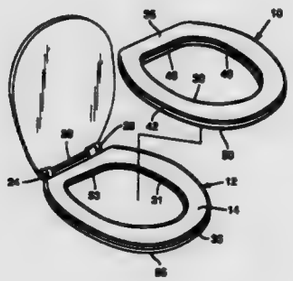
REPLACEABLE TOILET SEAT COVER

Glenn L. Rohde, Rte. 2, Box 18, Echo, Oreg. 97826

Filed Jan. 11, 1991, Ser. No. 640,091
Int. Cl.[5] A47K *13/14*
U.S. Cl. 4—245.001 **11 Claims**



1. A replaceable cover adapted to fit over the seating surface of a toilet seat, the cover comprising:

a semi-rigid annular body formed of a sheet of thin moldable resilient material, said body extending around a central opening and having inner and outer edges which extend continuously around said body wherein said inner edge is adjacent said central opening,

said body having a contoured top surface which includes continuous inner and outer downwardly-depending sides, said inner side curving inwardly and downwardly into said central opening to said inner edge of said body and outer side curving outwardly and downwardly to said outer edge of said body to produce a contoured shape which generally corresponds to the shape of the seating surface of a toilet seat over which the cover is adapted to fit, and

a continuous elongated bead of said resilient material formed on said outer side of said body adjacent said outer edge and extending continuously around said outer side and adapted to engage a toilet seat to retain said body thereon.

SWIMMING POOL AERATING DEVICE

Fernand Béland, 853D, Boul. des Chutes, Drummondville, Québec, Canada J2B 4H3

Filed Jan. 17, 1992, Ser. No. 822,125
Int. Cl.[5] E04H *4/00*; E03C *1/02*
U.S. Cl. 4—507 **2 Claims**

1. An oxygenating device for use with a water filtering recirculating system of a swimming pool enclosing a large body of water, in view of dissolving oxygen into the filtered water returned into said large body of water, said oxygenating device consisting of:

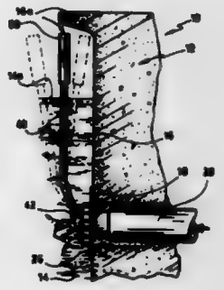
(a) nozzle means, to be submerged into said pool water in register with a submerged water outlet port of said recirculation system;

(b) oxygen feedmans, or feeding oxygen to said nozzle means;

(c) mount means, for mounting said nozzle means against said water outlet port;

said nozzle means including channel having an upstream end, opening into said system water outlet port, and a downstream end, opening into said large body of water, whereby said filtered water will flow through said channel; said oxygen feed means including oxygen intake means, and oxygen outlet means located into said nozzle channel intermediate said upstream and downstream ends thereof, wherein said filtered water flow through said nozzle channel generates a venturi effect about said oxygen outlet means, thereby generating an oxygen flow from said oxygen intake means, through said oxygen outlet means, and into said channel, where oxygen is dissolved into said filtered water during escape into said large body of water;

said mount means being of the type enabling relative movement of said nozzle means about said water outlet port, for directional adjustment of water flow of filtered water returned to said large body of water; said oxygen feed means consisting of an elongated standpipe, releasable mounted to said nozzle means at an inner end, and defining an outer end located above the water line of said large body of water and forming a handle for manual control of said relative motion of said nozzle means, for said directional adjustment of filtered water flow, whereby ambient air is flowable freely through said standpipe into said nozzle channel;



wherein said nozzle means consists of a semi-spherical body defining: a diametrally largest intermediate section, and a diametrally smallest tangential end section at said nozzle channel upstream end; said water outlet port of said recirculating system defining an outlet duct mouth, projecting short of said large body of water nd having a radially inward threaded portion; and said mount means consisting of; an elongated tubular extension, defining upstream and downstream end mouths, each of the latter mouths having a a radially outwardly threaded section and a generally circular radially inward section, said tubular extension upstream end screwingly meshing with said threaded outlet duct mouth, said tubular extension downstream end mouth being diametrally intermediate said nozzle intermediate section and said nozzle tangential end section, and an annular nut, having a threaded section, for screwingly engaging said tubular extension downstream end, and an unthreaded radially inturned flange, said nozzle intermediate section being diametrally intermediate said nut threaded section and said nut flange, whereby said semi-spherical nozzle is rotatably, frictionally taken in sandwich between said nut and said tubular extension downstream end mouth before the latter are screwed to one another with said diametrally smallest tangential end section of said semi-spherical body being partially engaged into said tubular extension downstream end mouth for rotation of said nozzle body therein.

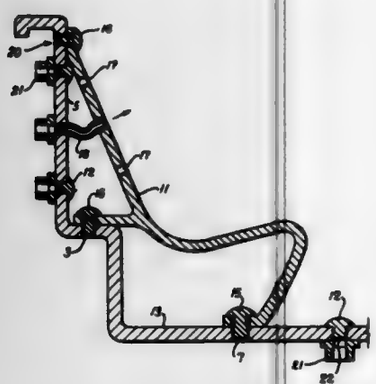
SPA WITH CONVERTIBLE FURNITURE LAYOUT

John S. Lake, 34 Atherton, Irvine, Calif. 92720

Filed Sep. 13, 1991, Ser. No. 759,531
Int. Cl.[5] A47K *3/022*; A61H *33/02*
U.S. Cl. 4—541.4 5 Claims



1. An improved spa including a vessel for water containment, seating and reclining arrangements, means for producing jets of air and air/water mixtures into the water, means for recirculating, heating and aerating the water within the vessel, the improvement comprising:

a water-containment vessel including side walls and a bottom surface, the vessel walls being outfitted with multiple outlets for ducting jets of water, air and water-air mixtures into the vessel, the vessel walls and bottom surface being outfitted at various points with means for mounting body-resting furniture to the walls, hoses attachable to the wall outlets and leading to the furniture, the means for mounting furniture being laid out at specific points on the vessel walls and bottom surface, the furniture being outfitted with means for attachment of the hoses at multiple location points, the hoses ducting jets of air and water-air mixtures from the wall outlets to selected location points on the furniture, the jets of air and water-air mixtures being ducted through openings in the furniture at the selected points and into the vessel, the furniture being in the form of seating having configurations such as bucket seats and benches, the furniture having mounting points which coordinate with the specific points on the vessel walls and bottom surface, whereby the vessel can be outfitted with a variety of furniture arrangements and jet placements.

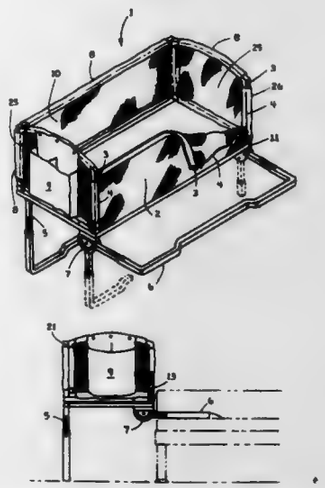
EXTEND-A-BED FOR INFANTS AND VERY YOUNG CHILDREN

Darlene Griffin, and Peter Griffin, both of 608 Beaverkill Rd., Kingston, N.Y. 12401

Filed Apr. 1, 1992, Ser. No. 861,464
Int. Cl.[5] A47D *7/01, 7/02, 7/04*
U.S. Cl. 5—95 16 Claims



1. A foldable baby bed capable of standing alone and also for use as an extension of an adult bed comprising:

a rigid support frame having a rectangular base hingedly integtrated with the back wall of the baby bed, to which are hingedly integrated the two side walls, both of which do not extend completely to the base and which contain connecting means to secure said sides to the base, and said frame base having receptacles to accept said connecting means and hold same fixedly in place;

a rigid support strut centrally affixed to and integrated with the sides of the rectangular frame base;

a rigid plate fitted into said frame base and resting on said support strut which plate forms the sleeping surface;

two parallel oblong apertures in the said plate corresponding to the positions of the said connecting means and to receive said connecting means when the bed is folded;

flexible fabric wall panels affixed to the said three walls of the frame;

a fourth flexible fabric wall panel permanently affixed along the front edge of the said frame base characterising the front wall of the baby bed and being removably coupled to the two adjacent side walls;

means to couple the said flexible fabric front wall to the two adjacent side walls;

two adjustable support legs hingedly mounted to the back corners of the frame base and connected by means of a U-shaped strut having a slightly raised central portion, thus forming the back leg assembly, said back leg assembly being capable of being locked in the vertical position and of being folded under the base;

two adjustable support legs pivotally mounted at the front corners of the frame base and connected by means of a U-shaped strut having a slightly raised central portion thus forming the front leg assembly, said front leg assembly being capable of being locked in the vertical position, being folded under the base and also of attaining a forward horizontal attitude for insertion under the mattress of a conventional bed so as to affix the baby bed securely thereto; and

means to adjust said leg assemblies to the desired height.

MATTRESS CUSHION

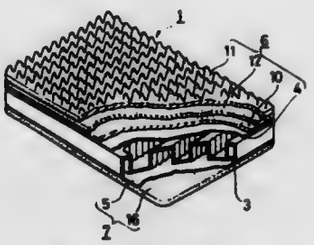
Isamu Masuda, Fukuoka, Japan, assignor to Nihonkeakozoshinkenkyukai Co., Ltd., Fukuoka, Japan

PCT No. PCT/JP90/00400, § 371 Date Oct. 2, 1991, § 102(e) Date Oct. 2, 1991, PCT Pub. No. WO91/14387, PCT Pub. Date Oct. 3, 1991

PCT Filed Mar. 26, 1990, Ser. No. 768,308

Int. Cl.[5] A47C *27/15*

U.S. Cl. 5—448 **6 Claims**



1. A mattress cushion comprising:

a) an elastic mattress body including:

(1) a core portion formed of a synthetic resin molding having a rigidity, said core portion having upper and lowr opposite sides, said core portion including:

(A) vertical side walls spaced from each other at regular intervals, said vertical side walls including vertical convex parts spaced from each other at regular intervals along said vertical side walls;

(B) horizontal upper walls alternately connecting upper ends of said vertical side walls; and

(C) horizontal lower walls alternately connecting lower ends of said vertical side walls at positions between said horizontal upper walls;

(2) an elastic surface layer overlaying said upper side of said core portion; and

(3) an elastic surface layer overlaying said lower side of said core portion; and

b) cover means for entirely covering said elastic mattress body.

5,172,437

WATERBED MATTRESS WITH HEXAGONAL BAFFLE STRUCTURE, AND METHOD AND APPARATUS FOR MANUFACTURING THE SAME

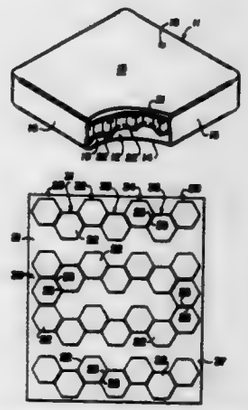
John B. Johenning, Beverly Hills, Calif., assignor to Strata Flotation, Inc., Torrance, Calif.

Continuation-in-part of Ser. No. 395,714, Aug. 18, 1989, Pat. No. 5,068,934. This application Feb. 22, 1991, Ser. No. 660,604

Int. Cl.[5] A47C *27/08*

U.S. Cl. 5—451 **12 Claims**

1. In a waterbed mattress: an enclosure for holding a body of water, a buoyant pad adapted to float within the enclosure, a plurality of hexagonal cells depending from the pad, each of said cells having six side walls sealed to the pad along a hexagonal path, a continuous sheet of material sealed to the lower portions of the side walls of the cells along horizontally extending paths to form hexagonal bottom walls for the cells, and



openings in at least some of the walls permitting limited water movement into and out of the cells, said cells being arranged in a honeycomb array with the side walls of adjacent ones of the cells facing each other in a closely spaced parallel relationship.

5,172,438

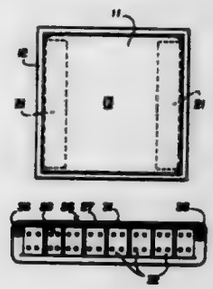
WATERBED MATTRESS WITH EQUALIZED EDGE SUPPORT

John B. Johenning, Beverly Hills, Calif., assignor to Strata Flotation, Inc., Torrance, Calif.

Filed Aug. 16, 1991, Ser. No. 746,279

Int. Cl.[5] A47C *27/08*

U.S. Cl. 5—451 **10 Claims**



1. In a waterbed: a water-filled mattress having a horizontally extending top wall for supporting a person resting thereon, a horizontally extending baffle within the mattress for reducing wave action in the water, and a pair of elongated strips of buoyant material attached to the baffle along opposite side edges thereof in close proximity to the side edges of the mattress, said strips having a width on the order of at least 6 inches and being of sufficient buoyancy to hold a person resting near the side edges of the mattress in a substantially level position.

5,172,439

THERAPEUTIC MATTRESS OVERLAY AND METHOD OF FORMING AND USING THE SAME

David L. Farley, 18672 Evergreen Ave., Yorba Linda, Calif. 92686

Filed Jun. 10, 1991, Ser. No. 714,375

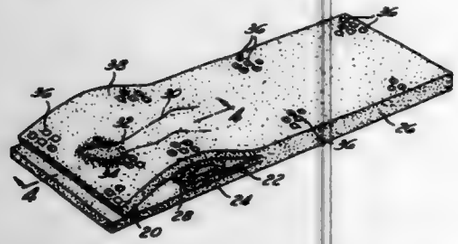
Int. Cl.[5] A47L *27/15*

U.S. Cl. 5—465 **15 Claims**

1. A pad comprising:

(a) a first layer of resilient material;

(b) a separable second layer of resilient material maintained generally in laminar juxtaposition to said first layer during use of the pad, said second layer foldable to provide an area of increased thickness to support an anatomical body portion;



(c) a third layer of resilient material disposed generally in laminar juxtaposition to said second layer and attached thereto; and

(d) wherein said first, second, and third layers are portions of a common piece of resilient material.

5,172,440

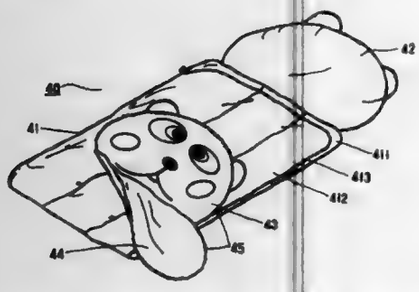
QUILT BAG

Wu L. Ming, No. 9, Lane 117, Chien Chung Street, Chia Li Chen, Taisan Hsien, Taiwan

Continuation of Ser. No. 727,437, Jul. 9, 1991, abandoned. This application Jul. 15, 1992, Ser. No. 914,010

Int. Cl.[5] A47G 9/00

U.S. Cl. 5—485 **1 Claim**



1. A quilt bag comprising a quilt having an outer surface including a middle portion, a pillow at one end thereof and a remaining portion surrounding said middle portion, a frontal cover having a first portion defining the shape of a toy-like object with an outer edge extending along the periphery of the toy-like object, said frontal cover also including an integral flap which is equal in size and shape to said first portion and which also includes an outer edge along the periphery of its toy-like shape, said frontal cover including said flap sewn to said middle portion of said outer surface and defining a crease between said first portion and said flap so that said flap can be folded over said first portion along said crease to bring the peripheral edge of said first portion and said flap into registry with one another to thereby form an envelope and with the remaining portion of said quilt folded therebetween and completely encased together with said pillow within, a complementary pair of slide fastener parts fixed to said outer edges of said first portion and said flap and a slider for fastening said slide fastener parts together to thereby form a completely closed bag with the remaining portion of said quilt and said pillow folded therein.

5,172,441

WATER MATTRESS QUILTED TOP WITH STIFFENING INSERTS

Alfredo D. Mayea, Torrance, Calif., assignor to Advanced Sleep Products, Carson, Calif.

Filed Mar. 4, 1992, Ser. No. 847,724

Int. Cl.[5] A47C 27/08; A47G 9/00

U.S. Cl. 5—500 **7 Claims**

1. A quilted cover for a water mattress including a quilted top portion and a peripheral side portion releasably attached thereto, said top portion having a fabric outer surface and internal padding, a peripheral recess extending laterally into said top portion and defining two vertically spaced, horizontal sides that face each other, said outer surface fabric extending into said recess and covering peripheral stiffening inserts located proximated said sides, the covered peripheral stiffening inserts that define the sides of the recess being of sufficient size and rigidity to prevent the recess from opening when a person sits or lies on the mattress.

5,172,442

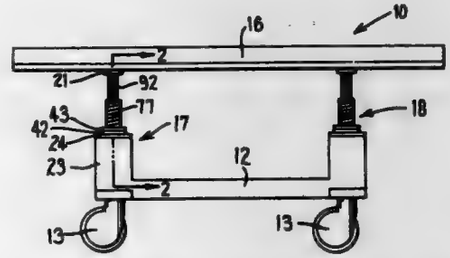
LITTER SUPPORT HAVING TELESCOPING THREADED ROD ARRANGEMENT

Gary L. Bartley, Kalamazoo Township, Kalamazoo County; Louis A. Haddock, Jr., Emmett Township, Calhoun County, and John S. Messner, Battle Creek, all of Mich., assignors to Stryker Corporation, Kalamazoo, Mich.

Filed Jan. 3, 1992, Ser. No. 816,826

Int. Cl.[5] A61G 7/00

U.S. Cl. 5—611 **17 Claims**



8. A bed, comprising: first and second parts, one of said first and second parts being a base portion and the other thereof being a support portion which is disposed above said base portion and can support a person, and selectively actuable spaced first and second lift mechanisms which are each operatively coupled to said first and second parts and which can each effect relative vertical movement between said first and second parts, wherein each of said lift mechanisms includes a first member supported on said second part and held against vertical movement with respect to said second part, said first member having an internally threaded vertical opening therethrough, a second member which is an elongate tube having internal and external threads thereon, said second member extending through said opening in said first member so that

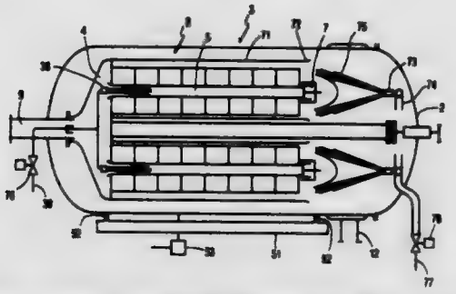
said external threads on said second member engage the internal threads of said opening through said first member, a third member which is an elongate member having external threads thereon, said third member having a portion extending into said second member so that the external threads on said third member engage the internal threads on said second member; means for preventing rotation of said third members about lengthwise axes thereof relative to each other and relative to said first part, including one end of each said third member being coupled to said first part, independently controllable first and second reversible drive motors each having a rotatable drive shaft, and first and second drive train means each responsive to rotation of the drive shaft of a respective one of said motors for effecting relative rotation between a respective one of said second members and at least one of said first and third members threadedly engaged therewith.

5,172,443

METHOD AND APPARATUS FOR WET-FINISHING TEXTILE GOODS

Wilhelm Christ, Michelbach an der Bilz, Fed. Rep. of Germany, assignor to Thies Maschinen und Apparatebau GmbH, Hessental, Fed. Rep. of Germany

Filed Mar. 6, 1991, Ser. No. 665,361
Int. Cl.[5] D06B 5/18
U.S. Cl. 8—149.1 26 Claims



1. Method for wet-finishing textile goods in an exhaustion process, wherein the textile goods have low residual moisture and are made up in the form of spools or in packages, and placed in a vessel, closable in a pressure-tight manner, and

the goods are subjected to a finishing treatment liquor, which is caused to flow through the textile goods in the vessel,

said method comprising the steps of

raising the temperature of the goods above ambient or room temperature;

substantially removing air from interstices of the textile goods until the goods have achieved essentially air-free state; and

applying an aerosol which comprises a gaseous medium and the treatment liquor dispersed therein at a pressure in excess of the pressure prevailing in the vessel to one side of the textile goods, the gaseous medium developing a higher pressure on one side of the textile goods than on the other side thereof, so that the gaseous medium of the aerosol will flow directly through the goods for a predetermined period of time.

17. Apparatus for wet-finishing textile goods (8), comprising

a vessel (3) closable in pressure-tight manner;

support means (4) for supporting the goods (8) located within the vessel forming a material holder;

a pipe line system (9, 11, 12, 13);

gas pressure generating means (18),

said pipe line system including

a first connecting line (12) connecting the interior of the vessel to said gas pressure generating means (18) at one terminal side thereof; and

a second connecting line (9) connected to the interior of said vessel and coupled to the support means (4) and connected to said gas pressure generating means (18) at another terminal side thereof;

temperature controlling means (15, 16) coupled to be pipe line system to control the temperature of the gas therein;

humidity or moisture controlling means (17) coupled to the pipe line system to control the moisture of the gas flowing in the pipe line system;

a pressurized finishing liquid supply means (45–48);

an atomizing device (38, 73); and

a coupling connection (44, 39) from the pressurized finishing liquid supply means (45–48) to the atomizing device (38, 73),

wherein

said atomizing device comprises an atomizing nozzle located within the vessel (3),

said pipe line system, said gas pressure generating means and said vessel forming a closed loop pressurized gas circuit,

whereby pressurized treatment liquor atomized by said atomizing nozzle to form fine droplets will, in combination with the gas circulated in said closed loop, form an aerosol which will flow through the textile structure.

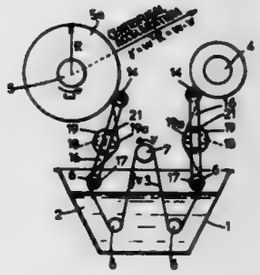
JIG

Charles M. A. Penet, 64 Avenue de la Republique, 95400 Arnouville, France

Continuation-in-part of Ser. No. 444,128, Nov. 15, 1989, abandoned. This application Jul. 18, 1991, Ser. No. 732,119
Claims priority, application France, May 15, 1987, 87 6825
Int. Cl.[5] D06B 3/32; B65H 59/38
U.S. Cl. 8—151 16 Claims



1. A process for operating a machine for dyeing webs of fabric, in which the fabric to be dyed passes through a dyeing bath and then winds onto a roller, said process comprising the following steps:

a) monitoring the instantaneous angular speed ω of the winding roller during the operation of the machine,

b) monitoring the linear speed of movement v of the fabric,

c) forming the multiplication product $\omega.v$,

d) adjusting the speed of rotation of the winding roller so as to maintain constant or substantially constant the product $\omega.v$.

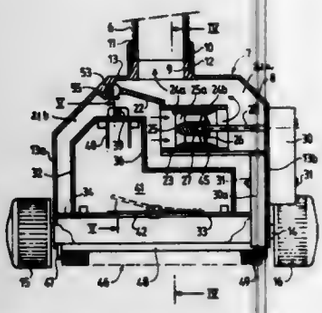
7. A machine for dyeing webs of fabric comprising a roller for receiving the fabric after passing through a dyeing bath, an electric motor for driving said roller, a device associated to said motor for adjusting its speed of rotation ω, means designed to generate two electrical signals respectively proportional to the angular speed ω of the fabric winding roller and to the linear speed v of the fabric generated as a result of the rotation of this roller, and means utilizing these signals in order to supply the adjusting device of the electric motor with a control signal designed for keeping the product $\omega.v$ constant or virtually constant.

5,172,445

CLEANER DEVICE FOR SWIMMING POOLS AND THE LIKE

Michael J. Chandler, Eden Bridge, Great Britain, assignor to Jean-Pierre Orset, Saint-Denis, France, a part interest

Filed Jul. 24, 1991, Ser. No. 735,310
Claims priority, application France, Jul. 25, 1990, 90 09511
Int. Cl.[5] F04H *3/20*
U.S. Cl. 15—1.7 **26 Claims**



1. A hydraulic cleaner device for a swimming pool and the like in which a water pump is provided for drawing water from the pool through a tube, said cleaner device comprising a casing having an open bottom, a shaft carried by said casing, a set of spaced wheels mounted on said shaft for supporting said casing on the bottom of a pool, brushes provided between said wheels for sweeping material from the bottom of the pool into the open bottom of the casing as said cleaner device moves along the bottom of the pool, an axial turbine having a rotor, a reducing and transmitting mechanism between said rotor and said shaft, the interior of said casing being divided into two compartments by a partition wall delimiting a water inlet to said axial turbine, a first one of said two compartments in said casing being positioned downstream of said axial turbine and being adapted to be connected to said tube, rotation of said rotor due to the flow of water through said axial turbine driving said shaft through said reducing and transmitting mechanism to rotate said wheels thereby to effect movement of said cleaner device along the bottom of the pool, a buoyancy member connected to said casing for maintaining said casing in a substantially vertical position on the bottom of the pool when said cleaner device is immersed in the pool.

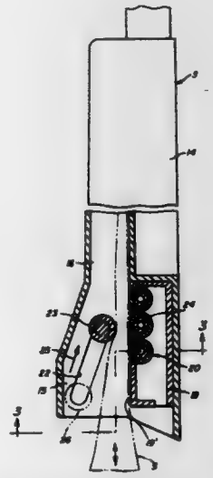
5,172,446

MOP AND MOP-SQUEEZE COMBINATION

Rolf-Gunter Schuleia, Singhofen, Fed. Rep. of Germany, assignor to Leifheit AG, Nassau/Lahn, Fed. Rep. of Germany

Filed May 22, 1991, Ser. No. 704,132
Claims priority, application European Pat. Off., May 22, 1990, 90109750.1
Int. Cl.[5] A47L *13/20*
U.S. Cl. 15—119.1 **18 Claims**

1. A mop and mop-squeeze combination, comprising:
a handle (1);
a pulling handle (2) slideably coupled to said handle (1);
a mop head (4) with a mop cloth (5), said mop head (4) having two lateral end portions (8);
a wringer device (3) disposed behind the mop head (4); and
a pulling device (6) to which said mop cloth (5) is detachably secured, said pulling device (6) comprising guide tracks (7) extending from said lateral end portions (8) of said mop head (4) to said wringer device (3), said pulling device (6) being coupled to said pulling handle (2) and being arranged at least partially in said mop head (4) and at least partially along said wringer device (3), such that said mop cloth (5) is pulled into and through said wringer device (3) from both lateral end portions (8) of said mop head (4) responsive to pulling upwardly of said pulling handle (2), via said guide tracks, said pulling device (6) thereby guiding said mop cloth 95) from a wide-area cleaning position to a pressing or squeezing position into said wringer device (3);
said wringer device (3) comprising:
a housing member (14) which is connected to said handle (1);
said housing member (14) having an inlet region for receiving said guide tracks (7) therethrough;
at least two sets of guide rollers (20), each set of guide rollers (20) being arranged at a respective side of said guide tracks (7);



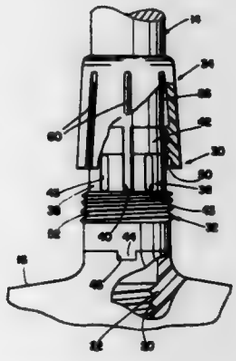
and a squeeze roller (23) supported in oblique elongated guides (22) extending from an outer portion of said housing toward an inner portion of said housing and along which said squeeze roller is movable from a rest position to a wringing position closer to said guide rollers (20) to squeeze said mop cloth between said squeeze roller (23) and said guide rollers (20) in said wringing position.

5,172,447

TAB LOCK ADAPTOR FOR BROOM HANDLES AND THE LIKE

Erwin Tomm, 3320 W. 130th St., Cleveland, Ohio 44111

Filed Dec. 12, 1991, Ser. No. 806,124
Int. Cl.[5] A46B *5/02*
U.S. Cl. 15—159.1 **6 Claims**



1. A broom assembly comprising:
a broom head having an internally threaded handle receiving opening formed therein;
a handle having a threaded end threadedly connected in said handle receiving opening; and,

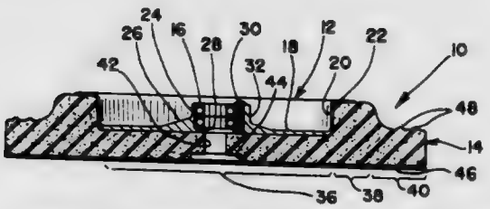
a locking adaptor means for preventing inadvertent unthreading of said handle from said head, said adaptor means comprising; a generally cylindrical collet body member formed independently of said head and said handle extends, said collet body member being axially slidable on said handle toward and away from said head and further including resilient finger portions extending axially from said body member along said handle in a direction away from said head, a nut member threadedly received on said collet body member for movement axially thereof and including a tapered surface engageable with said finger portions for driving said finger portions radially inward into gripping engagement with said handle, and engagement means extending axially between said collet body member and said head for preventing relative rotation between said collet body member and said head while permitting free axial sliding movement toward and away from said head when said nut member is unthreaded from said collet body member.

5,172,448

MOLDED BUFFER PAD

Roy S. Kitahata, Fullerton, Calif., assignor to Waxing Corporation of America, Orange, Calif.

Filed Mar. 26, 1991, Ser. No. 675,493
Int. Cl.[5] B24D *13/14*; B24B *29/00*; B60S *3/06*
U.S. Cl. 15—230 3 Claims



1. A buffer pad assembly for use in treating the exterior surfaces of automobiles or the like, comprising:

a pad holder of pan-like configuration comprising a circular plate section having an upstanding central hub, an annular well section rising from the plate section at the periphery thereof, and an annular flange section extending radially outwardly from said wall section, said several sections and hub being molded integrally of the same material as a unitary body;

an integral circular pad of resilient plastic material molded onto the outer surfaces of said pad holder concentrically therewith, said pad having a sole portion of constant thickness beneath the plate section of the pad holder, a thicker ring portion radially outwardly of said annular wall section and sole portion and beneath said annular flange section, and an annular lip portion of lesser thickness than said ring portion at the periphery of the pad, all portions of the pad collectively presenting a circular working surface in a plane perpendicular to the axis of said hub;

said resilient plastic pad being formed of foamed polyurethane foamed in place about the exterior surfaces of the pad holder and about a central core to provide therein a central opening on the axis of the pad holder hub, said pad also being countercored to elevate the locally densified plastic material surrounding said central opening above said working surface of the pad; and

means within said hub for mounting said pad assembly in driving relation to a buffer.

5,172,449

WINDSHIELD WIPER WITH INTEGRAL RESILIENT BIASING STRIP

Peter Baumgarten, Coburg; Bruno Egner-Walter, Heilbronn, and Eckhardt Schmid, Brackenheim, all of Fed. Rep. of Germany, assignors to SWF Auto-Electric GmbH, Stuttgarter, Fed. Rep. of Germany

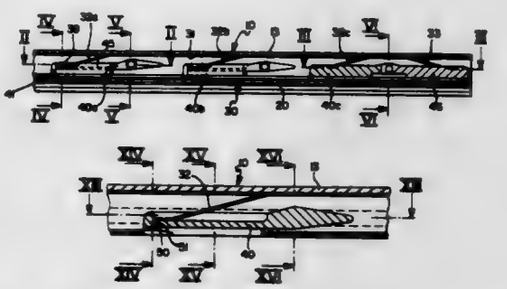
Claims priority, application Fed. Rep. of Germany, Jan. 27, 1989, 3902397
Int. Cl.[5] B60S *1/04*, *1/37*
U.S. Cl. 15—250.42 28 Claims



1. A windshield wiper for motor vehicles comprising:

a carrier yoke;

a rubber element; and

means for resiliently supporting said rubber element on said carrier yoke to distribute pressure along said rubber element and including:

a plurality of clawed yokes each swivellably mounted at its top on said carrier yoke and each having at its bottom a claw for carrying said rubber element,

a flexible strip attached to said carrier yoke,

a plurality of elongated resilient lugs integrally connected to and formed from said flexible strip, said resilient lugs disposed along said strip and each of said resilient lugs having an end extending from said strip in a first direction, and

at least one elongated resilient element integrally connected to and formed from said flexible strip, said resilient element having an end extending from said strip in a second direction opposite said first direction,

each of said resilient lugs and said at least one resilient element engaging a separate one of said clawed yokes adjacent said claw.

SHAFT CLEANING AND DECONTAMINATION APPARATUS

Jack H. Cole, Ponca City, Okla.; C. Michael Swindoll, Pleasanton, Calif., and Mark P. DiStefano, Ponca City, Okla., assignors to Conoco Inc., Ponca City, Okla.

Filed Oct. 1, 1990, Ser. No. 591,347
Int. Cl.[5] B08B *7/04*
U.S. Cl. 15—302 16 Claims

1. A shaft cleaning apparatus for cleaning peripheral surfaces of an elongate shaft as the elongate shaft moves axially along a path of travel, said apparatus comprising:

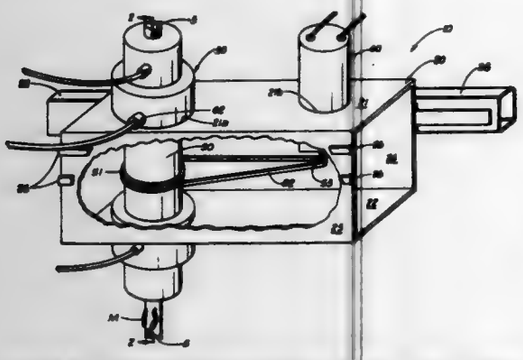
a housing having a hollow interior space and openings at opposite ends thereof;

means defining a cleaning chamber within said hollow interior space;

means in said cleaning chamber for providing cleaning fluid to the peripheral surfaces of the shaft;

means in said cleaning chamber for scrubbing the wet pe-

ripheral surfaces of the shaft and comprising a brush for rotating generally about the path of travel of the shaft; and



means for collecting the cleaning fluid from the surfaces, whereby the peripheral surfaces along the length of the shaft are cleaned as the shaft moves through said housing.

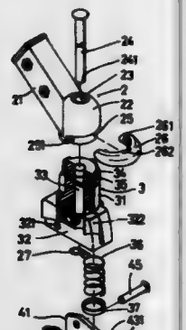
FRONT CASTER DEVICE FOR INFANT STROLLER

Hsiu-Hui Chiu, Tainan Hsien, Taiwan, assignor to Sunshon Molding Co., Ltd., Tainan Hsien, Taiwan

Filed Dec. 6, 1991, Ser. No. 803,422

Int. Cl.[5] B60B *33/00*

U.S. Cl. 16—35 R **3 Claims**



1. A front caster device for an infant stroller comprising:

a bulb integrally attached to a distal end of a front leg of the infant stroller and provided with a passageway extending vertically therethrough and a first cut-off portion in a lowermost periphery thereof;

a pair of pivot holes opposedly located in the first cut-off portion of the bulb;

a cylindrical hub having a passageway extending axially and vertically therethrough, at least a second cut-off portion formed in an upper periphery thereof and a pin hole extending transversely in a lower side portion thereof;

a pin extending through the passageways of the bulb and hub to secure the hub under the bulb and permit free rotation of the hub about the pin with respect to the bulb;

a wheel mounting bracket including a first subsidiary bracket for mounting an axle along a transverse axis for rotatably mounting a ground supporting wheel thereto and a second subsidiary bracket opposed to the first subsidiary bracket and provided with a pair of apertures for receiving a rivet which extends through the pin hole of the hub to hingedly attached the wheel mounting bracket to the hub; and

an actuator having a pair of pivots extending opposedly from an inner surface thereof and adapted to be inserted in the pivot holes for swinging the actuator between a first position wherein the hub is rotatable about the pin with respect to the bulb and a second position wherein the second cut-off portion of the hub corresponds the first cut-off portion and the hub is restricted in a preselected angle with respect to the bulb.

HINGE WITH OPENING OCCUPIED BY AN INTUMESCENT MATERIAL

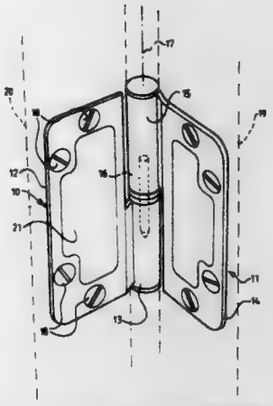
Peter E. Brown, Bridgnorth, Great Britain, assignor to Jebron Limited, Wednesbury, United Kingdom

Filed May 16, 1991, Ser. No. 701,288

Claims priority, application United Kingdom, May 16, 1990, 9011014

Int. Cl.[5] E05D *5/02*

U.S. Cl. 16—387 **17 Claims**



1. A butt hinge comprising first and second members and a pivot for connecting the members for relative pivoting about an axis of the hinge, wherein at least the first of said members includes a plate-like portion and has a plurality of holes through which screws can pass to secure the plate-like portion in face-to-face relation with a structure to which the first member of the hinge is to be fixed, characterized in that the plate-like portion has at least one opening which is of larger area than each said screw hole and which opening is occupied by an intumescent material.

5,172,453

SLIVER CAN

Yasuo Akiyama, Kyoto, Japan, assignor to Murata Kikai Kabushiki Kaisha, Kyoto, Japan

Filed May 15, 1991, Ser. No. 700,509

Claims priority, application Japan, May 18, 1990, 2-52002[U]; May 18, 1990, 2-128315; May 21, 1990, 2-52178[U]

Int. Cl.[5] D04H *11/00*

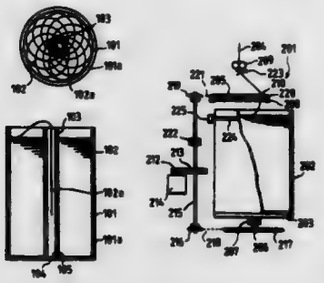
U.S. Cl. 19—159 R **1 Claim**

1. In a sliver storing apparatus including a horizontal rotary table for supporting a cylindrical can having a closed bottom, the horizontal rotary table defining a center of rotation, and a horizontal rotary disk rotatably supported at the top of the rotary table for guiding a sliver into the can, the rotary disc defining a center of rotation deviating from the center of rotation of the horizontal rotary table, a sliver can comprising:

a main body, and

a tubular member associated with the main body for receiv-

ing an end portion of the sliver, the tubular member arranged substantially coaxially with the main body,



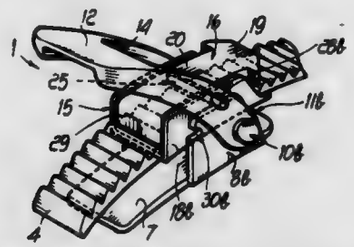
wherein a bottom of the main body defines a hole associated with the tubular member, the hole covered with a net.

5,172,454

SECURING DEVICE, PARTICULARLY FOR FOOTWEAR

Dino Martignago, Maser, Italy, assignor to Officine Everest S.p.A., Crocetta Del Montello, Italy

Filed Nov. 18, 1991, Ser. No. 793,883
Claims priority, application Italy, Nov. 19, 1990, 59401/90[U]
Int. Cl.[5] A43C *11/00*
U.S. Cl. 24—68 SK 3 Claims



1. Device for securing a first flap and a second flap of an item of footwear, comprising a first base rigidly associable with said first flap, a pair of pivoting shoulders protruding from said first base and having pivotally connected thereto a lever arm, said lever arm having a pivot connected to a support provided with a ratchet system for engagement with a toothed tab, said support having a first longitudinal slot, said lever arm having a second longitudinal slot, said first longitudinal slot and said second longitudinal slot accommodating said pivot, said pivot selectively interacting with stop means, said stop means being defined on said shoulders, said toothed tab being removably associable with said second flap, said lever arm being provided with a pair of tabs defining a seat for the temporary positioning of said support provided with a ratchet system, said support being U-shaped and defining a second base, a pair of walls for accommodating said ratchet system protruding laterally from said second base, said ratchet system having a T-shaped body constituted by a head and a stem, said head protruding rearward and laterally with respect to said pair of tabs, said stem having a free end, said free end of said stem interacting with said toothed tab and being directed in the same direction as the free end of said lever arm.

5,172,455

BUCKLE AND BELT ASSEMBLY CONSTRUCTION FOR PATIENT RESTRAINT

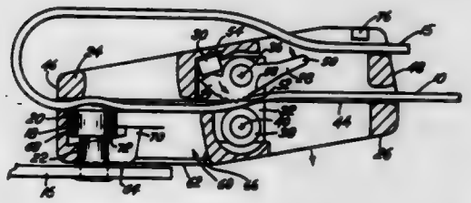
Thomas G. Johnson, Blue Hill; James M. Gruidel, and Reinhold A. Haase, both of Hastings, all of Nebr., assignors to Dutton-Lainson Company, Hastings, Nebr.

Filed Sep. 24, 1991, Ser. No. 765,363
Int. Cl.[5] A44B *11/00*
U.S. Cl. 24—170 11 Claims

1. An improved belt buckle construction for coupling a flexible belt strap to a bushing, of the type having a head and a stem, said construction comprising:

a rigid material buckle body member having an outside surface, an inside surface and opposite ends with an elongated slot through the body connecting the ends, said slot sized to receive the flexible belt strap therethrough from end to end;

a keyhole shaped passage extending from the inside surface toward the through slot, said passage including means for retention of the bushing comprising a wide section for receipt of the head of a bushing and a narrow section for receipt of the stem of a bushing, said narrow section de-



fined adjacent the inside surface and connected with a wide retaining section adjacent the elongated slot for slidable receipt of the head, said retaining section having a depth less than the thickness of the head, whereby a flexible belt strap in the slot biases against the head toward the narrower section to hold the stem in the narrower section of the passage and also holds the head in the wide retaining section; and

a releasable belt strap engaging means retained within the buckle body member adjacent the keyhole passage for holding the strap in a generally non-slidable position in at least one direction through the elongated slot.

5,172,456

ZIPPER WITH FUSIBLE WOVEN YARN

Michael Samberg, Miami, Fla., and Thomas L. Allison, Gastonia, N.C., assignors to Talon, Inc., Meadville, Pa.

Filed Dec. 12, 1990, Ser. No. 626,535
Int. Cl.[5] A44B *1/04, 11/25, 17/00;* B32B *7/00*
U.S. Cl. 24—397 8 Claims

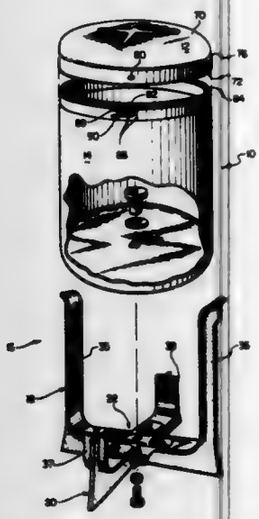
1. A zipper installation comprising a pair of article sections disposed to define an opening to be closed therebetween, said sections having opposed edge portions adjacent the opening, a zipper having a pair of mounting tapes correspondingly disposed on the edge portions of said pair of sections, each tape being made of woven material having warp yarns and weft yarns, said warp yarns including a series of fusible yarns being parallel and spaced relative to each other, each fusable yarn including a fusible thermoplastic resin coating so that each woven tape is heat sealable to its corresponding article section.

5,172,457

URN WITH TOP SEAL, BAYONET CLOSURE AND BASE ARRANGEMENT WITH SEAL

Kim Allen, and Frank Allen, both of Libertyville, Ill., assignors to F. H. Noble & Company, Mundelein, Ill.

Filed Aug. 2, 1991, Ser. No. 739,843
Int. Cl.[5] A61G *17/08*
U.S. Cl. 27—1 6 Claims



1. An urn or like vessel, comprising, in combination, a pedestal, a canister having an inner and an outer surface, a cap, and an attachment means for securing the canister to the pedestal, the attachment means including a nut having an axially extended nut shank of non-circular cross-sectional shape for engaging a mating aperture in the pedestal and a mating aperture in the canister, and a nut top extending both axially above the shank and radially outwardly from the shank, an attachment gasket member compressed between the inner canister surface and the nut top to provide a seal inhibiting gas flow into or out of the canister, and a connector bolt having a bolt shank adapted to threadably engage the connector nut and a bolt head adapted to engage the pedestal.

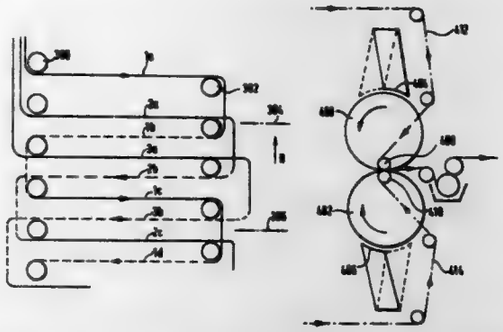
5,172,458

METHOD AND APPARATUS FOR CREATING AN ARRAY OF WEFT YARNS IN MANUFACTURING AN OPEN SCRIM NON-WOVEN FABRIC

Paul Cooper, Royton, England, assignor to James Dewhurst Limited, Lancashire, United Kingdom

Continuation of Ser. No. 469,432, Apr. 5, 1990. This application Sep. 9, 1991, Ser. No. 758,941
Claims priority, application United Kingdom, Oct. 7, 1987, 8723574
The portion of the term of this patent subsequent to Mar. 31, 2009, has been disclaimed.
Int. Cl.[5] D04H *3/04*
U.S. Cl. 28—102 24 Claims

1. A method of manufacturing a fabric comprising: reciprocating a weft carrier laying a set of weft yarns in a lateral, weftwise, direction across a weftspace between two sets of weft retainers and moving said weft carrier in a longitudinal, warpwise, direction relatively to the weft retainers at at least one end of its weftspace traverse to lay the set of weft yarns across the weftspace at each lateral traverse, causing said weft carrier to hook each weft yarn around at least two weft retainers at at least one side of the weftspace, the relative warpwise movement between said weft carrier and said weft retainers being such that at each traverse of said weft carrier, after a first traverse, some, but not all, of the laid weft yarns are interdigitated with weft yarns previously laid by the weft carrier or another weft carrier, the reaming weft yarns laid at that traverse being spaced from each other to permit a further set of



weft yarns to be interdigitated with them on a subsequent traverse of the or another weft carrier.

5,172,459

MULTI-PLY AIR TEXTURED YARN

Andre M. Goineau, Spartanburg, S.C., assignor to Milliken Research Corporation, Spartanburg, S.C.

Division of Ser. No. 501,279, Mar. 29, 1990. This application Dec. 21, 1990, Ser. No. 643,561
Int. Cl.[5] D02J *1/22;* D02G *1/16*
U.S. Cl. 28—240 1 Claim

1. The method of producing a multi-ply yarn comprising the steps of: supplying at least three separate partially oriented synthetic filament yarns, merging the three supplied yarns, drawing the supplied merged yarns twice each at the same draw ratio, supplying the twice drawn yarns into an air jet, supplying air under pressure into said air jet, commingling and air texturing the supplied yarns in the air jet and taking up the commingled and air textured yarn.

5,172,460

METHOD OF MAKING LEAD-FREE CAPSULE FOR WINE BOTTLES

Thomas H. Womack, Novato, Calif., assignor to Womack International, Inc., Novato, Calif.

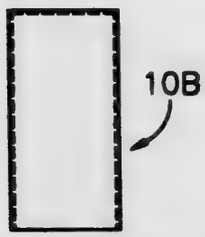
Filed Aug. 21, 1991, Ser. No. 748,242
Int. Cl.[5] B21D *33/00*
U.S. Cl. 29—17.3 8 Claims

1. A method of forming a moldable, flexible capsule for wine bottles, comprising the steps of

selecting a laminate of lead-free metallic foil and plastic having a soft metallic surface look and feel, the laminate

having characteristics of flexibility, ductility and laminal adhesion permitting relatively deep drawing,

drawing the laminate from a generally flat blank to form a continuous, seamless capsule configuration while maintaining laminate integrity, and



applying surface treatment for decorating the capsule prior to applying it to the wine bottle, whereby the use of lead is avoided for environmental purposes while still achieving the soft, metallic look and feel of traditional lead and lead-tin capsules as well as cuttability and tearability resembling removal characteristics of the traditional lead and lead-tin capsules.

5,172,461

METHOD OF PRODUCING ELECTRICAL RESONANT CIRCUITS, SPECIFICALLY RESONANCE LABELS

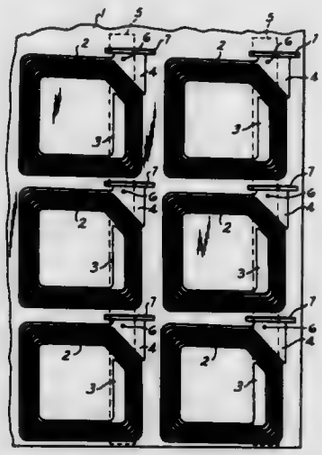
Fritz Pichl, Seehaldenstrasse 17, CH 8802 Kilchberg, Switzerland

Filed Aug. 12, 1991, Ser. No. 743,761

Claims priority, application Switzerland, Aug. 17, 1990, 2-2685

Int. Cl.[5] H01G *4/26*; H01F *41/04*

U.S. Cl. 29—25.42 9 Claims



1. A method of producing improved electrical resonance labels for use in a theft protection system with a coil having the shape of a spiral and one surface of the capacitor located on one side and the second surface of the capacitor located on the other side of the dielectric, adapted for later deactivation of the resonant circuit by means of a spark discharge, comprising the steps of:

introducing a plurality of bodies of a size in the micron range in the dielectric to cause by the spark discharge an electrically conductive connection between the capacitor surfaces of a thread-like shape substantially embedded in the dielectric.

5,172,462

SPRING COMPRESSION DEVICE

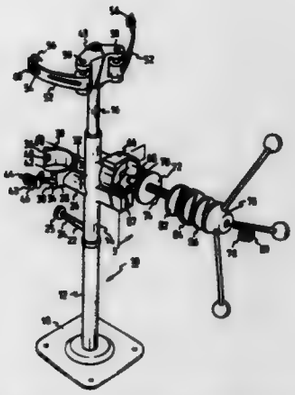
Tae-Hong Ha, 457-4, Jangan-Dong, Dongdaemoon-Ku, Rep. of Korea

Filed Apr. 7, 1992, Ser. No. 864,643

Claims priority, application Rep. of Korea, Jul. 16, 1991, 91-11063

Int. Cl.[5] B23P *19/04*

U.S. Cl. 29—227 7 Claims



1. A spring compression device which comprises:

a base plate;

a hollow post secured to the base plate and having a spring accommodated therewithin;

a housing detachably fixed to a top portion of the hollow post, the housing having an adjustable nut suitable for supporting a lower portion of a shock absorber unit and means for clamping a middle portion of the unit wherein the adjustable nut and the clamping means are arranged on a substantially same vertical plane and in a parallel relationship with each other;

a sliding bar movably mounted in the housing and biased by the spring mounted in the hollow post, the sliding bar including a rack integrally formed thereon and a bracket fixed to an upper portion thereof, the bracket having a pair of spaced guide pins secured thereto;

a pair of arcuate swing arms rotatably pivoted at the guide pins of the bracket and having slots provided at end regions thereof;

a pair of inverted U-shaped arcuate grippers adapted for clamping a shock absorber spring and slidably attached to the slots of the swing arms, the grippers being formed of a helical configuration; and

means for actuating the rack of the sliding bar, thereby moving the sliding bar downward or upward.

5,172,463

METHOD OF ASSEMBLING A MOTOR DRIVE UNIT FOR A CABLE WINDOW REGULATOR

Wolfgang Roth, Aslar-Oberlemp, and Thomas Medebach, Wetzlar, both of Fed. Rep. of Germany, assignors to Kuester & Co. GmbH, Ehringshausen, Fed. Rep. of Germany

Division of Ser. No. 486,011, Feb. 23, 1990, Pat. No. 5,109,725. This application Jan. 10, 1992, Ser. No. 818,906

Claims priority, application Fed. Rep. of Germany, Feb. 23, 1989, 3905389

Int. Cl.[5] B23P *11/00*; G05G *1/08*

U.S. Cl. 29—434 1 Claim

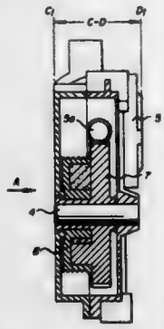
1. A method of assembling a motor drive unit for a cable window regulator comprising the steps of:

assembling a first subassembly casing comprising a worm drive gear, an electric motor adapted to drive said worm gear, and a bearing pin extending therefrom;

assembling a second subassembly casing comprising a worm

wheel, and a cable drum connected to and driven by said worm wheel;

connecting said first subassembly casing to said second subassembly casing by inserting said bearing pin through a center of said worm wheel of said second subassembly, and further comprising the step of



positively engaging a portion of said worm wheel extending within an opening in the second subassembly with said worm gear in said second subassembly and retaining said wormwheel and said cable drum against removal from said second subassembly.

MACHINE TOOL

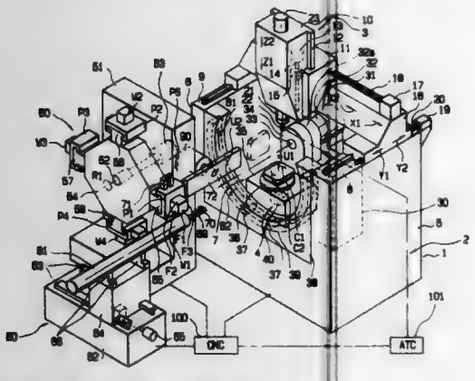
Koichiro Kitamura; Katsuji Taniguchi, and Shigeru Yamada, all of Takaoka, Japan, assignors to Kitamura Machinery Co., Ltd., Japan

Filed Jun. 4, 1991, Ser. No. 709,886

Claims priority, application Japan, Jun. 25, 1990, 2-164088

Int. Cl.[5] B23Q *7/02, 41/02;* B65G *47/00*

U.S. Cl. 29—563 **19 Claims**



1. A machine tool comprising:

(a) a tool (22);

(b) a body (2) comprising a C-shape member (38) with an arc-shape guide groove (39);

(c) a tool supporting means (10) for supporting the tool (22) wherein said tool supporting means (10) is movable with respect to said body (2);

(d) a work operating means (4) for supporting a pallet (P) for setting a work (W), wherein the work operating means (4) comprises a base (35) provided with rollers (37) for interaction with the guide groove (39) and is movable with respect to the body (2);

(e) a first moving means (31, 32, 32a, 33, 34, 37, 39) for moving the base (35) along the guide groove (39) such that the work operating means (4) moves about a center axis (U2) along a first path (B1, B2); and

(f) a second moving means (11, 12, 13, 14, 15, 16, 17, 18, 19, 20) for moving the tool supporting means (10) so as to cause relative motion between the tool supporting means (10) and the work operating means (4) for performing a machining operation of the work (W).

5,172,465

METHOD OF ASSEMBLING DYNAMOELECTRIC MACHINE BRUSH RIGGING

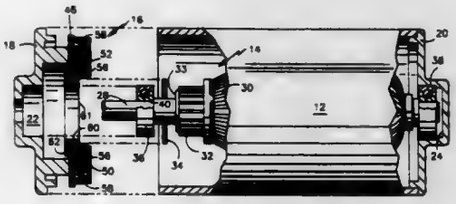
Kenneth W. Stewart, Sr., Columbus, Miss., assignor to United Technologies Motor Systems, Inc., Columbus, Miss.

Division of Ser. No. 503,507, Apr. 2, 1990, Pat. No. 5,006,747.

This application Oct. 29, 1990, Ser. No. 605,219

Int. Cl.[5] H02K *15/14*

U.S. Cl. 29—597 **3 Claims**



1. A method of automated assembly of a dynamoelectric machine having an armature subassembly with an armature shaft, a commutator mounted to the shaft, and an antifriction bearing assembly having a diametral dimension greater than said commutator, and a brushcard subassembly with at least one brush for engaging the commutator and a central opening larger than said bearing assembly which comprises the steps of

securing the antifriction bearing assembly to the shaft in spaced disposition to the commutator,

releasably retaining the brush in a retracted position so as to form an unobstructed passageway sufficient for passing the antifriction bearing assembly therethrough,

passing the antifriction bearing assembly mounted to the shaft axially through the passageway of the brushcard subassembly to position the commutator within the central opening of the brushcard subassembly, and

automatically releasing the brush when the commutator is positioned within the central opening of the brushcard subassembly.

5,172,466

PROCESS FOR PRODUCING PTC TEMPERATURE SENSOR ELEMENTS FOR PTC TEMPERATURE SENSOR

Karl-Hermann Friese, Leonberg; Hans-Martin Wiedenmann, Stuttgart, and Günther Stecher, Ludwigsburg, all of Fed. Rep. of Germany, assignors to Robert Bosch GmbH, Stuttgart, Fed. Rep. of Germany

Continuation of Ser. No. 459,752, Jan. 10, 1990. This application Jun. 14, 1991, Ser. No. 715,798

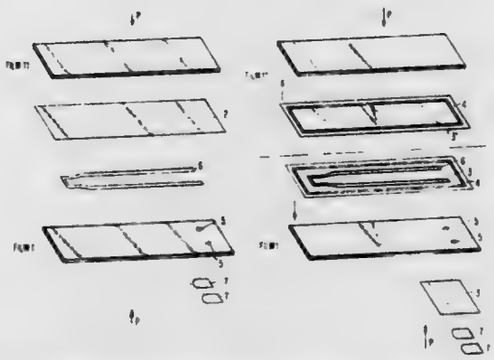
Claims priority, application Fed. Rep. of Germany, Jan. 10, 1987, 3733192

Int. Cl.[5] H01C *7/02*

U.S. Cl. 29—612 **8 Claims**

1. A process for producing a PTC temperature sensing element for a PTC temperature sensor, comprising the steps of providing a first ceramic film based on an insulator ceramic; punching interconnection holes in the first ceramic film; printing contact areas in the region of the interconnection holes; printing the other side of the film with a PTC resistor track;

and laminating the film and sintering the film with a second film based on an insulator ceramic in a manner such that the



PTC resistor track is hermetically encapsulated with respect to a gas being measured and ambient air.

5,172,467

INSTALLATION APPARATUS FOR INSTALLING SELF-ATTACHING FASTENERS

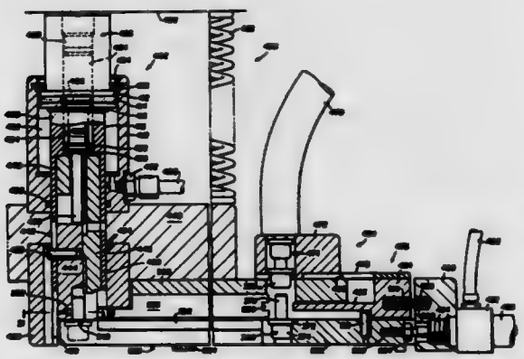
Rudolph R. M. Muller, Frankfurt, Fed. Rep. of Germany, assignor to Multifastener Corporation, Detroit, Mich.

Division of Ser. No. 491,925, Mar. 12, 1990, Pat. No. 5,092,725, which is a division of Ser. No. 196,209, May 19, 1988, Pat. No. 4,915,558, which is a division of Ser. No. 892,017, Aug. 1, 1986, Pat. No. 4,765,057, which is a division of Ser. No. 773,387, Sep. 6, 1985, Pat. No. 4,633,560, which is a division of Ser. No. 563,833, Dec. 21, 1983, Pat. No. 4,555,838, which is a continuation-in-part of Ser. No. 485,099, Mar. 28, 1983, Pat. No. 4,459,073, and Ser. No. 504,074, Jun. 12, 1983, Pat. No. 4,543,701, which is a continuation of Ser. No. 229,274, Jan. 28, 1981, abandoned, said Ser. No. 485,099, is a division of Ser. No. 229,274,. This application Nov. 13, 1991, Ser. No. 791,941

Claims priority, application Fed. Rep. of Germany, Feb. 2, 1980, 3003908

Int. Cl.[5] B23P *21/00*

U.S. Cl. 29—716 12 Claims



1. An installation apparatus for installing self-piercing and riveting fasteners in a panel, each fastener having an elongated body portion and a self-piercing and riveting annular wall portion extending from said body portion in generally coaxial alignment, said installation apparatus comprising:

a housing having an elongated plunger reciprocable in a plunger passage, a feed transfer means transferring said fasteners in a path transverse to and intersecting said plunger passage, said plunger having a longitudinally extending bore configured to receive said of one of said fasteners elongated body portion and an end portion adapted to bear against said fastener annular wall portion, said plunger formed of at least two longitudinally extending parts intersecting said bore including a first part having a concave portion of said bore facing said transfer means path and a second relatively moveable part adapted to close said bore and block said path, said apparatus including actuation means adapted to longitudinally move said second plunger part relative to said first plunger part thereby opening said concave bore portion of said first plunger part, said transfer means then transferring a fastener to receive said fastener longitudinal body portion in said plunger first part bore portion locating said fastener oriented for installation, said actuating means then closing said second plunger part around said fastener elongated body portion ready for installation, said actuating means then actuating said plunger to drive said plunger through said plunger passage and install said oriented fastener in a panel located opposite said plunger passage.

MOUNTING APPARATUS FOR ELECTRONIC PARTS

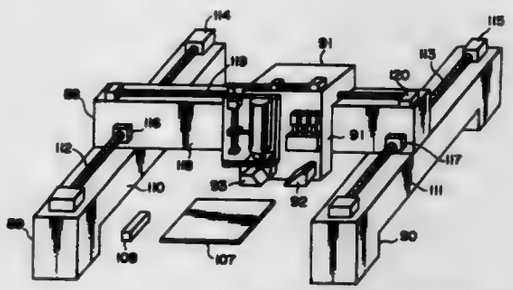
Satoru Tanaka, Kanagawa, and Kazuhide Tago, Tokyo, both of Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Aug. 16, 1991, Ser. No. 745,705

Claims priority, application Japan, Aug. 22, 1990, 2-220840; Nov. 20, 1990, 2-314864

Int. Cl.[5] H05K *3/30*

U.S. Cl. 29—721 3 Claims



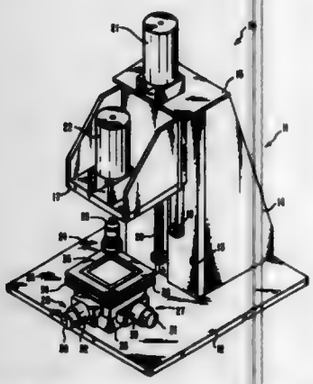
1. In a mounting apparatus for mounting an electronic part on a circuit board, the improvement which comprises a mounting head, a part attracting nozzle mounted for movement in a vertical direction on said mounting head for attracting thereto an electronic part to be mounted on said circuit board, image pickup camera means mounted in parallel to said part attracting nozzle on said mounting head, and a mirror unit mounted for horizontal movement between at least first and second horizontal positions and including a plurality of reflecting mirrors disposed in opposing relationship to a lower end of said part attracting nozzle and a lower end of said camera means, wherein first and second reflecting mirrors of said plurality in said first horizontal position of said mirror unit define a first light path along which an image of a reference mark on said circuit board is transmitted to said camera means and wherein third and fourth reflecting mirrors of said plurality in said second horizontal position of said mirror unit define a second light path along which an image of an electronic part attached to said part attracting nozzle is transmitted to said camera means, wherein said mirror unit is moved to said first horizontal position when said part attracting nozzle operates to attract an electronic part thereto and also to mount the thus attached electronic part on said circuit board.

5,172,469

ADVANCED PART REMOVAL AND TORQUE SHEAR STATION

Edward J. Onda, Hermosa Beach, and Craig S. Iwami, Dana Point, both of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed May 8, 1991, Ser. No. 698,747
Int. Cl.[5] H05K *13/04*
U.S. Cl. 29—762 15 Claims



1. Apparatus for removing a semiconductor device from a substrate, said apparatus comprising:

means for positioning and securing a substrate having a part to be removed;

a thermode positionable along a vertical axis above said semiconductor device to be removed;

a first drive means coupled to said thermode for selectively causing precise vertical movement thereof;

a second drive means coupled to said thermode for selectively causing precise rotational movement thereof; and

control means coupled to said first and second drive means for controlling the precise vertical movement and precision rotational movement of said thermode.

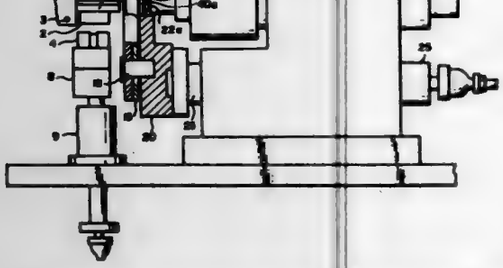
METHOD OF AND APPARATUS FOR SHAPING FILM CARTRIDGE

Haruo Ichikawa; Saupei Iida, and Koichi Takahashi, all of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Continuation of Ser. No. 456,205, Dec. 20, 1989, abandoned, which is a continuation of Ser. No. 278,864, Dec. 2, 1988, abandoned, which is a division of Ser. No. 154,255, Feb. 10, 1988, abandoned. This application Feb. 4, 1991, Ser. No. 651,000
Claims priority, application Japan, Feb. 1, 1987, 62-29235
Int. Cl.[5] B23P *19/00*
U.S. Cl. 29—806 1 Claim



1. A film cartridge-producing apparatus for shaping a shell plate into a hollow cylindrical shell and for mounting a cap on an end of the shell all at a single station, comprising, at a single station:

a mandrel having a substantially perfectly circular cross section with a flat top portion;

a shaping device which has a means for bending said shell plate around said mandrel so as to form said shell plate into a substantially cylindrical hollow shell having an opening and which is movable toward the mandrel to bend the shell plate around the mandrel;

a capping-and-clinching device which is movable toward the mandrel to mount the cap on the hollow cylindrical shell on the mandrel and to clinch the cap to the hollow cylindrical shell while grasping the hollow cylindrical shell from outside the hollow cylindrical shell, wherein said capping-and-clinching device includes:

chuck halves for grasping the hollow cylindrical shell;

a cap-guiding means for positioning the cap with respect to both radial and axial directions of the mandrel;

a cap-conveying means by which the cap is supplied to said cap-guiding means at the side opposite to the mandrel;

and a clinching means which, after the cap reaches the end of the cap-conveying means, inserts the cap into the hollow cylindrical shell via the cap-guiding means and, after the cap stops at a predetermined position, deforms the cap from inside of the hollow cylindrical shell into contact with an inner surface of said hollow cylindrical shell, thus enabling said chuck-halves to hold the cap, by grasping the hollow cylindrical shell into which the cap is located, from outside the hollow cylindrical shell and prevent the cap from deforming during clinching;

first relative motion maintaining means for maintaining the relative motion between said mandrel and said shaping device during the cylindrical shaping of said shell plate around said mandrel in such a way that said shaping device moves toward said mandrel while said mandrel remains stationary as compared to the moving shaping device; and

second relative motion maintaining means for maintaining the relative motion between said mandrel and said capping-and-clinching device during the mounting of said cap in such a way that said capping-and-clinching device moves towards said mandrel while said mandrel remains stationary as compared to the moving capping-and-clinching device.

5,172,471

METHOD OF PROVIDING POWER TO AN INTEGRATED CIRCUIT

Chin C. Huang, San Jose, Calif., assignor to VLSI Technology, Inc., San Jose, Calif.

Filed Jun. 21, 1991, Ser. No. 718,524
Int. Cl.[5] H05K *3/34*
U.S. Cl. 29—840 6 Claims

1. A method of providing power to an integrated circuit, comprising the steps of:

forming an insulating layer on at least a portion of a semiconductor die, on which integrated circuit elements and a plurality of wirebonding pads are formed;

forming a power-distribution conducting layer on said insulating layer, said conducting layer formed to have lateral dimensions significantly greater than the line width of a signal conductor formed on said semiconductor die, forming said conducting layer as a single conducting region, which is connected to one or more wirebonding pads on said semiconductor die, which extends over a substantial area of the semiconductor die, and which has an inductance significantly less than the inductance of one of said signal conductors, said conducting layer providing a connection for a first voltage reference source to a first selected region of said integrated circuit;

mounting the semiconductor die in a wirebond package, which has external connection pins mounted thereto; and

electrically connecting the external connection pins of said wirebonding package to selected ones of said wirebonding pads by connecting including bonding wires to wirebond pads on said semiconductor die.

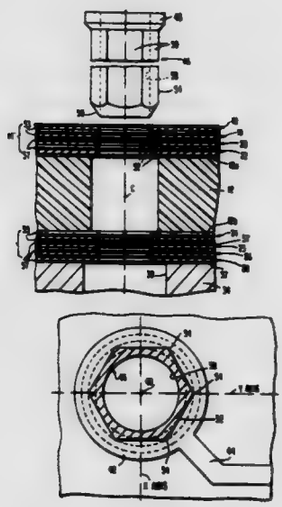
MULTI-LAYER RIGID PROTOTYPE PRINTED CIRCUIT BOARD FABRICATION METHOD

Frederick H. Lisdner, Canaan, and Paul A. Duncanson, Franklin, both of N.H., assignors to Direct Imaging Inc., West Lebanon, N.H.

Filed Aug. 15, 1991, Ser. No. 745,314
Int. Cl.[5] H01R *9/14*
U.S. Cl. 29—845 13 Claims



1. A method of completion of electrical connections between a plurality of conductor tracks, respectively, on a stacked array of multi-layer flexible films mounted to at least one face of a printed circuit board planar substrate having at least one through-hole passing through said core comprising:

drilling a hole through said stacked flexible films at the common location of several overlying conductor tracks of different layers of a diameter less than that of the diameter of the through-hole within said substrate core and aligned with said through-hole to form a cantilever edge portion over the substrate core through-hole,

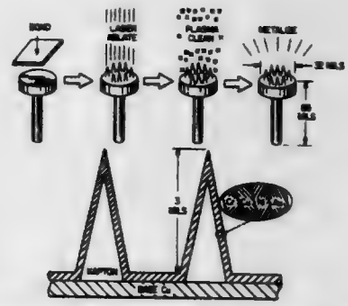
passing a conductive through-hole connector pin through said aligned holes of said flexible film array and said substrate core, said pin having at least one radially outward projecting diameter sharp edge portion having a radius in excess of the radius of the hole through said stacked multilayer flexible film array but less than the radius of the hole within said substrate core, such that said at least one radial projection sharp corner cuts into the overlying conductor tracks for said multi-layer flexible film array and deflects and deforms the cantilever edge portion of the multi-layer flexible film in the direction of pin insertion into the substrate hole to effect a low impedance conductor track-to pin-to conductor track electrical connection for a plurality of the films of the stacked array upon penetration of the through-hole connector pin through said aligned holes.

5,172,473

METHOD OF MAKING CONE ELECTRICAL CONTACT

Francis C. Burns, Apalachin; John J. Kaufman, Windsor; David E. King, Endicott, and Alan D. Knight, Newark Valley, all of N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Division of Ser. No. 520,335, May 7, 1990, Pat. No. 5,118,299. This application Sep. 25, 1991, Ser. No. 765,299
Int. Cl.[5] H01R *43/00*
U.S. Cl. 29—885 10 Claims



1. A method of making an electrical contact, said method comprising the steps of:

providing a metallic element having a conductive surface thereon;

applying a film of laser removable polymer having a predetermined thickness onto said conductive surface of said metallic element;

aligning a mask relative to said polymer film to mask at least one selected area within said polymer film against laser light;

directing laser light through said mask to remove portions of said polymer not masked by said mask and to define at least one sharply domed conical projection within said selected area within said polymer; and

depositing a substantially continuous electrically conductive coating on said sharply domed conical projection and said conductive surface thereabout.

5,172,474

METHOD OF CUTTING A HELICAL CUT SEAL

Ronald C. Kurkowski, Farmington Hills, Mich., assignor to Charleron Enterprises, Inc., Southfield, Mich.

Continuation-in-part of Ser. No. 467,448, Jan. 19, 1990, Pat. No. 5,087,057. This application Feb. 10, 1992, Ser. No. 833,535
Int. Cl.[5] B23D *5/00*
U.S. Cl. 29—888.3 4 Claims

1. A method of cutting a ring seal having an axis, an inner circumference about said axis, an outer circumference about said axis, a thickness between said inner and outer circumference, and a depth extending parallel to said axis, said method utilizing a cutting tool having a generally straight cutting edge, said method comprising:

rotating the cutting edge about said axis, a projection of said cutting edge extending through said axis and being parallel thereto;

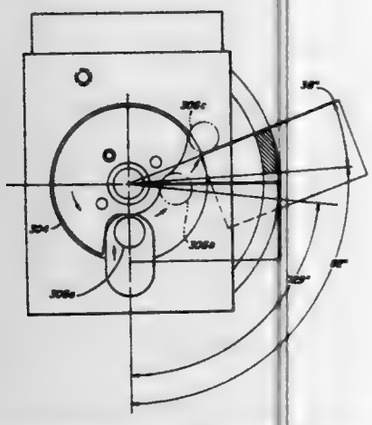
contacting said seal with said cutting edge;

cutting into said seal while perform said step of rotating the cutting edge;

traversing the cutting edge radially while performing said

steps of rotating the cutting edge and cutting into said seal; and

traversing the cutting edge across said depth while perform-



ing said steps of rotating the cutting edge, cutting into said seal, and traversing the cutting edge radially,

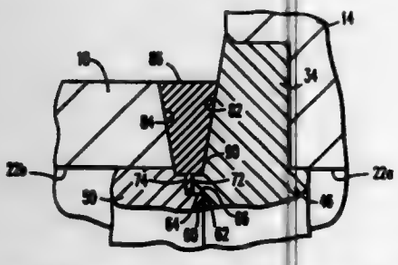
whereby each part of said cutting edge traverses a helical path.

5,172,475

METHOD FOR REPAIRING A ROTOR

Dennis R. Amos, Rock Hill, S.C., and Robert E. Clark, Orlando, Fla., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Dec. 9, 1991, Ser. No. 801,137
Int. Cl.[5] B21K *3/04*
U.S. Cl. 29—889.1 14 Claims



1. A method for repairing a rotor, comprising the steps of:

severing said rotor, at a position which is in close proximity to a crack, into at least two pieces, said pieces having a bore therethrough;

removing a portion of material including said crack from one of said pieces;

replacing said removed portion of material with weld metal;

welding a built-up portion onto a surface adjacent said bore of each of said pieces;

machining one of said built-up portions into a first mating connection and another of said built-up, portions into a second mating connection for engagement of said pieces;

positioning one of said pieces adjacent to another of said pieces engaging said first and said second mating connections for alignment of said pieces; and

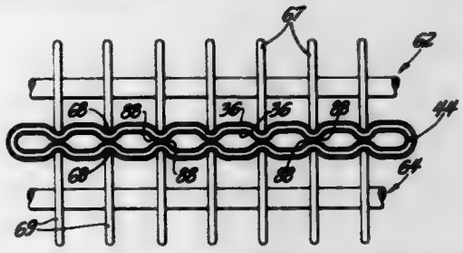
welding said pieces together with weld metal.

5,172,476

METHOD OF MANUFACTURING HEAT EXCHANGER TUBING

Shrikant M. Joshi, Cambridge, Mass., assignor to General Motors Corporation, Detroit, Mich.

Filed Aug. 14, 1991, Ser. No. 744,863
Int. Cl.[5] B23P *15/26*
U.S. Cl. 29—890.053 2 Claims



1. A method of making a tube for a heat exchanger comprising the steps of:

providing a sheet of aluminum base material, cladding said sheet of material with a coating of aluminum-silicone cladding material of a substantially constant thickness on the upper and lower sides thereof,

forming said cladded sheet into a blank having predetermined dimensions with elongated side walls,

roll forming said blank into a partial tube so that said side walls closely interface one another,

welding said interfacing side walls along the length thereof to one another to form a tube,

partially flattening said tube so that it is oval shaped substantially throughout its length in cross section with substantially flattened upper and lower sides,

forming said tube so that it has a predetermined length,

roll forming opposing flattened upper and lower side sections of said tube intermediate the ends thereof to have a plurality of generally U-shaped webs therein and that have interior apices which are closely adjacent to one another,

providing a brazing material to said interior of said tube between the adjacent apices of said channels,

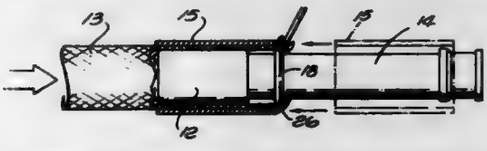
clamping said tube so that said apices are sufficiently close to one another and so that the brazing material will be effective to seal said interfacing apices to one another during a subsequent brazing operation, placing said tubes in an oven and heating said oven until said interfacing apices are brazed together to form a plurality of separate passages in said tube.

5,172,477

METHOD OF PRODUCING A FLEXIBLE HOSE ASSEMBLY FOR A MANOMETER MERCURY LINE

Benjamin H. Hadley, 692 W. 9th St., Claremont, Calif. 91711

Division of Ser. No. 461,820, Jan. 8, 1990, Pat. No. 5,069,253.
This application Sep. 20, 1991, Ser. No. 763,311
Int. Cl.[5] B23K *31/02*
U.S. Cl. 29—890.144 3 Claims



1. A method of producing a flexible hose assembly for a mercury line for a manometer, including the steps of:

cutting a length of convoluted helical hose;

axially compressing a plurality of convolutions of said hose at one end thereof such that said compressed convolutions are in contact with each other;

placing an inner sleeve over said hose and said hose end;

welding an end of said inner sleeve to said hose end, thereby producing a first weldment;

providing a hose fitting having a fitting end and a welding section spaced from said fitting end;

welding said fitting end of said hose fitting to said first weldment, thereby producing a second weldment;

placing a braid over said hose and said inner sleeve;

placing an outer sleeve over said braid, said inner sleeve, and said hose end; and

welding an end of said outer sleeve to an end of said braid and to said fitting weld section.

5,172,478

Patent Not Issued For This Number

5,172,479

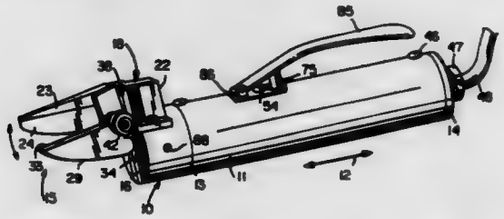
PNEUMATIC SCISSORS

J. Herbert Keeton, c/o P.O. Box 296, 747 Meader St., Campbellsville, Ky. 42719

Continuation-in-part of Ser. No. 701,075, May 16, 1991. This application Sep. 11, 1991, Ser. No. 757,630

Int. Cl.[5] B26B *15/00*

U.S. Cl. 30—228 **21 Claims**



14. A hand held powered readily maneuverable, lightweight scissors-action cutter, dimensioned and constructed to be held in a human hand, and comprising:

an elongated casing, having a first end, and a second end opposite said first end in the dimension of elongation of said casing, and having a largest cross-sectional dimension of less than about one and one-half inches;

a stationary substantially planar cutting blade mounted on said casing and extending outwardly from said first end thereof, generally in said dimension of elongation, and having a free end most remote from said casing, and a first thickness;

a movable cutting blade having an actuating extension and having a second thickness significantly greater than said first thickness so that said movable blade does not deflect as easily as said stationary blade;

means for operatively mounting said movable cutting blade to said casing, and for movable movement about an axis generally perpendicular to the dimension of elongation of said casing, and for movement with respect to said stationary blade so that a scissors like cutting action is provided thereby;

powered means mounted within said casing, and having an actuating element thereof in operative engagement with said movable blade actuating extension;

actuator means mounted on said casing engageable by a human hand, and mounted in association with said powered means so that movement of said actuator means into an actuating position effects movable movement of said movable blade to effect cutting action as long as said actuator means is maintained in an actuating position; and

means for deflecting said stationary blade out of plane so that said free end thereof is biased toward said plane of movement of said movable blade.

5,172,480

BOREHOLE DEVIATION MONITOR

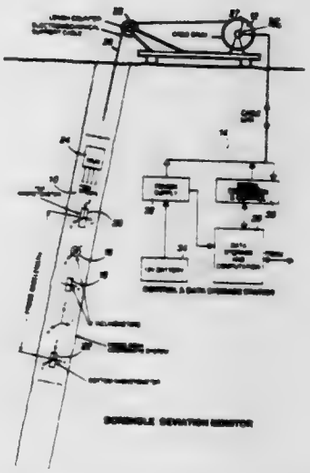
Vladimir M. Labuc, Hudson; Michel Hamelin, Pointe-Claire; David Sprott, Ile Bizard, and Patrick Andrieux, Pierrefonds, all of Canada, assignors to Noranda Inc., Toronto, Canada

Filed Aug. 28, 1991, Ser. No. 755,499

Claims priority, application Canada, Aug. 31, 1990, 2024429

Int. Cl.[5] E21B *47/022*

U.S. Cl. 33—304 **6 Claims**



1. A borehole deviation monitor comprising:

a) a probe body adapted to be lowered in a borehole and including two inclinometers mounted in an orthogonal configuration to provide simultaneous X and Y axis inclination signals indicating the dip angle of the borehole with respect to the vertical and two triaxial magnetometers to provide reference signals indicating the azimuth angle of the borehole, said magnetometers being separated by a predetermined distance along the axis of the probe;

b) a cable takeup winch mechanism including means to lower the probe body into the borehole by successive incremental distances equal to the distance between the two magnetometers; and

c) a control and data storage station connected to the two inclinometers and magnetometers for reading and storing the data collected at each incremental position of the probe and including means for correcting the azimuth reading given by the top magnetometer at any given position of the probe by subtracting therefrom any difference in readings between the two magnetometers at the previous position of the probe.

5,172,481

ELECTRONIC INCLINOMETER

Colin P. Wiseman, Cogenhoe; Paul T. Ryan, Over, and Charles W. Wyatt-Millington, Perry, all of United Kingdom, assignors to The Stanley Works, New Britain, Conn.

PCT No. PCT/GB87/00042, § 371 Date Mar. 14, 1990, § 102(e) Date Mar. 14, 1990, PCT Pub. No. WO87/04515, PCT Pub. Date Jul. 30, 1987

PCT Filed Jan. 23, 1987, Ser. No. 223,240

Claims priority, application United Kingdom, Jan. 23, 1986, 8601586

Int. Cl.[5] G01C *9/06*

U.S. Cl. 33—366 **25 Claims**

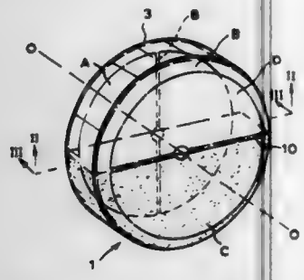
1. A sensor for an inclination measuring device comprising:

a capsule part-filled with a liquid,

first electrode means comprising first and second electrodes disposed within the capsule, the relative degree of immersion of the first and second electrodes in the liquid being indicative, within a first angular range, of the angle of

inclination of the capsule both about a reference axis and relative to a first reference angle.

second electrode means comprising third and fourth electrode disposed within the capsule, the relative degree of immersion of the third and fourth electrodes in the liquid being indicative, within a second angular range, of the angle of inclination of the capsule both about the reference axis and relative to a second reference angle different from the first reference angle; and



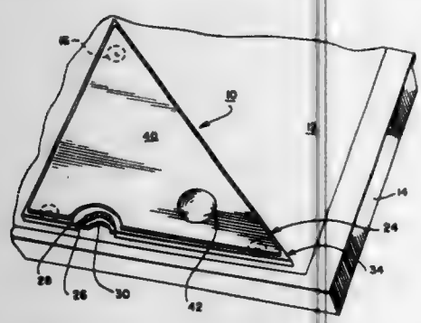
the first and second electrode means being arranged so that any angle of inclination of the capsule about the reference axis is included within at least one of the first and second ranges and the first and second reference angles are those at which the electrodes of the first and second electrode means, respectively, are substantially equally immersed in the liquid.

5,172,482

DRAWING INSTRUMENT

Cynthia E. Coleman, New York, N.Y., assignor to Align Incorporated, New York, N.Y.

Filed Jan. 29, 1992, Ser. No. 827,331
Int. Cl.[5] B43L *7/04*
U.S. Cl. 33—449 **11 Claims**



1. A drawing instrument comprising:

an instrument body,

a rolling member adapted for supporting said body on a drawing surface,

means mounting said rolling member on said body for relative movement to and from the body between respective rolling and locked positions of the member projecting from the body,

resilient means on said body yieldingly constraining said rolling member in said rolling position,

said resilient means yielding for relative movement of the rolling member into said locked position upon application of pressure to said body in the direction of such drawing surface, and comprising also

frictional braking means on said body engaging said rolling member in said locked position,

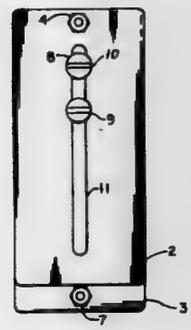
whereby the instrument may be moved relatively on a drawing surface on which said body is supported with said rolling member in said rolling position and rendered substantially immobile with the rolling member in said locked position, while said instrument body remains in spaced apart relation to the drawing surface.

5,172,483

OUTLET BOX LOCATOR

Thomas F. Yocono, Sr., P.O. Box 84, and Thomas F. Yocono, Jr., P.O. Box 65, both of Munsonville, N.H. 03457

Filed Jan. 23, 1992, Ser. No. 824,079
Int. Cl.[5] G01B *5/14*
U.S. Cl. 33—528 **6 Claims**



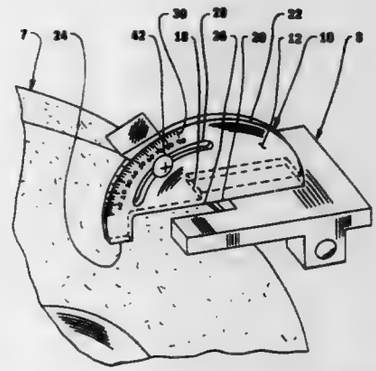
1. A device for locating an access hole to an electrical outlet box sealed behind a covering panel, and comprising in combination a two piece adjustable bracket comprising a first plate and a second plate, slidably mounted to one another, and locator and marking pins carried on each plate, and extending normally therefrom from both sides of said plate, whereby to permit adjustment of spacing of both the locator and marking pins.

5,172,484

ANGLE MEASURING DEVICE FOR PERIPHERAL GRINDING WHEELS WITH TOOL RESTS

Thomas Triola, 1210 Tumbleweed St. NE., Uniontown, Ohio 44685

Filed May 16, 1991, Ser. No. 701,471
Int. Cl.[5] B27G *23/00*
U.S. Cl. 33—534 **16 Claims**



1. A separate measuring device to define the angular relationship between a peripheral grinding wheel and it's tool rest in a vertical plane comprising:

A) in combination, a flat body plate with angle indicating means having a base edge of said plate colinear with a center point of said angle indicating means, and

B) a base flange perpendicular to said flat plate and having a pivot edge perpendicular to said base edge and coincident with said center point, and

C) an indicator having the indicator edge perpendicular to

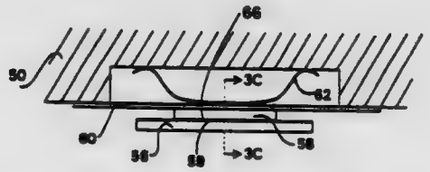
said flat plate and parallel to said pivot edge with said indicator edge longer than the thickness of said flat plate and secured to said flat plate with fastening means.

5,172,485

PRECISION LINEAR MEASURING SUSPENSION SYSTEM HAVING SLIDING CONTACT BETWEEN THE SCALE AND THE PICK-OFF

Gregory J. Gerhard, Seattle, and Kim W. Atherton, Kirkland, both of Wash., assignors to Mitutoyo Corporation, Tokyo, Japan

Filed Oct. 17, 1991, Ser. No. 778,002
Int. Cl.[5] G01B 7/02
U.S. Cl. 33—706 30 Claims



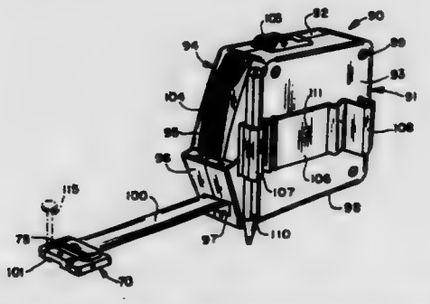
1. A linear measuring apparatus comprising:
a housing;
a scale slidably mounted within said housing so that said scale can move in an axial direction;
a pick-off body coupled to said housing, said pick-off body having a front surface retained in sliding contact with said scale, said pick-off body including a sensor for measuring movement of said scale with respect to said pick-off body; and
a spring assembly coupled to said pick-off body and to said housing and resiliently biasing said pick-off body into abutting contact with said scale as said scale slides on a surface of said pick-off body, said spring assembly restraining movement of said pick-off body in said axial direction while permitting movement normal to said axial direction so that axial movement of said scale is accurately sensed.

5,172,486

FIXTURE FOR TAPE MEASURE

Arthur Waldherr, 201 Freeport Dr., Bloomingdale, Ill. 60108

Filed Jun. 15, 1992, Ser. No. 898,686
Int. Cl.[5] B43L 9/04; G01B 3/10
U.S. Cl. 33—770 20 Claims



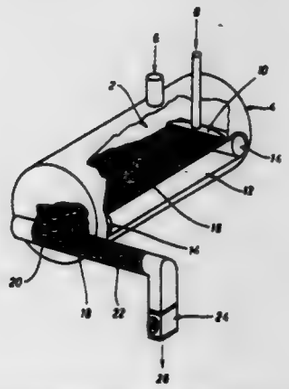
1. A fixture for use with a retractable tape measure having a tab at the end thereof perpendicular to the tape, comprising a base having opposed side walls at least one of which defines a recess for receiving the tape end tab therein, a retaining member extending over a portion of said base for frictionally retaining the tape between the base and said retaining member, and spacer means extending away from one of said side walls intermediate the tape and the surface on which the fixture rests to protect the surface when the tape and said fixture are moved therealong.

5,172,487

METHOD FOR CONTINUOUS DRYING OF A MATERIAL AND AN ASSEMBLY FOR CARRYING OUT SAID METHOD

Ole C. Hansen, and Torben Andersen, both of Nakskov, Denmark, assignors to Danisco A/S, Copenhagen, Denmark

PCT No. PCT/DK89/00066, § 371 Date Sep. 24, 1990, § 102(e) Date Sep. 24, 1990, PCT Pub. No. WO89/09373, PCT Pub. Date Oct. 5, 1989
PCT Filed Mar. 22, 1989, Ser. No. 582,202
Claims priority, application Denmark, Mar. 23, 1988, 1994/88
Int. Cl.[5] F26B 5/06
U.S. Cl. 34—5 28 Claims



1. A method for the continuous drying of a material, which comprises:
a) adjusting the temperature of the material to a value which is not injurious for the material;
b) feeding the material into a vacuum chamber,
c) moving the material through the vacuum chamber without heat being supplied to the material so as to dry the material after introduction into the vacuum chamber; and
d) removing the dried material from the vacuum chamber through an air lock,
e) wherein said material comprises a substantially particle free syrup selected from the group consisting of syrups of carbohydrate and syrups of sugar alcohol and wherein step a) comprises adjusting the temperature of the syrup to a value below the boiling point of the material at atmospheric pressure but sufficiently high of the material to be dried in step c) to an amorphous, solid product such that a phase shift of said material occurs from a liquid state to a solid state.

5,172,488

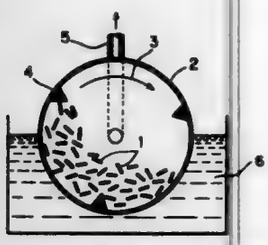
METHOD OF DRYING ELECTRONIC COMPONENTS

Masaaki Okane, and Masataka Mae, both of Kyoto, Japan, assignors to Murata Manufacturing Co., Ltd., Japan

Filed Aug. 29, 1991, Ser. No. 751,552
Claims priority, application Japan, Sep. 5, 1990, 2-236666
Int. Cl.[5] F26B 5/04
U.S. Cl. 34—15 9 Claims

1. A method of drying electronic components that have been exposed to water and are of a material that is not substantially damaged by stirring in a rotating container, comprising the steps of:
providing a container which is capable of storing a plurality of said electronic components;
introducing a plurality of said electronic components to be dried into said container; and

rotating said container so as to stir said plurality of electronic components, while decompressing said container in



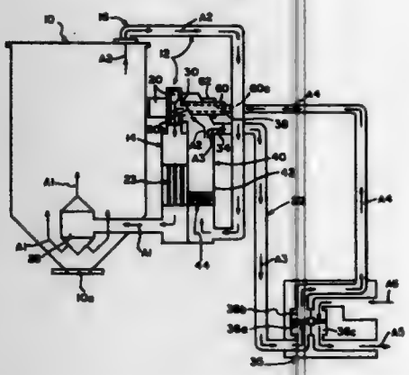
which said plurality of electronic components are contained.

5,172,489

PLASTIC RESIN DRYING APPARATUS AND METHOD

Richard W. Moller, Fenton, Mich., assignor to Hydreclaim Corporation, Fenton, Mich.

Filed Apr. 30, 1991, Ser. No. 693,717
Int. Cl.[5] F26B 3/00
U.S. Cl. 34—32 20 Claims



1. Apparatus for drying moisture-bearing particles comprising:

a. a container for holding the particles to be dried,

b. a first airflow loop communicating with the container for passing a heated airstream therethrough for heating the particles and removing moisture therefrom as a moisture-laden return airstream,

c. a plenum in communication with the first airflow loop for receiving the return airstreams,

d. a second airflow loop communicating with the plenum for receiving at least a portion of the moisture-laden airstream returned to the plenum, said second airflow loop having dryer means in communication with the first airflow loop for drying said portion of the return airstream and supplying said portion as dried air to said first airflow loop, and

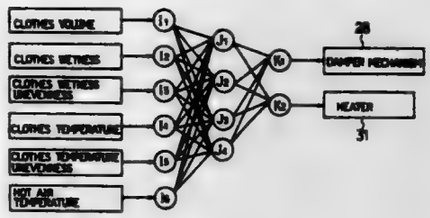
e. valve means in the plenum for controlling the volume of the return airstream that is supplied to the first airflow loop from the plenum and that is supplied to the first airflow loop via the second airflow loop after drying by said drying means.

5,172,490

CLOTHES DRYER WITH NEUROCONTROL DEVICE

Hisao Tatsumi, Nagoya; Takashi Kawano, Seto, and Noriyuke Fukuda, Tokyo, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kanagawa, Japan

Filed Dec. 5, 1991, Ser. No. 803,195
Claims priority, application Japan, Feb. 28, 1991, 3-58256
Int. Cl.[5] F26B 21/00
U.S. Cl. 34—54 5 Claims



1. A clothes dryer in which hot air induced by a heater is circulated from a drying compartment through a heat exchanger for drying clothes, comprising:

a) detecting means for detecting states of clothes to be dried and the like;

b) intake air volume adjusting means for adjusting a volume of cooling intake air supplied to the heat exchanger; and

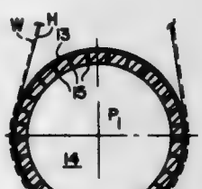
c) control means for controlling the intake air volume adjusting means by way of a neurocontrol based on the result of detection by the detecting means so that the volume of cooling intake air is adjusted.

5,172,491

METHOD AND DEVICE FOR DRAWING A WEB THROUGH A GROUP OF DRYING CYLINDERS

Heikki IlvespÄÄ, Jyväskylä; Allan Lieden, Palokka, and Olavi Viitanen, Jyväskylä, all of Finland, assignors to Valmet Paper Machinery Inc., Finland

Continuation of Ser. No. 320,985, Mar. 9, 1989, Pat. No. 5,022,163. This application Apr. 23, 1990, Ser. No. 513,223
Claims priority, application Finland, Mar. 9, 1988, 881106
The portion of the term of this patent subsequent to Jun. 12, 2007, has been disclaimed.
Int. Cl.[5] F26B 5/00
U.S. Cl. 34—115 14 Claims



1. A paper machine cylinder comprising

shafts on which the cylinder is mounted to revolve by means of bearings,

end flanges to which said shafts are respectively coupled,

a mantle connected to said flanges at ends thereof and comprising grooves on an outer face thereof,

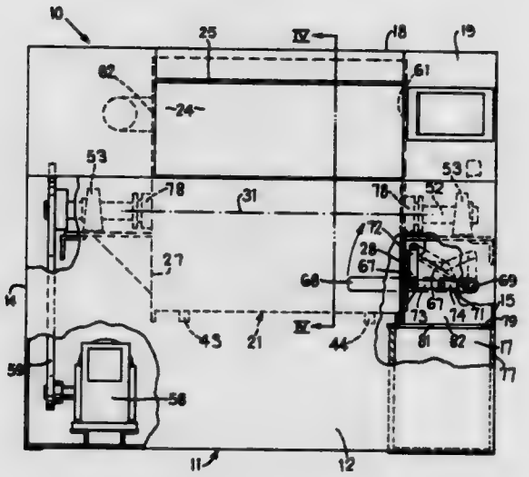
wherein said cylinder comprises holes passing through the mantle and opening, at one end thereof, into said grooves and at an opposite end thereof, into an inner space within the mantle.

5,172,492

BATCH-TYPE DRYER

Thomas W. Peterson, South Haven; John W. Vanden Bos, Holland, and David Mc Leod, Roosevelt Park, all of Mich., assignors to JWI, Inc., Mich.

Continuation of Ser. No. 267,997, Nov. 4, 1988, abandoned. This application Oct. 18, 1989, Ser. No. 423,641
Int. Cl.[5] F26B 11/12
U.S. Cl. 34—179 14 Claims



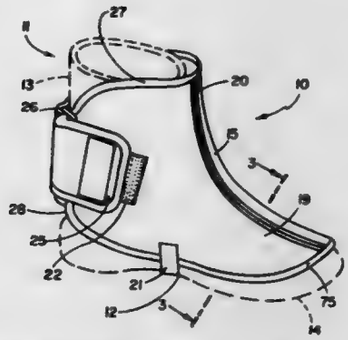
1. In a batch-type dryer, comprising a housing having a chamber structure fixed thereto and defining a channel-like drying chamber, said chamber structure including a generally horizontally elongated U-shaped sidewall extending between and fixedly connected to a pair of end walls and defining therein an upwardly-opening drying chamber, said U-shaped sidewall including an arcuate bottom wall part which is of uniform radius generated about a substantially horizontal axis, said arcuate bottom wall part extending through an angle of about 180° and being disposed entirely below a diametrical plane which contains said axis, said U-shaped sidewall also including generally parallel first and second sidewall parts which are joined to side edges of said arcuate bottom wall part and which project upwardly away from said diametrical plane in generally perpendicular relationship thereto, said sidewall parts having upper edges which define an opening therebetween for depositing material into said chamber, cover means movable mounted on said housing for closing off said opening, rotor means disposed within said chamber for rotation substantially about said axis to agitate the material within said chamber, and a heat means associated with at least said arcuate bottom wall part, the improvement wherein said housing includes wall means cooperating with one said end wall for defining a closed interior compartment, said one end wall having a discharge opening therein for permitting communication between said interior compartment and said drying chamber at a lowermost point therein, door means movably mounted relative to said chamber structure for selectively opening and closing said discharge opening, said wall means including a bottom wall having opening means therethrough for permitting discharge of dried material downwardly therethrough through when said door means is opened, and upwardly-opening receptacle means removably positioned beneath the opening means in said bottom wall for receiving the dried material, said receptacle means having a top edge which is disposed in substantial sealing engagement with said bottom wall for confining dust within said interior compartment.

5,172,493

PROTECTIVE COVER FOR SHOES, BOOTS AND THE LIKE

Vincent Diaz, Hanover, Pa., assignor to AT & S Specialties, Inc., Baltimore, Md.

Continuation of Ser. No. 445,788, Nov. 29, 1989, abandoned. This application Aug. 12, 1991, Ser. No. 746,054
Int. Cl.[5] A41D 17/00
U.S. Cl. 36—2 R 17 Claims



1. A flexible protective cover to protect feet, shoes or boots having an arch, a back, a sole, a heel, an outer side, an inner side and an instep, the protective cover comprising:

a multiple layer fabric body which, when folded, is contoured as a curve to conform to the instep of the shoe and extend to the ankle, the folded body extending from the instep of the shoe, on both the outer side and the inner side of the shoe, downwardly to the sole of the shoe and backwardly to the back of the shoe;

releasable means for securing the folded body around the arch of the shoe;

the multiple layer fabric body, when folded, further having a first side and a second side, each side having a respective upper portion and a respective lower portion, the upper portion of each side curving downwardly toward the back of the shoe, the lower portion of each side curving upwardly toward the back of the shoe; a tab extending outwardly from the first side of the fabric body beyond the back of the shoe, the tab extending substantially continuously from the upwardly curved portions to the downwardly curved portions of the sides of the body; means for connecting the tab to the second side of the fabric body around the back of the shoe and folding the tab back to connect the tab to the first side of the fabric body such that the folded body is secured around the back of the shoe.

5,172,494

FOOT CUSHIONING DEVICE

Murray R. Davidson, P.O. Box 759, San Marcos, Calif. 92069

Filed May 31, 1991, Ser. No. 708,238
Int. Cl.[5] A43B 7/32, 21/32
U.S. Cl. 36—35 R 7 Claims

1. A foot cushioning and shock absorbing device comprising:

(a) a resilient body member having an upper surface and a lower surface, the body member being generally configured to be worn at least on the heel portion of the foot and being receivable in footwear;

(b) primary shock absorbing means extending from the outer surface of the body member at least in an area corresponding to the weight-bearing portion of the heel of the foot, said primary shock absorbing means comprising first and second ribs intersecting and interconnecting to form a plurality of first sections having a predetermined first height which will absorb initial shock loads imposed by the foot by deflection and deformation of said primary shock absorbing means; and

(c) secondary shock absorbing means extending from the outer surface of the body, said secondary shock absorbing means comprising third and fourth ribs intersecting and interconnected to one another and connected to at least selected of said first sections, said third and fourth ribs having a predetermined second height less than the first height of said first and second ribs, said secondary shock absorbing means being resilient members providing resistance to loads at predetermined higher loads above said initial loads whereby said primary and secondary shock absorbing means cooperate to absorb shock forces imposed on the foot and exhibit a non-linear force displacement behavior at predetermined load levels.

5,172,495

SHOE LINING

Jurgen Fehlhaber, Gorxheimertal; Ernst Fehr, Laudenbach, and Dieter Groltzsch, Hirschberg/Leutershausen, all of Fed. Rep. of Germany, assignors to Firma Carl Freudenberg, Weinheim, Fed. Rep. of Germany

Filed Jul. 5, 1990, Ser. No. 548,078

Claims priority, application European Pat. Off., Dec. 9, 1989, 89122731.6

Int. Cl.[5] A43B *23/07*

U.S. Cl. 36—55 **13 Claims**

1. A multi-ply fabric shoe liner comprising a first ply of bonded wear resistant fabric on a foot contacting side; having a second moisture absorbent ply of bonded nonwoven fabric comprised of thermoplastic synthetic fibers and cellulosic fibers adhered thereto on a side opposing the foot contacting side.

5,172,496

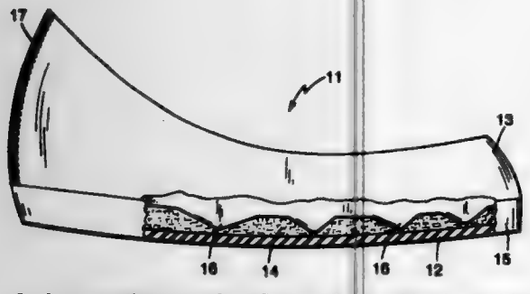
SPIKED SHOE COVERING

Frank J. Vemi, 421 W. Ave. I, Lancaster, Calif. 93534

Filed Sep. 25, 1989, Ser. No. 412,084

Int. Cl.[5] A43B *1/10, 5/00*

U.S. Cl. 36—135 **3 Claims**



1. A protective overshoe for use in combination with a sports shoe having spiked members extending downward from a sole section of said sports shoe comprising:

a hard outer sole;

a soft inner sole having an upper surface and a lower surface and formed with openings to accommodate each spiked member, said inner sole being thick enough so that said spiked members do not pierce said hard outer sole;

a flexible upper portion affixed to said outer sole;

said inner sole being inside said upper portion and seated with said lower surface on said outer sole;

said overshoe being detachably securable to said sports shoe in surrounding relationship with said spiked members seated in said openings,

wherein said inner sole upper surface is formed with transverse V-shaped grooves.

5,172,497

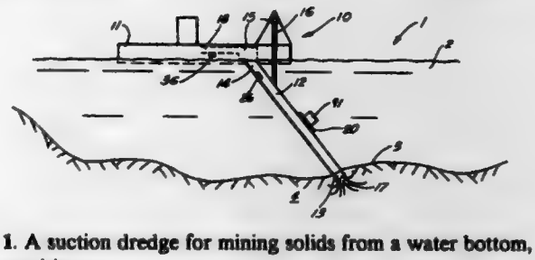
SLURRY DENSITY CONTROL SYSTEM

Stephen C. Lemonds, Gretna; Huey Legendre; Randy L. Steed, both of Marrero, all of La., and Virgil H. Thomas, Jacksonville, Fla., assignors to Lor, Inc., Atlanta, Ga.

Filed Oct. 25, 1991, Ser. No. 782,517

Int. Cl.[5] E02F *3/88*

U.S. Cl. 37—59 **15 Claims**



1. A suction dredge for mining solids from a water bottom, comprising:

(a) a floating barge;

(b) an elongated tubular suction line extending between the barge and the water bottom;

(c) boom means for raising and lowering the elongated tubular suction line:

(d) a valve means in the elongated tubular suction line for allowing water to enter the elongated tubular suction line;

(e) dredge pump means for causing solids to be drawn upward from the water bottom, through the elongated tubular suction line, to the floating barge, the dredge pump means having a cavitation level at which the vacuum level is so high that the dredge pump means ceases to pump; and

(f) automatic control means for controlling the degree of opening of the valve means, the automatic control means allowing just enough water to mix with the solids such that the dredge pump means is maintained substantially at but below the cavitation level, the automatic control means including measuring means for measuring the vacuum level of the dredge pump means, and causes the valve means to open more as the vacuum level rises and to close more as the vacuum level drops.

SHOVEL FOR EARTHMOVING EQUIPMENT

Helmut Wack, Am Langen Zaun Nr. 7, D-6653 Bliesakstel, Fed. Rep. of Germany

Filed Jul. 17, 1991, Ser. No. 731,668

Claims priority, application Fed. Rep. of Germany, Feb. 18, 1991, 4104950

Int. Cl.[5] E02F *3/40*

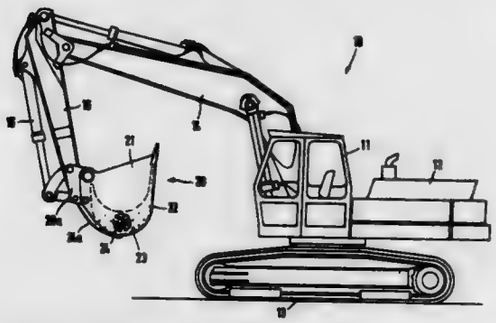
U.S. Cl. 37—103 **17 Claims**

1. Shovel for earthmoving equipment, the shovel comprising:

two side walls;

a shovel bottom located between the side walls and interconnecting said side walls;

a lattice grating forming at least a portion of the shovel bottom;



at least one vibration damper mounted on one end to said lattice grating and on the other end to respective side walls of the shovel; and

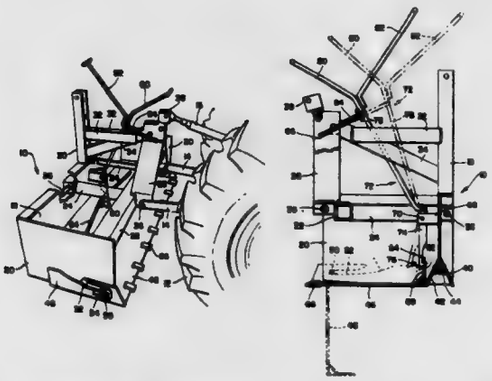
a vibrator for vibrating the lattice grating.

5,172,499

COMBINATION SCRAPER/LOADER

John Griffin, Monroe, N.C., assignor to Gill Industries, L.P., Charlotte, N.C.

Filed Jun. 25, 1991, Ser. No. 720,606
Int. Cl.[5] E02F 3/76
U.S. Cl. 37—117.5 20 Claims



1. Apparatus for attachment to a vehicle having a three-point hitch and used to scoop, dig, scarify, scrape and/or load dirt, such apparatus comprising:

(a) a box member having two spaced parallel side walls open at one end thereof and a back wall extending between said side walls at the other end thereof to form a generally rectangular container for dirt;

(b) a generally flat bottom wall extending between said side walls and having a bound edge thereof located at said one open end of said side wall, said edge being formed for scooping or digging dirt;

(c) pivot means connecting said bottom wall to said box member to permit selective movement of said bottom wall between a closed position at which it extends between said side walls to form a bottom of said box member and at which said formed edge is adjacent said one open end of said box member and an open position at which it opens the area between said side walls to release dirt contained in said box member, said pivot means including means for detaching said bottom wall from said box member at the point where said bottom wall is connected to said box member;

(d) operating means operable between a first position holding said bottom wall at said closed position thereof with respect to said side walls and a second position to release said bottom wall and permit it to assume said open position thereof; and

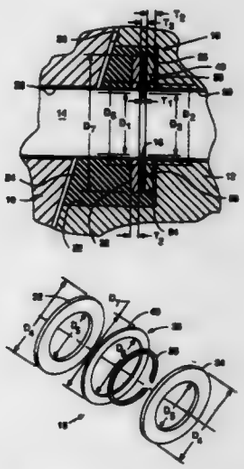
(e) first mounting means adapted for mounting said box member to said three-point hitch of said vehicle to permit movement of said box member between a lower position at which said bottom wall edge engages the ground and said bottom wall is slanted upwardly therefrom, and a raised position at which said bottom wall is above the ground and slanted downwardly from said edge so as to retain dirt in said box member until said operating means is operated to said second position thereof.

5,172,500

PIN RETAINER ASSEMBLY

William J. Reuski, Peoria, and Preston L. Gale, Morton, both of Ill., assignors to Caterpillar Inc., Peoria, Ill.

Filed Feb. 21, 1992, Ser. No. 838,012
Int. Cl.[5] E02F 9/28
U.S. Cl. 37—142 A 22 Claims



1. A pin retainer assembly adapted when in use to fit in a space between a tooth and an adapter nose and operative to retain a pin in a position which secures the tooth to the adapter nose, the pin defines a groove therein having a predetermined diameter, the pin retainer assembly comprising:

a split retaining ring having a predetermined thickness, a predetermined uniform outermost diameter extending substantially about the circumference, and a predetermined uniform innermost diameter extending substantially about the circumference which is generally the same size as the predetermined diameter of the groove defined in the pin and when assembled the split retaining ring fits into the groove of the pin;

at least two retaining members each being immediately adjacent the split retaining ring and having a predetermined innermost diameter less than the predetermined outermost diameter of the split retaining ring and a predetermined outermost diameter greater than the predetermined outermost diameter of the split retaining ring and being operative to loosely encapsulate the split retaining ring therebetween; and

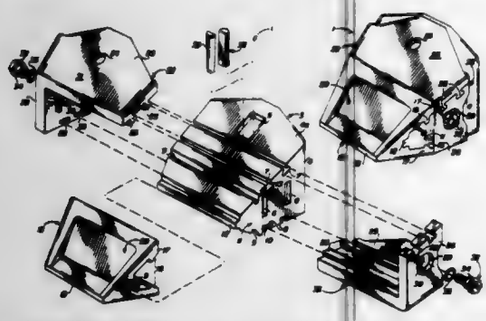
means for connecting the at least two retaining members together.

5,172,501

TOOTH ASSEMBLY FOR EXCAVATING APPARATUS

Sherlock K. Pippins, 306 Rebecca Cir., Longview, Tex. 75601

Continuation-in-part of Ser. No. 541,599, Jun. 21, 1990, abandoned. This application Oct. 15, 1991, Ser. No. 777,601
Int. Cl.[5] E02F 9/28
U.S. Cl. 37—142 R 20 Claims



1. A tooth assembly for mounting on a tooth horn of an excavating apparatus, comprising wedge-shaped adapter means adapted for mounting on the tooth horn; a pair of first slot means provided in said adapter means in transverse relationship with respect to the longitudinal axis of said adapter means; point means having a pair of spaced point flanges adapted for slidably and transversely engaging said first slot means and removably mounting said point means on said adapter means; point bolt means adapted for bolting said point means to said adapter means; second slot means provided in said adapter means in spaced, substantially parallel relationship with respect to said first slot means; a pair of wear cap means having wear cap ribs adapted for engaging said second slot means and removably mounting said wear cap means on said adapter means adjacent to said point means; and wear cap bolt means adapted for bolting said wear cap means to said adapter means, whereby said point means and said wear cap means may be transversely slidably removed from said adapter responsive to removal of said point bolt means and said wear cap bolt means, respectively.

5,172,502

FLATWORK FEEDER HAVING FLATWORK SENSING AND CLAMPING STATIONS

Kazimir Kober, Niles, Ill., assignor to Chicago Dryer Company, Chicago, Ill.

Filed Jun. 21, 1991, Ser. No. 719,253
Int. Cl.[5] D06F 67/04
U.S. Cl. 38—7 10 Claims

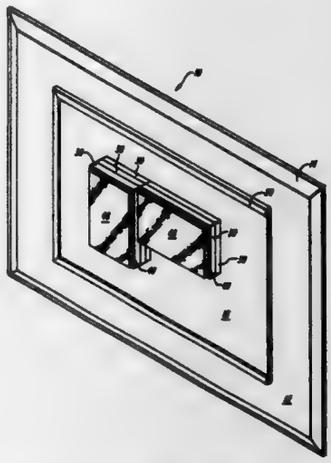
1. A feeding aid for laundry flatwork comprising at least two clamping stations; a laundry flatwork feeding conveyor disposed beneath said clamping stations for feeding flatwork into engagement with laundry processing means; means associated with said feed conveyor for actuating said conveyor into alternate stop and moving conditions; each clamping station having a clamping element comprising a shoe for slidably engaging flatwork disposed on said conveyor and movable from a retracted position above said conveyor to a lowered clamping position in which said element is biased against said conveyor; means for lowering said clamping element into the lowered clamping position when laundry flatwork is disposed beneath said clamping element; said feed conveyor being in the stop condition when at least one of said clamping elements is in the retracted position; and means for placing the conveyor actuating means in the conveyor moving condition after clamping elements of said at least two clamping stations are in the lowered clamping position.

5,172,503

DISPLAY UNIT HAVING VERTICAL RELIEF

Mark Dane, Sharon, Mass.; Peter C. Sewell, Vancouver, and Grant S. Burson, Victoria, both of Canada, assignors to Photoscape, Inc., Sharon, Mass.

Continuation-in-part of Ser. No. 583,213, Sep. 14, 1990, abandoned. This application Feb. 20, 1991, Ser. No. 658,181
Int. Cl.[5] G09F 7/04
U.S. Cl. 40—600 15 Claims



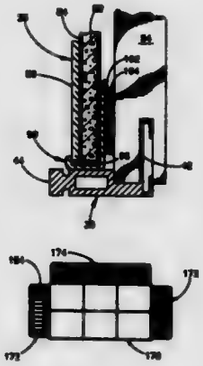
1. A display unit for exhibiting display material comprising:
a unitary base, at least partially formed of metal, and having means for securing said base against a flat surface;
a plurality of spacer elements removably securable to one another in stacked relation on said base, each of said spacer elements comprising:
a body member capable of receiving another of said spacer elements in stacked relation; and
magnetic means, coupled to said body member, for selectively removably securing said body member to other adjacent ones of said spacer elements and said base;
means for mounting display material within the body member of at least one of said spacer elements;
a substantially rigid, transparent window member removably securable to the body member of said one spacer element and substantially covering said display material, said window member having a generally planar upper surface; and
means for frictionally retaining said window member within said body member, said retaining means permitting the removal of said window member by application of force in a direction generally perpendicular to said planar upper surface thereof.

5,172,504

FRONT-MOUNT GRID DISPLAY HAVING TRIM STRIPS AND HOOK AND LOOP

H. Thomas De Mast, Holland, and H. Jay Schoeppe, II, Hudsonville, both of Mich., assignors to Grid-Graphics Services Corporation, Grand Rapids, Mich.

Filed Feb. 8, 1991, Ser. No. 652,800
Int. Cl.[5] G09F 7/00
U.S. Cl. 40—605 4 Claims



1. A front-mount grid display comprising:

a grid frame including a plurality of frame members joined in assembled relationship to define a plurality of grid openings, each frame member having a rearward base disposed generally in a plane defining the rear of the grid display and a forwardly extending leg;

a plurality of frame connectors disposed at the intersections and junctures of said frame members having means for engaging the bases of adjacent frame members and holding said frame members in assembled relationship, each of said frame connectors having a forwardly directed pad surface extending inwardly beyond said bases into the grid opening defined by said adjacent frame members;

a plurality of hook or loop fabric fastener elements each adhered to one of said frame connector pad surfaces; and

a plurality of preassembled display panels, each of said display panels removably carried in one of said grid openings, each of said display panels including:

a board having spaced apart front and rear faces and peripheral edges,

a plurality of trim strips, each of said trim strips adhered to one of said board edges and including an outer leg extending generally parallel to said board edge and a lip extending inwardly from the forward edge of said outer leg and overlying the perimeter of the front face of said board, said trim strips lying adjacent the forwardly extending legs of said frame members defining the grid opening in which the display panel is installed, and

a plurality of hook or loop fabric fastener elements each adhered to the rear of the display panel disposed in coengagement with one of said hook or loop fabric fastener elements on a frame connector pad surface to releasably hold the display panel within a grid opening.

5,172,505

ADJUSTABLE, PORTABLE, WIND-RESISTANT VEHICULAR SIGN DISPLAY

Albert Borsella, 1514 Rockey Point Rd., Middle Island, N.Y. 11553

Continuation-in-part of Ser. No. 570,313, Aug. 21, 1990, abandoned. This application Jun. 24, 1991, Ser. No. 719,982
Int. Cl.[5] G09F 15/00
U.S. Cl. 40—606 3 Claims

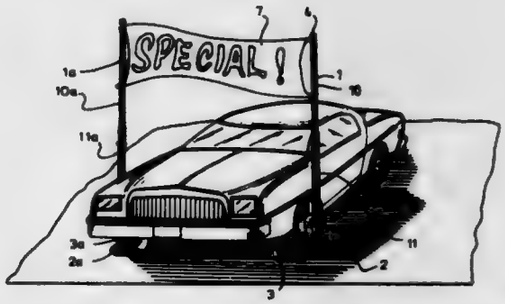
1. An adjustable, portable, wind resistant vehicular flexible sign display system for an automobile motor vehicle with tires comprising:

a) a first base having at least one edge lip protruding upward from said base, said base adapted to receive one of said vehicle's tires rolled thereon;

b) a first post extending up from said base, said first post including a lower section and an upper section, said upper section of said first post slidably and adjustably secured within said lower section of said first post;

c) a second base having at least one edge lip protruding upward from said second base, said base adapted to receive one of said vehicle's tires rolled thereon;

d) a second post extending up from said second base, said second post including a lower section and an upper section, said upper section of said second post slidably and adjustably secured within said lower section of said second post;



e) a display sign having a top edge, a bottom edge, a first side end edge and a second side end edge; and

f) said display sign attached at said first side end edge to said first post and said display sign attached at said second side end edge to said second post;

g) said lower section of said first post extends generally vertically upwardly and outwardly from said first base at a slight oblique angle and said upper section of said first post extends generally vertically upwardly and outwardly from said lower section of said first post;

h) said lower section of said second post extends generally vertically upwardly and outwardly upward from said second base at a slight oblique angle and said upper section of said second post extends generally vertically upwardly and outwardly from said lower section of said second post.

5,172,506

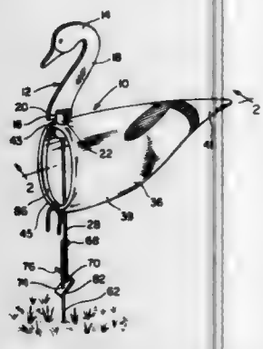
WIND DIRECTION RESPONSIVE AND HEIGHT ADJUSTABLE GOOSE DECOY

Garen R. Tiley, and Alicia R. Tiley, both of 18744 Tadlock Cir., Alexander, Ark. 72002

Filed Mar. 3, 1992, Ser. No. 845,180
Int. Cl.[5] A01M 31/06
U.S. Cl. 43—3 14 Claims

1. A decoy including a first upright support shank having upper and lower end portions, said lower end portion being adapted for support from a generally horizontal support surface, a water fowl combined neck and head structure including a neck lower end supported from said upper end portion, a flexible, hollow water fowl simulating body portion including front and rear ends, said front end including upper and lower portions, said first, shank upper end portion extending downwardly through at least said body upper portion, said neck lower end including a body supported therefrom having a generally cylindrical outer surface, a sleeve disposed within said body portion and having a generally cylindrical bore formed therethrough of slightly greater diameter than the diameter of said outer surface, said first shank passing downwardly through an aperture formed in an area of said body upper portion disposed closely beneath said body with a gener-

ally annular zone of said body upper portion disposed about said area extending upwardly from said area and being removably wedged between said outer surface and the surfaces of



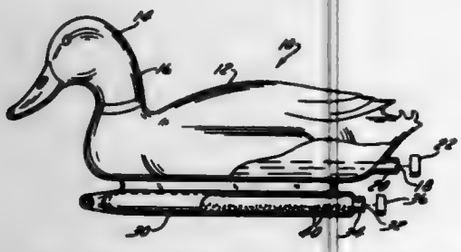
said bore, with said body in selected adjusted rotated position relative to said area and zone, for support of said zone, and thus said body upper portion, from said body.

5,172,507

COLLAPSIBLE WATERFOWL DECOY

Augusto Franceschini, Rero, Italy, assignor to Carry-Lite, Inc., Milwaukee, Wis.

Filed Dec. 27, 1991, Ser. No. 815,342
Int. Cl.[5] A01M *31/06*
U.S. Cl. 43—3 **1 Claim**



1. A lightweight, collapsible waterfowl decoy, comprising:
a main body comprising a hollow soft plastic shell in the shape of the body, head and neck of a waterfowl;
an orifice in the form of an externally threaded pipe section on the backside of the main body for optionally injecting and ejecting air therefrom;
the main body being in a collapsed condition when air has been ejected therefrom, or in an inflated position when air has been injected therein, or in a partially inflated position therebetween; and
an elongated tubular keel integrally molded to, yet isolated from, the underside of the main body, the keel having an elongated, tubular hollow compartment for containing a ballast material;
an orifice in the form of a second externally threaded pipe section on the backside of the keel for inserting and removing the ballast; and
interchangeable first and second internally threaded caps for sealing and unsealing the orifices of the first and second externally threaded pipe section;
whereby the position of the head and neck of the main body and the riding height of the decoy in the water may be optionally varied by varying the amount of air injected into the main body and by varying the amount of ballast material inserted into the keel.

5,172,508

ILLUMINATED FISHING POLE

Mark O. Schmidt, 7915 E. 74th Terrace, Kansas City, Mo. 64129, and Willard W. Bray, II, 7118 W. 85th St., Overland Park, Kans. 66212

Continuation-in-part of Ser. No. 628,622, Dec. 19, 1990, abandoned, which is a continuation-in-part of Ser. No. 497,087, Apr. 13, 1990, abandoned. This application Mar. 6, 1992, Ser. No. 847,629
Int. Cl.[5] A01K *87/00*
U.S. Cl. 43—18.1 **2 Claims**

1. A fishing rod comprising:
a hollow pole having a handle end and a tip opposite said handle end, said pole being constructed of a light conductive material and tapering from said handle end to said tip end;
a cavity in said pole extending from the handle end thereof to the tip end thereof, said cavity being open at the handle end and closed at the tip end;
a handle adapted for manual grasping mounted on said handle end of the pole, said handle presenting a cavity therein open at a butt end of the handle and at a second end which is opposite said butt end and which is adjacent to the cavity in said pole at the handle end of the pole;
a plurality of optical fibers extending inside of said cavity in the pole the entire length thereof, said fibers upon energization with light being illuminated along the entire length thereof and emitting light which is transmitted through said pole to illuminate the pole along the entire length thereof;
a flashlight unit having a casing, a bulb on the casing at one end thereof for producing light when energized with electrical current, battery means in the casing for supplying current to the bulb, and a push button switch on the end of the casing opposite said one end thereof for connecting said battery means to the bulb and disconnecting said battery means therefrom, said flashlight unit being self contained and fitting closely in said cavity of the handle with said bulb abutting said optical fibers at the handle end of the pole to energize said fiber means with light when said bulb is energized with electrical current; and
a removable end cap for detachable application to the butt end of the handle to close the cavity of the handle and retain said flashlight unit therein with said flashlight unit engaging the handle end of the pole at said one of the flashlight unit and engaging said end cap at said opposite end of the flashlight unit, said end cap having an opening through which said push button switch extends when said flashlight unit is fitted in the cavity and said end cap is applied to the butt end of the handle, said flashlight unit being removable from the cavity of said handle as a unit when the end cap is removed from the handle to permit the flashlight unit to be used in the manner of a flashlight.

5,172,509

DEVICE FOR PREVENTING DAMAGE TO A FISHING FLY HACKLE

William Motovik, Perimeter Rd., Kinnelon, N.J. 07405

Filed Apr. 23, 1991, Ser. No. 690,079
Int. Cl.[5] A01K *87/00*
U.S. Cl. 43—25.2 **11 Claims**

1. An improved device for preventing crushing or other damage to the hackle on the hook of an artificial fishing fly during transport of a fly rod, the fly being tied to one end of a line, the other end of which is connected to the rod by a fishing reel mounted to the handle of the rod, the line running from the

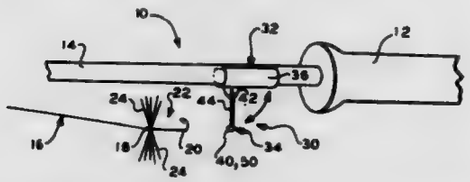
reel to and beyond the end of the rod remote from the handle; wherein the improvement comprises:

(a) a base member;

(b) a clip engageable by the hook, the clip being a U-shaped member having two parallel legs and a bridge therebetween, the bridge having a hook-engageable portion;

(c) first means for mounting the base member in close proximity to the rod near the handle; and

(d) second means for mounting the clip to the base member for selective movement between two positions,



(i) in the first position the clip being retracted so as to be physically proximate to the base member and the rod so that the base member and the clip present a low profile and do not interfere with the line during fly casting, and

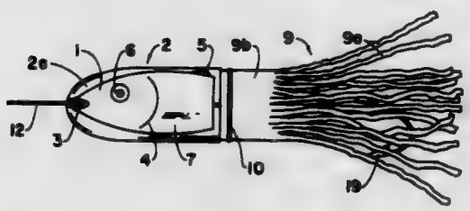
(ii) in the second position the clip being protrudent and extending away from the base member and the rod by a distance sufficient to hold the hackle of a fly away from and out of contact with both the base member and the rod when the hook of the fly engages the clip and the line is taut, whereby the hackle is not crushed or otherwise damaged during transport of the rod.

5,172,510

SEMI-ARTIFICIAL FISH LURE

Charles F. Lovell, Jr., 2142 Haverford Dr., Chesapeake, Va. 23320

Filed Aug. 12, 1991, Ser. No. 743,737
Int. Cl.[5] A01K *85/00*
U.S. Cl. 43—42.36 **13 Claims**



1. A fishing lure comprising:

a body;

a natural bait member completely embedded within said body;

said natural bait member being visible from exterior of said body, said body sealing and protecting said natural bait member against the deteriorating effects of water, air and repeated handling;

said natural bait comprising a dead natural marine animal from which the natural tail section is removed;

and means for attaching a line to said body;

wherein said body comprises a castable material, said body having an axis substantially parallel to the length of said natural bait, and said body having a forward end and an aft end;

and further comprising means for attaching an artificial tail to the aft end of said body;

wherein said means for attaching an artificial tail to the aft end of said body comprises a shoulder member, said shoulder member being disposed at the aft end of said body and being of smaller cross sectional area than the maximum cross sectional area of said body;

and further comprising an artificial tail member attached to said shoulder;

and wherein said artificial tail member comprises a plurality of flaccid elongated members extending rearwardly from said body;

and wherein said means for attaching a line to said lure comprises a tunnel through said body, extending from the aft end to the forward end of said body;

and wherein said tunnel passes through the mouth of said natural marine animal;

and further comprising:

a chamber disposed within said body;

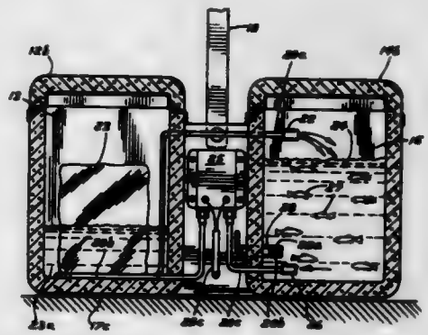
and a first opening in said body, said first opening leading from the exterior of said body to said chamber.

5,172,511

FISH OR BAIT PRESERVATION APPARATUS AND METHOD

Leonard S. Smith, 6319 Girard Ave. South, Richfield, Minn. 55423, and Gary L. Cook, 9808 Blaisdell Ave. South, Bloomington, Minn. 55420

Continuation-in-part of Ser. No. 546,116, Aug. 8, 1990, abandoned. This application Jan. 22, 1991, Ser. No. 643,365
Int. Cl.[5] A01K *97/00*
U.S. Cl. 43—56 **2 Claims**



1. A live fishing bait or fish preservation apparatus, having in combination

a pair of portable containers each having a chamber therein,

handle means adapted to unite said containers, to unitarily carry the same,

one of said containers having a first chamber therein containing water that is a natural habitat for bait or fish,

the other of said containers having a second chamber therein, said second chamber having a tubular conductor therein forming a heat exchanger,

a coolant in said second chamber comprising ice,

means for circulating said water in said first chamber through said conductor in said second chamber to be cooled by said coolant and being isolated from said coolant in said second chamber,

means for presetting upper and lower reference temperatures for said water in said first chamber,

water temperature sensing means in said first chamber actuating said circulating means to maintain said water in said first chamber between said upper and lower reference temperatures.

5,172,512

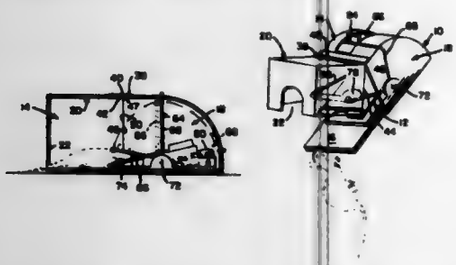
TRAP FOR CATCHING MICE AND RATS

Alan N. Bodker, Wayne, N.J., and Craig E. Karasin, Tappan, N.Y., assignors to Sterling Drug, Inc., New York, N.Y.

Filed Aug. 19, 1991, Ser. No. 747,161
Int. Cl.[5] A01M *23/30*
U.S. Cl. 43—81 **21 Claims**

1. A housing for containing a mousetrap mechanism, the housing comprising:

a base for supporting the mousetrap;
a first housing portion fixed to the base and overlying at least a portion of the mousetrap mechanism, the first housing portion having a slot therein through which the mousetrap mechanism is accessed for cocking the mousetrap mechanism;
a second housing portion having an opening therethrough through which a mouse can enter, and

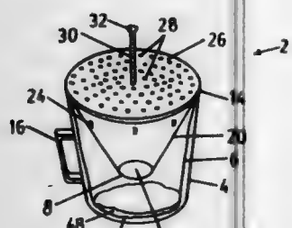


means for movably mounting the second housing portion with respect to both the first housing portion and base, wherein the second housing portion is selectively movable from a first position in which the mousetrap is completely shielded to a second position in which the housing opens for disposal of a mouse caught therein.

5,172,513
INSECT TRAP

Douglas J. Reibling, 92 Blake Street, Stratford, Ontario, Canada N5A 2C6

Filed Mar. 9, 1992, Ser. No. 848,142
Int. Cl.[5] A01M *1/10*
U.S. Cl. 43—121 **8 Claims**



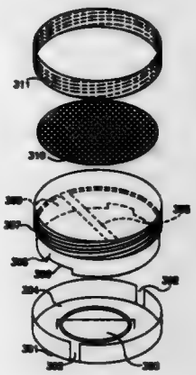
1. A trap for insects, said trap comprising an elongated bag made of flexible and impermeable material, a support, a ring and sealing means, said support having a mouth with a lip surrounding said mouth, said bag having a closed end and an open end, said bag being mounted within said support so that a closed end of said bag extends downward beneath said lip in a generally U-shaped configuration, said bag being formed around said ring into a shape of a truncated cone that extends downward from said lip above said closed end, thereby forming an opening in said bag through a centre of said ring, the bag being sealed around said lip with a removable cover resting on said lip, said cover containing perforations to permit said insects to pass therethrough.

5,172,514
INSECT TRAP

Terry Weber, Sunnyvale; Ramon Georgis, San Jose; Paul Pruitt, Half Moon Bay, and Jean Wren, Palo Alto, all of Calif., assignors to Biosys Corporation, Palo Alto, Calif.

Filed Nov. 19, 1990, Ser. No. 615,609
Int. Cl.[5] A01M *1/20*
U.S. Cl. 43—132.1 **18 Claims**

1. An apparatus for decreasing the population of insects in an environment, wherein said apparatus comprises:
an enclosure including a means by which an insect can enter said enclosure, and
inside said enclosure acceptable to the insect, a source of live and active entomogenous infective juvenile nematodes;
a means to conduct said nematodes to a surface area acceptable to the insects in a manner which effects nictation behavior in said nematodes at the surface; and

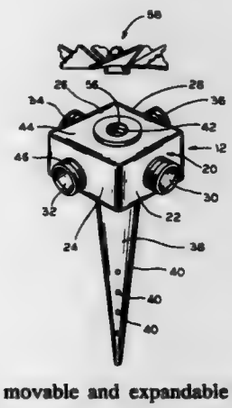


a means to maintain the relative humidity (RH) in the enclosure at 95% RH or greater;
said means to conduct said nematodes to said surface area being a hydrogel containing entomogenous infective juveniles maintained in a volume below an upper surface, said surface being a reticulated porous matrix.

5,172,515
IRRIGATION SYSTEM AND PORTABLE WATERING SYSTEM THEREFOR

John F. Lapshansky, Sr., and John F. Lapshansky, Jr., both of 1420 Woodbridge Dr., Unit 3E, Joliet, Ill. 60436

Filed Oct. 31, 1990, Ser. No. 606,427
Int. Cl.[5] B05B *1/12*
U.S. Cl. 47—48.5 **36 Claims**



8. A portable, movable and expandable irrigation system, comprising:
a plurality of portable watering stations adapted to be positioned at selected locations to achieve a predetermined watering pattern, each ofs aid watering stations including:
a hollow body having at least one port adapted to receive water either directly or indirectly from a water source, at least two ports adapted to distribute water received therein directly to a pair of other watering stations and said hollow body furthe rincluding means independent of said water receiving and distribution ports for securing said hollow body in the ground, and said means associated with said body for irrigating an area immediately surrounding said watering station;

said ports all being disposed in said hollow body about the perimeter thereof;

said irrigating means including a hollow tube in fluid communication with each of said hollow bodies, said hollow tubes each having a plurality of holes therein for receiving and dispensing water from the respective one of said hollow bodies, said hollow tubes being adapted to be inserted into the ground for placement of said holes below the surface of the ground for underground irrigation;

a pluraliyt of hoses adapted to interconnect said water source with said watering stations and said watering stations to one another for watering in said predetermined watering pattern whereine ach of said hoses and said hollow bodies are formed to include corresponding mating engagement means associated therewith; and

a plurality of caps for selectively sealing said water distributing ports for any of said watering stations.

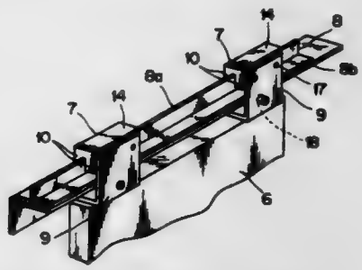
Filed Nov. 5, 1991, Ser. No. 787,866

Claims priority, application Japan, Nov. 7, 1990, 2-117536[U]

Int. Cl.[5] E05F *11/00*

U.S. Cl. 49—360 **6 Claims**



1. A driving apparatus for doors, comprising:

a door-like driven body;

a conductive rail having an inverted T-shaped configuration comprising a base portion and an upstanding central portion, said conductive rail serving as a secondary member of a linear motor;

two traveling bodies each consisting of two unit traveling bodies opposing each other, said unit traveling bodies moving along and being supported upon said base portion of said conductive rail by means of first rollers disposed within a bottom portion of each one of said unit traveling bodies so as to drive said driven body;

a connecting portion for connecting said pair of unit traveling bodies and a top portion of said driven body such that said pair of unit traveling bodies oppose each other across a distal edge portion of said upstanding central portion of said conductive rail;

a primary coil of said linear motor disposed upon side surfaces of said unit traveling bodies opposing each other; and

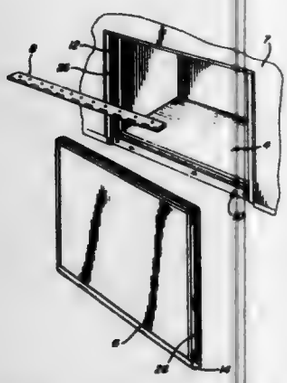
second rollers disposed upon side surfaces of said unit traveling bodies opposing each other for rolling along side surfaces of said upstanding central portion of said conductive rail and for maintaining predetermined gaps between said primary coils and said side surfaces of said upstanding central portion of said conductive rail.

5,172,519

COMPARTMENT DOOR FOR RECREATIONAL VEHICLES

Denzil R. Cooper, Nuevo, Calif., assignor to Fleetwood Enterprises, Inc., Riverside, Calif.

Filed Jul. 16, 1991, Ser. No. 730,547
Int. Cl.[5] E05D 7/00
U.S. Cl. 49—400 14 Claims



1. An assembly for enclosing an opening to a compartment in an exterior wall of a housing, comprising:

a door member pivotally coupled to the housing along a top edge of the opening having an exterior surface and an interior surface with an insulative material disposed between the exterior surface and the interior surface, the door being sized to reside within the periphery of the opening when in a closed position so that the exterior surface of the door and an exterior surface of the wall are in substantially the same plane, the door including a peripheral member affixed along a top edge and side edges thereof, the peripheral member having an elongated first projection extending the length thereof from its surface, and

a frame member affixed along a top edge and side edges of the opening, the frame member having a second projection complementary to the first projection of the peripheral member affixed to the door member for defining a liquid sealing interface when the door member is in the closed position to inhibit liquid from entering the compartment, portions of the frame member affixed along the side edges of the opening being substantially L-shaped with a first side thereof extending perpendicular to an exterior surface of the wall and a recessed second side thereof extending parallel to the exterior surface of the wall, a portion of the frame member affixed to the top edge of the opening being substantially flat with a portion of the complementary projection extending its length.

5,172,520

WINDOW ASSEMBLY HAVING A HORIZONTALLY SLIDABLE WINDOW UNIT LATCHABLE IN A CLOSED POSITION

Paul Hostetler, Sarasota, and E. Wayne Burkhart, Venice, both of Fla., assignors to Vinyl Tech, Venice, Fla.

Filed Sep. 16, 1991, Ser. No. 760,123
Int. Cl.[5] E05D 13/00
U.S. Cl. 49—449 16 Claims

1. A window assembly comprising:

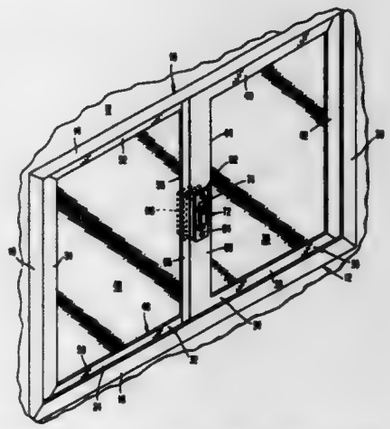
a main frame;

inner and outer window units mounted in said main frame, at least said inner window unit being arranged for horizontal sliding movement in said frame between open and closed states, each window unit including a secondary frame in which at least one window panel is mounted;

each of said secondary frames including a vertical frame section arranged such that inner and outer vertical frame sections of said inner and outer window units, respectively, are superimposed when said window units are closed, each of said inner each of said inner and outer vertical frame sections including a inwardly facing surface and an outwardly facing surface;

said inner vertical frame section including a through-hole extending from its inwardly facing surface to its outwardly facing surface;

said inwardly surface of said outer vertical frame section including a recess arranged to be in alignment with said through-hole when said inner and outer vertical frame sections are superimposed;



latching means for locking said window units in their closed state, comprising:

a latch housing seated in said through-hole, and

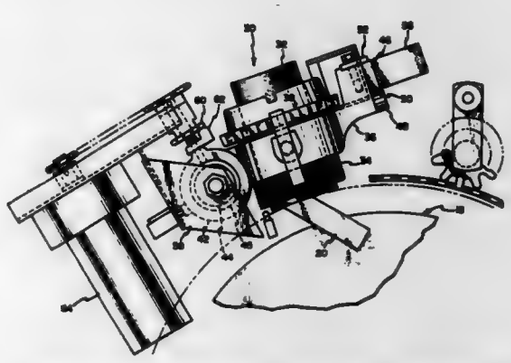
a latching arm rotatably mounted to said latch housing for movement between latching and unlatching positions, said latching arm including a handle portion and a retaining portion, said retaining portion arranged to enter said recess in said outer vertical frame section when said latching arm is in its latching position in order to latch said outer and inner window units against relative sliding movement.

5,172,521

SHARPENING APPARATUS FOR FORAGE HARVESTER KNIVES

John R. McClure, and Larry D. Hall, both of New Holland, Pa., assignors to Ford New Holland, Inc., New Holland, Pa.

Filed Feb. 8, 1991, Ser. No. 652,782
Int. Cl.[5] B24B 3/55
U.S. Cl. 51—57 14 Claims



1. A sharpening apparatus for a plurality of knives disposed

in a cutterhead generating a cylindrical periphery when rotating, said apparatus comprising:

(a) means for grinding the knives when the cutterhead is rotating;

(b) a guide member for carrying said grinding means in a grinding mode across the cutterhead, said grinding means translating a line generally parallel to the axis of rotation of the cutterhead, said guide member being disposed generally parallel to the axis of rotation of said cutterhead;

(c) said guide member including a guide edge having first and second end portions and central portion, said central portion being disposed closer to the cutterhead than said first and second end portions; and

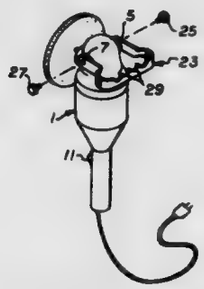
(d) the cutterhead having first and second ends, said guide edge including first and second points disposed generally equidistant from the cutterhead first and second ends, said first point being closer to the cutterhead than said second point.

5,172,522

HANDLE USED ON A HAND HELD GRINDER OR BUFFER

Daniel J. Jares, 17403 Guinn, Houston, Tex. 77044

Filed Dec. 6, 1991, Ser. No. 802,888
Int. Cl.[5] B24B *23/00*
U.S. Cl. 51—170 R **6 Claims**



1. A replacement safety handle for replacing the existing pole handle of a power tool of the type having an elongate cylindrical housing and a rotating buffing or grinding attachment at a first end, a removable pole handle selectively threadedly engaged in threaded holes on either side of the first end and the cylindrical housing having a second end gripped by a user's hand, the replacement handle comprising:

a generally U-shaped handle member having a central hand grip portion with a series of longitudinally spaced finger notches, opposed outwardly curved leg portions at each end of said hand grip portion and laterally opposed parallel straight portions extending from said outwardly curved portions,

said handle member hand grip portion and the distance between the opposed outwardly curved portions of said leg portions being of sufficient width to receive a gloved hand of a user,

a hole through the laterally opposed parallel straight portions near the terminal ends of each in axial alignment with one another to receive the shaft of a bolt member,

said laterally opposed parallel straight portions being received closely adjacent each of the threaded holes on either side of said generally cylindrical housing, and

a pair of bolt members for pivotally connecting said U-shaped handle member to the threaded holes on either side of the first end of said power tool cylindrical housing when the existing pole handle is removed therefrom,

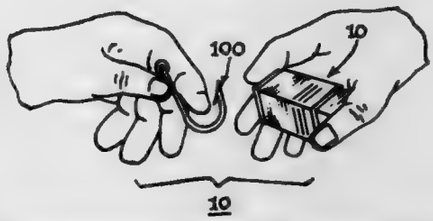
said U-shaped handle member being pivotally movable between a forward and backward position relative to said housing first end.

5,172,523

COMPACT FISH HOOK SHARPENING DEVICE

Richard W. Kadlec, 7809 Sprucewood, Woodridge, Ill. 60517

Filed Oct. 8, 1991, Ser. No. 772,810
Int. Cl.[5] B24B *19/16*
U.S. Cl. 51—204 **10 Claims**



1. A compact reciprocating fish hook sharpening device for fish hooks; wherein, the device comprises:

a generally rigid housing member having at least three interconnected generally flat sides; wherein, each of said sides is provided with a plurality of elongated apertures; and,

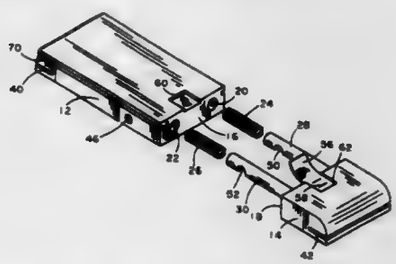
a sharpening stone member mounted for reciprocation within said housing member; wherein, said sharpening stone member has at least three interconnected generally flat sides disposed adjacent to said at least three interconnected generally flat sides of said housing member.

5,172,524

SANDING BLOCK

Willie A. Poss, R.R. 1, Box 363, 2003 Okoboji Ave., Milford, Iowa 51351

Filed May 20, 1991, Ser. No. 702,295
Int. Cl.[5] B24D *15/04, 15/00, 17/00*
U.S. Cl. 51—372 **13 Claims**



1. A sanding block, comprising:

two coplanar aligned blocks having opposed inner ends for selectively carrying an endless belt and a strip of sanding material extending over one coplanar side of said blocks and removably attached thereto,

means interiorily of said blocks affording free relative movement of said blocks away from each other to a point of total separation and towards each other to an abutting position of said inner ends,

spring means in one of said blocks to normally urge said blocks into spaced apart relationship, and

means operable between said inner ends for limiting movement thereof away from each other to prevent the complete separation of said blocks from each other.

5,172,525

FOLDING AND TELESCOPING SPORTS SHELTER

John S. Cook, 18944 Warwick, Birmingham, Mich. 48009

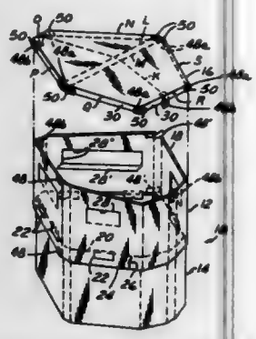
Filed Dec. 17, 1991, Ser. No. 809,582
Int. Cl.[5] E04B *1/346*; E04H *15/00*
U.S. Cl. 52—71 **18 Claims**

1. A portable shelter, comprising:

an upper wall component having a top edge and a bottom

edge, said upper wall component being formed of a multiply sided closed loop defined by a plurality of first folds, said upper wall component being foldable between a predetermined folded configuration and a predetermined unfolded configuration;

a lower wall component having a top edge and a bottom edge, said lower wall component being formed of a multiply sided closed loop defined by a plurality of second folds, said lower wall component being foldable between said predetermined folded configuration and said predetermined unfolded configuration, said lower wall component being coaxially located within and adjacent said upper wall component, each of said first folds of said



upper wall component being adjacent said second folds of said lower wall component so that said upper wall component and said second wall component may be simultaneously foldable along said first and second folds, said upper wall component being telescopically movable in relation to said lower wall component;

holding means connected with said upper wall component for resting said upper wall component upon said top edge of said lower wall component when said upper wall component is telescopically raised in relation to said lower wall component; and

a lid component structured for being connected with said top edge of said upper wall component.

5,172,526

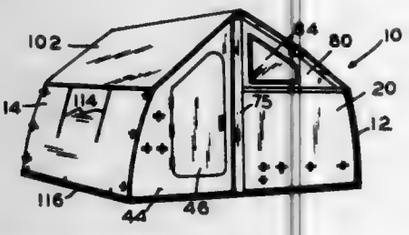
SHELTER

Melvin L. Morgan, 100 N. Pacific Hwy., #108, Talent, Oreg. 97540-9505

Filed May 2, 1991, Ser. No. 694,503

Int. Cl.[5] E04H *15/32*

U.S. Cl. 52—79.5 **22 Claims**



1. A shelter, comprising:

a. a first side wall member and a second side wall member, each having a first side edge, an opposing second side edge, a top edge and a bottom edge, wherein a plurality of vertically disposed slots are formed in series proximate both said first and second side edges of both said first side wall member and said second side wall member;

b. a first front wall member and a first back wall member, each having a first side edge, an opposing second side edge, a top edge and a bottom edge, wherein a plurality of projections extend from said first side edges of said first front wall member and said first back wall member and are formed and positioned thereon to engage through said vertically disposed slots formed proximate said first and second side edges of said first side wall member; said projections each having a perforation formed therein, into which a tapered peg may be inserted;

c. said first side wall member, said first front wall member, and said first back wall member, when having been interconnected by said projections extending through said slots, the insertion of said tapered pegs into said perforations of said projections securing the first front wall member and the first back wall member to said first side wall member, thereby forming a three-sided wall structure of a general U-shape;

d. said first front wall member and said first back wall member each having a series of slots formed in a horizontal line interim the first side edge and the opposing second side edge, said slots in said first front wall member opposing said slots in said first back wall member;

e. a plurality of elongated bed support beams, each having a projection opposingly extending from its two ends, such projections being formed with a perforation through which a tapered peg may be inserted;

f. each said elongated bed support beam having its projections inserted through a slot formed in said first front wall member and an opposing slot formed in said first back wall member, and a tapered peg inserted into said perforations of said projections so as to secure the bed support beam into position against and between said first front wall member and said first back wall member, thereby providing support to said first front and back wall members; said beams being laterally spaced so as also to provide support for an off-the-ground bed within the shelter;

g. a plurality of tapered pegs;

h. a second front wall member and a second back wall member, each having a first side edge, an opposing second side edge, a top edge, and a bottom edge, wherein a plurality of projections extend along said first side edges of said second front wall member and said second back wall member and are formed and positioned thereon to engage through said vertically disposed slots formed proximate said first and second side edges of said second side wall member; said projections each having a perforation formed therein through which a tapered peg may be inserted;

i. said second side wall member, said second front wall member and said second back wall member, when interconnected by said projections extending through said slots, and having tapered pegs inserted into said perforations of said projections so as to lock the second front wall member and the second back member to said second side wall member, thereby forming a second three-sided wall structure formed in a general U-shape;

j. said second front wall member and said second back wall member each having at least one slot formed therethrough;

k. an elongated horizontal member having a flat upper surface and having at least one projection extending from each of its two ends;

l. said elongated horizontal member, having its projections inserted through slots in said second front wall member and said second back wall member and a tapered peg inserted into said perforation of said projections so as to lock the elongated flat horizontal member into position against and between said second front wall member and said second back wall member, thereby providing support to said second front and back wall members as well as a useful flat surfaced structure within the shelter;

m. a first center pole, having an upper end and a lower end, attached to and extending vertically along said second side edge of said second front wall member; and a second center pole, having an upper end and a lower end, attached to and extending vertically along said second side edge of said second back wall member;

n. a third front wall member and a third back wall member,

each substantially triangular in shape, having a horizontal bottom edge, a vertical side edge, and a slanting side edge, the bottom side edge of the third front and back wall members being attached to the top side edge of the first front and back wall members, respectively, the second side edge of the first front wall member and the vertical side edge of the third front wall member forming a continuous side edge, and similarly, the second side edge of the first back wall member and the vertical side edge of the third back wall member also forming a continuous side edge, said continuous side edges abutting and being attached to said center poles which are attached to the second side edge of said second front and back wall members;

o. a top ridge pole, attached to said upper ends of said first and second center poles and extending horizontally therebetween; a side ridge pole, attached to the slanted sides of the third front and back wall members and extending horizontally therebetween; two eave poles, attached to the top edges of the first side wall member and the second side wall member; and a roof supported by said top ridge pole, side ridge pole, and eave poles;

p. said third front and back wall members having a window opening formed therein;

q. said second front wall member having a door opening formed therein;

r. bottom strips which are attached to the bottom edges of said first and second front, side, and back wall members, said bottom strips having holes formed therein so as to permit attachment of the shelter to a fixed ground location;

s. two planar bed members, the second planar bed member being a reflection of the first planar bed member, which are formed to lie upon said elongated bed support beams within the shelter, wherein a double bed may be formed to lie parallel and adjacent to said first side wall member or, alternatively, two single beds may be formed one lying parallel and adjacent to said first front wall member and the second lying parallel and adjacent to said first back wall member;

t. said tapered pegs being formed of a cylindrically shaped pin of a diameter substantially equal to the diameter of the perforation in the projection, wherein a first end of the cylindrically-shaped pin is tapered to a flat surface on one side, said first end formed to be inserted within said perforation, so that the flat-tapered side will engage and remain against a flat surface adjacent to the slot and the second end, a head, of the tapered peg will remain at a distance from a wall member being secured by a wedging effect of the tapered peg; and

u. means for sealing against weather the slots formed in a wall member through which an projection is inserted:

(1) wherein, where an elongated beam is used, an encircling flexible sealing member is installed between an outer end of the elongated beam and around the projection, which encircling flexible sealing member is pressed tightly against a wall member by the locking action of the tapered peg; and

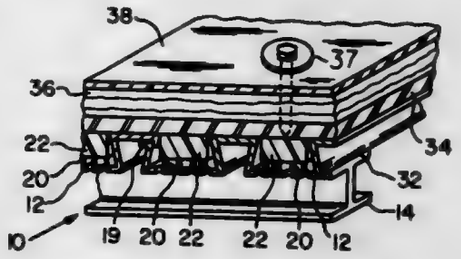
(2) wherein, where a wall-to-wall junoture is formed, a flexible strip, U-shaped in cross-section, and having at least one longitudinal aperture formed therein which allows a projection to extend therethrough to accept a tapered peg as the walls are set together, the U-shaped strip, when positioned along an edge of a wall member, thereby forming a seal along said edge and surrounding each said projection at its base.

5,172,527

ACOUSTICAL DECK PANEL ASSEMBLY

Robert L. Ault, Saltzburg, Pa., assignor to Epic Metals Corporation, Rankin, Pa.

Filed May 31, 1991, Ser. No. 707,874
Int. Cl.[5] E04B *1/82*
U.S. Cl. 52—145 **14 Claims**



1. In an acoustical ceiling roof panel assembly, the improvement comprising:

a plurality of roof deck panels assembled in side-by-side relationship and secured to roof supports, each panel including a plurality of parallel and spaced apart, substantially perforated flat sections with each flat section being separated from its adjacent flat section by a rib section, and having a width within the range of three to five times greater than the width of the rib section as measured in the plane of the flat section,

lengths of insulation positioned between adjacent ribs so as to substantially fill a space formed by said adjacent ribs and a flat section; and

spacer means positioned within said space between each perforated flat section and said insulation to maintain said insulation in spaced relationship to said flat section,

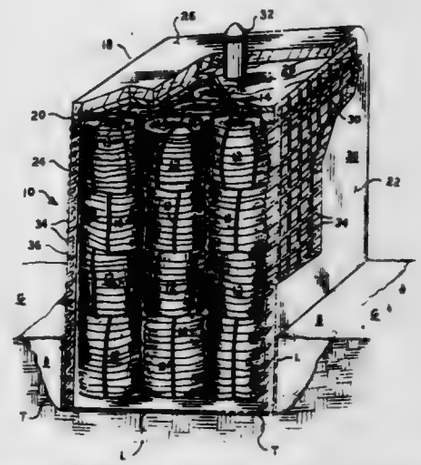
whereby said system has a noise reduction coefficient on the order of 0.95 to 1.

5,172,528

BUILDING CONSTRUCTION INCORPORATING RECYCLING TIRES

Paul H. Clarke, Box 117, Hillsboro Rd., Camden, N.Y. 13316

Filed Oct. 15, 1991, Ser. No. 775,454
Int. Cl.[5] E04B *7/00*; B41M *3/12*; E02D *1/00*
U.S. Cl. 52—198 **21 Claims**



1. A structure including compacted tires secured in bales, said structure comprising;

a plurality of said bales arranged horizontally in one or more rows immediately adjacent one another and secured to one another to form a structural core,

said structural core covered with concrete reinforcement means, and

said structural core and concrete reinforcement means covered with a concrete shell.

5,172,529

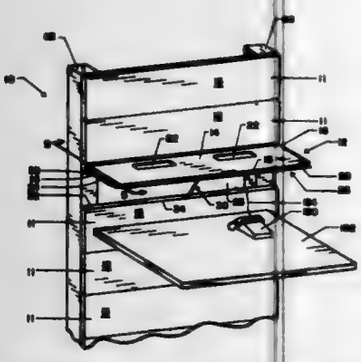
HINGED WIRE MANAGEMENT COVER PANEL

Douglas M. Van De Riet, Holland, Mich., assignor to Herman Miller, Inc., Zeeland, Mich.

Filed Jan. 22, 1991, Ser. No. 643,426

Int. Cl.[5] E04B *5/48*

U.S. Cl. 52—221 15 Claims



1. A panel for covering a wire raceway in a modular wall structure, said panel comprising:

a front surface, a back surface opposing the front surface, a first edge, a second edge, and opposite side edges extending therebetween;

a hinge mounted on the back surface adjacent the first edge for hingedly mounting the panel to the wall structure for movement of the panel between a closed position where the back surface encloses the wire raceway, and an open position where the wire raceway is exposed; and

a support member pivotably mounted to the back surface for movement between a retained position and an engaging position, said support member having a pedestal adapted to engage a ledge of the wall structure to maintain the panel in the open position when the support member is in the engaging position.

5,172,530

SOUND ATTENUATION PANEL ARRANGEMENT WITH CABLING ACCOMMODATING CAPABILITY FOR OFFICE FURNITURE SPACE DIVIDER SYSTEMS

Duane D. Fishel, Oswego, and Donald V. Beaver, Brookfield, both of Ill., assignors to Allsteel Inc., Aurora, Ill.

Filed Nov. 6, 1990, Ser. No. 609,898

Int. Cl.[5] E04H *1/00*

U.S. Cl. 52—221 7 Claims

1. A panel of the office furniture type that defines a front side that forms the working side of the panel at which electrically operated equipment may be optionally located, and an opposite rear side, with the panel being arranged at a predetermined area of the panel front side for sound attenuation, and also for optional local accommodation capability and internal masking capability, of electrical conduiting for operating such electrically operated equipment,

said panel comprising:

a rigid panel frame of open centered quadrilateral configuration including a rigid top, bottom, and side rail members fixedly assembled to form said panel frame and the front and rear sides thereof, and define an open space of quadrilateral configuration, with said rail members being disposed in marginal relation about said open space,

and an insert frame assembly for application to said panel frame over and across said open space thereof at the predetermined area of the panel working side,

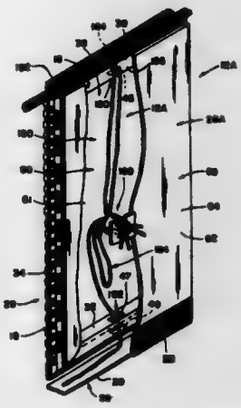
said insert frame assembly having a rear side and a front side,

and means for mounting said insert frame assembly on said front side of said panel frame with said rear side of said insert frame assembly in overlying relation to said panel frame and the front side of said insert frame assembly facing forwardly of said front side of said panel frame and the panel front side,

said insert frame assembly comprising:

a rigid supplemental generally planar frame of outer and inner quadrilateral marginal configuration, and proportioned to extend between said panel frame side rail members when said insert frame is mounted on said panel frame,

said inner marginal configuration of said supplemental frame assembly defining a planar space that is coplanar of said supplemental frame assembly,



said insert frame assembly for the area of said supplemental frame space being comprised solely of a continuous and uninterrupted mass of acoustical masking material that has both sound attenuation characteristics and defines the panel predetermined area transversely of the panel,

said material being constituted transversely thereof for electrical conduiting pass through providing aperture formation transversely of said insert frame assembly and anywhere within the metes and bounds of the panel predetermined area,

whereby the panel at the predetermined area thereof provides the option of later in field providing of such aperture formation therein and anywhere within said metes and bounds of the panel predetermined area, for egress of such electrical conduiting transversely of the panel, as needed for operating such electrical equipment.

5,172,531

CONDUIT SUPPORT APPARATUS FOR CONCRETE INSTALLATION

Steven L. Fowler, Paulding County, Ga., assignor to PK Products, Inc., Conyers, Ga.

Continuation-in-part of Ser. No. 518,649, May 3, 1990. This application Oct. 18, 1990, Ser. No. 600,193

Int. Cl.[5] E04B *5/00*

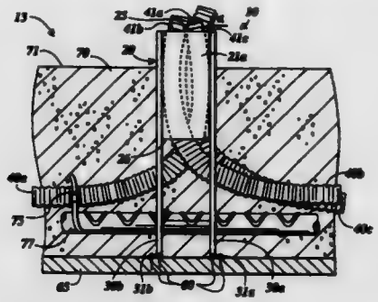
U.S. Cl. 52—221 25 Claims

1. A conduit support apparatus for supporting flexible conduit before and during the pouring of wet concrete into a form to dry into a hardened concrete slab, which form includes a form bottom section and form side sections which retain wet concrete and are removable from the hardened concrete slab, said conduit support apparatus comprising:

a collar portion defining a passageway for receiving at least one flexible conduit; and

at least one support member connected to said collar portion

for supporting said collar portion above a form bottom section wherein selected physical dimensions of said collar



portion and said at least one support member are balanced to impose on a flexible conduit a bend which has a curvature within an optimum curvature range.

5,172,532

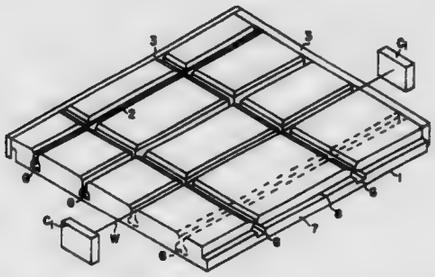
PREFABRICATED POLYMER BUILDING WALL PANELS

James H. Gibbar, Jr., 1100 Lottes St., Perryville, Mo. 63775

Continuation-in-part of Ser. No. 522,327, May 11, 1990, Pat. No. 5,038,541, which is a continuation-in-part of Ser. No. 176,650, Apr. 4, 1988, Pat. No. 4,924,641. This application Aug. 12, 1991, Ser. No. 744,474

Int. Cl.[5] E04C *1/00*

U.S. Cl. 52—309.12 7 Claims



1. In a prefabricated polymer building or other structured wall panel formed at the factory, a sheet of foamed polymer, said sheet having sizable dimensions to form a significant part of a wall when assembled, said sheet having front and back surfaces, a series of grooves cut into one of said front and back surfaces of the sheet, and cut to a depth to form a significant groove within the said polymer sheet, said grooves cut within the formed polymer sheet to accommodate the fill of reinforcing concrete therein, a quantity of concrete applied into the cut grooves to fill the said grooves to capacity and to function as concrete reinforcement within the formed prefabricated wall panel, said sheet having another sheet formed at least of one of foamed polymer and lightweight concrete applied thereon and held thereto by one of an adhesive or fastener to form a prefabricated concrete reinforced wall, said sheet of foamed polymer being formed of one of polystyrene and polyurethane foam, the grooves within the sheet being cut at various angular relationships with respect to each other, and extending from one edge to the opposite edge of the wall panel, said grooves being arranged at approximately perpendicularly with respect to each other, and there being at least one reinforcing rod provided within each cut groove prior to its fill with concrete, each wall panel having a pair of side edges, and a connecting slot provided upon each of the side edges of the wall panel at opposite sides thereof and provided to accommodate the erection of a series of said wall panels into a building wall after transfer to the job site, and tee tracks placed along the edges of adjacent wall panels when erected for providing fastening surface to which various finishing materials may be applied.

5,172,533

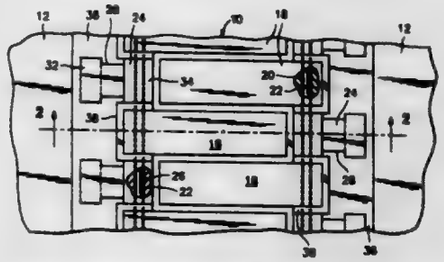
RESILIENT FINGER JOINT FOR CONCRETE SLABS

Samuel A. Face, Jr., Norfolk, Va., assignor to Face Construction Technologies, Inc., Norfolk, Va.

Filed Oct. 2, 1991, Ser. No. 769,647

Int. Cl.[5] E04B *1/68*

U.S. Cl. 52—396 10 Claims



1. A joint for concrete slabs having adjacent edges subject to relative vertical movement, said joint comprising a plurality of rigid fingers oriented in interdigitated relationship and bridging the joint between adjacent slabs, means pivotally securing the ends of every other finger to one of the slabs, means pivotally securing the other fingers to the other concrete slab whereby alternating fingers have one end pivoted to a slab for pivotal movement about a horizontal axis and the opposite end free of the slabs for movement in a vertical plane, said fingers having upper surfaces generally parallel to and forming extensions of the plane of the concrete slabs throughout the length of the fingers to form a traffic bearing surface, and a resilient bed underlying and supportingly engaging said fingers throughout the length of the fingers with the fingers and bed oriented in downwardly extending recesses in the adjacent edges of adjacent concrete slabs.

5,172,534

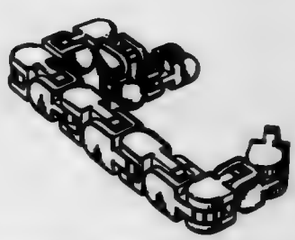
CHAINABLE BUILDING BLOCKS

Ronald E. Milner, Grass Valley, and Eric D. Plambeck, Ventura, both of Calif., assignors to ADL Partners, Grass Valley, Calif.

Filed Apr. 2, 1991, Ser. No. 679,654

Int. Cl.[5] E04C *1/00, 2/30;* A63H *33/06*

U.S. Cl. 52—593 18 Claims



1. A modular building piece adapted to releasably attach to another in a pivoting relationship, the piece comprising: two resilient spaced elements in parallel opposition at a first end providing a cavity therebetween, the cavity facing away from the piece along a centerline between the ends of the piece; a projection at the other end aligned along the centerline adapted to seat in the cavity of another piece; dimples and bumps defining a first axis at the first end and a second axis at the second end, the dimples adapted to pivotally and releasably engage bumps of the other piece about one of the axes, the bumps adapted to pivotally engage the dimples of the other piece about the other axis, and detent means for releasably

fixing the piece in a selected one of a plurality of angular positions about one of the axes relative to an attached piece.

5,172,535

FIBER REINFORCED PLASTIC GRID

Jacobus J. M. Jongh, and Michael H. Collins, both of Arnhem, Netherlands, assignors to Shell Oil Company, Houston, Tex.

Filed Jun. 11, 1990, Ser. No. 535,693
Claims priority, application United Kingdom, Sep. 18, 1989, 8921076
Int. Cl.[5] D03D 3/00; E04H 12/00
U.S. Cl. 52—667 7 Claims

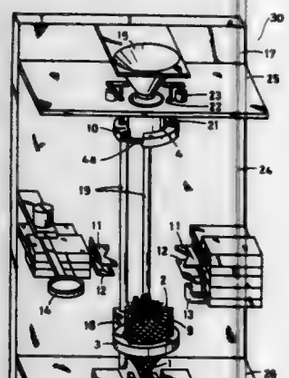
1. A fiber reinforced plastic grid comprising at least one truss beam which includes a pair of parallel fiber reinforced plastic chord members and a series of fiber reinforced shear members that are arranged between the chord members, wherein within one node between a shear member and a chord member the fibrous reinforcement of the shear member passes into the chord member.

5,172,536

CONTINUOUS PACKING APPARATUS

Takakazu Miyahara, Kaneda, Japan, assignor to Elm Co., Ltd., Kaneda, Japan

Filed Nov. 27, 1991, Ser. No. 798,909
Claims priority, application Japan, Nov. 30, 1990, 2-339931
Int. Cl.[5] B65B 9/14
U.S. Cl. 53—567 5 Claims



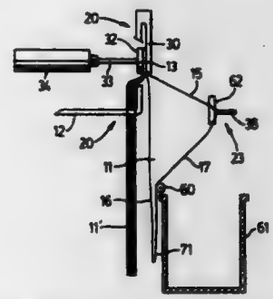
1. A continuous packing apparatus comprising:
a cylindrical net supply source (20) for supplying a cylindrical long packing net (1);
a cylindrical net moving means for externally supporting the cylindrical net (1) supplied from said cylindrical net supply source (20) and for drawing an upper end of the cylindrical net (1) upward from said cylindrical net supply source (20), comprising:
a shuttle (2) to be inserted in the cylindrical net (1) so as to be vertically moved;
a lower support member (3) for externally supporting said shuttle (2) through the cylindrical net (1), said lower support member (3) having a central vertical aperture having a size and shape so that said shuttle (2) can be removably and tightly mounted therein from above; and
a moving member for moving said lower support member (3) upward relative to said cylindrical net supply source (20);
a first clamp (5) for clamping the cylindrical net (1) below said cylindrical net moving means and above said cylindrical net supply source (20), said clamp (5) being operative to clamp the net (1) until said cylindrical net moving means has moved upward a fixed distance (h), thereby drawing the cylindrical net (1) downward;
an upper support member positioned above said cylindrical net moving means for grasping and supporting the upper end of the cylindrical net (1) when said lower support member (3) has moved to an upper position and for maintaining the upper end of the cylindrical net (1) in an open condition, said shuttle having a central vertical aperture into which said upper support member (3) fits when said lower support member (3) is in the upper position, wherein said upper support member comprises a cylindrical holder (4) having an outward circumferential flange (4a) formed on the lower end of said cylindrical holder (4), and a ring-shaped fitting (10) resiliently urging downward onto the outward circumferential flange (4a) for pressing and supporting the opening of the upper end of the cylindrical net against the outward circumferential flange (4a) when said shuttle moves out of said upper support member;
a net bag forming means positioned above said cylindrical net supply source (20) and below said upper support member for cutting the cylindrical net (1) to separate an upper portion of the cylindrical net (1) from a lower portion of the cylindrical net (1) and for forming a net bag in the upper portion of the cylindrical net; and
a hopper (15) insertable into the cylindrical long packing net (1) for inserting items to be packed into the open upper end of the net bag.

5,172,537

BAG OPENING MEANS FOR BAGGING MACHINE

Bruno Wetter, 393 Moreau, St.-Eustache, Quebec, Canada J7P 2M5 , and Arnold Lipes, 3493 Atwater Ave, Apt #18, Montreal, Quebec, Canada H3H 1Y2

Filed Jun. 27, 1991, Ser. No. 722,455
Int. Cl.[5] B65B 43/44
U.S. Cl. 53—572 2 Claims



1. A bagging machine for placing a plurality of objects in a first thin walled bag of a plurality of juxtaposed, wide bags held in said machine, and said first bag into a case having a mouth opening in front of said first bag, each of said bags having a front wall portion and a back wall portion, said front wall portion having two upper corners and a middle portion

therebetween, and each of said bags having an extended tab secured to the back wall portion thereof, said tab extending above a mouth opening of each of said bags, said machine comprising:

a) first holding means for holding said plurality of bags in juxtaposition, said bags being held by said tabs;

b) second holding means for securing at least a portion of said extended tab of said first bag;

c) bag opening means for opening said mouth of said first bag comprising i) third holding means which comprises two spaced apart implements to hold the middle front wall portion of the bag, at the mouth, such that a smaller mouth is formed between the two spaced apart implements, and the spaced apart implements ar at a distance from one another of about 40% to about 60% of the distance between the two upper corners of the front wall portion, ii) mouth opening means adapted to separate the front wall portion of the bag from the back wall portion between the two implements, and iii) means to displace the third holding means, such that a full mouth of the bag is formed and supported in a square or rectangular configuration; and

d) mouth clamping means associated with the third holding means for insertion into said smaller mouth, and means for displacing the mouth clamping means along with the third holding means for holding the bag mouth in an open position;

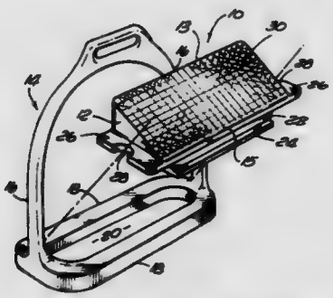
e) a bar member being about level with or above said case for maintaining the bag in a position behind the case during a first portion of the filling process and for allowing the bag to flop over the bar and into the case during a second portion of the filling process, said case thereby providing support to the bag during and after filling.

5,172,538

STIRRUP PAD

Linda S. Luger, 2500 N. 6th St., Burbank, Calif. 91504

Filed Sep. 5, 1991, Ser. No. 755,090
Int. Cl.[5] B68C *3/00*
U.S. Cl. 54—47 14 Claims



1. For use with a stirrup having an elongated stirrup frame for supporting a rider's foot, said frame being oriented substantially horizontally,

a stirrup pad comprising a body member including a base for attaching said stirrup pad to said stirrup, said base also being oriented substantially horizontally on said stirrup frame,

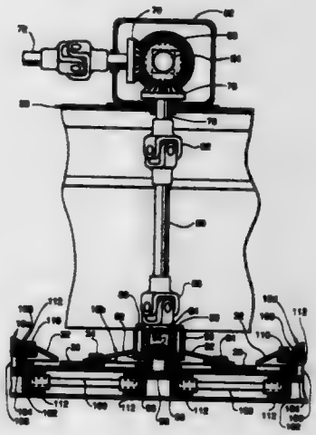
said body member also having a footrest portion, including a foot engaging ramp attached to said base, said ramp comprising a surface sloped from front to rear only and having at least a lower ramp edge which is essentially parallel to said stirrup frame, wherein said footrest portion serves to orient a foot supported by said footrest portion at an angle relative to horizontal.

5,172,539

AGRICULTURAL MACHINE WITH A CUTTERBAR DRIVEN BY A GENERALLY VERTICAL DRIVE SHAFT

Richard E. Jennings, Manheim, and Kenneth W. McLean, New Holland, both of Pa., assignors to Ford New Holland, Inc., New Holland, Pa.

Filed Sep. 3, 1991, Ser. No. 753,584
Int. Cl.[5] A01D *34/66*
U.S. Cl. 56—6 12 Claims



1. An agricultural machine comprising:

a frame carrying a cutterbar having a plurality of transversely disposed individual rotatable cutting units including two laterally spaced end cutting units located adjacent opposed sides of said frame and at least one intermediate cutting unit disposed between said end cutting units;

means for rotatably driving said cutting units including a generally vertical drive shaft connected to one said intermediate cutting unit to effect rotation thereof and directly drive said one intermediate cutting unit; and

power transfer means operably connected to said means for rotatably driving said cutting units to transfer rotational power between said one intermediate cutting unit to said end cutting units for rotatably driving said end cutting units and any intermediate cutting units therebetween, whereby all of said cutting units are rotatably driven from said generally vertical drive shaft.

5,172,540

APPARATUS FOR CHANGING BOBBIN TUBES AND TUBE GRIPPER THEREFOR

Joerg Werali; Daniel Breanwalder; Markus Erni, all of Winterthur; Isidor Fritschi, Andelfingen, and Andreas Wanzenried, Wittenwil, all of Switzerland, assignors to Rieter Machine Works, Ltd., Winterthur, Switzerland

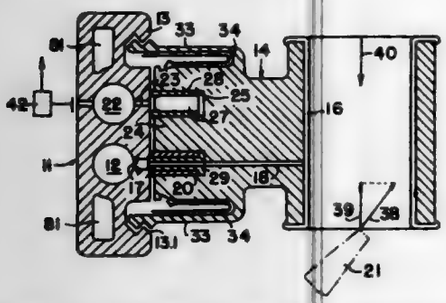
Division of Ser. No. 485,946, Feb. 27, 1990, Pat. No. 5,014,505, which is a division of Ser. No. 233,564, Aug. 18, 1988, abandoned. This application Jan. 17, 1991, Ser. No. 642,560
Claims priority, application Switzerland, Aug. 18, 1987, 3169/87
Int. Cl.[5] D01H *9/02*
U.S. Cl. 57—275 6 Claims

1. A tube gripper for a textile machine comprising

a plastic body having an aperture in one side for receiving a bobbin tube therein;

a pair of retaining lugs extending from said body from a respective top and bottom of said body and on an opposite side from said aperture and perpendicularly of an axis of said aperture for releasably engaging with a doffer bar, at least one of said lugs being flexible; and

a metal spring associated with said flexible lug and said body for adjusting the flexibility of said lug and biasing said flexible lug outwardly of said body to releasably engage the doffer bar.



5,172,541

LOADING AND UNLOADING OF ROVING SPOOLS IN A RING-SPINNING MACHINE

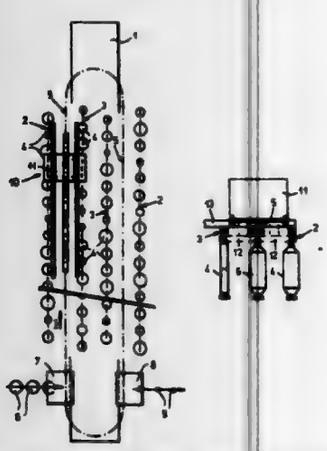
Erich Schmaiz, Reichenbach/Fils, Fed. Rep. of Germany, assignor to Zinser Textilmaschinen GmbH, Ebersbach/Fils, Fed. Rep. of Germany

Filed Apr. 10, 1991, Ser. No. 683,979

Claims priority, application Fed. Rep. of Germany, Apr. 10, 1990, 4011619

Int. Cl.[5] D01H *9/00*; D02H *1/00*

U.S. Cl. 57—281 6 Claims



1. A method for changing full roving spools into and unloading empty spools from a spinning machine having a pair of parallel, spaced-apart, and horizontally extending rows of working positions each holding a respective plurality of active roving spools, the method comprising the steps of:

moving a spool as it becomes empty substantially only horizontally and transversely to the respective row from a working position in the respective row to a respective changing position between the two rows of active spools without displacing it through either of the rows of working positions and thereby leaving the respective working position empty;

transporting the empty spool off substantially only horizontally in a predetermined horizontal direction along a horizontal path extending parallel to and between the rows;

transporting a full spool substantially only horizontally along the path in the direction to the changing position adjacent the working position from which the empty spool has been taken; and

moving the full spool substantially only horizontally and transversely of the rows from the path laterally into the empty working position to fill same without displacing the full spool through either of the rows of working positions.

5,172,542

SPINNING MACHINE FOR PNEUMATIC FALSE-TWIST SPINNING

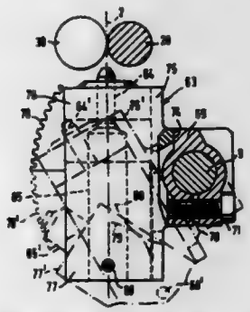
Fritz Stahlecker, Josef-Neidhart-Strasse 18, 7347 Bad Überkingen, and Josef Scholz, Bad Ditzenbach, both of Fed. Rep. of Germany, assignors to Fritz Stahlecker and Hans Stahlecker, Fed. Rep. of Germany

Continuation of Ser. No. 544,955, Jun. 28, 1990, abandoned. This application Sep. 30, 1991, Ser. No. 768,109

Claims priority, application Fed. Rep. of Germany, Jul. 11, 1989, 3922769

Int. Cl.[5] D01H *5/28, 11/00*

U.S. Cl. 57—328 20 Claims



1. A spinning machine arrangement for pneumatic false twist spinning including at least one spinning unit, each of said at least one spinning units comprising:

a drafting unit for drafting sliver, said drafting unit including a pair of delivery rollers at its downstream end,

a first air nozzle disposed downstream of the delivery rollers,

a movable air nozzle holder for holding the first air nozzle,

a second air nozzle disposed downstream of the first air nozzle,

and a restricted guidance system for controlling adjusting movement of the first and second air nozzles between an operating spinning position with the first and second air nozzles axially aligned with one another and a servicing position with the first and second air nozzles out of axial alignment with one another, said restricted guidance system including a transmission device for transmitting movement of said first nozzle to the second nozzle while continuously maintaining a predetermined ratio of movement of the first and second nozzles with the second nozzle moving a greater distance than the first nozzle for all adjusted positions of the first and second nozzles.

5,172,543

STARTING SYSTEM FOR A GAS TURBINE AND METHOD OF STARTING A GAS TURBINE

Robert C. White, San Diego, Calif., assignor to Sundstrand Corporation, Rockford, Ill.

Filed Dec. 26, 1990, Ser. No. 633,794

Int. Cl.[5] F02C *7/26*; F02G *3/00*

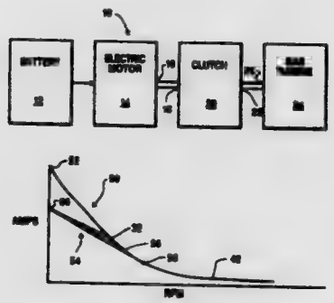
U.S. Cl. 60—39.02 12 Claims

1. A method of starting a gas turbine with a starting system having an electric motor coupled to an input of a clutch with an output of the clutch driving the gas turbine during starting comprising:

activating the electric motor to cause the electric motor to accelerate to a first rotational speed without coupling torque from the input to the output of the clutch; and

coupling torque from the input of the clutch to the output of the clutch after the motor has accelerated to above the first rotational speed with the first rotational speed being

chosen with respect to a power output characteristic of the electric motor as a function of speed of the motor which produces acceleration of the turbine to self-sustaining speed while minimizing a total amount of energy



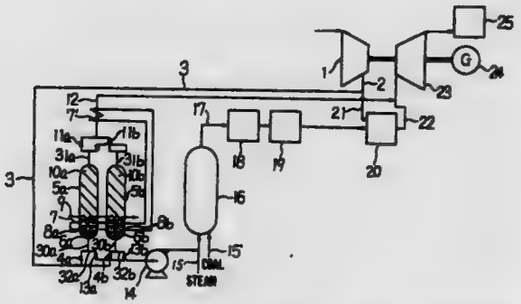
required, represented by an integral of a curve plotting current versus revolutions per minute of the electric motor, for rotating the turbine from zero revolutions per minute to self sustaining speed.

5,172,544

METHOD FOR POWER GENERATION WITH GAS TURBINE USING GASIFIED FUEL OF INFERIOR QUALITY

Yasuo Funayama, Tokyo; Jun Izumi, Nagasaki; Shozo Kaneko, Nagasaki, and Kazuaki Oshima, Nagasaki all of Japan, assignors to The Tokyo Electric Power Company, Inc. and Mitsubishi Jukogyo Kabushiki Kaisha, both of Tokyo, Japan

Filed Jan. 9, 1991, Ser. No. 639,066
Claims priority, application Japan, Jan. 12, 1990, 2-3492
Int. Cl.[5] F02C *3/28*
U.S. Cl. 60—39.02 2 Claims



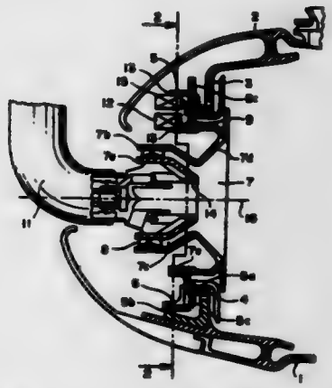
1. A method for power generation with a gas turbine using a gasified fuel of inferior quality, said method comprising: bleeding part of highly compressed air emanating from an air compressor driven by a gas turbine and introducing said part of highly compressed air into an oxygen adsorbing tower containing an oxygen adsorbent of Na-A type zeolite thereby causing the oxygen of said part of highly compressed air to be adsorbed by the oxygen adsorbent and, at the same time, allowing the nitrogen of said part of the highly compressed air to flow in a highly compressed state through the oxygen adsorbing tower; subjecting the adsorbing tower to a vacuum which causes the adsorbed oxygen to be desorbed from the oxygen adsorbent; compressing the oxygen desorbed from the oxygen adsorbent and gasifying a fuel of inferior quality with the compressed oxygen gas as an oxidizing agent; effecting combustion of the gasified fuel of inferior quality with the remainder of said compressed air produced by the air compressor; mixing the gas produced by the combustion of the gasified fuel with said highly compressed nitrogen gas having flowed through the adsorbing tower; and introducing the mixture of said gas and said compressed nitrogen gas into the gas turbine thereby driving the gas turbine and inducing power generation.

5,172,545

APPARATUS FOR ATTACHING A PRE-ATOMIZATION BOWL TO A GAS TURBINE ENGINE COMBUSTION CHAMBER

Alexandre Forestier, Boissise la Bertrand, France, assignor to Societe Nationale d'Etude et de Construction de Moteurs d'Aviation (S.N.E.C.M.A.), Paris, France

Filed Jan. 4, 1991, Ser. No. 710,112
Claims priority, application France, Jan. 5, 1990, 90 00047
Int. Cl.[5] F02C *7/20*; F23R *3/46*
U.S. Cl. 60—39.32 7 Claims



1. Attachment apparatus for temporarily attaching a pre-atomization bowl to a wall of a generally annular combustion chamber having a central longitudinal axis comprising:

a) a first support member attached to the wall of the combustion chamber;

b) a second support member attached to the pre-atomization bowl and extending generally parallel to the first support member;

c) means operatively associated with the first and second support members to limit their relative movement to translational movement along an axis X—X'; and,

d) magnetic means having a first portion attached to the first support member and second portion attached to the second support member and located on the X—X' axis such that the first and second portions are magnetically attached to each other so as to temporarily attach the pre-atomization bowl to the combustion chamber wall.

5,172,546

VOLUME ENHANCED TURBINE ENGINE COMBUSTION ZONE

Jack R. Shekleton, and Colin Rodgers, both of San Diego, Calif., assignors to Sundstrand Corporation, Rockford, Ill.

Filed Nov. 19, 1990, Ser. No. 615,048
Int. Cl.[5] F02C *7/00*
U.S. Cl. 60—39.36 8 Claims

1. A turbine engine, comprising:

a rotary compressor and a turbine wheel coupled to said rotary compressor for driven movement thereof;

an annular nozzle proximate said turbine wheel for directing gases of combustion at said turbine wheel;

an annular combustor about said turbine wheel defined by spaced inner and outer walls connected by a radially extending wall, said annular combustor having a combustion zone upstream of said annular nozzle and a dilution air zone intermediate said annular nozzle and said combustion zone;

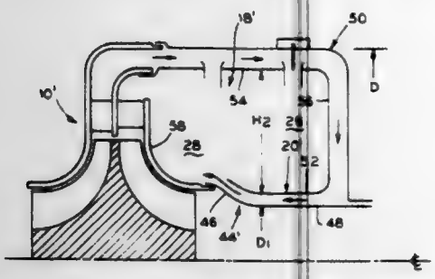
an annular combustor housing surrounding said annular combustor in generally concentric radially spaced relation to said inner and outer walls and in axially spaced relation

to said radially extending wall to define an air flow path from said rotary compressor substantially entirely about said annular combustor;

means for injecting air from said air flow path into said annular combustor; and

means for injecting fuel from a fuel source into said annular combustor;

said annular combustor being adapted to combust fuel from said fuel source and air from said air flow path to generate said gases of combustion, said gases of combustion being



directed at said turbine wheel by said annular nozzle for driven movement of said turbine wheel and said rotary compressor;

said annular combustor housing in the region of said inner wall of said annular combustor defining a thrust nozzle axially adjacent said turbine wheel and radially inwardly of said annular combustor upstream of said radially extending wall;

said combustion zone comprising a generally annular expanded space relative to said dilution zone.

5,172,547

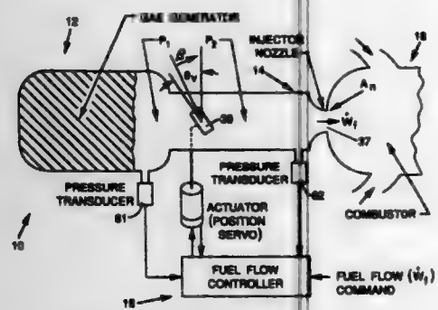
ELECTRONIC VALVE CONTROL FOR GAS GENERATOR OUTFLOW

William J. Lawrence; John A. Stolan, both of San Jose, and Steven O. Leisch, Morgan Hill, all of Calif., assignors to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.

Filed Apr. 30, 1991, Ser. No. 693,464

Int. Cl.[5] F02K 9/26

U.S. Cl. 60—234 **12 Claims**



1. A controlled fuel flow system from gas generator to secondary combustor comprising, a valve mounted between said gas generator and said secondary combustor, said valve having a throat therethrough and a blockage element mounted in said valve and movable in said throat between relatively blocked and unblocked positions to control the gas flow therethrough, sensor means to read the gas pressure in said system upstream of said blockage element and downstream thereof, actuator means to position said blockage element between relatively blocked and unblocked settings and fuel flow controller logic to read said sensors and to operate said actuator and said blockage element to adjust the gas flow through said valve toward a desired rate and to repeat such read-adjust cycle.

5,172,548

DEVICE FOR TAPPING OFF HOT GASES FROM A COMBUSTION CHAMBER AND INJECTOR HEAD EQUIPPED WITH SUCH A DEVICE

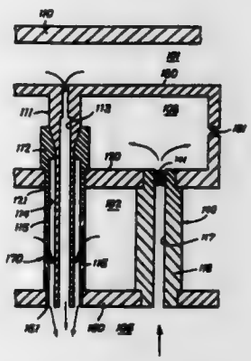
Antoine Dubedout, Montargis, and René Morel, Pacy-Sur-Eure, both of France, assignors to Societe Europeenne De Propulsion, France

Continuation of Ser. No. 403,472, Sep. 6, 1989, abandoned. This application Aug. 21, 1991, Ser. No. 751,592

Claims priority, application France, Sep. 14, 1988, 88 11999

Int. Cl.[5] F02K 9/60, 11/00

U.S. Cl. 60—258 **21 Claims**



1. Device for tapping off hot gases from a combustion chamber into which a plurality of injectors mounted in an injection plate open, each injector having at least an inlet channel for a propellant, the injectors delivering at least two propellants coming from two different cavities, wherein said device includes a tap-off means to convey the gases tapped from the combustion chamber into a third cavity which is equipped at its output with a first nozzle hole having a predetermined diameter selected to achieve a desired gas flow out of said third cavity and wherein said tap-off means includes a cooling system running off one of said propellants and wherein said tap-off means is formed by at least one tubular element having, in the region of its end opposite the combustion chamber and opening in said third cavity, a second nozzle hole having a predetermined diameter selected to achieve a desired gas flow of the gases tapped off out of the combustion chamber.

5,172,549

AIR-FUEL RATIO CONTROL DEVICE FOR AN ENGINE

Hajime Kako, Himeji, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Mar. 13, 1992, Ser. No. 850,855

Claims priority, application Japan, Apr. 19, 1991, 3-88060

Int. Cl.[5] F01N 3/20

U.S. Cl. 60—276 **1 Claim**

1. An air-fuel ratio control device for an internal combustion engine comprising:

a first air-fuel ratio sensor for detecting concentrations of specified components of exhaust gas provided at an exhaust system of an internal combustion engine and on upstream side of a catalytic converter for purifying the exhaust gas;

a low-pass filter for removing a high-frequency component of an output signal of the first air-fuel sensor;

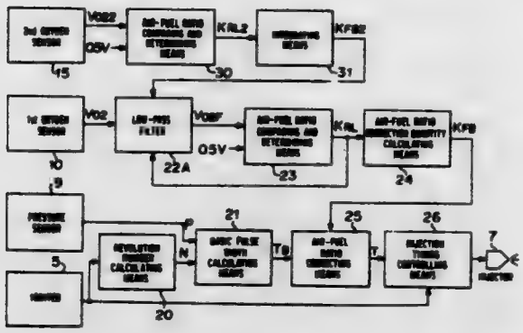
an air-fuel ratio comparing and determining means for comparing an output signal of the low-pass filter with a set value and determining a comparison value;

an air-fuel ratio correction quantity calculating means for calculating an air-fuel ratio correction quantity corre-

sponding with an output signal of the air-fuel ratio comparing and determining means;

an air-fuel ratio controlling means for controlling an air-fuel ratio of the internal combustion engine corresponding with the air-fuel ratio correction quantity;

a second air-fuel ratio sensor for detecting the concentrations of the specified components of the exhaust gas provided on downstream side of the catalytic converter;



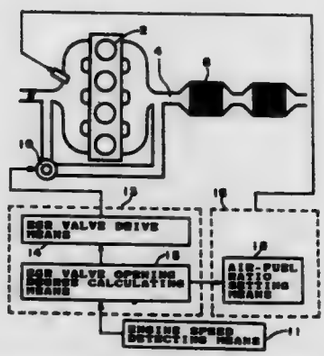
a time constant controlling means for controlling a time constant of the low-pass filter in relation to at least one of the output signal of the first air-fuel ratio sensor, the output signal of the low-pass filter and the output signal of the air-fuel ratio comparing and determining means and an output signal of the second air-fuel ratio sensor.

5,172,550

CONTROL APPARATUS FOR AN INTERNAL COMBUSTION ENGINE

Shinichi Takeshima, Susono, Japan, assignor to Toyota Jidosha Kabushiki Kaisha, Toyota, Japan

Filed Dec. 3, 1991, Ser. No. 801,939
Claims priority, application Japan, Dec. 7, 1990, 2-406184
Int. Cl.[5] F02M 25/07
U.S. Cl. 60—278 13 Claims



1. A control apparatus for an internal combustion engine, the engine being capable of fuel combustion at lean air-fuel ratios and having an exhaust conduit where a zeolite catalyst carrying at least one kind of metal selected from the group consisting of transition metals and noble metals and capable of reducing nitrogen oxides in an exhaust gas from the engine under oxidizing gas conditions is installed, the control apparatus comprising:

engine speed detecting means for detecting an engine speed;

EGR control means including EGR valve opening degree calculating means and EGR valve driving means, the EGR valve opening degree calculating means calculating an EGR valve opening degree based on air-fuel ratios which cause a current exhaust gas temperature to be within a predetermined temperature range at engine speeds lower than a predetermined engine speed and calculating an EGR valve opening degree which causes an amount of large molecular weight HC included in the exhaust gas to be more than a predetermined amount at engine speeds equal to or higher than the predetermined engine speed, the EGR valve driving means driving an EGR valve to the EGR valve opening degree calculated by the EGR valve opening degree calculating means; and

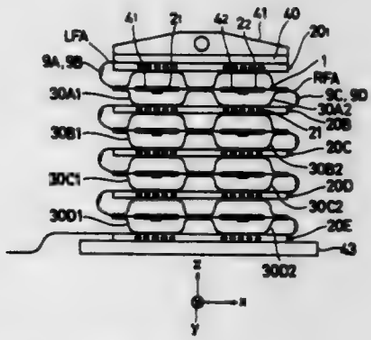
air-fuel ratio control means including air-fuel ratio setting means for setting a current air-fuel ratio to a lean air-fuel ratio calculated based on the EGR valve opening degree.

5,172,551

ACTUATOR

Naomasa Nakajima, Chofu; Mitsuhiro Ando, Tokyo; Yoshihiro Naruse, Ichikawa; Sadao Mikami, Toride, and Katsuhiro Sano, Toyota, all of Japan, assignors to Aisin Seiki Kabushiki Kaisha, Kariya, Japan

Filed Sep. 25, 1991, Ser. No. 765,287
Claims priority, application Japan, Sep. 26, 1990, 2-256399
Int. Cl.[5] F03G 7/00
U.S. Cl. 60—527 21 Claims



1. An actuator comprising:

a plurality of longitudinal segments, each of said segments including at least two laterally adjacent deformable containers, each of said containers enclosing fluid expandible in response to increase in temperature;

heat supply means for supplying the heat to the fluid in each of the containers;

cooling means for cooling the fluid in each of the containers; and

control means for controlling the heat supply means and the cooling means.

5,172,552

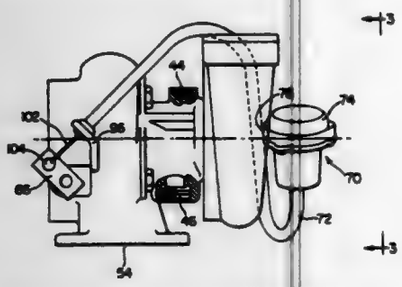
TURBOCHARGER WITH FLEXIBLE CABLE WASTEGATE OPERATING LINKAGE

David G. Elpera, Los Angeles, and Glenn G. Gaba, Palmdale, both of Calif., assignors to Allied-Signal Inc., Morristown, N.J.

Filed Nov. 12, 1991, Ser. No. 790,951
Int. Cl.[5] F02B 37/12
U.S. Cl. 60—602 13 Claims

1. Turbocharger comprising a compressor housing, a turbine housing, and a center housing between the compressor housing and the turbine housing, a shaft rotatably supported in the center housing, one end of said shaft extending into the turbine housing, the other end of the shaft extending into the compressor housing, a turbine wheel mounted on said one end of the shaft, a compressor wheel mounted on the other end of the shaft, said turbine housing defining a turbine volute passage for communicating exhaust gasses to the turbine wheel, said compressor housing defining a compressor volute passage for communicating compressed air delivered by said compressor wheel to an outlet, a lever actuated wastegate valve operable

to vent said turbine passage, a pneumatic actuator communicated with said compressor volute passage for operating said



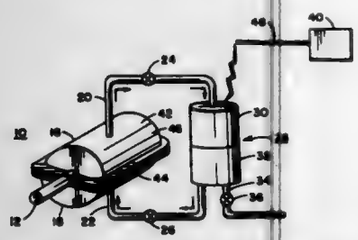
lever when the pressure level in the compressor volute passage attains a predetermined level, and a flexible cable interconnecting the pneumatic actuator and said lever.

5,172,553

CONVECTIVE, TEMPERATURE-EQUALIZING SYSTEM FOR MINIMIZING COVER-TO-BASE TURBINE CASING TEMPERATURE DIFFERENTIALS

Serge P. Barton, Oviedo, and Peter G. Smith, Winter Park, both of Fla., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Jan. 21, 1992, Ser. No. 823,420
Int. Cl.[5] F01K *13/02*
U.S. Cl. 60—656 9 Claims



1. A system for maintaining generally uniform temperature of a steam turbine during time periods when the turbine is off-line after a period of operation, the system including means for circulating residual steam-air mixture in the turbine between an upper portion of a casing of the turbine and a lower portion of the casing for generally equalizing temperatures at the upper and lower portions of the casing and means inhibiting operation of said circulating means when pressure within said turbine exceeds a preselected value.

5,172,554

SUPERFLUID THERMODYNAMIC CYCLE REFRIGERATOR

Gregory W. Swift, Santa Fe, N. Mex., and Vincent Y. Kotsubo, La Canada, Calif., assignors to The United States of America as represented by the United States Department of Energy, Washington, D.C.

Filed Apr. 2, 1991, Ser. No. 679,498
Int. Cl.[5] F25B *9/00*
U.S. Cl. 62—6 18 Claims

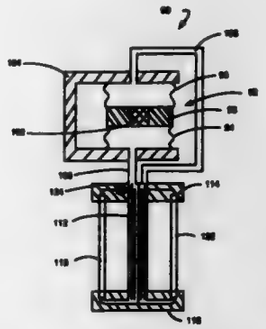
1. A refrigerator for cryogenic cooling, comprising:

a single phase working solution of liquid ^3He at a predetermined initial concentration in superfluid ^4He;

a bulk fluid containing superfluid ^4He;

first pump means defining a first variable volume for containing said working solution, a second variable volume for containing said bulk fluid, and means for cyclically transferring said bulk fluid between said first and second variable volumes;

first superleak means connecting said first and second variable volumes to permit said bulk fluid in said second variable volume to pass therethrough and cyclically vary said concentration of ^3He in said first volume for cyclically heating and cooling said working solution in said first volume; and



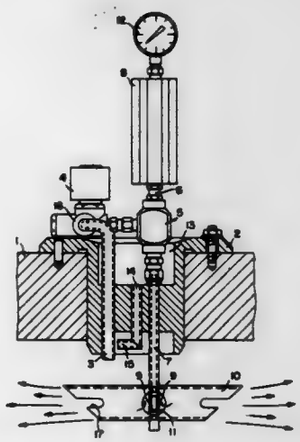
at least one heat exchanger operatively connected with said first volume for thermal energy exchange with said working solution.

5,172,555

DEVICE FOR EXPANSION OF LIQUEFIED GASES

Wolfgang Schmidtke, Munich, Fed. Rep. of Germany, assignor to Linde Aktiengesellschaft, Wiesbaden, Fed. Rep. of Germany

Filed Oct. 28, 1991, Ser. No. 782,145
Claims priority, application Fed. Rep. of Germany, Oct. 26, 1990, 4034076
Int. Cl.[5] F17C *7/02*
U.S. Cl. 62—50.2 21 Claims



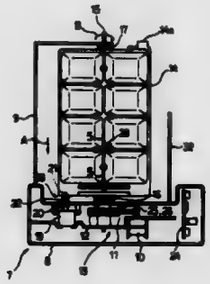
1. A device for expansion of a liquefied gas having liquefied gas piping and at least one connected expansion opening, wherein the expansion opening is arranged inside a cold gas supply pipe which has first and second ends with a lateral groove at each for jet expansion and which has at least one ejector bore hole in the vicinity of the expansion opening for aspirating secondary atmosphere into the cold gas supply pipe.

5,172,556

AUTOMATIC ICE MAKER AND HOUSEHOLD REFRIGERATOR EQUIPPED THEREWITH

Hiroshi Oike, Osaka, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Nov. 14, 1990, Ser. No. 612,448
Claims priority, application Japan, Nov. 15, 1989, 1-296892
Int. Cl.[5] F25C 1/20
U.S. Cl. 62—68 11 Claims



9. An ice maker comprising:

a) an ice making compartment;

b) an ice tray having a shaft, the ice tray being provided in the ice making compartment so as to be inverted about the shaft and slidable in the lengthwise direction of the shaft;

c) water supply means for supplying the ice tray with water;

d) chilled air supply means for supplying chilled air to the interior of the ice making compartment so that the water in the ice tray is converted to ice;

e) an electromagnet for vibrating the ice tray in the lengthwise direction of the shaft in an ice making operation so that air bubbles contained in the water in the ice tray are caused to promptly escape therefrom before the water frozen, thereby making transparent ice; and

f) a drive mechanism for driving the ice tray after the water in the ice tray is made into the ice, the drive mechanism inverting the ice tray, thereby removing the ice from the ice tray;

g) a temperature sensor for sensing the temperature of the ice tray, the temperature sensor generating a signal representative of the sensed temperature;

h) position detecting means for detecting both horizontal and inversion positions of the ice tray, the position detecting means generating a signal when detecting each of the horizontal and inversion positions coupled by the ice tray; and

i) control means for controlling the drive mechanism and electromagnet, the control means determining an ice making completion time based on the signal from the temperature sensor, thereby controlling the drive mechanism and the electromagnet, the control means activating the drive mechanism in accordance with the detection signals so that the ice tray is stopped at the horizontal and inversion positions.

5,172,557

BY PASS MANIFOLD VALVE FOR CHARGING REPAIRING AND/OR TESTING REFRIGERANT SYSTEMS

Paul J. Hubbell, Jr., P.O. Box 541, Metairie, La. 70004

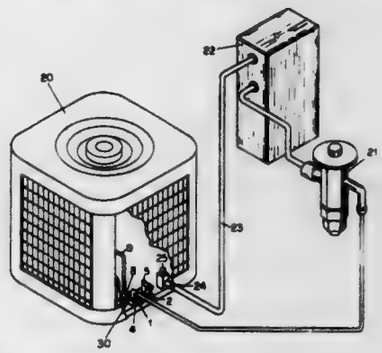
Filed Nov. 13, 1987, Ser. No. 120,525
The portion of the term of this patent subsequent to Feb. 22, 2008, has been disclaimed.
Int. Cl.[5] F25B 45/00
U.S. Cl. 62—77 5 Claims

1. A device containing a double valve manifold with a by pass of the shut off valve in the main flow refrigerant line between the condenser and evaporator coils of a closed refrigeration system, comprising,

a longitudinal main flow manifold containing a manually operated shut off valve through which compressible evaporative refrigerants flow between the condenser and evaporator coils of a closed refrigeration system and having an entrance and exit to a passageway for the flow of said refrigerant through the said manifold and comprising,

a second longitudinal manifold containing a manually operated shut off valve that is generally parallel to the said firstly described main flow manifold and shut off valve with an external threaded access port thereon, without a Schrader valve core therein, extending from said second longitudinal manifold, and

a transverse tubular manifold between the first and secondly



described longitudinal manifold valves, on a generally ninety degree angle, which intersects the first and secondly described manifold valves on the upstream side of the seat thereof,

which provides a means to infuse in and to extract refrigerants from a closed refrigeration system through the threaded access port of the secondly described manifold, and then through the tubular transverse manifold, intersecting the first and secondly described manifolds, into the firstly described manifold, upstream of the seat of its shut off valve, allowing a by pass of the main flow shut off valve.

5,172,558

COOLING PROCESS AND REFRIGERATED CONTAINER

Rüdiger Wansbauer, Puch, and Werner Russ, Altenmarkt, both of Austria, assignors to Franz Welz Internationale Transporte GmbH, Austria

PCT No. PCT/AT89/00070, § 371 Date Feb. 4, 1991, § 102(e) Date Feb. 4, 1991, PCT Pub. No. WO90/01661, PCT Pub. Date Feb. 22, 1990
PCT Filed Aug. 4, 1989, Ser. No. 613,828
Claims priority, application Austria, Aug. 4, 1988, 1968/88
Int. Cl.[5] F24F 3/16
U.S. Cl. 62—78 22 Claims

1. Apparatus for storing perishable goods in a refrigerated state comprising

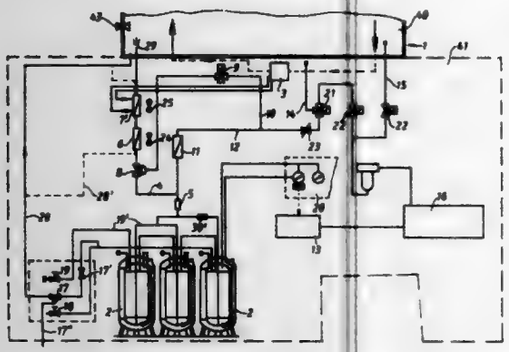
a cool room for storing said perishable goods,

control means connected with said cool room, said control means being adapted to control separately the atmospheric composition, and the internal temperature, of said cool room,

a liquid nitrogen source connected with said cool room and said control menas, liquid nitrogen from said source being used substantially only to modify the atmospheric composition of said cool room, and not to change substantially the temperature of said cool room,

a warming system connected with said control means and said liquid nitrogen source, said warming system being adapted to warm nitrogen from said source to a temperature substantially corresponding to the internal temperature of said cool room, that nitrogen being so warmed before it is introduced into said cool room to modify the atmospheric composition of said cool room, said warming

system thereby permitting the nitrogen to be introduced into said cool room at a warmed temperature which does not significantly damage perishable goods within said cool room, and



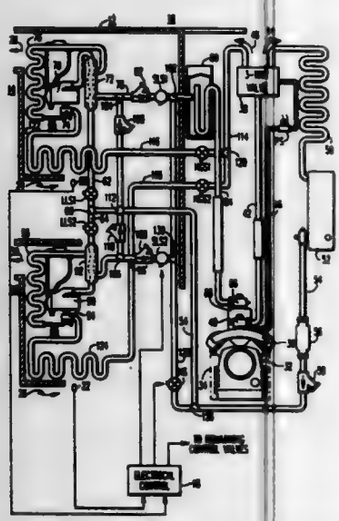
a cooling system connected with said cool room and said control means, said cooling system being adapted to cool the internal temperature of said cool room independent of said liquid nitrogen.

5,172,559

COMPARTMENTALIZED TRANSPORT REFRIGERATION SYSTEM HAVING MEANS FOR ENHANCING THE CAPACITY OF A HEATING CYCLE

David J. Reaken, Minneapolis, and John P. Saunders, Brooklyn Park, both of Minn., assignors to Thermo King Corporation, Minneapolis, Minn.

Filed Oct. 31, 1991, Ser. No. 785,838
Int. Cl.[5] F25B *13/00*
U.S. Cl. 62—81 **7 Claims**



6. A method of operating a compartmentalized transport refrigeration system which holds selected set point temperatures in at least first and second served spaces via heating and cooling cycles, a refrigerant circuit having high and low pressure sides, including a compressor, a condenser, a receiver, at least first and second evaporator sections respectively associated with the first and second served spaces, an accumulator, and mode selector valve means having heating and cooling positions, comprising the steps of:

providing a heat signal when the need for a heat cycle is detected in one of the served spaces,

connecting the receiver in direct fluid flow communication with the low pressure side of the refrigerant circuit when the heat signal is provided,

initiating a predetermined timing period in response to the heat signal,

maintaining the mode selector valve means in a cooling cycle position during the timing period,

operating the mode selector valve means to select the heating cycle at the expiration of the timing period,

and terminating the direct fluid communication between the receiver and low pressure side of the refrigerant circuit at the expiration of the timing period,

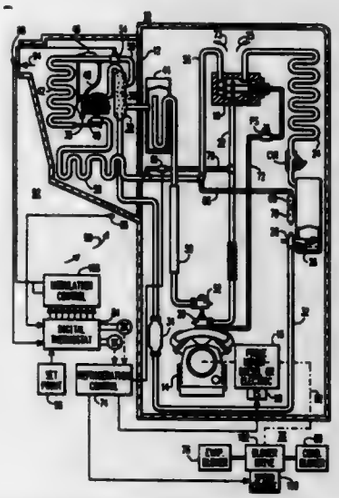
whereby continuing the mode selector valve means in the cooling position thereof while the receiver is directly connected to the low pressure side of the refrigerant circuit forces liquid refrigerant trapped in the condenser to become available for a heating cycle, while preventing high pressure refrigerant required by a cooling cycle associated with another of the served spaces, from being short circuited to the low pressure side of the refrigerant circuit.

5,172,560

METHOD OF OPERATING A TRANSPORT REFRIGERATION SYSTEM

Romuald M. Jurewicz, St. Louis Park; Jay L. Hanson; Jeffrey B. Berge, both of Bloomington; Jayaram Seshadri, Minneapolis; Alan D. Gustafson, Eden Prairie; David A. Christiansen, Bloomington, all of Minn.; Richard A. Johnson, Murrysville Boro, Pa.; Lowell B. Naley, Minnetonka, and Doyle G. Herrig, Elko, both of Minn., assignors to Thermo King Corporation, Minneapolis, Minn.

Filed Mar. 27, 1992, Ser. No. 858,806
Int. Cl.[5] F25D *19/06*
U.S. Cl. 62—89 **8 Claims**



1. A method of operating a transport refrigeration system having a compressor driven by a prime mover at a selected one of predetermined high and low speed values; hot gas, liquid and suction lines; a condenser; an evaporator; expansion means in the liquid line; a controllable modulation valve in the suction line; a controllable hot gas injection valve between the hot gas line and evaporator; evaporator air flow means driven by the prime mover, and control means providing a control error which controls the temperature of a load space to a predetermined set point via heating and cooling modes which includes modulation control of the suction line modulation valve, comprising the steps of:

driving the compressor at the predetermined high speed value during a cooling mode when the control error exceeds a first predetermined value,

injecting hot gas into the evaporator via the hot gas injection

valve when the control error is reduced to said first predetermined value, while maintaining the prime mover at the predetermined high speed, to maintain the evaporator air flow at a high rate associated with high prime mover speed, to provide relative rapid temperature pull-down across the entire load space, notwithstanding that cooling capacity has been reduced by the hot gas injection,

reducing the speed of the prime mover to the predetermined low speed value when the control error has been further reduced to a second predetermined value, while initiating suction line modulation and maintaining hot gas injection,

and switching from the cool mode to the heat mode, when the control error has been further reduced to a third predetermined value, while maintaining suction line modulation and terminating hot gas injection,

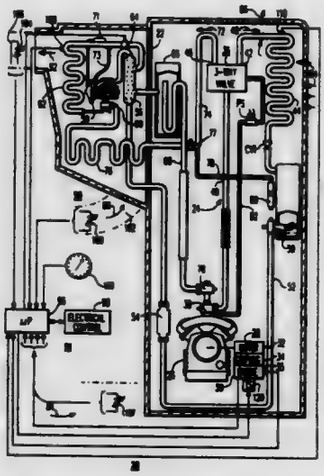
said hot gas injection during a cool mode necessitating a small flow of refrigerant through the suction line at and near a control error value of zero, either enabling set point to be held without a mode change, or causing the refrigeration capacity just prior to a mode change to more closely match the capacity available after a mode change, enabling substantially continuous and more stable control over the load space temperature through a mode change.

5,172,561

PRE-TRIP DIAGNOSTIC METHODS FOR A TRANSPORT REFRIGERATION UNIT

Jay I. Hanson, Bloomington, and James E. Nixon, Woodbury, both of Minn., assignors to Thermo King Corporation, Minneapolis, Minn.

Filed May 1, 1992, Ser. No. 877,306
Int. Cl.[5] F25B *49/00*
U.S. Cl. 62—127 **13 Claims**



1. A method of automatically checking predetermined functions and operating performance of a transport refrigeration unit having electrical control, electrically controlled components, a refrigeration circuit which includes a refrigerant compressor, and a prime mover for the refrigerant compressor which includes an internal combustion engine, with the transport refrigeration system conditioning air returning from a cargo space via commanded heating and cooling modes, as required to hold a predetermined set point temperature, and discharging the conditioned air back into the cargo space, and including temperature sensors for providing the temperatures of the return air, discharge air and ambient air, comprising the steps of:

measuring the current draw of predetermined electrical components with the prime mover stationary,

comparing the measured current draw of each electrical component with an allowable range for the component,

starting the internal combustion engine at a predetermined rated speed when the comparison step finds that the current draw for each component checked is in the associated allowable range,

determining the actual speed of the internal combustion engine,

comparing the actual speed of the internal combustion engine with an allowable range for the predetermined rated speed,

commanding the transport refrigeration system to operate in a cooling mode,

checking for adequate cooling capacity of the transport refrigeration unit as a dynamic function of the temperature values of the return air, discharge air, and ambient air, commanding the transport refrigeration system to operate in a heating mode,

determining if the transport refrigeration system is operating in the commanded heating mode by comparing the temperatures of the return air and discharge air,

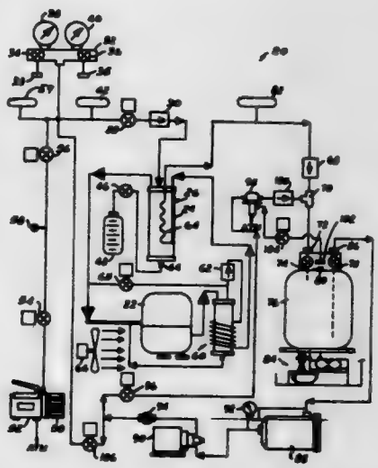
and preparing an indication of a fault condition descriptive of any detected malfunction and marginal operating performance.

5,172,562

REFRIGERANT RECOVERY, PURIFICATION AND RECHARGING SYSTEM AND METHOD

Kenneth W. Manz, Paulding, Ohio, and Charles E. Dull, Fort Wayne, Ind., assignors to SPX Corporation, Muskegon, Mich.

Continuation-in-part of Ser. No. 556,624, Jul. 20, 1990, abandoned. This application Sep. 10, 1991, Ser. No. 757,663
Int. Cl.[5] F25B *45/00*
U.S. Cl. 62—149 **11 Claims**



1. A system for recovery and recharging refrigerant in refrigeration equipment that comprises:

means forming a system inlet for connection to equipment under service,

first refrigerant pump means having an inlet and an outlet,

means including a recovery control valve for connecting said inlet of said first refrigerant pump means to said system inlet, and a recovery control sensor connected between said recovery control valve and said system inlet for terminating a recovery cycle when pressure at said system inlet drops below a recovery threshold value which indicates that substantially all refrigerant has been recovered,

means connected to said outlet of said first pump means for storing recovered refrigerant,

means for evacuating the refrigeration equipment including a vacuum pump, a first vacuum control valve for selectively connecting said vacuum pump to said system inlet,

and a vacuum control sensor connected between said first vacuum control valve and said system inlet and having a vacuum cycle threshold above one atmosphere absolute pressure for inhibiting opening of said first vacuum control valve when pressure at said system inlet is greater than said vacuum cycle threshold, and

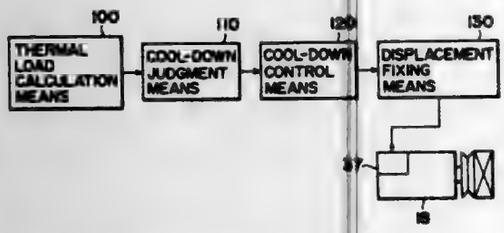
control means including a pressure sensor separate from said recovery control sensor and said vacuum control sensor connected between said vacuum pump and said first vacuum control valve for sensing pressure in the refrigeration equipment during operation of said evacuating means, means coupled to said vacuum valve and to said vacuum pump, and responsive to an operator, for selectively opening said first vacuum control valve and operating said vacuum pump during a vacuum cycle, and means responsive to said pressure sensor for terminating operation of said vacuum pump when pressure at said sensor reaches a preselected low-pressure threshold, said pressure sensor having a pressure sensitivity range below one atmosphere absolute and being protected against inadvertent opening of said first vacuum control valve by said vacuum control sensor.

5,172,563

APPARATUS FOR CONTROLLING AUTOMOBILE AIR-CONDITIONER

Kazuo Fujii, Konan, Japan, assignor to Zexel Corporation, Tokyo, Japan

Filed Jun. 7, 1991, Ser. No. 712,042
Claims priority, application Japan, Jun. 20, 1990, 2-161836
Int. Cl.[5] F25B *1/00*
U.S. Cl. 62—158 **3 Claims**



1. An apparatus for controlling the operation of an air-conditioner for a motor vehicle, comprising:

(a) a variable displacement compressor constituting a part of a refrigeration cycle of the air-conditioner for controlling the discharge rate of a refrigerant in response to an externally supplied compressor displacement signal;

(b) a thermal load calculation means for calculating a total signal based on at least a vehicle compartment temperature, an outside air temperature, a solar radiation quantity, and a setting signal from a temperature setter;

(c) a cool-down judgement means for judging from said total signal calculated by said thermal load calculation means whether or not a rapid cooling is necessary;

(d) a cool-down control means for performing a rapid cool-down control when said cool-down judgement means judges it necessary to perform the rapid cooling; and

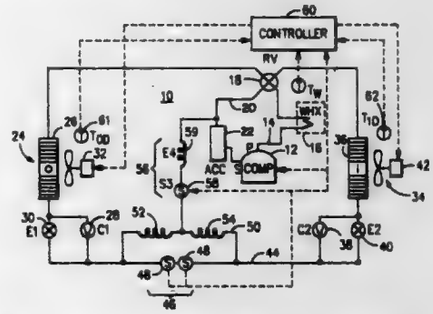
(e) a displacement fixing means for fixing a value of the compressor displacement signal for maintaining a maximum displacement level of the compressor during a predetermined period of time starting from when the rapid cool-down control by said cool-down control means begins to be performed.

5,172,564

INTEGRATED HEAT PUMP WITH RESTRICTED REFRIGERANT FEED

Wayne R. Reedy, Edwardsville, Ill., assignor to Electric Power Research Institute, Inc., Palo Alto, Calif.

Filed May 14, 1991, Ser. No. 699,919
Int. Cl.[5] F25B *13/00*
U.S. Cl. 62—160 **7 Claims**



1. An integrated heat pump and hot water system capable of providing cooling to an indoor space, heating of said indoor space, and water heating with or without heating or cooling of said indoor space; comprising

a refrigerant compressor having a discharge port from which compressed refrigerant vapor is discharged and a suction port to which the refrigerant is returned as low pressure vapor;

a water heat exchanger following said discharge port for transferring heat from the compressed refrigerant to water in the water heat exchanger for heating the water;

an outdoor heat exchanger which includes a heat exchanger coil having first and second refrigerant ports, an associated outdoor fan for forcing outdoor air over the outdoor heat exchanger coil, and an outdoor expansion device coupled to the second refrigerant port;

an indoor heat exchanger which includes a heat exchanger coil having first and second refrigerant ports, an associated indoor fan for forcing indoor air over the indoor heat exchanger coil, and an indoor expansion device coupled to the second refrigerant port of the indoor heat exchanger coil;

a reversing valve having a first port coupled to the water heat exchanger to receive the compressed refrigerant therefrom, a second port coupled to a suction line that connects to the suction port of said compressor to supply said low pressure refrigerant vapor thereto, and third and fourth ports respectively connected to the first ports of said outdoor and indoor heat exchanger coils, respectively; said reversing valve having a heating position in which the compressed refrigerant is supplied to the indoor coil and the low pressure vapor is returned from the outdoor coil, and a cooling position in which the compressed refrigerant is supplied to the outdoor coil and said low pressure vapor is returned from said indoor coil;

a condensed refrigerant line connecting the indoor and outdoor heat exchangers and supplying condensed refrigerant from one of said heat exchanger coils to the expansion device of the other heat exchanger, said line including

selective restriction means providing unrestricted refrigerant flow in said condensed refrigerant line under conditions of heating or cooling of said indoor space, but restricting said refrigerant flow therein under conditions of water heating in said water heat exchange only, but not heating or cooling said indoor space and wherein said indoor or outdoor fan, respectively, is not actuated; and

a quenching branch line coupled between said selective restriction means and said suction line for injecting a restricted flow of said condensed refrigerant into the low

pressure refrigerant vapor in said suction line under said conditions of water heating only.

5,172,565

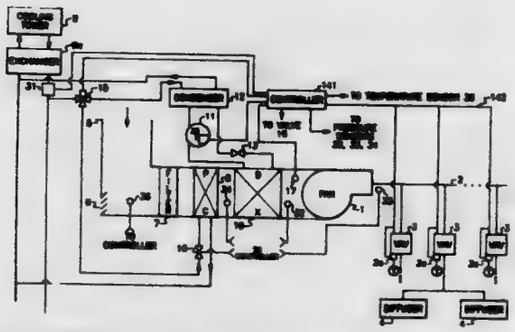
AIR HANDLING SYSTEM UTILIZING DIRECT EXPANSION COOLING

Richard A. Wruck, Mount Prospect, and Gideon Shavit, Highland Park, both of Ill., assignors to Honeywell Inc., Minneapolis, Minn.

Division of Ser. No. 526,857, May 21, 1990, Pat. No. 5,101,693. This application Oct. 3, 1991, Ser. No. 770,694

Int. Cl.[5] F25D *17/00*

U.S. Cl. 62—177 1 Claim



1. A HVAC system with which provides conditioned air having a first temperature to a space, said space having a second temperature, comprising:

a terminal controller for controlling air flow into the space;

a first temperature sensing means adapted to produce a first temperature signal indicative of the first temperature;

a second temperature sensing means adapted to produce a second temperature signal indicative of the second temperature; and

a controller having a programmable memory in communication with said first and second temperature sensing means and said terminal controller, said controller being adapted to produce a terminal controller control signal which varies air flow through the space for small variations in the second temperature according to $F=Q_{REQ}/1.1*(T_1)-T_2$ where F=airflow, Q_{REQ}=amount of heat transfer required, T_1=first temperature and T_2=second temperature.

5,172,566

TEMPERATURE REGULATING APPARATUS FOR REFRIGERATORS

Yoon G. Jung, and Young R. Yoon, both of Seoul, Rep. of Korea, assignors to Daewoo Electronics Co., Ltd., Seoul, Rep. of Korea

Filed Aug. 12, 1991, Ser. No. 744,074

Claims priority, application Rep. of Korea, Oct. 24, 1990, 90-17089

Int. Cl.[5] F25D *17/04*

U.S. Cl. 62—186 7 Claims

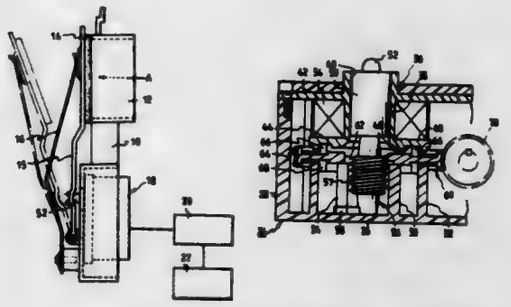
1. An actuator for use in a temperature regulating apparatus of an air-circulated refrigerator, said refrigerator having a refrigeration room communicating with a cold air source through an inlet port formed on a wall of the refrigeration room, said inlet port being closed by an openable damper flap, which comprises:

a housing having a bottom wall, a side wall and a cylindrical boss extending vertically upwardly from the bottom wall about half the height of the side wall, said side wall terminating at its top end;

a guide member having a flanged cylinder and an axial bore formed through the flanged cylinder, said guide member mounted on the top end of the side wall so that the flanged cylinder can be in a concentrically spaced-apart relationship with the cylindrical boss of said housing;

a core member slidably fitted into the axial bore of said guide member for a linear movement between a first position in which the damper flap closes off the inlet port and a second position in which the damper flap fully opens up the inlet port, said core member being operatively connected to the damper flap;

a core driver for causing an axial movement of said core member between the first and the second positions;



a coil wound around the flanged cylinder for generating an electrical position signal proportional to the axial displacement of said core member;

means for generating an electrical temperature signal indicative of the actual temperature within said refrigeration room; and

means responsive to the position and the temperature signals for controlling operation of said core driver to permit a controlled amount of cold air to flow into the refrigeration room.

5,172,567

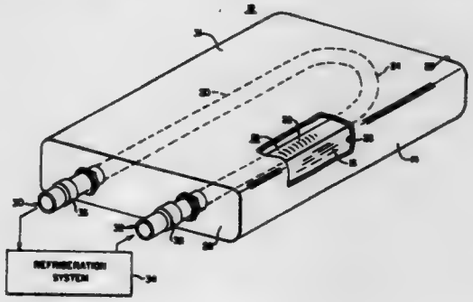
EUTECTIC BEAMS FOR USE IN REFRIGERATION

Rajender K. Sadhir, Murrysville Boro, Pa., assignor to Thermo King Corporation, Minneapolis, Minn.

Filed May 29, 1991, Ser. No. 706,813

Int. Cl.[5] F25D *17/02, 11/00*; F25B *39/02*

U.S. Cl. 62—434 14 Claims



1. An eutectic beam comprising:

a housing,

said housing being formed of a plastic material having a filler of carbon black, to increase the thermal and electrical conductivity of the plastic material,

an eutectic solution in said housing,

and an evaporator tube in the eutectic solution having ends which extend through said housing which are adapted for connection to a refrigeration system,

said evaporator tube being constructed of copper having a protective coating formed of plastic on the outside surface thereof.

HOLLOW JEWELRY OBJECTS AND METHOD

Daya R. Senanayake, 9 Ecrin Place. Colombo 8. Sri Lanka

PCT No. PCT/LK89/00001, § 371 Date Apr. 15, 1991, § 102(e) Date Apr. 15, 1991, PCT Pub. No. WO90/02828, PCT Pub. Date Mar. 22, 1990

PCT Filed Sep. 8, 1989, Ser. No. 659,356

Claims priority, application Sri Lanka, Sep. 9, 1988, 9934

Int. Cl.[5] A44C *25/00*

U.S. Cl. 63—2 10 Claims

1. A method of fabricating a hollow jewellery object comprising applying a first coating of an electrically conducting material to a preselected first portion of the surface of a mandrel of insulating material whereby said surface has a coated portion and an uncoated portion, dipping said mandrel into an eletrolyte while said first coating is connected as a cathode so that positive ions from said electrolyte form a first deposit on said first coating, removing said mandrel from said electrolyte, applying a second coating of an electrically conducting material to the previously uncoated portion of the external surface of said mandrel, dipping said mandrel with said second coating into an electrolyte while said mandrel second coating is connected as a cathode to form a second deposit on the previously uncoated portion of said mandrel and also upon and integral with said first deposit.

5,172,569

CAM ARRANGEMENT FOR KNITTING MACHINES, ESPECIALLY CIRCULAR KNITTING MACHINES

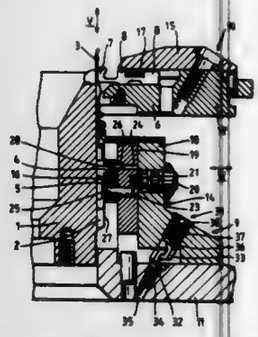
Hans Schaurrer, Albstadt, Fed. Rep. of Germany, assignor to SIPRA Patententwicklungs-und Beteiligungsgesellschaft mbH, Albstadt, Fed. Rep. of Germany

Filed Mar. 27, 1991, Ser. No. 676,091

Claims priority, application Fed. Rep. of Germany, Apr. 14, 1990, 4012204

Int. Cl.[5] D04B *15/32*

U.S. Cl. 66—8 14 Claims



1. Cam arrangement for a knitting machine, especially a circular knitting machine, comprising: a first support in the form of a cam support, said cam support having a flat surface (40), a first abutment surface (41) perpendicular thereto and a centering pin (42) projecting from the flat surface (40); at least one second support in the form of a segment (14), said second support having a bearing surface (43) cooperating with the flat surface (40), a second abutment surface (44) cooperating with the first abutment surface (41) and a recess (45) receiving the centering pin (42); at least one cam part (16) mounted on the segment and at least one fixing device (31) for interchangeable fixing both supports (11, 14) on each other, said fixing device (310) including a first claw (32) associated with one of said supports and tightening means associated with the other one of said supports, said tightening means including a coupling pin (36) associate with the other support and having a second claw (33) cooperating with the first claw (32) and a threaded section (37), said tightening means also including a tightening element (38) screwed together with the threaded section (37) and rotatably mounted on the support to which the coupling pin (36) is associated.

5,172,570

PATTERNED FABRIC, PROCESS AND WARP KNITTING MACHINE FOR THE PRODUCTION THEREOF

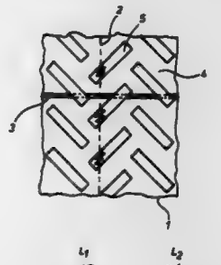
Heins Wade, Rodgau, and Gerhard Bergmann, Heusenstamm, both of Fed. Rep. of Germany, assignors to Karl Mayer Textilmaschinenfabrik GmbH, Obertshausen, Fed. Rep. of Germany

Filed Jun. 24, 1991, Ser. No. 719,786

Claims priority, application Fed. Rep. of Germany, Jun. 28, 1990, 4020549

Int. Cl.[5] D04B *21/00*

U.S. Cl. 66—195 14 Claims



1. A patterned knitted fabric having weft insert threads and a fabric ground comprising at least one system of pattern forming warp threads, at least a majority of said warp threads, for the purpose of patterning, being spatially distributed to alternate both in a warp direction and in a weft direction from first areas each having a plurality of chain stitches, to second areas each having a plurality of different stitches.

5,172,571

NEEDLE SELECTION DEVICE FOR CIRCULAR KNITTING MACHINE, IN PARTICULAR FOR WOMEN'S STOCKINGS

Franco Garlboldi, Viale Banchiero 9, Condove (Torino), Italy

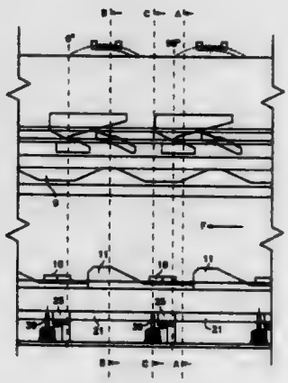
Filed Mar. 28, 1991, Ser. No. 676,325

Int. Cl.[5] D04B *15/66*

U.S. Cl. 66—219 4 Claims

1. A needle selection device for circular knitting machines for women's stockings, comprising: a pusher jack associated with each of a plurality of needles of a needle cylinder, each pusher jack having two heels including an upper heel interacting, in a selection position, with a lower cam and a lower heel interacting, in a selection position, with a pressure cam, acting in a radial direction with respect to the cylinder, and with a raising cam; a horizontal collar formed of non-magnetic material, said horizontal collar being anchored around said needle cylinder, said horizontal collar defining a plurality of radial grooves; a plurality of horizontal elastic selector jacks, each

selector jack being positioned in one of said radial grooves, each selector jack having a foot anchored on said collar and a head extending into a vertical groove receiving said pusher jack, and extending underneath a foot of said pusher jack in a rest position of said pusher jack; a permanently magnetized ring fastened below said collar, facing said selector jacks, said permanently magnetized ring being spaced a distance from said selector jacks to retain said selector jacks only when said selector jacks are inclined downwardly, removed from a horizontal rest position; a permanent magnet supported by a fixed structure with respect to said cylinder in a region of each pressure cam and immediately before said selection position for



removing said selector jack from said horizontal rest position for urging said selector jack to said permanently magnetized ring, to said position inclined downwardly; a vertical tappet cooperating with vertical oscillation movement means for vertically oscillating said tappet, said vertical tappet being positioned between said permanent magnet and an inclined surface of said raising cam, and being positioned under said selector jack for selective detachment of said selector jack from contact with said permanently magnetized ring, whereby the position of said selector jack maintains or modifies a position of said corresponding pusher jack upon passage of said pusher jack over said pressure cam for determining non-operation or operation of a corresponding needle.

5,172,572

AUTOMATIC WASHING APPARATUS

Shuzo Ono, Iwaki, Japan, assignor to Alps Electric Co., Ltd., Tokyo, Japan

Filed Jun. 26, 1991, Ser. No. 721,031

Claims priority, application Japan, Jul. 12, 1990, 2-182787; Jul. 12, 1990, 2-182788

Int. Cl.[5] D06F *33/02*; A47L *15/46*

U.S. Cl. 68—12.02 6 Claims

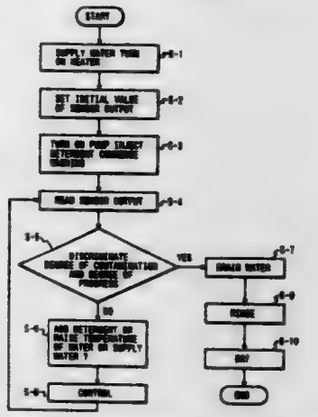
1. An automatic washing apparatus for washing dirty things in a washing tank to which washing liquid is supplied comprising:

light emitting means for emitting light to said washing liquid which has passed through said washing tank;

light receiving means for receiving light generated from said light emitting means and passed through said washing liquid;

sensing means for sensing variation of stain concentration and stain quality in said washing liquid in response to an output signal from said light receiving means; and

control means for discriminating a progress of stain of said washing liquid under a comparison between an output



value from said sensing means and a stain initial value of said washing liquid and controlling a washing condition.

5,172,573

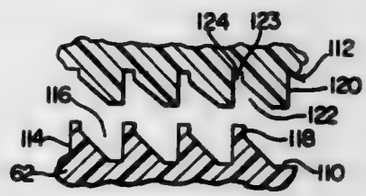
AUTOMATIC WASHER BASKET AND AGITATOR DRIVE SYSTEM

Brenner M. Sharp, St. Joseph Township, Berrien County, and Douglas E. Wood, Hagar Township, Berrien County, both of Mich., assignors to Whirlpool Corporation, Benton Harbor, Mich.

Filed Nov. 13, 1991, Ser. No. 791,798

Int. Cl.[5] D06F *23/04*, *37/40*

U.S. Cl. 68—23.7 6 Claims



1. In an automatic washer having an agitator contained in a wash basket, a motor for driving said agitator and a clutch means selectively connectible between said motor and said wash basket, a clutch comprising:

first engagement means for transmitting power from said motor, said first engagement means including a plurality of radially extending evenly spaced first splines disposed on said first engagement means, each of said first splines further including:

a first side extending outwardly from an originating point to a first predetermined point;

a second side extending at an angle from said first side at said first predetermined point to a second predetermined point;

a third side extending from said second side at said second predetermined point to a third predetermined point, and forming an opposite-facing side to said first side;

a fourth side extending obliquely from said third side at said third predetermined point and terminating at the originating point of the adjacent spline;

second engagement means for transmitting power to said wash basket and engagable by said first engagement means being disposed adjacent to and facing said first engagement means, said second engagement means including a plurality of radially extending evenly spaced second splines disposed on said second engagement means, each selected pair of said second splines defining a facing sur-

face therebetween, each of said second splines further including:

a first side extending outwardly from a first facing surface to a first predetermined point;

extending at an angle from a second side said first side at said first predetermined point to a second predetermined point, said second side being greater in length than an individual space between two of said adjacent first splines disposed on said first engagement means;

a third side extending obliquely from said second side at said second predetermined point to a third predetermined point, defining a plane parallel to the plane defined by said fourth side of one of said first splines which is adjacent during engagement;

a fourth side extending from said third side of said third predetermined point to a second facing surface;

each of said fourth sides being of sufficient length to prevent contact between each of said second sides of each of said first splines and each of said facing surfaces, during clutch engagement; and

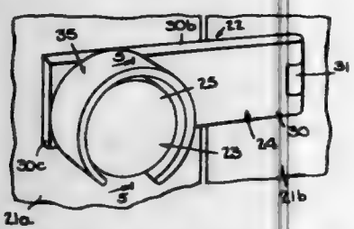
each of said facing surfaces having a width greater than the length of each of said second sides of said first splines.

5,172,574

LOCKING SYSTEM INCLUDING A CUSTOMIZED PADLOCK GUARD

Ralph J. Perfetto, 1312 - 85th St., Brooklyn, N.Y. 11228-3312

Filed Jan. 29, 1991, Ser. No. 647,471
Int. Cl.[5] E05B 67/38
U.S. Cl. 70—56 6 Claims



1. A burglar-resistant locking system for closure means of protected premises which locking system utilizes apertured staple means associated with the closure means and a padlock of the type disclosed in U.S. Pat. No. 3,769,821 for cooperating with said staple means, and which padlock includes a substantially cylindrical housing with flat front and back faces and a circular peripheral face, an axial channel extending inwardly from the back face of the housing toward the front face thereof but terminating short of the latter and being dimensioned to accommodate said staple means, a diametrical passageway extending inwardly from one part of the peripheral face of the housing toward but terminating short of the diametrically opposite part of the peripheral face and intersecting the axial channel substantially medially of the housing, a key cylinder axially and rotatably slidably arranged in the diametrical passageway and having opposite ends directed outwardly and inwardly of the housing, and a bolt carried by the key cylinder at its inwardly directed end and adapted to be reciprocally moved by the latter upon manipulation thereof with the aid of a key so as to be selectively protracted across and retracted away from the axial channel and thereby into and out of the apertured staple means when the same are received in the axial channel;

wherein the improvement comprises a guard for the padlock, and means for supporting the guard in a predetermined relationship to said staple means;

(a) said guard having the form of a high strength and distortion-resistant substantially cylindrical hollow shell of metal or metal alloy, said shell having (i) circumferential front and back edges, (ii) an inner diameter slightly greater than the diameter of said peripheral face of the housing of the padlock so as to enable the latter to be axially inserted into and removed from the shell with a nearly sliding fit, (iii) an axial width between its front and back edges somewhat greater than the thickness of the padlock between said front and back faces of the latter, and (iv) a gap in its circumference defined between two axially extending circumferentially spaced edges, the width of said gap being slightly greater than the diameter of the key cylinder of the padlock; and

(b) said supporting means having (i) a member of metal or metal alloy with a flat front surface, (ii) an opening in said member for accommodating said staple means, and (iii) said guard welded along said circumferential back edge thereof to said member at said front surface of the latter in substantially symmetrically surrounding relation to said opening in said member and with said gap located so as to accommodate the key cylinder of the padlock only when the axial passageway in the housing of the padlock is properly aligned with and able to receive said staple means upon insertion of the padlock into said guard;

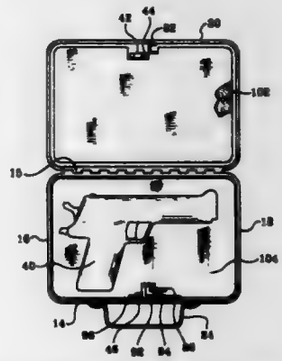
(c) whereby, when the padlock is inserted into said guard and has said staple means received in said axial channel of the padlock and the key cylinder is operated to protract the bolt of the padlock through the apertured staple means and to lock the protracted bolt in position, the locking system is rendered resistant to rapid and noise-free destruction of the staple means and the bolt of the padlock.

5,172,575

GUN BOX LATCHING MECHANISM

Thomas I. Fisher, R.D. #2, Rte. 100, Pottstown, Pa. 19464

Filed Sep. 11, 1991, Ser. No. 757,696
Int. Cl.[5] E05B 65/52
U.S. Cl. 70—63 19 Claims



1. An improved portable gun box for safely sorting at least one of a variety of loaded and unloaded firearms and of the type having a back, a front, first and second sides, a bottom, a plurality of feet outside said gun box on said bottom to support said gun box, a lid hingedly attached to said back for opening and closing said gun box, and a hook affixed to and projecting downward from said lid inside said gun box, wherein the improvement comprises a child-resistant latching mechanism positioned on the inside of said bottom of said gun boxy and including:

a first latching arm slidably engaging said bottom of said gun box, said first latching arm having a

projecting end,

a second latching arm slidably engaging said bottom of said gun box, said second latching arm having an end with a notch which engages said projecting end of said first latching arm when said latching mechanism is in a closed position,

a first foot of said plurality of feet projecting into the inside of said gun box through said bottom of said gun box and

engaging said first latching arm for transmitting a sliding motion of said first foot to said first latching arm;

a second foot of said plurality of feet projecting into the inside of said gun box through said bottom of said gun box and engaging said second latching arm for transmitting a sliding motion of said second foot to said second latching arm;

a vertical catch attached to said second latching arm and having a slot near its top, said slot engaging said hook projecting downward from said lid of said gun box when said gun box is closed; and

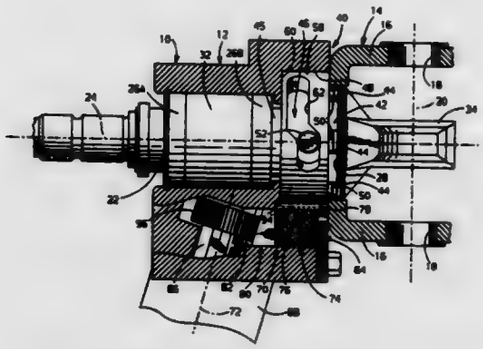
a U-shaped guide bracket attached to said front of said gun box and substantially surrounding said vertical catch, said guide bracket preventing said hook from disengaging said slot in said vertical catch unless said first latching arm and said second latching arm are disengaged.

5,172,576

ANTI-THEFT STEERING SHAFT LOCK

Thomas J. Milton, Bay City, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed Feb. 10, 1992, Ser. No. 832,872
Int. Cl.[5] B60R *25/02*
U.S. Cl. 70—185 **6 Claims**



1. In a steering column having a support and a steering shaft rotatably mounted on said support,

an anti-theft steering shaft lock comprising:

a first clutch element rigidly connected to said steering shaft having a notch means accessible in the direction of a longitudinal centerline of said steering shaft,

a second clutch element having an axial lug means thereon,

means mounting said second clutch element on said support for bodily shiftable movement in the direction of said centerline of said steering shaft between a locked position wherein said axial lug means engages said notch means to prevent relative rotation between said first and said second clutch elements and an unlocked position wherein said axial lug means is remote from said notch means,

an anti-rotation means between said support and said second clutch element operative to prevent rotation of said second clutch element relative to said support,

an annular control element mounted on said support for rotation between a first position corresponding to said unlocked position of said second clutch element and a second position corresponding to said locked position of said second clutch element,

a cam means between said control element and said second clutch element operative to move said second clutch element between said unlocked and said locked positions thereof concurrently with rotation of said control element between said first and said second positions thereof, and

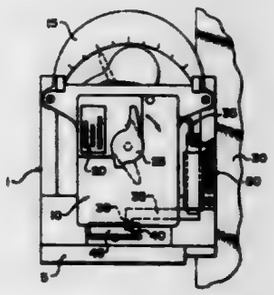
an actuating system on said support operative to rotate said control element between said first and said second positions thereof.

5,172,577

TIMED DOOR LOCKING DEVICE

Alfred G. Gibson, 9186 214 St, Langley V1M 2C1, British Columbia, Canada

Filed Dec. 27, 1990, Ser. No. 634,616
Int. Cl.[5] E05B *43/00*
U.S. Cl. 70—272 **30 Claims**



1. A door lock, comprising:

(a) a first member for rigid affixation adjacent a door, said first member having a latch aperture therein;

(b) a second member, slidably coupled to said first member, for slidable advance to said second member, in a first direction, into a locked position overlying said door;

(c) a latch member carried by said second member for slidable advance of said latch member, in a second direction, to releasably mate said latch member within said latch aperture, thereby locking said second member in said locked position; and,

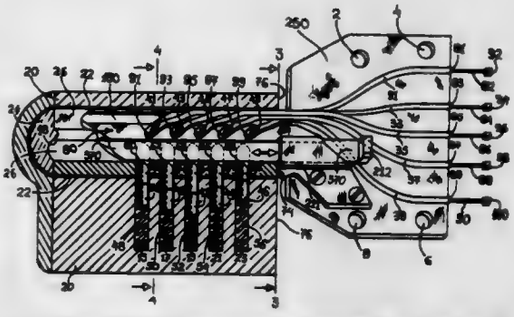
(d) timer means carried by said second member for withdrawing said latch member from said latch aperture, upon expiry of a predetermined time interval, thereby allowing slidable withdrawl of said second member in a direction opposite said first direction from said locked position into an open position away from said door, wherein said timer means further comprises means for timing said pre-determined time interval, coin slots adapted to receive coins, a handle for actuating said timer, and a visual time indicator for indicating the time remaining before expiry of such pre-determined time interval.

5,172,578

LOCKSMITH TOOL

Spiridon A. Bitzios, Kartali 11, Ioannina, Greece

Continuation of Ser. No. 600,829, Oct. 22, 1990, abandoned. This application Nov. 1, 1991, Ser. No. 785,240
Claims priority, application Greece, Feb. 1, 1990, 900100055
Int. Cl.[5] E05B *19/20*
U.S. Cl. 70—394 **5 Claims**



1. A locksmith tool apparatus for decoding the length of a tumbler pin disposed in a discrete lock cylinder within a cylinder lock of the type having a lock housing with a rotatable lock cylinder therein, said apparatus comprising:

lock insertion means slidably insertable into a key way of the

rotatable lock cylinder and including an upper portion and a slidable lower portion, said upper portion having a key shape, said key shape being uniquely defined by the shape of an upper portion of a key specific to the cylinder lock, said slidable lower portion when inserted into said key way being oriented to depress the tumbler pin to a fixed position within said discrete lock cylinder and in a direction away from said upper portion of said lock insertion means;

a frame uniquely attachable to said lock insertion means for controlling the distance said lock insertion means is to be slidably inserted into the key way such that a first end of a wire extending from a groove in said upper portion of said lock insertion means is oriented to extend in said direction away from said upper portion and downwardly along a forward wall within said discrete lock cylinder, said frame including means for supporting said slidable lower portion and permitting said slidable lower portion to be removed from the key way while the upper portion of said lock insertion means remains in the key way;

a small diameter fixed tube disposed within said groove for supporting said wire slidably driven therein, said small diameter fixed tube and said groove extending in a direction from said frame to said upper portion of said lock insertion means, said groove for guiding said small diameter tube to a position within said upper portion of said lock insertion means substantially over said discrete lock cylinder; and

a universal adaptor for attaching to said frame, said universal adaptor comprising:

a wire depressing means attachably connected to a second end of said wire extending from said frame for slidably driving said wire through the small diameter fixed tube, the slidably driven wire depressing the tumbler pin from a fixed relative position below said slidable lower portion to a fully depressed position, said small diameter fixed tube being oriented such that the wire is guided to extend downwardly along said forward wall of the discrete lock cylinder thereby making contact with the tumbler pin therein at said fixed relative position;

means for measuring a maximum distance the wire is slidably extended downwardly by said wire depressing means;

means for calculating, in response to said measured maximum distance, a distance said tumbler pin must be extended downwardly from below said upper portion of said lock insertion means when said slidable lower portion is removed such that a bottom surface of said tumbler pin, resting on a driver pin within said discrete lock cylinder, is flush with the rotatable lock cylinder permitting the rotatable lock cylinder to rotate; and

zeroing means connected to said wire depressing means and said measuring means for calibrating the measuring means by compensating for changes in wire elasticity or shifting of the small diameter fixed tube.

5,172,579

STEERING CONTROL APPARATUS FOR ROLLED PLATES

Akira Nojima, Koganei, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

PCT No. PCT/JP90/00977, § 371 Date May 21, 1991, § 102(e) Date May 21, 1991, PCT Pub. No. WO91/01827, PCT Pub. Date Feb. 21, 1991

PCT Filed Jul. 31, 1990, Ser. No. 700,178

Claims priority, application Japan, Jul. 31, 1989, 1-198407; Jul. 31, 1989, 1-198408

Int. Cl.[5] B21B *37/12*; G06F *15/46*; G05B *13/02*

U.S. Cl. 72—8 **5 Claims**

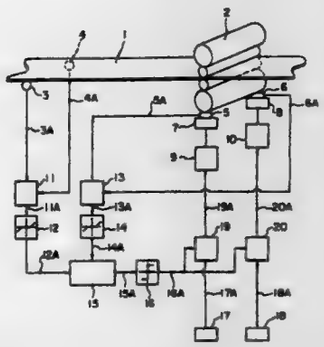
1. A steering control apparatus for steering a rolled plate comprising:

tension detecting means for detecting an operator side tension of a plate rolled by a rolling mill and a drive side tension thereof;

rolling load detecting means for detecting an operator side rolling load of said rolling mill and a drive side rolling load thereof;

first calculation means for calculating a tension difference between said operator side tension and said drive side tension, respectively detected by said tension detecting means;

second calculation means for calculating a rolling load difference between said operator side rolling load and said drive side rolling load, respectively detected by said rolling road detecting means;



third calculation means for obtaining by means of a fuzzy inference scheme, a leveling amount and its polarity of said rolling mill for the steering control of said rolled plate, on the basis of two inputs, said two inputs being said tension difference calculated by said first calculation means and said rolling load difference calculated by said second calculation means; and

means for regulating said leveling amount of said rolling mill independently for the operator side and the drive side, in accordance with said leveling amount and the polarity calculated by said third calculation means.

5,172,580

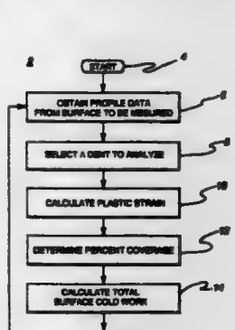
NON-DESTRUCTIVE DETERMINATION OF SURFACE COLD WORK DUE TO A SHOT PEENING OPERATION

Robert A. Thompson, Quaker Street, N.Y., assignor to General Electric Company, Schenectady, N.Y.

Filed Mar. 2, 1992, Ser. No. 844,025

Int. Cl.[5] B24C *1/10*

U.S. Cl. 72—53 **3 Claims**



1. A method for a non-destructive determination of surface cold work due to a shot peening operation including a substrate having a side which has been surface treated, said method comprising the steps of:

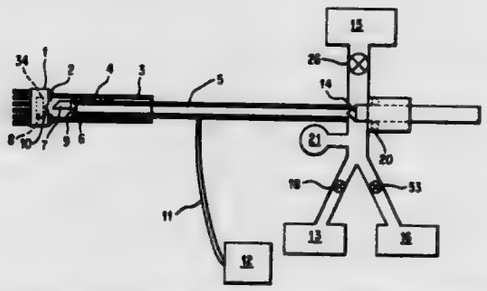
obtaining profile data of said surface treated side in a non-destructive and direct manner, said profile data being indicative of dents caused by said shot peening operation;
selecting a dent from said profile data to be analyzed;
calculating a plastic strain for said dent;
determining a percent of coverage of said surface treated side;
calculating an actual total surface cold work; and
adjusting, if needed, the peening operation so that the actual total surface cold work of a subsequently formed dent will be more in conformance with a predetermined desired total surface cold work.

5,172,581

METHOD AND APPARATUS FOR ANALYZING ENCAPSULATED VAPORS

Richard T. Brackmann; Richard L. Myers, both of Pittsburgh, Pa., and Sanjai K. Bijawat, Boston, Mass., assignors to Extrel Corporation, Pittsburgh, Pa.

Filed Sep. 21, 1989, Ser. No. 410,506
Int. Cl.[5] G01N *33/00*
U.S. Cl. 73—29.01 **41 Claims**



1. A method of analyzing the composition of a small volume of fluid that is initially confined in a small space in an object, said method comprising penetrating said object so that said fluid emerges into a sample chamber, limiting the amounts of said fluid which are sorbed by the interior surfaces of said sample chamber to inconsequential amounts by providing that said sample chamber is sufficiently small to achieve this result, and retaining the fluid that emerges from said space at a pressure in said sample chamber that is sufficiently high so that essentially viscous flow and/or steady state flow conditions exist in said sample chamber and all passages that conduct said fluid to an analyzer so that said analyzer is therefore able to measure in real time the relative composition of the chemical constituents of said fluid via the ratio of real-time measurements of individual constituents of said fluid.

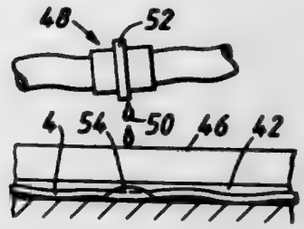
5,172,582

METHOD OF DETECTING ESCAPE OR SPILLAGE OF A COLD LIQUID

Robert B. Tench, Solihull, and David M. Painter, Coventry, both of England, assignors to British Gas plc, London, England

Filed Apr. 24, 1991, Ser. No. 690,568
Claims priority, application United Kingdom, May 10, 1990, 9010462
Int. Cl.[5] G01M *3/28*
U.S. Cl. 73—40.7 **20 Claims**

1. A method of detecting escape or spillage of a cold liquid into an ambient atmosphere which is at a temperature which is higher than that of the liquid, the method comprising providing a container in said atmosphere, said container having a wall through which heat is conductible, said container having an interior containing a gas which is the gaseous state of a substance which is a gas at the pressure prevailing within the container when the substance is at substantially the temperature of the ambient atmosphere, positioning said container for escaped or spilled cold liquid to come into contact with an exterior of said container wall so cooling the wall that said substance in the container interior cools accompanied by a drop in pressure in the container interior, and observing the



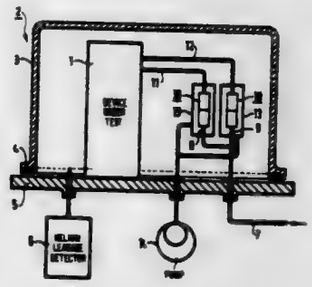
occurrence of said drop in pressure as indication that said escape or spillage has occurred.

5,172,583

SEAL TESTER

Jacques Tallon, Annecy, France, assignor to Alcatel Cit, Paris, France

Filed Sep. 12, 1991, Ser. No. 758,150
Claims priority, application France, Sep. 12, 1990, 90 11272
Int. Cl.[5] G01M *3/22*
U.S. Cl. 73—40.7 **1 Claim**



1. Leak tester comprising a vacuum chamber in which a device under test is placed and a helium leakage detector connected to said vacuum chamber, said device under test being adapted to be filled with helium or with air-helium mixture through an exterior pipe entering said vacuum chamber and incorporating a coupling for connecting it to said device under test and said coupling being surrounded by a collector chamber connected by a pipe to a vacuum pump outside said vacuum chamber.

5,172,584

SECONDARY CONTAINMENT AND LEAK DETECTION APPARATUS

Horace F. Thomas, Houston, Tex., assignor to CoreTank, Inc., Houston, Tex.

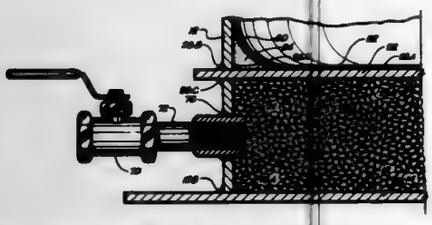
Continuation-in-part of Ser. No. 509,246, Apr. 9, 1990, Pat. No. 5,096,087, which is a continuation-in-part of Ser. No. 388,593, Aug. 2, 1989, Pat. No. 4,939,833. This application Dec. 26, 1990, Ser. No. 634,324
Int. Cl.[5] G01M *3/32*
U.S. Cl. 73—49.2 **17 Claims**

1. An apparatus for holding stored material and for containing and detecting leaks of such stored material from the apparatus, comprising:

(a) a tank, including a tank bottom having a continuous surface for supporting such stored material, and further including a shell for surrounding such stored material, said shell being disposed above said continuous surface of said tank bottom and in continuous sealing connection therewith;

(b) containment baffle means, including (i) a baffle plate having a continuous surface for supporting such stored

material, said baffle plate being disposed above said tank bottom and within said shell, and said continuous surface of said baffle plate being in continuous sealing contact with said shell, thereby forming an air-purged containment space disposed between said baffle plate and said tank bottom; and (ii) wherein said baffle plate is supported above said tank bottom, said baffle plate supported by a fill of aggregate material contained within said containment



space, said containment space filled with said aggregate material and a supply of an inert gas; and

(c) leak detection means arranged so as to detect the presence of such stored material within said containment space, said leak detection means connected to a device external of said tank for receiving electronic signals from said leak detection means relative to the presence of stored materials in said containment space.

5,172,585

CONTINUOUSLY OPERATING CAPILLARY RHEOMETER APPARATUS WITH MINIMIZED RESPONSE-TIME LAG

Wolfgang Gleissle, Hagenbach, Fed. Rep. of Germany, assignor to Göttfert-Werkstoff-Prüfmaschinen GmbH, Buchen, Fed. Rep. of Germany

Filed Jul. 3, 1990, Ser. No. 547,762

Claims priority, application Fed. Rep. of Germany, Jul. 3, 1989, 3921841

Int. Cl.[5] G01N *11/04*

U.S. Cl. 73—54.04 **9 Claims**

1. A capillary rheometer apparatus for the measurement of the viscosity of fluid substances, especially polymer melts and other visco-elastic fluids, comprising:

a capillary having first and second sides;

a metering pump for pumping fluid to the capillary in a controlled manner;

a first connection line for carrying fluid from the metering pump to the capillary;

a second connection line attached to the input side of the metering pump configured for attaching the metering pump to a fluid sampling port of a vessel containing fluid whose viscosity is to be ascertained;

a withdrawal pump for pumping fluid from the capillary in a controllable manner;

means associated with at least one side of the capillary for sensing pressure;

a bypass line for routing fluid from a point immediately upstream of the metering pump to a point downstream from the output side of the withdrawal pump, whereby the bypass line joins with the output of the withdrawal pump;

an independently controllable supply pump for assisting in the movement of fluid from the fluid sampling port through the capillary rheometer apparatus, said supply pump and said metering pump being controlled independently of one another; and

whereby the fluid passing through the bypass line is returned to the vessel from which it was drawn.

5,172,586

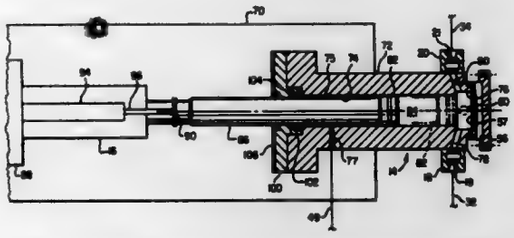
SYSTEM AND METHOD FOR DETERMINING VAPOR PRESSURE OF LIQUID COMPOSITIONS

Donald B. Reed, Plano, Tex., assignor to Atlantic Richfield Company, Los Angeles, Calif.

Filed Oct. 26, 1990, Ser. No. 604,717

Int. Cl.[5] G01N *7/14*

U.S. Cl. 73—64.45 **18 Claims**



1. An apparatus for measuring the vapor pressure of a liquid composition comprising:

means forming a cylinder defining a closable expansible chamber for holding a liquid sample, said cylinder being mounted to receive liquid for taking sample measurements in such a way that the longitudinal central axis of said chamber is substantially horizontal so as to minimize the depth of liquid in said cylinder during expansion of said chamber;

piston means disposed in said cylinder for reciprocating movement to change the volume of said chamber from a first minimum volume to larger volumes;

pressure-sensing means exposed to said chamber for sensing the pressure in said chamber in response to a change in volume of said chamber;

means for maintaining said liquid sample at a substantially constant, predetermined temperature in said chamber; and

means for moving said piston with respect to said cylinder to a selected set of volumes of said chamber, respectively.

5,172,587

PILE LOAD TESTING DEVICE

Erwin L. Long, Anchorage, Ak., assignor to Arctic Foundations, Inc., Anchorage, Ak.

Filed Mar. 13, 1991, Ser. No. 668,777

Int. Cl.[5] G01N *33/24, 3/08, 3/42*

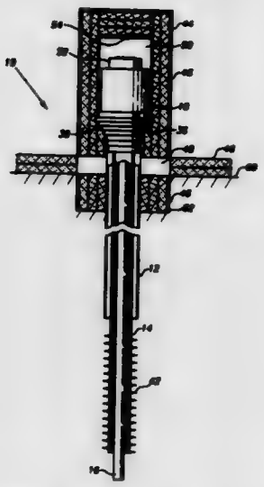
U.S. Cl. 73—84 **19 Claims**

1. A pile load testing device for testing the loading of a test pile extending downwardly into the ground, comprising:

a reaction pile axially disposed inside said test pile and extending downwardly into the ground;

means for simultaneously exerting a downward force on said

test pile and an upward force on said reaction pile such that said test pile moves downwardly;



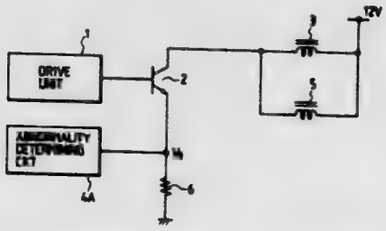
means for detecting the test rate at which said test pile moves downwardly with respect to the ground.

5,172,588

DEVICE FOR DETECTING AN OCCURRENCE OF ABNORMAL CONDITION IN A LOAD

Hideki Umemoto, Hyogo, Japan, assignor to Mitsubishi Denki K.K., Tokyo, Japan

Filed Jan. 11, 1991, Ser. No. 640,461
Claims priority, application Japan, Jan. 12, 1990, 2-1258[U]
Int. Cl.[5] G01M *19/00*
U.S. Cl. 73—119 A
10 Claims



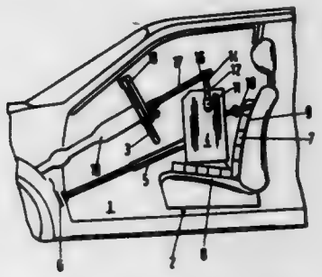
1. A load abnormality detecting device comprising:
a switching circuit connected between one or more loads and a resistor, for performing the on-off control of a current flowing through said one or more loads; and
an abnormality determining circuit for determining whether said one or more loads are normal or not according to the value of a current flowing through said switching circuit, by measuring a voltage across said resistor and comparing said measured voltage to first and second reference voltages.

5,172,589

ROBOT DRIVER

Georg Witt, Helmstedter Strasse 58 H, 3300 Braunschweig, Fed. Rep. of Germany

PCT No. PCT/DE90/00953, § 371 Date Aug. 2, 1991, § 102(e) Date Aug. 2, 1991, PCT Pub. No. WO91/09290, PCT Pub. Date Jun. 27, 1991
PCT Filed Dec. 7, 1990, Ser. No. 721,573
Claims priority, application Fed. Rep. of Germany, Dec. 8, 1989, 3940588
Int. Cl.[5] G01M *19/00*
U.S. Cl. 73—132
25 Claims



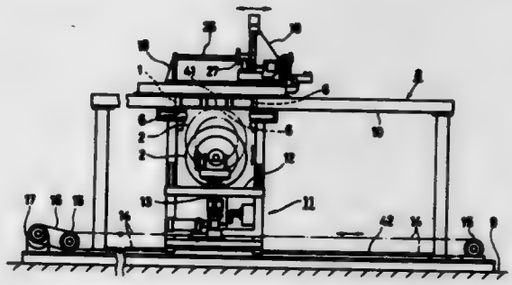
1. Robot driver for a motor vehicle having a passenger compartment, the robot driver comprising:
a central casing being mounted in the passenger compartment;
actuation element operatively connected to pedals of the motor vehicle;
a driver's seat having a seating surface and a back rest surface, the central casing being supported on the seating and back rest surfaces;
a steering wheel frame being mounted to a steering wheel of the motor vehicle;
a rod being connected to the central casing and to the steering wheel frame such that it is flush with the center of a steering column of the motor vehicle.

5,172,590

APPARATUS FOR MEASURING THE GROUND CONTACTING PORTION OF TIRE TREAD

Zenpachiro Adachi, and Yoshio Gouhara, both of Hiratsuka, Japan, assignors to The Yokohama Rubber Co., Ltd., Tokyo, Japan

Filed Jul. 22, 1991, Ser. No. 733,777
Claims priority, application Japan, Aug. 24, 1990, 2-221046
Int. Cl.[5] G01M *17/02*
U.S. Cl. 73—146
6 Claims



1. A tire tread's ground-contacting portion measuring apparatus comprising:
a glass plate;
an illuminating device arranged along the side edges of the glass plate to throw rays of light into the glass plate;
a tire having its tread pressed against one of surfaces of the glass plate; and

a camera to photograph from the other surface of the glass plate the ground-contacting geometry of the tire tread in contact with the glass plate;

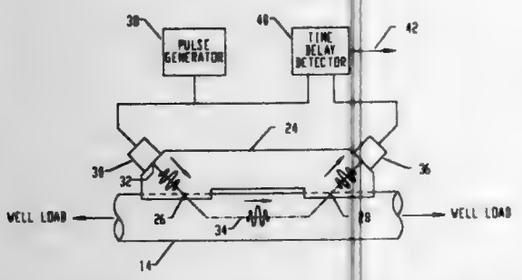
said illuminating device including condenser lenses facing the side edges of the glass plate, a light source and optical fiber cables connecting the condenser lenses with the light source.

5,172,591

OIL WELL SUCKER ROD LOAD MEASUREMENT

W. Mark Bohon, Frisco, Tex., assignor to Atlantic Richfield Company, Los Angeles, Calif.

Filed Aug. 20, 1990, Ser. No. 569,305
Int. Cl.[5] E21B *41/00*; G01H *5/00*; G01N *9/24, 29/18*
U.S. Cl. 73—151 2 Claims



2. A method for measuring load on a sucker rod oil well pumping unit comprising:

injecting an acoustic signal into said sucker rod,

measuring the time of travel of said signal between two points on a load-free portion of said sucker rod, said two points spaced apart by a preselected distance,

measuring the time of travel of said signal between two points on a load-bearing portion of said sucker rod, said two points spaced apart by a preselected distance,

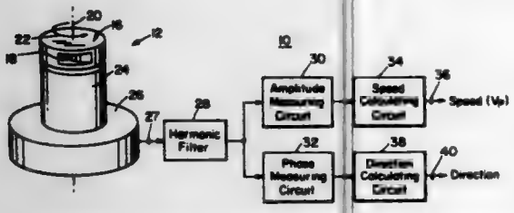
using said measured travel times to calculate the total load on said load-bearing portion of said sucker rod.

5,172,592

OMNIDIRECTIONAL PRESSURE SENSING HEAD

Joseph R. Fisher, Sudbury, Mass., assignor to Pacer Systems, Inc., Billerica, Mass.

Filed Sep. 25, 1990, Ser. No. 587,417
Int. Cl.[5] G01F *1/34*; G01W *1/02*
U.S. Cl. 73—189 11 Claims



1. An omnidirectional pressure sensing head for use in determining the relative velocity and direction of a fluid, comprising:

a rotatable hub having an exterior surface region interfacing with the fluid, said hub further having an axis of rotation;

a channel extending through said hub and having an inlet and an outlet at said hub interfacing surface; and

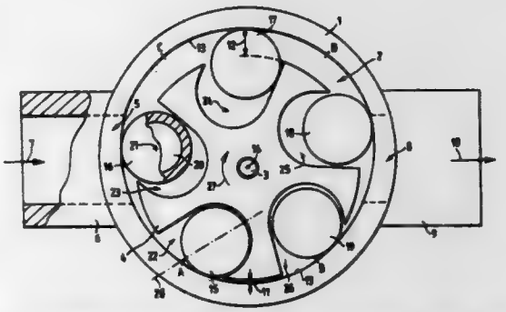
a single pressure sensing port in said hub disposed in said channel between said inlet and outlet for sensing the dynamic pressure of the fluid within said channel, the pressure being a function of the relative translational speed of said hub through the fluid and the rotational speeds of said inlet and outlet.

5,172,593

VOLUMETRIC METER FOR LIQUIDS AND/OR GASES

Giorgio Bergamini, and Ernesto Paris, both of Bari, Italy, assignors to Nuovopignone-Industrie Meccaniche & Fonderia SpA, Florence, Italy

Filed Jul. 15, 1991, Ser. No. 731,101
Claims priority, application Italy, Aug. 1, 1990, 21156 A/90
Int. Cl.[5] G01F *3/08*
U.S. Cl. 73—259 1 Claim



1. A volumetric meter for fluids, comprising a rotor having an axis of rotation for rotation in a predetermined direction and a plurality of circumferential grooves formed in the surface of said rotor parallel to said rotor axis and angularly offset relative to said rotational axis and inclined in a direction toward said predetermined direction of rotation, an outer casing having an inner cylindrical cavity in which said rotor axis is eccentrically mounted to form with the inner surface of said chamber in diametrically opposite regions a minimum and a maximum clearance between said rotor and said inner surface respectively, and at which said inner casing surface has two portions of constant curvatures but with a single centre situated on said rotor axis, said constant curvatures portions extending to straddle opposite inner surface regions through an angle equal to the angular pitch between two successive of said circumferential rotor grooves, a plurality of rollers, each of said rollers being housed in a respective one of said grooves in said rotor, and a plurality of magnets, each associated with a respective one of said rollers, said individual magnetic fields being oriented to produce mutual magnetic repulsion among said magnets in order to urge said rollers in radial directions by the mutual magnetic repulsion action provided by magnets with like magnetization in the direction of the roller axes thereby to press each of said rollers into a sealed state against said inner surface of said cylindrical casing of the outer casing of the meter.

5,172,594

EXTERNALLY REMOVABLE LIQUID LEVEL SENSOR SYSTEM

John Dyke, Federal Way, Wash., assignor to The Boeing Company, Seattle, Wash.

Filed Oct. 29, 1991, Ser. No. 784,192
Int. Cl.[5] G01F *23/00*
U.S. Cl. 73—290 V 7 Claims

1. A matter level sensor system for a holding tank comprising:

a. a stillwell;

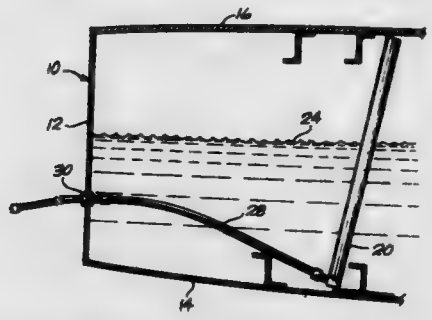
b. a transducer assembly, positioned inside the stillwell, for generating a signal which is a function of the level of matter inside the tank, the transducer assembly having a body with a spline extending from the body;

c. a wire assembly for conducting the signal from the transducer assembly to a location outside the tank, the wire assembly including at least one wire which extends through a wall of the tank;

d. a sleeve which extends from the stillwell for receiving the transducer assembly therein, the sleeve including at least one slot for receiving the transducer assembly spline

therein so as to position the transducer assembly in a predetermined manner inside the sleeve and the stillwell;

e. a conduit for guiding the transducer assembly to the sleeve, the conduit being connected to the sleeve and extending through the tank wall; and



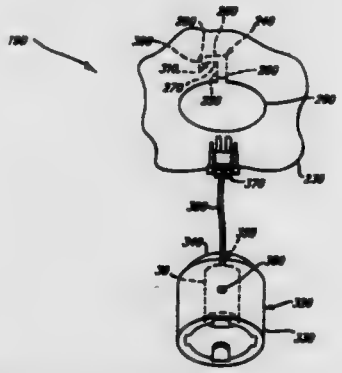
f. an end cap which is attached to the conduit at a location outside the tank and which is removable from the conduit to permit installation and removal of the wire assembly and transducer assembly through the conduit.

5,172,595

BIN LEVEL CONTROL CIRCUIT AND TRANSDUCER MOUNTING SYSTEM FOR AN ICE MAKING MACHINE

Vincent N. Bush, Madison Lake, Minn., and Gregory L. Griswold, Lake Villa, Ill., assignors to Scotsman Group, Inc., Vernon Hills, Ill.

Division of Ser. No. 536,503, Jun. 12, 1990, Pat. No. 5,060,484.
This application Oct. 24, 1991, Ser. No. 782,053
Int. Cl.[5] G01D *21/00*
U.S. Cl. 73—290 V **1 Claim**



1. An apparatus for mounting a transducer in an upper surface of a container, the transducer being part of an ultrasonic volume level control circuit, said apparatus comprising:

(a) socket means for receiving said transducer having a substantially cylindrical and vertical wall including upper and lower edges, the lower edge meeting and being fastened upon the upper surface of the container, said socket means having a channel in said wall having a first vertical section extending upward from the upper surface of the container, a horizontal section extending from the upper most tip of the first vertical section and following the curvature of the wall of said socket means, and a second vertical section extending downward from the horizontal section and having a length less than the first vertical section so as to form a detent; and

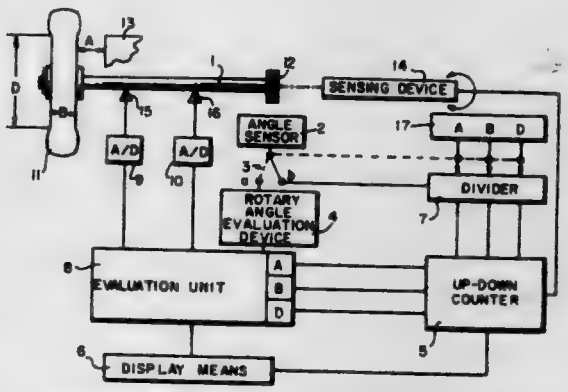
(b) housing means for containing said transducer, said housing means including a substantially cylindrical and vertical wall so as to fit within said socket means and having an upper surface, said transducer being inserted within said housing means such that the emitting side of said transducer is exposed and facing downward, the upper surface of said housing means having a race for passing a wire from the transducer, said housing means also having a pin extending radially outwardly from said wall of said housing means, said pin resting within the second vertical section within said channel when said transducer is mounted within said socket.

5,172,596

PROCESS AND APPARATUS FOR THE INPUT OF PARAMETERS OF A ROTARY MEMBER TO BE BALANCED INTO A BALANCING MACHINE EVALUATION UNIT

Karl Rothamel, Darmstadt, and Stefan Vellmari, Dierdorf, both of Fed. Rep. of Germany, assignors to Hofmann Werkstatt-Technik GmbH, Pfungstadt, Fed. Rep. of Germany

Continuation of Ser. No. 511,083, Apr. 19, 1990, abandoned.
This application Jan. 13, 1992, Ser. No. 819,668
Claims priority, application Fed. Rep. of Germany, Jun. 14, 1989, 3919449
Int. Cl.[5] G01M *1/02*
U.S. Cl. 73—462 **10 Claims**



1. A process for inputting at least one characteristic dimension parameter of a rotary member to be balanced into means for evaluating unbalance measurement values, comprising the steps of:

monitoring a rotary angular position of a balancing machine main shaft;

displaying a value of said characteristic dimension parameter and effecting a correspondence between the displayed value and the monitored rotary angular position of the main shaft;

rotating the main shaft until a desired value is displayed; and

transferring the desired characteristic dimension parameter value to the means for evaluating unbalance measurement values.

5,172,597

METHOD AND APPLICATION FOR MEASURING SOUND POWER EMITTED BY A SOURCE IN A BACKGROUND OF AMBIENT NOISE

Robert A. Hedeen, Clifton Park, N.Y., assignor to General Electric Company, Schenectady, N.Y.

Filed Nov. 14, 1990, Ser. No. 612,937
Int. Cl.[5] G01N *29/24*
U.S. Cl. 73—646 **8 Claims**

1. A method for measuring sound emitted by a source in an environment of background noise comprising the steps of:

providing a plurality of sound measuring probes, each one of the plurality of probes comprising at least a pair of microphones spaced a known distance apart on a common axis;

arranging the probes in a sufficiently distributed array about a virtual measurement surface so that the common axis of each probe is substantially normal to the virtual measurement surface;

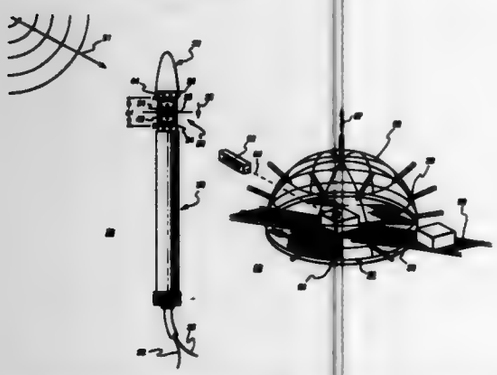
indexing the source to an interior position confronting the virtual measurement surface;

collecting sound pressure measurements from each microphone of each one of the plurality of probes over a predetermined measurement interval;

converting the collected sound pressure measurements from each microphone to digital signals;

fourier transforming said digital signals to a frequency domain;

calculating an average cross-power spectrum for the microphone pair of each probe;



computationally correcting the cross-power spectrum of each probe for mismatches in gain and phase of the microphones thereof from stored probe calibration correction factors;

calculating a net sound intensity at each probe from the corrected cross-power spectrum thereof; and

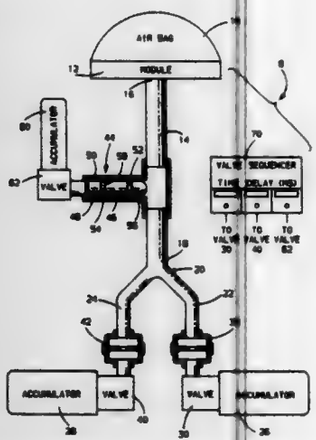
performing a closed surface integration of the net sound intensities at all probes over the virtual measurement surface to determine total sound power emitted by said source exclusive of any background noise.

5,172,598

STORED GAS INFLATABLE RESTRAINT INFLATION SYSTEM

Keith D. Wilson, Highland; Gregory A. Miller, Troy; Brian H. Frantz, Royal Oak, and Jeffery L. Pearson, Rochester, all of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Feb. 28, 1991, Ser. No. 662,056
Int. Cl.[5] G01N *17/00*
U.S. Cl. 73—865.6 **4 Claims**



1. A testing apparatus for inflating an inflatable restraint and simulating the inflation curve of a pyrotechnic device used in a vehicle, the testing apparatus comprising:

a manifold connected to the inflatable restraint for communicating of a gas to the inflatable restraint;

a first accumulator for storage of the gas at a high pressure connected to the manifold;

a second accumulator for storage of the gas at a high pressure connected to the manifold;

a first valve connecting and interposed between the first accumulator and the manifold for releasing the flow of the gas out of the first accumulator;

first flow control means connecting and interposed between the first valve and the manifold for regulating the rate of flow of the gas out of the first accumulator;

a second valve connecting and interposed between the second accumulator and the manifold for releasing the flow of the gas out of the second accumulator;

second flow control means connecting and interposed between the second valve and the manifold for regulating the rate of flow of the gas out of the second accumulator;

flow shut off means connected to the manifold and interposed between the first and second accumulator and the inflatable restraint and adapted for stopping the flow of gas from the first and second accumulator to the inflatable restraint; and

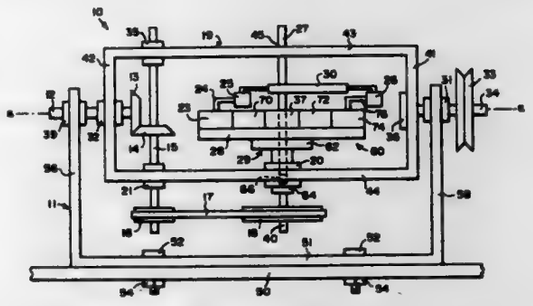
valve timing means connected to the first valve, second valve and the flow shut off means for timing the actuation of the valves and the flow shut off means whereby the first valve, the second valve and the flow shut off means are actuated in sequence to release the gas from the accumulators and then stop the flow of the gas to the inflatable restraint to simulate the inflation curve of the pyrotechnic device.

5,172,599

VIBRATORY DEVICE

Howard M. Woltering, Rte. 2, Box 454, Foster, Ky. 41043

Filed May 15, 1991, Ser. No. 700,462
Int. Cl.[5] F16H *33/00*
U.S. Cl. 74—61 **7 Claims**



1. A vibratory device comprising:

a base having two arms,

a rectangular frame rotatively mounted between the two arms,

a rectangular platform rotatively mounted within the rectangular frame,

means for rotating the rectangular platform as the rectangular frame rotates,

two weights mounted on the rectangular platform,

means to rotate the weights as the rectangular platform rotates,

a connecting rod connecting the weights, and

means to rotate the rectangular frame.

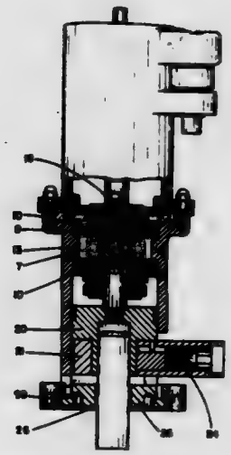
LINEAR WEIGHT ACTUATOR

Thomas J. Cissell; David C. Doerschuk, both of Columbus; Karsten G. Koester, Plain City, and Gordon K. Reed, Bexley, all of Ohio, assignors to ABB Process Automation Inc., Columbus, Ohio

Filed Jan. 18, 1991, Ser. No. 642,988
Int. Cl.[5] F16H *29/20*
U.S. Cl. 74—89.15 2 Claims



1. An actuator comprising:
a housing;
a motor fixed in said housing;
a threaded power nut rotatably driven by said motor, said power nut being longitudinally fixed relative to said housing;
a power screw threadedly carried in said power nut;
an output spindle;
clamp means for adjustably connecting said power screw to said output spindle, said clamp means including means for preventing rotation of said power screw relative to said housing;
support means for providing lateral support to said output spindle, said support means engaging said output spindle at a point spaced from said clamp means;
rotatably adjustable mounting means for affixing said actuator to a desired surface, said mounting means including a mounting plate adapted to be affixed to the desired surface and locking means for fixedly clamping said mounting plate to said housing in a desired rotational orientation; said support means comprising a threaded mounting nut.

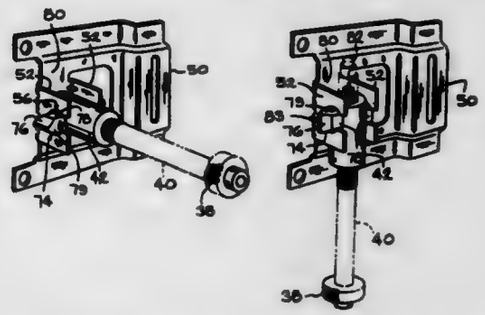
5,172,601

DRIVE NUT AND SCREW FOR SEAT ADJUSTER

Ronald R. Siegrist, Grass Lake, and William M. Huffman, Jackson, both of Mich., assignors to Hoover Universal, Inc., Plymouth, Mich.

Filed Aug. 12, 1991, Ser. No. 743,858
Int. Cl.[5] F16H *25/20*; B60N *2/06*
U.S. Cl. 74—89.15 5 Claims

1. An adjuster for a seat structure having first and second frame members adapted to move relative to one another to adjust the position of the seat structure, said adjuster comprising:
a mounting bracket affixed to one of said frame members, said bracket having a pair of transversely spaced plates extending from a base portion forming a generally U-shaped structure open at the ends of said plates with a key hole slot in each plate with said slots in alignment with one another, each of said slots having a straight sided portion extending inwardly from said end of said plates and an interior circular portion in communication with the straight sided portion of the slots with the circular portion having a diameter greater than the width of the straight sided portion of said slots;
a drive nut having a main body disposed between said plates with a pair of lugs extending oppositely from said main body and resting in said slots, said lugs at the largest cross section through the lugs having a circular section with two flattened opposite sides, the width between said flattened sides being of a size to pass through the straight sided portion of said slots and the diameter of the circular section being sized to fit within the circular portion of said slots whereby said lugs can pass through said slots by aligning the flattened sides of said lugs with the straight



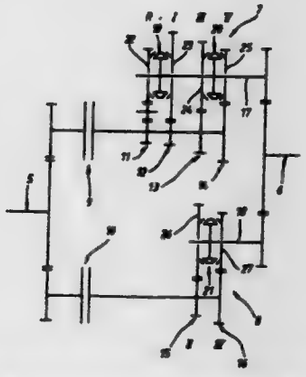
sided portion of said slots and, once said lugs are in the circular portion of the slots, rotating said drive nut ninety degrees to a position in which said lugs cannot be withdrawn from said slots, the main body of said nut being sized to permit side to side movement of said nut between said plates and said main body having a central bore threaded with four screw threads;
a drive screw having four screw threads carried by the other of the two frame members and mated with the drive nut through said threaded bore; and
means for rotating said drive screw whereby the two frame members are moved relative to one another.

5,172,602

HYDRAULICALLY-ASSISTED AUTOMATIC SKIP SHIFTING METHOD OF A MULTI-PATH TOOTHED-WHEEL GEAR CHANGE BOX

Gunter Jürgens, Stuttgart; Gerhard Wagner, Remseck, and Frank Tietze, Stuttgart, all of Fed. Rep. of Germany, assignors to Mercedes-Benz AG, Fed. Rep. of Germany

Filed Oct. 5, 1991, Ser. No. 772,639
Claims priority, application Fed. Rep. of Germany, Oct. 5, 1990, 4031570
Int. Cl.[5] F16H *61/08*
U.S. Cl. 74—335 21 Claims



1. Hydraulically-assisted automatic shifting apparatus of a

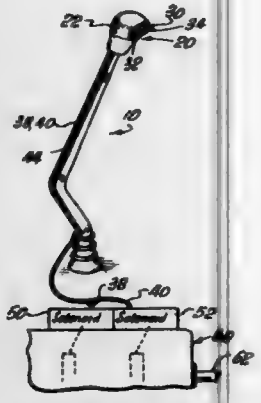
multi-path toothed-wheel gear change box with a gearbox arrangement, comprising an output shaft, an input shaft configured to be brought into a driving connection with the output shaft, at least two gearbox subunits operatively arranged in parallel to one another in a torque transmission path and via least one of which the driving connection is established, power-shift clutches operatively arranged in the torque transmission path between the input shaft and in each gearbox subunit, at least one of the gearbox subunits has at least two gearwheel stages with one loose wheel configured to be coupled to an associated shaft by a positively engaging gearwheel clutch with operatively associated clutch actuator, the transmission ratios of the gearwheel stages are configured such that, for two gears nonadjacent to each other in terms of transmission ratio, in one gear of the two gears associated with one gearbox subunit is connected into the driving connection and, in an adjacent gear of the two gears, another gearbox subunit with the one gearbox subunit is connected into the driving connection by subjecting the clutch actuator actuating the associating power-shift clutch to working pressure, and means for changing over between nonadjacent gears in the case of which, in each case, the another gearbox subunit is connected into the driving connection to shift via a middle gear which lies between them in its transmission ratio and in which a gearwheel stage of the another gearbox subunit is connected into the driving connection is temporarily engaged, and the working pressure in the clutch actuators of the power-shift clutches of the two gearbox subunits is controlled such that a change in speed of the input speed between an old gear speed and a new gear speed is approximately constant, the working pressure in the clutch actuator of the power shift clutch of the second gearbox unit in a middle shifting phase being held at a constant phase pressure value deviating from an engagement pressure value associated with the middle gear so that the change in input speed changes without remaining at a speed value associated with the middle gear.

5,172,603

ELECTRICALLY ACTUATED SHIFTING METHOD AND APPARATUS

Richard F. MacInnis, P.O. Box 2541, White City, Oreg. 97503

Filed May 3, 1991, Ser. No. 695,688
Int. Cl.[5] F16H *59/10, 59/12*
U.S. Cl. 74—335 **1 Claim**



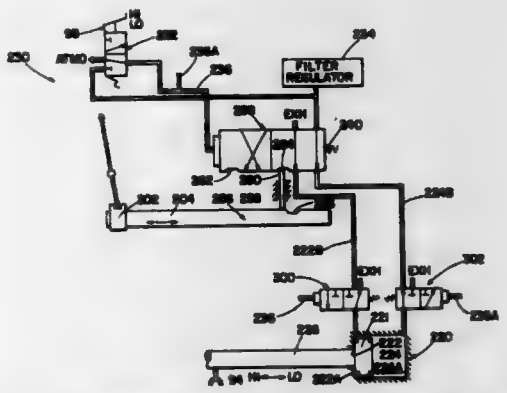
1. Apparatus for assisting the activation of an automotive transmission shifting mechanism comprising: an automotive shift lever knob containing a first electrical switch and a second electrical switch each said first and second switch having a separate actuator; a first source of electrical energy connected to each of said switches; a first solenoid actuated pneumatic valve; a second solenoid actuated pneumatic valve; a of pneumatic line connected to each of said pneumatic valves; pneumatic means connected from each of said pneumatic valves to an automotive transmission shifting mechanism; electrical energy conducting means connected to each of said switches and to each of said solenoid activated valves; and electrical energy conducting means connected to each of said solenoid operated pneumatic valves.

5,172,604

RANGE SECTION PREEXHAUST

Daniel A. Monette, Battle Creek; Mark A. Hirsch, Vicksburg; James R. Grundy, Battle Creek, and Terry E. Teeter, Mattawan, all of Mich., assignors to Eaton Corporation, Cleveland, Ohio

Filed Jan. 23, 1992, Ser. No. 824,675
Int. Cl.[5] F16H *3/22; B60K 20/00*
U.S. Cl. 74—335 **11 Claims**



1. A system (230) controlling a pressurized fluid operated shift actuator (220) for an auxiliary transmission section (14) of a compound transmission (10) including a main transmission section (12) having engaged and not engaged positions connected in series with said auxiliary transmission section, said auxiliary transmission section including a selectable high speed ratio (direct) and a selectable low speed ratio (reduction), each of said auxiliary section ratios engageable by a synchronized jaw clutch assembly (92/128), switch means (98/98A) for selecting a desired auxiliary section ratio, said actuator (220) comprising a piston (221) having a first piston surface (224) defining a first chamber (224A) and a second piston surface (222) defining a second chamber (222A), pressurization of said first chamber (224A) causing said actuator to urge said synchronized clutch assembly to engage said high speed ratio and pressurization of said second chamber (222A) causing said actuator to urge said synchronized clutch assembly to engage said low speed ratio, a common source (234) of pressurized fluid an exhaust (EX), a slave valve means (238) responsive to said switch having a first position for pressurizing said first chamber and exhausting said second chamber and a second position for pressurizing said second chamber and exhausting said first chamber, a slave valve interlock assembly (258) for interlocking said slave valve means (238) to prevent movement between the first and the second positions thereof when said main section is engaged and allowing movement of said slave valve means when said main section is in the not engaged position, said system further comprising:

means (300) for exhausting said second chamber upon said switch means selecting said high ratio regardless of the engaged or not engaged position of said main transmission section.

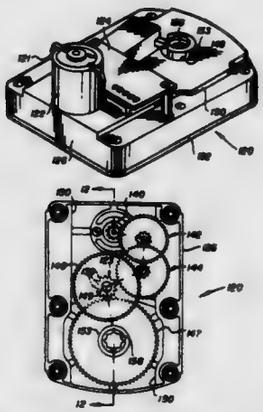
ELECTRIC MOTOR GEARBOX

Glenn R. Schwartz, Des Plaines, Ill., assignor to Molon Motor & Coil Corp., Rolling Meadows, Ill.

Continuation-in-part of Ser. No. 627,506, Dec. 14, 1990, abandoned. This application Dec. 12, 1991, Ser. No. 805,979
Int. Cl.[5] F16H *1/10, 57/02*
U.S. Cl. 74—421 A **4 Claims**

1. The electric motor gearbox for driving a product item in a vending machine, comprising:

a. a gearbox housing;
b. a minimotor mounted on the gearbox housing;
c. a PC board means, connected to the minimotor and also mounted on the gearbox housing, for sending electrical signals to the minimotor;
d. an assembly of gears mounted inside the gearbox housing and driven by the minimotor;



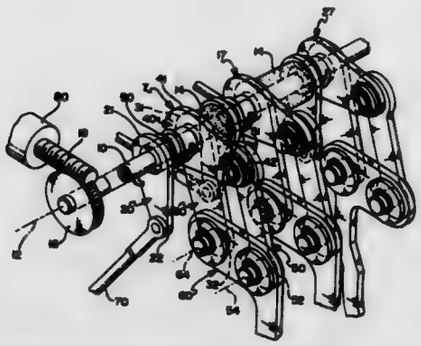
e. an output pinion and gear means, arranged within the assembly of gears, for permitting the minimotor to stall before the assembly fails in response to jamming of the product item in the vending machine; and
f. a cover means, secured to the gearbox housing, for providing rib means for stiffening the motor gearbox against excessive reaction loads.

5,172,606

MODULE COCKPIT/SUPPORT STRUCTURE WITH ADJUSTABLE PEDALS

Donald L. Dziobs, Midland, and Dainis O. Martinsons, Saginaw, both of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Mar. 25, 1992, Ser. No. 857,010
Int. Cl.[5] G05G *1/14*
U.S. Cl. 74—512 **9 Claims**



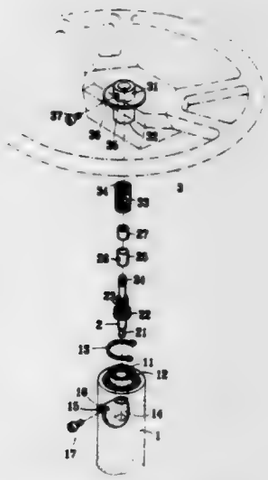
1. A locationally adjustable actuator for providing a force input to a rod operatively associated with an automotive vehicle control, the actuator in combination comprising:
a crossbar having a rotational axis fixed with respect to the vehicle;
an idler link having first and second ends, the first end being angularly fixed with respect to the crossbar;
a top link having first and second ends with the first end pivotally connected with the crossbar with a pivotal axis generally coterminous with the rotational axis of the crossbar;
a rear link with first and second ends with the first end pivotally connected to the top link second end;
a pedal link pivotally connected with the second ends of the idler and rear links, the pedal link having a surface for operator contact;
a rod link having a first end pivotally connected to the crossbar with a pivotal axis coterminous with the crossbar rotational axis, the rod link being angularly fixed with respect to the top link and the rod link having at a second end a pivotal connection with respect to the control rod; and
means to adjust and fix the rotational position of the crossbar.

5,172,607

DETACHABLE STEERING WHEEL FOR BURGLAR PROOF PURPOSE

Hsiang H. Wu, No. 49, Shang Chih Rd., Hualien, Taiwan

Filed Dec. 2, 1991, Ser. No. 800,983
Int. Cl.[5] B60R *25/02*; G05G *5/00*; F16D *1/00*
U.S. Cl. 74—552 **7 Claims**



1. A detachable steering wheel assembly for burglar proofing a car comprising:
a) a steering column including a longitudinal hole therein, at least one transverse hole extending from an outer surface of the column to the longitudinal hole, and a coupler on an upper end of the column;
b) a first nut disposed around the coupler and a retainer ring retaining the nut for free rotation around the coupler;
c) a spindle including a front tip having a configuration corresponding to the configuration of the longitudinal hole for insertion therein, a first threaded portion in a middle section thereof for threaded engagement with the first nut, an intermediate portion disposed above the first threaded portion, a second threaded portion positioned at a top section thereof, and a first screw disposable through the transverse screw hole for securing the spindle to the column;
d) a positioning sleeve having a hollow center portion and a screw hole on the outer surface thereof, the positioning sleeve being disposable on the intermediate portion of the spindle between the first and the second threaded portions;
e) a steering wheel having a detaching member in a middle portion thereof, the detaching member including a screw hole through an outer surface and a toothed portion around an inner cavity wall;
f) a positioning toothed cap including an inner wall for engagement with the intermediate portion of the spindle and the toothed portion of the detaching member, the inner wall of the cap and the intermediate portion of the spindle including a corresponding engagement configura-

tion, and a second screw insertable through the screw hole of the detaching member for detachably securing the steering wheel to the spindle; and

g) wherein the steering wheel may be detached from the spindle by loosening the second screw and the first nut as a preliminary burglar proofing measure, and the spindle may be detached from the steering column by loosening the first screw as an advanced burglar proofing measure.

5,172,608

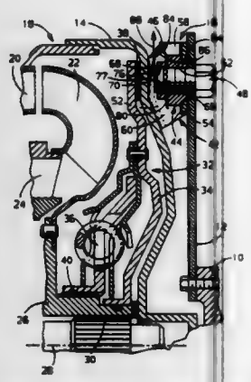
JOINT CONNECTION WITH A SPRING CLIP AND NUT

John C. Schultz, Saline; John D. Beres, III, Ann Arbor; Lee R. Krahn, Dexter, and Victor M. Rose, Ypsilanti, all of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed May 22, 1991, Ser. No. 704,239

Int. Cl.[5] G90S *1/00*; F16F *15/10*; F16B *39/284*

U.S. Cl. 74—572 **6 Claims**



1. A rotating joint connection comprising: a rotatable drive plate; a rotatable driven plate; a nut positioning lug secured to one of said drive and driven plates; nut means disposed in said lug for presenting an axially extending threaded opening; fastener means extending through a first opening in the other of said drive and driven plate and threadably engaging said nut means; spring means for maintaining said nut in said lug prior to engagement by said fastener means, said spring means having a nut engaging portion presenting a second opening for encircling said nut and for securement with said spring means, a spring portion extending radially inward and being axially displaced from the nut engaging portion and abutting the one of said drive and driven plate, and a joining portion integrally connecting said nut engaging portion and said spring portion and having an arcuate portion presenting a concave surface facing radially inward and being positioned radially outward of the nut means.

5,172,609

GRADEABILITY-BASED SHIFT PATTERN CONTROL FOR AN AUTOMATIC TRANSMISSION

Larry T. Nitz, Troy, and Susan L. Rees, Clawson, both of Mich., assignors to Saturn Corporation, Troy, Mich.

Filed Mar. 2, 1992, Ser. No. 844,063

Int. Cl.[5] B60K *41/06*

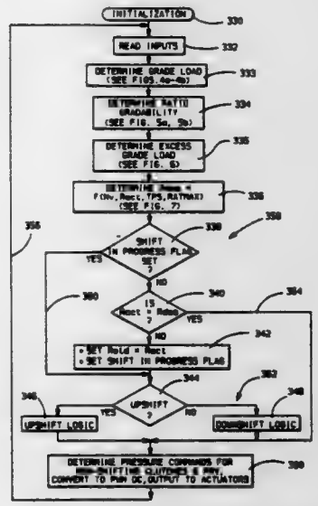
U.S. Cl. 74—866 **5 Claims**

1. In a motor vehicle including an engine and a transmission providing a plurality of forward speed ratios through which the engine may drive the vehicle, a method of operation comprising the steps of:

initiating upshifting and downshifting between said speed ratios in response to a comparison of measured load condition parameters with predetermined load condition parameters defined by a base shift pattern;

determining an apparent grade load indication in relation to an imbalance between engine produced torque and an estimate of the torque required to achieve a current driving condition of the vehicle;

determining maximum gradeability indications corresponding to a maximum grade load which can be overcome with said forward speed ratios;



comparing said apparent grade load with said maximum gradeability indications to form an indication of excess gradeability of each such speed ratio; and

overriding said base shift pattern when an excess gradeability indication for a respective speed ratio is less than a reference value by inhibiting upshifting to such respective speed ratio.

5,172,610

STEPLESS-SPEED-CHANGER ENGINE BRAKE CONTROLLER

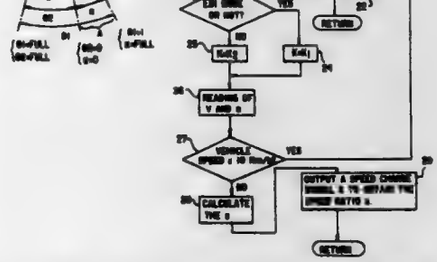
Hiroshi Uzawa, Kameoka, and Motosada Kiri, Nishikyo, both of Japan, assignors to Shimadzu Corporation, Kyoto, Japan

Filed Oct. 30, 1990, Ser. No. 605,306

Claims priority, application Japan, Oct. 31, 1989, 1-284074; Oct. 31, 1989, 1-284075

Int. Cl.[5] B60K *41/16*

U.S. Cl. 74—866 **2 Claims**



1. A stepless-speed-changer engine brake controller which is applied to a vehicle having a stepless-speed-changer arranged in a manner to steplessly change a speed ratio expressed as output revolution speed/input revolution speed, comprising:

detection means for detecting as an offset an angle displacement from the maximum opening to an actual opening in

an accelerator opening variation region where the throttle opening is made zero; and

control means for inputting the offset from the detection means and for controlling the speed ratio of said stepless-speed-changer in such a manner that an engine brake torque is not controlled under a normal driving condition in a region of negative offset and for controlling the speed ratio of the stepless-speed-changer in such a manner that an engine brake torque varies according to an increase or a decrease of the offset and the vehicle speed.

5,172,611

ENGINE-RPM-DEPENDENT ARREST DEVICE TO PREVENT NON-PERMITTED DOWN SHIFTS IN MOTOR VEHICLE GEARBOXES

Helmut Eymüller; Siegfried Stützle; Jürgen Legner, and Gerhard Buck, all of Friedrichshafen, Fed. Rep. of Germany, assignors to Zahnradfabrik Friedrichshafen AG, Fed. Rep. of Germany

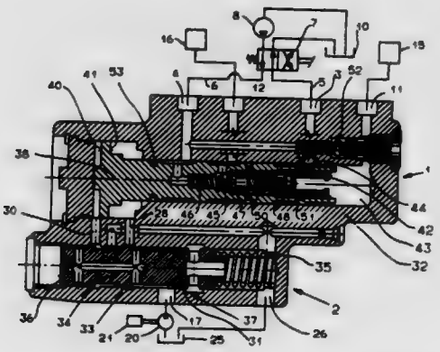
PCT No. PCT/EP90/00531, § 371 Date Sep. 27, 1991, § 102(e) Date Sep. 27, 1991, PCT Pub. No. WO90/12228, PCT Pub. Date Oct. 18, 1990

PCT Filed Apr. 5, 1990, Ser. No. 768,641

Claims priority, application Fed. Rep. of Germany, Apr. 8, 1989, 3911519

Int. Cl.[5] B60K *41/06*

U.S. Cl. 74—869 **6 Claims**



1. An engine-rpm-dependent arrest device to prevent non-permitted down shifts in motor vehicle transmissions with at least two shiftable gears and one gear-shift valve (7) adjustable by the driver

with a pilot valve (1) having two shift positions by which pressure medium under shift pressure can be fed through an activation connection (11, 12) of respective activation devices (15, 16) for a low and a high gear, and both shift positions are engageable by the pressure of the pressure medium, one shift position of said pilot valve (1) being engageable by actuating a piston surface of a pilot-valve piston (38) with pressure medium under shift pressure conveyed by a servopump (8) and

with a control valve (2) having two shift positions of which one shift position is engageable by the force of a compression spring (35) and the other shift position by the pressure of an engine-rpm-dependent low-pressure pump (20) acting upon a piston surface (36) of a control-valve piston (31) and exceeding a given value, characterized in that

said control valve (2) is exclusively in contact with the pressure medium conveyed by said low-pressure pump (20),

said pilot-valve piston (38) of said pilot valve (1) is designed as a stepped piston having a large end surface (40) and an annular surface (41) which forms two piston surfaces actuatable with the pressure medium conveyed by said low-pressure pump (20) and a small end surface (42) which forms the piston surface actuatable with pressure medium under shift pressure,

said control valve (2) has two control edge pairs (33, 34) for the alternative actuation of said large end surface (40) and of said annular surface (41) of said pilot-valve piston (38),

said pilot valve (1) has two work line connections (3, 4) for two work lines (5, 6) leading to said gear-shift valve (7) which are alternatively actuated with shift pressure or connected with the return flow to a pressure medium tank (10),

in both shifted gears a first of said five work line connections (3) communicates with said activation connection (11) for said activation device (15) of the low gear and a second of said two work line connections (4) communicates with said activation connection (12) for said activation device (16) of the high gear via said pilot valve (1), and

when the high gear is engaged and at an rpm above a predetermined rpm in which the given value of the pressure of said low-pressure pump (20) is exceeded, an actuation of said activation device (15) of the low gear with shift pressure is prevented by the fact that said first work line connection (3) coordinated with the low gear communicates via said pilot valve (1) with said activation connection (12) for said activation device (16) of the high gear.

5,172,612

SOCKET HOLDER

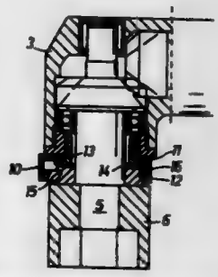
Gunnar C. Hansson, Stockholm, Sweden, assignor to Atlas Copco Tools AB, Sweden

Filed Mar. 29, 1991, Ser. No. 677,418

Claims priority, application Sweden, Apr. 11, 1990, 9001328-5

Int. Cl.[5] B25D *21/00*

U.S. Cl. 81—57.13 **8 Claims**



1. A socket holder for detachably holding a socket on the tool output shaft of an electrically or pneumatically operated power wrench having a housing, wherein a locking device which is movably but non-rotatably connected to the power wrench housing is adjustable from a socket locking position to a socket release position against the action of a spring means, and in said locking position the locking device engages a groove on a socket so as to positively lock said socket against axial displacement.

5,172,613

POWER TONGS WITH IMPROVED GRIPPING MEANS

William E. Veach, Jr., P.O. Box 337, Humble, Tex. 77347

Continuation of Ser. No. 447,419, Dec. 19, 1989, abandoned. This application Sep. 16, 1991, Ser. No. 760,322

Int. Cl.[5] B25B *13/50*

U.S. Cl. 81—57.33 **63 Claims**

1. Apparatus for gripping the surface and applying torque about the longitudinal axis of a tubular element comprising:

(a) a plurality of gripping assemblies, each including

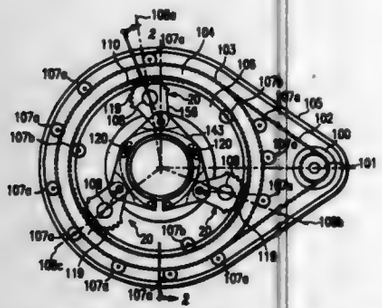
(i) a jaw having a gripping surface pivotally mounted on the gripping assembly and adapted for movement between a retracted position which permits insertion and removal of a tubular element into and from the apparatus and an extended position which permits engagement

of the jaw with a tubular element within the apparatus; and

(ii) a jaw link pivotally supporting each jaw;

(b) means for activating the gripping assemblies to extend and retract the jaws into and out of contact with the tubular element, to apply torque though the jaws about the longitudinal axis of the tubular element when the jaws contact the tubular element, and to apply gripping force to the tubular element which varies substantially in proportion to the torque applied to the tubular element, thereby minimizing or avoiding slippage of the jaws against the tubular element;

(c) jaw engagement control means responsive to initial activation of the gripping assemblies for applying a predeter-



mined gripping force to the tubular element through the jaws prior to application of torque to the tubular element, thereby minimizing or avoiding slippage of the jaws over the surface of the tubular element as the torque applied to the tubular element initially increases; and

(d) positioning means to control free pivotal movement of the jaw with respect to the jaw link which includes

(i) an opening extending through said jaw;

(ii) a friction member in said opening in contact with said jaw link;

(iii) resilient means in said opening in contact with said friction member; and

(iv) means for compressing said resilient means against said friction member to adjust the frictional contact between said friction member and said jaw link.

COMPOSITE IMPROVED WRENCH

Pierre Monnet, Montiers, and Jean P. Demurger, Roanne, both of France, assignors to Demurger et Cie, France

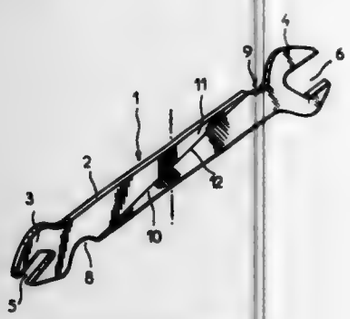
PCT No. PCT/FR90/00936, § 371 Date Jul. 25, 1991, § 102(e) Date Jul. 25, 1991, PCT Pub. No. WO91/09708, PCT Pub. Date Jul. 11, 1991

PCT Filed Dec. 21, 1990, Ser. No. 730,822

Claims priority, application France, Dec. 22, 1989, 89 17396

Int. Cl.[5] B25B *13/02*

U.S. Cl. 81—119 12 Claims



1. An improved wrench, comprising:

an elongated handle having two ends; and

a nut-engaging head at each end of the handle, said nut-engaging head having a configuration selected from the group of open fork, ring, and socket, each of polygonal cross section, said nut-engaging heads being arranged in two separate non-parallel planes and each being extended by a coplanar portion, wherein said coplanar portions intersect at a substantially constant angle alpha to form said handle and define a diagonal line of intersection that connects the two ends of the handle.

5,172,615

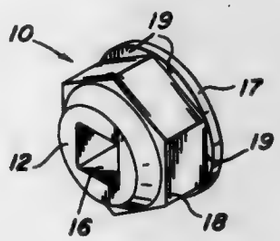
INTERNAL WRENCH

David E. Albrecht, 1383 Granary Rd., Blue Bell, Pa. 19422

Continuation-in-part of Ser. No. 498,818, Mar. 23, 1990, abandoned. This application Mar. 19, 1991, Ser. No. 671,536

Int. Cl.[5] B25B *15/00*

U.S. Cl. 81—436 14 Claims



1. An internal wrench for turning a part to be tightened, said part having an internal wrenching surface, comprising:

a wrench body having a longitudinal axis,

said wrench body having an internal hole extending along said longitudinal axis,

said internal hole having a polygon shape providing a plurality of inner surfaces centered on said longitudinal axis and adapted to be contacted by a driver for the wrench,

said wrench body having an outer driving surface providing a plurality of outer surfaces adapted to contact the internal wrenching surface of said part for driving the same during wrenching,

said wrench body including a shoulder formed at one end thereof, said shoulder extending radially outwardly of said outer surfaces of said wrench body for contacting the part to be wrenched to limit the insertion of said wrench body into the part's internal wrenching surface to thereby locate the wrench in a driving position,

said inner surfaces of said internal hole having surface portions, both said surface portions of said inner surfaces of said internal hole and said outer surfaces of said driving surface extending axially from said shoulder at one end of said wrench body a substantial distance toward the other end of said wrench body to provide, respectively, surfaces to be contacted by a driver for the wrench and surfaces to contact the internal wrenching surface of said part for driving the same during wrenching,

said surface portions of said inner surfaces being contained radially within said outer surfaces along a common portion of said longitudinal axis so as to be longitudinally coaxial therewith so that during the wrenching of a part by a driver in driving contact with said surface portions of said inner surfaces, wrenching forces are transmitted directly radially outwardly from said surface portions of said inner surfaces of said internal hole to said outer surface of said driving surface.

1. A torque wrench for use with a socket adapted for fitting onto the head of a threaded member to be screwed into an object, said torque wrench comprising:

an operating lever having a first end with an axis of rotation and a second end with a manually held grip;

an output shaft means coupable to said socket for rotating said socket;

one-way rotation restricting means interposed between said operating lever and said output shaft means for mounting said output shaft means on said operating lever along said axis of rotation and for converting reciprocal arcuate movement of said operating lever about said axis of rotation to unidirectional, driving rotation of said output shaft means;

torque measuring means for detecting strain in said operating lever and measuring fastening torque applied to said threaded member when said threaded member is screwed into said object;

a rotary parts group which rotates together with said output shaft;

a stationary parts group adapted to be secured to said object to be stationary with respect to said object, irrespective of the movement of said operating lever, said rotating parts group being rotatable relative to said stationary parts group;

rotating angle measuring means for measuring a rotating angle of said threaded member with respect to the object by measuring a relative rotating angle of said rotary parts group with respect to said stationary parts group; and

measuring output means for outputting values measured by said rotating angle measuring means and said torque measuring means.

1. A power-chuck assembly comprising:

a stationary housing;

a chuck spindle rotatable in the housing about a chuck axis;

a plurality of jaws carried on the chuck body movable radially toward and away from one another;

an actuator shaft movable axially relative to the body;

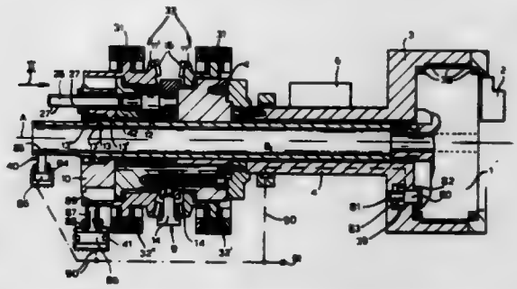
jaw-actuator means connected between the actuator shaft and the jaws for displacing same radially outward on displacement of the shaft in one axial direction and for displacing the jaws radially inward on opposite axial displacement of the shaft;

motion-converting means carried on the spindle and including

a pair of coaxial input wheels centered on and rotatable about the axis on the spindle,

gear means connected between the input wheels for synchronously oppositely rotating same,

an output element axially displaceable on the spindle and axially coupled to the shaft, and



gearing interconnecting the input wheels and output element for axial displacement of the output element in one direction on rotation of one of the input wheels in one rotational sense and for axial displacement of the output element in the opposite direction on rotation of the one input wheel in a rotational sense opposite to the one rotational sense; and

means including respective brakes between the housing and the input wheels for rotationally retarding rotation of the respective wheels relative to the housing.

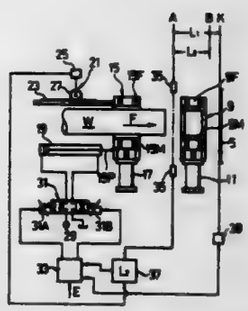
CUTTING MACHINE AND METHOD FOR POSITIONING END OF WORKPIECE TO BE CUT IN CUTTING MACHINE

Kikuo Moriya, Machida, and Isomi Washio, Hadano, both of Japan, assignors to Amada Company, Limited, Japan

Division of Ser. No. 354,359, May 19, 1989, Pat. No. 5,060,547.
This application Jul. 2, 1991, Ser. No. 724,893
Claims priority, application Japan, May 20, 1988, 63-122120; Feb. 9, 1989, 1-28691
Int. Cl.[5] B26D *1/00*
U.S. Cl. 83—13 4 Claims



1. A method of positioning a front end of a workpiece which is to be cut in a cutting machine, comprising the steps of:

(a) feeding the workpiece toward a cutting position of the cutting machine at which position a cutting tool of the cutting machine is provided;

(b) detecting the front end of the workpiece at a specific distance in advance of the cutting position;

(c) continuing the feeding of the workpiece toward the cutting position;
(d) calculating the distance the workpiece has advanced after the front end of the workpiece has been detected according to step (b);
(e) reducing the feed velocity of the workpiece when the distance moved by the workpiece is equal to a predetermined distance; and
(f) halting the feeding of the workpiece after the velocity thereof is reduced and when the front end of the workpiece contacts a contact means provided at the cutting position of the cutting machine.

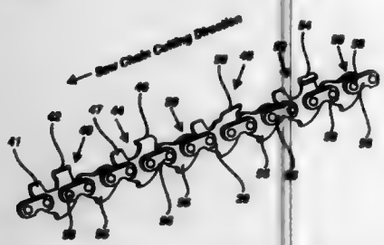
SINGLE SIDE CUTTER TOOTH WITH FACING RAKER TOOTH

Gerald C. Kolve, 5833 Southwest Lane Ct., Portland, Oreg. 97221

Continuation of Ser. No. 264,100, Oct. 28, 1988, abandoned.
This application Dec. 11, 1991, Ser. No. 808,081
Int. Cl.[5] B27B *33/14*
U.S. Cl. 83—13 **27 Claims**



1. The method of cutting material, comprising:
forming a first groove in said material on a first side and bottom of a kerf with a first cutter tooth, said first cutter tooth including a first cutter tooth leading depth gauge and a first slicer, said first cutter tooth depth gauge being positioned forward of said first slicer;
cutting material from the bottom of said kerf with a first raker tooth, said first raker tooth including a first raker tooth leading depth gauge and a first raker, said first raker tooth depth gauge being positioned forward of said first raker;
forming a second groove in said material on the other side and bottom of said kerf with a second cutter tooth, said second cutter tooth including a second cutter tooth leading depth gauge and a second slicer, said second cutter tooth depth gauge being positioned forward of said second slicer; and
cutting material from the bottom of said kerf with a second raker tooth, said second raker tooth including a second raker tooth depth gauge and a second raker, said second raker tooth depth gauge being positioned forward of said second raker.

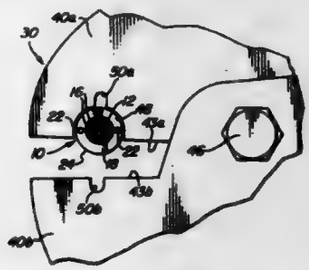
5,172,620

MONOTUBE OPTICAL FIBER CABLE CUTTER AND METHOD OF USING THE SAME

Alison M. Faust, Hickory, N.C., assignor to Alcatel NA Cable Systems, Inc., Claremont, N.C.

Filed Aug. 8, 1991, Ser. No. 742,299
Int. Cl.[5] G02B *6/245*; H02G *1/12*
U.S. Cl. 83—13 **17 Claims**

10. A method for cutting a monotube optical fiber cable comprising the steps of:
providing a monotube optical fiber cable having a single buffer tube extending longitudinally therein with protective elements surrounding said buffer tube for protecting the buffer tube;
providing a cutting tool having first and second cutting blades for cutting said protective elements of said cable without severing said buffer tube, said cutting blades being supported for relative shearing movement between an open position and a closed position, said cutting blades partially overlapping each other in said closed position, said first and second cutting blades each having a buffer tube slot dimensionally sized for receiving said buffer tube when said cutting blades are in said closed position, said cutting tool further includes means for aligning said monotube cable between said first and second cutting blades when said cutting blades are in said open position,



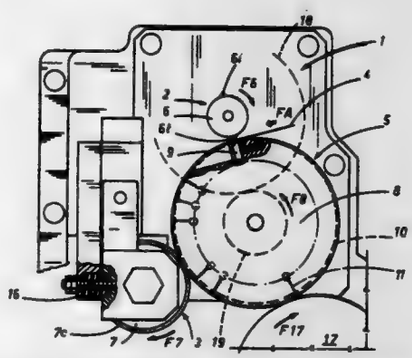
said cable aligning means comprises a cable alignment slot in said first cutting blade, said cable alignment slot being semi-circular in shape and having a diameter substantially the same as an outer diameter of the monotube cable;
inserting said monotube optical fiber cable between said cutting blades when said cutting blades are in said open position and aligning said monotube cable in said aligning means; and
providing relative shearing movement to said cutting blades between said open and closed positions thereby severing said protective elements surrounding said buffer tube.

5,172,621

DEVICE FOR CUTTING STRIP MATERIAL IN A WRAPPING MACHINE

Alessandro Minarelli, and Alver Tacchi, both of Bologna, Italy, assignors to G. D. Societa Per Azioni, Bologna, Italy

Filed Aug. 9, 1991, Ser. No. 743,186
Claims priority, application Italy, Aug. 24, 1990, 3638 A/90
Int. Cl.[5] B26D *1/22*
U.S. Cl. 83—152 **3 Claims**



1. A device for cutting a continuous strip of flexible sheet material that is being advanced longitudinally into the device along a path at a first given speed, into a succession of discrete wrappers delivered along said path to an outlet of the device. said device comprising:
a reaction means rotated about a horizontal axis and having an outer peripheral surface which is generally tangent to said path generally along an uppermost generatrix of said outer peripheral surface, said outer peripheral surface

thereby having a second given speed along said path which is slightly faster than said first given speed;

a take-off roller rotated about a horizontal axis and having an outer peripheral surface which is tangentially juxtaposed with said outer peripheral surface of said reaction means, at an outlet of said device, at a location which generally coincides with a lowermost generatrix of said outer peripheral device, said take-off roller being arranged to progressively and successively take off of said outer peripheral surface of said reaction means onto said outer peripheral surface of said take-off roller each of said succession of discrete wrappers;

said reaction means including a generally transversally extending, radially outwardly presented striking plate means disposed as an interruption of said outer peripheral surface of said reaction means;

said reaction means further including intermediate transversally opposite ends thereof a circumferentially extending, radially outwardly presented track disposed as an interruption of said outer peripheral surface of said reaction means;

a first rotary cutting means rotated about a horizontal axis and having a first radially outwardly presented, transversally extending cutter arranged to be cyclically rotated by rotation of said first rotary cutting means, into cutting tangency with said striking plate means of said reaction means at a first cutting station located adjacent, but rotationally downstream along said path from said uppermost generatrix of said outer peripheral surface of said reaction means, so that each time said first cutter is rotated into cutting tangency with said striking plate, a wrapper is completely severed from a leading end portion of said continuous strip;

a second rotary cutting means rotated about a horizontal axis and having a radially outwardly presented circumferential cutter disposed to be rotated, by rotation of said second rotary cutting means, into cutting tangency with said track of said reaction means at a longitudinal cutting location on said path that is disposed rotationally intermediate where said first rotary cutting means severs each wrapper from said leading end portion of said strip, and where said take-off roller progressively and successively takes said wrappers off of said outer peripheral surface of said reaction means, during at least a given portion of each cycle of rotation of said reaction means, for thereby, while so disposed in cutting tangency, making at least one longitudinal cut in each said wrapper at a location disposed intermediate transversally opposite edges of such wrapper;

means providing a plurality of circumferentially widely distributed radially outwardly acting suction openings in said outer peripheral surface of said reaction means, and for serving with suction only such portion of said suction openings as are at and given time located along said path between where said path initially becomes tangent to said outer peripheral surface of said reaction means and a location that is rotationally intermediate said longitudinal cutting location and where said take-off roller progressively and successively takes said wrappers off of said outer peripheral surface of said reaction means; said suction opening providing means, and said outer peripheral surface of said reaction means being constructed and operated so as to permit said leading edge portion of said strip to slip relatively upstream along said radially outer peripheral surface of said reaction means while disposed in suction-induced tractive engagement with said outer peripheral surface of said reaction means, but each wrapper, upon being severed from said strip to be conveyed along said path at said second given speed;

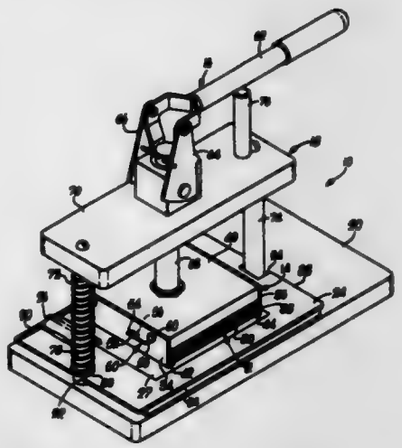
said second rotary cutting means and said track being cooperatively arranged such that said second rotary cutting means is rotated into cutting tangency with said track during only said given portion of each cycle of rotation of said reaction means, and said given portion is less than all of said cycle, so that each wrapper is, as a result, discontinuously longitudinally cut by said second rotary cutting means.

5,172,622

QUICK CHANGE DIE CUTTER

Robert E. Sabin, Kansas City, Mo., assignor to Lasercraft, Inc., Raytown, Mo.

Filed Nov. 12, 1991, Ser. No. 791,819
Int. Cl.[5] B26F *1/14*; B26D *7/00*
U.S. Cl. 83—520 **6 Claims**



1. A quick change die cutter for cutting a web of sheet material placed therein comprising:

a frame;

a die element presenting a cutting edge and having a body including a locating recess therein;

means for shifting said cutting edge of said die element into and out of engagement with the web;

a receiver connected to said shifting means for carrying said die element, said receiver including a pair of opposed spaced-apart walls defining a space therebetween for slidably receiving said die element therein, said walls each further including a ledge projecting toward the opposing sidewall for supporting said body of said die element, at least one of said sidewalls including a stop associated therewith for aligning the die element, said receiver further having locking means associated with at least one of said sidewalls for releasably locking said die element without the need for tools against said sliding movement along said at least one sidewall said locking means further comprising a projection and means spring-biasing said projection inwardly toward said space for positioning said projection in said locating recess when said die element slide into properly aligned position in said receiver; and

means for holding a template in position for arrangement with the cutting edge of said die element.

5,172,623

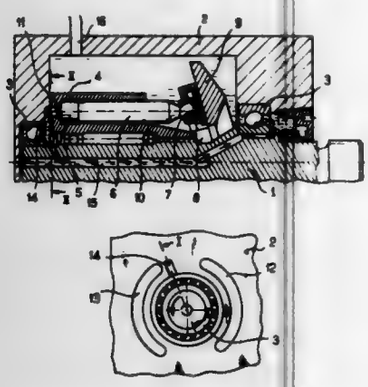
HYDRAULIC ROTARY MACHINE WITH PRE-DISCHARGE OPENING FOR LUBRICATION SUPPLY

Pierre Poisson, Viroflay, France, assignor to Messier-Bugatti, Velizy-Villacoublay, France

Filed Jul. 2, 1991, Ser. No. 724,702
Claims priority, application France, Jul. 10, 1990, 90 08741
Int. Cl.[5] F04B *39/02*; F03C *1/253*
U.S. Cl. 91—46 **2 Claims**

1. A hydraulic rotary machine including a casing and a series or rotatable cylindrical chambers swept by pistons in hydraulic liquid admission-and-discharge cycles and having admission-and-discharge openings alternately facing-high pressure and

low pressure openings of the casing during each revolution of the machine, wherein said machine includes a pre-discharge opening disposed between the high pressure opening and the low pressure opening in that order relative to a direction of rotation of the machine, the pre-discharge opening being connected by a connecting duct to at least one rotary support device and being intermittently faced by the admission-and-discharge openings of the cylindrical chambers upon rotation of the machine in order to cause hydraulic fluid to be positively supplied through the rotary support device.



5,172,624

HYDRAULIC DEVICE

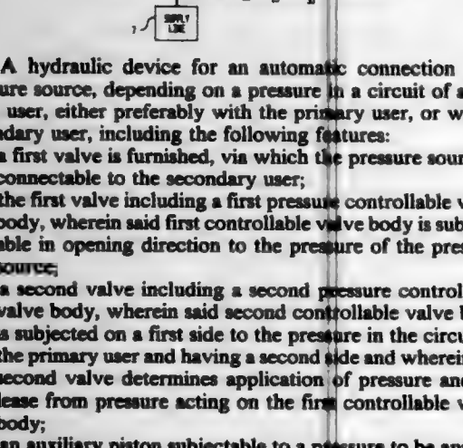
Olaf Mentzendorff, Hanover, Fed. Rep. of Germany, assignor to WABCO Westinghouse Fahrzeugbremsen GmbH, Hanover, Fed. Rep. of Germany

Filed Feb. 19, 1991, Ser. No. 657,501

Claims priority, application Fed. Rep. of Germany, Feb. 20, 1990, 4005296

Int. Cl.[5] F15B *13/00*

U.S. Cl. 91—516 17 Claims



1. A hydraulic device for an automatic connection of a pressure source, depending on a pressure in a circuit of a primary user, either preferably with the primary user, or with a secondary user, including the following features:

a) a first valve is furnished, via which the pressure source is connectable to the secondary user;

b) the first valve including a first pressure controllable valve body, wherein said first controllable valve body is subjectable in opening direction to the pressure of the pressure source;

c) a second valve including a second pressure controllable valve body, wherein said second controllable valve body is subjected on a first side to the pressure in the circuit of the primary user and having a second side and wherein the second valve determines application of pressure and release from pressure acting on the first controllable valve body;

d) an auxiliary piston subjectable to a pressure to be applied to the first controllable valve body of the first valve in closure direction;

e) a first compression spring acting on said second side of the second controllable valve body acting against said pressure in the circuit of the primary user;

f) a second compression spring is supported at its end, disposed remote relative to the controllable valve body of the second valve on the auxiliary piston and subjecting said second side of the controllable valve body to the force of the second compression spring against said pressure in the circuit of the primary user;

g) an adjustable stop supporting the end of the second compression spring, disposed remote relative to the valve body of the second valve in an operating condition, when the auxiliary piston is released of pressure in this operating condition.

5,172,625

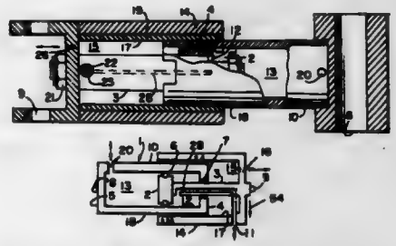
HYDRAULIC CYLINDER WITH LATERAL SUPPORT

Robert P. Latham, 280 SW. 32nd Ct., Fort Lauderdale, Fla. 33315

Filed Nov. 4, 1991, Ser. No. 787,666

Int. Cl.[5] F01B *7/20*

U.S. Cl. 92—51 7 Claims



1. A piston and cylinder assembly comprising:

a) a hollow cylindrical member with a long axis, an outer cylindrical surface, two ends and a cross section having inner and outer margins which are concentric circles, said cylindrical member provided with a first load-engaging means for engaging a load at a first end;

b) end closure means for closing opposite ends of the cylindrical member;

c) a piston with a circular cross-section arranged slidingly and sealingly within the cylindrical member so as to be able to move axially and to rotate about the axis therein while fluid-tightly engaging a bore surface of the cylindrical member;

d) a piston rod secured to said piston and stretching from said piston out of the cylindrical member through one of the end closure means at a second end of the cylindrical member and being able to be extended from, and retracted into said cylindrical member while fluid-tightly engaging said one of said end closure means, whereby two variable volume hydraulic chambers for hydraulic fluid are formed on opposite sides of said piston with said cylindrical member, a first chamber defined by said piston and said one of the end closure means and a second chamber defined by said piston and the other of the end closure means;

e) an elongate support member having a bore portion and a joint portion, said joint portion joined to a part of said piston rod which is outside of said cylindrical member, said support member having an elongate bore portion with a circular cross section arranged concentric with said long axis of said cylindrical member and slidably and non-sealingly engaging said outer cylindrical surface of said cylindrical member, to thereby provide a linear bearing means between support member and cylindrical member along said long axis and about said long axis for restraining non-coaxial relative motion between said support member and said cylindrical member, said bearing

means having a length that is substantially equal to said outer cylindrical surface of said cylinder; and

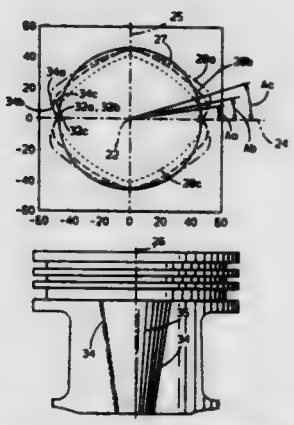
f) vent means for venting to the environment a space defined by said second end of said cylindrical member and said bore portion of said support member, said space arranged to be free of hydraulic fluid.

5,172,626

STABILIZED PISTON SKIRT HAVING VARYING PEAKS AND CONCAVE SURFACES

Richard W. Hart, Warren, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed Aug. 22, 1991, Ser. No. 748,732
Int. Cl.[5] F16J 1/00, 1/04; F02F 3/00
U.S. Cl. 92—177 10 Claims



1. A piston having a longitudinal axis and a skirt laterally divided by a thrust plane nominally containing the axis and extending laterally to thrust and counterthrust faces of the piston skirt, the skirt thrust face having, in an ambient temperature and unloaded condition of the piston and in planes normal to the axis over a continuous axial length extending from the top toward the bottom of the skirt, smoothly varying radii forming geometric peaks of maximum skirt radii located at angels of up to 45 degrees on either side of the thrust plane and reduced diameter portions toward the thrust plane forming an apparent concavity relative to a surrounding circular cylinder.

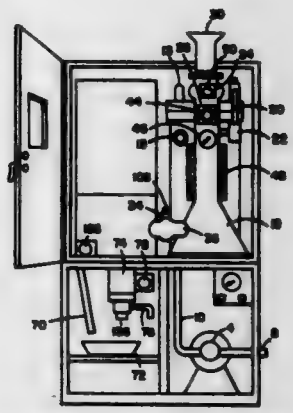
5,172,627

MACHINE TO FAST COOK SPAGHETTI AND THE LIKE

Henry R. Narcisi, 238 Larch Rd., Frankfort, Ill. 60423, and Ernest S. Kettelson, 16801 Ridge Rd., Minooka, Ill. 60447

Filed Oct. 23, 1991, Ser. No. 782,355
The portion of the term of this patent subsequent to Jul. 23, 2008, has been disclaimed.
Int. Cl.[5] A47J 27/04, 27/16, 27/21
U.S. Cl. 99—330 9 Claims

1. A fast cook machine to fast cook food, comprising boiler means to provide a supply of pressurized hot water at a pre-selected temperature above the boiling point of water when at atmospheric pressure and under a pre-selected elevated pressure which substantially prevents said high temperature water from vaporizing, a first cooking chamber separate from said boiler means, first conduit means to flow said pressurized hot water from said boiler means to said first cooking chamber, a first valve in said first conduit means operable between a valve open and a valve closed position, an entrance passageway of said first cooking chamber for entrance of food into said first cooking chamber, a second valve in said entrance passageway operable between a valve open and a valve closed position, a second cooking chamber, second conduit means to flow said pressurized hot water and said food from said first cooking chamber to said second cooking chamber, third valve in said second conduit means operable between a valve open and a valve closed position, an expansion tank in communication with said second cooking chamber to receive that part of said pressurized hot water which is in its vapor state as it exits from said second conduit means into said second cooking chamber, said second cooking chamber including a food discharge assembly operable between a discharge assembly open and discharge assembly closed position to discharge said food from



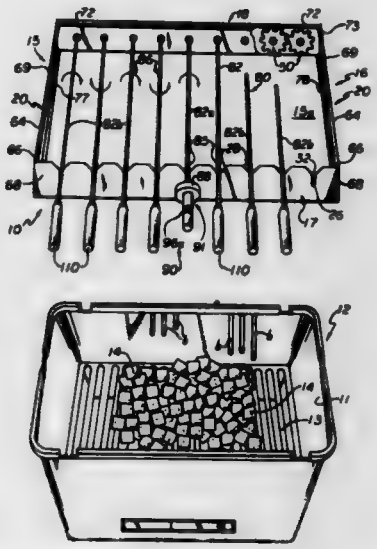
said second cooking chamber when in said discharge assembly open position, a third conduit means to drain from said second cooking chamber that part of said pressurized hot water which condenses into its liquid state as it exits from said second conduit means into said second cooking chamber, and a fourth valve in said third conduit means operable between a valve open and a valve closed position.

5,172,628

ROTARY FOOD COOKING DEVICE FOR A GRILL

Thomas J. Pillsbury, P.O. Box 6610, Saginaw, Mich. 48608, and Keith W. Wurst, 9683 Crescent Beach Rd., Pigeon, Mich. 48755

Filed Jun. 3, 1991, Ser. No. 709,351
Int. Cl.[5] A23C 3/00; A47J 37/04
U.S. Cl. 99—421 H 15 Claims



1. Cooking apparatus for mounting atop a cooking grill including:

a self-supporting, free-standing frame for resting atop a grill for freely laterally moveable relative thereto;

said frame including

a front frame member;

a rear frame member spaced apart from said front frame member;

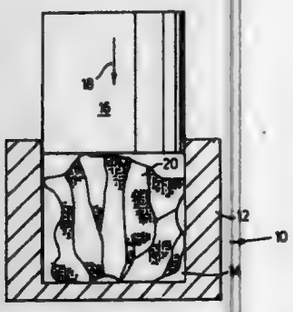
a pair of laterally spaced end frame members spanning the ends of said front and rear frame members;
a plurality of laterally spaced apart openings provided in each of said front and rear frame members;
a plurality of laterally spaced apart rotatable skewers, each having a longitudinal axis, adapted to support food to be cooked on said cooking grill and including
elongate blades each having a longitudinal axis and being pointed at one end and
hand grippable handles coupled to the opposite ends of said blades;
said skewers spanning said front and rear frame members and being received by said openings for rotation therein about their longitudinal axes;
drive means for rotating said skewers about their longitudinal axes including
a plurality of intermeshing rotatable drive members mounted on said rear end frame member and drivingly coupled to portions of said blades adjacent said pointed ends; and
motor means mounted on a portion of one of said skewer blades adjacent said front wall for rotating said one skewer blade about its longitudinal axis and rotatably driving said intermeshing rotatable drive members.

5,172,629

METHOD AND APPARATUS FOR COMPRESSION PACKAGING

Wayne M. Merry, Winston Salem, N.C., assignor to NovaPak, Inc., Atlanta, Ga.

Continuation-in-part of Ser. No. 451,051, Dec. 15, 1989, Pat. No. 5,042,227. This application Jul. 29, 1991, Ser. No. 737,328
Int. Cl.[5] B30B *12/00*
U.S. Cl. 100—35 **18 Claims**



1. A method of compressing a woven sheet article comprising 100% nylon, to produce a solid, stable, compacted article, the method comprising:
(a) placing the sheet article in a mold;
(b) subjecting the sheet article to an elevated pressure in the range 1,000 p.s.i. to 1,900 p.s.i. for a certain time, which pressure and time are selected so that the sheet article is compressed to form a stable, substantially rigid, compacted article, which retains substantially the shape of the mold after removal therefrom and which compacted article can be returned to its original uncompacted condition by manipulation thereof without the addition of any liquid; and
(c) removing the compacted article from the mold.

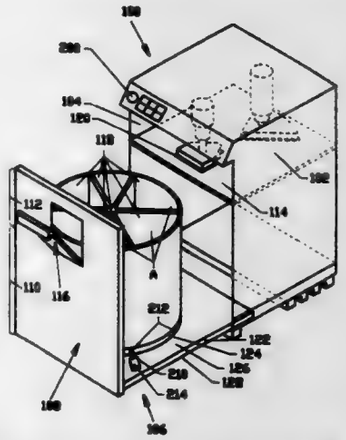
5,172,630

TRASH SEPARATION AND STORAGE SYSTEM

Richard M. Thompson, Star Rte. Box 98, Meriden, N.H. 03770

Filed Jan. 17, 1992, Ser. No. 804,819
Int. Cl.[5] B30B *15/00, 7/00*
U.S. Cl. 100—193 **10 Claims**

1. A trash storage system comprising:
a turntable;
a container having a rim, said container having multiple trash compartments, each of said trash compartments being bound by compartment sidewalls providing trash compartments having uniform cross section; said container being mounted on said turntable;
a retaining plate mounted above said container and in close proximity to said container rim, said retaining plate having at least a first opening therein, said first opening having a first opening cross section substantially the same as said uniform cross section of said trash compartments;



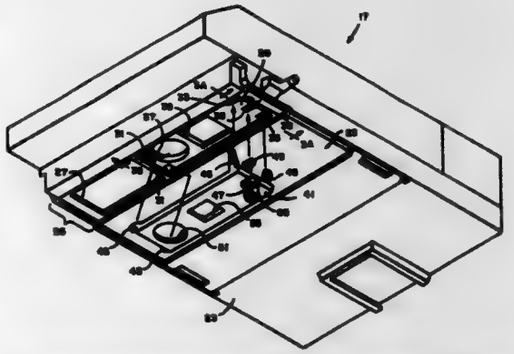
a first platen having a cross section substantially the same as said uniform cross section of said trash compartments;
means for engaging and disengaging said first platen with said compartments;
means for accessing said compartments through said retainer plate; and
means for positioning said turntable such that said first platen can selectively engage said compartments.

5,172,631

REPLACEABLE POSTAGE METER INDICIA

Robert E. Manna, Newtown, Conn., assignor to Pitney Bowes Inc., Stamford, Conn.

Filed Dec. 23, 1991, Ser. No. 812,549
Int. Cl.[5] B41J *1/00*
U.S. Cl. 101—93 **4 Claims**



1. An improved indicia plate in combination with a postage meter of the flat-bed type, wherein said improvement comprises:
said postage meter having a housing base plate, a first and second aperture in said base plate, and a recess locating said first and second apertures therein;
an indicia plate having a first and second aperture respectively to said first and second aperture of said base plate;

attachment means for detachable mounting to said postage meter within said recess of said base plate, said attachment means having said indicia plate having horizontal extending tabs and vertical extending tabs;

said base plate having first and second apertures located in said recess, and having a plurality of posts vertically extending and located laterally to said second apertures;

said first apertures cooperatively aligned to receive said respective horizontal tabs of said indicia plate and support said respective horizontal tabs in a shelved manner; and,

said second apertures cooperatively aligned to receive said respective vertical extending tabs of said indicia plate such that said respective vertical tab of said indicia plate contacts said respective post to clampably secure said indicia plate.

5,172,632

FRICTION ATTACHMENT FOR A STENCIL TO A ROTARY PRINTING DRUM

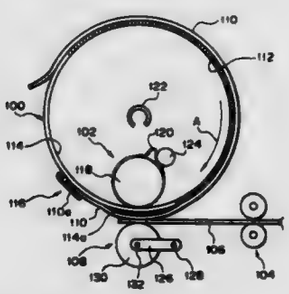
Kazuyosi Kobayasi, Murata; Tomoya Otomo, Sendai, and Mitsuo Satō, Shibata, all of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan

Filed Aug. 30, 1991, Ser. No. 753,235

Claims priority, application Japan, Aug. 31, 1990, 2-232074; Dec. 7, 1990, 2-407377; Dec. 11, 1990, 2-402870[U]; Feb. 18, 1991, 3-13684[U]; Mar. 25, 1991, 3-60116

Int. Cl.[5] B41L *13/10*

U.S. Cl. 101—120 **9 Claims**



1. A printer for printing out an image formed in a stencil on a sheet, comprising:

a rotatable drum comprising a hollow cylindrical support having an apertured portion which is formed with a number of apertures and a non-apertured portion, said apertured portion having leading and trailing ends with respect to a direction of rotation of the rotatable drum, a stencil being wrapped around an outer periphery of said support;

clamp means provided on said non-apertured portion of said support for clamping one edge of said stencil wrapped around said support;

ink supply roller means disposed in said support for supplying ink to said stencil via said apertured portion of said support;

press roller means for pressing a sheet against said stencil; and

friction generating means provided on the outer periphery of said drum for preventing said stencil wrapped around said drum from slipping off said clamp means, said friction generating means including a surface providing increased frictional engagement of said stencil as compared with non-apertured portions not having the friction generating means thereon, at least part of said friction generating means located on said non-apertured portion of said drum at a location between the clamp means and the leading end of the apertured portion such that, with respect to said direction of rotation, said clamp means leads said friction generating means and said friction generating means leads the leading end of the apertured portion.

5,172,633

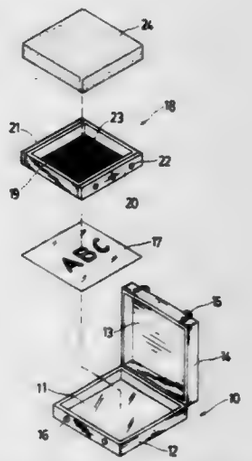
PRINTING SCREEN PLATE MAKING PROCESS AND THE DEVICE THEREFOR

Ti-Kun Hung, No. 39, Hsing Chung Str., Tai Ping Hsiang, Taichung Hsien, Taiwan

Filed Dec. 6, 1991, Ser. No. 803,434

Int. Cl.[5] B41C *1/14*

U.S. Cl. 101—128.4 **4 Claims**



1. A printing screen plate making device comprising:

a) a box, said box consisted of two hinged compartments movable between closed and open positions having two generally flat, opposite side walls, said two side walls including a first side wall made from the transparent material, and a second side wall;

b) a transparent film received in said box, said transparent film having a surface thereon for drawing a pattern;

c) a screen holder received in said box, said screen holder comprising a rectangular frame, a screen stretched on said rectangular frame, and a plurality of retaining blocks attached to said rectangular frame to secure said screen in place; and

d) a rubber pad tightly set in said rectangular frame and received in said box between the second side wall and the screen such that the rubber pad urges the screen in contact with the transparent film and the transparent film against the transparent material when the compartments are in their closed positions.

5,172,634

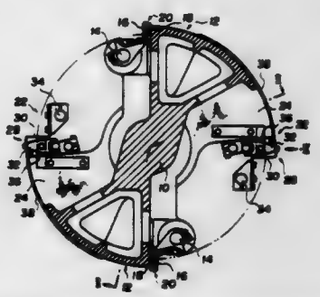
INTERMEDIATE CYLINDER OF SHEET-FEED PRESS

Masayuki Iwamoto, Shizuoka, Japan, assignor to Shinohara Machinery Co., Ltd., Shizuoka, Japan

Filed Jun. 19, 1992, Ser. No. 901,262

Int. Cl.[5] B21F *1/30*

U.S. Cl. 101—410 **1 Claim**



1. An intermediate cylinder of a sheet-feed press comprising:

a main shaft 10;

a front edge gripper holder 12 formed integrally with said main shaft 10, having a group of front edge grippers 20 aligned in an axial direction, and having an arcuate outer surface section;

holding discs 24 disposed at both side portions of said main shaft 10 in such a fashion that the rotation thereof relative to said main shaft 10 can be adjusted; and

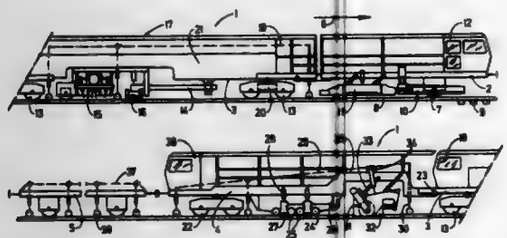
a rear edge gripper holder 22 having a group of rear edge grippers 28 aligned in the axial direction between said holding discs 24, and having a sheet member 38 disposed similarly on the outer peripheral surface between said holding discs 24, having an arcuate section, and partially overlapping the outer surface of said front edge gripper holder 12.

5,172,635

TRACK WORKING MACHINE FOR THE CONTROLLED LOWERING OF A TRACK

Josef Theurer, Vienna, Austria, assignor to Franz Plasser Bahnbaumaschinen-Industriegesellschaft m.b.H., Vienna, Austria

Filed Feb. 20, 1992, Ser. No. 839,246
Claims priority, application Austria, Mar. 26, 1991, 662/91
Int. Cl.[5] E01B 27/00
U.S. Cl. 104—2 8 Claims



1. A track working machine for controlled lowering of a track comprised of two rails fastened to ties supported on ballast, which comprises

(a) a machine frame,

(b) at least one undercarriage supporting the machine frame on the track for mobility in an operating direction,

(c) a track stabilization unit for compacting the ballast whereby the track is lowered, the track stabilization unit being vertically adjustably mounted on the machine frame and including rail-engaging roller tools subjected to substantially horizontal vibrations extending transversely to the machine frame and the track,

(d) a broom vertically adjustably mounted on the machine frame immediately ahead of the track stabilization unit in the operating direction, the broom being rotatable about an axis extending transversely to the machine frame and the track,

(e) a track leveling reference system for controlling the lowering of the track, the reference system comprising a front axle measuring the track level and the broom being mounted behind the measuring axle in the operation direction, and

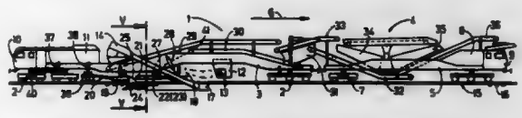
(f) a continuous action ballast tamping machine comprising a further machine frame supported on the track by front and rear undercarriages for mobility in the operating direction, the machine frame on which the track stabilization unit is mounted being a trailer having a front end adjacent the broom connected to, and supported on, the further machine frame and a rear end supported by an undercarriage, the track stabilization unit being mounted between the rear undercarriage of the further machine frame and the undercarriage supporting the rear end of the machine frame.

5,172,636

BALLAST CLEANING MACHINE WITH PIVOTAL AND VARYING SPEED CONVEYORS FOR SELECTIVELY CONTROLLING CLEANED BALLAST DISTRIBUTION

Josef Theurer, Vienna, and Herbert Wörgötter, Gallneukirchen, both of Austria, assignors to Franz Plasser Bahnbaumaschinen-Industriegesellschaft m.b.H., Vienna, Austria

Filed Dec. 12, 1991, Ser. No. 806,869
Claims priority, application Austria, Feb. 12, 1991, 299/91
Int. Cl.[5] E01B 27/06
U.S. Cl. 104—2 12 Claims



1. A mobile ballast cleaning machine for continuously receiving ballast from a ballast bed supported on a subgrade and supporting a track having two rails, and for cleaning the received ballast, which comprises

(a) a machine frame extending in longitudinal direction along the track,

(b) undercarriages supporting the machine frame for mobility on the track in an operating direction,

(c) an excavating chain mounted on the machine frame and arranged to excavate the ballast to expose the subgrade,

(d) a ballast screening installation arranged to receive the excavated ballast from the excavating chain and to clean the received ballast,

(e) a ballast conveyor unit extending in the longitudinal direction and having an input end receiving the cleaned ballast from the ballast screening installation and a discharge end,

(f) a chute arranged at the excavating chain for receiving the cleaned ballast from the discharge end of the ballast conveyor unit, the chute having

(1) at least one outlet opening in a bottom thereof,

(g) a conveyor band mounted immediately below, and having one end delimiting, each bottom outlet opening for receiving the cleaned ballast from the bottom outlet opening and having a discharge end for discharging the cleaned ballast on the exposed subgrade,

(1) the conveyor band being pivotal about a vertical center axis of the bottom outlet opening of the chute,

(h) a pivoting drive connected to the conveyor band,

(i) a variable speed drive for operating each conveyor band to impart thereof selectively a desired conveying speed for discharging a desired amount of the cleaned ballast from the discharge end or to close the bottom outlet opening by the one conveyor band end upon stoppage of the drive, and

(k) a power-actuated, vertically and transversely adjustable track lifting device mounted on the machine frame.

TRACK SURFACING MACHINE FOR THE CONTROLLED LOWERING OF THE TRACK

Josef Theurer, Vienna, and Bernhard Lichtberger, Leonding, both of Austria, assignors to Franz Plasser Bahnbaumaschinen-Industriegesellschaft m.b.H., Vienna, Austria

Filed Dec. 12, 1991, Ser. No. 806,872
Claims priority, application Austria, Feb. 1, 1991, 218/91
Int. Cl.[5] E01B 29/04
U.S. Cl. 104—7.2 5 Claims

1. A continuously advancing track surfacing machine for the controlled lowering of a track supported on ballast, which comprises

(a) a machine frame supported on undercarriages on the

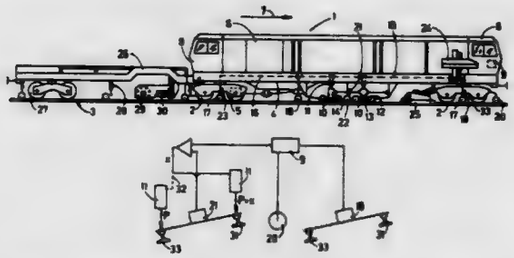
track for mobility in an operating direction and having a front end in the operating direction,

(b) a drive for propelling the machine frame continuously along the track in said direction,

(c) a power-actuated, vertically adjustable track stabilization assembly connected to the machine frame behind the front end and spaced therefrom, the track stabilization assembly including means for applying a vertical load to the track and means for vibrating the track in a substantially horizontal direction extending transversely to the track,

(d) a track leveling reference system including a measuring axle running on the track,

(e) a first cross level measuring element arranged at the machine frame front end and generating control signals corresponding to the measured cross level at successive



reference points along the track as the machine continuously advances,

(f) a second cross level measuring element arranged adjacent the track stabilization assembly and generating successive signals corresponding to the cross level measured thereby, and

(g) a control arranged to receive the control signals from the first cross level element, to store the received control signals until the second cross level element has reached the successive reference points, to compare the stored control signals with the successive signals generated by the second cross level element to obtain a reference signal, and to transmit the reference signal for actuating the means for applying a vertical load and for vibrating the track.

5,172,638

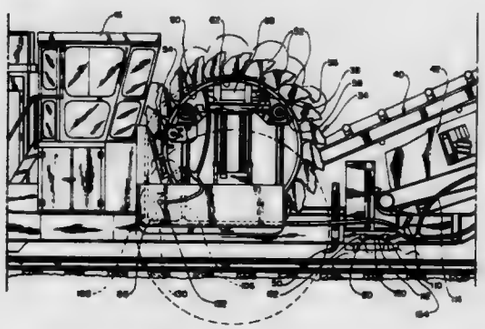
DUST SUPPRESSION SYSTEM FOR RAILROAD TRACK BALLAST CLEANING APPARATUS

Dennis R. Mathison, Hamel, and Charles R. Mackey, Buffalo, both of Minn., assignors to Loram Maintenance of Way, Inc., Hamel, Minn.

Continuation of Ser. No. 507,717, Apr. 10, 1990, abandoned. This application Jan. 16, 1992, Ser. No. 823,585

Int. Cl.[5] E01B *27/02*

U.S. Cl. 104—7.3 **10 Claims**



1. A self-contained dust suppression system for a self-propelled railway shoulder ballast cleaning machine having a digger wheel having a plurality of digger buckets for scooping up fouled ballast having dust generating debris embedded therein from a bucket insertion point along a railway shoulder and depositing said fouled ballast within said machine, a first conveyor having a first end operably positioned for receiving said fouled ballast from said digger wheel and a second end, ballast cleaning means operably positioned to receive said fouled ballast from said first conveyor second end for separating said debris from said fouled ballast to provide clean ballast and separated debris, and a second conveyor having a first end operably positioned for receiving said separated debris and a second end for discharging said separated debris from said machine, said dust suppression system including:

a storage tank for storing a working quantity of dust suppressing liquid sufficient for prolonged operations of said ballast cleaning machine independent of a source of resupply of said liquid, said tank being operably coupled to said ballast cleaning machine for transport therewith;

a main liquid distribution line extending generally along the length of said machine;

pressure means operably coupling said main line to said reservoir for pressurizing said main line with liquid;

a plurality of branch liquid distribution lines in fluid communication with said main line having a plurality of nozzle means operably positioned with respect to said dust generating debris for maximizing dust suppression with minimum use of liquid;

control means operably coupled to said branch liquid lines for selectively controlling the rate of flow of said liquid to maximize dust suppression with minimum usage of said liquid through said nozzle means; and

liquid spray containment means operably disposed with respect to said nozzle means for shielding said liquid spray generated by said nozzle means from dissipation by wind and for directing said liquid spray to maximize dust suppression with usage of a minimum amount of said liquid, where by said liquid in said tank is conserved.

5,172,639

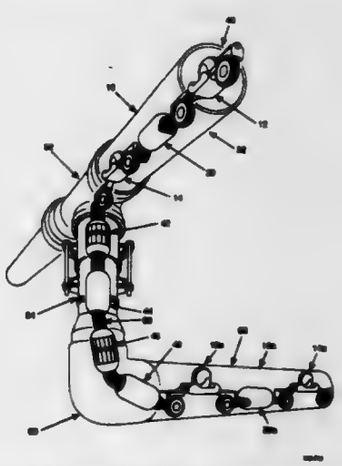
CORNERING PIPE TRAVELER

Richard M. Wiesman, Wayland; Edward E. Fischer, Acton; Richard R. Fontana, Lexington; Bruce B. Gamble, Wellesley; Robert T. Hsiung, Brookline, and Steven J. Kozminski, Rutland, all of Mass., assignors to Gas Research Institute, Chicago, Ill.

Filed Mar. 26, 1991, Ser. No. 675,487

Int. Cl.[5] B61B *13/10*

U.S. Cl. 104—138.2 **14 Claims**



1. A cornering pipe traveler for moving through a pipe, comprising:

a tractor having a pair of carriages, a leading carriage and a trailing carriage, each carriage including clamping means

for positively engaging the inner surface of the pipe, and means for propelling said carriage along the pipe;

curling means interconnected between said pair of carriages for exerting a curling force between the two carriages for mechanically compelling the lead carriage to curl in relation to the trailing carriage and enter a turn in the pipe; and

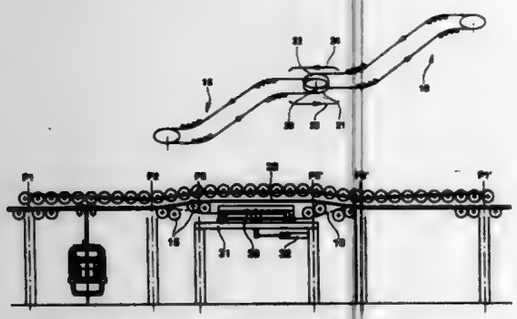
means for aligning by steering the lead carriage about the longitudinal axis of the tractor so that the curling force mechanically compels the lead carriage to enter a selected turn to be made.

5,172,640

OVERHEAD CABLE TRANSPORT INSTALLATION HAVING TWO SUCCESSIVE SECTIONS

Jean-Pierre Cathiard, Noyarey, France, assignor to Pomagalski S.A., France

Filed Dec. 2, 1991, Ser. No. 801,464
Claims priority, application France, Dec. 18, 1990, 90 15985
Int. Cl.[5] B61B 11/00
U.S. Cl. 104—173.2 7 Claims



1. A closed loop overhead cable transport, comprising:

first and second end stations comprising first and second end wheels, respectively, each end station including an entrance and an exit;

up and down tracks connecting said first and second end stations;

a technical relay disposed between said first and second end stations, said technical relay comprising first and second bull wheels;

a first closed loop cable connecting said first bull wheel to said first end wheel of said first end station, and a second closed loop cable connecting said second bull wheel to said second end wheel of said second end station;

loads for running along said first and second closed loop cables;

carriages supporting said loads, said carriages having detachable grips for coupling and de-coupling said carriages from said first and second closed loop cables upon entering and exiting one of said first and second end stations;

a half loop circuit along which said carriages run while being de-coupled from said first and second closed loop cables in said first and second end stations;

carriage acceleration and deceleration zones at the exit and entrance, respectively, of said first and second end stations;

passenger embarking and disembarking sections located between said acceleration and deceleration zones in said first and second end stations;

up and down transfer rails provided in said technical relay linking said first and second closed loop cables to each other along said up and down tracks, respectively;

a drive motor coupled to one of said first and second end wheels directly to drive one of said first and second closed loop cables; and

mechanical coupling means coupling said first and second bull wheels such that the other of said first and second closed loop cables is driven indirectly by said drive motor via said one of said first and second closed loop cables,

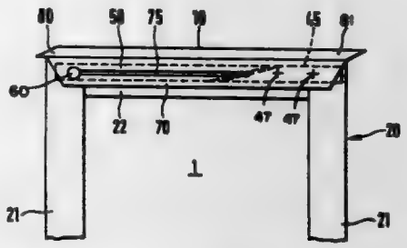
wherein said carriages are de-coupled from said first and second closed loop cables upon entering said technical relay, said first and second carriages being driven along said up and down transfer rails at a speed substantially corresponding to a speed of said first and second closed loop cables, said carriages being coupled to said first and second closed loop cables upon exiting the technical relay.

5,172,641

TABLE WITH MOVABLE WORKING SURFACE

Gerhard Auer, Hermersberg, Fed. Rep. of Germany, assignor to Wasa Massivholzmoebel GmbH, Geiselberg/Pfalz, Fed. Rep. of Germany

Filed Oct. 28, 1991, Ser. No. 782,992
Claims priority, application Fed. Rep. of Germany, Oct. 26, 1990, 9014828[U]; Jul. 13, 1991, 4123240
Int. Cl.[5] A47F 5/12
U.S. Cl. 108—5 9 Claims



1. A table comprising:

a table frame having a plurality of legs extending therefrom;

a horizontally movable working surface supported on the table frame, said working surface being pivotable from a horizontal position to an inclined position;

first and second running rail means provided on the table frame for controlling the movement of the work surface with respect to said table frame, each running rail means comprising two running rail elements including a first running rail element, having a first and second end, rigidly attached to the table frame and a second running rail element, having a first and second end, mounted to the table frame at a location adjacent to the first running rail element, said first end of said second running rail element being pivotally mounted to said table frame such that said second running rail element is rotatably mounted to the table frame, said first end of said first running rail element having a sloped support surface on which the second end of the second running rail element lies on when the working surface is in the horizontal position;

a pair of edge rails extending from said working surface, each edge rail receiving said first and second running rail elements of one of said running rail means in a form fitting relationship when said working surface is in the horizontal position and receiving said second running rail element of one of said running rail means when said work surface is in said inclined position;

a holding and sliding element mounted on an underside of each edge rail for being supported by said first running rail element of one of said running rail means when the working surface is in the inclined position such that holding and sliding element is located on the sloped surface of the first running rail element and underneath said second running rail element of the one running rail means, said holding and sliding element being located underneath the first and second running rail elements of one of said running rail means when the working surface is in the horizontal position; and

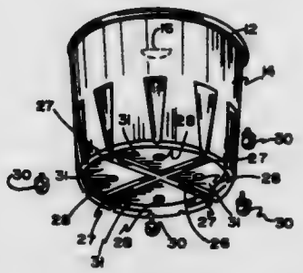
tightening means for securing said working surface in place when said working surface is in the inclined position.

5,172,642

STUDIO STORAGE TABLE

Catherine J. Iannuzzelli, and Nicholas J. Iannuzzelli, Jr., both of 271 Mallory Ave., Staten Island, N.Y. 10305

Filed Oct. 15, 1991, Ser. No. 775,591
Int. Cl.[5] A47B 5/00
U.S. Cl. 108—25 6 Claims



1. A generally cylindrical storage table which may be stacked in nested fashion with other similar tables when empty, said storage table comprising:

a storage area, said storage area bounded by a tapered cylindrical sidewall, a top member and a bottom member;

said sidewall having an upper region and a lower region;

said bottom member permanently affixed to said lower region of said sidewall;

said top member removably attached to said upper region of said sidewall and serving both as a horizontal planar surface forming a top for said table and a lid for said storage area;

said lower region having means for enabling easy separation of said storage table from other similar storage tables when stacked in said nested fashion, including a plurality of elongated V-shaped indented grooves disposed circumferentially on said sidewall and extending internally into said storage area to thereby limit insertion of said storage table into said other similar storage tables when stacked in said nested fashion;

said bottom member having a plurality of radially crossed reinforcing strips thereon;

whereby said top member can be removed from said sidewall permitting access to said storage area.

5,172,643

APPARATUS FOR HANDLING STRIPS OF PAPER

Yoshinori Koshida; Naohiro Yamada; Isao Miyake, and Hiroyuki Tominaga, all of Tokyo, Japan, assignors to Oki Electric Industry Co., Ltd., Tokyo, Japan

Filed Jul. 11, 1991, Ser. No. 728,606
Claims priority, application Japan, Jul. 16, 1990, 2-74316[U]; Jul. 26, 1990, 2-196124; Aug. 3, 1990, 2-82233[U]; Aug. 24, 1990, 2-221017; Nov. 20, 1990, 2-312928
Int. Cl.[5] G07G 5/00
U.S. Cl. 109—10 19 Claims

1. An apparatus for handling strips of paper comprising:

a box formed with a window for receiving strips of paper;

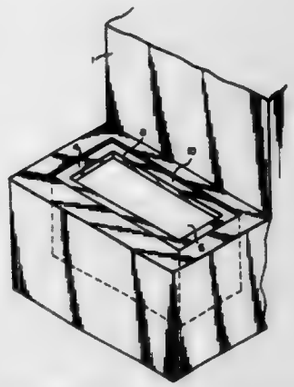
a shutter section for opening and closing said window;

a drum section having a pooling section for temporarily accommodating strips of paper therein; and

an anti-intrusion portion provided on a leading edge of said shutter section with respect to a closing direction of said shutter section and having a first abutment surface for preventing an alien substance from being inserted into said apparatus through a clearance formed between said box and said shutter section;

said first abutment surface extending along the leading edge of said shutter section;

a groove being formed at a substantially central part of said anti-intrusion portion to extend along the leading edge of



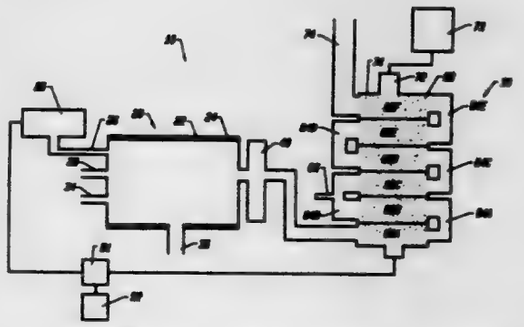
said shutter section to thereby form a second abutment surface.

5,172,644

METHOD AND APPARATUS FOR ENHANCED SUPPRESSION OF THE MULTIPLE POLLUTANTS PRODUCED BY A COMBUSTED FUEL

George R. Offen, Woodside, Calif., assignor to Electric Power Research Institute, Inc., Palo Alto, Calif.

Continuation of Ser. No. 806,730, Dec. 12, 1991, abandoned. This application May 20, 1992, Ser. No. 888,455
Int. Cl.[5] F23J 11/00, 15/00
U.S. Cl. 110—345 10 Claims



1. An apparatus for suppressing the multiple pollutants produced by the combustion of a carbonaceous fuel, said apparatus comprising:

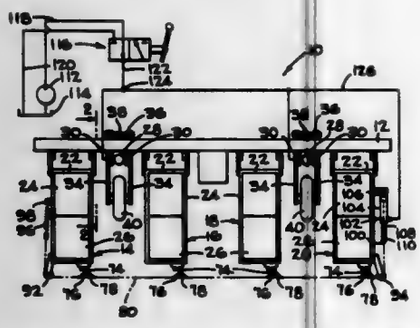
a slagging combustor for burning a carbonaceous fuel to produce high temperature combustion products, said slagging combustor providing substantial initial reduction of gaseous SO_x and NO_x pollutants within said combustion products, said slagging combustor further providing substantial conversion of the noncombustible fly ash in the coal into a vitrified solid waste; and

a lignite coke system coupled to said slagging combustor and receiving said combustion products from said slagging combustor, following passage through a heat utilization device, said lignite coke system providing supplemental reduction of said gaseous SO_x, NO_x, and fly ash pollutants within said combustion products and capturing gaseous toxic pollutants within said combustion products, whereby said apparatus provides efficient and enhanced reduction of said NO_x, SO_2, and fly ash pollutants within said combustion products, suppresses said toxic pollutants within said combustion products, and produces only said vitrified solid waste byproducts which will resist future leaching.

5,172,645
MEANS FOR DISPENSING GRANULAR AGRICHEMICAL PRODUCTS

Ronald J. Billett, Sunnyvale, Calif., and Samuel F. Tutt, Balaton, Miss., assignors to FMC Corporation, Chicago, Ill.

Continuation-in-part of Ser. No. 394,345, Aug. 15, 1989, abandoned. This application Jan. 25, 1991, Ser. No. 648,451
Int. Cl.[5] A01C *15/00*
U.S. Cl. 111—67 8 Claims



6. In an agricultural planter having a tool bar frame capable of being moved between raised non-planting and lowered planting positions, at least one hopper for dispensing granular agrichemical products mounted on said frame with a dispensing opening formed in the bottom thereof to permit gravity discharge of said products from said hopper; the improvement comprising:

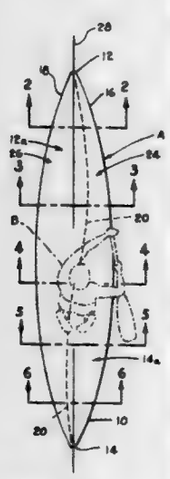
a closure means carried by said hopper and movable between an open position in which at least a portion of said discharge opening is uncovered to permit said discharge and a closed position in which said opening is completely covered to prevent said discharge; and

means for moving said closure means from its said closed position to said open position only after said frame has completed its movement from its raised position to its lowered position.

5,172,646
CANOE WITH ASYMMETRICAL HULL

William E. Masters, 100 Bentcreek Ct., Easley, S.C. 29642

Filed Jul. 11, 1991, Ser. No. 728,693
Int. Cl.[5] B63B *35/00*
U.S. Cl. 114—347 13 Claims



1. A watercraft comprising:

an asymmetrical hull having a bow and a stern, a first side and a second side defined on either side of a longitudinal center line of said hull;

said asymmetrical hull having an asymmetrical configuration from said bow to said stern, and an asymmetrical design from said port side to said starboard side of said hull; and

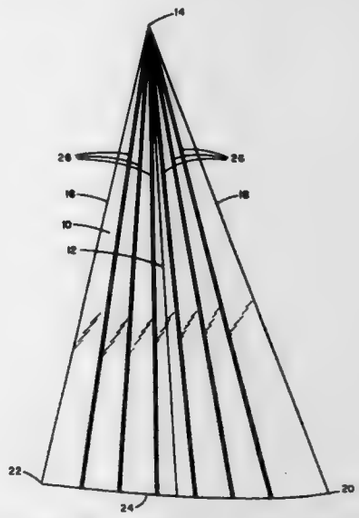
said asymmetrical configuration defining a keel line at the bottommost portion of said hull having a sinuous shape from said bow to said stern, said hull having a larger volume on said first side of said center line than on said second side of said center line;

whereby said watercraft turns into a paddle stroke when paddled only on said first side thereby causing the angular velocity of the paddle stroke to cancel the effect of the watercraft to veer to said first side and travel generally in a straight line.

5,172,647
TAPE REINFORCED MONOFILM SAIL

Stephen F. Towne, Tampa, Fla., assignor to Towne Yacht Survey, Inc., Tampa, Fla.

Filed Sep. 26, 1991, Ser. No. 766,808
Int. Cl.[5] B63H *9/06*
U.S. Cl. 114—103 1 Claim



1. As an article of manufacture, a high performance sail, comprising: at least two sail panels forming said sail with a head, a foot, a clew, a luff, and sides, a plurality of multi-filament reinforced adhesive tapes adhering to and reinforcing each said panels, said tapes having a pattern radiating out of and interconnecting the head of the sail with the foot of the sail on one side of the sail, and on the otherside of the sail said tapes having a different patern radiating out of and interconnecting the clew of the sail with the luff of the sail.

5,172,648
STEERING MECHANISM FOR A BOAT

George Isham, 111 Garretson Ave., Rodeo, Calif. 94572

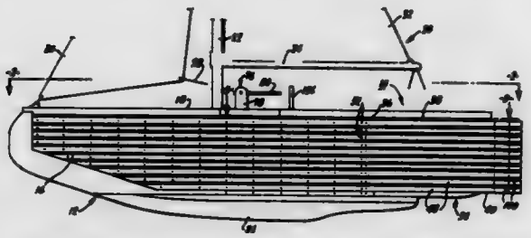
Filed Dec. 7, 1990, Ser. No. 623,519
Int. Cl.[5] B63H *25/06*
U.S. Cl. 114—62 13 Claims

1. A steering mechanism for a boat including a hull the improvement comprising:

a rudder apparatus directly connected to the boat hull, said rudder apparatus including an end portion positioned outwardly from the boat hull, a top portion, and a bottom portion;

b. means for turning the end portion of said rudder apparatus traversely relative to the boat hull; and

c. means for turning said top portion of said rudder apparatus transversely and turning said bottom portion of said



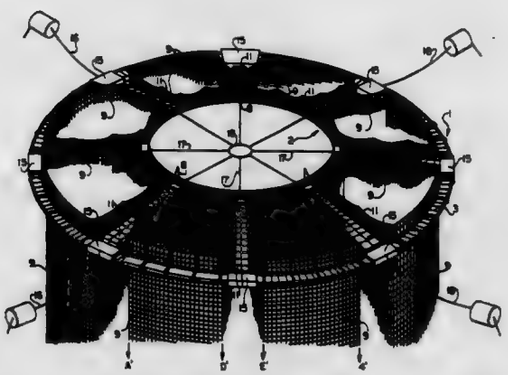
rudder apparatus traversely in a direction opposite to said transverse turning of said top portion of said rudder apparatus, to twist said rudder relative to said boat hull.

5,172,649

DEVICE FOR BREEDING FISH IN THE OPEN SEA

Olivier Bourgeois, Brussels, Belgium, assignor to Pisciculture Marine De Monaco, Monaco

Filed Aug. 9, 1991, Ser. No. 743,505
Claims priority, application European Pat. Off., Aug. 21, 1990, 90440073.6
Int. Cl.[5] A01K 63/00
U.S. Cl. 119—3 33 Claims



1. A device for breeding fish in the open sea, comprising:

a floating cage comprising concetric inner and outer flexible frames and a plurality of tensioned radial elements connecting said flexible frames, each two successive radial elements and said flexible frames therebetween defining a closed area; and

a netted bag suspended from each said closed area to form an individual net pen; wherein:

each said frame comprises a series of sections of rubber hose and a plurality of metallic flanges bolted together, said sections of rubber hose being connected by pairs of said metallic flanges assembled together; and

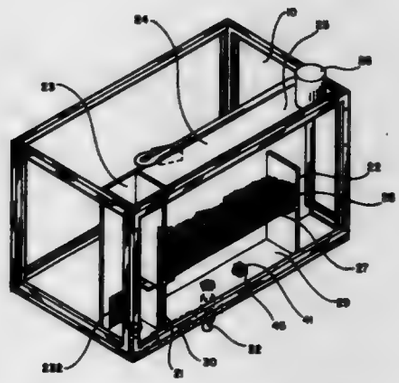
each said tensioned radial element comprises adjustable tensioned chains connected to said frames at said flanges.

5,172,650

AQUARIUM HAVING AN INTERNAL THREE CHAMBER RECIRCULATING FILTRATION SYSTEM

Ke-Yo Hsu, No. 14, Lane 86, Ta Lung Road, and Kuo-Hsiung Shen, No. 559, Sec. 1, Chung Te Road, both of Taichung, Taiwan

Filed Nov. 13, 1991, Ser. No. 791,142
Int. Cl.[5] A01K 63/04
U.S. Cl. 119—5 3 Claims



1. An aquarium for keeping live water animals and water plants comprising:

a housing having side walls sealingly joined to a bottom thereof, said housing further having a first through-hole and a second through-hole formed in a bottom portion thereof;

a filter tank fastened within said housing for filtering water contained therein, said filter tank having a first vertically extending partition board and a second vertically extending partition board fastened therein, said first and second partition boards being laterally spaced so as to divide said filter tank into a dirty water chamber at one end, a filtration chamber at the middle and a clean water chamber at an opposite end, said first partition board functioning to prevent water in said dirty water chamber from flowing to said filtration chamber and said clean water chamber, said second partition board permitting water from said filtration chamber to flow to said clean water chamber thereabove, said filtration chamber defining therein a sedimentation chamber at a bottom portion thereof and having a filter bed transversely set therein above said sedimentation chamber, said filter bed being comprised of a gauze filter and a pile of filter stones, said dirty water chamber having a water intake port formed in a lower portion thereof for the passing therethrough of water from said housing and a through-hole in a bottom portion thereof which is connected to said first through-hole of said housing by a first pipe connector, said sedimentation chamber having a through-hole formed in a bottom portion thereof connected to said second through-hole of said housing by a second pipe connector, and a water pump for pumping water from said clean water chamber to said housing; and

a pipe assembly comprising a three-way pipe having a first port connected to said first pipe connector through a first control valve, a second port connected to said second pipe connector, and a third port connected to a drain pipe through a second control valve;

wherein said first control valve is opened and said second control valve is closed, when said water pump is turned on to pump water from said clean water chamber to said housing, so as to permit water to be filtrated through said filter bed and circulated between said housing and said filter tank; and said first control valve is adapted to be closed and said second control valve to be opened, when said water pump is stopped, to permit water to be dis-

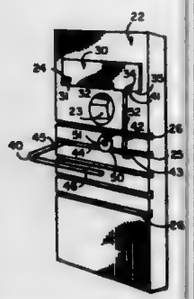
charged out of said sedimentation chamber for washing said filter bed.

5,172,651

PIVOTAL GATE TRAP FOR BIRDHOUSE

Joseph Finn, 922 Massachusetts Ave., #53, Cambridge, Mass. 02139

Filed Oct. 25, 1991, Ser. No. 782,662
Int. Cl.[5] A01K *31/00*
U.S. Cl. 119—23 8 Claims



1. A bird trap for trapping a bird, said bird trap for use in a birdhouse having an entry panel with an exterior suface and an inner surface with an entry hole defined therein, said entry panel having a first side edge end a second side edge, comprising:

at least one horizontal groove defined in the inner surface of said entry panel disposed below said entry hole;

a pivot pin attached to the inner surface of said entry panel disposed toward said first side edge and positioned above the level of said entry hole;

a gate member having a bottom portion, said gate member disposed against said inner surface, said gate member having a first and second end with said first end in proximity to said first side edge and said second end in proximity to said second side edge, said gate member in a first position positioned above the level of said entry hole and said gate member in a second position covering said entry hole;

pivot means to attach said first end of said gate member to the inner surface of said entry panel on said pivot pin, said pivot means being manually operable without tools;

a trip assembly for interacting with said gate member, said trip assembly including:

an upper trip arm extension having a first and second end, said upper trip arm extension in a first position having its first end engage and support the second end of said gate member at a point toward the second side edge of said entry panel opposite the position of said pivot pin, said upper trip arm extension in a second position to be disengaged from said gate member, said upper trip arm extension when engaged supporting said gate member in its first position, positioning said gate member above said entry hole;

a trip arm vertical segment having a first and second end, said first end of said trip arm vertical segment attached to the second end of said upper trip arm extension, said trip arm vertical segment extending downward at a right angle from said upper trip arm extension;

a lower trip arm extension having a first and second end, said first end attached to said second end of said trip arm vertical segment, said lower trip arm extension extending at a right angle to said trip arm vertical segment parallel to, and in the same direction as, said upper trip arm extension;

an axis section having a first and second end, said first end connected to said second end of said lower trip arm extension, said axis section disposed at a right angle to said trip arm vertical segment, said axis section being parallel to said groove and extending toward the first side edge of said entry panel, said axis section rotatably disposed within said groove;

a trigger lever having a first and second end, said first end attached to the second end of said axis section at a right angle thereto, said trigger lever being positioned parallel to, and disposed in the same direction as, said lower trip arm extension; and

a trigger extension having a first and second end, said first end attached to the second end of said trigger lever, and said second end disposed toward said second side edge, said trigger extension extending at a right angle to said trigger lever and parallel to said axis section; and

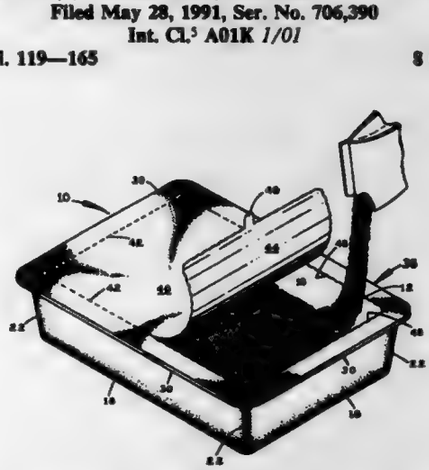
means to retain said axis section in said groove, said means being manually operable without tools, said means further including a strike/retention plate to catch the second end of said gate member when it falls into its second position covering said entry hole when said upper trip arm extension is moved to its second position by the downward movement of said trigger extension, said downward movement caused by the weight of a bird landing on said trigger extension.

5,172,652

ABSORBENT PET WASTE CONTAINER

Robert J. Dobrin, and Riza Chase-Gilpin, both of 3850 Coconut Creek Pkwy., Coconut Creek, Fla. 33066

Filed May 28, 1991, Ser. No. 706,390
Int. Cl.[5] A01K *1/01*
U.S. Cl. 119—165 8 Claims



1. A vessel for containing pet waste and litter material, comprising:

recycled paper for absorbing liquids and odor;

said vessel having at least one essentially vertical side member, having an upper edge;

and an essentially horizontal bottom member, interconnected in a sealing relationship and made of said recycled paper;

said vessel being impregnated with an antibacterial agent.

5,172,653

ADJUSTABLE ANGLE ROTARY CLEANING DEVICE

Thomas C. Vadakin, Marietta, Ohio, assignor to Vadakin, Inc., Marietta, Ohio

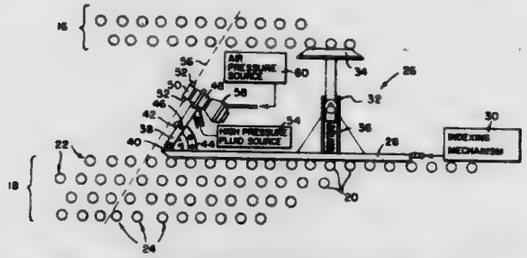
Filed Feb. 10, 1992, Ser. No. 833,533
Int. Cl.[5] F22B *37/52*
U.S. Cl. 122—392 9 Claims

1. Apparatus for cleaning the exterior surfaces of a plurality of parallel boiler tubes arranged in spaced rows, the tubes of each row being spaced and offset with respect to the tubes of an adjacent row to define an array, comprising

(a) a base supported by a first row of tubes for lateral displacement through the array;

(b) cleaning means connected with said base and including a rotating nozzle for directing a high pressure fluid stream against the tubes; and

(c) means for adjusting the angle of said cleaning means relative to said base, whereby when said cleaning means is positioned to direct the fluid stream between the offset



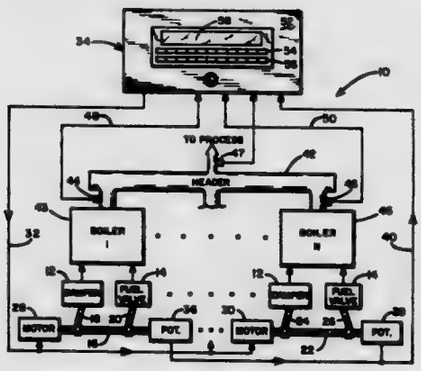
tubes of the array and when said base is displaced through the array of tubes, slag deposits are removed from the exterior surfaces of the tubes.

5,172,654

MICROPROCESSOR-BASED BOILER CONTROLLER

Leo P. Christiansen, Mendota Heights, Minn., assignor to Century Controls, Inc., Edina, Minn.

Filed Feb. 10, 1992, Ser. No. 833,067
Int. Cl.[5] F22B *37/42*; F22D *5/00*
U.S. Cl. 122—448.3 6 Claims



1. A boiler sequencer system comprising:

a plurality of boilers, each having means for varying the firing rate thereof and means for sensing the existing firing rate and providing a sense signal proportional thereto;

(b) a microprocessor-based controller having memory means for storing a plurality of set-point values for each of said plurality of boilers, including a Preferred Load value, an Advance Base Load value and a Retard Base Load value; means for entering said plurality of set-point values into said memory means, said microprocessor-based controller producing a plurality of control signals, each applied to said means for varying the firing rate of said plurality of boilers; and

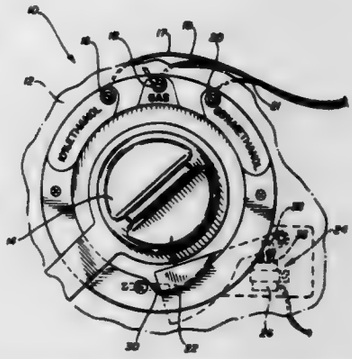
(c) means including microprocessor-based controller for determining whether said sense signal from a second of said plurality of boilers has increased by a predetermined percentage value while said sense signal from a first of said plurality of boilers remains below said Preferred Load set-point values for that first boiler and, if so, producing said control signal for said first of said plurality of boilers to increase the firing rate of said first of said plurality of boilers by a predetermined percentage value.

5,172,655

FUEL SPECIFYING APPARATUS

Robert L. Forgacs, Dearborn Heights, Mich., assignor to Ford Motor Company, Dearborn, Mich.

Filed Feb. 7, 1992, Ser. No. 832,459
Int. Cl.[5] F02B *75/12*
U.S. Cl. 123—1 A 17 Claims



1. A fuel specifying apparatus for a vehicle having an internal combustion engine, an engine control computer, and a fuel tank with an inlet thereto and a fuel cap covering said inlet, comprising:

means, mounted upon said vehicle, for manually specifying the composition of fuel to be added to said fuel tank;

means for transmitting to said engine control computer said manually specified composition of fuel to be added to said fuel tank; and

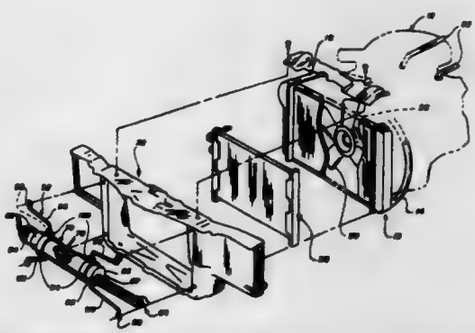
means for ensuring that the composition of fuel to be added to said fuel tank is specified to said engine control computer before said fuel is added to said fuel tank, said ensuring means including means for interfering with fuel additions to said fuel tank unless and until the composition of fuel to be added is specified to said engine control computer, said interfering means comprising means for impeding the removal of said fuel cap, said impeding means becoming non-impeding upon specifying to said vehicle engine control computer the composition of fuel to be added to said fuel tank.

5,172,656

AUXILIARY SYSTEM FOR HEATING/COOLING INTERNAL COMBUSTION ENGINE

Marvin L. Wright, P.O. Box 36, Mill Shoals, Ill. 62862

Filed Nov. 22, 1991, Ser. No. 796,590
Int. Cl.[5] F01P *9/00*
U.S. Cl. 123—41.01 8 Claims



1. A system for heating and cooling an internal combustion engine wherein a liquid coolant is circulated between the engine where it picks up heat and a radiator where it surrenders its heat as it flows through the radiator with a portion of

the liquid coolant routed to a heater core for warming the passenger compartment and wherein a liquid refrigerant is circulated by a compressor driven by the engine between a condenser located in front of the radiator and an evaporator located with the heater core in a heater/air conditioner case/duct forming means for tempering air, said system comprising a conduit having first and second ends, said first end flowably connected to means for diverting air which is tempered in the case/duct into the conduit and said second end flowably connected to means for exhausting tempered air from the conduit and delivering it towards the radiator.

5,172,637

EVAPORATION COOLED INTERNAL COMBUSTION ENGINE

Andreas Saumer, Frankfurt am Main; Klaus Mertens, Hemsbach, and Hans-Peter Jaekel, Frellstedt, all of Fed. Rep. of Germany, assignors to Firma Carl Freudenberg, Weinheim, Fed. Rep. of Germany

Filed Nov. 26, 1991, Ser. No. 798,555

Claims priority, application Fed. Rep. of Germany, Nov. 27, 1990, 4037644

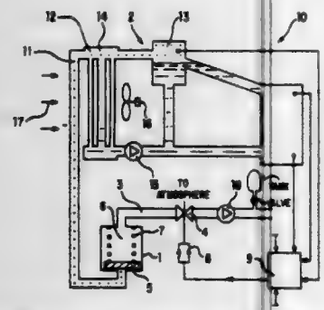
U.S. Cl. 123—41.21 **12 Claims**



1. An evaporation-cooling system for an internal combustion engine, comprising:

a conduit for transferring coolant to and from an internal combustion engine;

a heat exchanger operatively connected to the engine by means of the conduit, said heat exchanger having a steam-zone for the accommodation of vaporous coolant;

an equalization container linked to the steam-zone of the heat exchanger by a connection line, said equalization container containing first and second gaseous regions of variable volume, the first of which is in pneumatic communication with the heat exchanger; and

control means for selectively modifying the pressure within the second gaseous region of the equalization container.

CAMSHAFT PHASE CHANGE DEVICE

Keith Hampton, Ann Arbor, Mich., assignor to Eaton Corporation, Cleveland, Ohio

Filed Feb. 24, 1992, Ser. No. 840,234

Int. Cl.[5] F01L *1/34*

U.S. Cl. 123—90.17 **17 Claims**

1. A device including first and second members disposed for rotation about an axis, and an assembly for coupling the members and selectively advancing and retarding rotation of the members relative to each other during rotation of the members in one direction by a torque having positive and negative torque pulses with respect to an average value of the torque; characterized by:

the assembly comprising an advance and a retard one-way clutch means including first annular means disposed for rotation with one of the members about the axis and having race surface means common to both clutch means, a second annular means disposed for rotation with the other member and having a plurality of first and a plurality of second ramp surfaces spaced from the race surface means, a first wedge interposed for wedging engagement between each first ramp surface and the race surface means and operative when in said wedging engagement to prevent said retarding rotation in response to the positive torque pulses, a second wedge interposed for wedging engagement between each second ramp surface and the race surface means and operative when in said wedging engagement to prevent said advancing rotation in response to the negative torque pulses, spider means moveable in first and second opposite directions for respectively moving the first and second wedges out of engagement, actuator means selectively moveable between first and second positions for moving the spider means in the first and second directions, and attachment means connecting one of the annular means to one of the members with free play therebetween for effecting uniform spacing between the ramp surfaces and the race surface means.

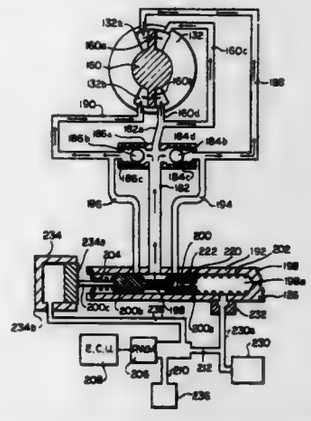
DIFFERENTIAL PRESSURE CONTROL SYSTEM FOR VARIABLE CAMSHAFT TIMING SYSTEM

Roger P. Butterfield, Interlaken, and Franklin P. Smith, Slaterville Springs, both of N.Y., assignors to Borg-Warner Automotive Transmission & Engine Components Corporation, Sterling Heights, Mich.

Continuation-in-part of Ser. No. 713,465, Jun. 11, 1991, Pat. No. 5,107,804, which is a continuation-in-part of Ser. No. 584,913, Sep. 19, 1990, Pat. No. 5,046,460, which is a continuation-in-part of Ser. No. 422,353, Oct. 16, 1989, Pat. No. 5,002,023. This application Sep. 20, 1991, Ser. No. 763,514

Int. Cl.[5] F01L *1/34*

U.S. Cl. 123—90.17 **15 Claims**



1. In an internal combustion engine having a rotatable crankshaft and a rotatable camshaft, the camshaft being position variable in a circumferential direction relative to the crankshaft, means for varying the position of the camshaft relative to

the crankshaft, said means for varying comprising a source of hydraulic fluid under pressure, a first hydraulic operator connected to said crankshaft and to said camshaft, the operation of said first hydraulic operator being effective to vary the position of the camshaft relative to the crankshaft in a given circumferential direction, first conduit means for delivering hydraulic fluid from the source to the first hydraulic operator to operate the first hydraulic operator, a second hydraulic operator connected to said crankshaft and to said camshaft, the operation of said second hydraulic operator being effective to vary the position of the camshaft relative to the crankshaft in an opposed circumferential direction, second conduit means for exhausting hydraulic fluid from the first hydraulic operator, third conduit means for delivering hydraulic fluid from the source to the second hydraulic operator to operate the second hydraulic operator, fourth conduit means for exhausting hydraulic fluid from the second hydraulic operator and control means for controlling the exhausting of hydraulic fluid from the first hydraulic operator and the second hydraulic operator to selectively permit hydraulic fluid from the source to operate one or another of said first hydraulic operator and said second hydraulic operator, said control means comprising:

a spool valve in communication with said second conduit means and said fourth conduit means, said spool valve comprising a housing and a valve member, said valve member being reciprocable within said housing and comprising first and second opposed ends and first and second spaced apart lands between said opposed ends, said first land being capable of blocking flow through said second conduit means in first and third positions of said valve member and permitting flow through said second conduit means in a second position of said valve member, said second land being capable of blocking flow through said fourth conduit means in said first and second positions of said valve member and permitting flow through said second conduit means in said third position of said valve member;

fifth conduit means for transmitting hydraulic pressure from the source to act on a first surface of said valve member at substantially the pressure of the source to urge the valve member in a given direction;

force imposing means for imposing a load on said valve member to urge said valve member in an opposed direction, said force imposing means having a second surface with an area that is substantially greater than the area of said first surface;

sixth conduit means for transmitting hydraulic pressure from the source to the force imposing means to act on said second surface of said force imposing means, said sixth conduit means comprising a control member therein to controllably reduce the pressure of the source that acts on said second surface of said force imposing means; and

centering means for centering said valve member in a substantially fixed position relative to said housing when the hydraulic forces acting on said valve member are in balance.

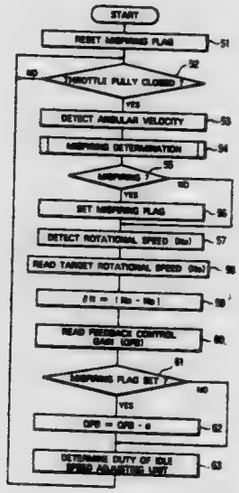
IDLE RUNNING CONTROL APPARATUS FOR INTERNAL COMBUSTION ENGINE

Toshiki Kuroda, Himeji, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 13, 1991, Ser. No. 791,231
Claims priority, application Japan, Nov. 16, 1990, 2-312203; Nov. 16, 1990, 2-312204
Int. Cl.[5] F02D 41/16
U.S. Cl. 123—339 10 Claims



1. An idle running control apparatus for an internal combustion engine, comprising:

a rotational speed sensor for sensing the rotational speed of the engine and generating a corresponding output signal;

a throttle sensor for sensing the degree of opening of a throttle valve and generating a corresponding output signal;

an intake air sensor for sensing the flow rate of intake air sucked into said engine and generating a corresponding output signal;

a misfiring determiner for determining an occurrence of misfiring in said engine on the basis of a change in magnitude of the output signal of said rotational speed sensor;

idle speed adjusting means for adjusting the idle running speed of said engine; and

control means responsive to the outputs of said rotational speed sensor, said throttle sensor and said intake air sensor and said misfiring determiner for controlling said idle speed adjusting means through feedback control with a control gain previously set such that a desired engine rotational speed is thereby attained, wherein when said misfiring determiner determines an occurrence of misfiring, said control means decreases said control gain in the feedback control so that said idle speed adjusting means is thereby controlled to stabilize the idle running speed of said engine.

5,172,666
FUEL INJECTION CONTROL SYSTEM

Kimihiro Nonaka, Hamamatsu, Japan, assignor to Yamaha Hatsudoki Kabushiki Kaisha, Iwata, Japan

Filed Nov. 13, 1991, Ser. No. 791,219
Claims priority, application Japan, Nov. 13, 1990, 2-303836
Int. Cl.[5] F02D 43/00
U.S. Cl. 123—352 18 Claims

1. An apparatus for controlling the speed of revolution of a direct fuel injected, scavenged, two-stroke engine, comprising:

a first sensor for sensing the degree to which the throttle is open;

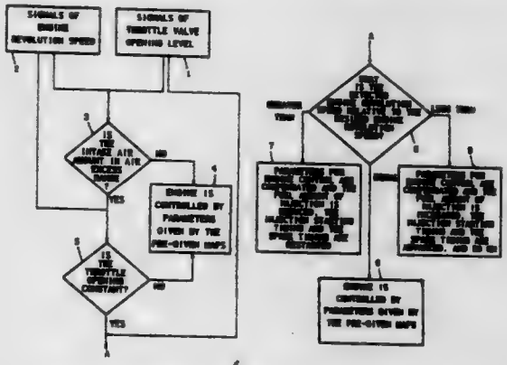
means for sensing whether the intake air amount is in the air-excess range;

means coupled to the first means for sensing whether the degree to which the throttle is open has been substantially constant for a predetermined amount of time;

a second sensor for sensing the engine revolution speed;

means for producing a desired engine revolution speed based on the degree to which the throttle is open;

means coupled to the first, and second sensors and to the means for sensing whether the intake air amount is in the air-excess range, the means for sensing whether the degree



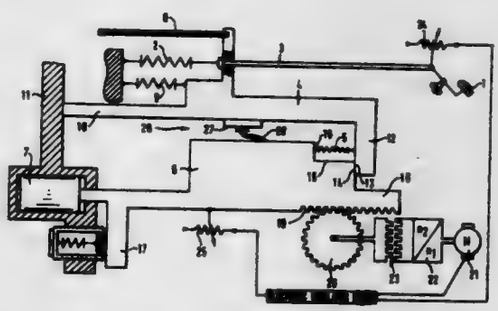
to which the throttle is open has been substantially constant for a predetermined amount of time, and the means for producing a desired engine revolution speed, for producing a signal corresponding to the difference between the engine revolution speed and said desired engine speed, when the degree to which the throttle is open has been substantially constant for the predetermined amount of time; and

a control device for adjusting at least one engine running parameter based on said difference to reduce said difference.

5,172,667
APPARATUS FOR CONTROLLING THE POWER DRIVE OF A VEHICLE

Guenter Spiegel, Worms, Fed. Rep. of Germany, assignor to Robert Bosch GmbH, Stuttgart, Fed. Rep. of Germany

Filed Aug. 19, 1991, Ser. No. 747,061
Claims priority, application Fed. Rep. of Germany, Sep. 29, 1990, 4030901
Int. Cl.[5] F02D 7/00, 3/00
U.S. Cl. 123—399 16 Claims



1. An apparatus for controlling a power drive engine of a vehicle, having a mechanically operated transmission device provided with a coupler (4) interposed between an actuator (7) that determines a power drive engine output and a power drive operating element (1), said mechanically operated transmission device including an adjusting element (6) having a first stop means (14), said adjusting element being movable by a regulat-

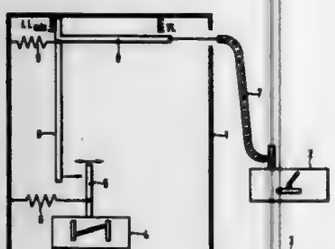
ing device for adjusting the actuator (7) in a direction counter to an action of at least one spring (5) with respect to said coupler, said coupler having a counterpart second stop means (13), said mechanically operated transmission device is movable from a first position in which said first and second stop means rest on one another to a second position in which said first and second stop means are spaced apart from one another, said apparatus includes a coupling (26, 28') that is at least intermittently operative selectively to delay and to stop a motion of the adjusting element (6) relative to the coupler (4).

5,172,668

LOAD ADJUSTMENT DEVICE FOR AN INTERNAL COMBUSTION ENGINE CONTROLLED BY THROTTLE VALVE

Frank Göhring, Frankfurt, and Erwin Schneider, Liederbach, both of Fed. Rep. of Germany, assignors to VDO Adolf Schindling AG, Frankfurt am Main, Fed. Rep. of Germany

Filed Jan. 9, 1992, Ser. No. 818,756
Claims priority, application Fed. Rep. of Germany, Jan. 9, 1991, 4100381
Int. Cl.[5] F02D 9/02, 11/02
U.S. Cl. 123—399 6 Claims



1. A load adjustment device for an internal combustion engine which is controlled by throttle valve, the throttle valve being urged in a downward control direction, the adjustment device comprising

a housing, an acceleration pedal, an idle stop, a first setting element, and a second setting element, the first setting element being settable in full-load direction by means of the accelerator pedal and being urged in downward control direction against the idle stop into a minimum idle speed position LL_{min}, the throttle valve engaging in upward-control direction into a path of movement of the second setting element;

an electromotive setting drive, the second setting element being controlled by the electromotive setting drive and, upon being urged in downward control direction, engages during upward control direction into the path of movement of the first setting element;

means for detecting a position of the throttle valve and of the second setting element, and the LL_{min} position of the first setting element;

wherein said detecting means comprises a drive potentiometer having a first wiper, a throttle-valve potentiometer having a second wiper, a common support plate for both of said potentiometers;

said load adjustment device comprises a drive shaft connecting with said electromotive setting drive, said common support plate being fastened, fixed for rotation, to said first drive shaft, and having a first potentiometer wiper path and a second potentiometer wiper path;

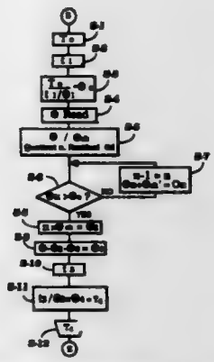
wherein said first wiper is arranged fixed on said housing and said second wiper is fastened, fixed for rotation, to said second setting element, said second setting element comprising a throttle-valve shaft.

5,172,669

ENGINE CONTROL SYSTEM

Kazuhiro Nakamura, Hamamatsu, Japan, assignor to Suzuki Kogyo Kabushiki Kaisha, Hamamatsu, Japan

Filed Jan. 16, 1992, Ser. No. 822,183
Claims priority, application Japan, Feb. 5, 1991, 3-35206
Int. Cl.[5] F02P 5/00
U.S. Cl. 123—416 10 Claims



1. A method of timing an event in an internal combustion engine having a rotating output shaft and wherein the event is to happen at a pre-determined angular position of the output shaft, the engine having means for outputting a reference signal indicative of a reference position of the output shaft and a series of pulse signals indicative of incremental angular rotation of the output shaft, said method comprising the steps of measuring the incremental angular offset between the giving of the reference signal and an adjacent signal indicative of angular shaft position to determine an incremental angular offset amount, selecting one of the pulse signals proceeding the timed event, and initiating the event to be timed a pre-determined time after the generation of the selected pulse signal adjusted to reflect the incremental angular offset.

EVAPORATIVE FUEL PURGE APPARATUS

Kenichi Harada, Susono, Japan, assignor to Toyota Jidosha Kabushiki Kaisha, Toyota, Japan

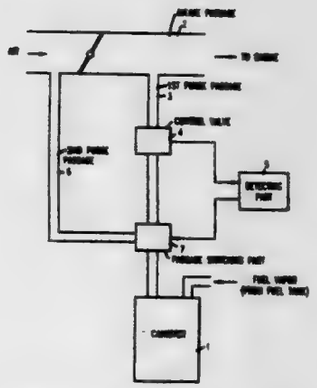
Filed Mar. 30, 1992, Ser. No. 859,931

Claims priority, application Japan, Apr. 11, 1991, 3-79146

Int. Cl.[5] F02M *33/02*

U.S. Cl. 123—520

8 Claims



1. An evaporative fuel purge apparatus comprising:

a first purge passage which connects a canister and an intake passage of an internal combustion engine and through which fuel vapor, stored in the canister, is purged into the intake passage;

a control valve provided in said first purge passage for controlling a flow of fuel vapor being fed from the canister to the intake passage;

detecting means for detecting a malfunction that occurs in said control valve;

a second purge passage which connects the canister and the intake passage and through which fuel vapor, stored in the canister, is purged into the intake passage; and

passage switching means for carrying out a passage switching from said first purge passage to said second purge passage if a malfunction in said control valve is detected by said detecting means, allowing the fuel vapor from the canister to be fed into the intake passage through said second purge passage.

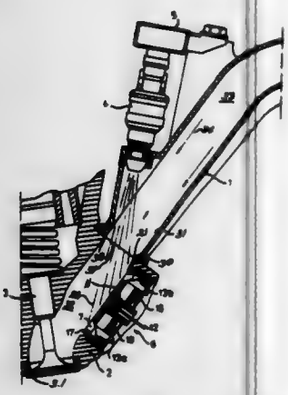
INJECTION INTERNAL COMBUSTION ENGINE WITH ELECTRICAL SPARK IGNITION

Robertus J. Pelgrim, EB Borne; Cornelis P. Hulshof, CP Apeldoorn, and Arie Van Der Ploeg, VA Wierden, all of Netherlands, assignors to Texas Instruments Incorporated, Dallas, Tex.

Filed Apr. 16, 1991, Ser. No. 686,331
Claims priority, application Netherlands, Apr. 17, 1990, 9000910
Int. Cl.[5] F02M *31/00*
U.S. Cl. 123—549 13 Claims



5. Injection internal combustion engine with electric spark ignition comprising at least one cylinder provided with an air inlet channel, at least one inlet valve fitted in the cylinder head, at least one fuel injector, and a heating element with heat sink fitted downstream of said injector, and at least one PTC wafer provided thereon, characterized in that the heating element is fitted in an opening in the wall of the cylinder head or of the air inlet channel and that the heat sink has at least two pins, each of which projects through an opening in a metal leaf spring with parts bent away from a plastic contact carrier and through an opening in a U-shaped fixing bracket, which brackets fall round the contact carrier and round the above-mentioned leaf spring and in that the heating device is retained in the opening of the wall of the cylinder head or of the air inlet channel by a circlip projecting into a groove in the wall, which circlip presses in the bent leaf spring part against spring action and presses the contact carrier against a shoulder in the wall of the opening.

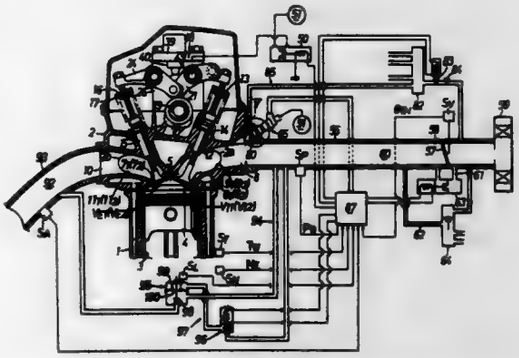
5,172,674

INTERNAL COMBUSTION ENGINE

Kaoru Horie; Kazutoshi Nishizawa; Kenichiro Kinoshita; Makoto Kishida; Hidehito Ikebe, and Hitoshi Takahashi, all of Saitama, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 27, 1991, Ser. No. 800,613
Claims priority, application Japan, Nov. 30, 1990, 2-336585
Int. Cl.[5] F02M *25/07, 35/10, 23/06*
U.S. Cl. 123—571 4 Claims

1. An internal combustion engine comprising
a fuel injection valve disposed in an intake passage and having an assist air supply means for finely dividing a fuel;
an exhaust gas recirculation device for circulating an exhaust gas from an exhaust passage to the intake passage;
a swirl control device for producing a swirl in a combustion chamber in accordance with the operational condition of the engine; and
a control means for controlling the operations of the assist air supply means, the fuel injection valve, the exhaust gas recirculation device and the swirl control device, wherein
said control means causes a swirl operation for a lean burn during a low load of the engine and a non-swirl operation for a burn based on a theoretical air-fuel ratio during a high load of the engine and the supply of an assist air and



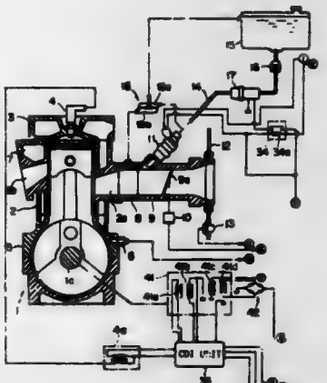
the recirculation of a large amount of the exhaust gas are carried out in the non-swirl operation.

5,172,675

POWER SUPPLY CIRCUIT FOR AN INTERNAL COMBUSTION ENGINE

Shinichi Kurosu, Ageo, Japan, and Ian P. Hart, Greenbush, Minn., assignors to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan and Polaris Industries L.P., Minneapolis, Minn.

Continuation of Ser. No. 602,601, Oct. 24, 1990, abandoned.
This application Apr. 2, 1992, Ser. No. 862,353
Int. Cl.[5] F02P *1/00*
U.S. Cl. 123—599 8 Claims



1. A power supply circuit for an internal combustion engine having a battery and a magneto connected to the engine and for supplying current to an ignition system of the engine, the circuit comprising:
a charge coil and a source coil provided on said magneto for generating a first alternating current and a second alternating current respectively;
a rectifier responsive to said first alternating current for rectifying said current and for producing a rectified current;
a first circuit responsive to said rectified current for charging said battery;
a second circuit for supplying the second alternating current to electric loads to be operated by said engine;
a fuel injector provided on said engine for injecting fuel in an intake manifold of said engine;
a control unit of the engine for electrically controlling said fuel injector; and
a third circuit connected to said first circuit for supplying said rectified current to said control unit and to said fuel

injector so as to prevent changing power supplied to said control unit to provide accurate operation of said control unit of the engine.

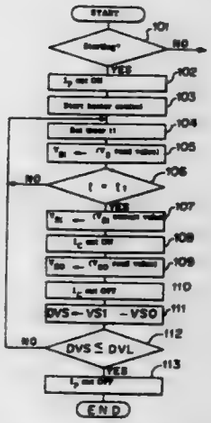
DEVICE FOR DETERMINING ACTIVATION OF AN AIR-FUEL RATIO SENSOR

Hiroyoshi Suzuki, Himeji, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 27, 1992, Ser. No. 842,622
Claims priority, application Japan, Apr. 2, 1991, 3-069846
Int. Cl.[5] F02D 41/14
U.S. Cl. 123—688
1 Claim



1. A device for determining activation of an air-fuel ratio sensor which comprises:

an air-fuel ratio sensor comprising a diffusion chamber arranged at an exhaust system of an engine wherein exhaust gas of the engine is diffused and introduced and a heater which heats an oxygen concentration cell element and an oxygen pump element respectively made of an oxygen-ion-conductive-solid-electrolyte material and respectively provided with first ones of pairs of electrodes interposing the diffusion chamber;

a current flowing means for flowing a predetermined current from a second one of the pair of electrodes of the oxygen concentration cell to the first one of the pair of electrodes thereof on the side of the diffusion chamber so that the second one of the pair of electrodes of the oxygen concentration cell becomes a reference electrode;

a pump current controlling means for controlling a pump current flowing in the oxygen pump element so that a sensor voltage between the reference electrode of the oxygen concentration cell and the first one of the pair of electrodes thereof on the side of the diffusion chamber becomes a predetermined reference voltage;

a pump current detecting means for detecting the pump current;

a current flowing cutting means for cutting the current flowing means;

a sensor voltage detecting means for detecting the sensor voltage;

a heater power supplying means for supplying power to the heater;

a timer means for starting supplying power to the heater from the heater power supplying means in a pump-current-cut state and for operating the current flowing cutting means during a predetermined time interval from when the heater starting supplying power means is operated at every predetermined time interval; and

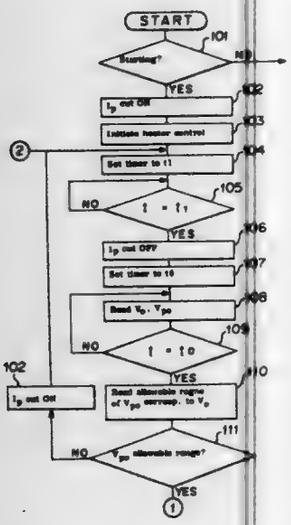
an air-fuel ratio controlling device which determines activation of the air-fuel ratio sensor by a difference of the sensor voltage between before and after the current flowing means is operated and controls to release the pump-current-cut state when the air-fuel ratio sensor is determined to be activated.

5,172,678

DEVICE FOR DETERMINING ACTIVATION OF AN AIR-FUEL RATIO SENSOR

Hiroyoshi Suzuki, Himeji, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 27, 1992, Ser. No. 842,624
Claims priority, application Japan, Apr. 2, 1991, 3-069845
Int. Cl.[5] F02D 41/14
U.S. Cl. 123—688 1 Claim



1. A device for determining activation of an air-fuel ratio sensor which comprises:

an air-fuel ratio sensor comprising an oxygen concentration cell element and an oxygen pump element arranged at an exhaust system of an engine made of an oxygen-ion-conductive-solid-electrolyte material respectively provided with electrodes and interposing a diffusion chamber wherein exhaust gas of the engine is diffused and introduced, and a heater which heats the oxygen concentration cell element and the oxygen pump element;

a pump current controlling means for controlling pump current which flows in the oxygen pump element so that electromotive force of the oxygen concentration cell element becomes a predetermined reference voltage;

a pump current detecting means for detecting the pump current controlled by the pump current controlling means;

a pump current cutting means for cutting supply of the pump current;

a pump voltage detecting means for detecting pump voltage applied to the oxygen pump element;

a heater power supplying means for supplying power to the heater;

a memorizing means for previously memorizing a pump voltage allowable range for the pump current or a target air-fuel ratio of the engine;

a timer means for starting supplying power to the heater from the heater supplying power means in a pump-current-cut state and for releasing the cutting supply of the pump current during a predetermined time interval from starting time of supplying power at every predetermined time period; and

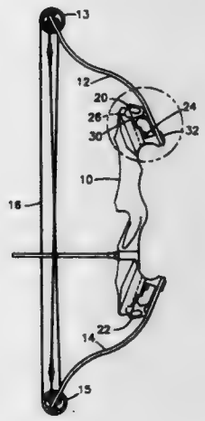
an air-fuel ratio controlling device which has the pump current controlling means control the pump current, detects a pump voltage, determines that the air-fuel sensor is activated when the pump voltage falls in the previously memorized pump voltage allowable range, and releases the pump-current-cut state.

5,172,679

MODULAR CONSTRUCTION FOR COMPOUND ARCHERY BOW

Kevin R. Mussack, Clifton Springs, N.Y., assignor to Golden Eagle Archery, Inc., Farmington, N.Y.

Continuation-in-part of Ser. No. 569,868, Aug. 20, 1990, abandoned. This application Aug. 23, 1991, Ser. No. 749,312
Int. Cl.[5] F41B 5/00
U.S. Cl. 124—25.6 3 Claims



1. A shim for a compound archery bow having a front face which faces a target when the bow is normally aimed, the bow having a central handle and a pair of limbs fixable upon opposite respective end portions of the handle, a bowstring extending between said pair of limbs, said end-portions of the handle and associated inner surface portions of the limbs forming mating faces shaped to prevent rotation of the limbs relative to the handle when the limbs are secured to the handle, a mating face on said surface portion of each limb being in conforming shape with a mating face on said end portions of the handle, each of the limbs being normally secured directly to an associated shim and the handle by a single screw, said shim comprising a block having front and rear faces, a first transverse above formed in the rear face of said block and being shaped similar to a limb pivot bar on the mating face of one of the bow limbs, and a block pivot bar formed on the front face of said block and being shaped similarly to a second transverse groove in one of the mating faces of the handle, said front and rear faces of said block being spaced from each other a predetermined distance in a predetermined direction so that when a pair of said shims are mounted between the handle and the limbs a distance between two selected parts of the bow is different from an associated distance when the limbs are secured directly to the handle.

5,172,680

DUST REMOVAL KIT FOR MASONRY TABLE-SAW

Leo Swan, Frederick, Md., assignor to Equipment Development Co., Inc., Frederick, Md.

Filed Oct. 11, 1991, Ser. No. 774,806
Int. Cl.[5] B28D 7/02, 1/04
U.S. Cl. 125—12 1 Claim

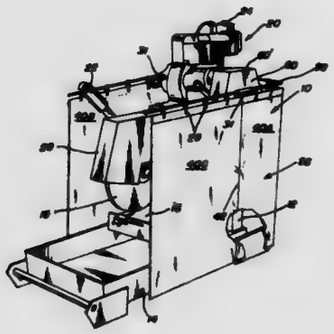
1. A dust removal kit for a masonry saw, said saw including a frame for supporting the saw on a horizontal surface, a rotary

circular blade supported by said frame, and a motor and drive train for rotating said blade to cut or abrade a workpiece, said frame defining an operator station on one side thereof for accommodating a workpiece and a masonry dust discharge station at an opposite side thereof, said kit comprising:

a flexible curtain supported by a curtain frame coupled to the frame of the masonry saw at the sides of the operator station and surrounding only three sides of the operator station defining a plenum chamber;

a funnel having an input end in communication with the plenum defined by said curtain and an exhaust end, said funnel disposed at the dust discharge station at the opposite side of the frame from the operator station and including sidewalls connected to and extending from the frame of the saw on the side of the dust removal station and converging toward an exhaust duct aligned with a cutting edge of the rotary circular blade; and

vacuum means coupled to the exhaust end of said funnel for withdrawing masonry dust from the region of the workplace and said plenum through said funnel as said workpiece is being cut or abraded.

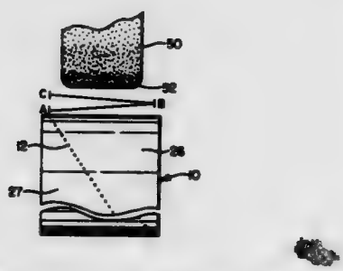


5,172,681

RECIPROCATING POINT ROTARY DIAMOND TRUEING AND DRESSING TOOL AND METHOD OF USE

William W. Ruark, Westerville, and Robert L. Henry, Hilliard, both of Ohio, assignors to General Electric Company, Worthington, Ohio

Filed Dec. 28, 1990, Ser. No. 635,082
Int. Cl.[5] B28D *5/04*
U.S. Cl. 125—38
15 Claims



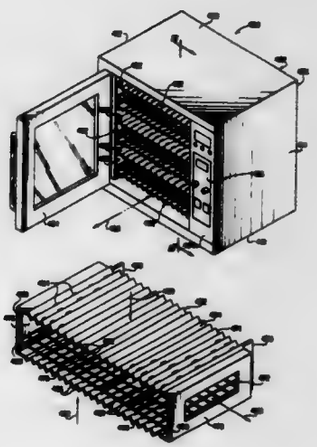
1. A tool for trueing and dressing a grinding wheel comprising a trueing and dressing wheel having a periphery, a rotational axis and a thin, generally planar layer of diamond particles integrally-incorporated into said trueing and dressing wheel at an angle of bisection oblique to said rotational axis and having an exposed edge circumscribing said periphery, said exposed edge of the diamond layer forming on said periphery a reciprocating point having a lateral displacement perpendicular to said rotational axis when said dressing and trueing wheel is rotated about said rotational axis and replenished with unworn diamond particles from said diamond layer as said trueing and dressing wheel wears through.

5,172,682

COMMERCIAL HOT AIR IMPINGEMENT COOKING APPARATUS

Clement J. Luebke, Burlington, Vt.; Gerald W. Sauk, Pasadena, Md., and Frank A. Slade, Mountain Top, Pa., assignors to Welbilt Corporation, New Hyde Park, N.Y.

Division of Ser. No. 593,246, Oct. 5, 1990, Pat. No. 5,050,578, which is a division of Ser. No. 279,094, Dec. 2, 1988, Pat. No. 4,972,824. This application Sep. 10, 1991, Ser. No. 757,236
Int. Cl.[5] F24L *15/32;* A21B *1/08*
U.S. Cl. 126—21 A
13 Claims



1. A convertible air impingement oven comprising:

a housing having a cooking chamber therein having air inlet and air return openings and an access door;

heated air recirculating means for creating within said housing a recirculating flow of heated air which is forced into and out of said cooking chamber through the air inlet and air return openings; and

a plurality of air plenum box means each selectively insertable through the access door and removably supportable in vertically spaced relationship within said cooking chamber for intercepting a portion of the heated air traversing said cooking chamber from the inlet openings and the return openings and utilizing the intercepted air to create within each of said air plenum box means vertically spaced, opposed, downwardly and upwardly directed

relatively high velocity heated air impingement jets which laterally diffuse and at least partially overlap during their vertical travel as air passes into the respective plenum box means, each of said air plenum box means having a food support member horizontally supported therein and positioned to be impinged on opposite sides by the oppositely directed jet flows in the air plenum box means, and a side wall opening through which a food item may be placed on and removed from the support member, the opposing jet flows in each air plenum box means operating to evenly blanket upper and lower sides of the support member with vertically directed heating air, whereby a food item placed on the support member is evenly cooked on opposite sides thereof at an accelerated rate regardless of the position of the food item on the support member.

5,172,683

STETHOSCOPE WARMER

Raymond O. West, P.O. Box 1137, Belfair, Wash. 98528

Continuation-in-part of Ser. No. 624,405, Dec. 7, 1990, abandoned. This application Feb. 12, 1992, Ser. No. 835,300

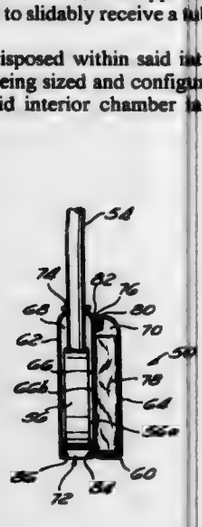
Int. Cl.[5] F24J *1/02*

U.S. Cl. 126—263 **10 Claims**

1. A portable device for warming a sound conveying portion of a stethoscope comprising:

a pouch member defining an interior chamber, a lower opening defining a first entrance to said interior chamber, an upper opening defining a second entrance to said interior chamber, and an upper aperture defining a third entrance to said interior chamber, said upper aperture being sized and configured to slidably receive a tubular portion of said stethoscope;

a wall member disposed within said interior chamber, said wall member being sized and configured so as to substantially bisect said interior chamber in a manner forming



first and second adjacent pockets therein, said first pocket being sized and configured to receive said sound conveying portion of said stethoscope, said upper aperture and said lower opening defining entrances to said first pocket and said upper opening defining an entrance to said second pocket; and

a heating means disposed within said second pocket for heating said sound conveying portion of said stethoscope when said sound conveying portion is disposed within said first pocket.

Patent Not Issued For This Number

5,172,685

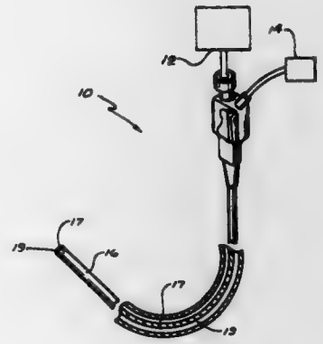
ENDOSCOPE AND VIDEO LASER CAMERA SYSTEM THEREFOR

Sol Nudelman, Avon, Conn., assignor to The University of Connecticut, Farmington, Conn.

Continuation of Ser. No. 521,672, May 10, 1990, abandoned, which is a division of Ser. No. 199,997, May 27, 1988, Pat. No. 4,938,205. This application Feb. 12, 1992, Ser. No. 835,021

Int. Cl.[5] A61B *1/06*

U.S. Cl. 128—6 **3 Claims**



1. An endoscope adapted for operation in association with an optical scanner which generates a beam of radiation tracing out a raster comprising:

optical channel means comprising a bundle of coherent flexible optical fibers for forming an optical channel having a proximal end and a distal end;

photosensor means comprising an elemental photodetector for generating an electrical signal having an instantaneous value proportional to the quantity of light impinging on said photodetector;

beam splitter means positioned in an optical path partially defined by said proximal end for directing radiation exiting said optical channel through said proximal end to said photosensor means; and

imaging means responsive to said photosensor means for forming an image of an object,

so that a raster from said scanner projected on said proximal end traverses said beam splitter means and said optical channel and is projected through said distal end for illuminating the surface of an object to be examined and radiation reflected from said surface traverses said optical channel and is directed by said beam splitter means to said photosensor means.

5,172,686

DEVICE FOR SUPPLYING AIR OR MEDICAL GASES IN A CONDITIONED, PARTICULARLY A MOISTENTED AND/OR HEATED STATE TO A PATIENT

Jean-Michel Anthony, Ringlaan 78, 2610, Wilrijk, Belgium

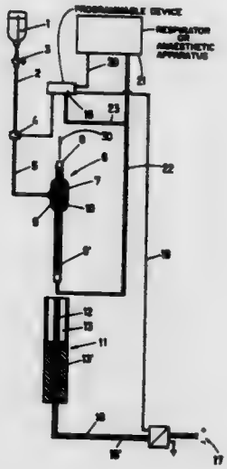
Continuation-in-part of Ser. No. 07/087,613, Aug. 20, 1987, abandoned. This application Sep. 19, 1989, Ser. No. 409,244

Int. Cl.[5] A61M *15/00*

U.S. Cl. 128—203.16 **5 Claims**

1. Device for supplying air or medical gases in a conditioned state to a patient through an air pipe connected to a source for said air or gas, said device comprising at least one tube including said air pipe for the flow of said conditioned air therethrough, said tube having a flow chamber of a diameter which is larger than the diameter of the air pipe connected therewith, a container for a supply of water, said flow chamber in said

tube being at least partly filled with a material which adsorbs or absorbs water conveyed into said flow chamber through a water-supply line leading from said container, an electromagnetic throttling valve interposed in said water-supply line, at



least one cylinder-shaped element having a central passageway dimensioned to have said flow chamber and portions of said air pipe adjacent to junctures with said flow chamber inserted therein, heating resistors on said cylinder-shaped element regulating the temperature for the air or gas flowing through said tube, and programmable means operatively connected with said throttling valve, said source for supplying said air or gas and said heating resistors for controlling the operation of said throttling valve to synchronize the state in the condition of the air or gas conducted to the patient with the admission of water from said water-supply line to said tube.

5,172,687

TREATMENT CHAMBER FOR PERFORMING THERAPEUTIC PROCEDURES

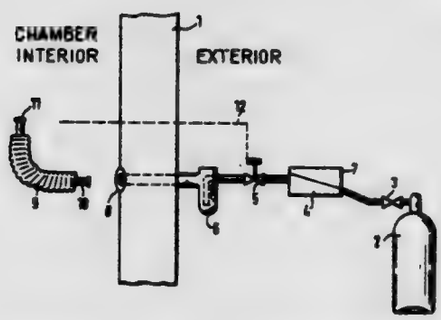
Andreas Donnerhack, Krefeld; Ralf Igelhorst, Dusseldorf, and Klemens Thoma, Krefeld-Huls, all of Fed. Rep. of Germany, assignors to Messer Griesheim GmbH, Frankfort, Fed. Rep. of Germany

Filed Oct. 30, 1990, Ser. No. 605,971

Claims priority, application Fed. Rep. of Germany, Nov. 24, 1989, 3938889

Int. Cl.[5] A61G *10/00*; A61H *33/06*

U.S. Cl. 128—205.26 **1 Claim**



1. A method of using a sauna treatment chamber comprising the user entering the chamber, directly breathing the chamber atmosphere, periodically applying a mouthpiece connected to a gas supply containing oxygen enriched gas outside the chamber with the gas supply connected to an inhalation site in the wall of the chamber and with the mouthpiece connected to the inhalation site, inhaling while the mouthpiece is applied to create a negative pressure which opens flow communication with the gas supply in response to the inhaling to breathe in a breathable gas from the gas supply which differs from the chamber atmosphere, periodically removing the mouthpiece to stop the flow of gas to the mouthpiece, the user then moving freely in the treatment chamber, and the user then again applying the mouthpiece to breathe in additional oxygen enriched gas.

5,172,688

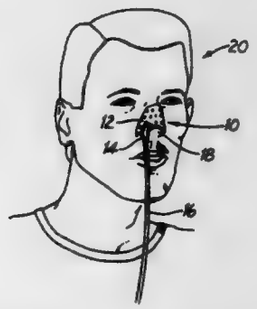
NASAL-GASTRIC TUBE HOLDER

Michael M. Dillon, Scottsdale, Ariz., assignor to Innovative Medical Design Corp., Hicksville, N.Y.

Filed Aug. 9, 1991, Ser. No. 743,173

Int. Cl.[5] A61M *25/02*

U.S. Cl. 128—207.18 **9 Claims**



1. A holder for attaching a nasal-gastric tube to the nose of a patient having a pair of nasal passages, said holder comprising an elastomeric planar flexible body having an upper and lower surface and a central axis, said body generally assuming the shape of the nose when disposed thereon and having a rigid elastomeric cylindrical hub provided with a central bore located offset from the central axis, said hub being integrally formed with the body, said hub having a proximal end and a distal end, said bore terminating at said distal end in an opening in the lower surface of said body in proximity to one of the nasal passages and a lengthwise split for spreading said hub apart to permit insertion in and removal of said nasal-gastric tube from said bore and for closing upon the tube inserted therein for frictional retention of said tube.

5,172,689

CRYOGENIC SLEEVE FOR PROVIDING THERAPEUTIC COMPRESSION

Christopher A. Wright, 171 Bloomingbeak Rd., Riverside, Ill. 60546

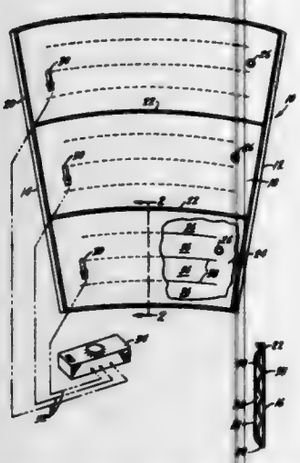
Filed Mar. 1, 1990, Ser. No. 486,782

Int. Cl.[5] A61F *7/00*

U.S. Cl. 128—400 **5 Claims**

1. A cryogenic device for use in diminishing hemorrhage and edema in acute trauma of body extremities includes a sleeve with longitudinal extending sides having a plurality of adjacent non-communicating cryogenic chambers, a fill opening for each cryogenic chamber, a plurality of pressure chambers, with each pressure chamber having an inlet and being generally coextensive with and exterior of a cryogenic chamber, said sleeve cryogenic chambers and coextensive pressure chambers being formed by a sleeve inner wall and a coextensive sleeve outer wall, each of which extends over the entire area of the sleeve, said sleeve inner and outer walls being peripherally joined, intermediate wall means separating each

cryogenic chamber from its coextensive pressure chamber, said inner and outer walls and intermediate wall means being joined along longitudinal spaced laterally extending seams to form said plurality of coextensive cryogenic and pressure chambers,



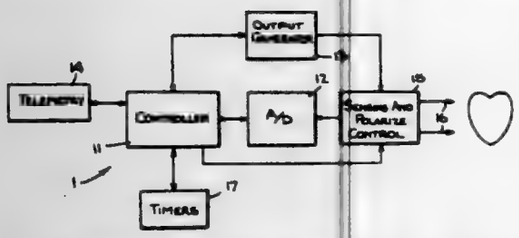
a pump connected to all of said pressure chamber inlets and formed and adapted to apply pressure intermittently to one or more of said pressure chambers to thereby apply intermittent cryogenic pressure to an area of a body extremity coextensive with one or more of said cryogenic chambers.

5,172,690

AUTOMATIC STIMULUS ARTIFACT REDUCTION FOR ACCURATE ANALYSIS OF THE HEART'S STIMULATED RESPONSE

Tibor A. Nappholz, Englewood; Fred L. Vance, Parker; John W. Camerlo, Littleton; Bruce M. Steinhaus, Parker; Stephen M. Quist, Denver, and Ken Koestner, Englewood, all of Colo., assignors to Telectronics Pacing Systems, Inc., Englewood, Colo.

Filed Oct. 26, 1990, Ser. No. 603,988
Int. Cl.[5] A61N 1/362
U.S. Cl. 128—419 PG **29 Claims**



1. An apparatus, adapted to be implanted in a patient, for electrically stimulating the heart and analyzing the heart's stimulated response, comprising:

means for generating triphasic cardiac stimulation pulses having a first and third phase of one polarity and a second phase of the opposite polarity,

means for timing the generation of said triphasic cardiac stimulation pulses so that at least one pulse occurs during the refractory period of the heart in each of a plurality of cardiac cycles,

means operative during the refractory period of the heart for measuring a stimulation polarization artifact resulting from the generation of said triphasic cardiac stimulation pulses, and

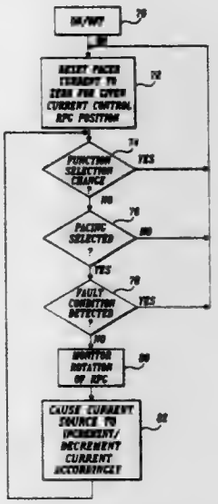
means operative to adjust the amplitude and polarity of the current flow during at least one phase of each of said triphasic cardiac stimulation pulses for reducing the amplitude of said stimulation polarization artifact.

5,172,691

LIMITLESS ROTARY PACING CURRENT CONTROL METHOD AND APPARATUS

Loren W. Gahnberg, Mill Creek; Charles A. Couche; Peter Y. Choi, both of Seattle, and Christopher Pearce, Monroe, all of Wash., assignors to Physio-Control Corporation, Redmond, Wash.

Filed Jan. 11, 1991, Ser. No. 640,056
Int. Cl.[5] A61N 1/362
U.S. Cl. 128—419 PG **15 Claims**



1. A method of controlling the pacing current to be delivered by a pacemaker in response to the operation of a manual input element included on the pacemaker and the rotation of a limitless rotary pacing current control included on the pacemaker, said method comprising the steps of:

monitoring the operation of the manual input element included on the pacemaker;

monitoring the rotation of a limitless rotary pacing current control included on the pacemaker;

establishing the pacing current as zero for an initial rotational position of the rotary pacing current control when a predetermined operation of the manual input is monitored; and

adjusting the pacing current to an adjusted level in response to rotation of the rotary pacing current control from the initial rotational position.

5,172,692

METHOD FOR INFLAMMATORY RESPONSE MANAGEMENT

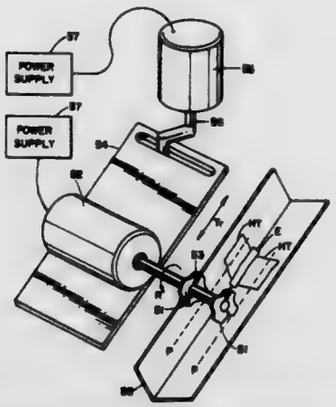
Howard H. Kulow, 880 Bryant Ave., Apt. B, Berea, Ohio 44017, and William M. Hunsinger, P.O. Box 6836, Cleveland, Ohio 44101

Filed Dec. 5, 1990, Ser. No. 622,769
Int. Cl.[5] A61N 1/00
U.S. Cl. 128—24 AA **19 Claims**

1. In an organic structure having tissue exhibiting a healing process comprising a plurality of sequential phases including an initial inflammatory response, a method of controlling said inflammatory response to minimize interference with regeneration and repair of said tissue in said organic structure subsequent to wound sustainment, the method comprising the steps of:

generating a vibrational wave energy flow by means of a vibrational wave energy source;

determining a treatment area of an organic structure expected to exhibit the inflammatory response; and,



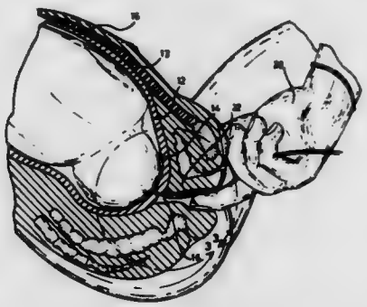
subjecting the treatment area to the vibrational wave energy flow substantially immediately after said wound sustainment and during said inflammatory response for a predetermined period of time sufficient to diffuse inflammatory components, having accumulated in the treatment area, into the non-treatment area of the organic structure.

5,172,693

PRENATAL NON-INVASIVE DETECTION OF MECONIUM STAINED AMNIOTIC FLUID

Michael C. Doody, 4203 Towanda Trail, Knoxville, Tenn. 37919

Filed Jan. 16, 1990, Ser. No. 465,510
Int. Cl.[5] A61B *6/00*
U.S. Cl. 128—633 **23 Claims**



1. A process for a non-invasive in vivo detection of a meconium state pregnancy in a gravid female by detection of fluorescent pigments within meconium stained amniotic fluid, said process comprising steps:

A. spectrally isolating excitation wavelengths characteristic of said pigments;

B. passing said isolated excitation wavelengths into said amniotic fluid for exciting said fluorescent pigments contained within said meconium;

C. detecting fluorescence emitted by said excited pigments contained within said meconium;

D. spectrally isolating emission wavelengths characteristic of the fluorescence emitted by said pigments contained in the meconium and

E. amplifying and analyzing spectra of said detected fluorescence.

5,172,694

SINGLE PACING LEAD AND METHOD UTILIZING TWO DIFFERENT FLOATING BIPOLES

Daniel Flammang, Angouleme, France, and Frits M. van Krieken, Dieren, Netherlands, assignors to Vitatron Medical B.V., Dieren, Netherlands

Filed May 30, 1991, Ser. No. 707,444
Int. Cl.[5] A61B *5/046*
U.S. Cl. 128—642 **13 Claims**

1. A lead for use with a pacemaker, said lead having at about its proximal end a connector for connecting to said pacemaker, a stimulus electrode at about its distal end for delivering stimulus signals, at lest two bipoles positioned for sensing signals in said atrium, and conducting means for conducting signals between said electrode and said connector and between said bipoles and said connector, characterized by:

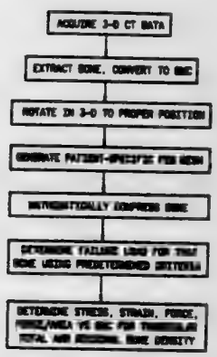
a first bipole positioned a distance from said distal end so as to be positioned in the lower atrium of an average patient when said distal end is in position for ventricular placing and a second bipole positioned proximal from said first bipole so as to be positioned in the upper atrium of a normal patient, and wherein said first bipole comprises a pair of whole-ring electrode and said second bipole comprises a pair of split-ring electrode.

5,172,695

METHOD FOR IMPROVED PREDICTION OF BONE FRACTURE RISK USING BONE MINERAL DENSITY IN STRUCTURAL ANALYSIS

Christopher E. Cann, 53 Carmel St., San Francisco, Calif. 94117, and Kenneth G. Faulkner, 608 Lancaster Dr., Lafayette, Calif. 94549

Filed Sep. 10, 1990, Ser. No. 580,045
Int. Cl.[5] A61B *6/00*
U.S. Cl. 128—653.1 **9 Claims**



1. A method of determining fracture risk of a bone in vivo under normal loading conditions based on the density and geometric distribution of bone mineral comprising the steps of

non-invasively obtaining x-ray attenuation data from said bone representing a measure of bone mineral,

converting said data into a bone mineral distribution characteristic,

generating a finite element method model based on said bone mineral distribution characteristic, and

determining load capability of said bone using said FEM model.

5,172,696

PHOTOELECTRIC SPHYGMOMANOMETER OF VOLUME OSCILLOMETRIC METHOD-TYPE

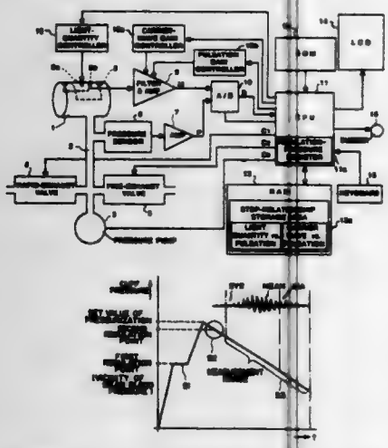
Takahiro Souma, Nakai, Japan, assignor to Terumo Kabushiki Kaisha, Tokyo, Japan

Filed Oct. 30, 1990, Ser. No. 606,076

Claims priority, application Japan, Oct. 31, 1989, 1-281880

Int. Cl.[5] A61B *5/02*

U.S. Cl. 128—664 16 Claims



14. A method for measuring blood pressure, comprising:

connecting a sphygmomanometer cuff to a part of a body for measuring blood pressure;

setting a regulating pressure valve in a regulation pressure register;

inflating the cuff to the regulating pressure value;

illuminating a blood containing vessel in the body with far-infrared light;

measuring a relationship between a carrier-wave amplifier gain and a pulsation amplifier gain as a function of a quantity of said far-infrared light reflected from the blood, transmitted by the blood or absorbed by the blood;

storing said relationship in a memory;

resume inflating said cuff until the pressure reaches a set pressure value greater then said regulating pressure value;

after reaching the set pressure value, discontinue inflating said cuff;

slowing releasing the set pressure from the cuff;

before measuring the blood pressure, while the pressure is being released, regulating the light quantity, the carrier-wave amplifier gain and the pulsation amplifier gain based on the stored relationship;

thereafter locating a systolic value based on a pressure corresponding to a point when a pulsation signal appears;

locating a diastolic value based on a pressure corresponding to a point when the pulsation signal disappears; and

indicating said systolic and diastolic values.

5,172,697

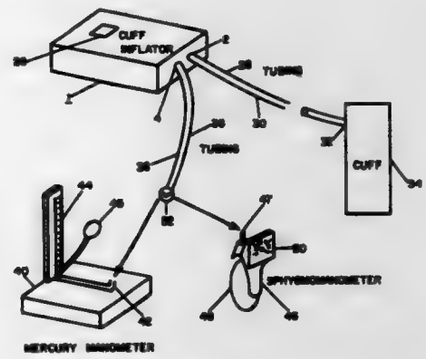
CUFF INFLATION SYSTEM

Paul G. Koven, St. Louis, Mo., and Yasushi Hayashi, Miyazaki, Japan, assignors to Hayashi Denki Co. Ltd., Kawasaki, Japan

Filed May 24, 1990, Ser. No. 527,931

Int. Cl.[5] A61B *5/02*

U.S. Cl. 128—679 11 Claims



1. A cuff inflation system for inflating a blood pressure cuff comprising:

an activating and control assembly having a first connector port with an attached internal tube, a second connector port with an attached internal tube wherein said tube intersects and joins said first internal tube, an inflation means connected to said first internal tube, electric drive means for energizing said inflation means, means for maintaining inflation pressure, and an activating switch for activating said system;

a first external tubular connector secured at one end to said first connector port and fastened at its opposite end to said blood pressure cuff;

a pressure regulating and measuring means; and

a second external tubular connector secured at one end to said second connector port and fastened at its opposite end to a said pressure regulating and measuring means.

5,172,698

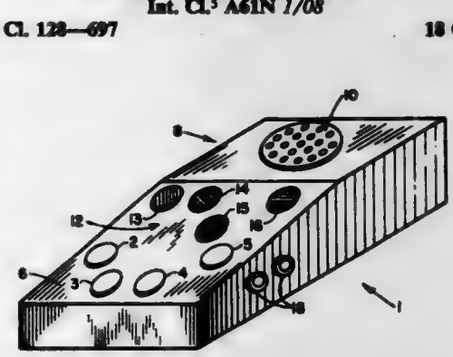
TELEPHONIC PACEMAKER AND SINGLE CHANNEL EKG MONITORING DEVICE

Bruce E. Stanko, 4284 Lampi Rd., Allison Park, Pa. 15101

Filed May 24, 1990, Ser. No. 528,839

Int. Cl.[5] A61N *1/08*

U.S. Cl. 128—697 18 Claims



1. A remote pacemaker monitoring device for a patient comprising a portable unit wherein at least three electrically conductive touchpads, a transmitter, an audio detector for detecting signals transmitted from a receiving center and a visual display are located on an outside surface of the unit; wherein a detection and transmission circuit is electrically connected between the touchpads and the transmitter which is capable of detecting pacemaker signals and transmitting them to a receiving center via a communication means; and wherein

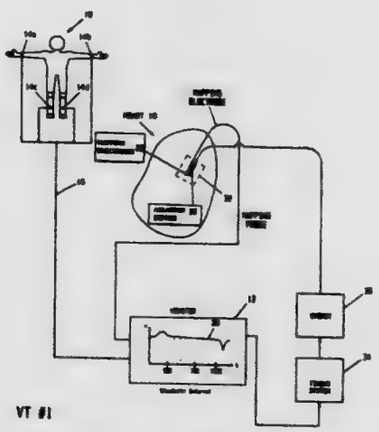
a decoder circuit is electrically connected between the visual display and the audio detector which is capable of providing visual feedback to the patient via the communication means for the receiving center.

5,172,699

PROCESS OF IDENTIFICATION OF A VENTRICULAR TACHYCARDIA (VT) ACTIVE SITE AND AN ABLATION CATHETER SYSTEM

Robert H. Svenson, Charlotte, N.C., and Wendell King, North Oaks, Minn., assignors to AngeLase, Inc., Plymouth, Minn.

Filed Oct. 19, 1990, Ser. No. 601,249
Int. Cl.[5] A61B *5/046*
U.S. Cl. 128—705 8 Claims



1. Process for identification of sites of diastolic activation during ventricular tachycardia (VT) comprising the steps of:
a. monitoring an ECG signal of a heart;
b. measuring the time period of a diastolic interval of a heart in relation to said monitored ECG signal;
c. determining the 20–80% time period of said measured diastolic interval;
d. mapping heart tissue for an active site in said 20–80% time period; and,
e. identifying the active site in said 20–80% time period.

5,172,700

DISPOSABLE BIOPSY FORCEPS

Robert F. Bencini, Dracut, and Barry D. Weitzner, Chelmsford, both of Mass., assignors to C. R. Bard, Inc., Murray Hill, N.J.

Continuation-in-part of Ser. No. 304,367, Jan. 31, 1989, abandoned. This application Sep. 17, 1990, Ser. No. 583,617
Int. Cl.[5] A61B *10/00*
U.S. Cl. 128—751 15 Claims

1. A biopsy device comprising:
an elongate flexible tubular shaft having a proximal end and a distal end;
a biopsy jaw assembly mounted to the distal end of the shaft, the biopsy jaw assembly including supporting strut means mounted in a fixed position with respect to the distal end of the shaft, a pair of biopsy jaws hinged to the end of the support strut means for opening and closing movement toward and away from each other, an actuator strut hingedly connected to each of the biopsy jaws, each biopsy jaw and its associated support strut and actuator strut being formed in a one piece unitary structure; and
a control wire extending longitudinally through the shaft and being connected to the proximal end of the actuating struts whereby longitudinal movement of the control wire may cause the biopsy jaws to open and close.

5,172,701

SINGLE USE AUTOMATED SOFT TISSUE ASPIRATION BIOPSY DEVICE

Harold G. Leigh, St. Louis County, Mo., assignor to Medical Device Technologies, Inc., Gainesville, Fla.

Filed Feb. 28, 1990, Ser. No. 486,116
Int. Cl.[5] A61B *10/00*
U.S. Cl. 128—753 14 Claims

1. A biopsy aspiration device comprising:
a hollow cannula having a proximal end and a distal end;
a stylet having a proximal end and a distal end and positioned within said cannula for axial movement relative thereto;
a housing providing a sealed chamber and means for holding the operative components of the biopsy aspiration device;
slide means movably associated with said housing in cooperative relationship with said sealed chamber, said slide means being movable from a cocked actuated position wherein the volume of said sealed chamber is minimized, to a released at rest position wherein the volume of said sealed chamber is maximized;
biasing means engageable with said slide means when said slide means is in said cocked position to urge said slide means to said at rest position;
cocking and releasing means associated with said slide means and said housing for moving said slide means against force of said biasing means to the cocked actuated position and for releasing said slide means to be moved to said released at rest position by said biasing means;
said hollow cannula being communicated with said sealed chamber, and one of said stylet or said cannula having its proximal end fixedly anchored to said slide means and the other one of said stylet or said cannula having its proximal end anchored to said housing;
whereby upon release of said slide means the resultant volume increase in said sealed chamber creates a pressure reduction, and the pressure reduction generated within said chamber is translated to the distal end of said cannula to effect aspiration of a biopsy specimen into the cannula during actuation of the device.

DISPOSABLE SPRING-LOADED SOFT TISSUE BIOPSY APPARATUS

Harold G. Leigh, St. Louis, Mo.; David L. O'Dell, Mishawaka, and Hugh A. Bourassa, Granger, both of Ind., assignors to Medical Device Technologies, Inc., Gainesville, Fla.

Continuation of Ser. No. 440,647, Nov. 24, 1989, Pat. No. 5,036,860. This application Apr. 1, 1991, Ser. No. 678,724
Int. Cl.[5] A61B *10/00*
U.S. Cl. 128—754 9 Claims

1. A soft tissue biopsy apparatus for obtaining a tissue speci-

men comprising: an elongate housing having a forward end and a rearward end, said housing having an opening at said forward end; a hollow cannula means positioned within said housing and reciprocally movable therewith, said cannula means having a distal end extending through said opening for insertion into tissue from which a specimen is to be taken; needle means mounted concentrically with respect to said cannula means to extend therethrough and reciprocally movable therewithin, said needle means having a distal end extending through said opening for insertion into the tissue and sapling means adjacent said distal end in which a tissue specimen is capturable; biasing means operatively coupled to said needle means near said proximal end of said needle means to urge said needle means toward said forward end of said housing; resilient means operatively associated with said needle means and said cannula means urging said needle means and said cannula

means to respective at rest positions; cocking means associated with said needle means for manually moving said needle means against the force of said biasing means to a predetermined selected position prior to insertion of said distal ends of said cannula means and said needle means into the tissue; releasing means associated with said needle means for initially enabling said needle means to move from said predetermined selected position to a sampling position under the force of said biasing means, whereby said needle means compresses said resilient means and for then moving said cannula means relative to said needle means to a position whereat said distal end of said cannula means covers said sampling means of said needle means to capture the tissue specimen in said sampling means of said needle means, said resilient means restoring said needle means and said cannula means to their at rest positions after the tissue specimen has been captured in said sampling means of said needle means.

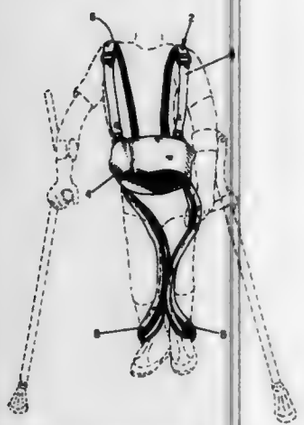
TORSION CONTROL HARNESS

Michelle Tiede, 840 Rice St. N., Kasota, Minn. 56050, and Schelli McCabe, Rte. 1, Box 448, Madison Lake, Minn. 56063

Filed Oct. 23, 1991, Ser. No. 780,994
Int. Cl.[5] A61F *3/00*
U.S. Cl. 128—875 **8 Claims**



1. A soft tissue splint comprising:
(a) strap means including a webbed portion for adjustably mounting about the waist and including suspender means having at least one support portion which is trainable about the shoulders for supporting said strap means from the shoulders;
(b) a plurality of elastic members coupled at one end to said strap means; and
(c) anchor means for mounting to the exo-skeleton comprising a pair of shoes wherein each shoe includes a plurality of fasteners for receiving mating fasteners secured to each of said elastic members upon training said elastic members about the exo-skeleton, whereby a rehabilitative correctional force may be applied to the exo-skeleton.

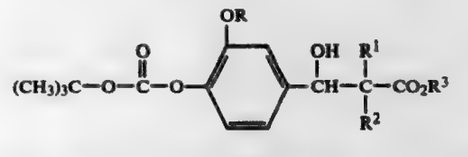
SMOKING COMPOSITIONS CONTAINING A VANILLIN-RELEASE ADDITIVE

W. Geoffrey Chan, Richmond; Harvey J. Grubbs, Mechanicsville; Yoram Houminer, Richmond; Kenneth F. Podraza, Richmond, and Edward B. Sanders, Richmond, all of Va., assignors to Philip Morris Incorporated, New York, N.Y. and Philip Morris Products Inc., Richmond, Va.

Filed Apr. 22, 1991, Ser. No. 688,436
Int. Cl.[5] A24B *15/30*
U.S. Cl. 131—276 **10 Claims**

1. A smoking composition comprising an admixture of (1) combustible filler selected from natural tobacco, reconstituted tobacco and tobacco substitutes, and (2) between about 0.0001–5 weight percent, based on the total weight of filler, of a flavorant-release additive corresponding to the formula:



where R is methyl or ethyl; R^1 is hydrogen or a C_1–C_4 alkyl substituent; R^2 is hydrogen or a C_1–C_4 alkyl or C_6–C_{10} aromatic substituent; and R^3 is a C_1–C_4 alkyl or C_6–C_{10} aromatic substituent.

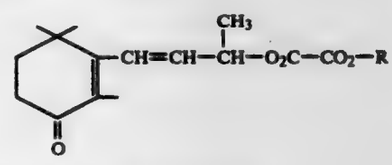
5,172,705

SMOKING COMPOSITIONS CONTAINING AN OXALATE FLAVORANT-RELEASE ADDITIVE

Geoffrey W. Chan, Chesterfield, Va., assignor to Philip Morris Incorporated, New York, N.Y. and Philip Morris Products Inc., Richmond, Va.

Filed Sep. 25, 1991, Ser. No. 765,311
Int. Cl.[5] A61B *15/30*
U.S. Cl. 131—276 **12 Claims**

1. A smoking composition comprising an admixture of
(1) combustible filler selected from natural tobacco, reconstituted tobacco and tobacco substitutes, and
(2) between about 0.0002–5 weight percent, based on the total weight of filler, of a flavorant-release additive corresponding to the formula:



where R is a C_1–C_8 alkyl substituent.

5,172,706

SMOKING COMPOSITIONS CONTAINING AN OXALATE FLAVORANT-RELEASE ADDITIVE

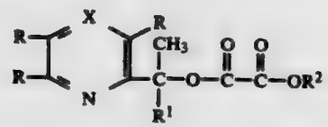
W. Geoffrey Chan, Chesterfield, Va., assignor to Philip Morris Incorporated, New York, N.Y. and Philip Morris Products Inc., Richmond, Va.

Filed Jan. 21, 1992, Ser. No. 822,695
Int. Cl.[5] A24B *15/38*
U.S. Cl. 131—278 10 Claims

1. A smoking composition comprising an admixture of

(1) combustible filler selected from natural tobacco, reconstituted tobacco and tobacco substitutes, and

(2) between about 0.0002–5 weight percent, based on the total weight of filler, of a flavorant-release additive corresponding to the formula:



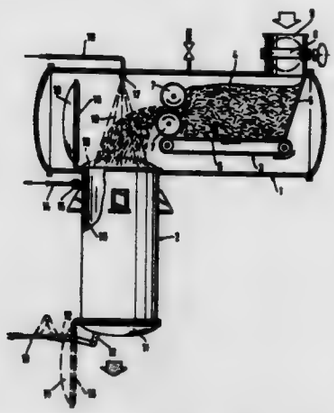
where X is nitrogen or carbon; R is hydrogen or a C_1–C_4 alkyl substituent; R^1 is C_1–C_4 alkyl substituent; and R^2 is a C_1–C_8 alkyl substituent.

5,172,707

PROCESS FOR THE EXPANSION OF TOBACCO

Alessio Zambelli, Treviso, Italy, assignor to Comas S.p.A., Silea-Treviso, Italy

Filed Mar. 22, 1991, Ser. No. 674,527
Claims priority, application Fed. Rep. of Germany, Apr. 4, 1990, 4010892
Int. Cl.[5] A24B *3/18*
U.S. Cl. 131—296 24 Claims



1. A process for the expansion of tobacco which comprises:

(a) directly in a closed system containing tobacco, expanding pressurized liquid carbon dioxide so as to initially form a mixture of gaseous carbon dioxide, solid carbon dioxide particles and, optionally, liquid carbon dioxide so as to cool the tobacco to between −30° C. and −100° C., the weight ratio of pressurized liquid carbon dioxide to tobacco introduced into said closed system being such that the thus-cooled tobacco contains not more than 10% by weight of solid carbon dioxide particles;

(b) compressing, under a pressure of from 15 to 35 bar, gaseous carbon dioxide in the presence of the cooled tobacco so as to form an amount of liquid carbon dioxide just sufficient to impregnate the pores of the cooled tobacco;

(c) converting the liquid carbon dioxide impregnated in the tobacco to solid carbon dioxide and simultaneously gaseous carbon dioxide through rapid reduction of the carbon dioxide pressure; and

(d) subjecting the tobacco containing the solid carbon dioxide to a hot gas treatment to achieve the expansion.

SMOKING ARTICLES

Christopher G. Drewett, River View, Mead Lane, Saltford, Bristol, United Kingdom; Brian C. Chard, 12 Ilchester Road, Bedminster Down, Bristol, United Kingdom BS13 7JA; David Herron, 52 Hampton Park, Redland, Bristol, United Kingdom BS6 6LJ, and Colin D. Laton, 6 Heath Ridge, Long Ashton, Bristol, United Kingdom BS18 9EW

Continuation of Ser. No. 517,808, May 2, 1990, abandoned. This application Feb. 26, 1992, Ser. No. 839,288
Claims priority, application United Kingdom, May 26, 1989, 8912238
Int. Cl.[5] A24D *1/02*
U.S. Cl. 131—365 18 Claims

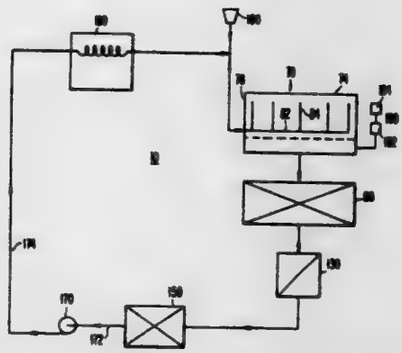
1. A paper wrapper for smoking articles, which wrapper comprises two or more substantially planar plies formed from discrete webs combined while at least one of the webs is in the wet stage of formation, whereby there is interaction of the fibres between adjoining piles so that the wrapper is in the form of a single sheet, each ply having a basis weight of less than 20 g/m^2, the total basis weight of the wrapper being less than 40 gm^{-2}.

5,172,709

APPARATUS AND PROCESS FOR REMOVING CONTAMINANTS FROM SOIL

Bart J. Eckhardt, Tenafly, N.J., and Brian Dengel, Chalfont, Pa., assignors to Clean Soil Inc., Tripp Island, S.C.

Filed Nov. 30, 1990, Ser. No. 619,987
Int. Cl.[5] B08B *3/04*
U.S. Cl. 134—95.1 8 Claims



1. A reclamation system for removing a contaminant from a volume of soil, comprising:

driver means for transporting the contaminant from the volume of material,

processor means for containing the volume of material, said processor means further comprising

driver inlet means for admitting said driver to said processor means,

vapor outlet means, for removing from said processor means the vapor fraction of the contaminant at the working temperature of the reclamation system, and

fluid outlet means for removing from the volume of material that fraction of said driver that has condensed and the balance of the contaminant that is removed from the volume of material, less the vapor fraction of the contaminant;

collector means in communication with said fluid outlet means for collecting the driver condensate and the balance of the contaminant that is removed from the

volume of material, less the vapor fraction, and discharging the resulting mixed fluid stream from said processing means;

first accumulator means in communication with said collector means for accumulating the driver and fluid fractions of the contaminant removed from the volume of soil;

separator means in communication with said collector means for separating the fluid and solid fractions of the contaminant from said driver into a waste discharge stream and a recovered driver fluid stream;

driver supply means in communication with said separator means for delivering said recovered driver fluid stream to said driver inlet means at a temperature, volume, and speed sufficient to effect removal of the contaminant from the soil;

driver make up means, in communication with said driver supply means, for supplying additional driver needed to maintain the operating conditions of said processor means;

heating means, cooperating with said driver supply means to heat said driver to temperatures necessary to effectuate removal of said contaminant from the volume of material;

air purge means, for injecting air into said processor means after processing has been completed in order to purge said processor means of contaminant vapor and to cool the reclaimed volume of material; and

wherein said reclamation system is portable.

APPARATUS FOR SPRAYING A LIQUID IN VESSEL

Max G. Harrington, Fair Oaks, Calif., assignor to Sybron Chemicals Inc., Birmingham, N.J.

Filed Feb. 6, 1989, Ser. No. 306,400
Int. Cl.[5] B08B *3/02*
U.S. Cl. 134—167 R **7 Claims**

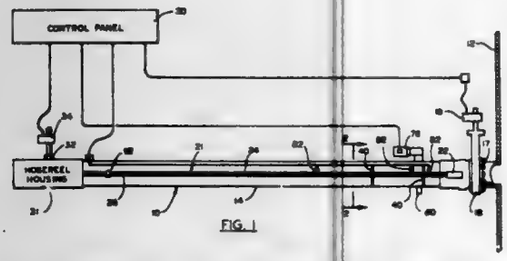

FIG. 1

1. An apparatus for directing a liquid spray against the interior walls of a vessel from a nozzle spray means comprising:

a sealed housing mounted externally to said vessel;

a spray support assembly mounted within sealed housing, said spray support assembly having a rigid fluid supply tube having a forward end and a rearward end, a nozzle spray means mounted at said forward end of said fluid supply tube and fluidly connected therewith, a flexible hose fluidly connected to said rearward end of said fluid supply tube, support means for supporting said fluid supply tube and allowing said tube to move longitudinally within said sealed housing, said fluid supply tube having a gear rack disposed on its outer surface which extends along a predetermined length of said tube;

means for closing off the interior of said self-contained sealed housing from said vessel; and

a drive assembly mounted to said housing for engaging said gear rack and moving said tube along said housing, said drive assembly comprising a drive gear rotatably mounted to said housing and connected to drive means.

5,172,711

COMBINATION CANOPY AND FAN

Erna Mueller, 3015 - 127th Pl. SE., Bellevue, Wash. 98005, and James Moores, 16020 Old Snohomish Hwy., Snohomish, Wash. 98290

Filed Jul. 31, 1991, Ser. No. 738,786
Int. Cl.[5] A45B *3/00*
U.S. Cl. 135—16 **6 Claims**

1. A combination canopy and fan, comprising:

(a) a unitary elongate shaft;

(b) a collapsible, domed canopy mounted on the upper end of the shaft;

(c) a fan assembly mounted on the shaft under the canopy, including:

(i) a fan hub mounted axially and rotatably on the shaft;

(ii) a plurality of fan blades secured to the fan hub and extendible radially outward therefore, wherein the fan blades are pivotally secured to the fan hub to pivot between a folded position, in which the blades are folded alongside the shaft, and an extended position, in which the blades extend radially outward from the fan hub;

(iii) biasing means for biasing the fan blades toward the folded position, wherein centrifugal forces generated by rotation of the fan hub overcome the biasing means so that the fan blades pivot to the extended position; and

(iv) drive means secured externally alongside the unitary shaft at a location adjacent to and trained with the fan hub for driving rotation of the fan hub; and

(d) power means for powering the drive means.

5,172,712

SCREEN APPARATUS

Louie A. Robinson, 3065 Vista St., NE., Washington, D.C. 20018

Filed Mar. 6, 1991, Ser. No. 665,560
Int. Cl.[5] E04H *15/28*
U.S. Cl. 135—98 **1 Claim**

1. A screen device adapted to form an enclosure when secured to a conventional beach umbrella having a circular covering and an elongated handle which supports the covering at a fixed distance above a support surface such as a sandy beach, said screen device comprising: a rectangular piece of open screen material having an upper edge, a lower edge, two side edges, a length sufficient to circumvent said circular covering and a width sufficient to span the distance between said covering and said fixed surface,

said upper edge having a means to secure said open screen material in overlapping relationship with said circular covering,

said side edges being constructed to strips of impervious material secured to said open screen material to impart strength to the open screen material and to form an entrance to said enclosure when said device is secured to an umbrella, and

a plurality of floating anchors selectively securable about the lower edge of said open screen material whereby said device may be secured to a conventional beach umbrella

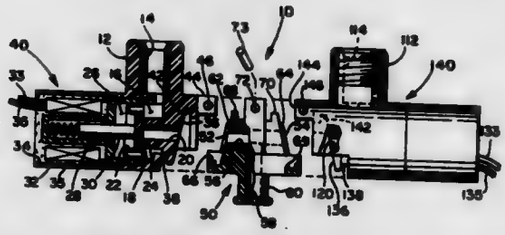
to form an enclosure and said floating weights may be secured as needed to hold said device in place above said support surface.

5,172,713

MODULAR MIXING VALVE

James A. Hall, Bartlett, Ill., assignor to Eaton Corporation, Cleveland, Ohio

Filed Apr. 6, 1992, Ser. No. 864,292
Int. Cl.[5] F16K 27/00, 11/24
U.S. Cl. 137—15
10 Claims



9. A method of making a valve having a plural inlet and a single outlet comprising the steps of:

(a) providing a plurality of valve bodies having an inlet and an outlet communicating with a valving cavity and valve seat disposed in said cavity between the inlet and outlet;

(b) disposing a movable valve member in said cavity adjacent said valve seat and closing said cavity and securing a cupped cover thereover by non-metallic weldment;

(c) potting an electrical coil in said cupped cover providing a manifold having plural inlets

(d) providing a manifold having plural inlets supplying a single outlet; and,

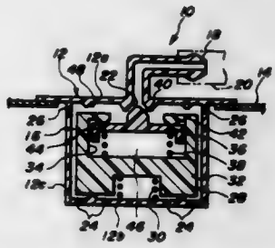
(e) connecting and sealing the outlet of one of a plurality of said valve sub-assemblies to each of said manifold inlets and securing said connection by non-metallic weldment.

5,172,714

FUEL CHECK VALVE ASSEMBLY FOR FUEL TANK

Jiro Kobayashi; Harumitsu Sugiyama, and Masakazu Miyoshi, all of Kanagawa, Japan, assignors to Nissan Motor Co., Ltd. and Kato Hatsujo Kaisha Limited, both of Yokohama, Japan

Filed Nov. 29, 1991, Ser. No. 799,939
Claims priority, application Japan, Nov. 30, 1990, 2-338769; Nov. 30, 1990, 2-338771
Int. Cl.[5] F16K 17/36
U.S. Cl. 137—39
22 Claims



1. A fuel check valve assembly in a fuel tank of a vehicle, comprising:

a valve casing installed in the fuel tank to form a passageway for providing communication between the inside and outside of the fuel tank;

a valve seat integral with said valve casing and forming part of said passageway; and

a float valve disposed within said valve casing and having a valve float movable toward and away from said valve seat by the effect of its buoyancy and weight, and a valve head movable relative to said valve float in response to a pressure differential across said valve seat and cooperative with said valve seat for controlling opening and closing of said valve seat;

said valve head being movable relative to said valve float to open said valve seat when said pressure differential exceeds a predetermined value;

wherein said valve float has at an upper end thereof a downward receding portion cooperative with one of opposite sides of said valve head to define therebetween a sealingly closed chamber.

5,172,715

COLLAPSIBLE WALKER

Lucie O. Webb, 232 Brookdale Dr., Americus, Ga. 31709

Filed Feb. 24, 1992, Ser. No. 840,797
Int. Cl.[5] A61H 3/00
U.S. Cl. 135—67
7 Claims

1. A foldable walker comprising:

a front frame section having a top member, a left leg, and a right leg, said legs extending downwardly from the ends of said top member;

a left side frame section pivotably attached to said front frame section and extending rearwardly therefrom,

a right side frame section pivotably attached to said front frame section extending rearwardly therefrom; and

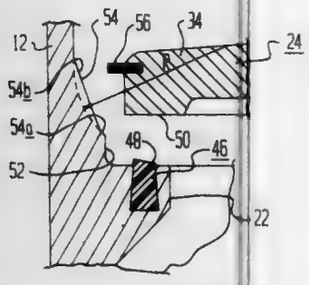
a top frame section comprising a left handlebar assembly and a right handlebar assembly, said handlebar assemblies being pivotably mounted to said top member of said front frame section, and each said handlebar assembly having a downwardly extending collar, said collar capable of retractable engagement with said corresponding side frame section.

5,172,716

RECIRCULATION VALVE

George J. Paptzun, North Wales, Pa., assignor to Keystone International Holdings Corp., Wilmington, Del.

Filed Jul. 1, 1991, Ser. No. 723,959
Int. Cl.[5] G05D *11/00*
U.S. Cl. 137—117 21 Claims



1. A recirculating valve for recirculating cooling water to a centrifugal pump comprising:

a valve casing having a first chamber for connection to a centrifugal pumping means, a second chamber for connection to a fluid outlet, a first port for introducing fluids from said centrifugal pump into said first chamber, a second port for expelling fluids out of said casing through said second chamber, and a recirculation port for redirecting fluid from said first chamber to said centrifugal pump;

means for changing the Cv within said valve;

check valve means situated between said first and second chamber, said check valve means comprising a substantially circular disc, said check valve means opening when the fluid pressure in said first chamber exceeds the fluid pressure in said second chamber and closing when the fluid pressure in said second chamber approaches that in said first chamber;

means for controlling the rate of flow of fluid through said recirculation port;

a slidable hollow valve stem coupled to said check valve means and extending through said first chamber, said valve stem moving responsively with said check valve means between open and closed positions;

a multiple angle control surface between the circular disc of said check valve and said valve casing for controlling the position and lift of said check valve relative to the flow of fluid past said check valve; and

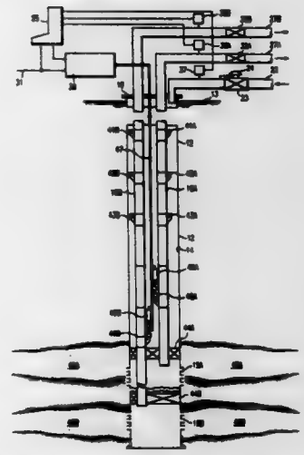
recirculation valve means operatively coupled to said check valve means for controlling the flow of fluid from said first chamber through said recirculation port, said recirculation valve impending such flow when said check valve means is open and permitting such flow when said check valve means is closed.

5,172,717

WELL CONTROL SYSTEM

William G. Boyle; John J. Goiffon, both of Dallas, and Charles M. Pool, Euless, all of Tex., assignors to Otis Engineering Corporation, Dallas, Tex.

Continuation-in-part of Ser. No. 457,520, Dec. 27, 1989. This application Nov. 30, 1990, Ser. No. 621,295
Int. Cl.[5] F04F *1/20*
U.S. Cl. 137—155 46 Claims



1. A system for controlling the flow from a gas lift petroleum production well in which a borehole penetrates at least two spacially separated geological production zones and includes a casing extending from a wellhead to line the borehole and extend into both of said spacially separated production zones and at least two strings of tubing extending in parallel along the interior of the casing from the wellhead and wherein the first string of tubing extends into the region of the first of said spacially separated production zones and the second string of tubing extends into the region of the second of said production zones, said system comprising:

a gas lift valve connected in each one of said strings of tubing with a first valve being associated with said first production zone and a second valve being associated with said second production zone;

a single source of pressurized gas connected to the casing at the wellhead to provide a source of lift gas; and

means for independently varying the size of the flow control aperture within each of said first and second gas lift valves to control the production of fluids from each of said first and second production zones.

5,172,718

APPARATUS FOR COLLECTING FLUIDS FROM A LEAKING CEILING

Robert P. Thornburgh, 8 Redgate La., Cohasset, Mass. 02025

Filed Apr. 29, 1992, Ser. No. 875,296
Int. Cl.[5] B67C *11/00*
U.S. Cl. 137—312 12 Claims

1. An apparatus for collecting fluids from a leaking ceiling, comprising:

a plurality of collecting members each of which is comprised of a flexible waterproof sheet with a plurality of eyelets, each defining a hole, equally spaced about said sheet's periphery for attachment of said collecting members about said leaking ceiling, wherein each collecting member has a central funnel neck shape downwardly projecting from said ceiling and terminating in an opening;

a tubing network comprised of a plurality of collecting member branch tubes and a receptacle tube wherein said branch tubes interconnect said collecting members with said receptacle tube;

a receptacle interconnected to said branch tubes by means of said receptacle tube; and

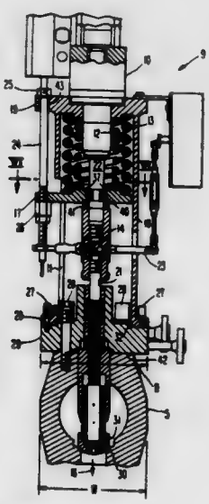
a junction element interconnecting said branch tubes with said receptacle tube.

5,172,719

STEAM TURBINE CONTROL VALVE

Suryakant K. Dawawala, Casselberry, and Jim G. Schwartz, Winter Park, both of Fla., assignors to Westinghouse ELectric Corp., Pittsburgh, Pa.

Filed Jul. 19, 1991, Ser. No. 732,968
Int. Cl.[5] F16K *43/00*
U.S. Cl. 137—315
17 Claims



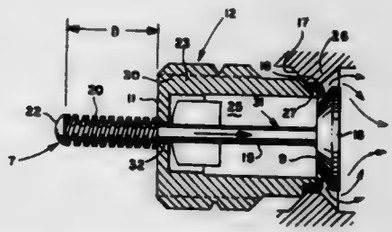
1. A steam turbine, comprising:
(a) a steam chest; and
(b) a steam control valve mounted on said steam chest, said valve having:
(i) a valve stem assembly;
(ii) a spring for applying a force to operate said valve;
(iii) a housing having a perimeter enclosing said spring, said housing having a longitudinally extending wall forming said perimeter and first and second distal ends, a first flange formed on said first distal end and a first window formed in a portion of said wall;
(iv) a spring seat at least partially enclosed by said housing and having an integrally formed lug extending through said first window beyond said housing perimeter, said spring seat being capable of being installed and removed through said first window, said spring seat having means for abutting said stem assembly, whereby said spring force is transmitted to said stem assembly; and
(v) means disposed outside of said housing perimeter for securing said lug to said first flange;
and for taking said spring seat out of abutment with said stem assembly so as to remove said force transmitted from said spring to said stem assembly to allow disassembly of said stem assembly.

5,172,720

SINGLE SEAL FLUID CONTROL VALVE

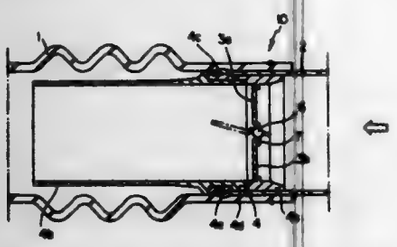
Donald L. Richards, Durham, N.C., assignor to Eaton Corporation, Cleveland, Ohio

Filed Feb. 3, 1992, Ser. No. 829,643
Int. Cl.[5] F16K *15/06*
U.S. Cl. 137—454.5
16 Claims



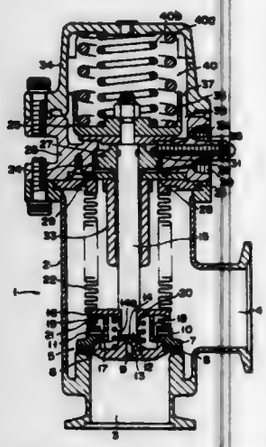
1. A control valve for controlling fluid flow under pressure, said valve comprising:
a body member having a wall surrounding a chamber extending therethrough between an inlet and an outlet,
said body member having an annular shoulder extending from the wall into the chamber and having an annular sealing surface facing towards the inlet and having an annular sealing surface facing inwardly towards a centerline of the body member;
a guide member having a wall surrounding a chamber extending therethrough between an open-end and a closed-end with the closed-end having a port extending therethrough;
said guide member having an annular securement surface surrounding the open-end and facing away from the closed-end;
a fluid sealing member secured to the guide member securement surface;
said guide member secured to the guide member chamber with the open-end facing towards the body member outlet and the closed-end facing towards the body member inlet with an annular outer portion of the sealing member compressed in fluid sealing engagement against the body member sealing surfaces facing towards the body member inlet and inwardly towards the centerline of the body member and having an annular inner portion of the sealing member exposed to the body member outlet;
a pin member having an enlarged head facing towards the exposed sealing member portion from the body member outlet and engageable therewith, said pin member having a stem extending substantially transversely away from the head and through the guide member chamber ad closed-end port and ending at a free-end disposed at the predetermined distance from the guide member closed-end; and
means for resiliently biasing the pin member towards the body member inlet with a preselected biasing force operative to cause the head to engage and press against the exposed sealing member portion sufficiently to establish a fluid seal therebetween effective to prevent the fluid from flowing from the body member outlet toward the body member inlet.

5,172,721
CHECK VALVE FOR FUEL TANK
Kyokuichi Sato, and Juichi Fujita, both of Sojai, Japan, assignors to OM Industrial Co., Ltd., Okayama, Japan
Filed Feb. 10, 1992, Ser. No. 833,337
Claims priority, application Japan, Feb. 15, 1991, 3-23392[U]
Int. Cl.[5] F16K *15/03*
U.S. Cl. 137—515 3 Claims



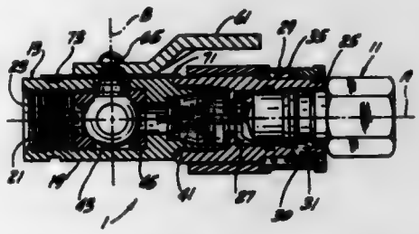
1. A check valve for a fuel tank to be attached to a fuel supply pipe including a shock absorber bellows, wherein a valve body of said check valve comprises an annular main body section and a tubular extension section extending over the substantially whole length of the inner peripheral side of the bellows.

5,172,722
STOP VALVE FOR A VACUUM APPARATUS
Koichi Nishimura, Tsutsumi, Japan, assignor to Motoyama Eng. Works, Ltd., Japan
Filed Sep. 12, 1991, Ser. No. 758,666
Claims priority, application Japan, Sep. 17, 1990, 2-96449[U]; Jun. 21, 1991, 3-47129[U]
Int. Cl.[5] F16K *1/54*
U.S. Cl. 137—599.2 8 Claims



1. A stop valve for a vacuum apparatus, comprising:
a valve casing having an inlet port and an outlet port;
a main valve means housed in said valve casing, for selectively opening and closing a flow passageway which causes said inlet port to communicate with said outlet port;
an auxiliary valve means for selectively opening and closing an orifice formed in said main valve means and capable of opening said flow passageway by opening said orifice when said main valve means is closed;
a valve shaft for driving said main valve means and said auxiliary valve means;
control means for controlling operation of said valve shaft and opening said main valve means after said auxiliary valve means has been opened;
guide means for selectively engaging said auxiliary valve means with and disengaging said auxiliary valve means from said main valve means;
a first spring for urging said main valve means and said auxiliary valve means to be moved away from each other; and
a metal diaphragm for isolating said guide means and said first spring from a fluid flowing said flow passageway.

5,172,723
QUICK-CONNECT COUPLING
Malcolm B. Sturgis, 555 Fee Fee Rd., Maryland Heights, Mo. 63043
Filed Dec. 31, 1991, Ser. No. 815,392
Int. Cl.[5] F16L *37/38*
U.S. Cl. 137—613 16 Claims



1. A quick-connect coupling comprising:
a nipple adapted for connection to a first conduit, said nipple having a first flow passage therethrough,
a socket assembly adapted for connection to a second conduit, the socket assembly having a second flow passage therethrough, said socket assembly comprising
a socket member with a socket therein for receiving the nipple,
a sleeve slidable on the socket member from a retracted position in which the nipple may be inserted into the socket, to a locking position in which the nipple is held captive in the socket with said first and second flow passages communicating with one another, and then back to a retracted position in which the nipple may be removed from the socket,
a first valve in the second flow passage biased to a closed position and adapted to open upon insertion of the nipple into the socket,
a second valve in the second flow passage spaced from the first valve, said second valve being movable from a fully open position for permitting maximum flow of fluid through the second flow passage, through a range of movement in which it is only partially open, to a fully closed position for preventing any flow through the second flow passage, said second valve permitting some flow through the second flow passage when it is only partially open,
a housing for said second valve, said second valve comprising a ball valve movable in the housing and having a bore therethrough, the bore being (a) aligned with the second flow passage when the ball valve is in its fully open position, (b) skewed relative to the second flow passage when the valve is in its partially open position, and (c) generally perpendicular to the second flow passage when the valve is in its fully closed position,
control means manually movable for opening and closing the second valve, said control means comprising a lever pivoted on the socket assembly for moving the second valve between its fully open and fully closed positions, and
detent means movable conjointly with said control means, said detent means being engageable by the sleeve to prevent the sleeve from being moved to its retracted position when the second valve is fully or partially open, and being movable to a position for permitting the sleeve to be moved to its retracted position only when the second

valve is in its fully closed position, thereby ensuring that flow through the second passage is completely cut off before the nipple and socket assembly can be connected or disconnected, thus preventing leakage of fluid past the second valve upon connection or disconnection,

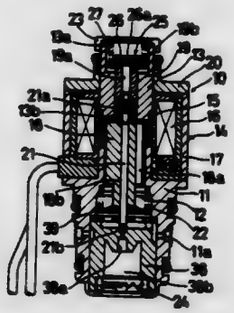
said detent means comprising a detent member mounted for conjoint pivotal movement with the lever on a pivot axis, said detent member having edge means configured for engagement by the sleeve to prevent retraction of the sleeve when the lever is in any position except one corresponding to said fully closed position of the ball valve, said edge means being configured to be sufficiently clear of the sleeve when the lever is moved to a position corresponding to the ball valve being fully closed to permit the sleeve to be retracted.

5,172,724

ELECTROMAGNETIC VALVE ASSEMBLY

Tetsuaki Tsuzuki; Michiharu Nishii, and Masahiro Inden, all of Aichi, Japan, assignors to Aisin Seiki K.K., Kariya City, Japan

Filed Mar. 28, 1991, Ser. No. 676,490
Claims priority, application Japan, Mar. 31, 1990, 2-34294[U]
Int. Cl.[5] F16K *15/00*
U.S. Cl. 137—614.2 1 Claim



1. An electromagnetic valve assembly comprising:

a housing having a bore extending therethrough with an enlarged bore portion at one end thereof;

a valve seat member having a longitudinal axis secured in said bore in said housing with one end extending into said enlarged bore portion;

a fluid passage extending through said valve seat member and communicating at one end with said enlarged bore portion;

valve means disposed in said housing for engagement with said valve seat member for opening and closing said fluid passage at an opposite end of said fluid passage;

electromagnetic means carried by said housing for moving said valve means;

one way means located in said enlarged bore portion including a hat-shaped valve member adapted to fit over said one end of said valve seat member for engagement with a valve seat at said one end of said passage with said hat-shaped valve member having a restricted orifice extending therethrough in communication with said fluid passage; and

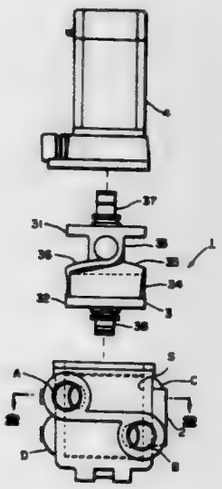
spring means biasing said hat-shaped valve member axially into fitted engagement with said one end of said valve seat member thereby preventing radial movement of said hat-shaped valve member relative to said longitudinal axis of said valve seat member.

5,172,725

DEVICE FOR SWITCHING THE FLOW DIRECTION OF FLUID

Isao Kitagawa, 110-4, Kamiwada-cho, Takasaki-shi, Gunma-ken, Japan

Filed Jan. 17, 1992, Ser. No. 822,445
Int. Cl.[5] F16K *11/085, 11/087*
U.S. Cl. 137—625.43 2 Claims



1. A device for switching the flow direction of a fluid comprising:

a main body having an inlet to be connected to a fluid supply source and an exit to be connected to a flow destination of the fluid, each disposed on the primary side of the main body, and a first exit/inlet and a second exit/inlet to be connected with an apparatus using the fluid, each disposed on the secondary side of the main body;

a selector rotatably disposed in the main body around a rotational shaft, the selector including:

an upper pipe and a lower pipe, the upper pipe and the lower pipe being spaced from each other and disposed perpendicular to each other;

first and second partitions respectively formed from a lower end of the upper pipe to an upper end of the lower pipe and located to one side of the upper pipe;

a first flow channel formed by the upper pipe capable of communicating the inlet with the first exit/inlet;

a second flow channel formed from above the second partition to below the first partition capable of communicating one of the inlet with the second exit/inlet, and the exit with the first exit/inlet;

a third flow channel formed by the lower pipe capable of communicating the exit with the second exit/inlet; and

a fourth flow channel formed from above the first partition to below the second partition capable of communicating one of the exit with the first exit/inlet and the inlet with the second exit/inlet;

the inlet, the exit, the first exit/inlet and the second exit/inlet being disposed at predetermined positions such that communication of one of the first flow channel with the third flow channel and communication o the second flow channel with the fourth flow channel is attained simultaneously with the rotation of the selector; and

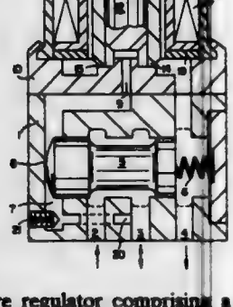
each of the flow channels being partitioned with a partition plate formed by the upper and lower pipes and the first and second partitions and having a thickness smaller than the diameter of each of the inlet, the exit and the first and second exit/inlet.

5,172,726

PRESSURE REGULATOR

Claude Mercier, St-Genis-Pouilly; Jean Livet, Geneva, and Raphael Prina, Perly, both of Switzerland, assignors to Honeywell Lucifer S.A., Carouge/Geneve, Switzerland

Filed Jul. 9, 1991, Ser. No. 727,242
Int. Cl.[5] F15B *13/043*
U.S. Cl. 137—625.64 4 Claims



1. In a pressure regulator comprising a valve with three passages, electrically controlled, comprising a body with three openings for the inlet and outlet respectively of a fluid to be controlled, at least one obturator coacting with these openings to obtain as desired communication between an opening corresponding to a user device and one or the other of the two openings adapted to be connected respectively to a source of fluid under pressure and to a discharge, this obturator being controlled by the pressure of a fluid in a control chamber acting on a movable member and against the force of a return spring, the pressure of the fluid in the control chamber being controlled by a magnetic core subjected to the action of a return spring and to the action of a magnetic field produced by an excitation winding, the control chamber communicating on the one hand with the discharge through a passage controlled by said magnetic core and on the other hand with the opening adapted to be connected to the user device, this latter communication having a passageway of cross section smaller than that of the passage controlled by the magnetic core; the improvement wherein the magnetic core is in the form of a hollow cylinder that slides on a fixed cylindrical portion, said passage communicating between the control chamber and the interior of the cylindrical magnetic core through a portion of said passage that is disposed within said fixed cylindrical portion.

5,172,727

ANNULAR SEAL ARRANGEMENT AND A VALVE FITTED THEREWITH

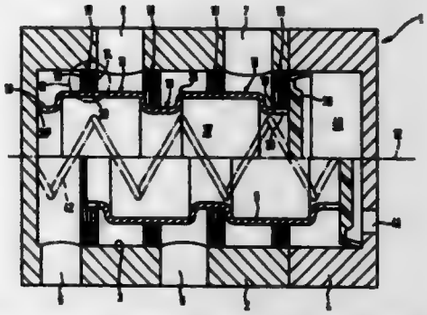
Kurt Stoll, and Manfred Rüdle, both of Esslingen, Fed. Rep. of Germany, assignors to Festo KG, Esslingen, Fed. Rep. of Germany

Filed Aug. 28, 1991, Ser. No. 750,962
Claims priority, application Fed. Rep. of Germany, Aug. 31, 1990, 4027520; European Pat. Off., Jul. 25, 1991, 91112475
Int. Cl.[5] F15B *13/042*; F16J *15/16*
U.S. Cl. 137—625.66 25 Claims

1. An annular seal arrangement for providing a seal between a valve housing and an axially-directable spool-like piston positioned in said valve housing comprising:

an annular seal housing having a pair of axially-spaced lateral walls and an intermediate wall, said intermediate wall extending between said axially-spaced lateral walls so that said seal housing defines a generally U-like ring-receiving recess, said seal housing being formed from at least two ring parts so that said recess may be accessed when said housing is unassembled, at least one of said ring parts having a dish-like shape such that it forms at least a portion of one of said lateral walls, said ring parts being press-fit into one another to form said seal housing;

an annular elastically-resilient inner ring positioned in said ring-receiving recess adjacent to said intermediate wall;



an annular outer seal ring positioned in said ring-receiving recess and situated radially inwards from said inner ring; and

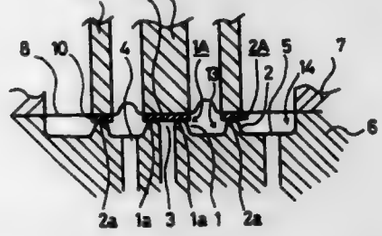
means for retaining said rings in said seal housing to form an integral unit being capable of being handled without external holding means.

5,172,728

THREE-WAY-VALVE

Hideo Tsukazaki, Tokyo, Japan, assignor to T.H.I. System Corporation, Tokyo, Japan

Filed Nov. 7, 1991, Ser. No. 788,938
Claims priority, application Japan, Nov. 8, 1990, 2-303410; Oct. 29, 1991, 3-309993
Int. Cl.[5] F16K *11/00*
U.S. Cl. 137—637.2 9 Claims



1. A three-way valve comprising:

a hollow bonnet having a cavity therein;

a valve body having a central port, first and second annular grooves, concentric with said central port, forming a first annular valve seat between said central port and said first annular groove and a second annular valve seat between said first and second annular grooves, a first port formed in said first annular groove, and a second port formed in said second annular groove;

a sealing diaphragm placed between said hollow bonnet and said valve body so as to separate said first and second annular grooves of said valve body from said cavity of said hollow bonnet;

a valve shaft provided within said cavity of said hollow bonnet so as to be opposed to said first annular valve seat and movable in the axial direction so that under a thrust, it abuts on said first annular valve seat via said sealing diaphragm to seal a first fluid path between said central port and said first port; and

a cylindrical valve shaft provided around said valve shaft within said cavity of said hollow bonnet so as to be opposed to said second annular valve seat and movable in the axial direction so that under a thrust, it abuts on said second annular valve seat via said sealing diaphragm to

seal a second fluid path between said first and second ports.

5,172,729

EXPANSION HOSE FOR THE REDUCTION OF PRESSURE PULSATIONS

Edoardo Vantellini, Via Gemelli 6, I-20042 Albiate/Milano, Italy

PCT No. PCT/CH90/00117, § 371 Date Jan. 28, 1991, § 102(e) Date Jan. 28, 1991, PCT Pub. No. WO90/14549, PCT Pub. Date Nov. 29, 1990
PCT Filed Apr. 30, 1990, Ser. No. 634,207
Int. Cl.[5] F16L 55/04
U.S. Cl. 138—26 2 Claims

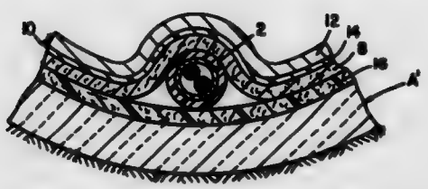
1. An expansion hose for reduction of pressure pulsations in hydraulic systems and noises associated therewith caused by the pump, specifically for power-steering systems of motor vehicles comprising in combination, an outer pressure hose with a high lateral volume expansion capacity, an inner flexible hollow body arranged coaxially within said pressure hose for conduction of a pressure medium, an inlet-side end piece terminating in a nipple plug, an outlet-side end piece, both said end pieces being made of a non-deformable material, and structure defining an outlet bore extending into said outlet-side end piece, said flexible hollow body having an outer diameter which is smaller than the inner diameter of said outlet bore, said outer pressure hose extending between and having ends connected to said inlet-side end-piece and said outlet-side end-piece, said inner flexible hollow body being firmly connected at the inlet side to said nipple plug of the inlet side end piece, said inner flexible hollow body including at least along a part of its length ports through the inner flexible hollow body, said inner flexible hollow body having a length extending freely up to and into the outlet side end piece, outlet channel with an outer diameter of the inner flexible hollow body being less than the outlet bore diameter.

5,172,730

TWO-WALL LEAKAGE DETECTION SYSTEM FOR A PIPE

F. Thomas Driver, Memphis, Tenn., assignor to Insituform of North American, Inc., Memphis, Tenn.

Continuation of Ser. No. 374,995, Jul. 3, 1989, abandoned. This application Feb. 7, 1992, Ser. No. 831,629
Int. Cl.[5] F16L 55/18
U.S. Cl. 138—104 2 Claims



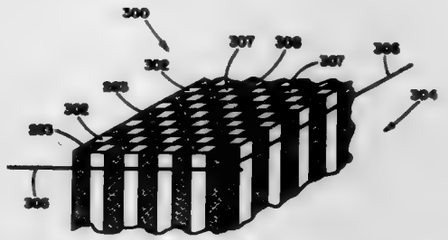
1. A process for retrofitting an existing fluid-carrying circumferentially closed conduit with a leakage detection system comprising (a) inserting along the interior of the conduit and elongated means for detecting the presence of fluid, said fluid detecting means including means for coupling to a monitoring system outside the conduit, (b) inserting a layer of fluid-retentive material in the conduit substantially in contact with said fluid-detecting means and substantially in contact with the inner surface of said conduit over substantially the entire circumferential extent thereof, (c) inserting a fluid-impermeable liner comprising porous material impregnated with a curable resin within the layer of fluid-retentive material, and (d) pressing said liner against said layer of fluid-retentive material while curing said resin, thereby causing said liner to remain positioned substantially against said layer of fluid-retentive material over substantially the entire circumferential extent thereof.

5,172,731

THERMAL INSULATION BLANKET

Thomas E. Nelson, Anchorage, Ky., assignor to Soltech, Inc., Shelbyville, Ky.

Continuation-in-part of Ser. No. 412,923, Sep. 26, 1989, Pat. No. 4,972,799, which is a continuation-in-part of Ser. No. 309,698, Feb. 13, 1989, Pat. No. 4,878,459. This application Sep. 18, 1990, Ser. No. 584,251
Int. Cl.[5] F16L 59/14
U.S. Cl. 138—149 1 Claim



1. A thermal insulation blanket for draping about a surface of compound curvature which is to be insulated, said thermal insulation blanket comprising:

a plurality of flexible insulation material modules;

a plurality of blocks of rigid insulation material, each block having a top surface, a bottom surface and side surfaces;

said flexible insulation material modules being arranged relatively to said blocks of rigid insulation material such that a flexible insulation material module is adjacent to each of the side surfaces of each of said plurality of rigid insulation material blocks to create a checkerboard pattern; and

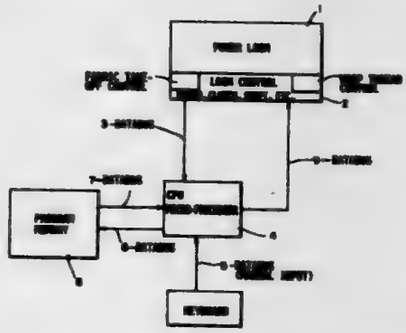
said flexible insulation material modules and said rigid insulation material blocks being joined together in order to create said thermal insulation blanket.

5,172,732

METHOD FOR STARTING A POWER LOOM AS A FUNCTION OF STANDSTILL TIME

Valentin Krumm, Hergensweiler, and Klaus Zelesy, Bodolz, both of Fed. Rep. of Germany, assignors to Lindauer Dornier Gesellschaft mbH, Lindau, Fed. Rep. of Germany

Continuation-in-part of Ser. No. 546,558, Jun. 29, 1990, abandoned. This application Oct. 10, 1991, Ser. No. 774,579
Claims priority, application Fed. Rep. of Germany, Jun. 29, 1989, 3921318
Int. Cl.[5] D03D 51/00
U.S. Cl. 139—1 E 9 Claims



1. A method for starting up a power loom comprising the following steps:

(a) ascertaining a plurality of first parameters that influence the weaving quality, said first parameters including at least a standstill time duration, a cause for said standstill,

and a weaving binding type employed at the instant when said standstill occurred,

(b) supplying said first parameters to a micro-processor for producing a program selector signal,

(c) selecting a start-up program from a plurality of start-up programs stored in a program memory connected to said microprocessor, said selecting taking place in accordance with said selector signal for providing a start-up program based on said selector signal, and

(d) controlling said starting up in response to the selected start-up program.

5,172,733

WEAVING THICK FABRIC BY LIFTING CLOTH FELL

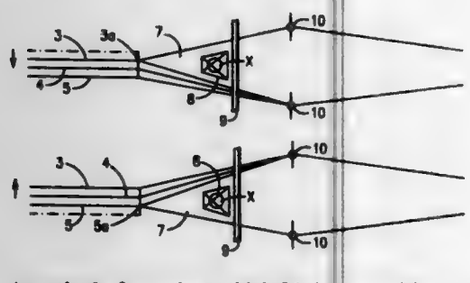
Kazuo Morohashi, and Hiroshi Matsuyama, both of Tokyo, Japan, assignors to Nippon Oil Company, Limited, Tokyo, Japan

Filed Aug. 7, 1991, Ser. No. 741,725

Claims priority, application Japan, Aug. 8, 1990, 2-210770

Int. Cl.[5] D03D *23/00*

U.S. Cl. 139—20 5 Claims



1. A method of weaving a thick fabric, comprising:

providing a plurality of vertically stacked layers of textile weave;

weaving a set of wefts into the layers of textile weave to form a respective cloth fell in each of said layers, including the steps of

for each of the plurality of layers,

i) forming a warp shed from the textile weave of the layer, and

ii) inserting one of the wefts into the formed warp shed;

repeating the weaving step a multitude of times to form the thick fabric; and

vertically moving the layers of textile weave to position the cloth fell of each of the layers at a standard pre-selected weft inserting position when one of the wefts is inserted into the warp shed formed in said each of the layers.

5,172,734

WEFT YARN SUPPLY DEVICE WITH BREAK TREND MONITORING APPARATUS

Isamu Matsui, and Yasuo Akiyama, both of Kyoto, Japan, assignors to Murata Kikai Kabushiki Kaisha, Kyoto, Japan

Division of Ser. No. 668,925, Mar. 13, 1991. This application Sep. 6, 1991, Ser. No. 755,743

Claims priority, application Japan, May 17, 1990, 2-67682; Jul. 25, 1990, 2-194869

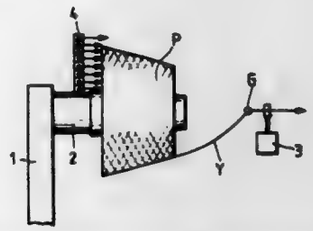
Int. Cl.[5] D03D *47/34*

U.S. Cl. 139—450 4 Claims

1. A system for monitoring yarn breaks as a yarn is unwound from a weft feed package, the weft feed package defining a plurality of radially extending sections, the system comprising:

sensor means for sensing a winding diameter of the weft feed package;

tension detector means for detecting a weft break during unwinding; and



control means, operably connected to the sensing means and the tension detector means, for counting a number of yarn breaks in at least one of the sections.

5,172,735

BELT DRIVEN WEFT THREAD SUPPLIERS

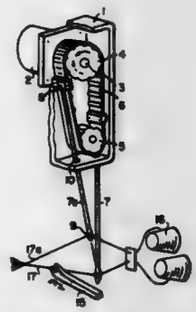
Walter Kleiner, Hirzel, Switzerland, assignor to Lindauer Dornier Gesellschaft mbH, Lindau, Fed. Rep. of Germany

Filed Oct. 4, 1991, Ser. No. 771,190

Claims priority, application Switzerland, Oct. 5, 1990, 03215/90

Int. Cl.[5] D03D *47/34, 47/38*

U.S. Cl. 139—453 8 Claims



1. An apparatus for selecting and supplying different weft threads to a gripper head (15) in a weaving machine, comprising a housing, a driven wheel and a guide wheel supported by said housing, reversible drive means supported by said housing for driving said driven wheel, belt means supported by said driven wheel and by said guide wheel for moving said belt means back and forth, said belt means having a first straight belt run and a second straight belt run, a first thread supplier, first means securing said first thread supplier to said first belt run for travelling back and forth with said first belt run, a second thread supplier, second means securing said second thread supplier to said second belt run for travelling back and forth with said second belt run, said reversible drive means moving said first and second belt runs in opposite directions between limit positions so that in a first limit position said first thread supplier is in a thread presenting position (U) while said second thread supplier is in a ready position and so that in a second limit position said first thread supplier is in a ready position while said second thread supplier is in a thread presenting position.

5,172,736

APPARATUS FOR MANUFACTURING SPRING UNIT

Noboru Sasaki; Tomoaki Nomura; Kazuo Hara; Isamu Yoshino, and Toshio Usui, all of Akishima, Japan, assignors to France Bed Co., Ltd., Tokyo, Japan

PCT No. PCT/JP88/00209, § 371 Date Aug. 24, 1990, § 102(e) Date Aug. 24, 1990, PCT Pub. No. WO89/07994, PCT Pub. Date Sep. 8, 1989

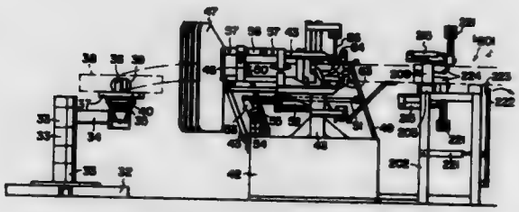
PCT Filed Feb. 26, 1988, Ser. No. 571,547

Claims priority, application Japan, Aug. 20, 1986, 61-194905

Int. Cl.[5] B21F *27/16*

U.S. Cl. 140—92.7

1 Claim



1. An apparatus for manufacturing a spring unit, in which coil springs are formed by bending a resilient wire, said coil springs being arranged side by side in a row such that side limbs of each of the coil springs are adjacent to one another, said coil springs also forming a band of springs which band has a predetermined thickness, and further in which helical wires are wound around the side limbs of each of the coil springs by moving the helical wires in an axial direction while the helical wires are rotated in a manner of a screw in a direction transverse to the band of springs, whereby the helical wires interconnect the side limbs of each of the coil springs in a jaw set attached in line to the apparatus, characterized in that the apparatus comprises:

means for feeding the helical wires while controlling a feeding length of the helical wires so as to be substantially equal to a width of the band of springs, and

two alternate end treatment means, one of which is provided such that its position is adjustable in a widthwise direction of the band of springs, for cutting off and bending forward ends of the helical wires in a feeding direction thereof at a position where one end face of the band of springs is located,

said one end treatment means being movable along the widthwise direction of the band of springs without detachment and movement of the jaw set.

5,172,737

METHOD AND APPARATUS FOR CALIBRATING A TENSION TOOL

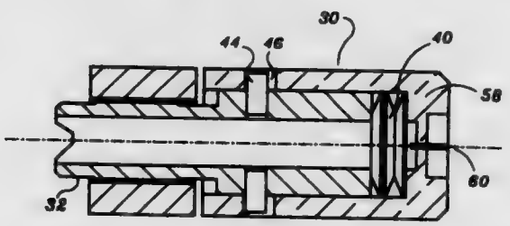
Michael G. Scruggs, and W. David Kelly, both of Orlando, Fla., assignors to Daniels Manufacturing Corporation, Orlando, Fla.

Filed Jul. 29, 1991, Ser. No. 737,354

Int. Cl.[5] G01L *25/00*

U.S. Cl. 140—123.5

7 Claims



1. A calibration tool for a tensioning apparatus comprising:

a first and second relatively movable elements;

compression spring means operatively positioned between said first and second elements for resisting closure of the elements with respect to each other, said spring means transitioning from minimum compressive force to maximum compressive force over a range of compression of about 0.125 inch;

means for determining the displacement of said first element with respect to said second element when said spring means is compressed by a predetermined pressure, said displacement determining means including adjustable means coupled to one of said first and second elements for setting a preselected measuring displacement when said spring means is compressed to the predetermined pressure; and

means for coupling said calibration tool to the tensioning apparatus such that actuation of the tensioning apparatus affects a closing movement of said first and second elements whereby the compressive force exerted by the tensioning apparatus is determinable by said displacement determining means.

5,172,738

FUELLING APPARATUS

Shigemi Komukai, Yokohama, and Yutaka Nagahisa, Ebina, both of Japan, assignors to Tokico Ltd., Kanagawa, Japan

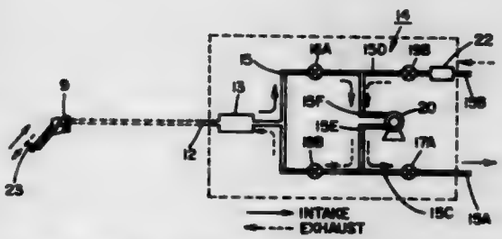
Filed Sep. 13, 1990, Ser. No. 582,324

Claims priority, application Japan, Sep. 20, 1989, 1-243627

Int. Cl.[5] B65B *3/26*

U.S. Cl. 141—83

10 Claims



1. A fuel delivery apparatus for vehicles, equipped with:

(a) a fuel sampling device for measuring concentration of fuel vapor present in a fuel delivery nozzle;

(b) a reference sampling device for measuring concentration of said fuel vapor present in ambient air external to said fuel delivery apparatus;

(c) a fuel type determining means for determining a type of fuel present in a fuel tank based on at least the fuel vapor concentration measured by said fuel sampling device;

(d) a calculating means for calculating a difference between the fuel vapor concentration measured by said fuel sampling device when said fuel delivery nozzle has take out from said fuel tank and that measured by said reference sampling device, after supplying said type of fuel to said vehicle and before supplying a type of fuel to another vehicle; and

(e) a warning means for issuing a warning when said difference exceeds a predetermined value.

5,172,739

WASTE LIQUID TRANSFER DEVICE

Michael J. Ristroph, HC69, Box 609, St. Francisville, La. 70775

Filed Oct. 15, 1991, Ser. No. 776,570

Int. Cl.[5] B67C *11/04;* B65B *39/00*

U.S. Cl. 141—98

6 Claims

1. A waste liquid transfer device, comprising:

(a) a receiver assembly comprising

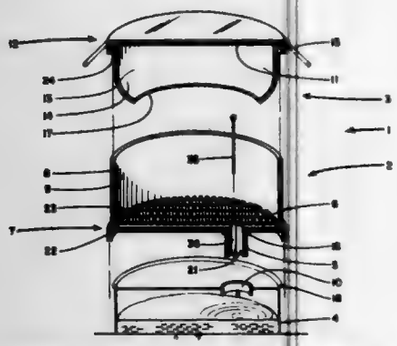
i) a receiver floor, said floor being shaped to fit over a storage means;

ii) a plurality of receiver side walls joined to said receiver

floor to form a receiver cavity for temporarily holding said waste liquid being transferred;

iii) a drain tube extending downward from said receiver floor and insertable into an opening in said storage means, said drain tube having a passageway to permit said waste liquid in said receiver cavity to flow into said storage means;

iv) a dipstick; and



v) a dipstick holding tube fixedly attached to the inner diameter of said drain tube, for holding said dipstick; and

(b) a drain pan assembly comprising

i) a drain pan floor; and

ii) a plurality of drain pan side walls joined to said drain pan floor to form a drain pan cavity for receiving said waste liquid to be transferred to said receiver assembly, said plurality of drain pan side walls being shaped to fit within said receiver cavity.

5,172,740

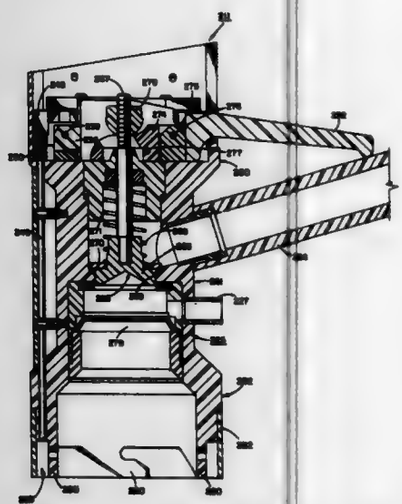
LIQUID FLOW CONTROL SYSTEM

Thomas L. Simmel, 44 Booras La., and Craig A. Baker, 31 Bird La., both of Milford, Conn. 06460

Continuation-in-part of Ser. No. 520,518, May 8, 1990, Pat. No. 5,058,636, which is a continuation-in-part of Ser. No. 211,811, Jun. 27, 1988, Pat. No. 4,924,921. This application Apr. 3, 1991, Ser. No. 677,494

Int. Cl.[5] B67C *3/00*; B65B *39/04*

U.S. Cl. 141—321 **23 Claims**



1. An integrated, cooperating liquid flow controlling system for delivering a desired liquid from a first storage reservoir to a second active reservoir and also for providing trouble-free refilling of the first storage reservoir whenever required, with all of the liquid transfer being achieved in a controlled manner with over-filling, spillage, and pressure build up virtually eliminated, said flow controlling system comprising

A. a liquid delivery/filling assembly comprising

a. a first flow channel;

b. a second, separate and independent flow channel positioned for cooperative association with said first flow channel;

c. actuation control means cooperatively associated with said first flow channel and said second flow channel for opening the flow channels whenever activated; and

d. interconnection means formed thereon and positioned for interengagement with cooperating connection means; and

B. a liquid transfer assembly constructed for mating, cooperating mounted engagement with the liquid delivery/filling assembly and comprising

a. a housing constructed for cooperating, mating, telescopic overlying interengagement with the liquid delivery/filling system assembly, for activating the actuation control means thereof and maintaining said actuation control means in the open position until removed therefrom, and comprising connection means positioned for mating engagement with the interconnection means of the liquid delivery/filling assembly,

b. a valve assembly mounted in the housing and incorporating

1. a liquid inlet portal connectable to a source of said liquid, and

2. flow control means movable between a first flow stopping position and a second flow permitting position, and

c. interlock means

1. mounted in the housing and controllably connected to the flow control means of the valve assembly for preventing movement of said flow control means whenever desired,

2. enabling the actuation of the flow control means only when the liquid transfer assembly is securely, matingly, cooperatingly mounted in the desired interengagement with the liquid delivery/filling assembly, and

3. comprising disconnection preventing means cooperatively associated with the liquid delivery/filling assembly to prevent relative rotation of said components, said disconnection preventing means being automatically activated during the actuation of said flow control means and cooperating with the mated connection means of the housing and the interconnection means of the liquid delivery/filling assembly to prevent separation of the liquid transfer assembly from the liquid delivery/filling assembly whenever the desired liquid is flowing therethrough,

whereby assurance is provided that the integrated, cooperating liquid flow controlling system of this invention is securely mounted in the precisely desired position prior to enabling any liquid flow to occur.

5,172,741

TIRE BEAD SEATER

Oscar C. Blomgren, Jr., Lake Forest, Ill., assignor to Tuxco Corporation, Gurnee, Ill.

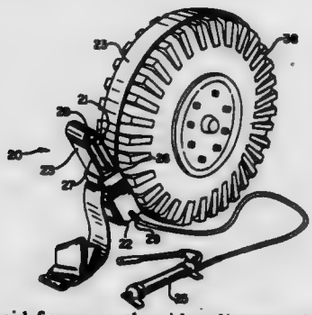
Filed Jul. 15, 1991, Ser. No. 731,123

Int. Cl.[5] B60C *25/12*

U.S. Cl. 151—1.21 **11 Claims**

1. A tire bead seater for mounting a tubeless tire on a vehicle wheel to constrict said tire, said tire having beads and said wheel having rims against which said beads are adapted to seal, said bead seater adapted to force said beads of said tire to spread and contact said wheel rims in a proper seated and sealed position, said tire bead seater comprising, a frame adapted to extend substantially tangential to said tire, a hydraulic ram mounted on the frame, a piston rod extendable there-

from, a piston head on the piston rod, a plurality of different size straps of flexible material, said frame having a plurality of different size slots for receiving said plurality of different size straps, said piston head having the ability to guide any one of said plurality of different size straps, each of said plurality of different size straps being attachable to said frame such that when any one of said plurality of different size straps is used, it is in tire-circumventing relation with said tire having one end



attached to said frame on the side adjacent said tire and the other end running through said frame and first trained over said piston head and then attached to the side of said frame opposite the side adjacent to said tire, and means for operating said ram, whereby extension of said piston rod/piston head shortens the circumferential length of said strap to compress said tire and cause expansion of said beads for engaging said wheel rims.

5,172,742

PANEL SHUTTER DEVICE

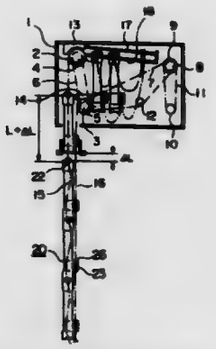
Hiroshi Iwasaki; Masaru Tanaka; Hiroshi Kimura, and Yoshihiro Uesugi, all of Tokyo, Japan, assignors to Sanwa Shutter Corporation, Tokyo, Japan

Filed Apr. 1, 1991, Ser. No. 678,638

Claims priority, application Japan, Apr. 2, 1990, 2-84937; Apr. 2, 1990, 2-84938; Mar. 12, 1991, 3-72295

Int. Cl.[5] E06B *3/92*

U.S. Cl. 160—36 11 Claims



1. A panel shutter apparatus, comprising:

a plurality of panels defining a shutter, each panel having a top edge, a bottom edge, and two side edges, each panel having a support shaft projecting laterally from adjacent the top of each said panel and a guide shaft projecting laterally from adjacent the bottom of each said panel;

a pair of vertically disposed guide rails, between which said panels extend, for guiding the side edges of said panels along said guide rails as said panels are raised and lowered;

a first connecting strip joining the guide shafts of adjacent panels;

a second connecting strip joining the support shafts of adjacent panels;

a housing, including a pair of horizontal housing rails for receiving said support shafts of said panels, for storing said panels in vertically oriented side-by-side relationship as said panels are raised; and

reversible drive means in said housing, including a rotary guide member for engaging said first connecting strip and driving said first connecting strip in forward and reverse directions to respectively raise and lower said panels, said drive means further including a wheel engaging said second connecting strip and driving said second connecting strip in forward and reverse directions to respectively raise and lower said panels; whereby both the top and bottom of each said panel are, respectively, positively drawn into said housing from said vertical guide rails and dispensed from said housing to said vertical guide rails upon raising and lowering of said panels, without jamming.

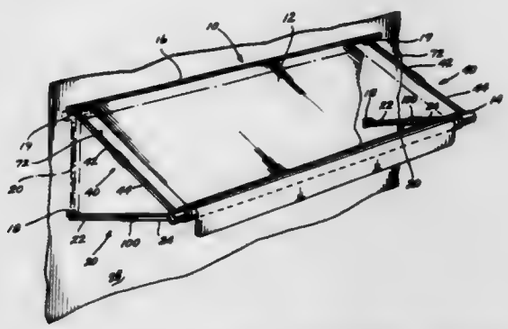
RETRACTABLE AWNING WITH IMPROVED LOCKING MECHANISMS

Howard Wallace, Redmond; Robert Bridges; Anthony Grasso, both of Seattle, all of Wash.; Greg Marting, Aptos, and Kurt Solland, Long Beach, both of Calif., assignors to Carter Shades, Inc., Seattle, Wash.

Filed Dec. 3, 1991, Ser. No. 801,792

Int. Cl.[5] E04F *10/06*

U.S. Cl. 160—67 20 Claims



1. An awning frame including a shade adapted to be moved between a furled and an unfurled position, the frame comprising:

a) rafter bar means including

i) first and second pivotally connected arms; and

ii) locking means for preventing said first and second arms from pivoting relative to each other when the shade is in the unfurled position, and unlocking means for remotely unlocking said first and second arms such that said arms are free to pivot relative to each other;

b) upright means formed of two pieces adapted to slide longitudinally with respect to each other;

c) locking means associated with said upright means to prevent said two pieces from sliding longitudinally with respect to each other; and

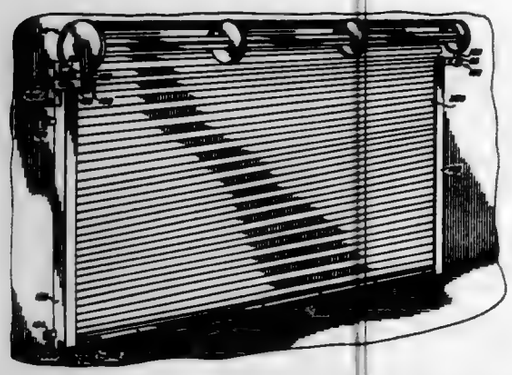
d) locking means adapted to interconnect and hold said upright means to said rafter bar means when said awning shade is in the furled position.

5,172,744

ROLL-UP DOOR SYSTEM

Harry E. Finch, 5273 Vista del Sol, Cypress, Calif. 90630, and Gene J. Sawyer, 24771 Acropolis Dr., Mission Viejo, Calif. 92691

Filed Oct. 23, 1989, Ser. No. 424,944
Int. Cl.[5] E06B 9/08
U.S. Cl. 160—133 37 Claims



1. A roll-up door system for mounting across a door opening, comprising:

a pair of guide tracks for vertical installation as door guide members on both sides of the door opening;

a hexagonal tube member, said hexagonal tube member being hollow;

a plurality of drums mounted on said hexagonal tube member, one of said drums being mounted at each end of said hexagonal tube member, each of said drums having means defining a generally hexagonal central opening for receiving the hexagonal tube member therein;

an axle extending through the interior of said hexagonal tube member,

at least one torsion spring mounted about said axle within said hexagonal tube member and secured at one end thereof to said axle;

torque means coupled between said torsion spring and said tube member, said torque means being slidable longitudinally of said axle and said tube member to accommodate changes in dimension of said torsion spring during rotation of the tube member;

bearing means for mounting said hexagonal tube member for rotational movement on said axle;

means for supporting said axle in a horizontal position adjacent the upper edge of the door opening; and

a roll-up door mounted at the top thereof to and supported by said plurality of drums, said roll-up door being positionable to cover the door opening with the side edges of said roll-up door being retained by said guide tracks, said roll-up door being rolled about said plurality of drums as said roll-up door is raised;

wherein said torque means include a corresponding spring plate located inside said hexagonal tube member, said torsion spring being secured at the other end thereof to said spring plate, said torque means balancing the weight of said roll-up door to allow it to be easily raised or lowered, said spring plate being free to move longitudinally within said hexagonal tube member while being constrained to rotate with said hexagonal tube member about said axle; and

wherein said spring plate is U-shaped, with the base of the U being flat and rectangular, the outside dimensions of said base being selected to match the inside dimensions of two opposed walls of said hexagonal tube member such that said spring plate is able to slide longitudinally within said hexagonal tube member but is constrained against angular rotation relative to said hexagonal tube member.

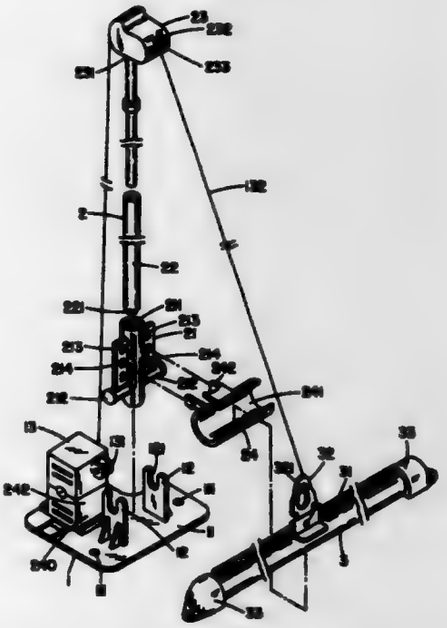
AUTOMOTIVE WINDOW SCREEN CONTROL DEVICE

Fore S. Wang, No. 174, La. 131, Sec. 2, True Hsing Rd., Panchiao, Taipei, Taiwan

Filed Dec. 6, 1991, Ser. No. 803,203
Int. Cl.[5] B60J 1/20
U.S. Cl. 160—370.2 3 Claims



1. An automotive window screen control device comprising:

a base, said base having two paralleled supports and a winding device on a top edge thereof, said two paralleled supports each having a circular notch at a top edge thereof, said winding device having a winding shaft and means for rotating said winding shaft;

a post assembly supported on said two paralleled supports and vertically extending therefrom; said post assembly comprising a tube holder supported on said two paralleled supports, a head, a telescopic tube connected between said tube holder and said head, and a screen holder, said tube holder comprising a central tube, a cross beam transversely connected through said central tube and supported on said two opposite paralleled supports at said circular notches, and two wing walls respectively extending outwardly from said central tube at two opposite sides and disposed above the cross beam, each of said wing walls having holes arranged on a vertical line, said head having a blind hole and a hooked projection on a bottom edge thereof, and a wire hole, said screen holder extending from a frame, said frame having an arc-shaped wall at an angle of 180° degrees and having two tenons alternatively releasably insertable in said holes on said wind walls;

an auto-reversible reel of screen held in said screen holder, said auto-reversible reel of screen having a screen attached with a hanging plate for releasably hanging on said hooked projection; and

a wire, said wire having one end connected to and wound on said winding shaft and the opposite end inserted through said wire hole and connected to said hanging plate whereby by alternately inserting said tenons in said holes on said wing walls, the angular position of said screen is adjusted.

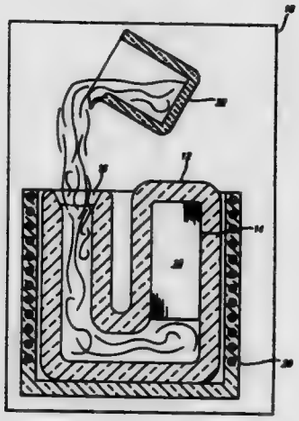
METHOD OF PRODUCING REINFORCED COMPOSITE MATERIALS

John M. Corwin, 703 Mt. Vernon Blvd., Oak, Mich. 48073

Continuation of Ser. No. 258,362, Oct. 17, 1988, Pat. No. 4,932,099. This application Mar. 23, 1990, Ser. No. 498,296
The portion of the term of this patent subsequent to Jun. 12, 2007, has been disclaimed.
Int. Cl.[5] B22D *19/02*
U.S. Cl. 164—97 8 Claims



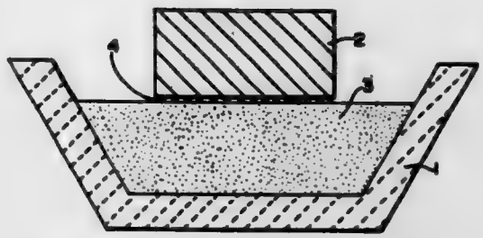
1. A method of producing a ceramic reinforced composite material, said method comprising the steps of:
(a) melting an aluminum alloy;
(b) heating said molten aluminum alloy to a temperature in the range of about 1,800° F. to about 2,200° F.;
(c) pouring said molten aluminum alloy into a heated mold containing a mass of ceramic reinforcing material, said heated mold being evacuated to a first pressure which is below atmospheric pressure prior to pouring said molten aluminum alloy;
(d) almost immediately after pouring said molten aluminum alloy, applying a second pressure greater than said first pressure to rupture an oxide layer formed from said molten aluminum alloy to permit said molten aluminum alloy to wet said mass of ceramic reinforcing material, said second pressure being in the range of about 760 to about 1500 mm Hg; and
(e) solidifying said molten aluminum alloy.

5,172,747
METHOD OF FORMING A METAL MATRIX COMPOSITE BODY BY A SPONTANEOUS INFILTRATION TECHNIQUE

Michael K. Aghajanian, Bel Air, Md., and Alan S. Nagelberg, Wilmington, Del., assignors to Lanxide Technology Company, LP, Newark, Del.

Continuation of Ser. No. 269,377, Nov. 10, 1988, Pat. No. 5,016,703. This application May 20, 1991, Ser. No. 702,802
The portion of the term of this patent subsequent to May 21, 2008, has been disclaimed.
Int. Cl.[5] B22D *19/14*
U.S. Cl. 164—97 17 Claims

1. A method for making a metal matrix composite, comprising:
providing a permeable body comprising at least one substantially nonreactive filler material provided in at least one form selected from the group consisting of a loose mass and a preform;
providing a source of molten matrix metal;
providing an infiltrating atmosphere in communication with at least one of the permeable body and the matrix metal;
defining at least a portion of a surface boundary of the permeable body with a barrier;
supplying a material comprising an infiltration enhancer to

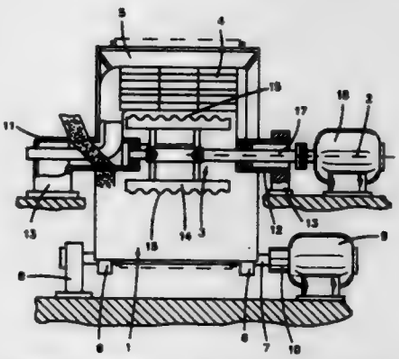


at least a portion of an interface between said matrix metal source and said permeable body; and
spontaneously infiltrating at least a portion of said permeable body with said molten matrix metal up to said barrier.

5,172,748
DEVICE FOR THE BATCH-WISE PREPARATION OF LOOSE MATERIAL

Franz Satmer, Schaffhausen, Switzerland, assignor to Georg Fischer AG, Schaffhausen, Switzerland

Filed Dec. 4, 1990, Ser. No. 621,806
Claims priority, application Switzerland, Dec. 6, 1989, 04390/89-6
Int. Cl.[5] B22C *5/02*
U.S. Cl. 164—412 8 Claims



1. In a foundry apparatus, a device for the batch-wise preparation of loose molding material having a horizontally arranged drum and an impact rotor rotating concentrically to the drum axis on a shaft wherein the impact rotor has at least two beating blades, the improvement which comprises each beating blade is fixed to said impact rotor and non-moveable relative thereto and is provided with a wave-shaped surface on the outer peripheral side thereof.

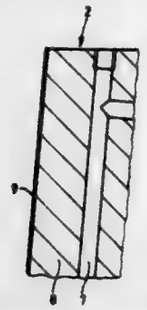
5,172,749
CONTINUOUS STEEL CASTING MOLD

Günter Flemming, Erkrath, Fed. Rep. of Germany, assignor to SMS Schloemann Siemag Aktiengesellschaft, Duesseldorf, Fed. Rep. of Germany

Filed Dec. 23, 1991, Ser. No. 812,440
Claims priority, application Fed. Rep. of Germany, Dec. 24, 1990, 4041830
Int. Cl.[5] B22D *11/00;* B22C *3/00*
U.S. Cl. 164—418 8 Claims

1. A continuous steel casting mold for continuously casting thin slabs, the mold comprising broad side walls and narrow side walls between the broad side walls, the broad side walls defining a widened pouring zone, the broad side walls compris-

ing a base member of copper alloy, the base member having cooling ducts, each broad side wall having a surface facing the



pouring zone, the base member having on the surface thereof a working coating, the working coating being a layer of pure copper having a thickness of at least 0.2 mm.

5,172,750

INSTALLATION FOR CONTINUOUS CASTING BETWEEN ROLLS

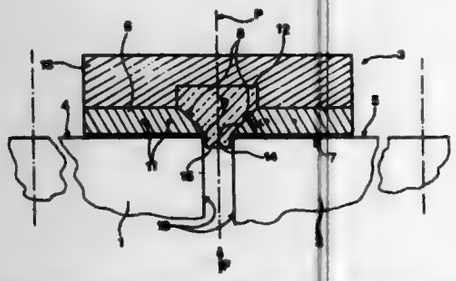
Jean-Pierre Birat, Semecourt; Philippe Bleu, Plappeville; Christophe Ganser, Fameck; Yves Grandgeorgevre, Rombas; Jean-Luc Jacquot, Metz; Jacques Spiquel, Montigny; Laurent Sorin, Fameck, and Jean-Bernard Veyret, Metz, all of France, assignors to Usinor Sacilor, Puteaux, France; Thyssen Stahl Aktien-Gesellschaft, Duisburg and Thyssen Edelstahlwerke AG, Krefeld, both of, Fed. Rep. of Germany

Filed Aug. 23, 1991, Ser. No. 748,927

Claims priority, application France, Sep. 3, 1990, 90 11000

Int. Cl.[5] B22D *11/06*

U.S. Cl. 164—428 **16 Claims**



1. Installation for continuous casting comprising two rolls having parallel axes of rotation, each roll having planar end faces at opposite ends of said each roll, two fixed lateral walls respectively located at said opposite ends of said rolls, said rolls defining between said rolls and with said two fixed lateral walls a casting space for molten metal, each of said lateral walls comprising at least one lateral part placed against said planar end face of an adjacent one of said rolls and constituted by a portion of a disc having an outside diameter equal to an outside diameter of said adjacent roll, and a part which is central relative to said casting space, confronts said casting space and is composed of an insulating refractory material, said disc portion constituting said at least one lateral part being made from a material having properties of thermal conductivity and mechanical resistance superior to properties of thermal conductivity and mechanical resistance of said refractory material and being a frustoconical disc portion having a face which has an edge having a first radius of curvature and is remote from said adjacent roll and a face which has an edge having a larger radius of curvature than said first radius of curvature and is placed against said end face of said adjacent roll, said frustoconical disc portion having a frustoconical surface which is in contact with said insulating material of said central part.

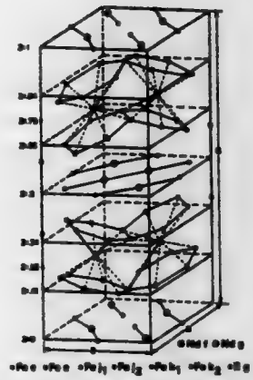
HIGH ENERGY PRODUCT RARE EARTH-IRON MAGNET ALLOYS

John J. Croat, Sterling Heights, Mich., assignor to General Motors Corporation, Detroit, Mich.

Continuation of Ser. No. 764,606, Aug. 12, 1985, abandoned, which is a division of Ser. No. 544,728, Oct. 26, 1983, Pat. No. 4,802,931, which is a continuation-in-part of Ser. No. 508,266, Jun. 24, 1983, abandoned, which is a continuation-in-part of Ser. No. 414,436, Sep. 3, 1982, Pat. No. 4,851,058. This application Jul. 16, 1987, Ser. No. 75,261

Int. Cl.[5] B22D *11/00*

U.S. Cl. 148—101 **6 Claims**



1. A method of making a composition having permanent magnet properties at room temperature comprising

preparing a melt of a composition comprising, on an atomic percentage basis of the total composition, 0.5 to 10 percent boron, 10 to 50 percent of one or more rare earth metals (RE) where neodymium or praseodymium or a mixture thereof constitutes at least 60 percent of the total rare earth element content, and 50 to 90 percent of one or more transition metals (TM) taken from the group consisting of iron and mixtures of iron and cobalt where iron constitutes at least 60 percent of the total transition metal, such molten composition being susceptible to being rapidly cooled to solidification over a determinable and controllable range of cooling rates within which range a series of fine grained crystalline products are formed containing the phase $RE_2TM_{14}B_1$ that respectively display (a) values of magnetic coercivity that continually increase toward a maximum value and decrease from such value as the cooling rate is increased, and (b) values of magnetic remanence that increase over at least a part of such range as the cooling rate is increased, and

continually rapidly cooling portions of the melt by ejecting them onto a moving quench surface to form a fine grained crystalline product containing the phase $RE_2TM_{14}B_1$ while controlling the cooling rate within said cooling range by a method comprising controlling the velocity of the quench surface such that the product has a desired combination of magnetic coercivity and remanence.

5,172,752

CURVED HEAT EXCHANGER WITH LOW FRONTAL AREA TUBE PASSES

Edward E. Goetz, Jr., 27935 Quail Hollow Ct., Farmington Hills, Mich. 48331

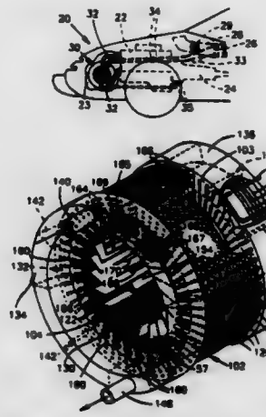
Continuation-in-part of Ser. No. 537,497, Jun. 12, 1990, Pat. No. 5,078,026. This application Oct. 11, 1991, Ser. No. 775,011

Int. Cl.[5] F28D *1/04*; F28F *13/12, 9/26*; F01P *7/10*

U.S. Cl. 165—41 **13 Claims**

1. A heat exchanger for receiving fluids from a plurality of mechanisms that each impart heat energy to one of the fluids, comprising a series of tubes arranged side-by-side in an arcuate

pattern, each of said tubes being generally sector shaped in cross section and having discrete inner and outer sections each providing a separate fluid flow path, tank means for receiving fluid from at least one of said mechanisms, said tank means being connected to the outer sections of said tubes for circulating fluid therethrough, fluid conductor means for operatively



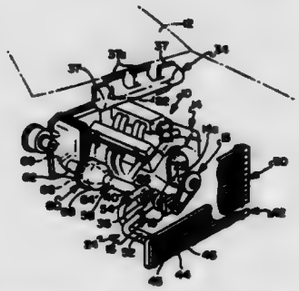
connecting the inner sections of said tubes to a second of said mechanisms, and web means interconnecting said inner and outer sections of each tube for insulating said fluid flow paths from one another and reducing the conduction of heat energy between fluids flowing in the flow paths of said inner and outer sections.

5,172,753

AUTOMOBILE HEATING SYSTEM

Prasad S. Kadle, Getzville, and Mohinder S. Bhatti, Amherst, both of N.Y., assignors to General Motors Corporation, Detroit, Mich.

Filed Oct. 15, 1991, Ser. No. 776,033
Int. Cl.[5] B60H 3/00; F02B 43/00
U.S. Cl. 165—42 3 Claims



1. In an automobile air conditioning system having an internal combustion engine for driving the air conditioning system for supplying cooled and heated air to a passenger compartment of a vehicle through an air distributing system the improvement comprising:

motive means directly driven by the internal combustion engine for providing energy; said motive means including high speed drive means for providing an output speed greater than the output speed of the internal combustion engine;

said air conditioning system including an air compressor and an air turboexpander and an intercooler therebetween; said air compressor operative to compress and heat air for flow to the air distributing system for heating the passenger compartment and for flow to the intercooler for removing energy from ambient air and said air turboexpander operative to expand the ambient air cooled by the intercooler for providing a cool air source for the air distributing system;

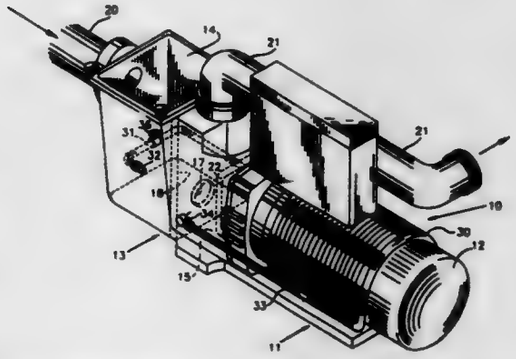
said intercooler having a hot air side and means for connecting said hot air side of said intercooler to the intake manifold of said engine for supercharging an air intake thereto.

5,172,754

HEAT EXCHANGER FOR RECOVERY OF HEAT FROM A SPA OR HOT TUB PUMP MOTOR

Neil M. Graber, 4125 E. Independence, Charlotte, N.C. 28205, and Carol R. Puryear, 6527 Crookstone Pl., Charlotte, N.C. 28215

Continuation-in-part of Ser. No. 263,373, Oct. 27, 1988, abandoned. This application Jan. 17, 1991, Ser. No. 643,139
Int. Cl.[5] F28F 7/00; H02K 9/00, 9/02; F04B 17/00
U.S. Cl. 165—47 9 Claims



1. An apparatus for recovery of waste heat from an electric motor driven pump having a wet end for recirculating water through a spa or hot tub comprising:

a coil of tubing contacting the exterior surface of said motor and having opposite respective ends thereof connected to a discharge and a suction side of said pump;

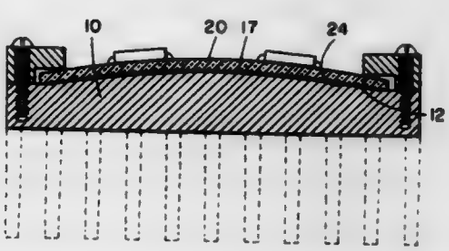
a motor seal sealing an armature shaft of said motor from pump fluid leakage and an annular restrictor separate from said motor seal being mounted to rotate with said motor shaft and sized to create additional friction between the outer surface of said restrictor and the inner surface of said motor seal thereby further heating the water recirculating between the spa or hot tub and the pump.

5,172,755

ARCUATE PROFILED HEATSINK APPARATUS AND METHOD

Victor M. Samarov, Carlisle, Mass., assignor to Digital Equipment Corporation, Maynard, Mass.

Filed Apr. 1, 1992, Ser. No. 861,724
Int. Cl.[5] H01L 23/40
U.S. Cl. 165—80.3 24 Claims



1. A cooling apparatus for a heat generating device comprising:

a substrate, on which is mounted said heat generating device;

a heatsink including a convex arcuate surface, said arcuate surface curved along a single axis, the profile of said convex arcuate surface defined by the following equation:

$$Y=P*C*(X/L-(2*(X^3/L^3))+X^4/L^4)$$

where:

P=a uniformly distributed load along the length L of said convex arcuate surface of said heatsink;

C=the flexural stiffness constant of said substrate;

L=the length of said convex arcuate surface of said heatsink;

X and Y=coordinates defining the curve with respect to a two-dimensional Cartesian coordinate system having an origin on said convex arcuate surface; and

means for maintaining said substrate in close contact with said arcuate surface of said heatsink.

19. A method of producing a cooling apparatus for a heat generating device mounted on a substrate, comprising the steps of:

measuring the initial warpage of said substrate;

if the initial warpage of said substrate is not less than a predetermined value, discarding said substrate;

if the initial warpage of said substrate is less than said predetermined value, flexing said substrate over a convex arcuate surface of a heatsink and attaching said substrate to said heatsink using an attachment means such that said substrate and said heatsink are in close thermal contact.

22. A method of producing a cooling apparatus for a heat generating device mounted on a substrate, comprising the steps of:

determining relevant characteristics of said substrate, said relevant characteristics of said substrate including the length of said substrate, the Young's modulus of the material of said substrate, the moment of inertia of said substrate, the initial warpage of said substrate, and the flexural strength of said substrate;

designing and producing a heatsink with a convex arcuate surface based on said characteristics of said substrate; and

flexing said substrate over said convex arcuate surface of said heatsink and attaching said substrate to said heatsink using an attachment means such that said substrate and said heatsink are in close thermal contact.

5,172,756

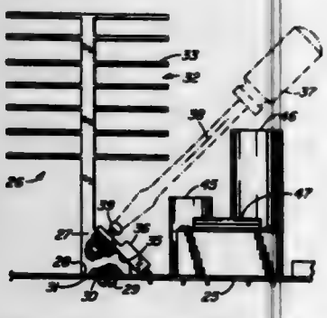
HEAT SINK

D. Anthony R. Jayamanne, Carrying Place; Stephen S. Hall, Belleville, and Agostino Cozzi, Corbyville, all of Canada, assignors to Northern Telecom Limited, Montreal, Canada

Filed Jun. 21, 1991, Ser. No. 720,216

Int. Cl.[5] H05K *7/20*

U.S. Cl. 165—80.3 15 Claims



1. Heat sink apparatus for accessibly mounting heat producing electronic devices having bent leads on a circuit board in close proximity to a plurality of obstructing components mounted thereon, comprising in combination:

a circuit board adapted to mount the components;

a plurality of the heat producing devices; and

a heat sink supportably mounting the devices and comprising,

a body member, said member being longitudinally extended to function as a partition between selected ones of components mounted on the circuit board and having a supporting surface attached to the board;

a radiator member in integral thermal contact with the body member and adapted to function cooperatively therewith as a continuous electrostatic shield between the selected ones of components; and

an inclined mounting surface forming part of the body member on which the devices are mechanically attached in good thermal contact and with the bent leads positioned in substantially vertical registry with corresponding apertures in the board for establishing electrical contact with the circuit thereof, the mounting surface being angularly disposed relative to the supporting surface such that an axis normal to the mounting surface and in registry with individual ones of the devices extends through a space between the radiator member and the nearest obstructing component to provide unobstructed tool access to the devices.

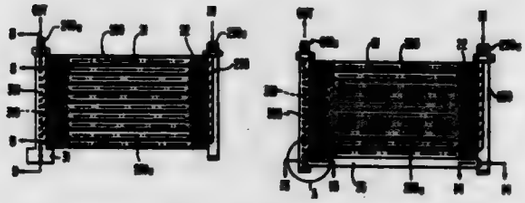
CONDENSER WITH A BUILT-IN RECEIVER

Hisao Aoki, Maebashi, Japan, assignor to Sanden Corporation, Gunma, Japan

Continuation of Ser. No. 470,254, Jan. 25, 1990, abandoned. This application Jun. 20, 1991, Ser. No. 722,403
Claims priority, application Japan, Feb. 1, 1989, 1-9898[U]
Int. Cl.[5] F28B 9/08
U.S. Cl. 165—110 30 Claims



1. In a condenser for a refrigerant fluid circuit, said condenser comprising a plurality of tubes having opposite first and second open ends, a plurality of fin units disposed between said plurality of tubes, first and second header pipes fixedly disposed at said opposite ends respectively, said open ends of said tubes disposed in fluid communication with the interior of said header pipes, said first header pipe having an inlet means for linking the condenser to an external element of the circuit, said second header pipe having a closed end and an outlet means for linking the condenser to an external element of the circuit, the improvement comprising:

said closed end of said second header pipe disposed at a location below said outlet means, said condenser further comprising a pipe member having opposite open ends and disposed within said second header pipe, one open end of said pipe member disposed near said closed end of said second header pipe, a second open end of said pipe member hermetically linked to said outlet means such that refrigerant fluid flows from said condenser to the external elements of the circuit exclusively through said pipe member; and

refrigerant accumulating means for accumulating condensed liquid refrigerant therein, said accumulating means disposed at and closing the closed end of said second header pipe.

5,172,759

PLATE-TYPE REFRIGERANT EVAPORATOR

Masahiro Shimoya, Chita; Tadashi Nakabou, Anjo, and Yoshiyuki Yamauchi, Agui, all of Japan, assignors to Nippondenso Co., Ltd., Kariya, Japan

Division of Ser. No. 603,623, Oct. 26, 1990, Pat. No. 5,137,082. This application Jun. 29, 1992, Ser. No. 905,877
Claims priority, application Japan, Oct. 31, 1989, 1-285829; Sep. 17, 1990, 2-248518
Int. Cl.[5] F25B 39/02; F28F 13/08
U.S. Cl. 165—110 5 Claims

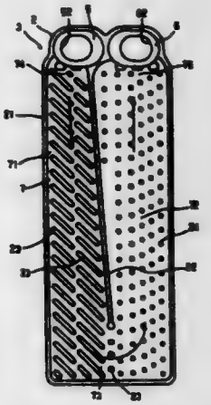
1. A plate-type refrigerant evaporator comprising:

a plurality of flat tubes each formed by two core pates sealingly jointed together;

each flat tube including an inlet tank portion and an outlet tank portion and defining a fluid passage therein, the fluid passage being communicated at its opposite ends with the tank portions and a cross sectional area of the fluid passage being increased along a flowing direction of the refrigerant;

first ribs having a relatively high flowing resistance and being disposed on the fluid passage in a vicinity of the inlet tank portion,

second ribs having a relatively low flowing resistance and being disposed on the fluid passage in a vicinity of the outlet tank portion; and



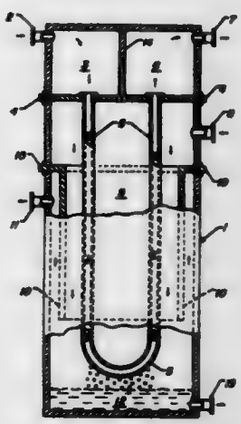
a corrugated fin interposed between and secured to adjacent core plates of each adjacent pain of the flat tubes.

5,172,760

HEAT EXCHANGE APPARATUS FOR SEPARATING A RESIN PHASE FROM A SOLVENT SOLUTION CONTAINING A SOLVENT, DEMETALLIZED OIL AND A RESIN

Brian W. Hedrick, Rolling Meadows, Ill., assignor to UOP, Des Plaines, Ill.

Division of Ser. No. 632,708, Dec. 24, 1990, Pat. No. 5,098,994. This application Oct. 15, 1991, Ser. No. 776,837
Int. Cl.[5] F28F 9/22
U.S. Cl. 165—114 5 Claims



1. A heat-exchange apparatus for separating a resin phase from a solvent solution containing a solvent, demetallized oil and resin which comprises:

(a) at least one generally vertically positioned heat-exchange surface;

(b) a means for directing the flow of said solvent solution in a downward direction over a portion of said heat-exchange surface thereby heating said solvent solution to precipitate a resin phase wherein said means is a baffle having a length of about 90% of the average length of said generally vertically positioned heat-exchange surface and forming an annulus within said apparatus to reverse the direction of fluid flow;

(c) an outlet means to recover a solvent solution having a reduced concentration of resin which outlet means is located to essentially reverse the flow of said solvent

solution having a reduced concentration of resin to a generally upward direction before exiting said heat-exchange apparatus; and

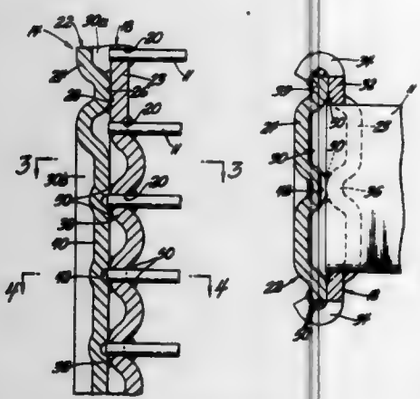
(d) an outlet means to recover said resin phase from a lower portion of said heat-exchange apparatus.

5,172,761

HEAT EXCHANGER TANK AND HEADER

Peter A. Lyon, Lockport, N.Y., assignor to General Motors Corporation, Detroit, Mich.

Filed May 15, 1992, Ser. No. 883,739
Int. Cl.[5] F28F 9/02
U.S. Cl. 165—173 4 Claims



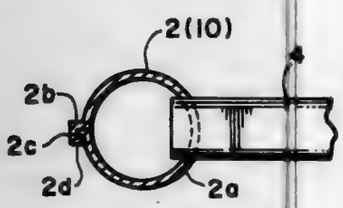
1. A heat exchanger header comprising a header plate having tube apertures for receiving heat exchanger tubes, a tank plate parallel with said header plate and having chamber indentations in one side thereof facing said header plate, said plates having mating surfaces surrounding said chamber indentations so as to define tank chambers open to selected ones of said tube apertures, said header plate having a plurality of tube indentations extending centrally therein at selected adjacent ones of said tube apertures, said tank plate having a tank rib extending within said chamber indentations forming a substantially continuous projection on said one side facing said header plate for contacting said tube indentations, and bonding material for effecting the bonding of said plates at said mating surfaces and between said tank rib and said tube indentations.

5,172,762

HEAT EXCHANGER

Toshiharu Shimura, Iseaki; Nobuyasu Ando, Takasaki; Hisao Aoki, Maebashi, and Naoyoshi Sutou, Takasaki, all of Japan, assignors to Sanden Corporation, Gunma, Japan

Filed Oct. 22, 1990, Ser. No. 600,869
Claims priority, application Japan, Oct. 20, 1989, 1-122951[U]; Oct. 20, 1989, 1-122953[U]; Oct. 20, 1989, 1-272968; Feb. 2, 1990, 2-23892; Mar. 7, 1990, 2-23899[U]
Int. Cl.[5] F28F 9/02
U.S. Cl. 165—173 6 Claims



1. A heat exchanger comprising:

a pair of tubular header pipes having axes which are parallel, each said header pipe having a plurality of axially spaced oblong slots;

a plurality of generally flat tubes extending between said header pipes and individually through said slots, for providing fluid communication between said header pipes;

a plurality of radiation fins extending between adjacent flat tubes; and

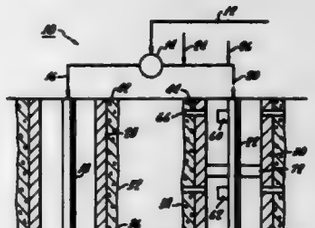
wherein said header pipes each comprise a single bent rectangular plate member having a plurality of oblong slots, and two side edge connecting portions, wherein one side edge connecting portion comprises an outwardly projecting U-shaped flange portion, and the other side edge connecting portion comprises an outwardly extending flange portion, said flat tubes being received within said slots, wherein said slots of said single bent rectangular plate member are sized to engage and press into said flat tubes to fixedly hold said flat tubes in place, and wherein said U-shaped flange portion of said single bent rectangular plate member extends over and retains the outwardly extending flange portion so that the single bent rectangular plate member forms a tubular header pipe.

5,172,763

STEAM-FOAM DRIVE

Shane S. Mohammadi, Tustin, and Shlomo R. Frieman, Los Angeles, both of Calif., assignors to Union Oil Company of California, Los Angeles, Calif.

Filed Aug. 30, 1991, Ser. No. 752,855
Int. Cl.[5] E21B 43/24
U.S. Cl. 166—263 20 Claims



1. A steam-foam drive method comprising the steps of simultaneously (a) injecting steam into at least a portion of a subterranean oil-bearing formation from a steam injection zone located within the subterranean oil-bearing formation while (b) injecting foam into at least a portion of the subterranean oil-bearing formation from a foam injection zone located in a subterranean oil-bearing formation at an elevation above the steam injection zone and periodically (c) lowering the foam injection zone while substantially maintaining the elevation of the steam injection zone constant.

17. A method for concurrently conducting steam-foam drives in a plurality of subterranean oil-bearing formations, adjacent subterranean oil-bearing formations being separated by a substantially steam impervious layer, the method comprising the steps of concurrently treating at least two of the subterranean oil-bearing formations by simultaneously (a) injecting steam into at least a portion of each subterranean oil-bearing formation from respective steam injection zones, each steam injection zone being located in at least a portion of the lower half of the respective subterranean oil-bearing formation while (b) injecting foam into at least a portion of each subterranean oil-bearing formation from respective foam injection zones, each foam injection zone being located in at least a portion of

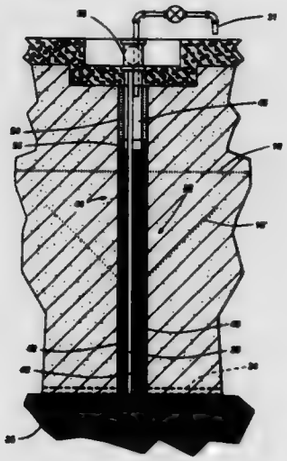
the upper half of the respective subterranean oil-bearing formation, and (c) periodically lowering the foam injection zone in at least one of the subterranean oil-bearing formations while substantially maintaining the elevation of the steam injection zone in the respective subterranean oil-bearing formation constant.

5,172,764

PROCESS AND APPARATUS FOR GROUNDWATER EXTRACTION USING A HIGH VACUUM PROCESS

Paris A. Hajali, Tustin, and William F. Revely, III, Moreno Valley, both of Calif., assignors to Xerox Corporation, Stamford, Conn.

Filed Feb. 7, 1991, Ser. No. 651,880
Int. Cl.[5] E21B *43/18, 43/34*
U.S. Cl. 166—267 22 Claims



1. A process for removing contaminants from a contaminated area of the ground having a vadose zone and water table which comprises providing a borehole in the contaminated area to a depth below the water table; placing in the borehole to a depth below the water table a perforated riser pipe inside of which is situated a vacuum extraction pipe with an opening situated within the perforated riser pipe; while introducing a gas into the riser pipe, applying a vacuum to the vacuum extraction pipe to draw gases and liquid from the soil into the perforated riser pipe and from the riser pipe into the vacuum extraction pipe and transport both the gases and the liquid to the surface as a common stream; forming from the common stream a stream which is primarily liquid and a stream which is primarily gaseous; and separately treating the separated liquid and gas streams.

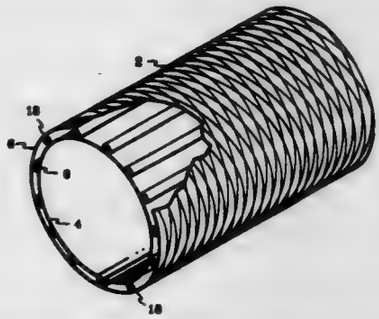
5,172,765

METHOD USING SPOOLABLE COMPOSITE TUBULAR MEMBER WITH ENERGY CONDUCTORS

Alex Sas-Jaworsky, Houston, Tex., and Jerry G. Williams, Ponca City, Okla., assignors to Conoco Inc., Ponca City, Okla.

Continuation-in-part of Ser. No. 614,769, Nov. 15, 1990, which is a division of Ser. No. 495,004, Mar. 15, 1990. This application Dec. 9, 1991, Ser. No. 803,946
Int. Cl.[5] E21B *19/22*; F16L *11/127*
U.S. Cl. 166—384 6 Claims

1. In a process in which a wireline actuated well tool is run into a wellbore by a spooled cable, the improvement which comprises utilizing as the cable an internally fluid-pressurized flexible membrane member stiffened with a plurality of parallel uni-directional composite rods spaced from each other and disposed axially on the outside of and in contact with said membrane, said pressurized membrane member being covered with an outer cylindrical flexible protective sheath separate from said membrane member, energy conductors positioned between said pressurized membrane and said protective sheath,



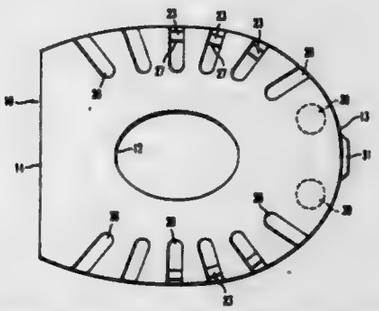
the combination forming a stiffened cylindrical cable having high resistance to buckling.

5,172,766

RADIALLY GROOVED HORSEHOES

Kirk E. Adkins, 400 W. Creekside Cir., Dixon, Calif. 95620

Filed Aug. 12, 1991, Ser. No. 743,934
Int. Cl.[5] A01L *5/00*
U.S. Cl. 168—14 6 Claims



1. A shoe for attaching to the hoof of a horse and shaped as a pad with a center hole of at least 1 and ½ square inches comprising three layers:

(a) a first metal layer comprising aluminum with a thickness between 0.10 inches and 0.30 inches and having an upper surface and a lower surface;

(b) a second thin polymer layer with a thickness between 0.01 inches and 0.06 inches and an upper surface and a lower surface and having the lower surface thereof attached to the upper surface of the first layer and the upper surface suitable to be in contact with the bottom of the hoof of a horse for an extended period;

(c) a third thicker polymer layer with a thickness between 0.10 inches and 0.50 inches and an upper surface and a lower surface and having the upper surface thereof attached to the lower surface of the first layer;

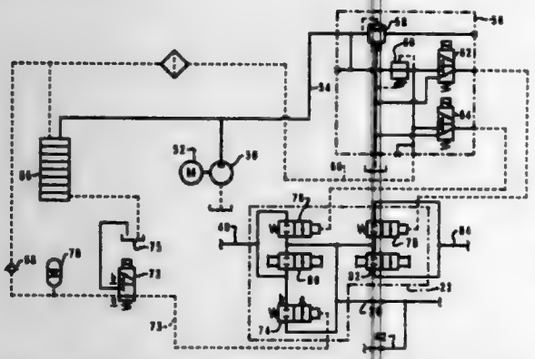
(d) the third layer having three or more molded radial grooves of at least 0.375 inches in length and a depth of at least 0.125 inches in the lower surface of the third layer to form a tread pattern and a countersink area for the heads of shoe nails.

5,172,767

WATER SPRAY CONTROL SYSTEM FOR UNDERGROUND MINING MACHINE

Robert P. Turner, Hotchkiss, and Jason D. Gallob, Paonia, both of Colo., assignors to Atlantic Richfield Company, Los Angeles, Calif.

Filed Jun. 21, 1991, Ser. No. 718,715
Int. Cl.[5] A62C 3/02
U.S. Cl. 169—43 5 Claims



1. In a mining machine having a water spray array operable to minimize ignition or propagation of fire, a water spray supply conduit connected to said spray array, a main water supply conduit adapted to be connected to a source of water, and a source of pressure fluid, the improvement comprising:

a control valve interposed between said main water supply conduit and said water spray supply conduit, said control valve being pressure-fluid operated to supply the water to said spray array;

an electrically operated valve; and

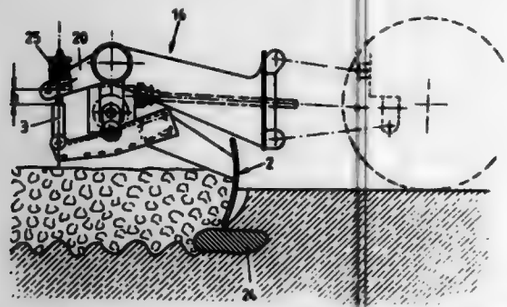
conduit means connecting said source of the pressure fluid to said electrically operated valve and said electrically operated valve to said control valve, respectively, for supplying the pressure fluid to effect operation of said control valve to supply the water to said water spray array in an event of interruption in a supply of electrical power to said electrically operated valve.

5,172,768

DEVICE FOR LOOSENING SOIL

Reinhold Strass, Pappelweg 5, 695 Mosbach, Fed. Rep. of Germany

Division of Ser. No. 268,362, filed as PCT/EP86/00764, Dec. 19, 1986, abandoned. This application Mar. 21, 1990, Ser. No. 496,928
Claims priority, application Fed. Rep. of Germany, Dec. 23, 1985, 3545970
Int. Cl.[5] A01B 11/00, 49/06
U.S. Cl. 172—89 20 Claims



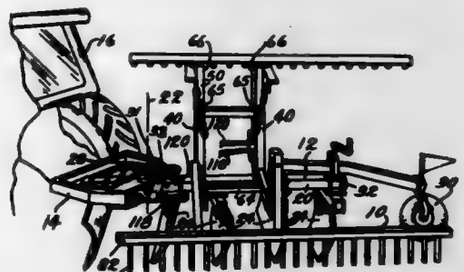
1. Soil loosening apparatus to partake of a predetermined travel distance, comprising a crossbeam (1) serving a support for digging tools (2, 2', 2'') and linked through a first knuckle joint (P4) aligned perpendicular to the travel direction on a frame connected tightly with a traction vehicle and tiltable in a vertical plane extending in the travel direction by means of crank or eccentric drive (4) around said first knuckle joint (P4) engaging through a second knuckle joint (P5) with crossbeam (1), characterized by the fact that first knuckle joint (P4) is arranged at the lower end of a lever (3) with preselectable lever length (l_5, $l_{5'}$), whose upper end is linked on the frame connected tightly with the traction vehicle in a preselectable position through a third knuckle joint (P1 . . . P3) aligned perpendicular to the travel direction, that the distance of the third knuckle joint (P1 . . . P3) from said knuckle joint (P5) is smaller than the sum of lengths (l_5, $l_{5'}$) of said lever (3) and the distance (l_1) of said first knuckle joint (P4) from said second knuckle joint (P5), that the diameter of the circle described by crank drive does not intersect with the connecting line between said first knuckle joint (P4) and said third knuckle joint (P1 . . . P3), and that the length of lever (3) is larger than the radius of the circle described by the crank drive; further characterized by the fact that the eccentric drive (4) and crossbeam (1) are suspended on a transverse support (19) with a side piece (20) projecting generally perpendicularly therefrom, which side piece has various longitudinally spaced holes (21) to which the upper end of lever (3) may be variantly connected with corresponding variance in the longitudinal displacement of knuckle joint (P3), which is the center of motion, compared to knuckle joint (P4) thereby varying the longitudinal distance of the center of motion compared to knuckle joint (P4).

5,172,769

REVERSIBLE TILLAGE ATTACHMENT FOR BIDIRECTIONAL MOLD BOARD PLOW

Clifford A. Lunsford, Jr., Rte. 1, Box 650, Richland, Ga. 31825

Filed Mar. 4, 1991, Ser. No. 664,197
Int. Cl.[5] A01B 49/02
U.S. Cl. 172—162 13 Claims



10. A tillage attachment for a switchable bidirectional moldboard plow adapted to be pulled in the forward direction by a farm tractor and having a switchable tool bar for carrying ground engaging mold boards to alternate right and left hand positions disposed at an angle relative to the forward direction, said tool bar being connected at one end to a tractor hitch and having a swingable trailing end supported by a ground engaging wheel, and a tool bar hydraulic cylinder means connected between the hitch and the tool bar for selectively moving the tool bar between alternate right and left hand positions, said tillage attachment which in use comprises:

a pair of axially spaced apart frame members pivotably mounted on the tool bar along a pivot axis, said pivot axis is aligned with the tine bar, the frame members each including a base member attachable to the tool bar and opposing left and right arms rotatably attached to the base members, said arms extending away from each other at right angles and lying in parallel planes perpendicular to the pivot axis, said arms having free ends, connecting bars parallel to the pivot axis interconnecting adjacent arms for maintaining the arms in the same plane as the frame members, tine bars being pivotably mounted to corresponding pairs of the free ends of the axially adjacent arms in the

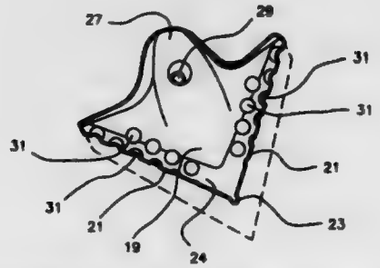
same plane, said tine bars including a plurality of ground engaging tines attached thereto extending at an angle with respect to the arm, said tines engaging the ground when the corresponding arms lie in a horizontal plane and the other tines being elevated away from the ground; actuator means responsively coupled to the tool bar hydraulic cylinder means governing the tool bar, said actuator means being connected between the base member and one of the arms pivotably attached thereto for alternately raising one set of tines and lowering the other set of tines as the plow direction is changed between the respective right and left hand positions.

5,172,770

AGRICULTURAL SHARES WITH DIMPLES

Raymond G. B. Moyle, Beechboro, Australia, assignor to Clarewood Pty Ltd and Wundowie Foundry Pty Ltd, Wundowie, Australia

Filed Mar. 22, 1991, Ser. No. 673,641
Claims priority, application Australia, Mar. 22, 1990, PJ9257
Int. Cl.[5] A01B 3/00
U.S. Cl. 172—732 9 Claims



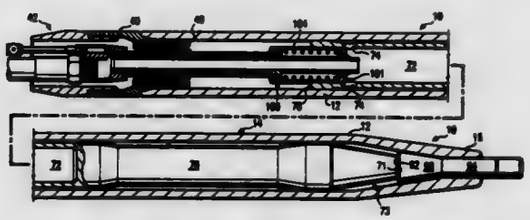
1. An agricultural share comprising a working portion, said working portion having a front face, a rear face and two sides converging to a forward point, said rear face having ground engaging portions extending along said sides and adapted to rest upon the ground before said working portion penetrates the ground, and a plurality of surface discontinuities in the form of dimples formed in a row along the ground engaging portion said sides of said rear face for providing areas of different thicknesses between said front face and said rear face from the front to the rear of said working portion for reducing the surface area of contact between said portions and the ground as said working portion wears.

5,172,771

REVERSIBLE IMPACT-OPERATED BORING TOOL

Dirk A. Wilson, Stillwater, Okla., assignor to Charles Machine Works, Inc., Perry, Okla.

Filed Nov. 6, 1990, Ser. No. 609,897
Int. Cl.[5] E21B 4/14
U.S. Cl. 173—1 3 Claims



1. A method for alternating the operation of a reversible impact operated boring tool between the forward mode and the reverse mode comprising the following steps:

(1) pressurizing the interior chamber of a control sleeve with high pressure fluid from a control fluid supply line, whereby the control sleeve is maintained in a first position to operate the tool in the forward mode;

(2) pressurizing the interior cavity of a striker with high pressure fluid from an operating fluid supply line;

(3) maintaining the supply of high pressure fluid to the interior of the striker for facilitating reciprocal motion of the striker to operate the tool in the forward mode; and

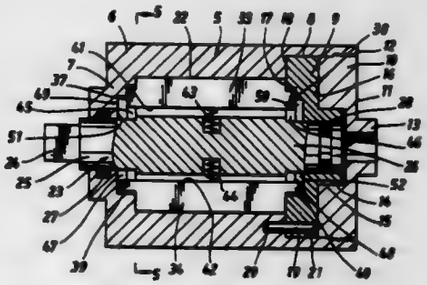
(4) depressurizing the interior chamber of a control sleeve by exhausting the high pressure fluid from the interior chamber while maintaining the supply of high pressure fluid to the interior of the striker, whereby the force of the high pressure fluid within the interior cavity of the striker upon the control sleeve moves the control sleeve to a second position to operate the tool in the reverse mode.

5,172,772

HYDRO-IMPULSE SCREW TOOL

Konrad K. Kettner, and Heinz-Gerhard Anders, both of Anlen, Fed. Rep. of Germany, assignors to Cooper Industries, Inc., Houston, Tex.

Filed Mar. 11, 1991, Ser. No. 667,128
Int. Cl.[5] B25B 19/00
U.S. Cl. 173—93 7 Claims



1. A hydro-impulse screw tool comprising:

a flange in the shape of a cup, said flange having an inner side forming the bottom and sides of a housing;

a rotationally driven hammer mechanism having an output shaft as a screw mechanism, said hammer mechanism positioned within said housing;

a top, said top being opposite of said bottom of said flange and encasing said hammer mechanism within said housing;

two opposing main lamellas on said output shaft, said main lamellas constructed and arranged to be radially adjustable;

two opposing additional lamellas on said output shaft, said additional lamellas together with said main lamellas adjoin on said output shaft at an angle to said housing of said hammer mechanism; said additional lamellas having guide rails,

at least four seal strips on said inner side of said housing to engage said lamellas at points on said inner side of said housing corresponding to said angle of said lamellas on said output shaft;

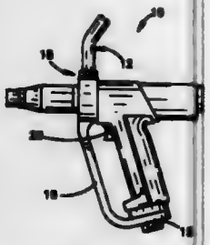
means for positioning said additional lamellas on said output shaft to engage selected seal strips for the generation of a turning impulse to said output shaft by sealing said lamellas against said seal strips, said housing of said hammer mechanism has steering tracks, said steering tracks being shaped by recesses in said bottom of said flange and said top, wherein said means for positioning said additional lamellas on said output shaft comprises arranging said guide rails of said additional lamellas to ride within said respective steering tracks of said bottom of said flange and said top, wherein said steering tracks associated with one of said additional lamellas is axially positioned in relation to said steering tracks of said other of said additional lamellas.

5,172,773

POWER CORD DIVERTER AND SUSPENSION CLAMP FOR A POWER TOOL

Ronald J. Meister, Athens, Pa., and David J. Ropp, Flemington, N.J., assignors to Ingersoll-Rand Company, Woodcliff Lake, N.J.

Division of Ser. No. 685,572, Apr. 15, 1991. This application Feb. 21, 1992, Ser. No. 838,952
Int. Cl.[5] B23B *45/02*
U.S. Cl. 173—170 2 Claims



1. In a hand held electric power tool of the type having a housing body with a handle in which an electric power cord enters at an end of the tool handle, the improvement comprising:

a releasable attachment means attachable to said housing body for diverting the power cord from the end of the tool handle to a desired remote location upon the tool body and for shielding the cord from mechanical damage along the entire length of cord extending between said remote location and said end of the tool handle; and

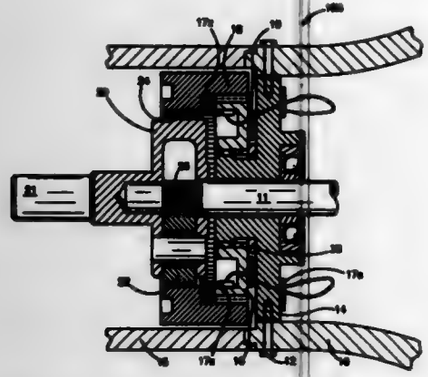
means for clamping the power cord at the desired remote location, wherein the attachment means comprises a rigid conduit cover separable into two mating lateral halves, having a smooth internal loop radius for forming a gradual bend in said cord near the point where the cord enters the tool handle, and having a configuration suitable for a trigger grip guard.

5,172,774

AXIALLY COMPACT TORQUE TRANSDUCER

David R. Melrose, Ringoes, N.J., assignor to Ingersoll-Rand Company, Woodcliff Lake, N.J.

Filed Apr. 12, 1991, Ser. No. 684,226
Int. Cl.[5] B25B *23/14*
U.S. Cl. 173—181 8 Claims



1. A high sensitivity torque transducer for low torque applications capable of installation between a drive motor and an output gear reduction drive train assembly within a housing of a rotating machine in a limited axial space, comprising:

a substantially disk shaped first member rigidly connectable to a static reference member of said housing;

a substantially disk shaped second member slidably connectable to said first member and also slidably connectable to a floating portion of said output gear reduction drive train which experiences reaction torque proportional to an output torque, said second member being rotationally restrained with respect to said floating portion of the output drive train but free to slide axially with respect thereto, said second member further comprising means for concentrating torsional stresses in a zone lying between a radially outer portion and a radially inner portion of said second member; and

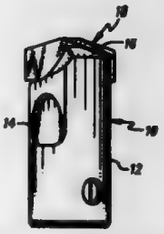
means for sensing and measuring torsional deflections within the zone of said second member at which said torsional stresses are concentrated wherein the means for concentrating torsional stresses in a zone lying between a radially outer portion and a radially inner portion of said second member comprises an annular axially thin section together with a plurality of torsional concentrator voids which define a plurality of shear webs between said radially outer and radially inner portions.

5,172,775

ROTARY DRILL BIT INSERT

Daniel C. Sheirer; Gerald L. Woods, both of Bedford, Pa., and Robert H. Montgomery, Jr., Everett, Pa., assignors to Kennametal Inc., Latrobe, Pa.

Filed Mar. 6, 1991, Ser. No. 665,400
Int. Cl.[5] E21B *7/00*
U.S. Cl. 175—57 20 Claims



1. A rotary drill bit insert (18) comprising an elongated body rotatable about a central axis (22) and having two halves (20, 21) symmetrical about the axis (22), each symmetrical half having a top surface (24) including a planar front surface (42) contiguous and noncoplanar with a back relief surface (44), a bottom surface (26) opposite said top surface (24), a leading face (28) extending between forwardly facing edges of said front surface (42) and of said bottom surface (26), a trailing face (30) opposite said leading face (28) extending between rearwardly facing edges of said back relief surface (44) and of said bottom surface (26) and a distal end surface (32) extending between outwardly distal edges of said top surface (24), leading face (28), trailing face (30), and bottom surface (26), said front surface (42) inclined with radial distance at a constant angle of inclination with respect to a first radial line (48) projecting from said central axis (22) and inclined downwardly and rearwardly from said forwardly facing edge of said front surface (42) and inclined at a constant angle of inclination with respect to a second line (50) normal to said radial line (48) and to said central axis (22).

5,172,776

DIAMOND DRILL CHUCK JAW CARRIER AND ASSEMBLY

Kenneth E. Wilachek, 748 Shaw Avenue, Coquitlam, British Columbia, Canada V3K 2R8

Filed Apr. 22, 1991, Ser. No. 689,376
Int. Cl.[5] E21B *19/10*
U.S. Cl. 175—162 18 Claims

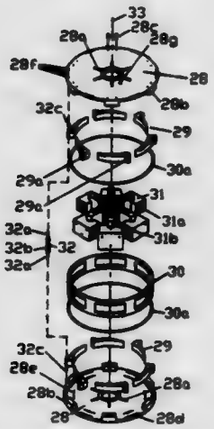
12. Drill drive apparatus for a drill rod string, comprising:

a hydraulically operated drive motor concentrically mounted about the axis of rotation of the drill rod string and operatively connected to a chuck jaw carrier assem-

bly for rotating said chuck jaw carrier assembly about said axis;

said chuck jaw carrier assembly having a concentric aperture for receiving and gripping the drill rod string;

said chuck jaw carrier assembly comprising a plurality of spaced floating chuck jaws mounted in an array about the aperture for slidable radial movement within said chuck jaw carrier assembly, and wedge assemblies circumferentially slidably and pivotally mounted in spaced circumferential array near the periphery of said chuck jaw carrier



assembly, said wedge assemblies in response to rotation of the chuck jaw carrier assembly forcing said chuck jaws into removable engagement with the outer surface of said drill pipe;

said chuck jaws further comprising at their inner faces chuck jaw wheels;

said chuck jaws further comprising hydraulically operated motors operatively engaging said chuck jaw wheels;

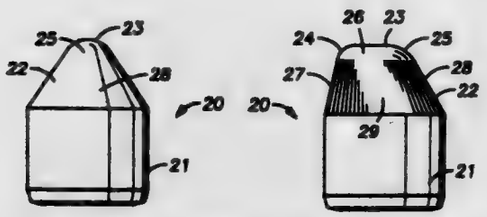
said chuck jaw wheels having toothed outer surfaces for gripping engagement with said drill pipe.

5,172,777

INCLINED CHISEL INSERTS FOR ROCK BITS

Michael A. Siracki, Spring, Tex., and James C. Minikus, Costa Mesa, Calif., assignors to Smith International, Inc., Houston, Tex.

Filed Sep. 26, 1991, Ser. No. 766,882
Int. Cl.[5] E21B *10/16, 10/52*
U.S. Cl. 175—374 6 Claims



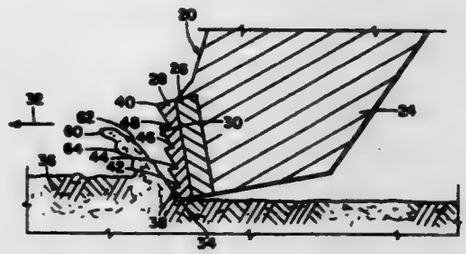
1. A gage insert for a rolling cone rock bit having inner rows of inserts and a gage row of inserts, each gage insert comprising a base section and a cutting tip section, said base section being generally cylindrical and is adapted to extend into a matching hole formed on the gage row of the bit cone, the upper end of the cutting tip section, furthest away from the base section, comprises an elongated crest, having a first end which is adapted to be oriented toward the inner rows of inserts, and a second end which is adapted to be oriented toward the borehole wall surface, the remainder of the cutting tip surface below the crest being formed with an outer surface adjoining both the crest and base section, the elongated crest having a rounded convex exterior surface with the second end having a larger radius than the first end.

5,172,778

DRILL BIT CUTTER AND METHOD FOR REDUCING PRESSURE LOADING OF CUTTERS

Gordon A. Tibbitts, and Paul Pastusek, both of Salt Lake City, Utah, assignors to Baker-Hughes, Inc., Salt Lake City, Utah

Filed Nov. 14, 1991, Ser. No. 794,722
Int. Cl.[5] E21B *10/36*
U.S. Cl. 175—420.1 24 Claims



1. A drag-type drill bit for boring an earth formation comprising:

a bit body having an operating face;

a plurality of cutting elements formed on said operating face;

means for circulating drilling fluid around the cutting elements during drilling;

a cutting surface formed on each cutting element;

a cutting edge formed on each cutting surface and being embedded in the earth formation during boring so that the formation is received against a portion of said cutting surface, said cutting element creating a formation chip having a first surface directed generally toward the cutting element and a second surface directed generally in the direction of cutting element travel when said bit body is operatively rotated, said second surface being exposed to drilling fluid pressure and said first surface being exposed to a lower formation pressure; and

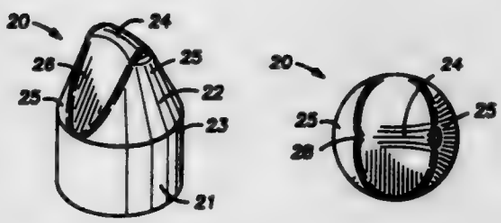
means for minimizing the pressure differential between said first and second chip surfaces, said minimizing means comprising a plurality of steps formed on said cutting surface and having surfaces oriented generally in the direction of cutting element travel, said cutting edge being formed on the forward-most extending step.

5,172,779

RADIAL CREST INSERT

Michael A. Siracki, Spring; Gary R. Portwood, Katy; Chris E. Cawthorne, The Woodlands, all of Tex., and James C. Minikus, Costa Mesa, Calif., assignors to Smith International, Inc., Houston, Tex.

Filed Nov. 26, 1991, Ser. No. 798,435
Int. Cl.[5] E21C *13/00*
U.S. Cl. 175—420.1 9 Claims



1. A shaped insert for a rolling cone rock bit having a base section and a cutting tip section, said base section being gener-

ally cylindrical and is adapted to extend into a matching hole formed in the bit cone, the longitudinal axis of the base forming the axis of the insert, the upper end of the cutting tip section, furthest away from the base section, comprises an elongated crest having a median line substantially normal to the insert axis, the crest being radiused along and normal to the median line and at its ends with the radius forming the crest is smallest at the middle and becoming larger as it reaches the ends, thereby enabling the ends of the crest to have a larger mass than the middle to better absorb the higher loads acting on the outside corners of the crest.

5,172,780

HARD METAL OR HARD MATERIAL TIPPED DRILLING, CHIPPING AND CUTTING TOOLS

Rainer Battliner, Schaanwald, Liechtenstein, and Maximilian Stöck, Azmoos, Switzerland, assignors to Hilti Aktiengesellschaft, Liechtenstein

Filed Nov. 15, 1991, Ser. No. 794,122
Claims priority, application Fed. Rep. of Germany, Nov. 17, 1990, 4036777
Int. Cl.[5] E21B *10/46*
U.S. Cl. 175—435 4 Claims

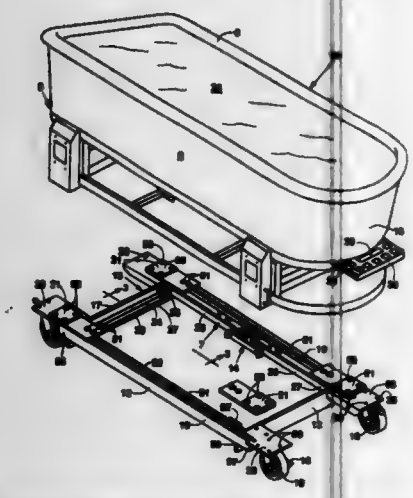
1. Drilling, chipping and cutting tools for working on rock and hard construction materials, comprising a support member, one of a hard metal or hard material part for effecting the drilling, chipping or cutting work, and a precipitation hardenable solder securing the hard metal or hard material part to the support member.

5,172,781

SCALE FOR FLUIDIZED BED AND METHOD FOR USING SAME

Dennis J. Hlavinka, Lakewood, Colo.; Douglas S. Harris, Scarborough, and Burt L. Swersey, Stephentown, both of N.Y., assignors to Kinetic Concepts, Inc., San Antonio, Tex.

Continuation of Ser. No. 691,176, Apr. 25, 1991, which is a continuation of Ser. No. 428,226, Oct. 27, 1989. This application Jan. 2, 1992, Ser. No. 816,855
Int. Cl.[5] G01G *19/52*; A61G *7/00*; A47C *27/08*
U.S. Cl. 177—144 11 Claims



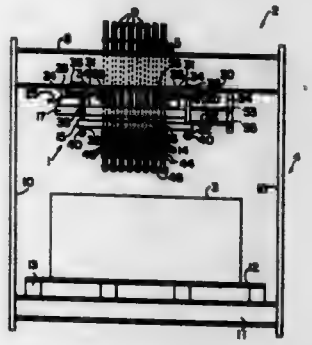
1. A bead bed adapted for weighing a patient lying thereon, comprising:
- a frame;
- a bead bed support mounted atop said frame;
- said bead bed including a tank having a porous diffuser board supporting a mass of granular material, a cover sheet and a compressor for fluidizing the granular material to support a patient thereon to cure and prevent bedsores;
- a scale integrated with said frame for determining the weight of a patient lying on said support;
- a signal emitting means mounted to said frame for emitting signals which are representative of a load supported by said frame;
- a signal processing means for determining the weight of the patient lying on said support based on the signals emitted by said signal emitting means; and
- output means for providing a continuous readout of the weight determined by said scale.

5,172,782

PIVOT MOUNT OF ELEVATOR LOAD-WEIGHING AT CAR HITCH

Young S. Yoo, Avon, and Eric K. Jamieson, Farmington, both of Conn., assignors to Otis Elevator Company, Farmington, Conn.

Filed Nov. 15, 1991, Ser. No. 792,978
Int. Cl.[5] G01G *19/14, 23/02*; B66C *13/16*
U.S. Cl. 177—147 8 Claims



1. A load weighing assembly in combination with an elevator car, said load weighing assembly hanging from a plurality of rods, said car having a crosshead, said load weighing assembly comprising:
- a bottom hitch plate biased toward said crosshead by springs enclosing said rods, said bottom hitch plate having two or more holes for receiving said rods, and having a pivot mounted thereon for causing said rods to carry equal load;
- a middle hitch plate sitting on said pivot, said middle plate having two or more holes for receiving said rods;
- a load cell mounted on a top surface of said middle hitch plate at an end to one side of said rods for providing the load of the car;
- a support mounted on said top surface of said middle hitch plate at another end thereof opposite said load cell; and
- a top hitch plate means having a top surface and a bottom surface, said top surface coming to bear against said crosshead when said load cell and support are brought to bear against the bottom surface of said top hitch plate means by the weight of said elevator car upon said rods.

5,172,783

WEIGHING SCALE WITH VALIDATING REFERENCE CHANNEL

Seymour Feinland, Stamford, and Gerald C. Freeman, Norwalk, both of Conn., assignors to Pitney Bowes, Inc., Stamford, Conn.

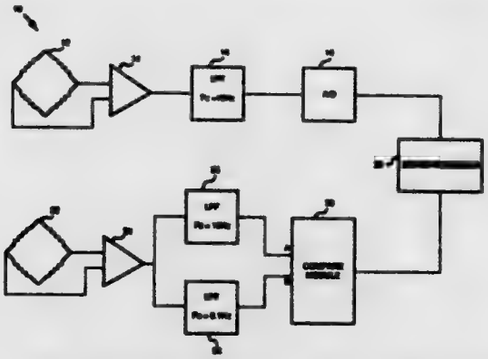
Filed Jul. 1, 1991, Ser. No. 724,304
Int. Cl.[5] G01G *23/10*
U.S. Cl. 177—185 20 Claims

1. An electronic scale for weighing an article, comprising:
- a housing;
- weighing channel means disposed within said housing for providing an output indicative of an instantaneous weight of the article;
- reference channel means disposed within said housing for providing an output indicative of instantaneous vibrations affecting the output of said weighing channel means;
- first means connected to said reference channel for provid-

ing a first signal indicative of a long term average of said output of said reference channel means;

second means connected to said first means and said reference channel means for comparing said first signal with said output of said reference channel means and for outputting a validation signal when said output of said reference channel means does not differ by more than a threshold amount from said first signal;

third means for sampling said weighing channel means output when said second means is outputting said validation signal.

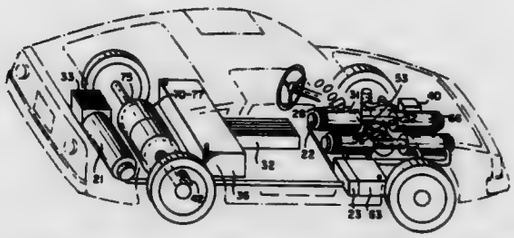


5,172,784

HYBRID ELECTRIC PROPULSION SYSTEM

Arthur A. Varela, Jr., 6008 Grove Dr., Alexandria, Va. 22307

Filed Apr. 19, 1991, Ser. No. 688,117
Int. Cl.[5] B60L 11/12
U.S. Cl. 180—65.4 27 Claims



1. An electro-mechanical propulsion system for a vehicle comprising:

an external combustion, free piston multiple-cylinder engine;

linear electric generator means for generating electric power from said engine including linear element generator means integrally mounted in said engine for converting mechanized to electrical power;

means for adjusting a mechanical and electrical phase relationship between said engine and said generator means;

a manual accelerator and an electric traction motor;

means for controlling the electric output of the linear generator means corresponding to an accelerator position, and motor speed;

an auxiliary power source comprising means for controlling output of said auxiliary power source corresponding to the load on said motor, said auxiliary power source being synchronized with the said means for controlling output of said linear generator means;

said electric traction motor being connected as the prime mover means for propelling said vehicle, said motor being connected to be actuated by said linear generator and said auxiliary power supply, said electric motor including two independent and synchronized rotors, each of said rotors including an output shaft for connection to the vehicle propulsion means.

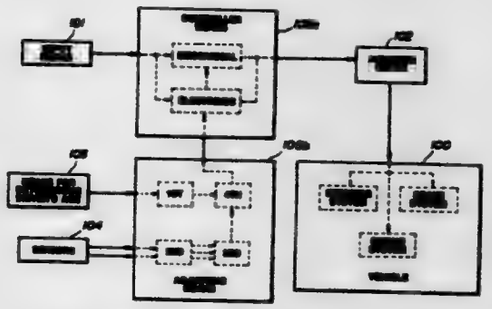
VEHICLE CONTROL SYSTEM ADJUSTABLE IN ACCORDANCE WITH DRIVER'S AGE AND CHARACTERISTIC

Hiroshi Takahashi, Zushi, Japan, assignor to Nissan Motor Co., Ltd., Yokohama, Japan

Filed Jun. 19, 1991, Ser. No. 716,808
Claims priority, application Japan, Jun. 19, 1990, 2-158772
Int. Cl.[5] B62D 6/00
U.S. Cl. 180—141 26 Claims



1. A control system for a vehicle, comprising:

an input means for producing an input signal representing a driver's command in accordance with a driver's operation;

an actuator means for receiving a control signal and varying a manipulated variable to control motion of said vehicle in response to said control signal;

an age determining means for producing an age signal representing a driver's age;

a sensing means for sensing said driver's operation; and

a controlling means for producing said control signal from said input signal according to a predetermined control characteristic, estimating a driver's characteristic from a signal supplied from said sensing means, and adjusting said control characteristic in accordance with said driver's characteristic and said driver's age.

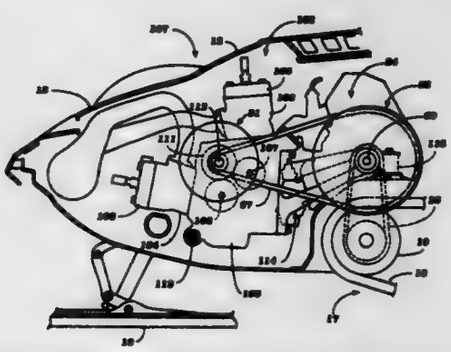
V BELT TYPE AUTOMATIC TRANSMISSION SYSTEM

Tadakazu Ishibashi; Nozomu Kishira, and Yoshiharu Iseka, all of Iwata, Japan, assignors to Yamaha Hatsudoki Kabushi Kaisha, Iwata, Japan

Continuation of Ser. No. 487,653, Mar. 2, 1990, abandoned. This application Dec. 30, 1991, Ser. No. 815,843
Int. Cl.[5] B62M 27/02; F02B 75/06
U.S. Cl. 180—190 20 Claims



11. A snowmobile, having an engine and transmission assem-

bly comprising an internal combustion engine; said engine including a crankcase; and an engine output shaft journaled within said crankcase and rotatable about an axis; and a transmission input shaft journaled within said crankcase; wherein said engine output shaft and said transmission input shaft are separate members, spaced apart from one another within said crankcase; and further comprising means for driving said transmission input shaft from said engine output shaft, a driving variable pulley on said transmission input shaft, a transmission output shaft journaled for rotation about an axis parallel to the axis of rotation of said transmission input shaft, a variable driven pulley on said transmission output shaft, and belt means for driving said variable driven pulley from said variable driving pulley; and further having a drive belt and wherein the drive belt is driven from the transmission output shaft.

5,172,787

RESTRICTING DEVICE FOR A DIFFERENTIAL IN A MOTOR VEHICLE

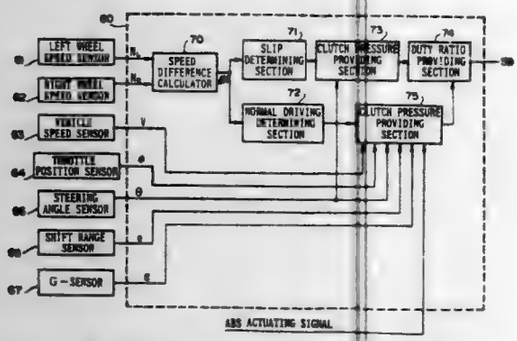
Toshio Kobayashi, Tokyo, Japan, assignor to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 513,485, Apr. 20, 1990, abandoned. This application Oct. 7, 1991, Ser. No. 772,628

Claims priority, application Japan, Apr. 28, 1989, 1-111736

Int. Cl.[5] B60K *17/34*

U.S. Cl. 180—197 **8 Claims**



1. In a device for restricting differential operation for a two-wheel drive motor vehicle having driving wheels and an engine mounted on said motor vehicle producing power from a crank shaft, a main clutch connected to said crank shaft, a trans-axle type transmission connected to said main clutch for operatively transmitting said power to an axle of the driving wheels of the vehicle, a differential having a final reduction gear connected to said transmission, and the differential being connected to said axle and for differentiating speed of said wheels, the improvement in the device which comprises:

a fluid-operated clutch mounted in a non-rotatable cover of said differential and operatively connected to said differential so as to restrict the differential operation;

a clutch oil in said fluid operated clutch;

control means for controlling a pressure of said fluid-operated clutch in accordance with driving conditions of said motor vehicle and road surface conditions;

a lubricating oil which is a different type of oil than said clutch oil; and

oil seal means interposed between said fluid-operated clutch and said differential for separating said clutch oil form said lubricating oil in order to avoid mixing of said clutch oil with said lubricating oil;

said fluid-operated clutch further comprises:

an outer drum operatively connected to a differential case of said differential;

an inner drum operatively connected to said axle;

a plurality of inner disks secured to said inner drum;

a plurality of outer disks secured to said outer drum;

a piston slidably but non-rotatably inserted in a non-rotatable piston chamber formed in said cover and operated by said clutch oil in the piston chamber in order to engage said inner and outer disks with each other; and

a centrifugal oil pressure chamber being integrally formed in said cover adjacent said piston chamber with said piston separating said centrifugal oil pressure chamber and said piston chamber, the piston chamber for applying said pressure to said piston without being effected by centrifugal force of said clutch oil due to rotation of said axle.

5,172,788

MOTORCYCLE

Takayuki Fujii, Saitama; Yoshio Nogami, Okayama; Yoshihiro Matsuo, and Seiichi Urashi, both of Saitama, all of Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

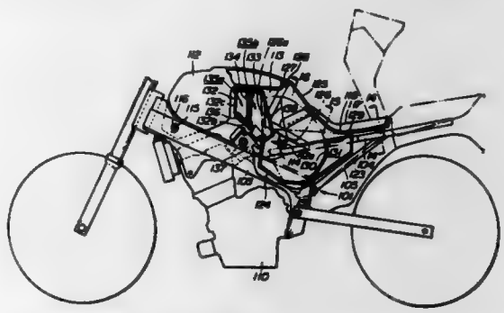
Continuation of Ser. No. 215,570, Jul. 6, 1988, Pat. No. 5,040,632. This application Jan. 14, 1991, Ser. No. 640,949

Claims priority, application Japan, Jul. 6, 1987, 62-169322; Jul. 23, 1987, 62-184222

The portion of the term of this patent subsequent to Aug. 20, 2008, has been disclaimed.

Int. Cl.[5] B62J *11/00*

U.S. Cl. 180—219 **18 Claims**



1. A motorcycle comprising:

a body frame extending in a straight manner substantially along a longitudinal axis of the motorcycle and supporting front and rear wheels on front and rear ends, respectively, thereof;

a fuel tank disposed near said front end of the body frame and positioned substantially upwardly of said body frame;

a rider's seat disposed rearwardly of said fuel tank;

an engine disposed downwardly of said body frame;

a receptacle adapted to selectively store large sized articles therein and disposed at least partially rearwardly of said fuel tank, at least partially forwardly of said rider's seat, and at least partially upwardly of said engine;

said receptacle having an opening defined therein, and said rider's seat being movably supported on said motorcycle for selectively covering said opening;

said body frame comprising at least one main pipe and at least one separate seat supporting member extending rearwardly upwardly from a rear portion of said main pipe such that an intersection defined between said main pipe and said seat supporting member is substantially V-shaped when viewed from the side; and

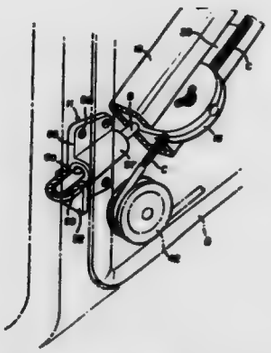
said storage receptacle occupying a space defined between said main pipe and said seat supporting member.

5,172,789

DOOR LOCK FOR VEHICLE WITH SEAT BELT SYSTEM

Alfredo Alvarado, 4310 Bayview Dr., Fort Lauderdale, Fla. 33308

Continuation-in-part of Ser. No. 682,357, Apr. 9, 1991. This application Nov. 21, 1991, Ser. No. 795,824
Int. Cl.[5] B60R 22/06
U.S. Cl. 180—268 2 Claims



1. In a motor vehicle having:
a front-hinged door for access to the interior of the vehicle;
a door post behind said door;
a seat next to said door;
and a seat belt system having a release position enabling a person to enter upon and leave said seat and an operating position restraining a person sitting on said seat, said seat belt system including an elongated, upwardly and forwardly inclined guideway on said door, and a slide which is slidable along said guideway between an upper position which establishes said release position of said seat belt system and a lower position which establishes said operating position of said seat belt system;
the improvement which comprises an auxiliary lock for said door having;
a keeper mounted on said door post and presenting an upwardly and forwardly inclined socket which is aligned with said guideway when said door is closed, said socket being open at its upper front end;
a holder mounted on said door;
a lock bolt slidably mounted in said holder behind said guideway and projecting upward and forward from said holder into the path of movement of said slide downward and rearward along said guideway, said lock bolt having a rear end segment which is engageable in said socket when said lock bolt is moved rearward and downward by said slide in the movement of said slide to its said lower position thereof;
and spring means in said holder biasing said lock bolt forwardly and upwardly to a position disengaging said rear end segment of the lock bolt from said socket in the keeper.

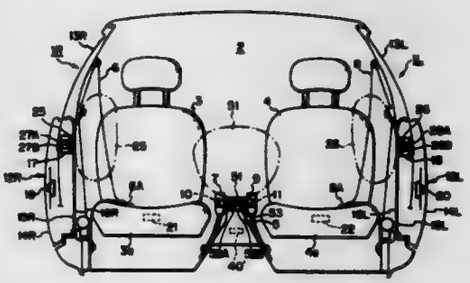
5,172,790

BODY SIDE MOUNTED AIR BAG CONTROL SYSTEM

Toshihiro Ishikawa; Toshihiro Hara, both of Hiroshima; Harukisa Kore, Kure, and Kazuhiro Murashige, Aosakihigashi, all of Japan, assignors to Mazda Motor Corporation, Hiroshima, Japan

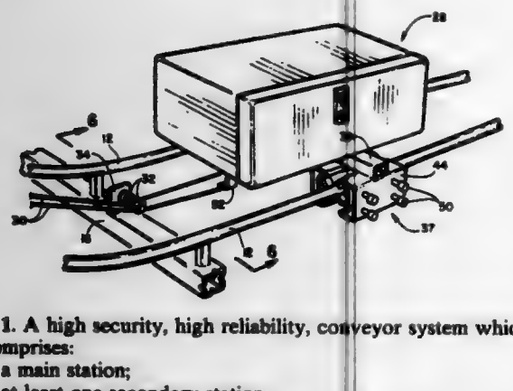
Filed Jan. 13, 1991, Ser. No. 714,714
Claims priority, application Japan, Jun. 13, 1989, 2-154882
Int. Cl.[5] B60R 21/22
U.S. Cl. 180—268 8 Claims

1. A body side mounted air bag control system comprising:
(a) first bag storage means, arranged in a vehicle body left side portion on a passenger room side, for storing a folded first energy absorbing bag;
(b) first bag inflating means, arranged in said first bag storage means, for inflating said first energy absorbing bag;
(c) second bag storage means, arranged in a vehicle body right side portion of the passenger room side, for storing a folded second energy absorbing bag;
(d) second bag inflating means, arranged in said second bag storage means, for inflating said second energy absorbing bag;
(e) first shock sensor means for sensing an external shock applied to the vehicle body left side portion;
(f) second shock sensor means for sensing an external shock applied to the vehicle body right side portion;
(g) seating state sensor means for sensing seating states of passengers on seats arranged in the passenger room;
(h) belt used state sensor means for sensing use states of seat belts equipped on the seats; and
(i) control means for controlling operations of said first and second bag inflating means, when a shock sensing output signal is obtained from one of said first and second shock sensor means, said control means operates one or both of said first and second bag inflating means in accordance with an operation mode according to the seating states of passengers represented by a sensing output signal obtained from said seating state sensor means, and the use states of the seat belts represented by a sensing output signal obtained from said belt use state sensor means so as to inflate one or both of said first and second energy absorbing bags in accordance with the seating states of passengers and the use states of the seat belts, and when the shock sensing



output signal is obtained from one of said first and second shock sensor means, said control means further includes
(i-1) a basic control mode for controlling to operate both said first and second bag inflating means so as to inflate both said first and second energy absorbing ; and
(i-2) an exceptional control mode for, when it is sensed that a passenger is seated on a collision side and the belt is used, and no passenger is seated on the seat on a side opposite to the collision side, controlling to operate the bag inflating means on the collision side, and not to operate the bag inflating means on the side opposite to the collision side so as to inflate only the energy absorbing bag on the collision side, and
wherein the basic control mode of said control means includes
a first basic control mode for controlling to quickly operate the bag inflating means on the collision side so as to immediately fully expand the energy absorbing bag on the collision side; and
a second basic control mode for, when it is sensed that a passenger is seated on a collision side and the belt is not used and no passenger is seated on the seat on a side opposite to the collision side, or when it is sensed that passengers are seated on the collision side and on the side opposite to the collision side and the belts are not used, controlling to quickly operate the bag inflating means on the side opposite to the collision side so as to immediately fully expand the energy absorbing bag on the side opposite to the collision side.

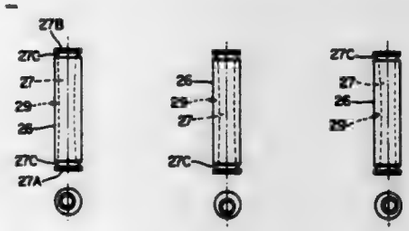
5,172,791
CONVEYING APPARATUS HAVING IMPROVED RELIABILITY AND SECURITY
Edward F. Conrette, 11478 Woodside Ave. North, Santee, Calif. 92071
Filed Dec. 26, 1990, Ser. No. 634,036
Int. Cl.[5] B61B 13/12
U.S. Cl. 186—37 13 Claims



1. A high security, high reliability, conveyor system which comprises:
a main station;
at least one secondary station;
a pair of substantially parallel, smooth, continuous tubes extending between said main and each secondary station;
a carriage adapted to move along each pair of said tubes, said carriage comprises a plurality of assemblies, said assemblies each comprises a pair of inner brackets each of which support a pair of wheels which ride on one of said tubes, a plurality of pins secured to said inner bracket, a pair of outer brackets having spaced apart apertures equal in number to said plurality of pins adjacent to and spaced from said inner brackets, said pins slideably extend through said apertures in said outer brackets and compression springs surrounding each pin in the space between said inner and outer brackets, said assemblies provide a degree of resiliency to carriage movement so that said wheels can deflect slightly in turns, accommodate slight irregularities in the surface and spacing between said tubes;
cable means extending between said stations along said support means;
a plurality of pulleys on said support means adapted to guide said cable substantially parallel to said tubes;
at least one bracket securing said carriage to said cable for movement therewith along said tubes;
drive means at said mains station for selectively moving said cable to move said carriage toward or away from the secondary station;
whereby said carriage is movable between said main station and said secondary station.

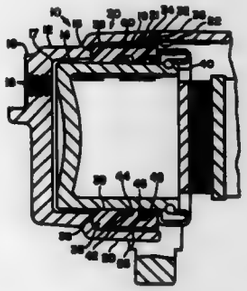
5,172,792
MODULAR DISC BRAKE
Mark A. Cartwright, Rochester; Mark A. Korody, and Patrick A. Thesler, both of Granger, all of Ind., assignors to Allied-Signal, Inc., Morristown, N.J.
Filed Jun. 25, 1991, Ser. No. 720,349
Int. Cl.[5] F16D 55/00
U.S. Cl. 188—71.1 32 Claims

28. A parallel slider mechanism for carrier means of a disc brake which includes a support member with a pair of pin support portions with pin openings, the carrier means slidably attached to the support member by the slider mechanism which comprises two pins received fixedly by the carrier means, one of said pins extending through and slidably received within an associated pin opening, the other of said pins extending through and slidably received within an associated pin opening by means of a sleeve member, the sleeve member having a through opening receiving the other pin and the through opening being disposed eccentrically relative to a central longitudinal axis of said sleeve member, the through opening narrowing progressively radially inwardly toward a central axial portion of said sleeve member to provide substan-



tially a central axial point of contact with said other pin and the sleeve member axially slidable relative to the respective pin support portion, such that the one pin and sleeve member remain substantially parallel with one another during operation of the brake.

5,172,793
VEHICLE BRAKE WITH BRAKE CYLINDER BORE INSERT
Robert B. Temple, Granger, Ind.; Edgar A. Behrmann, Mason City, Iowa, and Donald D. Johannesen, South Bend, Ind., assignors to Allied-Signal Inc., Morristown, N.J.
Filed Jun. 21, 1990, Ser. No. 541,680
Int. Cl.[5] F16D 55/19; F16F 9/36; F16J 10/04
U.S. Cl. 188—72.4 10 Claims



1. A vehicle brake cylinder having a stationary bore insert, comprising an interior cavity of the brake cylinder being a cylinder bore with a surface and receiving therein the bore insert, brake fluid, and piston means, the cylinder bore communicating with at least one opening in the cylinder for receiving the brake fluid and an end opening receiving said piston means, the stationary bore insert comprising an integral member with a continuous outer perimeter having perimeter extensions extending radially beyond the outer perimeter at opposite axial ends of the insert, groove means receiving seal means disposed between the bore insert and piston means, and a central opening therein defining an insert bore, the bore insert disposed within the cylinder bore such that the perimeter extensions are tightly engaged and deformed by the surface of the cylinder bore, and the piston means received in and engaging slidably only the seal means and insert bore of the bore insert.

5,172,794
ADJUSTABLE DAMPING SHOCK ABSORBER
Michael Ward, Brampton, Canada, assignor to Maremont Corporation, Carol Stream, Ill.
Filed Apr. 3, 1991, Ser. No. 680,084
Int. Cl.[5] F16F 9/44
U.S. Cl. 188—299 7 Claims

1. An improved adjustable damping shock absorber adapted for use with a seat of a motor vehicle, the shock absorber

utilizing an incompressible fluid to provide adjustable compression and rebound damping characteristics and comprising:

an inner cylinder having a wall, a first end and a second end and defining a cylindrical volume between its first and second ends;

first means for closing the second end of the inner cylinder;

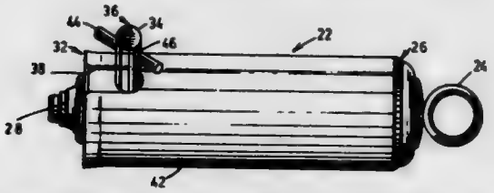
an outer cylinder having a greater diameter than the inner cylinder and disposed coaxially about the inner cylinder so as to define an annular reservoir between the inner and outer cylinders, the outer cylinder having a first end and a second end, adjacent to the first and second ends, respectively, of the inner cylinder;

an outer cylinder having a greater diameter than the inner cylinder and disposed coaxially about the inner cylinder so as to define an annular reservoir between the inner and outer cylinders, the outer cylinder having a first end and a second end, adjacent to the first and second ends, respectively, of the inner cylinder;

second means for sealing the second end of the outer cylinder;

a piston assembly disposed in the inner cylinder and adapted to be reciprocally movable therein, with at least a portion of the piston assembly being in a slidable, fluid sealing relationship with the inner surface of the inner cylinder, the piston assembly also serving to divide the cylindrical volume so as to define a compression chamber between the piston assembly and the first means and a rebound chamber between the piston and the first end of the inner cylinder;

a piston rod extending from the piston assembly, coaxially with the longitudinal axis of the inner cylinder, beyond the first end of the inner and outer cylinders;



an inner cylinder head extending across the first ends of the inner and outer cylinder, having a centrally disposed aperture therein through which the piston rod may sealingly slide, and having a bore therein;

means for covering the first end of the inner and outer cylinders and the inner cylinder head, the covering means including means for preventing the leakage of fluid out of the first ends of the inner and outer cylinder and around the piston rod, as it moves with the piston assembly;

a replenishing passage for providing fluid communication between the reservoir and the compression chamber;

a replenishing valve disposed in the replenishing passage, and opening when fluid pressure in the reservoir exceeds the fluid pressure in the compression chamber by a predetermined replenishing pressure;

a bypass passage in the piston assembly communicating between the compression chamber and the rebound chambers;

a piston bypass valve disposed in the compression passage and adapted to open when fluid pressure in the compression chamber exceeds the fluid pressure in the rebound chamber by a predetermined compression opening pressure;

a rebound passage in the piston assembly communicating between the compression chamber and rebound chamber;

a rebound valve disposed in the rebound passage and adapted to open when the fluid pressure in the rebound chamber exceeds the fluid pressure in the compression chamber by a predetermined rebound opening pressure;

means for permitting substantially restricted fluid flow between the rebound chamber and the reservoir;

a fluid flow path disposed, at least in part, in the inner cylinder head and permitting fluid communication between the rebound chamber and the reservoir;

a valve pin disposed in a section of the fluid flow path and in part in the bore in the inner cylinder head, the valve pin being selectively movable between a first position where restricted fluid flow may occur between the rebound chamber and the reservoir, a second position where less restricted fluid flow may occur between the rebound chamber and the reservoir and a third position where still less restricted fluid flow, relative to the flow occurring in its second position, may occur between the rebound chamber and the reservoir; and

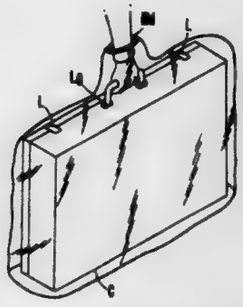
means for rotationally moving the valve pin through an arc about its longitudinal axis so as to move the valve pin between its first, second and third positions, with the moving means projecting out from the outer cylinder so that the position of the valve pin may be moved from without the shock absorber, and with the valve pin including means, which cooperates with means in the bore in the inner cylinder head, for limiting the rotational movement of the valve pin in the bore in the inner cylinder head.

5,172,795

PROTECTIVE COVER FOR HANDLED CARRYING CONTAINER

Robert G. Ricenaa, West Caldwell, N.J., assignor to Randolph-Rand Corporation, New York, N.Y.

Filed Aug. 21, 1990, Ser. No. 571,098
Int. Cl.[5] A45C *11/00, 13/00*
U.S. Cl. 190—26 11 Claims



1. A protective cover for a carrying container having an arched-type stiff handle, having opposite ends attached to the container and around which the fingers of a hand can be gripped, comprising:

a pair of opposed side walls having a size greater than the corresponding walls of the carrying container and having top, side and bottom edges, said top edges and side edges of the respective side walls including means for permanently joining said edges to each other, the bottom edges being unjoined, said protective cover having a handle receiving aperture where said top edges are joined; and

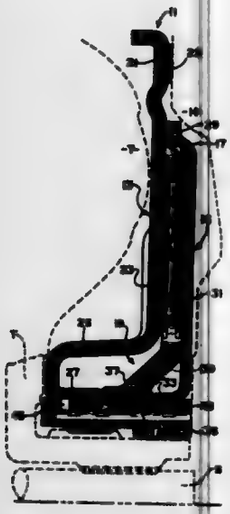
handle engaging means around said handle receiving aperture and engageable around and under the arched-type handle in substantially watertight engagement, said handle engaging means being an upwardly extending sleeve integrally joined to said side walls and into which the handle extends, the upper end of said sleeve being open and dimensioned for permitting insertion of a hand.

5,172,796

REDUCED COST VISCOUS COUPLING BY-PASS ELEMENT FOR A TORQUE CONVERTER

Lester Campbell, Battle Creek; Edward Bojas, Marshall, and Edward Goscenski, Battle Creek, all of Mich., assignors to Eaton Corporation, Cleveland, Ohio

Filed Mar. 18, 1992, Ser. No. 853,560
Int. Cl.[5] F16H 45/02; F16D 35/00, 47/06
U.S. Cl. 192—3.29 21 Claims



1. A viscous coupling for use as a bypass element in a torque converter assembly including a torque converter housing and an output shaft; said viscous coupling being of the type including an annular housing assembly adapted to be positioned within the torque converter housing, and having axially spaced, radially-extending first and second annular side wall members defining an annular viscous chamber therebetween adapted to contain viscous fluid; said annular housing assembly defining a radially-extending annular clutching surface adapted for clutching co-action with a confronting surface of the torque converter housing; an annular clutch assembly disposed within said viscous chamber and including an annular, radially-extending clutch portion adapted for viscous clutching co-action with one of said first and second side wall members, and an axially-extending clutch hub portion adapted to be drivingly associated with the output shaft of the torque converter assembly; characterized by:

(a) said annular clutch portion of said clutch assembly including first and second annular, radially-extending clutch plates disposed adjacent, and adapted for viscous clutching co-action with an adjacent surface of said first and second annular side wall members, respectively;

(b) said first and second clutch plates being drivingly associated with said axially-extending clutch hub portion, whereby rotation of said clutch plates results in rotation of said clutch hub portion;

(c) said annular housing assembly further comprising an annular radially-extending housing plate disposed axially between said first and second clutch plates, and adapted for viscous clutching co-action with at least one of said first and second clutch plates; and

(d) said housing plate being disposed in operable engagement with said first and second annular side wall members at a location disposed radially outwardly of said annular viscous chamber.

18. A method of assembling and filling a viscous fluid coupling including first and second annular side wall members, said first side wall member having a reservoir-defining portion and said second side wall member having a radially outer peripheral portion; an annular clutch assembly including an axially-extending clutch hub portion and first and second clutch plates drivingly associated with said clutch hub portion; said viscous fluid coupling further including an annular radially-extending housing plate disposed axially between said first and second clutch plates for viscous clutching co-action therewith in response to the presence of viscous fluid, said housing plate including a radially outward, peripheral portion, the method comprising:

(a) positioning said first side wall member with said reservoir-defining portion oriented downwardly;

(b) locating said clutch hub portion in sealing engagement with said reservoir-defining portion of said first side wall member;

(c) positioning said first clutch plate onto said first side wall member, and in driving engagement with said clutch hub portion;

(d) positioning said housing plate above said first clutch plate with said peripheral portion in engagement with said first side wall member;

(e) positioning said second clutch plate onto said housing plate, and in driving engagement with said clutch hub portion;

(f) subsequent to step (b), introducing a predetermined volume of viscous fluid into said reservoir-defining portion of said first side wall member;

(g) positioning said second side wall member above said second clutch plate, in sealing engagement with said clutch hub portion, and with said outer peripheral portion of said second side wall member in engagement with said peripheral portion of said housing plate; and

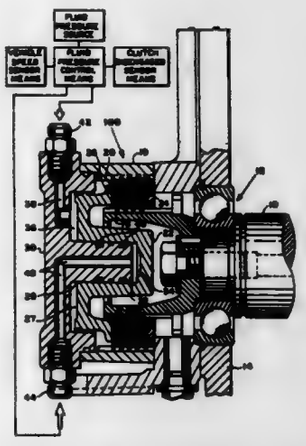
(h) fixedly attaching said peripheral portions of said second side wall member and said housing plate to said first side wall member.

5,172,797

MOTOR VEHICLE INERTIA AND HILL HOLDING BRAKING MECHANISM

Donald M. Stout, Troy, and Otis J. Olson, Farmington Hills, both of Mich., assignors to Eaton Corporation, Cleveland, Ohio

Filed Jan. 24, 1992, Ser. No. 825,348
Int. Cl.[5] F16D 67/04
U.S. Cl. 192—13 R 6 Claims



1. An improved braking mechanism for a vehicle having an engine selectively engageable with a gear change transmission by a clutch,

said mechanism having a piston operative to urge at least one rotary friction plate against at least one stationary plate with a first force sufficient to cause the mechanism to act as an inertia brake for slowing the transmission gears in preparation for shifting upon establishment of a first pre-

determined set of operating conditions including at least disengagement of the clutch,

means for sensing the first set of predetermined operating conditions and for controlling pressurized fluid flow into the primary chamber upon the establishment thereof, and

means for sensing a second set of predetermined operating conditions including at least disengagement of the clutch and a vehicle speed that is below a predetermined minimum value,

said improvement characterized by said mechanism having at least one secondary fluid chamber in which the piston is slideably received and means for controlling pressurized fluid flow into the secondary fluid chamber upon establishment of the second set of predetermined operating conditions such that, upon pressurization of fluid in said secondary fluid chamber, the piston is operative to urge said rotary friction plate against said stationary plate with a second force sufficiently larger than the first force to cause the mechanism to act on a hill holding brake when the vehicle is on an incline.

5,172,798

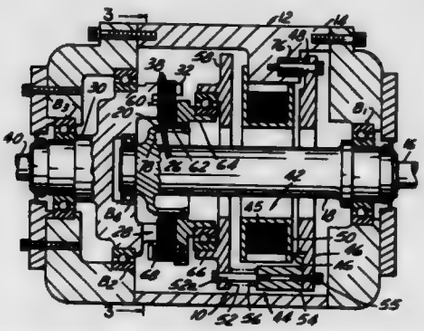
ELECTRICAL ACTUATION SYSTEM FOR A DRIVE

Brian D. Mabee, Sterling Heights, Mich., assignor to Eaton Engineering and Manufacturing Corporation, Clinton Township, Macomb County, Mich.

Filed Jun. 8, 1992, Ser. No. 895,344

Int. Cl.[5] F16D *67/06, 27/10, 27/12;* F16H *37/06*

U.S. Cl. 192—18 B **42 Claims**



1. An electrical actuation system for a drive, the drive having a housing, the drive further having at least one disc stack mounted within the housing, the disc stack having a first side and a second side, a first thrust surface being provided within the housing adjacent the first side of the disc stack, the disc stack being composed of at least two sets of annular discs which are mutually interleaved, said electrical actuation system comprising:

an electromagnetic coil assembly located within and connected to the housing, said electromagnetic coil assembly comprising an electromagnetic coil and a pole piece, said pole piece being located with respect to said electromagnetic coil so as to be magnetizable thereby; and

an armature assembly located within the housing, said armature assembly comprising:

armature plate means selectively locatable within a first predetermined distance from said pole piece;

armature connection means for slidably connecting said armature plate means with respect to the housing so that said armature plate means may slide reciprocably between a first location whereat said armature plate means contacts said pole piece to a second location whereat said armature plate means is at said first predetermined distance from said pole piece;

spring take-up plate means resiliently connected with said armature plate means;

armature spring means for resiliently connecting said spring take-up plate means to said armature plate means, said armature spring means having a first end and a second end, said first end of said armature spring means being connected with said armature plate means, said second end of said armature spring means being slidably connected with said spring take-up plate means; and

second thrust surface means for selectively contacting the second side of the disc stack, said second thrust surface means being connected with said spring take-up plate means, said second thrust surface means being selectively locatable within a second predetermined distance from the second side of the disc stack;

wherein an excitation current supplied to said electromagnetic coil causes said armature plate means to be magnetically attracted to said pole piece and as a result thereof slide on said armature connection means toward said pole piece until contact therewith has been made whereupon said excitation current is reduced by a predetermined amount which provides sufficient magnetism to keep said armature plate means in contact with said pole piece, and wherein said first predetermined distance is longer than said second predetermined distance; wherein further, the movement of said armature plate means into contact with said pole piece causes said armature spring means, said spring take-up plate means and said second thrust surface means to move with said armature plate means until said second thrust surface means forcibly abuts the second side of the disc stack, wherein still further, said armature spring means resiliently compresses in order to accommodate the difference between said first and second predetermined distances thereby supplying a predetermined biasing force to said second thrust surface means with respect to the second side of the disc stack so as to clamp the at least two sets of annular discs between the first thrust surface and said second thrust surface means.

CENTRIFUGAL HYDRAULIC CANCEL MECHANISM FOR THE ROTATING CLUTCH

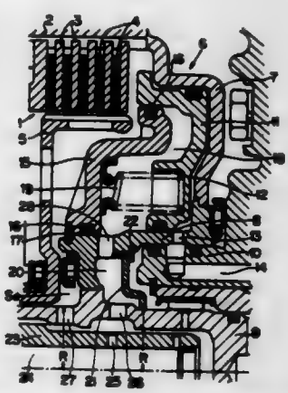
Yoshihiro Iijima, Toyota; Tokuyuki Takahashi, Owariasahi; Kojiro Kuramochi, Okazaki; Mikio Mori, Toyota; Norihiro Kitamura, Toyota, and Yuji Yasuda, Toyota, all of Japan, assignors to Toyota Jidosha Kabushiki Kaisha, Toyota, Japan

Filed Feb. 6, 1992, Ser. No. 831,842

Claims priority, application Japan, Feb. 8, 1991, 3-37693; Dec. 26, 1991, 3-360391

Int. Cl.[5] F16D *25/61*

U.S. Cl. 192—106 F **18 Claims**



1. A centrifugal hydraulic cancel mechanism for a rotating clutch in which a first cylindrical body and a second cylindrical body whose diameter is smaller than the first cylindrical body are set on a single central axis, frictional plates are attached to an inner surface of the first cylindrical body and an outer surface of the second cylindrical body so as to frictionally transmit torque, a piston is arranged to move forward and

backward relative to the frictional plates, a fluid chamber is formed on an opposite side of the piston with respect to the frictional plates, and a cancel chamber is formed at an opposite side to the fluid chamber with respect to the piston, where oil pressure can be supplied and discharged, comprising:

means forming an auxiliary oil chamber formed closer to the central axis than the cancel chamber, and

means forming a fluid passageway connecting the cancel chamber and the auxiliary oil chamber wherein said means forming an auxiliary oil chamber is non-rotatingly attached to said means forming a fluid passageway.

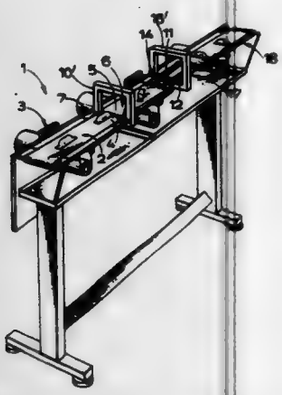
U.S. Cl. 198—380 10 Claims



1. A conveying apparatus for turning an elongate object about a vertical axis comprising first and second substantially aligned belt conveyors presenting substantially horizontal conveying surfaces on which said object is conveyed, an outfeed end of said first conveyor being arranged to project an object in a generally horizontal direction onto said second conveyor, and gas blast means so arranged as to direct a blast of gas at an object whilst the object is in flight between said first and second conveyors, the direction of the gas blast being substantially horizontal whereby said object is turned by the blast about a substantially vertical axis whilst said object is in flight between said first and second conveyors.

DEVICE FOR TWISTING WORKPIECES, PARTICULARLY FOR TURNING CASINGS

Nicolaus Georgitsis, Osterkappel, and Rolf Zierdt, Seeheim, both of Fed. Rep. of Germany, assignors to Tetra PaK Holdings S.A., Pully, Switzerland

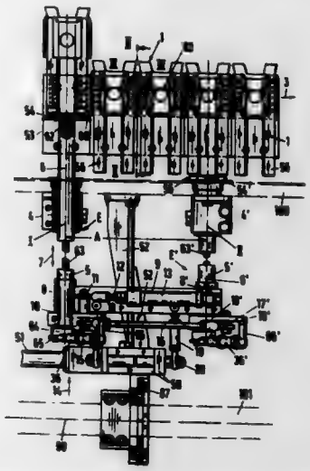
Filed Jun. 6, 1991, Ser. No. 711,081

Claims priority, application Fed. Rep. of Germany, Jun. 14, 1990, 4019031

Int. Cl.[5] B65G 29/00

U.S. Cl. 198—414 10 Claims

1. A device for twisting workpiece carriers which are transported by a conveyor device, the improvement comprising a work piece carrier detachably arranged on the conveyor device and adapted to be brought into engagement with a decoupling unit, said unit comprising a rotating member which is pivotally driven about a fixed first axis which axis is oriented vertically to the transportation direction of the conveyor device, characterised in that fixed to the workpiece carrier are insertion members which extend in the direction of the first



axis of rotation and which can be introduced into corresponding receiving members secured to the conveyor device.

5,172,802

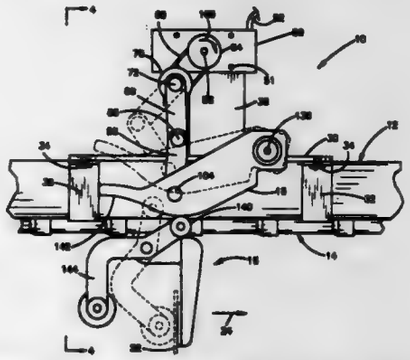
SELECTIVE RELEASE ASSEMBLY FOR GRIPPER CLAMPS

Dale K. Wells, Englewood, Ohio, assignor to AM International Inc., Chicago, Ill.

Filed Sep. 17, 1991, Ser. No. 760,955

Int. Cl.[5] B65G 47/86

U.S. Cl. 198—470.1 16 Claims



1. A release assembly for mounting adjacent a track and for releasing selected ones of a plurality of gripper clamps movable along the track past said release assembly, said release assembly comprising:

a cam mounted for movement relative to the track between a first position in which said cam is engageable by a gripper clamp moving along the track to open the gripper clamp and a second position in which said cam is spaced from and not engageable by the moving gripper clamp;

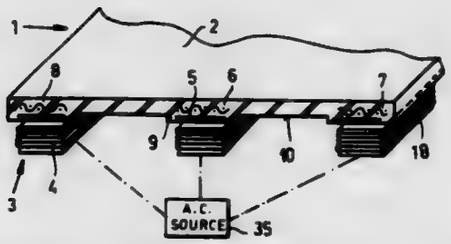
a rotary actuator having an output shaft rotatable about its axis, said rotary actuator being selectively energizeable to initiate rotation of said output shaft of said rotary actuator; and

a linkage actuated by rotation of said output shaft for moving said cam between its first and second positions.

5,172,803
CONVEYOR BELT WITH BUILT-IN MAGNETIC-MOTOR LINEAR DRIVE

Heinz-Ulrich Lewin, Brinkstrerweg 14, D-4600 Dortmund, Fed. Rep. of Germany

Division of Ser. No. 607,167, Oct. 31, 1990, Pat. No. 5,088,593. This application Oct. 29, 1991, Ser. No. 783,882
Claims priority, application Fed. Rep. of Germany, Nov. 1, 1989, 3936302
Int. Cl.[5] B65G 35/00
U.S. Cl. 198—619 6 Claims



1. In a conveyor having an endless belt spanned over upstream and downstream rollers, normally traveling in a predetermined travel direction, and having upper and lower stretches, the belt having an outer surface adapted to carry a load in the upper stretch and a lower surface turned inward,

the improvement comprising:

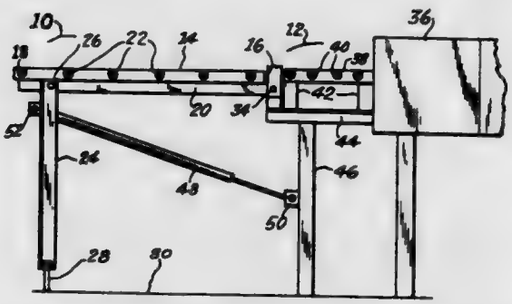
permanent magnets imbedded in the belt adjacent the inner surface of the belt and each having rounded leading and trailing ends relative to the normal travel direction of the belt; and

a linear-motor stator underneath the upper stretch and juxtaposed with the permanent magnets thereof, the stator and magnets together forming a linear motor for advancing the upper stretch downstream.

5,172,804
PALLET BRIDGE DEVICE

Andrew J. Chersin, 848 W. Plantation Cir., Plantation, Fla. 33324

Filed Aug. 9, 1991, Ser. No. 744,124
Int. Cl.[5] B65G 41/00
U.S. Cl. 198—861.5 9 Claims



1. A bridge for use in combination with a remote set-up station for transporting pallets between the remote set-up station and a machining center comprising:

a main frame defined as a pair of elongated guide tracks having a support end and an extension end and an upper surface and a lower surface, said support end pivotedly mounted to a remote set-up station, said extension end movable between an operating position horizontal to said support end and a storing position vertical to said support end;

means for slidable transport of pallets over said guide tracks;

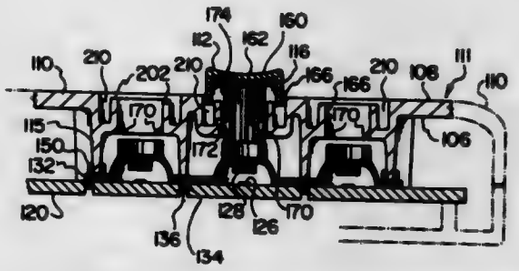
a collapsible stand coupled to said main frame, said stand opening to a perpendicular position in relation to said main frame providing a main frame support directly to the floor, said stand collapsing to a parallel position in relation to said main frame when said main frame is placed in a vertical position; and

a dampener operatively associated with said collapsible stand allowing ease of placement of said main frame in said vertical position.

5,172,805
PUSHBUTTON AND CARRYING MEMBER COMBINATION FOR OPERATING AN ELECTRONIC SWITCHING DEVICE

Beverley W. Gumb, London, Canada, assignor to Northern Telecom Limited, Montreal, Canada

Filed May 23, 1991, Ser. No. 704,517
Int. Cl.[5] H01H 13/04
U.S. Cl. 200—341 21 Claims



1. An assembly of pushbuttons and a carrying member with an electronic switching device comprising:

a circuit board carrying at least part of an electronic switching device;

a flexible barrier layer overlying the circuit board and said at least part of an electronic switching device; and,

a sub-assembly comprising a carrying member and a plurality of buttons,

the carrying member having a first side and another side, and defining a plurality of apertures extending therethrough, and

each button of said plurality of buttons comprising a body having a first part providing a contact surface and a second part of the body being slideably received through an individual one aperture of said plurality of apertures, the first part of each button body comprises a wall surrounding and spaced from the second part, and

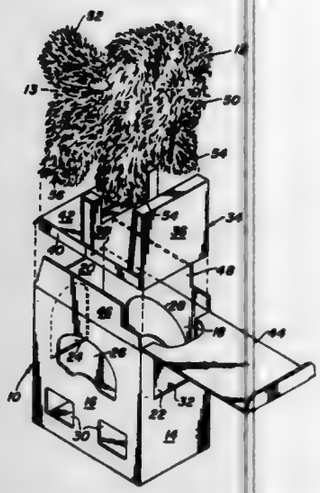
the first side of the carrying member around each one aperture defines a recess spaced from and surrounding said one aperture with said wall received within said recess, whereby the contact surface is accessible from the first side of the carrying member,

the sub-assembly being mounted with the other side of the carrying member facing the barrier layer,

the second part of the body of each button and the carrying member having cooperable retaining means whereby each button is releasably captive in the carrying member with said second part of the body being operable to move slideably through the aperture for engaging the flexible barrier layer and operating said at least part of an electronic switching device, and

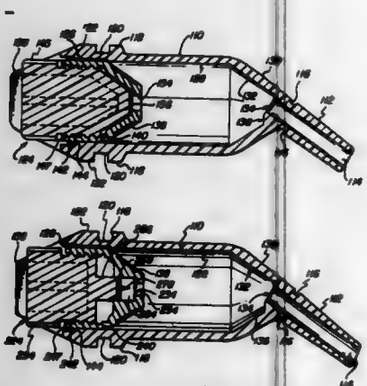
the sub-assembly with the buttons releasably captive in the carrying member being removable intact from the flexible barrier layer and the circuit board.

5,172,806
ANIMATED TOY IN PACKAGE
Stephen R. Mickelberg, Longport, N.J., assignor to S. R. Mickelberg Company, Inc., Jenkintown, Pa.
Filed Nov. 8, 1991, Ser. No. 792,328
Int. Cl.[5] B65D *25/00*
U.S. Cl. 206—45.31 19 Claims



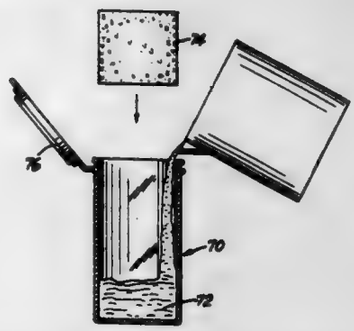
1. A package for an animated toy, said animated toy, said animated toy comprising at least one articulated moveable part and means for activating said at least one articulated part and said package comprising at least one wall, means in said at least one wall for accessing said activating means while said toy is in its package, means for allowing said animated toy to ambulate within said package and means in said at least one wall for observing the movement of said at least one articulated part when said toy is activated in said package.

5,172,807
CEMENT MIXING CAPSULE
William B. Dragan, Easton, and John Discko, Jr., Hamden, both of Conn., assignors to Centrix, Inc., Shelton, Conn.
Filed Sep. 30, 1991, Ser. No. 767,623
Int. Cl.[5] B65D *25/08*
U.S. Cl. 206—219 20 Claims



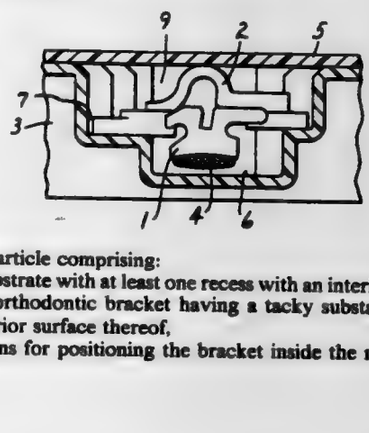
9. A dental cement mixing capsule comprising:
a tubular body having a first bore, a front end, and a back end;
collar means, attached adjacent to the back end of said body, for securely holding said body;
a nozzle having a second bore therein attached to the front end of said body;
a frangible seal disposed between said first bore and said second bore;
an internally threaded plug having an opening in the front thereof and adapted to be received by said first bore; and
a threaded plug insert mating with said internally threaded plug.

5,172,808
DEVICE FOR SAFELY TRANSPORTING ONE OR MORE HYPODERMIC NEEDLES OR THE LIKE FROM POINT OF USE TO POINT OF ULTIMATE DISPOSAL
John Bruno, 77-83 Second Ave., Paterson, N.J. 07514
Continuation-in-part of Ser. No. 214,332, Jul. 1, 1988, abandoned. This application May 17, 1989, Ser. No. 353,240
Int. Cl.[5] B65D *83/10*
U.S. Cl. 206—366 10 Claims



2. A re-usable sharps storage/transport device for temporarily retaining used hypodermic needles/syringe assemblies intended for ultimate disposal, comprising a generally open-topped container proportioned to receive at least one needle/-syringe assembly, in-tact, said container including a weight member generally at its bottom and a needle-piercing insert member generally above said weight member, wherein said weight member is formed by a hardenable compound poured into said container, said insert comprising a material which has a memory, such that when said inset is pierced by a needle, it will tend to retain said needle to resist inadvertent removal of the used needle/syringe assembly from said container until the used needle/syringe assembly is removed by a user for appropriate disposal, yet said insert will substantially return to its original configuration after removal.

5,172,809
PACKAGING CURABLE MATERIALS
Dwight W. Jacobs, St. Paul, Minn., assignor to Minnesota Mining and Manufacturing Company, St Paul, Minn.
Division of Ser. No. 350,609, May 10, 1989, Pat. No. 4,978,007.
This application Nov. 20, 1990, Ser. No. 615,790
The portion of the term of this patent subsequent to Dec. 8, 2007, has been disclaimed.
Int. Cl.[5] B65D *83/10*
U.S. Cl. 206—368 2 Claims



1. An article comprising:
a) a substrate with at least one recess with an interior surface,
b) an orthodontic bracket having a tacky substance on an exterior surface thereof,
c) means for positioning the bracket inside the recess such

that the tacky substance does not separate from the bracket upon removal of the bracket from the recess,

d) a cover for the recess, and

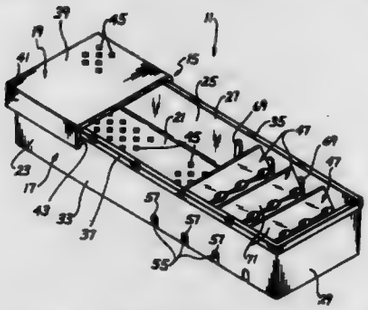
e) means for maintaining the cover in contact with the substrate, wherein the means for positioning the bracket includes means suspending the bracket in the recess such that the tacky substance does not contact the interior surface of the recess.

5,172,810

RECEPTACLE FOR HOLDING DENTAL BURRS

Charles A. Brewer, 105 Via Wazier, Newport Beach, Calif. 92660

Filed Nov. 6, 1991, Ser. No. 788,342
Int. Cl.[5] B65D *83/10*
U.S. Cl. 206—369 18 Claims



1. A receptacle for holding dental burrs comprising:

a container including a container body and a cover;

said container body including a transverse wall and a peripheral wall joined to the transverse wall to define a compartment having an open end, said cover being positionable over the open end of the compartment;

first and second dental burr holders in said compartment, each of said dental burr holders having a plurality of bores with each of said bores terminating in an opening, each of said bores being sized and adapted to receive a dental burr through the opening thereof;

each of the dental burr holders being attached to the container body for pivotal movement between a first position in which the openings of the bores face generally outwardly of the open end of the compartment to facilitate access to any burrs in the bores and a second position in which the openings of the bores are closer to the transverse wall than in the first position;

means on said second dental burr holder cooperable with the cover for holding dental burrs in the bores of the first dental burr holder when the first and second dental burr holders are in said second position; and

said container having aperture means therein for providing access to the compartment.

5,172,811

Patent Not Issued For This Number

5,172,812

CHILD-RESISTANT PAPERBOARD BLISTER PACKAGE AND METHOD OF MAKING THE SAME

B. G. Wharton, Buffalo Grove, Ill.; Daniel Lagerfeldt, Stratford, and Alan Johnston, New Haven, both of Conn., assignors to Rexham Corporation, Del.

Filed Jan. 23, 1992, Ser. No. 824,344
Int. Cl.[5] A61J *1/00*
U.S. Cl. 206—531 2 Claims

1. A child-resistant blister package comprising

(a) a top sheet of paperboard having a series of oblong apertures defined in central portions thereof;

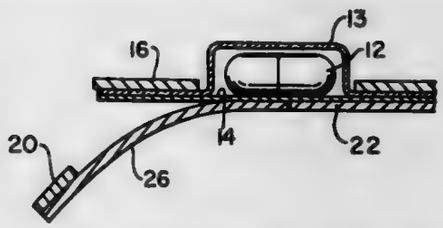
(b) a thermoformed plastic sheet defining a series of elongated blisters adapted to project through each of said apertures in registry therewith;

(c) a sheet of rupturable material closing off said elongated blisters;

(d) a bottom sheet of paperboard laminated by a peelable laminate to said rupturable sheet material;

(e) said top sheet of paperboard having a severable pull-tab extension projecting beyond the edge of said blisters and beyond the edge of said rupturable material and being directly adhered to said bottom paperboard sheet;

(f) a continuous die cut extending through said bottom sheet of paperboard and defining a removable strip in a manner



whereby said bottom strip may be removed from the packaged by grasping said pull-tab and peeling back said pull-tab along with the adhered removal bottom layer to reveal a penetrable limited exposed portion of said rupturable material lying beneath a portion of said aperture;

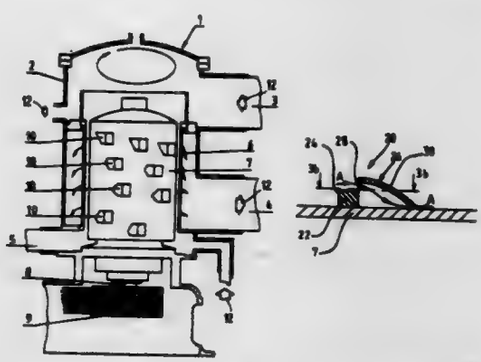
(g) a tablet within said blister being readily removable therefrom by the application of pressure to specific limited region of said blister along the edge of said blister closest to said pull-tab to rupture said rupturable sheet material, but said tablet not being readily removable from said blister by the application of pressure along the edge of the blister remote from said pull-tab.

5,172,813

METHOD AND AN APPARATUS FOR TREATING FIBER SUSPENSION

Risto A. Ljokkoi, Karhula, Finland, assignor to A. Ahlstrom Corporation, Noormarkku, Finland

Continuation of Ser. No. 524,752, May 17, 1990, abandoned. This application Dec. 11, 1991, Ser. No. 804,534
Claims priority, application Finland, May 17, 1989, 892356
Int. Cl.[5] D21D *5/00*; B07B *1/20*
U.S. Cl. 209—270 21 Claims



1. A method of treating a fiber suspension utilizing a filter apparatus including a filter surface having openings therein, a counter member having an axially and circumferentially extending counter surface provided with protrusions, each of which has an axial length less than the axial length of said counter surface, said counter member cooperating with the filter surface to define a gap therebetween, said filter surface further including a discharge end and an inlet end, with an

accepts volume provided on the opposite side of the filter surface from the gap, the method comprising the steps of:

(a) under force, drawing the suspension into the gap between the filter surface and the counter member at the inlet end of the filter surface;

(b) effecting relative movement between the filter surface and the counter member, so that relatively fine accepts pass through the openings in the filter surface and relatively coarse rejects pass toward the discharge end, some suspension at the filter surface being coarser and/or of higher solids concentration than the accepts; and

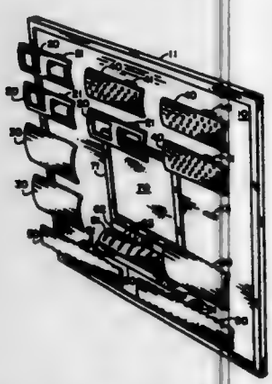
(c) during the practice of step (b), diverting the suspension at the filter surface of coarser and/or higher solids concentration than the accepts away from the filter surface and physically moving the coarser and/or higher solids concentration suspension to the rotor surface by means of said protrusions, thereby causing new fiber suspension to be fed towards the filter surface to replace the coarser and/or higher solids concentration suspension.

5,172,814

JEWELRY BOARD

Carol C. Pell, and Pamela J. Simon, both of Wilmette, Ill., assignors to Other Notions, Inc., Skokie, Ill.

Filed Nov. 22, 1991, Ser. No. 799,688
Int. Cl.[5] A47F 7/00
U.S. Cl. 211—13 **18 Claims**



1. An apparatus for holding and displaying jewelry, said apparatus comprising:

a substantially flat, rigid base, including a front surface, a back surface and a plurality of spaced apart openings;

a panel, including a layer of material capable of being easily penetrated by a pin, for retaining and displaying said pin, said panel located in said front surface;

a shelf projecting from said front surface, including a unitary slotted, resilient insert adapted to receive finger rings in said slots; and

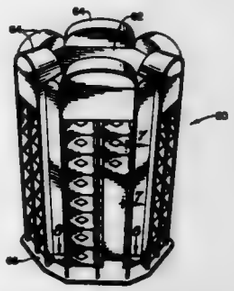
a plurality of interchangeable jewelry holding means, said holding means including a plurality of differing configurations, each of said interchangeable jewelry holding means further including one of said mounting means receivable within any of said openings so as to facilitate the selective placement of said interchangeable jewelry holding means in any position on said base so as to allow rapid variation of the display of said jewelry, said mounting means comprising a horizontal section extending from said jewelry holding means and a vertical section at the distal end of said horizontal section, said horizontal section being sized for insertion through one of said openings, said vertical section being sized and positioned for abutment against the rear of said base when said horizontal section is positioned through one of said openings, thereby retaining said jewelry holding means thereon.

5,172,815

GRAVITY FEED JEWELRY DISPLAY SYSTEM AND DUAL-FLANGE DISPLAY CARD

Richard J. Schock, Sherman Oaks, Calif.; Fred Richmond, New York, N.Y., and Jeffrey A. Felheiman, East Greenwich, R.I., assignors to Mel Bernie & Company, Inc., Burbank, Calif. and Display Technologies, Inc., Johnston, R.I.

Filed May 11, 1990, Ser. No. 522,520
Int. Cl.[5] A47F 7/00
U.S. Cl. 211—13 **10 Claims**



1. An improved gravity feed display system for the mounting and display of display cards, the system comprising:

a pair of inclined slots spaced apart to slidably receive said cards in such manner that when a lower card is pulled out, a card situated above slides down to occupy the position of the card being removed,

each card comprising:

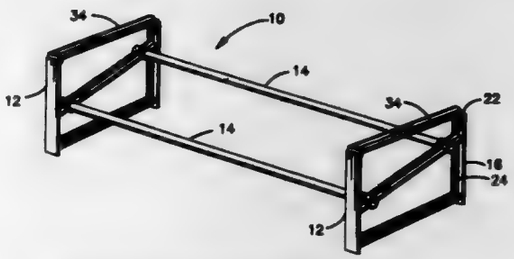
a generally flat panel and a top flange, and means to prevent the overlapping of an adjacent card while on display in the display system.

5,172,816

SHOE RACK

Richard B. Kline; Chris Sersiev, both of Overland Park, Kans., and Vijay S. Malik, Kansas City, Mo., assignors to Lynk, Inc., Shawnee Mission, Kans.

Filed Jan. 10, 1992, Ser. No. 819,111
Int. Cl.[5] A47F 7/08
U.S. Cl. 211—37 **11 Claims**



1. A modular shoe rack system, comprising:

at least one pair of support tubes; and

at least two side frames, each being substantially identical and including a pair of tube supports, each of said tube supports including a pair of oppositely opening cavities, each of which is adapted to receive a respective end of one of said tubes, with a pair of said tubes extending between each adjacent pair of said frames, said tube supports being located above a lower end of said side frames whereby said support tubes are supported above the ground, and whereby one pair of said tubes may be connected to and extend between one pair of said side frames to define a single unit length rack having exterior ones of said frames, and an additional pair of said tubes may be connected to and extend between the open ones of said cavities of said

exterior ones of said frames and an additional side frame to define a multiple unit rack having n units with the use of only n+1 side frames.

5,172,817

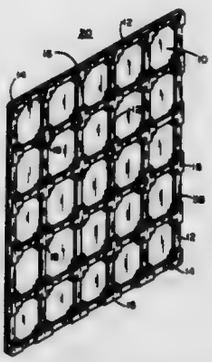
RACK FOR COMPACT DISKS OR TAPE CASSETTES

Jan S. Gross, 4903 San Jose St., Tampa, Fla. 33629

Continuation-in-part of Ser. No. 637,778, Jan. 7, 1991, Pat. No. 5,072,836. This application Dec. 16, 1991, Ser. No. 809,384

Int. Cl.[5] A47B 63/00

U.S. Cl. 211—40 11 Claims



1. A wall mountable storage rack for compact disk cases comprising an open framework forming a plurality of adjacent rectangular receptacles being sized to accept a compact disk case when the case is oriented with one of the disk case's largest surfaces facing outward of the rack, each of the rectangular receptacles being formed from four elongated side members releasibly joined to four corner members, preselected ones of the corner members being connectable to other elongated side members for forming the adjacent receptacles;.

each of said corner members including a flange adjacent a rear edge thereof, said flange extending a preselected distance into a receptacle defined in part by a corresponding one of said corner members, said flange engaging a rear surface of said compact disk case when the disk case is inserted into a receptacle for positioning an outwardly facing surface of the case in a preselected orientation with respect to an outwardly facing surface of the storage rack, each of said corner members further including a receptacle on a rear surface thereof; and

means for mounting said rack to a generally flat surface, said mounting means comprising a first plate-like member having a front and a rear surface and a protrusion extending from said front surface, said protrusion being adapted for releasable engagement with one of said receptacles, and fastening means associated with said rear surface of said mounting means for attaching said mounting means to said generally flat surface for supporting said rack thereon.

5,172,818

ADJUSTABLE SECURING DEVICE

Peter S. Martino, Verona, and Douglas Hanes, Pittsburgh, both of Pa., assignors to McConway & Torley Corporation, Pittsburgh, Pa.

Filed Jan. 28, 1992, Ser. No. 826,797

Int. Cl.[5] B61G 9/00

U.S. Cl. 213—62 R 21 Claims

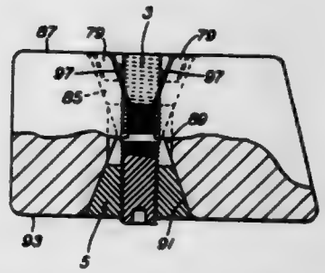
1. An adjustable securing device for an axially adjustable blockout device that forms a portion of a slackless drawbar assembly which connects adjacent ends of a pair of railway car together in a substantially semi-permanent fashion, said adjustable securing device comprising:

(a) a first wedge shaped member having each of a horizontally disposed top wall portion and a horizontally disposed bottom wall portion, a pair of substantially vertically disposed end wall portions and a pair of tapered side wall portions extending between said top wall portion and said bottom wall portion and between said pair of said end wall portions, said top wall portion having a predetermined width which is wider than a predetermined width of said bottom wall portion;

(b) a second wedge shaped member spaced from and confronting said first wedge shaped member, said second wedge shaped member having each of a horizontally disposed top wall portion and a horizontally disposed bottom wall portion, a pair of substantially vertically disposed end wall portions and a pair of tapered side wall portions extending between said top wall portion and said bottom wall portion and between said pair of said end wall portions, said top wall portion having a predetermined width which is narrower than a width of said bottom wall portion;

(c) a first threaded bore extending between and through said top wall portion and said bottom wall portion of said first wedge shaped member, said first threaded bore having threads oriented in one of a left hand and a right hand predetermined direction;

(d) a second threaded bore extending between and through said top wall portion and said bottom wall portion of said second wedge shaped member and disposed in axial alignment with said first threaded bore, said second threaded bore having threads oriented in an opposite one of said left hand and said right hand predetermined direction of said thread in said first threaded bore; and



(e) a threaded member extending into said first threaded bore of said first wedge shaped member and into said second threaded bore of said second wedge shaped member, said threaded member including,

(i) a head portion disposed at a first end thereof,

(ii) a gripping member portion disposed at an axially opposed second end thereof, and

(iii) a shank portion extending between said head portion and said gripping member portion, a first portion of said shank portion located adjacent said head portion, having a threaded portion engageable with said threads disposed in said first threaded bore in said first wedge shaped member and a second portion of said shank portion, located adjacent said gripping member portion, having a threaded portion engageable with said threads disposed in said second threaded bore in said second wedge shaped member so that upon threading of said threaded member into first threaded bore in said first wedge shaped member and said second threaded bore in said second wedge shaped member, said first wedge shaped member and said second wedge shaped member will be secured together and upon rotating said threaded member in a first direction with said first wedge shaped member and said second wedge shaped member being restrained from rotation they will be moved toward one another and upon rotation of said threaded member in an opposite direction they will be moved apart.

5,172,819

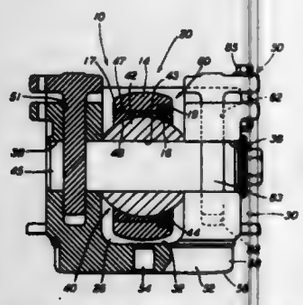
BEARING ASSEMBLY FOR AN ARTICULATED COUPLING APPARATUS WHICH CONNECTS ADJACENT ENDS OF A PAIR OF RAILWAY CARS TOGETHER

David W. Daugherety, Jr., Bolingbrook; Walih Kanjo, Lockport, both of Ill.; Michael G. Hawryszkow, Munster, Ind.; William D. Wallace, Chicago, Ill., and Edward G. Lynch, Jr., Saugus, Calif., assignors to Westinghouse Air Brake Company, Wilmerding, Pa. and Sargent Industries, Inc., Waukesha, Wis.

Continuation of Ser. No. 521,861, May 8, 1990, abandoned. This application Jun. 2, 1992, Ser. No. 894,727

Int. Cl.[5] B61G 5/02

U.S. Cl. 213—75 R 21 Claims



1. A bearing assembly for use in an articulated coupling arrangement utilized in connecting adjacent ends of a pair of railway cars in a substantially semipermanent manner, such articulated coupling arrangement has a male connection member secured to one predetermined end of a first railway car and a female connection member secured to an adjacent predetermined end of a second railway car, said bearing assembly comprising;

(a) a substantially spherical member having a predetermined diameter;

(b) a race assembly formed by at least two members, each of said at least two members forming said race assembly having a substantially spherical inner surface positioned around a predetermined portion of said spherical member, an outer surface of said race assembly having a substantially identical size and a substantially identical configuration as a predetermined size and a predetermined configuration of an aperture formed through a predetermined portion in one end of such male connection member when said at least two members forming said race assembly are positioned around said predetermined portion of said spherical member, said race assembly enables movement of such male connection member in relation to such female connection member in both a vertical direction and a horizontal direction over a predetermined range of angles measured from a centerline of said spherical member disposed in a vertical direction, and from a longitudinal axis of such articulated coupling arrangement disposed in a horizontal direction;

(c) securing means engageable with each of said race assembly and such one end of such male connection member for securing said race assembly and said spherical member to such one end of such male connection member; and

(d) a pair of shaft members extending outwardly a predetermined length from axially-opposed surfaces of said spherical member, a longitudinal axis of said pair of shaft members being in a substantially horizontal plane, one of said pair of shaft members being engageable with a respective one of an opening formed through each of a pair of upstanding side wall portions of a cavity formed in one end of such female connection member, at least a first portion of each of said pair of shaft members having a substantially identical configuration as at least a portion of a predetermined configuration of such opening formed through such side wall portions of such cavity, at least a second portion of each of said pair of shaft members having a substantially flat surface area to be engaged by a wedge member to secure said pair of shaft members to such female connection member.

5,172,820

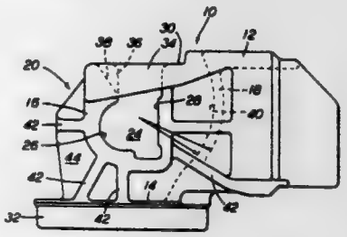
FEMALE CONNECTION MEMBER USED IN AN ARTICULATED COUPLING ARRANGEMENT

David W. Daugherty, Jr., Bolingbrook, Ill., assignor to Westinghouse Air Brake Company, Wilmerding, Pa.

Filed Jul. 8, 1991, Ser. No. 726,758

Int. Cl.[5] B61G 5/02

U.S. Cl. 213—75 R 16 Claims



1. An improved female connection member formable as an integral single piece casting and which forms a portion of an articulated coupling arrangement used in connecting predetermined ends of a pair of adjacent railway cars together in a substantially semipermanent manner, said improved female connection member being configured in a particular manner which will facilitate both assembly and disassembly of such articulated coupling arrangement, said improved female connection member comprising:

(a) a center sill engaging portion disposed adjacent a first end of said improved female connection member, said center sill engaging portion having a predetermined size and a predetermined configuration which includes a generally rectangular portion that enables said first end to be engageable within such center sill so that said improved female connection member can be secured to one predetermined end of one of such pair of railway cars;

(b) a male connection member receiving portion disposed adjacent a radially disposed second end of said improved female connection member;

(c) a cavity having an open top portion and an open front portion formed in said male connection member receiving portion, said cavity formed by,

(i) a bottom wall portion,

(ii) a pair of radially opposed side wall portions extending upwardly from said bottom wall portion, an inner vertically disposed surface of each of said pair of side wall portions having a predetermined configuration, and

(iii) a back wall portion extending upwardly from said bottom wall portion and between said pair of said side wall portions, said back wall portion of said cavity having a concave shape in each of a vertical direction and a horizontal direction;

(d) a radially opposed opening formed through said each of said pair of side wall portions, each said opening having a predetermined configuration which at least includes an arcuate portion and a generally rectangular portion and a generally triangular shaped portion disposed above said arcuate portion and forwardly of said rectangular portion, said rectangular portion of said opening terminates at an upper surface of a respective side wall portion, said triangular portion of said opening having a tapered surface which extends upwardly from an inner surface of said rectangular portion and outwardly toward said upper surface of said respective side wall portion; and

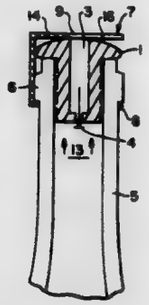
(e) a generally round plate-like bolster bowl engaging portion disposed adjacent a bottom portion of said bottom wall portion of said cavity formed in said male connection member receiving portion.

5,172,821

CLOSURE FOR KEEPING OPENED BOTTLES OF SPARKLING WINE FRESH

Eugenie Knopf, Schwetzinger Str. 4, 5000 Cologne 91, Fed. Rep. of Germany

Filed Dec. 3, 1990, Ser. No. 620,634
Claims priority, application Fed. Rep. of Germany, Jan. 22, 1990, 4001663; May 23, 1990, 4016592
Int. Cl.[5] B65D *45/04*
U.S. Cl. 215—286 7 Claims



1. A closure device for keeping an opened bottle of sparkling wine fresh and providing for insertion of carbon dioxide, comprising:

a stopper having a head portion and an elongated shaft extending downwardly from said head portion which is insertable into a neck of said bottle, said stopper further having a gas passage bore defined along a vertical axis therein, and a non-return valve centrically disposed in said bore for feeding the carbon dioxide into the bottle;

a retaining device for retaining said stopper within said bottle neck, said retaining device comprising a generally U-shaped bracket having first and second angled walls;

at least two fork shaped lower fingers extending from said first angled wall and defining a first recess therein;

at least two fork shaped upper fingers extending from said second angled wall and defining a second recess in said second angled wall between said upper fingers, such that when said bracket is placed around said stopper to close the bottle, said lower fingers engage a rim of said bottle, and said upper fingers engage said head portion of the stopper, said second recess forming a thumb-pressure opening which enables said stopper to be pushed further into the bottle by placing a thumb within said thumb pressure opening, thereby allowing for easier insertion and removal of the stopper into the bottle neck and allowing for removal of said retaining device from said bottle neck while a thumb is inserted within said thumb pressure opening and pressed onto said stopper; and

radially projecting ribs formed on said stopper shaft and extending in a circumferential direction to form sealing elements for sealing said stopper within said bottle.

5,172,822

LID PROTECTOR FOR PAINT CANS AND THE LIKE

Robert DeFrance, 48 Catskill Ave., Poughkeepsie, N.Y. 12603

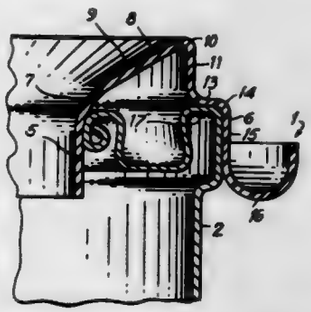
Filed Feb. 1, 1991, Ser. No. 649,467
Int. Cl.[5] B65D *25/00*
U.S. Cl. 220—733 2 Claims

1. A lid protector for paint cans and the like comprised of

a) a substantially vertical outer wall;

b) a substantially vertical inner wall: and

c) an intermediate piece extending at an upward and outward angle connected to the outer and inner walls, said protector can be in the shape of a ring and being dimensioned to fit over the rim of the can, the intermediate piece forming an upward and outward angle with respect to the circumferential inner wall greater than 90°, but less than 180°, so that at least a section of intermediate piece does not lie flush against the circumferential rim of the paint can, the inner circumferential vertical wall being the first section thereof, the inner circumferential vertical wall being connected by means of a first elbow to a second section formed of a circumferential angled portion of the intermediate piece, the intermediate piece being further comprised of a third section which is a substantially vertical component connected to the second section by means



of second elbow, said third section being connected to a substantially horizontal fourth section by means of a third elbow forming a right angle between the third section and the fourth section, said fourth section being connected to the outer wall by means of a fourth elbow forming a right angle between the fourth section and the outer wall of the lid protector.

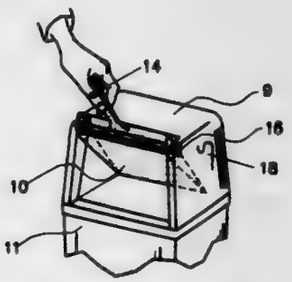
COMBINATION DUSTPAN AND TRAPDOOR RECEPTACLE CLOSURE

John B. Moetteli, 11524 Royalshire Dr., Dallas, Tex. 75230

Filed Dec. 28, 1990, Ser. No. 635,272
Int. Cl.[5] B65D *90/00*
U.S. Cl. 220—334 5 Claims



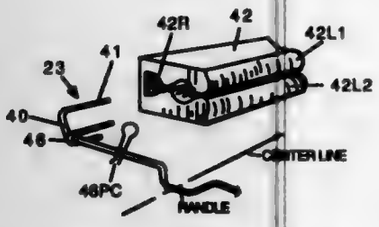
1. A fixture operative as a sanitary closure for a waste receptacle having an upper open end or as a dustpan comprising:

means whereby said fixture is pivotally attached to the open end of the receptacle when used as a closure such that said fixture pivots into the interior of said waste receptacle and can be opened against the force of entering refuse thus enabling onehanded disposal of refuse into said waste receptacle;

a handle or handles dependent from said fixture in order to enable remote and sanitary pivoting of said fixture for access to the interior of said receptacle, to facilitate removal of the fixture from said open end of said receptacle, and to grip said fixture when said fixture is used as a dustpan; and

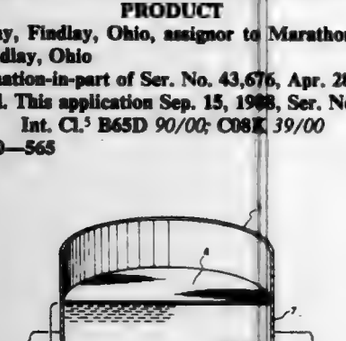
a straight edge portion integral with said fixture and extending therefrom and forming a ramp leading into the concave side of said fixture whereby when said fixture is removed from said receptacle, it may be used as a dustpan.

5,172,824
TRASH ORGANIZER FOR RECYCLING
Mark Statler, Rte. 3, Box 150E, Hurricane, W. Va. 22526
Filed Mar. 15, 1991, Ser. No. 669,087
Int. Cl.[5] B65F *1/06*
U.S. Cl. 220—404 4 Claims



1. A trash collection and sorting system having a vertically extending main housing having left and right sidewalls and a plurality of individual vertically stacked storage volumes in said main housing, said individual storage volumes being adapted to receive a particular category of trash, one of said storage volumes being for miscellaneous trash and including a plastic trash bag in said miscellaneous trash storage volume, and means maintaining said plastic trash bag open, including a left guide track secured to said left sidewall and a right guide track secured to said right sidewall, an endless loop wire frame having a generally rectangular configuration and including front and rear bars joined at their respective ends by left and right side rails, said left and right side rails being slidably receivable in said left and right guide tracks, respectively, and left and right bails slidable on said front and rear bars of said endless loop wire frame proximate the left and right sidewalls, respectively, for securing opposing sides of the open end of said plastic trash bag thereto.

5,172,825
STORAGE OF A REFINED LIQUID HYDROCARBON PRODUCT
Carl D. Clay, Findlay, Ohio, assignor to Marathon Oil Company, Findlay, Ohio
Continuation-in-part of Ser. No. 43,676, Apr. 28, 1987, abandoned. This application Sep. 15, 1988, Ser. No. 245,083
Int. Cl.[5] B65D *90/00*; C08K *39/00*
U.S. Cl. 220—565 12 Claims



1. A process for storing a refined liquid hydrocarbon product in a storage tank "having a dead volume" between the bottom of said tank and an outlet port in said tank, said process comprising:
preparing a gelation solution comprising an aqueous liquid solvent, an acrylamide polymer and a crosslinking agent containing a polyvalent metal cation selected from the group consisting of aluminum, chromium and mixtures thereof, said gelation solution capable of forming a rigid crosslinked polymer gel which is substantially insoluble and inert in said refined liquid hydrocarbon product;
placing said solution in said dead volume;
gelling said solution substantially to completion in said dead volume to produce said rigid gel which substantially fills said dead volume; and
storing said refined liquid hydrocarbon product in said storage tank in contact with said gel without substantially contaminating said product with said gel and without substantially degrading said gel.

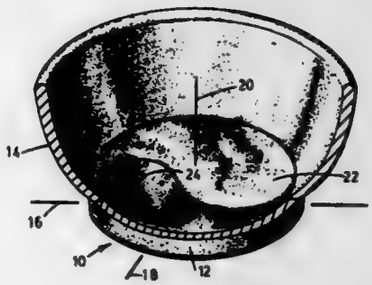
FOOD BOWL
Carlos Celaya, 124 W. 65th St., #3, Westmont, Ill. 60559
Filed Dec. 20, 1991, Ser. No. 811,270
Int. Cl.[5] A47G *19/02*
U.S. Cl. 220—574 1 Claim



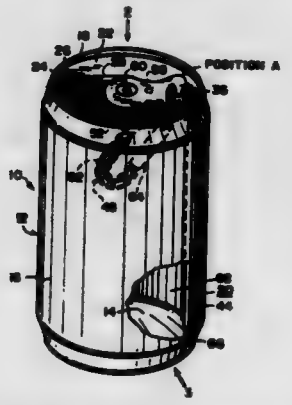
1. A food bowl comprising:
a base having a two-dimensional extent in a base plane and thicknesses in a direction transverse to the base plane;
a wall having a height in the direction transverse to the base plane, the wall extending continuously around at least a portion of the base, the portion of the base being surrounded by the wall defining the bottom of the bowl, and the wall being merged with the base; and
a portion of the bottom having a thickness which is reduced from the thicknesses of the remainder of the bottom, to form a depression in the bottom, whereby liquids in the bowl collect in the depression in the bottom;
the portion of the bottom having a reduced thickness being, by definition, a depressed portion, the depressed portion having a variably reduced thickness such that the depression formed in the bottom is a sloped depression;
the depressed portion further being helical, along a helical axis;
the depressed portion further having widths perpendicular to the helical axis, the widths decreasing as thickness of the depressed portion increases;
the depressed portion further having, immediately adjacent the location of maximum width, a semicircular, concave end.

5,172,827
BEVERAGE CONTAINER
In Y. Chang, and Kyung S. Kang, both of 2 Harriet Dr., Syosset, N.Y. 11791
Filed May 20, 1992, Ser. No. 885,845
Int. Cl.[5] B65D *47/06*
U.S. Cl. 220—707 12 Claims

1. An improved beverage container which comprises:
a) a hollow housing having a bottom wall, a cylindrical side wall and an annular open top end forming an interior beverage chamber;
b) a top wall for sealing the annular open top end of said hollow housing;
c) a first panel in said top wall defined by a first weakened seam and a side fold line;

d) a second panel in said top wall defined by a second weakened seam and an end fold line;

e) a tab rotatively mounted to a top surface of said second panel, so that when said tab is in a first position and tipped upwardly, said first panel will separate from the first weakened seam to bend inwardly along the side fold line into the interior beverage chamber to form a first opening in said top wall, and when said tab is pressed down flat, rotated one hundred and eighty degrees into a second position and pulled upwardly, said second panel will separate from the second weakened seam to bend up-



wardly along the end fold line to form a second opening in conjunction with the first opening in said top wall;

f) a flexible, resilient, tubular drinking straw disposed internally within the interior beverage chamber in said hollow housing; and

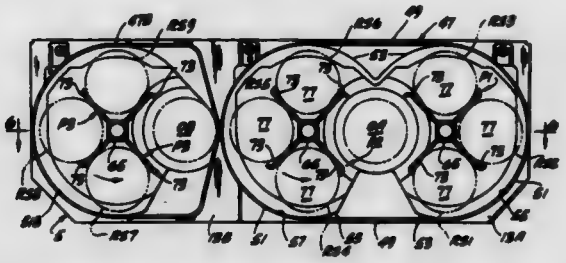
g) means for connecting an upper folded portion of said drinking straw to a bottom surface of said second panel, so that when said second panel is pulled upwardly, the upper folded portion of said drinking straw will pass through the first opening and the second opening in said top wall and be unfolded to allow a person to drink from said drinking straw.

5,172,828

CUP DISPENSER

Leonard A. Ficken, Manchester, and Gerald J. Podgorny, St. Louis, both of Mo., assignors to UniDynamics Corporation, New York, N.Y.

Filed Oct. 1, 1991, Ser. No. 769,552
Int. Cl.[5] G07F *11/12*
U.S. Cl. 221—11 18 Claims



1. A cup dispenser for dispensing cups from a stack of nested cups each of which has a rim comprising

a base having a cup dispensing opening;

dispensing means at the opening for holding up the lowermost cup of a stack in dispensing position by the rim of the lowermost cup in the opening and thereby holding up the stack in dispensing position generally in line with the opening;

said dispensing means being operable to release the lowermost cup of the stack in dispensing position to drop down from the base and to hold up the next cup by its rim and thereby hold up the remainder of the stack;

first means for holding a first reserve stack adjacent the opening;

second means for holding a second reserve stack adjacent the opening, and

means operable in response to depletion of the stack in dispensing position to move one or the other of the reserve stacks into dispensing position;

the cup dispensing opening being located between said first and second reserve stack holding means for movement of said first reserve stack into dispensing position in said dispensing opening and for movement of said second reserve stack into dispensing position in said dispensing opening;

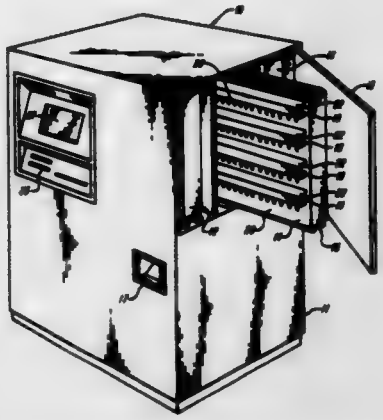
said means operable in response to depletion of the stack in dispensing position being operable to move said first reserve stack from its position adjacent said dispensing opening to dispensing position in said dispensing opening in a first path which intersects said dispensing opening, and to move said second reserve stack from its position adjacent said dispensing opening to dispensing position in said dispensing opening in a second path which intersects said opening.

5,172,829

AUTOMATED KEY DISPENSER

Henry A. Dellicker, Jr., Holliston, Mass., assignor to Siemens Nixdorf Information Systems, Inc., Burlington, Mass.

Filed Sep. 26, 1991, Ser. No. 765,992
Int. Cl.[5] G07F *11/10*
U.S. Cl. 221—13 23 Claims



1. An automatic key dispensing system, comprising:

at least one rack body;

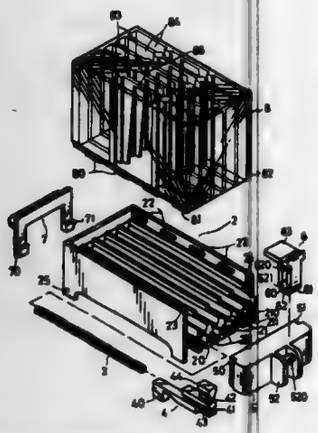
a plurality of individual key holders arranged horizontally and vertically on said rack body, each of said key holders movable between two states, the first wherein a key is retained, the second wherein a key is released;

means for actuating said key holders between said two states;

means for directing to a common location keys released from said key holders; and

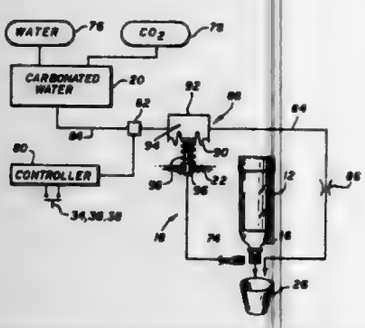
awning-shaped covers associated with said rack body and disposed over said individual key holders, said covers comprising a first portion operative to retain keys on said individual key holders and a second portion unitary with said first portion comprising a deflective surface extending away from said rack body to prevent interference among keys.

5,172,830
COTTONBUD DISPENSER
Ching-Kao Wu, Room 2, 11th Fl., No. 85, Shoei-Yuan Road, Taipei, Taiwan
Filed Aug. 16, 1991, Ser. No. 746,370
Int. Cl.[5] B65G 59/00
U.S. Cl. 221—131 5 Claims



2. A cottonbud dispenser comprising:
a) a base including one or more vertical walls, a plurality of separate, lengthwise rooms, two walls parallel to the long access of said rooms, and a vertical guide groove located on an inner surface of one end of said parallel walls;
b) a case body attached to said base for storing elongated cottonbuds, the case body including a plurality of lengthwise rooms, each of which rooms is open to a respective one of the rooms in said base;
c) a pushing block slidably mounted in each room which may be impelled across a long axis of said room to eject a cottonbud from the dispenser;
d) a spring compressed by said pushing block when said block is impelled across said room, said spring returning said pushing block approximately to its original position when released;
e) an outlet in one of said rooms which is open to said room; and
f) a stop plate which covers said outlet but which is urged to an open position by a cottonbud when said pushing block ejects the cottonbud from the dispenser.

5,172,831
VALVE ACTUATOR FOR A SOFT DRINK DISPENSER STATION
Bruce D. Burrows, Valencia, Calif., assignor to Ebtech, Inc., Columbus, Ohio
Filed Dec. 23, 1991, Ser. No. 812,015
Int. Cl.[5] B67B 7/00
U.S. Cl. 222—1 11 Claims



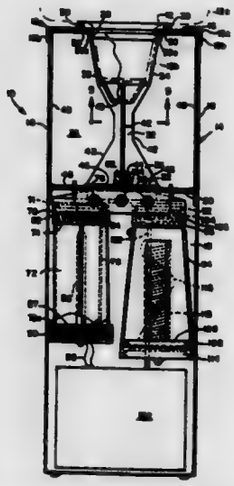
1. In a soft drink dispenser station having a reservoir containing a supply of carbonated water under pressure, a water dispense conduit for flow passage of the carbonated water from said reservoir to a receptacle, a water dispense valve for controlling carbonated water outflow from said reservoir through said water dispense conduit, a bottle containing a supply of a selected flavor syrup, and a syrup dispenser valve for controlling syrup outflow from said bottle to said receptacle, a valve actuator comprising:
an actuator member engageable with said syrup dispenser valve to displace said syrup dispenser valve between closed and open positions for respectively preventing and permitting syrup outflow from said bottle; and
means responsive to flow of the water through said water dispense conduit to displace said actuator member to a first position moving said syrup dispenser valve to said open position during water flow through said water dispense conduit, and to displace said actuator member to a second position moving said syrup dispenser valve to said closed position in the absence of carbonated water flow through said water dispense conduit.

9. In a soft drink dispenser station having a reservoir containing a supply of carbonated water under pressure, a water dispense conduit for flow passage of the carbonated water from said reservoir to a receptacle, a water dispense valve for controlling carbonated water outflow from said reservoir through said water dispense conduit, a bottle containing a supply of a selected flavor syrup, and a syrup dispenser valve for controlling syrup outflow from said bottle to said receptacle, a method of operating the syrup dispenser valve in coordination with the water dispense valve, said method comprising the steps of:
engaging the syrup dispenser valve with an actuator member
responding to flow of carbonated water along the water dispense conduit using a pressure responsive element to displace the actuator member to a first position moving, the syrup dispenser valve to the open position; and
responding to the absence of flow of carbonated water along the water dispense conduit using a pressure responsive element to displace the actuator member to a second position moving the syrup dispenser valve to the closed position.

5,172,832
LIQUID DISPENSING APPARATUS FOR DISPENSING LIQUID FROM A CONTAINER
Ismael Rodriquez, Jr., West Chester, and Daniel M. McShane, Philadelphia, both of Pa., assignors to Sunroc Corporation, Glen Riddle, Pa.
Filed Aug. 15, 1991, Ser. No. 745,577
Int. Cl.[5] B67D 5/62
U.S. Cl. 222—146.1 15 Claims

1. A liquid dispensing apparatus for dispensing liquid from a container having a body and a neck portion, said apparatus comprising:
a housing including an upper wall for at least partially supporting said container, said upper wall having a periphery, said housing including at least one side wall extending generally downwardly from the periphery of said upper wall and a bulkhead wall extending from said side wall within said housing and having an opening extending therethrough, said upper wall having an opening extending therethrough for receiving the neck portion of the containher, said bulkhead wall being spaced from said upper wall such that said upper wall, said side wall and said bulkhead wall form a reservoir for receiving and holding liquid dispensed from said container;
funnel means positioned within the reservoir between said opening in said upper wall and said opening in said bulkhead wall for directing liquid flowing from said neck portion of said container into said reservoir and from said reservoir through said opening in said bulkhead wall;
a liner releasably positioned within said reservoir including a

first opening releasably positioned in alignment with said opening in said upper wall, said first opening having a periphery sealingly positioned between said opening in said upper wall and said funnel means for preventing liquid from passing therebetween, said liner including a second opening releasably positioned in alignment with said opening in said bulkhead wall, said second opening having a periphery sealingly positioned between said opening in said bulkhead wall and said funnel means, said



liner being positioned in substantial engagement with the reservoir such that liquid within said reservoir is prevented from directly engaging said upper wall, said side wall and said bulkhead wall; and

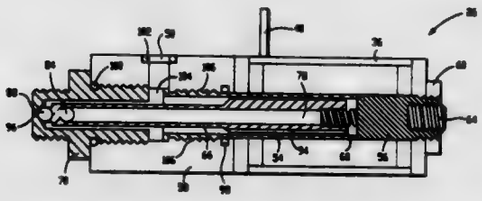
selective dispensing means in fluid communication with said opening in said bulkhead wall for selectively dispensing liquid from said reservoir, through said second opening in said liner and through said opening in said bulkhead wall whereby said liner is replaceable with a second liner without sanitizing said reservoir.

5,172,833

MODULAR APPLICATOR HAVING A SEPARATE FLOW LOOP TO PREVENT STAGNANT REGIONS

W. Harrison Faulkner, III, Salinas, Calif., assignor to Slautterback Corporation, Monterey, Calif.

Filed Jan. 9, 1992, Ser. No. 818,698
Int. Cl.[5] B67D 5/62
U.S. Cl. 222—146.5 **16 Claims**



1. A device for controlling the intermittent flow of adhesive material comprising,

a housing having a bore and having a seat at an axially forward end of said bore, said seat having an outlet port, said housing having an inlet port in fluid communication with said bore,

a reciprocating member slidably received in said bore, said reciprocating member having a forward end and a rearward end and having a sealed position in which said forward end is in contact with said seat to block fluid flow from said bore to said outlet port, said inlet port located along the length of said reciprocating member between said forward end and said rearward end, said housing and said reciprocating member defining an axially forward high-volume flow path from said inlet port to said outlet port via said bore and defining a predetermined low-volume flow loop extending from said inlet port to said rearward end of said reciprocating member and returning to join said high-volume flow path, and

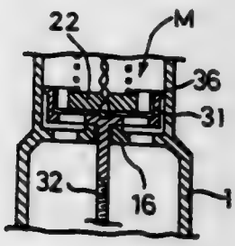
means for selectively displacing said reciprocating member to and from said sealed position.

5,172,834

DISPENSING CONTAINER CONVERTING RECIPROCATING MOTION TO ROTARY MOTION TO MOVE A PRODUCT DISPENSING PISTON TO DISPENSE THE PRODUCT IN A FIXED AMOUNT

Philip Wang, No. 7, Kao-Cheng 9th Street, Pa-Teh Hsiang, Tao-Yan Hsien, Taiwan

Filed Dec. 26, 1990, Ser. No. 634,070
Int. Cl.[5] B67D 5/42
U.S. Cl. 222—320 **19 Claims**



3. A fluid dispenser, comprising:

a container body having a fluid containing portion, a drive chamber and a dispensing outlet;

a push-knob reciprocably mounted on said container body so as to be moveable toward and away from said drive chamber;

a drive means in said drive chamber for converting reciprocal movement of said push-knob into rotary motion, said drive means including a screw having a predetermined lead angle;

a threaded rod extending in said fluid containing portion of said container body;

a piston engaging said threaded rod such that said piston is axially moveable in said container body along said threaded rod in response to rotation of said threaded rod;

driven means in said drive chamber in unidirectional rotation driving engagement with said drive means for rotating said threaded rod to axially move said piston in response to said drive means converting reciprocal movement of said push-knob into rotary motion.

5,172,835

DEVICE FOR DOSING PRODUCTS IN PAST FORM, IN PARTICULAR MEAT OR OTHER PROTEIN EMULSIONS

Robert Hudcovic, Achim; Erich Mengel, Verden, and Bruno Trachez, Kirchlinteln, all of Fed. Rep. of Germany, assignors to Unisabi, S.A., Saint-Denis-de-l'Hotel, France

PCT No. PCT/FR90/00008, § 371 Date Jul. 31, 1991, § 102(e) Date Jul. 31, 1991, PCT Pub. No. WO90/07695, PCT Pub. Date Jul. 12, 1990
PCT Filed Jan. 5, 1990, Ser. No. 720,782
Claims priority, application France, Jan. 6, 1989, 89 00107
Int. Cl.[5] B67D 5/40
U.S. Cl. 222—380 **7 Claims**

1. A device for volumetric metering of pasty products into a container comprising:

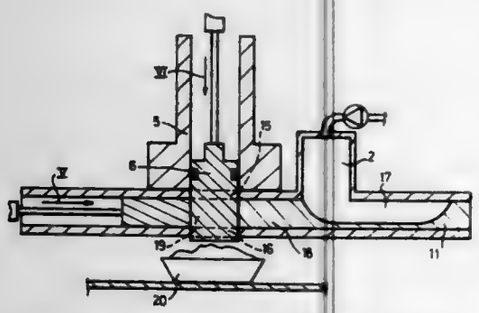
a metering chamber provided, at one of its ends, with a common filling and delivery opening

a metering plunger is disposed within the metering chamber and is movable axially between a reference position, wherein no residual volume of the pasty product remains inside the metering chamber, to a raised position wherein a metered volume of pasty product is received within said metering chamber,

means for supplying the pasty product under pressure into said metering chamber,

a distribution cylinder disposed transversely relative to the metering chamber and provided laterally with a first opening defining said filling and delivery opening of said metering plunger, a second opening disposed axially opposite to said first opening, and a third opening offset axially relative to the other two said openings and in communication with said means for supply of pasty product,

said distribution cylinder including a distributor slide having a lateral conduit for communication between first and second positions offset axially relative to each other, and an axial conduit for communication between first and



second positions disposed axially opposite to each other, said distributor slide being movable axially between:

(a) a filling position, wherein the lateral conduit is moved such that said first and third openings are opened into communication with one another and said second opening of the distribution cylinder is closed so as to permit filling of said metering chamber via said supply means,

(b) an isolating position, wherein after said metering plunger reaches its raised position, each of said three openings of said distribution cylinder is closed,

(c) a delivery position, wherein while the metering plunger is lowered towards its said reference position, the third opening remains closed, and said axial conduit is moved so that the said first and second openings are opened so as to deliver a portion of pasty product into the container which is place opposite to said second opening, and when said metering plunger reaches its said reference position, said metering plunger pentrates through said axial conduit of said distribution cylinder such that no quantity of pasty product is contained within said second opening, and

means for selective actuation of said metering plunger and distributor slide for movement of the same.

5,172,836

ERGONOMIC TRIGGER SPRAYER AND HAND POSITIONER THEREFOR

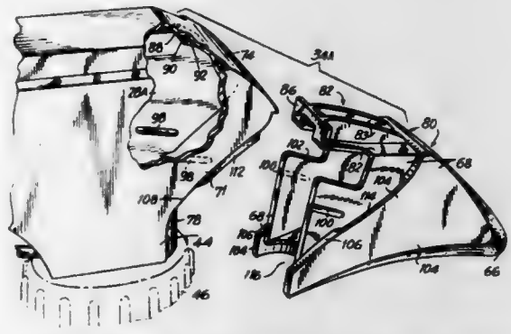
Jim Warner, New York, N.Y., assignor to The Drackett Company, Cincinnati, Ohio

Filed Jun. 7, 1991, Ser. No. 712,019
Int. Cl.[5] B67D 5/40
U.S. Cl. 222—383 **19 Claims**

1. An ergonomic trigger sprayer provided with a spraying mechanism including a nozzle for connection to a container, comprising, in combination,

a housing having mounting means for attachment to the container, said housing enclosing the spraying mechanism and having opposed front and rear ends, said front end for enclosing the nozzle, said mounting means being located between said front and rear ends,

hand positioning means for providing ergonomic pressure contact with the dorsal web of the user's hand between



the thumb and the index finger when the user grips the container and pulls the trigger, and

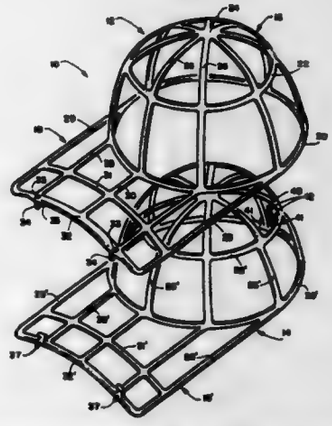
connecting means for non-releasably connecting said hand positioning means solely at said rear end of said housing.

5,172,837

DEVICE FOR WASHING A BALL CAP IN A DISH WASHER

Harold W. Fianey, Jr., 31053 DeLa Vista Ave., San Juan Capistrano, Calif. 92675, and John D. Fortney, 25111 Pizarro, El Toro, Calif. 92630

Filed Jun. 24, 1991, Ser. No. 720,244
Int. Cl.[5] A42C 1/00, 5/00
U.S. Cl. 223—23 **3 Claims**



1. A device for washing a ball cap in a dishwasher comprising:

a male top frame assembly having a top crown portion, said a top crown portion having a front end, a rear end, a left side and a right side, said top crown portion having a base and an apex;

a top brim portion extending forwardly only from the front end of said top crown portion, said top brim portion having a front end formed by a transversely extending front cross member that has a left end, a right end and a bottom surface;

a female bottom frame assembly having a bottom crown portion, said bottom frame portion having a front end, a rear end, a left side and a right side, said bottom crown portion having a base and an apex;

a bottom brim portion extending forwardly only from the front end of said crown portion, said bottom brim portion having a front end formed by a transversely extending front cross member that has a left end and a right end and a top surface;

the bottom surface of said male top frame assembly is spaced a predetermined distance D1 from the top surface of said female bottom frame assembly when they are secured to each other so that a ball cap placed between them is not wedged therein but is free to move about;

said male top frame assembly and female bottom frame assembly are each entirely integral members made of molded plastic material;

means for pivotally securing the front end of said top brim portion to the front end of said bottom brim portion at two laterally spaced points comprising: the front cross member of said top brim portion having an aperture therein adjacent its right end and its left end, a pair of resilient fingers extending downwardly from the front and rear edges of each of said apertures; the front cross member of said bottom brim portion having laterally spaced upstanding protrusions that detachably interlock with said resilient fingers; and

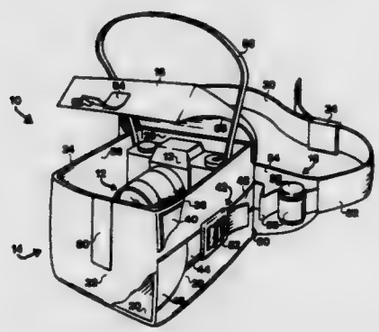
means for detachably securing the rear end of said top crown portion to the rear end of said bottom crown portion.

5,172,838

CHEST POUCH CAMERA CARRIER

Galen A. Rowell, Berkeley, and Hans M. Wain, Truckee, both of Calif., assignors to Photoflex, Inc., Santa Cruz, Calif.

Filed May 24, 1991, Ser. No. 705,107
Int. Cl.[5] A45F *3/00, 3/14*
U.S. Cl. 224—224 **11 Claims**



1. A camera carrier for carrying a camera therein, comprising:

a generally rectangular case enclosure for containing the camera within, said case enclosure having four flexible padded side walls;

at least one adjustment strap assembly attached to the side walls such that the volume of the case enclosure is variable according to the adjusted length of the adjustment strap; and

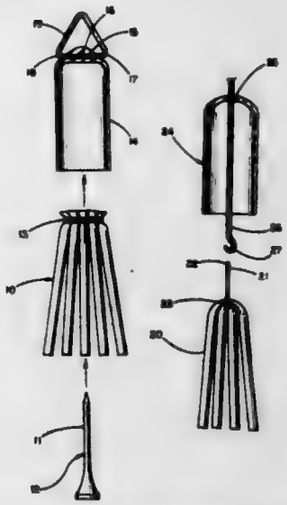
a case lid attached to one of said side walls of the case enclosure such that said case lid hinges up from that side wall to permit access to the camera within the case enclosure, wherein said case lid is formed so as to provide a pair of recesses through which a camera neck strap may be passed such that said camera neck strap may be extended from the case enclosure through said recesses when the lid is closed over the enclosure.

5,172,839

GOLF TEE HOLDER

James D. Frisbie, 8450 Dygert, Alto, Mich. 49302

Continuation of Ser. No. 364,642, Jun. 12, 1989, Pat. No. 4,993,613. This application Oct. 2, 1990, Ser. No. 591,697
Int. Cl.[5] A45F *5/00*
U.S. Cl. 224—251 **5 Claims**



1. A golf tee holder for golf tees, said tees having a relatively narrow shank and an enlarged head, comprising:

a body portion for securing the holder to a support;

a plurality of separate downwardly-open tube sections secured together in a cluster each depending from said body portion, and having an inside diameter selected to receive a portion of a standard golf tee shank in a lightly force fit; and a binder surrounding said cluster for securing said tube sections together to form a group;

said body portion includes a cap embracing said cluster and said binder.

5,172,840

DISPENSING APPARATUS FOR PRIMARY AND REMNANT ROLLS OF TOILET TISSUE

Nathan D. Bloch, 16 N. Green Acre Dr., Cherry Hill, N.J. 08003; Edward J. O'Brien, 8 Oxford Ct., Eastampton, N.J. 08060, and W. Scott Reitze, 704 Meadowwood La., Media, Pa. 19063

Continuation of Ser. No. 730,385, Jul. 15, 1991, abandoned, which is a continuation of Ser. No. 495,803, Mar. 19, 1990, abandoned. This application Nov. 15, 1991, Ser. No. 795,229
Int. Cl.[5] A47K *10/32*
U.S. Cl. 225—37 **20 Claims**

1. A toilet tissue dispenser comprising:

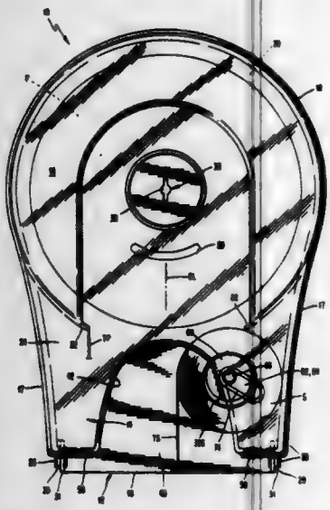
(a) a rear housing including a rear wall for attachment to a supporting surface;

(b) a cover, being closeable on said rear housing to define a chamber including sidewalls for enclosing a roll of toilet tissue, said chamber having an opening at the bottom thereof sufficient to allow manual access to the roll;

(c) a primary spindle projecting perpendicularly from said rear wall at a fixed position within said chamber for supporting the roll of toilet tissue;

(d) a secondary spindle within said chamber, said secondary spindle located below said primary spindle and being parallel to said primary spindle, said secondary spindle being further adapted for automatic movement away from a vertical center line of said chamber and toward one or said sidewalls as said stub is depleted thereby facilitating

access to said primary roll when said stub roll is fully depleted, said secondary spindle including front and rear



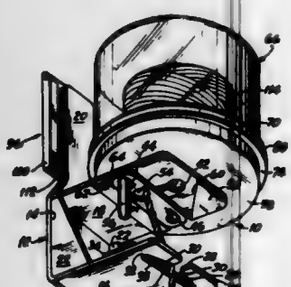
journals mounted for sliding movement in front and rear slots in said cover and said rear housing, respectively.

5,172,841

CORD DISPENSING APPARATUS

Leonard Friedman, 190 Kelly Blvd., Staten Island, N.Y. 10314

Filed May 28, 1991, Ser. No. 706,002
Int. Cl.[5] B65H 49/08
U.S. Cl. 225—42 20 Claims



1. A cord dispensing apparatus comprising:

a body member provided with first means for holding a mass, ball, spool and the like of cord;

second means for mounting said body member on a wall, panel or frame to position said cord dispensing apparatus for use thereof;

third means for cutting a selected length of cord off from the mass, ball, spool and the like;

said third means including a tab portion having a free edge, said tab portion being provided with a transversely extending slot adjacent to said tab portion edge, said slot extending parallel to said tab portion edge;

a first opening extending through said tab portion edge into said slot;

said third means including cutting means extending across said slot for cutting the selected length of cord when a portion of the cord is passed through said first opening into said slot and forced against said cutting means; and

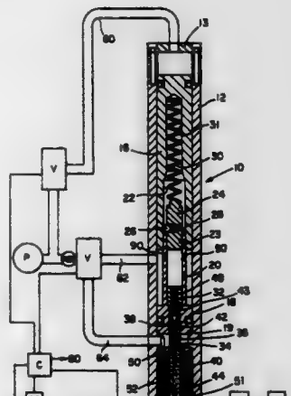
said body member including locking means for securely holding the cord during the cutting thereof, said locking means including a tongue portion extending between said first means and said tab portion, said tongue portion having a second opening extending therethrough in alignment with said slot, a bar member pivotably secured to said tongue portion, said bar member having a third opening extending therethrough so that the cord is fed from said first means through said second opening of said tongue portion and then through said third opening of said bar member into said slot, so that in a first pivot position of said bar member, said tongue portion second opening and said bar member third opening are in alignment with each other to allow the cord to pass freely therethrough, and so that in a second pivot position of said bar member, said tongue portion second opening and said bar member third opening are out of alignment with each other to securely sandwich and lock the cord between said tongue portion and said bar member.

5,172,842

TOOL FOR BREAKING AND REMOVING TANG OF AN INSERTED WIRE COIL INSERT

Donald P. Viscio, Danbury; Peter C. Thomas, East Windsor, and David W. Newton, Bethel, all of Conn., assignors to Emhart, Inc., Newark, Del.

Filed Dec. 13, 1991, Ser. No. 808,155
Int. Cl.[5] B26D 7/18
U.S. Cl. 225—93 3 Claims



1. A tool for breaking off and recovering the tang of a wire coil insert which is installed in a hole comprising

a magnetizable punch,

a housing for supporting said punch for displacement in a selected direction,

means for displacing said punch from a first position engaging the tang to a second position so that the displacement of said punch will result in said punch breaking off the tang from the insert,

means for magnetizing said punch so that said punch will be magnetized during said displacement and for maintaining said magnetism until said punch is displaced to a third position vertically above said first position,

means for displacing said punch from said second position to said third position,

means for stripping the tang which is magnetically secured to said magnetized punch as said punch is displaced from said second position to said third position, and

vacuum means for recovering the tang stripped from said punch.

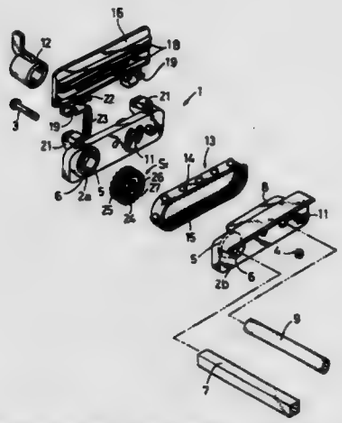
STRUCTURES OF DRIVING AND DRIVEN SPROCKETS AND BELT RECEPTION ROTARY MEMBER IN PAPER FEED APPARATUS

Sadao Uzuma, Aichi, Japan, assignor to Tokai Kogyo Kabushiki Kaisha, Oobu, Japan

Filed May 16, 1990, Ser. No. 524,050
Claims priority, application Japan, May 26, 1989, 1-134247
The portion of the term of this patent subsequent to Mar. 26, 2008, has been disclaimed.
Int. Cl.[5] B65H *20/20*
U.S. Cl. 226—74 5 Claims



1. In a paper feed apparatus which includes a pair of side frames opposed to each other with a predetermined gap between them, an endless feed belt disposed between said pair of side frames and a driving sprocket disposed between said pair of side frames and annular protuberances at one of the end portions of said pair of side frames rotatably supporting said driving sprocket, said feed belt being passed around said driving sprocket, and a receiving member disposed at the other end portions of said pair of side frames, and said feed belt being run around said driving sprocket and receiving member by the rotation of said driving sprocket to feed a sheet of paper, an improved driving sprocket having a main body having a shaft hole therethrough and having a rim around the outer periphery with gear teeth thereon, said sprocket main body having a thickness in the axial direction of said shaft hole no greater than the width of said feed belt and having opposite side faces, said socket main body further having a recess in each of said side faces and extending around said shaft hole into which said protuberances extend for rotatably supporting said driving sprocket.

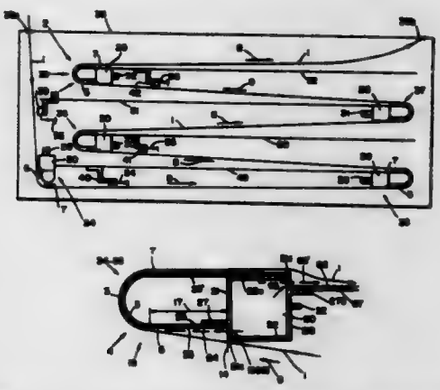
5,172,844

METHOD AND APPARATUS FOR REDUCING A TRANSPORTING STRAIN ON ELONGATED MATERIAL PASSING THROUGH A TREATMENT CHAMBER

André Mueller, Ferrette, France, assignor to Bandfabrik Breitenbach AG, Breitenbach, Switzerland

Continuation of Ser. No. 467,609, Jan. 19, 1990, abandoned. This application Feb. 24, 1992, Ser. No. 841,282
Claims priority, application Fed. Rep. of Germany, Jan. 21, 1989, 3901782
Int. Cl.[5] B65H *23/00*
U.S. Cl. 226—97 40 Claims

16. An apparatus for reducing a transporting strain on elongated flat material passing through a treatment operation in a travel direction, comprising a treatment chamber for treating said elongated material, said chamber having an inlet and an outlet defining a transport direction from said inlet to said outlet, means for transporting said elongated material from said inlet to said outlet, said transporting means including at least one material guide means having a curved material guide surface for changing the travel direction of said elongated material between said inlet and said outlet, whereby said material guide means define a direction change zone where a direction change begins, said material guide means further having a straight portion merging into said curved material guide surface, and fluid flow means including a nozzle wall upstream of said straight portion, as viewed in said travel direction, said nozzle wall, said straight portion and said flat material bounding a space of substantially triangular cross-section tapering toward a point where said guide means begin changing said



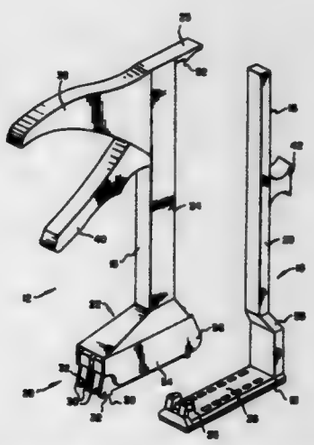
travel direction in said direction change zone for introducing substantially in said travel direction at least one flowing fluid jet into said space of substantially triangular cross-section between said straight portion of said material guide means and said elongated flat material, whereby a force component extending radially of said curved material guide surface is substantially reduced for reducing said strain, said fluid flow means imparting to said flowing fluid a flow speed corresponding at least to a transporting speed of said elongated material.

5,172,845

RIGHT ANGLE ARTICULATED INTESTINAL STAPLER

William V. Tejeiro, 3980 Kumquat Ave., Coconut Grove, Fla. 33133

Filed Apr. 12, 1991, Ser. No. 684,224
Int. Cl.[5] A61B *17/072*
U.S. Cl. 227—180 5 Claims



1. A surgical stapling device comprising a base member and an actuator arm, said base member comprising an anvil and an anvil arm fixed to said anvil and extending at a right angle with respect to said anvil, said actuator arm having a stapler fixed to one end of the actuator arm, a trigger disposed on the opposite end of said actuator arm, attachment means on said stapler and on said anvil for releasably engaging said actuator arm on said

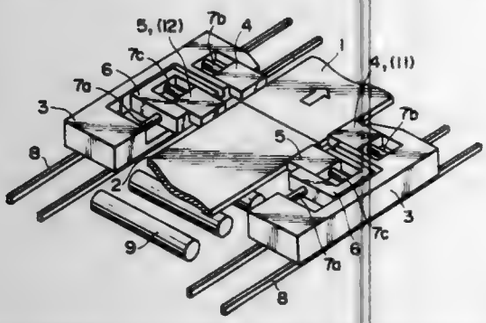
anvil for pivotal movement from an open position wherein a gap is provided between the anvil and stapler so as to receive tissue on the anvil and a closed position wherein the tissue is retained on the anvil by the stapler with the anvil arm and actuator arm in face to face engagement.

5,172,846

BUTTING DEVICE FOR JOINING RUNNING STEEL SHEETS

Kanji Hayashi; Ryuichi Ozono, and Tohru Takeguchi, all of Hiroshima, Japan, assignors to Mitsubishi Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Dec. 20, 1991, Ser. No. 810,871
Claims priority, application Japan, Dec. 20, 1990, 2-411836
Int. Cl.[5] B23K *37/04*
U.S. Cl. 228—5.7 **5 Claims**



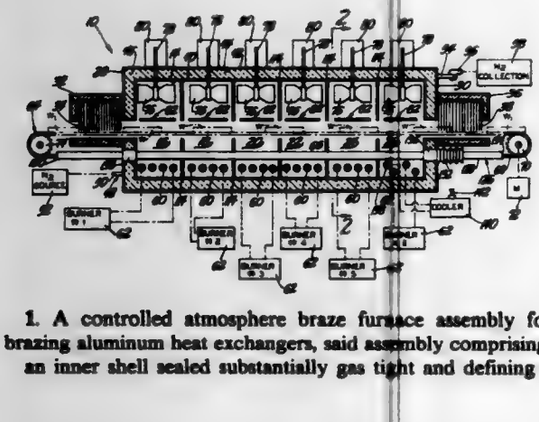
1. A butting device for joining running steel sheets comprising a sliding member disposed at each side of a conveying means for conveying a plurality of steel sheets continuously, a pair of joining device carriers which are mounted on said sliding member to travel substantially in parallel to the direction in which said steel sheets are conveyed, two sets of clamping means which are mounted on said joining device carrier to clamp said steel sheets, and a moving means which is mounted on said joining device carrier to move one set of said two sets of clamping means substantially in parallel to the direction in which said steel sheets are conveyed so that adjacent steel sheets are butted together.

5,172,847

METHOD AND APPARATUS FOR CONVECTION BRAZING OF ALUMINUM HEAT EXCHANGERS

Brian L. Barten, and Gary A. Halstead, both of Lockport, N.Y., assignors to General Motors Corporation, Detroit, Mich.

Filed Sep. 25, 1991, Ser. No. 765,632
Int. Cl.[5] B23K *1/00*; F27D *1/00*
U.S. Cl. 228—18 **4 Claims**



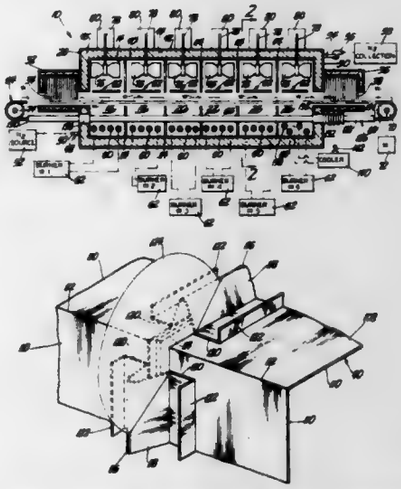
1. A controlled atmosphere braze furnace assembly for brazing aluminum heat exchangers, said assembly comprising:
an inner shell sealed substantially gas tight and defining a brazing chamber having a controlled atmosphere of predominately inert gas;
an outer shell sealably surrounding said inner shell and defining an interstitial space between said outer shell and said inner shell;
heater means for elevating the temperature within said brazing chamber;
conveyor means for successively conveying heat exchangers through said brazing chamber;
and interstitial pressurizer means for pressurizing said interstitial space with an inert gas at a pressure above the pressure within said brazing chamber such that a gas leak in said inner shell causes a flow of inert gas from said interstitial space into said brazing chamber to prevent contamination of the controlled atmosphere of predominately inert gas within said inner shell.

5,172,848

METHOD AND APPARATUS FOR CONVECTION BRAZING OF ALUMINUM HEAT EXCHANGERS

Brian L. Barten, and Gary A. Halstead, both of Lockport, N.Y., assignors to General Motors Corporation, Detroit, Mich.

Filed Sep. 25, 1991, Ser. No. 765,340
Int. Cl.[5] F27D *1/00*; B23K *1/00*
U.S. Cl. 228—18 **4 Claims**



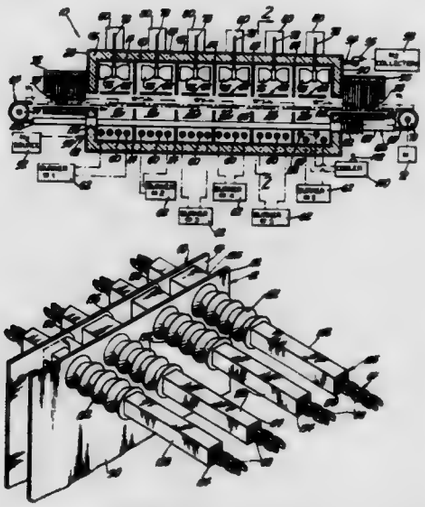
1. A braze furnace assembly for brazing aluminum heat exchanger workparts, said assembly comprising:
a controlled atmosphere housing;
heater means disposed in said housing for heating the atmosphere within said housing;
said housing including a plurality of tubular shell sections arranged in end-to-end fashion and each having a pair of straight side portions merging at a corner therebetween;
a pair of thermal expansion strips disposed between adjacent pairs of said shell sections and respectively attached to opposing pairs of said side portions for absorbing thermal expansion and contraction from said shell sections without contaminating the controlled atmosphere in said housing;
and a fragmentary generally ellipsoidal expansion joint operatively disposed between said pair of expansion strips and opposing pairs of said corners for simultaneously absorbing thermal expansion and contraction from said expansion strips and said shell sections without contaminating the controlled atmosphere of said housing.

5,172,849

METHOD AND APPARATUS FOR CONVECTION BRAZING OF ALUMINUM HEAT EXCHANGERS

Brian L. Barten, and Gary A. Halstead, both of Lockport, N.Y., assignors to General Motors Corporation, Detroit, Mich.

Filed Sep. 25, 1991, Ser. No. 765,341
Int. Cl.[5] B23K *1/00*
U.S. Cl. 228—18 4 Claims



1. A controlled atmosphere braze furnace assembly for brazing aluminum heat exchanger workparts, said furnace assembly comprising:

a substantially gas tight sealed housing having forward and rearward ends and defining therebetween a controlled atmosphere brazing chamber;

heater means for elevating the atmospheric temperature within said housing;

an endless flexible conveyor element movably disposed within said housing and extending outwardly therefrom beyond said forward and rearward ends for circulatory movement through said housing, said conveyor element moveable through an upper straightaway for supporting and conveying workparts through said housing and a lower return straightaway;

and tubular guide means extending gas tight through said housing and operatively gas tight sealed adjacent said forward and rearward ends for guiding said lower return straightaway of said conveyor element through said housing while preventing ambient atmosphere entrance to said housing to maintain heat energy of said conveyor element moving through said lower return straightaway without contaminating said controlled atmosphere brazing chamber.

5,172,850

ELECTROWINNING ANODE AND METHOD OF MANUFACTURE

Raymond D. Prengaman, Arlington, and Clifford E. Morgan, Grand Prairie, both of Tex., assignors to RSR Corporation, Dallas, Tex.

Filed Aug. 29, 1991, Ser. No. 751,523
Int. Cl.[5] B23K *31/02, 101/38*
U.S. Cl. 228—176 2 Claims

1. A method of making an electrowinning anode comprising:

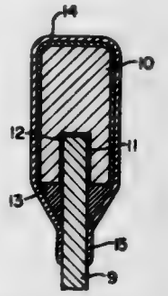
(a) forming a sheet of lead alloy anode material;

(b) forming a copper busbar with a longitudinal slot of a size such that an end of the lead alloy sheet fits tightly therein;

(c) fitting said end of the lead sheet into said slot of the busbar;

(d) soldering the busbar and lead sheet together;

(e) immersing the busbar and the soldered joint with the lead sheet into a lead electroplating bath; and



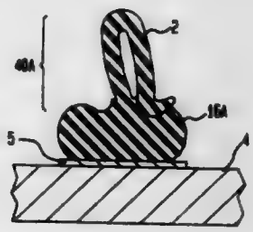
(f) electrodepositing a coating of lead onto the busbar and joint, whereby a complete metallurgical seal is formed around the busbar and soldered joint.

5,172,851

METHOD OF FORMING A BUMP ELECTRODE AND MANUFACTURING A RESIN-ENCAPSULATED SEMICONDUCTOR DEVICE

Akira Matsushita, Zyoyou, and Hidekazu Konishi, Ibaraki, both of Japan, assignors to Matsushita Electronics Corporation, Osaka, Japan

Filed Sep. 17, 1991, Ser. No. 761,717
Claims priority, application Japan, Sep. 20, 1990, 2-252316; Oct. 9, 1990, 2-271346
Int. Cl.[5] H01L *21/607;* B23K *101/40*
U.S. Cl. 228—179 14 Claims



1. A method of forming a bump electrode comprising the steps of:

forming a swollen head at the tip of a metal wire drawn out from the tip of a capillary;

pressing the swollen head to a pad electrode on a semiconductor chip by the tip of said capillary to crush said swollen head, thereby bonding said swollen head and said pad electrode, wherein the crushed swollen head part becomes a base part of said bump electrode, and a cavity is formed on the top surface of said base part;

moving said capillary in a loop forming motion above said base part, and folding back the wire extending from said base part toward the base part;

pressing and bonding the wire to said cavity by the tip of the capillary to form a loop of wire; and

cutting off the wire further extending from said bonded part thereby leaving the loop of wire as a protrusion on said base part.

13. A method of forming a bump electrode comprising the steps of:

forming a swollen head at the tip of a metal wire drawn out from the tip of a capillary, defining a wire root at a point where the swollen head and the wire connect;

pressing said swollen head to a pad electrode of a semiconductor chip by the tip of said capillary to crush said swollen head, thereby bonding said crushed swollen head

and said pad electrode, wherein said crushed swollen head becomes a base part of said bump electrode;

moving said capillary in a loop forming motion above said base part, said loop forming motion comprising an upward movement and a downward movement and by the downward movement of the capillary cutting off the wire extending from said base part at the vicinity of the wire root, thereby forming a protrusion substantially at the center of the top surface of the base part.

5,172,852

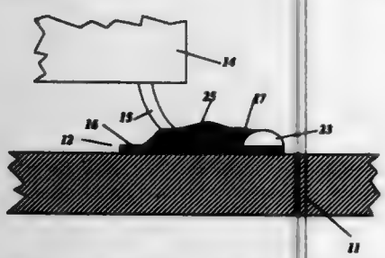
SOLDERING METHOD

Lonnie L. Bernardoni, Boca Raton; Kenneth R. Thompson, Sunrise, and Anthony B. Suppelsa, Coral Springs, all of Fla., assignors to Motorola, Inc., Schaumburg, Ill.

Filed May 1, 1992, Ser. No. 877,003

Int. Cl.[5] H05K *3/34*

U.S. Cl. 228—180.2 **16 Claims**



1. A soldering method for connecting an electronic component to a circuit carrying substrate, comprising:

providing a circuit carrying substrate having a plurality of solder pads disposed thereon, each pad having a terminal portion, a solder reservoir portion, and a bridging portion, the terminal portion connected to the reservoir portion by the bridging portion;

providing an electronic component having a plurality of solderable terminals corresponding to the terminal portions of the plurality of solder pads;

applying solder to the solder pad reservoir portions;

applying flux to the solder pad terminal portions;

placing the electronic component on the circuit carrying substrate so that its solderable terminals are in contact with the flux and the terminal portion of the solder pads; and

applying heat to melt the solder, thereby causing the melted solder to flow across the solder pad bridging portion so as to form a fillet between the solder pad terminal portion and the component terminal.

5,172,853

METHOD FOR APPLYING SOLDER TO PRINTED WIRING BOARDS AND PRINTED WIRING BOARD TO WHICH SOLDER HAS BEEN APPLIED

Werner Maiwald, Bad Aibling, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Munich, Fed. Rep. of Germany

Filed Dec. 2, 1991, Ser. No. 801,430

Claims priority, application European Pat. Off., Nov. 30, 1990, 90123005.2

Int. Cl.[5] H05K *3/34*

U.S. Cl. 228—248 **13 Claims**

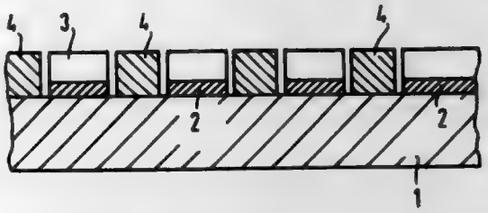
1. A method for applying solder to printed wiring boards, which comprises:

a) producing a printed wiring board with electrically conductive regions;

b) applying soldering paste as a solder deposit on the electrically conductive regions;

c) melting the solder deposits to form hump-shaped solid solder applications joined to the printed wiring board; and

d) leveling out the hump-shaped solder applications by areally applying pressure to the solder applications in the direction of the printed wiring board, and reinforcing the



leveling of the hump-shaped solder application by heating the applied solder.

5,172,854

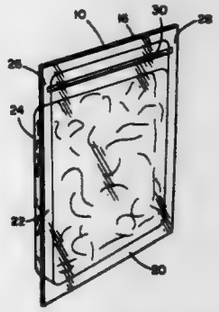
RECLOSABLE, REUSABLE PACKAGE

Moshe Epstein, 2530 Queensway, Northbrook, Ill. 60062, and Robert D. Tischer, Oak Forest, Ill., assignors to Moshe Epstein, Northbrook, Ill.

Filed Oct. 16, 1991, Ser. No. 777,063

Int. Cl.[5] B65D *1/34, 27/16*

U.S. Cl. 229—123.3 **10 Claims**



1. In a package comprising a first layer, and a second layer, said second layer comprising a main portion having a product-storage compartment for storing products therein, and an annular section surrounding said compartment comprising a first annular surface-portion, a second annular surface-portion, a third annular surface-portion, and a fourth annular surface-portion, each of said annular surface-portions comprising a sealing, outer, edge-surface portion, said first layer being a substantially flat, planar sheet sandwiched over said second layer, said first layer also having mating first, second, third, and fourth annular surface-portions, with each of said annular surface-portions of said first, inner layer comprising a sealing, outer, edge-surface portion for sealed connection to a respective, said sealing, outer, edge-surface portion of said second layer, said first layer also comprising a central section that closes off said compartment of said second layer, the improvement comprising:

at least one glue-strip made of resealable glue located in at least one of said annular surface-portions of at least one of said layers for providing a reclosable, resealable bag for storing the remaining contents of the package.

5,172,855

CONTINUOUS MAILER FORM

James B. Coffey, Dayton, Ohio, assignor to NCR Corporation, Dayton, Ohio

Filed Apr. 1, 1991, Ser. No. 678,927

Int. Cl.[5] B65D *27/06, 27/10*

U.S. Cl. 229—305 **13 Claims**

1. A mailer comprising a

first ply having a first line of perforations adjacent one edge

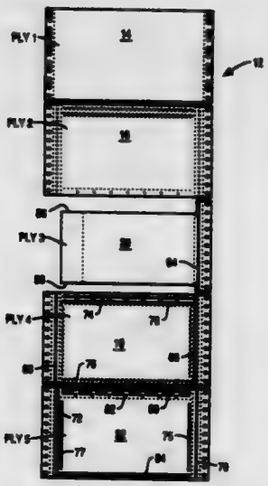
of said first ply and a second line of perforations adjacent the opposite edge of said first ply, a

second ply having a first line of perforations adjacent one edge of said second ply and a second line of perforations adjacent the opposite edge of said second ply, said first ply and said second ply being secured by crimping means adjacent said first line of perforations in said first ply and adjacent said first line of perforations in said second ply, a

third ply having a first line of perforations adjacent one edge of said third ply and a second line of perforations spaced from said first line of perforations in said third ply, a

fourth ply having a first line of perforations adjacent one edge of said fourth ply and a second line of perforations adjacent the opposite edge of said fourth ply, said second ply and said fourth ply being secured by a line of adhesive adjacent said opposite edges of said second ply and said fourth ply, and a

fifth ply forming the back ply of said mailer and having a first line of perforations adjacent one edge of said fifth ply and a second line of perforations adjacent the opposite edge of said fifth ply, said third ply being positioned between said second ply and said fourth ply, said third ply being secured to said second ply by adhesive means adjacent said first line of perforations in said third ply and said



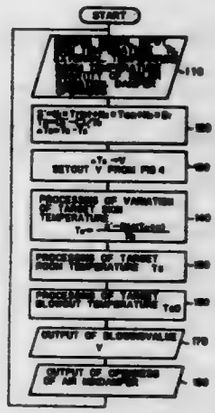
third ply being secured to said fourth ply by adhesive means adjacent said first line of perforations in said fourth ply and inward of said first mentioned adhesive means, said fourth ply being secured to said fifth ply by first line adhesive means adjacent said first line of perforations in said fifth ply and being secured to said fifth ply by second line adhesive means adjacent said second line of perforations in said fifth ply and inward of said line of adhesive adjacent said opposite edges of said second ply and said fourth ply, said fifth ply including third line adhesive means inward of said first line adhesive means and fourth line adhesive means inward of said second line adhesive means for securing said fourth ply and said fifth ply, and said fifth ply including fifth line adhesive means securing said fourth ply and said fifth ply for forming a pocket for said third ply, said third ply defining a cutout portion along the upper edge thereof for accommodating adhesive means securing said second ply and said fourth ply adjacent the upper edges thereof and said third ply defining a cutout portion along the lower edge thereof of lesser dimension than the dimension of the cutout portion along the upper edge for accommodating adhesive means securing said second ply and said fourth ply adjacent the lower edges thereof.

5,172,856

CONTROL APPARATUS FOR AIR-CONDITIONING

Hisashi Tanaka; Motohiro Kitada, both of Anjo; Yousuke Taniguchi, Nagoya, and Tadayuki Miyawaki, Aichi, all of Japan, assignors to Kabushiki Kaisha Toyota Chuo Kenkyusho Nippondenso Co., Ltd., Kariya, Japan

Filed Sep. 12, 1990, Ser. No. 580,935
Claims priority, application Japan, Apr. 24, 1990, 2-108457
Int. Cl.[5] F24F 7/00
U.S. Cl. 236—49.3 13 Claims



1. A control apparatus for an air-conditioner comprising:

a flow controlling means for controlling the amount of air blown into a room;

a temperature control means for controlling the temperature of air blown into a room;

a skin temperature detecting means for detecting actual skin temperature of persons in a room;

a temperature sensation determining means for determining the actual temperature sensation of persons in the room based on the detected skin temperature and a rate of change of the detected skin temperature; and

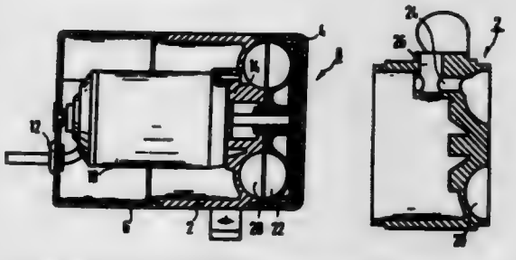
control means for controlling the flow controlling means so that the determined temperature sensation approaches a target temperature sensation, and for controlling the temperature control means.

5,172,857

COMBUSTION AIR BLOWER FOR AN AUXILIARY HEATER FOR A MOTOR VEHICLE

Fritz Mohring, Ostfildern, and Martin Stoll, Reutlingen, both of Fed. Rep. of Germany, assignors to J. Eberspächer, Esslingen, Fed. Rep. of Germany

Filed Mar. 16, 1990, Ser. No. 494,968
Claims priority, application Fed. Rep. of Germany, Mar. 17, 1967, 8903372[U]
Int. Cl.[5] B60H 1/02
U.S. Cl. 237—12.3 C 4 Claims



1. A motor vehicle auxiliary heater annular channel combustion air blower, comprising a blower suction side and a blower

delivery side defined by a housing a bypass channel extending between said suction and said delivery side of said blower; a mounting bore defined by said housing extending through said bypass channel; and, a rotary slide valve, said rotary slide valve being positioned within said mounting bore and rotatable to throttle said bypass channel said rotary slide valve being formed as a pin member accessible from outside of said housing, said slide valve including one of a longitudinal slot or a cross slot having a reduced, substantially circular cross section disposed on the inside of said housing in the area of said bypass channel.

5,172,858

PROCESS FOR SUPPORTING A RAILWAY TRACK INSTALLATION

Günter Frohn, Giebelweg 12, D-5990 Altena 7, Fed. Rep. of Germany

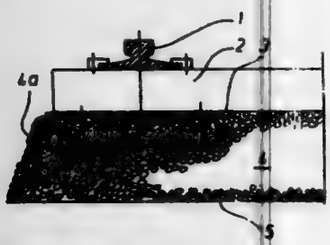
PCT No. PCT/EP89/01267, § 371 Date May 6, 1991, § 102(e) Date May 6, 1991, PCT Pub. No. WO90/05212, PCT Pub. Date May 17, 1990

PCT Filed Oct. 24, 1989, Ser. No. 690,941

Claims priority, application Fed. Rep. of Germany, Nov. 5, 1988, 3837681

Int. Cl.[5] E01B *1/00*

U.S. Cl. 238—2 2 Claims



1. A method of building a reinforced railway track installation, said railway track including at least one rail and a plurality of ties perpendicular to said rail which constitute a plurality of rail/tie intersections, said method comprising the steps of:

filling a plurality of rubber vehicle tires with ballast material;

placing said tires onto a supporting surface;

locating said tires so that there is one tire located concentrically below each adjacent rail/tire intersection;

applying a layer of ballast material to fill any interstices between said tires and to form a lateral embankment adjacent to said rail;

whereby an outer section of said tires extends into the vicinity of the lateral embankment to prevent

shifting of the ballast material and thereby provide reinforcement for the lateral embankment.

5,172,859

LIQUID DIFFUSER DEVICE

Neriel Paglin, 6 Hazamir St., Ramat-Gan, and Eyal Ron, 28 Alumia St., Tel-Aviv, both of Israel

Filed Jul. 16, 1991, Ser. No. 730,604

Claims priority, application Israel, Jul. 19, 1990, 95123

Int. Cl.[5] A61L *9/12*

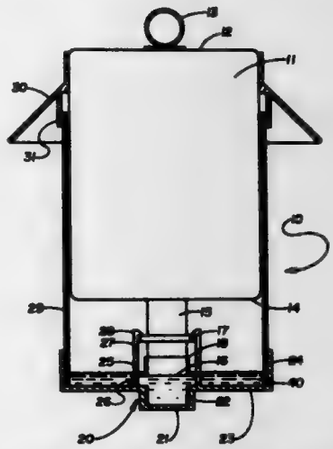
U.S. Cl. 239—42 8 Claims

1. A liquid diffuser device comprising in combination:

a liquid holding container having a neck portion extending from an end wall which in operation constitutes the bottom, which neck portion has a discharge opening;

a base portion including means for tightly sealing the discharge opening of the neck portion of the container, the said means being integral with a skirted dish;

the base portion being associated with the container, such that the base portion and the liquid holding container are slidably longitudinally movable relative to one another for movement between an uppermost position wherein the means for tightly sealing the discharge opening on the base portion engages and tightly seals the discharge opening, so that the flow of liquid from the container through the neck portion is prevented and a lowermost position wherein the means for tightly sealing the discharge opening is spaced from the discharge opening, so that the flow of fluid through the discharge opening is permitted, the base portion further including an upright retainer means



integral with said base portion and designed to engage stop means in said container, whereby said skirted dish is arrested in a lowermost position in which the skirted portion of said dish further extends above the discharge opening of said neck portion; and

an absorbent material body one end of which is in said skirted dish.

5,172,860

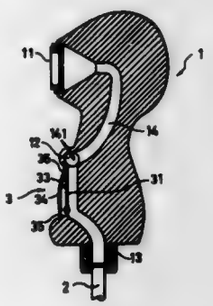
SHOWER HEAD WITH A TEMPERATURE MEASURING FUNCTION

Fan C. Yueh, 3F, No. 2, Alley 2, Lane 88, Sec. 2, Shui Yuan Rd., Hsi-Chih, Taipei, Taiwan

Filed Apr. 19, 1991, Ser. No. 687,954

Int. Cl.[5] G01K *13/02*

U.S. Cl. 239—71 4 Claims



1. A shower head with a temperature measuring function comprising:

a shower head body including an upper portion, a lower portion and a front face, said lower portion including a water inlet and said upper portion including a water outlet, a water tunnel extending within said shower head body to interconnect said water inlet to said water outlet, said water tunnel including a bent section such that at least a portion of said tunnel extends within said shower head body adjacent said front face;

a manually operable switch valve means carried by said shower head body and extending into said tunnel, said

switch valve means being movable between a first operating position in which said switch valve means fluidly interconnects said water inlet to said water outlet and a second operating position in which the flow of water from said water inlet to said water outlet is prevented; and

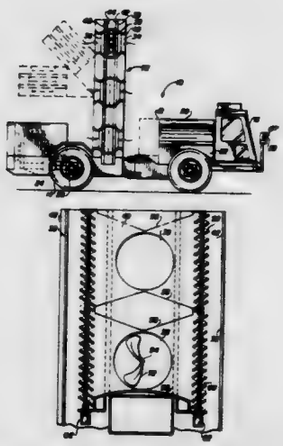
water temperature measuring and displaying means secured to said shower head body between said water inlet and said switch valve means adjacent said front face at said bent portion, said water temperature measuring and displaying means functioning to measure the temperature of water either flowing through said tunnel or within a basin of water contacted by the front face of said shower head body and displaying the measured temperature through said front face.

5,172,861

AGRICULTURAL SPRAYER

Theodore F. Lenhardt, Winter Garden, Fla., assignor to AG-Spray Corporation, Immokalee, Fla.

Filed Oct. 26, 1990, Ser. No. 605,083
Int. Cl.[5] B05B *9/03*
U.S. Cl. 239—78 **20 Claims**



1. An agricultural sprayer for applying pesticide to foliage comprising:

a substantially vertically oriented shaft having a vertical axis extending therethrough and coupled to a plurality of vertically stacked paddles extending around said shaft;

means for generating an airstream;

means for directing said airstream over said paddles;

means for injecting the pesticide into said airstream;

means for continuously rotating said paddles on said shaft about said vertical axis; and

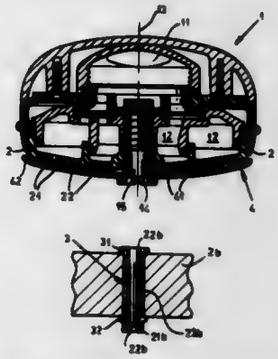
said paddles being oriented on said shaft such that when said paddles are continuously rotated, said airstream continuously varies between an upward direction and a horizontal direction to shake the leaves on the foliage up and down, and when said air direction varies said pesticide in the airstream effectively covers the foliage.

5,172,862

SHOWER HEAD

Bruno Heimann, Fröndenberg-Ardey; Friedrich Wagner, Endingen; Bernd Bischoff, Iserlohn, and Hans-Peter Strelow, Freiburg, all of Fed. Rep. of Germany, assignors to Friedrich Grohe Aktiengesellschaft, Hemer, Fed. Rep. of Germany

Filed Dec. 27, 1990, Ser. No. 633,483
Claims priority, application Fed. Rep. of Germany, Dec. 28, 1989, 3943062
Int. Cl.[5] B05B *15/02*
U.S. Cl. 239—114 **13 Claims**



1. A shower head comprising:

a body having a wall and forming therewith a pressurizable compartment, the wall having an inner face in the compartment and an outer face being formed between the faces with an array of throughgoing perforations; and

respective flexible and normally open tubular liners in the perforations having

outer ends projecting past the outer face of the wall at the perforations, and

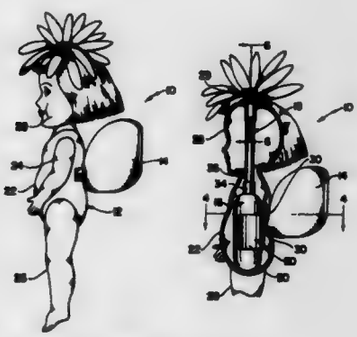
laterally projecting inner and outer ridges respectively bearing against the inner and outer faces of the wall, whereby lime formations adhering to the outer ends are flaked therefrom on deformation of the outer ends.

5,172,863

TOY DOLL DISPENSER FOR FLUIDS

Georgina M. Melone, Bristol, R.I.; Rosenan Radosevich, New Bedford, Mass., and Fred D. Eddins, Mapleville, R.I., assignors to Hasbro, Inc., Pawtucket, R.I.

Filed Feb. 5, 1992, Ser. No. 831,484
Int. Cl.[5] B67D *1/04*
U.S. Cl. 239—211 **1 Claim**



1. A dispenser for a fluid comprising:

a. a human-like doll body including a head portion and a substantially rigid torso portion having a back portion;

b. a pair of substantially rigid wings;

c. pivot mounting means for pivotally mounting said wings

on said back portion for pivoting said wings together and apart thereon about a pivot axis;

d. a reservoir in said torso portion for containing the fluid, said reservoir being deformable for dispensing the fluid therefrom;

e. atomizer means for atomizing the fluid as it is dispensed from said reservoir so that the fluid passes outwardly in an atomized stream from said head portion; and

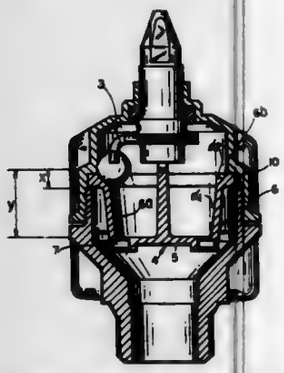
f. linkage means extending inwardly into said torso portion rom each of said wings, said linkage means being pivotable with said wings in a scissors-like manner, said linkage means cooperating to deform said reservoir in order to dispense the fluid therefrom as said wings are pivoted together.

5,172,864

ROTARY SPRINKLER

Benjamin Spencer, Zichron Yaacob, Israel, assignor to Dan Mamtirim, Galil Elyon, Israel

Filed Jul. 1, 1991, Ser. No. 724,159
Claims priority, application Israel, Jul. 12, 1990, 95056
Int. Cl.[5] B05B *3/04*
U.S. Cl. 239—241 **3 Claims**



1. A rotary sprinkler comprising a sprinkler housing; a water inlet of said housing; an outlet nozzle of said housing rotatably mounted with respect thereto; an open ended drive motor enclosure fixedly located within said housing; a base wall of said enclosure; an axially directed side wall of said enclosure which tapers outwardly with respect to said base wall; at least one tangentially directed opening formed in said base wall and communicating with said water inlet; a drive ball of predetermined diameter (D) located in said enclosure; an impact element formed integrally with said nozzle and spaced from said base wall by a distance which is not substantially less than 2 D; characterised in that

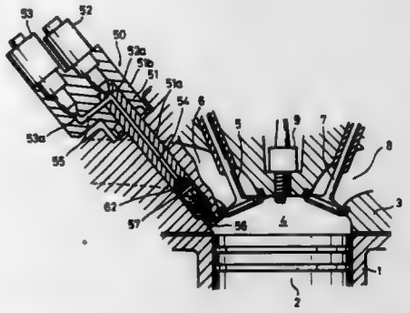
a first major axial portion of said side wall extending from said base wall to an intermediate peripheral position thereof defines a first angle α_1 with respect to a normal to the said base wall whilst a second minor axial portion of said side wall, extending from said intermediate peripheral position to an edge rim of the enclosure, defines a second angle α_2 with respect to a normal to the base wall wherein α_2 is substantially greater than α_1, said impact element being spaced from said intermediate peripheral position by a distance which is not substantially less than 0.5 D.

5,172,865

FUEL SUPPLY DEVICE OF AN ENGINE

Yuichi Takano; Takahiro Kushibe, and Naotaka Shirabe, all of Susono, Japan, assignors to Toyota Jidosha Kabushiki Kaisha and Nippondenso Co., Ltd., both of, Japan

Continuation of Ser. No. 398,981, Aug. 28, 1989, abandoned. This application Jul. 25, 1991, Ser. No. 737,890
Claims priority, application Japan, Jan. 12, 1989, 1-3849
Int. Cl.[5] F02M *67/02*
U.S. Cl. 239—408 **21 Claims**



1. A fuel supply device of an engine, comprising:

a fuel and air supply passage having ends and extending substantially linearly;

a nozzle opening formed at one end of said fuel and air supply passage for injecting fuel and pressurized air;

a fuel injector and an air injector arranged at the other end of said fuel and air supply passage;

an automatically opening and closing valve arranged at said nozzle opening and constantly urged toward a closing direction, said valve being opened by a pressure of pressurized air injected from said air injector and fuel injected from said fuel injector into said fuel and air supply passage, the fuel being injected from said nozzle opening by said pressurized air; and

a guide member spaced apart from said a tomatically opening and closing valve and fixedly positioned in said fuel and air supply passage entirely between said automatically opening and closing valve and said fuel injector, a large part of fuel injected from said fuel injector being retained in a narrow passage formed between an outer surface of said guide member and an inner surface of said fuel and air supply passage when said automatically opening and clos- e closes said nozzle opening.

5,172,866

MULTI-FUNCTION SHOWER HEAD

Irving Ward, Hacienda Heights, Calif., assignor to Interbath, Inc., City of Indust., Calif.

Continuation of Ser. No. 565,499, Aug. 10, 1990. This application May 12, 1992, Ser. No. 883,881
Int. Cl.[5] B05B *1/16*
U.S. Cl. 239—446 **10 Claims**

1. A shower head providing a plurality of spray effects, comprising:

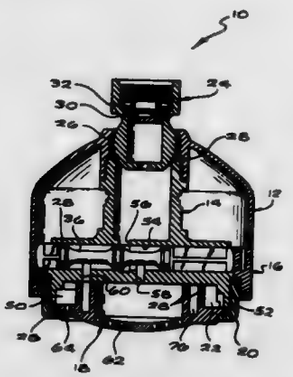
inlet port means for establishing fluid communication with a source of water;

first outlet port means for directing a spray of water with a first spray effect to a user of said shower head;

second outlet port means for directing a spray of water with a second spray effect to said user; and

pushrod means internally contained in said shower head and oriented generally perpendicular to the flow of water from said inlet port means, said pushrod means, disposed between said inlet port means and said first and second outlet port means, for selectively opening by rotary movement said first and second outlet port means to establish fluid communication with said inlet port means; and

cam means, controlled by said user, for positioning said pushrod means to selectively open said first and said sec-



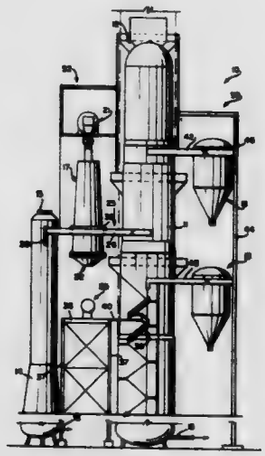
ond outlet port means, whereby user can continuously select any combination of said first and second effects.

5,172,867

UTILIZATION OF A PAPER PULP DIGESTER AS A STRUCTURAL SUPPORT

James M. Whitney, Glens Falls, N.Y., assignor to Kamyr, Inc., Glens Falls, N.Y.

Filed Sep. 9, 1991, Ser. No. 756,553
Int. Cl.[5] D21C 7/00
U.S. Cl. 241—30 20 Claims



1. A method of structurally supporting accessory vessels cooperating with an upright continuous digester for producing paper pulp from comminuted cellulosic fibrous material, the digester fed with material from the top, and discharging produced pulp from the bottom, said method comprising the steps of:

(a) providing a first structural support extending outwardly from a side of the digester, between the top and bottom thereof;

(b) providing a second, vertical, structural support independent of the digester and adjacent to it; and

(c) operatively connecting at least one accessory vessel which feeds liquid or material to, or receives liquid or material from, the digester, to the first structural support so that the accessory vessel is vertically supported by the digester and the second vertical support.

11. A superstructure assembly of vessels for producing paper pulp from comminuted, cellulosic fibrous material, comprising:

an upright continuous digester having a top, bottom, and sides, a material inlet to the top, and a pulp outlet from the bottom, and containing a slurry of material and liquid;

an accessory vessel connected to the digester to feed liquid or material to the digester, or receive liquid or material from the digester;

a first structural support extending outwardly from a side of the digester, and vertically supported by the digester;

a second, vertical, structural support adjacent to, but spaced from, the digester, and connected to the first structural support to assist the digester in vertically supporting the first structural support; and

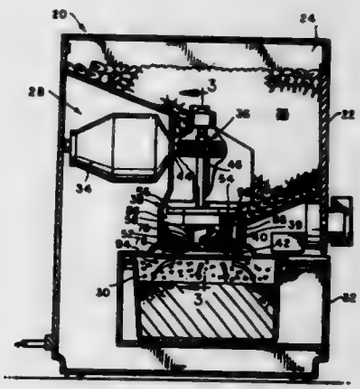
said accessory vessel engaging and vertically supported by said first structural support.

5,172,868

HOME COFFEE GRINDER

William E. Midden, Springfield, Ill., assignor to Bunn-O-Matic Corporation, Springfield, Ill.

Filed Oct. 24, 1991, Ser. No. 781,862
Int. Cl.[5] B02C 7/08, 23/02
U.S. Cl. 241—246 17 Claims



1. Material flow inducing means for use with a material grinding apparatus to grind material during a grinding operation;

the grinding apparatus includes a hopper portion for holding a quantity of material for grinding and a grinding mechanism for grinding material, drive means operatively associated with the grinding mechanism for driving the grinding mechanism to grind material during a grinding operation;

said flow inducing means comprising first means positioned between a hopper portion and a grinding mechanism for promoting movement of material from the hopper portion to the grinding mechanism and for distributing material in relation to the grinding mechanism, and second means for moving material distributed by said first means into the grinding mechanism;

wherein said first means comprises a stirring member, arms extending from said stirring member rotatably moving around an annular path during a grinding operation for moving material from the hopper portion to the grinding mechanism and distributing material in relation to the grinding mechanism;

a fixed obstruction in said annular path; and

said arms being able to yield and spring back circumferentially when said arms contact said fixed obstruction for enhancing the flow of beans through the grinding mechanism.

5,172,869

JAW CRUSHER

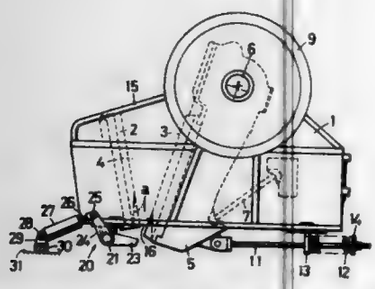
Tomohiro Kitsukawa; Yoshihiko Isebabe, both of Tokyo; Kazuhisa Hirano, Taku, and Masanao Hirakawa, Tokyo, all of Japan, assignors to Nakayama Iron Works, Ltd., Takeo, Japan

Continuation of Ser. No. 644,815, Jan. 23, 1991, abandoned. This application May 1, 1992, Ser. No. 877,360

Claims priority, application Japan, Jan. 25, 1990, 2-6247; Jul. 23, 1990, 2-77472

Int. Cl.[5] B02C *23/02*

U.S. Cl. 241—264 8 Claims



1. A jaw crusher for breaking a non-rigid object comprising:
a) a body;
b) a fixed tooth plate which is secured to said body;
c) a movable tooth plate which is swingably provided at an acute angle to said fixed tooth plate to provide therebetween a crushing space for breaking the non-rigid object which is to be crushed;
d) a swing jaw to which said movable tooth plate is secured;
e) a driving mechanism for swinging said swing jaw;
f) a motor for driving said driving mechanism;
g) a plurality of forks which are provided at the lower end of said crushing space to prevent said object from passing through said crushing space without being crushed;
h) a fork shaft which is provided with one end of each of said forks and which is provided on said body; and
i) means for rotating said fords toward and away from said fixed and movable tooth plates.

8. A jaw crusher for breaking a non-rigid object comprising:
a body;
a fixed tooth plate which is secured to said body;
a movable tooth plate which is swingably provided at an acute angle to said fixed tooth plate to provide therebetween a crushing space for crushing said non-rigid object;
a swing jaw to which said movable tooth plate is secured;
a driving mechanism for swinging said swing jaw;
a motor for driving said driving mechanism;
first projections provided on one of said fixed and movable tooth plates, each first projection being at a constant pitch and having a constant height, first projection root portions being formed between adjacent first projections;
cutting projections provided on the other of said fixed and movable tooth plates, each cutting projection having a constant pitch and a constant height and projecting towards a respective first projection root portion, said cutting projections for bending and cutting said non-rigid object placed between said fixed and movable plates, wherein each of said cutting projections comprises a top portion formed as an acute angle at the top of each cutting projection;
first crushing projections, each of which is provided substantially in the middle between each pair of adjacent cutting projections, said first crushing projections being lower in height than said cutting projections;
second crushing projections provided on said fixed and movable tooth plates at each end thereof with respective top portions facing each other, said second crushing projections having a height greater than said first crushing projections but less than said cutting projections; and
vertical surfaces formed and said second crushing projections at one end thereof, said vertical surfaces extending parallel to the direction of swing of said movable tooth plate.

5,172,870

METHOD OF WINDING AN ARMATURE AND ARMATURE PRODUCED BY THE METHOD

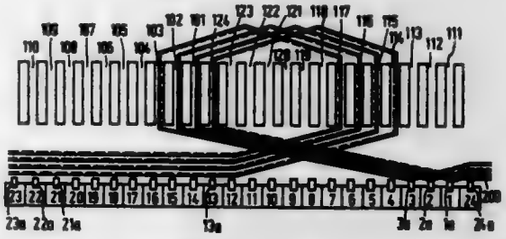
Johan Van Assema, Hoogeveen, Netherlands, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Aug. 17, 1990, Ser. No. 570,243

Claims priority, application Netherlands, Aug. 29, 1989, 8902180

Int. Cl.[5] H02K *15/09*

U.S. Cl. 242—7.03 3 Claims



1. A method of winding an armature body provided with armature slots and having a commutator mounted on an armature shaft, said commutator having commutator segments provided with attachment elements, said method comprising the steps of: attaching wire to the attachment elements and feeding the wire through the armature slots in accordance with a first winding cycle to form a first set of coils, said coils being electrically connected to one another via the commutator segments; and performing a second winding cycle which is identical to said first winding cycle and forms a second set of coils similar to the first set of coils whereby, each said coil of the second set of coils is electrically connected in parallel with, lies in the same armature slots as, and is connected to the same attachment elements as a corresponding coil of the first set of coils.

5,172,871

APPARATUS FOR GUIDING A WEB OF MATERIAL ACROSS A DRIVEN DRUM

Eduard C. Schütt, Hamburg; Peter Hübner, Wedel, and Kaj Sellschopp, Rosengarten, all of Fed. Rep. of Germany, assignors to Aristo Graphic Systeme GmbH KG, Hamburg, Fed. Rep. of Germany

Filed Feb. 1, 1991, Ser. No. 649,734

Claims priority, application Fed. Rep. of Germany, Feb. 1, 1990, 4002894; Sep. 5, 1990, 4028536

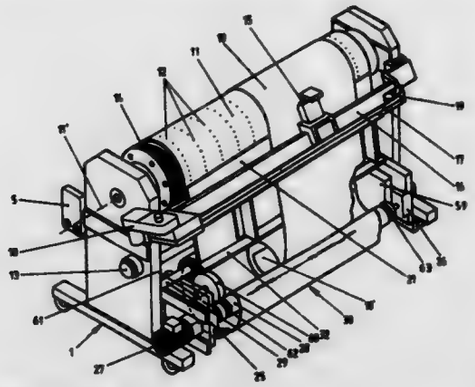
Int. Cl.[5] B65H *18/02, 18/22, 20/02, 20/06*

U.S. Cl. 242—67.10 R 7 Claims

1. An apparatus for guiding a web of material across a driven drum to a receiving arrangement located lower than the drum, the receiving arrangement having at least one surface moving vertically to the axis of rotation of the drum so as to contact and take along a portion of the material web as it rolls off the drum, said apparatus comprising:
a driven drum that forms a processing surface;
a receiving arrangement formed by an upper concave portion of an endless belt (30) extending in a sagging loop between a drive roller (28) and a non-driven roller (29), the non-driven roller (29) being located at the back end of the upper concave portion (30'), looking in the direction of belt movement, whereby an engagement between the drive roller (28) and belt (30) is free of relative movement therebetween;
a stationary deflection surface positioned substantially

across the drive roller in the direction of movement of the web, and disposed a distance above the non-driven roller; and,

a planar circular disk, located between the drive roller and the non-driven roller at each end of the rollers and located



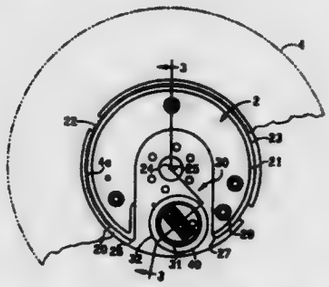
substantially in a vertical plane between the drive roller and non-driven roller, each disk having an axis of rotation that extends parallel to the axis of rotation of the drive roller, in engagement with the upper surface of more than one half of said upper concave portion of the endless belt.

5,172,872

SELF-LOCKING TAPE DRIVE HUB

William M. Barton, Jr., Encinitas, Calif., assignor to Overland Data, Inc., San Diego, Calif.

Filed Aug. 2, 1990, Ser. No. 561,871
Int. Cl.[5] G11B *15/32*; B65H *16/10*
U.S. Cl. 242—201 14 Claims



1. A self-locking mechanism that used only tape tension to actuate a tape reel torque lock for a tape drive having at least one hub with a base plate, the self-locking mechanism for each such hub comprising:

a reel engagement means pivotally mounted on the hub base plate for engaging the inner wall of a tape reel,

and being pivotable between a disengaged position having a first effective diameter and an engaged position having a second effective diameter greater than the first effective diameter, the reel engagement means being situated in its disengaged position so as to be proximate to the inner wall of a reel when the reel is mounted on the hub base plate, wherein the reel engagement means is contacted by the inner wall of a mounted reel and automatically pivots from its disengaged position to its engaged position by frictional contact between the reel engagement means and the inner wall of the reel when sufficient tension is applied to the tape of the tape reel, the reel engagement means in its engaged position applying a radial force against the inner wall of the tape reel to lock the reel to the hub base plate,

wherein the reel engagement means includes a disk pivotally mounted on the hub wheel base plate, and

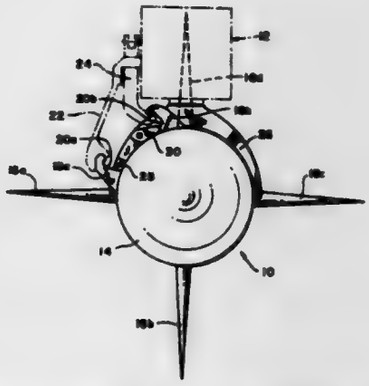
wherein the disk includes a first spring coupled to the disk for maintaining approximately constant outward radial force by the disk against the inner wall of the tape reel.

5,172,873

ANTI-ROLL SYSTEM FOR A MISSILE LAUNCHER

Robert W. Luss, Levittown, N.Y., assignor to Grumman Aerospace Corporation, Bethpage, N.Y.

Filed May 14, 1991, Ser. No. 699,728
Int. Cl.[5] B64D *1/12*
U.S. Cl. 244—137.4 14 Claims



1. An anti-roll device for a missile launcher mechanism including a ejection launcher and a missile latching system comprising:

a) latching lug means affixed to the missile adapted to engage the missile latching system;

b) ejector foot means operatively associated with the launcher and bearing against the missile so as to urge it away from the launcher during launching of the missile; and,

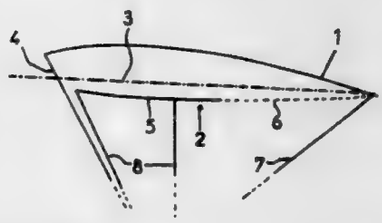
c) tab means operatively associated with the ejector foot and located so as to contact the latching lug means to prevent rolling of the missile about a longitudinal axis during launch.

5,172,874

DEVICE FOR SUPPLYING AIR TO A DOUBLE SURFACE-AERODYNAMIC-PROFILE

Yves Maciocia, 105 bis route Nationale, 69330 Pusignan, France

PCT No. PCT/FR90/00816, § 371 Date Jul. 9, 1991, § 102(e) Date Jul. 9, 1991, PCT Pub. No. WO91/07316, PCT Pub. Date May 30, 1991
PCT Filed Nov. 15, 1990, Ser. No. 721,528
Claims priority, application France, Nov. 16, 1989, 89 15290
Int. Cl.[5] B64D *17/00*
U.S. Cl. 244—142 7 Claims



1. A flexible lift-developing airfoil having an air inlet in a front portion thereof, and further having an upper surface and a lower surface, and a valveless air-filled chamber therebetween, said lower surface being permeable to air over at least an appreciable part of its surface area, said lower surface further being exposed to air in said chamber at all times during

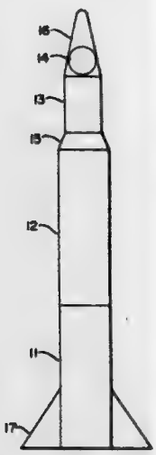
flight, and permitting air to freely exit said chamber therethrough when air pressure inside said chamber exceeds air pressure outside said chamber during flight, said upper surface being impermeable to air, said permeable part of said lower surface operatively disposed so as to be substantially unexposed to relative wind force when said airfoil is in horizontally advancing flight, and to be exposed in relative wind force when said airfoil is descending in a substantially vertical direction, whereby the airfoil maintains an advantageous aerodynamic profile and does not autorotate during flight.

5,172,875

SPACE LAUNCHER AND METHOD FOR LAUNCHING OBJECTS INTO SPACE

Israel Fried, c/o 1920 N St., NW. - Suite 510, Washington, D.C. 20036

Filed Mar. 28, 1989, Ser. No. 329,534
Claims priority, application Israel, Mar. 30, 1988, 85926; Mar. 30, 1988, 85927
Int. Cl.[5] B64G *1/40*
U.S. Cl. 244—158 R 16 Claims



1. A multi-stage space launcher for launching satellites and other payloads into space for orbiting around the Earth at least one complete orbit, the launcher comprising a plurality of rocket stages and a payload, wherein each rocket stage has at the start of firing thereof a weight comprised of a combined weight of a fuel consumed by an engine of a respective stage, the weight of the engine and the weight of a container of said respective stage, said combined weight of said respective rocket stage being no longer present when a next stage located in the launcher above said respective stage is fired, and wherein the ratio of the weight of any lower rocket stage to the weight of the rocket stage directly above it is between 0.5 and less than 2.5.

5,172,876

SPIN REORIENTATION MANEUVER FOR SPINNING SPACECRAFT

Christopher D. Rahn, Pleasant Hill, Calif., assignor to Space Systems/Loral, Inc., Newport Beach, Calif.

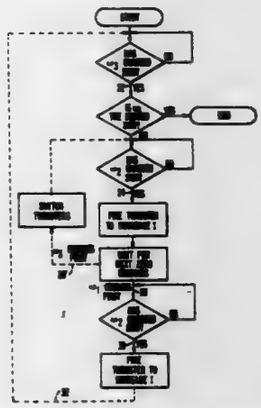
Filed Aug. 3, 1990, Ser. No. 563,161
Int. Cl.[5] B64G *1/24*
U.S. Cl. 244—164 19 Claims

1. A method of effecting spin transitioning of an object having a minor axis, an intermediate axis, and a major axis from a spin about the minor axis to a particular orientation of spin about the major axis, comprising the steps of:

a) detecting transition of the spin of the object to a spin bias about the major axis;

b) determining that said major axis spin bias is not a desired spin bias;

c) applying a control impulse to said object to remove said spin bias if said spin bias is not said desired spin bias; and



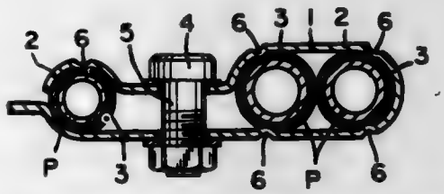
d) thereafter repeating steps a) through c) until said object has said desired major axis spin bias.

5,172,877

PIPE FIXING STRUCTURE USING CLAMP MEMBER

Koutaro Hattori; Kuniaki Sugiyama, and Takeshi Matsumoto, all of Numazu, Japan, assignors to Usui Kokusai Sangyo Kaisha Ltd., Japan

Filed Aug. 28, 1991, Ser. No. 751,141
Claims priority, application Japan, Aug. 31, 1990, 2-91855[U]; Sep. 28, 1990, 2-101669[U]
Int. Cl.[5] F16L *3/00*
U.S. Cl. 248—68.1 13 Claims



1. A pipe fixing structure for clamping a plurality of pipes in fixed parallel relationship to one another, each said pipe having a center axis and an outer circumference, said pipe fixing structure comprising:

a plurality of cylindrical members of heat-shrinkable resin fixedly shrunk respectively on the outer circumferences of the respective pipes;

a clamp formed from at least one band-shaped plate member having a plurality of curved pipe-engaging portions, each said curved pipe-engaging portion partly encircling one said cylindrical member fixed on the outer circumference of one said pipe, the band-shaped plate member of the clamp having at least one projection for each said pipe, each said projection biting into the resin of the cylindrical member fixed to the corresponding pipe and being disposed such that the center axis of the respective pipe is intermediate the projection and the corresponding curved pipe-engaging portion of the band-shaped plate member; and

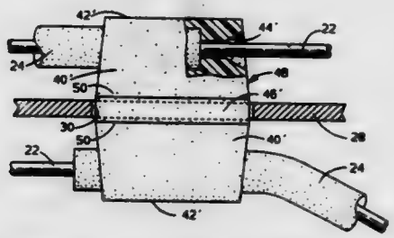
fastening means for fastening opposed portions of the band-shaped plate member of the clamp in proximity to one another for causing said projections to bite into the cylindrical members and urging the respective pipes into tight clamping engagement with the respective curved pipe-engaging portions of the clamp.

5,172,878

MOTION TRANSMITTING REMOTE CONTROL ASSEMBLY WITH IMPROVED RETAINERS

Frederick E. Lederman, Sandusky, Ohio, assignor to General Motors Corporation, Detroit, Mich.

Filed Sep. 3, 1991, Ser. No. 753,555
Int. Cl.[5] F16L 3/00
U.S. Cl. 248—73 1 Claim



1. In a motion transmitting remote control assembly of the type that uses a flexible cable of predetermined diameter, an improved cable retainer for installation to a planar panel having a aperture therethrough, the edges of which are separated by a predetermined width, said retainer comprising,

a generally elliptical shell having a pair of resilient and flexible side walls with inner surfaces and outer surfaces, said inner surfaces being spaced apart, in a free state, by more than said cable diameter and with said outer surfaces being spaced apart by more than said aperture, said side walls further converging into a pair of opposed ends with a width less than said aperture, each of said ends having a cable receiving passage therethrough that is open along its length into the space between said side wall inner surfaces,

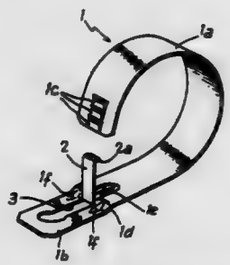
whereby said retainer may be installed in each direction by pushing a selected one of said ends into said aperture, thereby flexing said side walls together and out of said free state to engage the edges of said aperture and hold said retainer to said panel with a cable receiving passage located to either side of said panel, after which said cables may be introduced between said side walls and pushed into said open cable receiving passages.

5,172,879

ATTACHMENT CLAMP

Lionel Calmettes, and Michel André, both of Romorantin Lanthenay, France, assignors to Etablissements Caillau, France

Filed Dec. 16, 1991, Ser. No. 807,729
Claims priority, application France, Dec. 24, 1990, 90 16224
Int. Cl.[5] F16L 3/08
U.S. Cl. 248—74.3 4 Claims



1. A clamp for attachment to a supporting structure, comprising:

a) a metal strap wound on itself to form an open ring and including a first and a second end;

b) a plurality of transversely extending, longitudinally spaced, raised ribs formed adjacent the first end thereof;

c) a rectilinear extension formed on the second end of said strap and including an opening in said extension to receive an attachment member; and

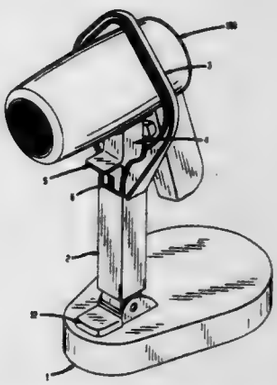
d) a hook formed proximate the second end of said strap, said hook displaced from the plane of said strap and flexibly adapted to engagement behind a selected one of said ribs.

5,172,880

HOLDER FOR A BLOW DRYER OR OTHER APPLIANCE

John G. McDougall, Kowloon, Hong Kong, assignor to China Pacific Trade Limited, British Virgin Isls.

Filed Jan. 29, 1991, Ser. No. 647,061
Int. Cl.[5] F16M 11/10
U.S. Cl. 248—185 4 Claims



1. A holder for a blow dryer or other appliance comprising:

a base;

a support arm extending from the base;

an open frame member on the support arm for receiving the barrel of the blow dryer or other appliance, the internal dimensions of the open frame member being tapered along at least one side thereof;

a gripping arm for projecting into the open frame member towards said tapered side so as to grip the barrel and hold it in position in the open frame member, the gripping arm being retractable to allow insertion of the barrel;

biasing means for biasing the gripping arm towards an external position; and

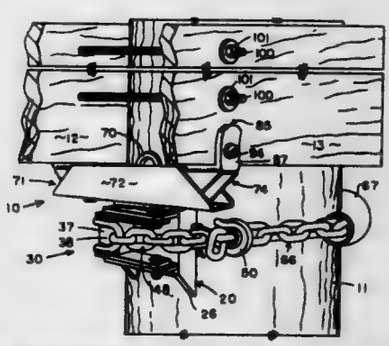
an adjustment mechanism for adjusting the inclination of the support arm.

5,172,881

ADJUSTABLE DOCK SUPPORT

Robert J. Stein, 438 Clark St., Iowa City, Iowa 52240

Filed Jun. 14, 1991, Ser. No. 715,393
Int. Cl.[5] A47B 96/06
U.S. Cl. 248—231 11 Claims



1. An adjustable dock support for a dock of the kind having

an upstanding piling and a load carrying part including a member to be supported on said piling, the dock support comprising:

elongate flexible means for at least partly enwrapping the piling at a desired height thereon;

base means for engaging a portion of the perimeter of said piling opposite said flexible means;

over center lever means pivoted with respect to said base means from an open position to a closed position and engageable with said flexible means for tightly enlooping said piling and therewith snugly gripping the piling with said base means and flexible means;

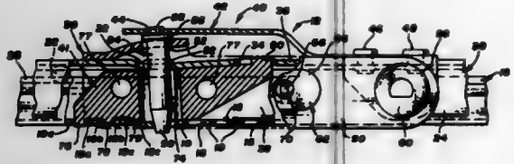
carrier means fixed with respect to said base means for supporting a load carrying member of the dock, in which said base means includes an upstanding channel member having a bight to be spaced from the piling and laterally spaced upstanding arms with free edges engageable with the perimeter of the piling for small area, high pressure gripping of the piling.

5,172,882

MANUAL SEAT ADJUSTER WITH DUAL LOCKING MEANS

James P. Nini, Mt. Clemens, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed Mar. 25, 1991, Ser. No. 674,474
Int. Cl.[5] F16M *13/00*
U.S. Cl. 248—430 13 Claims



1. A manual seat adjuster for a vehicle seat which is adjustable fore and aft, the seat adjuster comprising:

a lower channel fixedly mounted to a floor of the vehicle;

an upper channel carried by the lower channel and interconnected with the lower channel;

a latching mechanism mounted on the upper channel and having a primary locking means including a movable locking member adapted to assume a latched position for selectively positioning and locking the upper channel to the lower channel; and

a secondary locking means operatively connected with said locking member of said primary locking means, said secondary locking means having a normal position in which it provides no locking function, but being movable from its normal position to a locking position in response to a rapid forward movement of the upper channel relative to the lower channel to additionally secure the upper channel to the lower channel when the seat encounters high load situations.

5,172,883

ARTIST'S TOOL

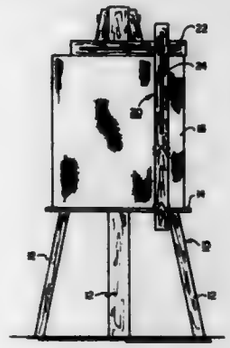
Acop J. Amirian, 132 E. Walnut St., Goldsboro, N.C. 27530

Filed Dec. 13, 1991, Ser. No. 807,112
Int. Cl.[5] A47G *1/24*
U.S. Cl. 248—441.1 20 Claims

1. A painting arrangement for a painter comprising a canvas resting on an easel having a ledge and a tool having

first and second rails joined together by a pivotal connection, said pivotal connection being adjustably located along the length of one of said first and second rails and being tightenable to secure said rails in a set pivotal configuration along said adjustable length,

said first rail resting securely on top of the canvas as it rests on the ledge of the easel and said second rail being supported by being bound to said first rail by said connection and and by contacting the ledge without touching the



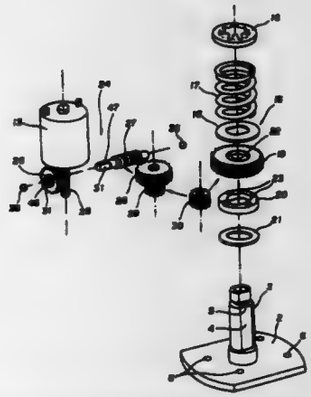
canvas, thereby permitting an artist to rest his or her painting on the second rail while painting.

5,172,884

MOTOR-DRIVEN FOLDABLE TYPE DOOR MIRROR

Yoshihiko Ishiyama, Isehara, Japan, assignor to Ichikoh Industries, Ltd., Tokyo, Japan

PCT No. PCT/JP90/01103, § 371 Date Apr. 23, 1991, § 102(e) Date Apr. 23, 1991, PCT Pub. No. WO91/03337, PCT Pub. Date Mar. 21, 1991
PCT Filed Aug. 30, 1990, Ser. No. 674,337
Claims priority, application Japan, Aug. 31, 1989, 1-101150[U]; Aug. 31, 1989, 1-101151[U]; Aug. 31, 1989, 1-101152[U]; Aug. 31, 1989, 1-101153[U]
Int. Cl.[5] B60R *1/06*
U.S. Cl. 248—479 7 Claims



1. An electrically-driven foldable door mirror, comprising:

a mirror base to be fixed to the body or door of a car;

a shaft integrally formed on and extending from said mirror base;

a mirror assembly pivotably supported on said shaft;

a motor provided in said mirror assembly;

a reduction gear mechanism including first-stage and second-stage worm gears coupled with said motor;

a gear concentrically fixed to the second-stage worm gears in said reduction gear mechanism;

a clutch mechanism including a clutch holder fixed to said shaft, a clutch gear pivotably mounted on said shaft, and compression spring means mounted on said shaft for urging said clutch gear toward said clutch holder;

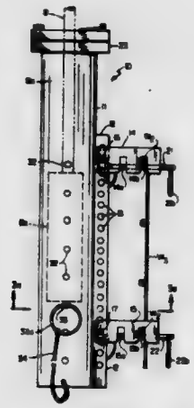
an idle gear interposed between the clutch gear and the gear concentrically fixed to the second-stage worm gears.

5,172,885

UMBRELLA SUPPORT

Marjory K. Kreischer, R.D. 3, Box 347, Towanda, Pa. 18848

Filed Mar. 25, 1991, Ser. No. 674,206
Int. Cl.[5] A45B 25/00; A47G 29/00
U.S. Cl. 248—539
6 Claims



1. An umbrella holder for supporting an umbrella or like device, comprising, in combination:

a hollow tube;

means for clamping said tube to a pair of wires at a selected height relative to said wires, said tube having a plurality of pairs of holes spaced apart along the tube, the holes of each pair being spaced from each other on opposite side walls of said tube;

a pin which may be selectively inserted into a selected pair of said holes to limit the distance which an umbrella shaft may be inserted into said tube; and

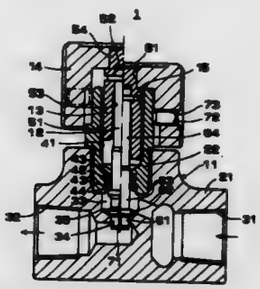
cover means attached to said tube and movable between open and closed conditions, said cover means presenting in the closed condition an opening through which an umbrella shaft may extend but through which an umbrella handle may not pass.

5,172,886

FLUID FLOW CONTROL VALVE ASSEMBLY

Tetsuzo Takotani, Osaka, and Kazuma Horita, Hyogo, both of Japan, assignors to Taiyo, Ltd., Osaka, Japan

Filed Apr. 16, 1991, Ser. No. 686,040
Claims priority, application Japan, Oct. 16, 1990, 2-108675
Int. Cl.[5] F16K 1/52, 39/02
U.S. Cl. 251—205
2 Claims



1. A fluid flow control valve assembly comprised of a valve housing and a valve rod, said valve housing having a valve chamber, a valve hole, an inflow port, and an outflow port, and said valve rod being provided in said valve chamber and turned by a handle to move in an axial direction so as to adjust an opening of said valve hole wherein,

a valve member that is provided on one end of said valve rod so as to face said valve member toward said valve hole, is inserted into said valve hole when moved in an axial direction,

a shank portion, that is movable while sealing said valve chamber by a gasket, is formed on an intermediate portion of said valve rod,

a valve seat positioned between said valve chamber and said valve hole;

a collar that is formed between said valve member and said shank portion so as to protrude radially and outwardly therefrom, said collar having a slant undersurface which engages with said valve seat,

said shank portion which contacts said gasket and a part, which is in contact with said valve seat, of said collar have effective cross-sectional surface areas which are equal to each other, and

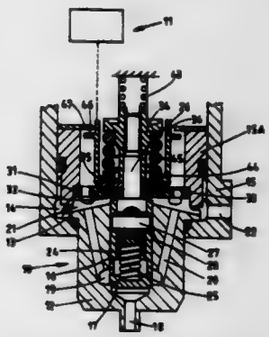
said valve member has a slit provided on one end thereof so that the length of said slit is shorter than the length of said valve member.

5,172,887

FLUID CONTROL VALVE

Robert K. Cross, Surrey; Ronald Phillips, and Lakhbir S. Panesar, both of Middlesex, all of England, assignors to Lucas Industries Public Limited Company, Solihull, England

Filed Jun. 24, 1991, Ser. No. 719,399
Int. Cl.[5] F16K 31/06
U.S. Cl. 251—129.19
8 Claims



1. An electro-magnetically operable fluid control valve of the on/off type comprising:

a seating;

a valve member movable between open and closed positions relative to the seating;

an electro-magnetic device including a stator assembly carrying a winding and an armature which is moved towards the stator assembly when the winding is energized;

a return spring which is stressed during movement of the armature towards the stator assembly;

means coupling the armature to the valve member, said means comprising an actuating element operatively connected to said return spring and a valve member undertravel spring interposed between said actuating element and the valve member, said undertravel spring yielding to allow continued movement of the actuating element when the valve member engages the seating;

an armature overtravel spring interposed between the armature and said actuating element; and

stop means operable to limit the movement of the valve member away from the seating when said winding is energized, the armature overtravel spring yielding to permit continued movement of the armature after said stop means has halted the movement of the valve member.

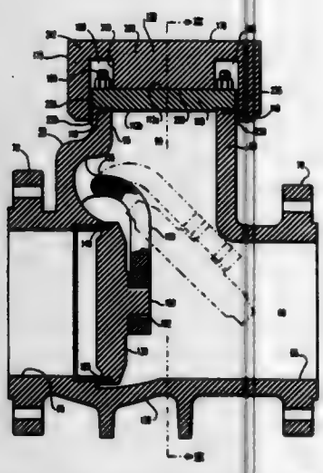
APPARATUS FOR SEALINGLY ENCLOSING A CHECK VALVE

L. Ike Ezekoye, Wilkinsburg, Pa., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Feb. 7, 1992, Ser. No. 853,158
Int. Cl.[5] F16K *15/00*
U.S. Cl. 251—367 7 Claims



1. A check valve having a construction to eliminate leakage during valve operation, the check valve comprising:

(a) a valve body having a passageway therethrough;

(b) a disc disposed in the valve body and movable between a first position for blocking said passageway to prevent flow of a material therethrough and a second position out of said passageway to allow material to flow therethrough;

(c) a tubular shaped extension extending generally radially from said valve body and having a first end portion communicating with said passageway in said valve body and an opposite, open end portion;

(d) a solid cap sealingly connected with the open end of said tubular shaped extension for closing the open end portion and providing a primary seal to prevent material within said passageway from leaking through said open end portion; and

(e) a cup shaped housing having an inner solid portion disposed in abutting contact with said cap and an outer annular peripheral portion integral with and extending from said inner portion and in surrounding relation with a portion of an outer surface of said tubular extension; the outer peripheral portion being hermetically welded to the outer surface of said tubular extension to provide a secondary seal to prevent material within said passageway from leaking through said open end portion and said primary seal in the event said primary seal fails.

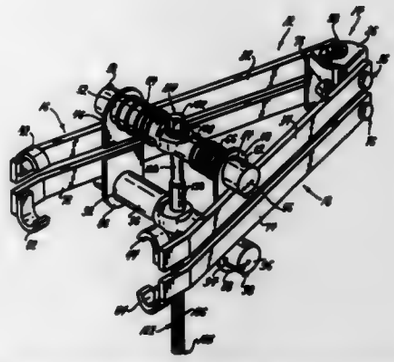
5,172,889

STRUT SPRING COMPRESSION TOOL

Steven W. Post, Jonesboro, Ark., and Gregory Law, Edwardsville, Ill., assignors to Lincoln, St. Louis, Mo.

Filed Jan. 16, 1992, Ser. No. 821,700
Int. Cl.[5] B23P *19/04*
U.S. Cl. 254—10.5 13 Claims

1. In a spring compression tool having separate arm assemblies for attachment to spaced coils of a spring, and having a load screw connected between the arm assemblies for causing the arm assemblies to be selectively adjusted toward each other in response to rotation of the load screw in a first direction relative to the arm assemblies, and for causing the arm assemblies to be selectively adjusted away from each other in response to rotation of the load screw in a second direction relative to the arm assemblies, an improvement in the tool comprising:



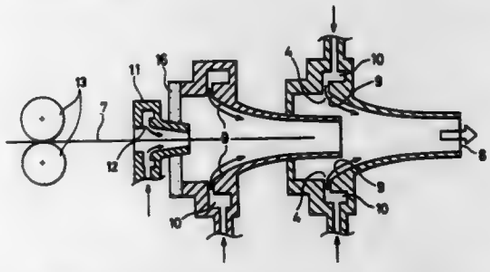
means provided on the load screw for limiting the proximity within which the arm assemblies are adjusted toward each other in response to rotation of the load screw in the first direction.

5,172,890

INSTALLATION DEVICE

Kiyoshi Horii, 5-8-15-501, Kamimeguro, Meguro-ku, Tokyo, Japan, and Kakuji Ohsumi, Yamaguchi, Japan, assignors to Kiyoshi Horii, Tokyo and Toa Kikai Kogyo Co., Ltd., Shimonoseki, both of, Japan

Filed Aug. 14, 1991, Ser. No. 745,240
Claims priority, application Japan, Apr. 10, 1991, 3-077909; Jun. 11, 1991, 3-139286
Int. Cl.[5] B66F *3/24*
U.S. Cl. 254—134.4 5 Claims

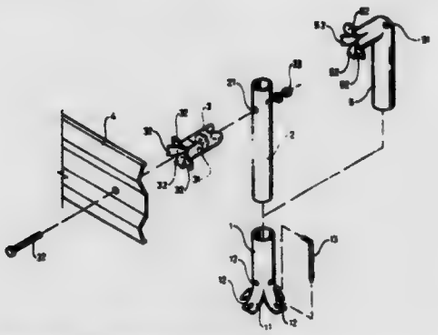


1. An apparatus for feeding a wire-like element through a tube, comprising:

a Coanda spiral flow unit device constituted by at least one Coanda spiral flow unit having a central flow passage, a tube passage connection portion at a downstream end thereof, an induction port at an upstream end thereof, and at least one annular Coanda slit for supplying compressed gas into said central flow passage to generate a Coanda spiral flow in a direction toward said tube passage connection portion; and

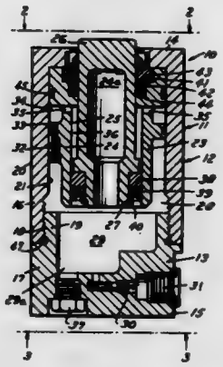
a Coanda flow supply device having a further central flow passage with a smaller inner diameter than said central flow passage and having a downstream end connected to said induction port and a further Coanda slit for supplying compressed gas into said further central flow passage to generate a Coanda spiral flow toward said Coanda spiral flow unit, and having an upstream end through which a wire-like element is supplied to said apparatus for being fed to the tube.

5,172,891
SAFE ROAD RAILING
Chyi-Bang Chen, No. 209, Tzu Yu Road, Feng Shan City, Kaohsiung Hsien, Taiwan
Filed Jan. 27, 1992, Ser. No. 826,436
Int. Cl.[5] A01K *3/00*
U.S. Cl. 256—13.1 7 Claims



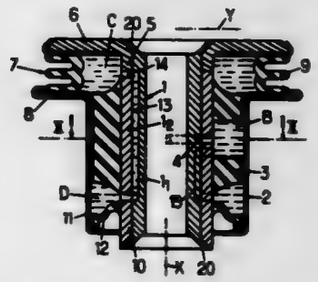
1. A safe road railing comprising:
a) a support member having a first portion for burying substantially below the ground surface and a second portion for extending vertically substantially above the ground surface;
b) a cushion tube having a first end for attachment to the second portion of the support member to position the tube in a substantially horizontal disposition and a second end configured in a plurality of outwardly curved petaloid elements; and
c) a fence plate for bolting to the cushion tube and support member and having a side surface engageable with the petaloid elements, whereby shock forces imparted to the fence plate are absorbed by the cushion tube.

5,172,892
SELF CONTAINED GAS SPRING
Bernard J. Wallis, 2215 Dacosta, Dearborn, Mich. 48128
Filed Oct. 28, 1991, Ser. No. 783,206
Int. Cl.[5] F16F *5/00*
U.S. Cl. 267—119 2 Claims



1. A self contained gas spring comprising
a housing having a closed end and an open end,
said housing having a cylindrical bore,
a cylindrical sleeve inserted into said housing,
said sleeve having at least a portion thereof forming a cylindrical surface,
a rod including a piston within said cylindrical surface,
means limiting axially outward movement of said rod relative to said housing,
said sleeve defining a first space between said sleeve and said bore of said housing,
a second space between said piston and said housing,
a charging valve in said closed end of said housing for charging said second space at the piston end of said piston rod and said first space between the sleeve and the housing with gas under pressure,
a third space between said sleeve and said piston rod axially above said piston,
a one-way valve means on said sleeve functioning to permit passage of pressurized gas from said third space to said second space in the event gas leaks into said third space and exceeds the pressure in said second space.

5,172,893
HYDRAULIC ANTIVIBRATORY SLEEVES
Bernard Boubier, Vierzon, and Michel Domer, Valdampierre, both of France, assignors to Hutchinson, France
Filed Mar. 14, 1991, Ser. No. 669,885
Claims priority, application France, Mar. 16, 1990, 90 03416
Int. Cl.[5] F16F *13/00*
U.S. Cl. 267—140.12 6 Claims



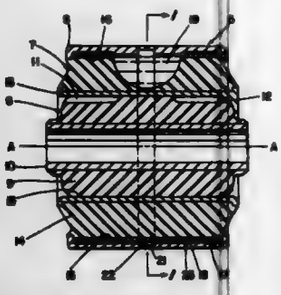
1. A hydraulic antivibratory sleeve comprising, on the one hand, two rigid tubular frames with an axis X, one surrounding the other, joined together by an intermediate elastomer body shaped so as to form therewith two sealed pockets diametrically opposite in a direction Y perpendicular to axis X and being work chambers defined by resilient working walls which provide substantial resistance to deformation, said sealed pockets communicating together through a narrow channel, the assembly formed by said pockets and said channel being filled with liquid and, on the other hand, at one of its axial ends, an annular work chamber defined respectively by extensions of the two tubular frames, by the intermediate elastomer body and by a resilient wall resisting axial compression and inserted axially between the said extensions, this annular work chamber being directly connected by a narrow channel only to a deformable chamber and the assembly formed by said annular work and deformable chambers and the channel which joins them together being filled with liquid, the deformable chamber being a compensation chamber defined partially by a flexible member which only opposes a negligible resistance to deformation, said deformable compensation chamber being separate from said sealed pocket working chambers, wherein (1) relative oscillations between the two tubular frames in the Y direction are damped essentially by the operation of the assembly formed by the sealed pockets, the said narrow channel connecting them and the liquid filling the pockets and their respective narrow channel and (2) relative oscillations between the two tubular frames in the X direction are damped essentially by the operation of the assembly formed by the annular work chamber, the deformable compensation chamber, the narrow channel connecting them and the liquid filling the annular work chamber, the deformable compensation chamber and their respective narrow channel.

5,172,894

DUAL ELASTOMERIC/FLUID ENGINE MOUNT

Richard D. Hein, Wabash; Bradley G. Hampton, Tipton, and Donald L. Deane, Logansport, all of Ind., assignors to GenCorp Inc., Fairlawn, Ohio

Filed Dec. 5, 1991, Ser. No. 802,580
Int. Cl.[5] F16F *13/00*; B60G *7/04*
U.S. Cl. 267—140.12 8 Claims



1. An engine mount, comprising

a) an inner spring assembly, including;

(1) an inner hollow metal sleeve;

(2) a first, resilient elastomeric spring surrounding the inner sleeve, the first spring having at least one pair of voids disposed therein, the voids being, (i) spaced 180 degrees apart, (ii) unconnected and free of any dampening fluid, and (iii) designed to provide the spring rate desired in the inner spring assembly; and

b) an outer spring assembly coacting with the inner spring assembly to dampen vibrations, the outer spring assembly including;

(3) an intermediate metal sleeve surrounding the first spring;

(4) a second, resilient elastomeric spring surrounding the intermediate sleeve, the second spring including a pair of cavities which are disposed therein 180 degrees apart for receiving a dampening fluid, the radial orientation of the voids and cavities being in the same directions from the longitudinal axis of the inner sleeve;

(5) an outer metal sleeve embedded in the second spring adjacent the outer periphery thereof leaving a thin layer of elastomeric spring material outside the outer metal sleeve in farther spaced relation from the intermediate sleeve than the other sleeve; and

c) an outer metal casing surrounding the outer metal sleeve in compressed relation with the thin layer of elastomeric material to hold the inner and outer spring assemblies in concentric relation;

d) at least one fluid passageway outside the inner spring assembly for connecting the pair of cavities in the second spring such that a dampening fluid can flow between the cavities; and

e) a dampening fluid disposed in the cavities.

5,172,895

CLAMPING DEVICE

Horst Klimach, Ilsfeld-Auenstein, Fed. Rep. of Germany, assignor to Bessey & Sohn GmbH & Co., Bietigheim-Bissingen, Fed. Rep. of Germany

PCT No. PCT/EP89/01072, § 371 Date May 29, 1990, § 102(e) Date May 29, 1990, PCT Pub. No. WO90/02633, PCT Pub. Date Mar. 22, 1990
PCT Filed Sep. 15, 1989, Ser. No. 466,460
Claims priority, application Fed. Rep. of Germany, Sep. 15, 1988, 3831375
Int. Cl.[5] B23Q *1/04*
U.S. Cl. 269—41 38 Claims

1. A clamping device comprising:

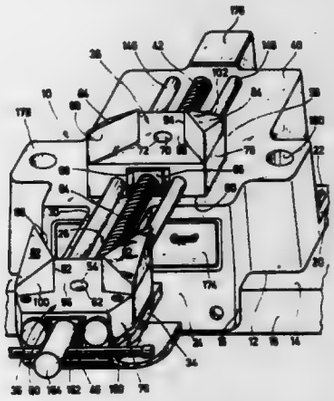
a first and a second clamping yoke adjustable relative to each other in a plane of motion;

said first clamping yoke carrying two main jaws each having a first angle clamping surface standing perpendicularly to said plane of motion;

said first angle clamping surfaces together forming a first prismatic workpiece receiving means open towards a main jaw of said second clamping yoke and enclosing an angle of $\alpha_1 < 180$ degrees;

said main jaws of said first clamping yoke being spaced from each other so that said first angle clamping surfaces end in spaced relation to each other and form a through-opening on a side of said workpiece receiving means facing away from said second clamping yoke;

said main jaws of said first clamping yoke comprising delimiting surfaces facing away from said second clamping



yoke, said delimiting surfaces including an angle of $(180-\alpha_1)$ degrees with said respective first angle clamping surfaces and standing perpendicularly to said plane of motion;

a spindle extending parallel to said plane of motion for adjustment of said clamping yokes relative to each other; and

a supplementary jaw adapted for insertion in said first clamping yoke, said first supplementary jaw having a first flat clamping surface facing said main jaw of said second clamping yoke and being arranged closer to the main jaw of said second clamping yoke than said first angle clamping surfaces are when the supplementary jaw is inserted in said first clamping yoke.

5,172,896

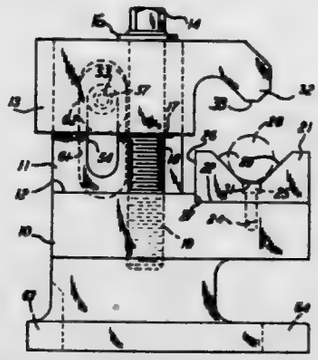
VISE

Richard F. Beere, Waterford, Wis., assignor to Beere Tool Company, Inc., Racine, Wis.

Filed Jun. 9, 1992, Ser. No. 895,718
Int. Cl.[5] B25B *5/04*
U.S. Cl. 269—252 20 Claims

1. A vise comprising a base piece having an upstanding tower, a V-block supported on said base piece, an upper jaw slidably supported on said tower and being in snug sliding contact up and down on said tower, said tower having two diametrically opposite sides and a third side intermediate said two sides and all sides being with respect to the upstanding longitudinal central axis of said tower, said upper jaw extends in snug sliding contact with all three said sides of said tower, a fastener connected to said upper jaw and being slidably guided on said tower for slidably securing said upper jaw to said tower, said fastener extending through said tower in a position which forces said upper jaw toward said third side of said tower, said upper jaw having a portion disposed in alignment with said V-block for holding a workpiece against said V-

block, and a screw interconnected between said upper jaw and said base piece and being threadedly engaged with said base



piece for effecting the up and down movement of said upper jaw upon rotation of said screw.

5,172,897

PROCESS AND APPARATUS FOR COLLECTING AND STAPLING FOLDED PRINTED SHEETS

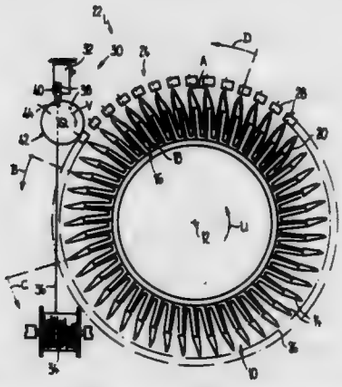
Egon Hansch, Wetzikon, and Willy Leu, Pfaffikon, both of Switzerland, assignors to Ferag AG, Hinwil, Switzerland

Continuation of Ser. No. 527,749, May 23, 1990. This application Dec. 9, 1991, Ser. No. 807,773

Claims priority, application Switzerland, May 25, 1989, 01964/89

Int. Cl.[5] B42B 2/00, 2/02

U.S. Cl. 270—53 28 Claims



1. An apparatus for collecting folded printed sheets, comprising:

a plurality of spaced saddled-shaped supports including means for arranging the plurality of supports to rotate along a closed path of conveyance;

the supports, in at least one section of the path of conveyance, having a mutually parallel longitudinal extent extending substantially perpendicular to the direction of rotation;

at least two feed stations arranged spatially from one another for depositing printed sheets astride one another on the supports;

a stapling station disposed at at least one section of the path of conveyance and the downstream of the feed stations, the stapling station having a plurality of stapling heads arranged in a row one behind another essentially at the spacing of the supports for placing staples, in a staple region, into the printed sheets deposited on the supports;

the stapling heads essentially moving in a plane extending transverse with the supports;

means for forming staples from essentially straight wire sections held by the stapling heads;

a wire section dispenser;

a lead-away means for conveying the stapled printed sheets away from the stapling station;

wherein the stapling station has one single staple placing region extending between at least two supports along said section of the path of conveyance and the stapling heads travel along a closed track of travel, the track of travel leading past the wire section dispenser and along said section of the path of conveyance, the stapling heads traveling at a rate or velocity essentially equal to the rate or velocity of the supports, and moving together synchronously with the supports along said section of the path of conveyance of the supports.

5,172,898

PAPERBOARD FEEDING APPARATUS

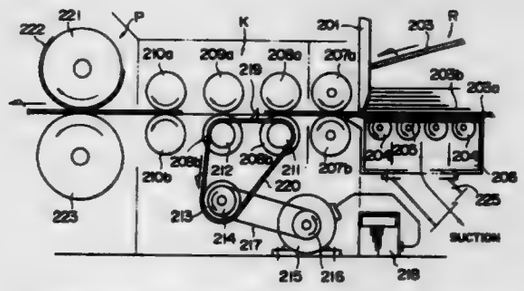
Takehiro Takahashi, Hiroshima, Japan, assignor to Mitsubishi Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 2, 1991, Ser. No. 724,867

Claims priority, application Japan, Jul. 5, 1990, 2-71695[U]; Jul. 5, 1990, 2-71696[U]; Aug. 24, 1990, 2-223889

Int. Cl.[5] B65H 5/00

U.S. Cl. 271—10 8 Claims



1. A sheet feeding apparatus comprising:

a hoper means for receiving and piling up a plurality of sheets, said hopper means including a front guide and a back stop;

delivery means for delivering a single sheet from said hopper along a delivery path, said delivery means including delivery rollers rotating against said single sheet and transporting said single sheet past said front guide;

feed means for receiving said single sheet from said delivery means and transposing said single sheet along said delivery path, said feed means including a plurality of pairs of feed rollers positioned along said delivery path and downstream of said delivery means;

timing correction means for determining a portions of a front edge of said single sheet as said single sheet is transported along said delivery path, said timing correction means including pulleys rotatably mounted on two of said feed rolls, said pulleys being independently rotatable from said feed rolls, an endless belt mounted on said pulleys and moveable with said pulleys, and a claw mounted on said endless belt and moveable with said endless belt; and

control means for controlling a movement of said claw on said endless belt, said control means moving said endless belt at a speed substantially in synchronization with said feed rolls, said control means positioning sad claw downstream and in front of said single sheet as said single sheet passes adjacent to said endless belt, said control means increasing said speed of said endless belt just before said front edge of said single sheet reaches said endless belt in order to have said claw advance downstream for said single sheet, said control means reducing said speed of said endless belt when said single sheet is adjacent said endless belt, said reducing of said speed causing said claw to contact said single sheet, said control means moving said

endless belt as substantially a same speed as said single sheet after contact between said single sheet and said claw, said control means increasing said speed of said endless belt prior to said front edge of said single sheet passing downstream so as to separate said claw from said single sheet.

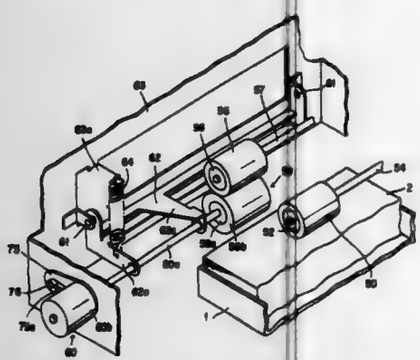
PAPER FEEDER

Akio Tajima, Tokyo, Japan, assignor to Seikosha Co., Ltd., Tokyo, Japan

Division of Ser. No. 509,101, Apr. 13, 1990, Pat. No. 5,050,854.
This application Jun. 6, 1991, Ser. No. 711,477
Claims priority, application Japan, Apr. 28, 1989, 1-110114; Jun. 9, 1989, 1-146972
Int. Cl.[5] B65H *3/52*
U.S. Cl. 271—122 1 Claim



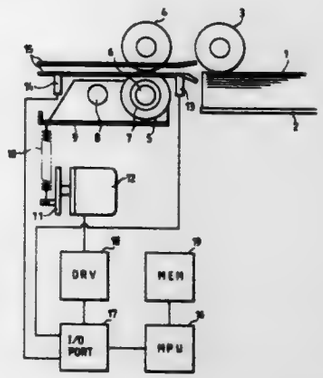
1. A paper feeder comprising a pickup roller means feeding a paper sheet from a stack of sheets, a rotatable feed roller and a retard roller means biasingly urged toward one another, said rotatable feed roller and said retard roller means being downstream of said pickup roller means, said feed roller means being rotatable in a feed direction for feeding said paper sheet between said feed roller means and said retard roller means, a pivot arm means pivotably supporting said retard roller means on a fixed support structure, said pivot arm means having a first pivot axis, motor means, and mounting means pivotably mounting said motor means on said fixed support structure, said mounting means having a second pivot axis, said mounting means comprising adjusting means for adjusting the position of said second pivot axis relative to said first pivot axis, said motor means being operable to apply a turning torque to said retard roller means in a direction opposite to said direction of feed of said feed roller means.

5,172,900
PAPER FEED MECHANISM

Kazuo Uno; Junji Shirakawa, and Masahiro Yamazaki, all of Ibaraki, Japan, assignors to Hitachi Koki Co., Ltd., Tokyo, Japan

Filed Apr. 23, 1991, Ser. No. 689,437
Claims priority, application Japan, Apr. 27, 1990, 2-113007
Int. Cl.[5] B65H *3/52*
U.S. Cl. 271—125 2 Claims

1. A paper feed mechanism, comprising:
a feed roller rotatably in one direction at a predetermined timing;
a torque limiter;
a separation roller, rotatably mounted in operative engagement with said torque limiter, disposed in rotatable contact with said feed roller, so as to rotate together with said feed roller when a load torque on said separation roller exceeds a predetermined value; and
a pickup roller disposed upstream of said feed roller relative to the direction of rotation of said feed roller for feeding a paper sheet in response to a paper feed instruction;
means for varying a pressing force of said separation roller against said feed roller;

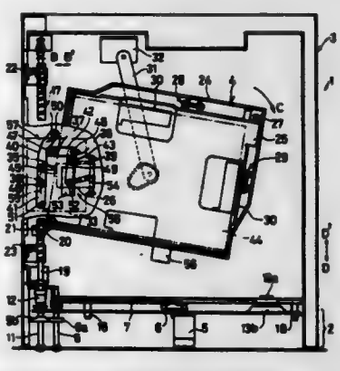


detection means provided in the vicinity of said feed roller and said separation roller for directly detecting the speed of the paper sheet fed by said feed roller and said separation roller; and
means for controlling said varying means according to a detection signal from said detection means.

5,172,901
PAPER FEEDING DEVICE

Yuji Sugimoto, Nara; Kenji Okada, Saijo, and Hiranaga Yamamoto, Yamatokoriyama, all of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Jul. 30, 1991, Ser. No. 738,260
Claims priority, application Japan, Jul. 31, 1990, 2-205694; Jul. 31, 1990, 2-205695; Aug. 31, 1990, 2-231558
Int. Cl.[5] B65H *1/08*
U.S. Cl. 271—127 8 Claims



1. A paper feeding device provided with:
a tray storing member which is attachable to and removable from a device housing;
a rotatable tray provided in the tray storing member, the tray being rotatable to a longitudinal feed position for feeding copy paper oriented longitudinally with respect to a feeding direction, and to a lateral feed position for feeding the copy paper oriented laterally with respect to the feeding direction;
a raisable and lowerable paper holding plate provided in the rotatable tray, the copy paper being stacked on the paper holding plate; and
a paper holding plate driving member, provided in the tray storing member under a bottom section of the paper holding plate, for lifting up and lowering the paper holding plate to a paper-feed position and to a lowered position

respectively, by applying and cancelling a force on the paper holding plate, the paper feeding device being characterized in comprising:

a guide member provided in the device housing;

a lifting up guide means provided on a side face toward a paper-feed end of the rotatable tray when the rotatable tray is in the paper-feed position;

a first driven member provided in the tray storing member and driven by the guide member when the rotatable tray is attached to the device housing;

a second driven member provided in the tray storing member and driven by the lifting up guide means when the rotatable tray is in the paper-feed position;

a driving force applying means for transmitting a driving force to the paper holding plate driving member when the first driven member and the second driven member are simultaneously driven by the guide member and the lifting up guide means respectively; and

a driving force transmission means provided in the tray storing member and coupled to the paper holding plate driving member, for transmitting the driving force transmitted from the driving force applying means to the paper holding plate driving member so as to exert a force upwards on the paper holding plate.

5,172,902

PAPER STORING DEVICE WITH A SWINGABLE ENGAGING MEMBER AND AN ENGAGING/DETACHING MECHANISM

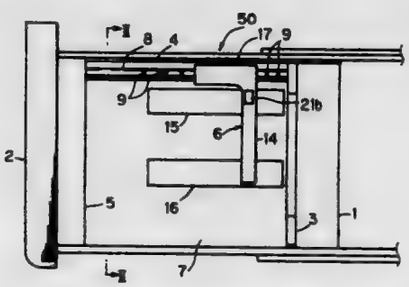
Yasuhiro Hashimoto, Kyoto, and Toru Tanjyo, Toyonaka, both of Japan, assignors to Mita Industrial Co., Ltd., Japan

Filed Nov. 15, 1991, Ser. No. 792,618

Claims priority, application Japan, Nov. 27, 1990, 1-326650

Int. Cl.[5] B65H *1/22, 1/00*

U.S. Cl. 271—164 9 Claims



1. In a paper feeding device having a paper feeding deck which moves back and forth and is provided with a width aligning guide movable in a direction in which the paper feeding deck moves for positioning of recording paper sheets, the paper feeding device comprising:

a guide bar provided for the paper feeding deck so as to extend in the direction in which the paper feeding deck moves, the guide bar having grooves formed at positions corresponding to sizes of recording paper sheets;

a width aligning guide supporting member fixed to the width aligning guide and guided by the guide bar;

an engaging member provided for the width aligning guide supporting member and being detachably engagable with the grooves of the guide bar;

an engaging and detaching mechanism, provided for the width aligning guide supporting member, for causing the engaging member to engage with and disengage from the grooves of the guide bar;

a tray mounted with overlapping recording paper sheets, the tray being movable up and down with respect to a bottom plate of the paper feeding deck, and being disposed above the bottom plate,

the width aligning guide being guided in the direction in which the paper feeding deck moves to the bottom plate of the paper feeding deck by a rail member,

the tray having a hole through which the width aligning guide passes for permitting movement of the width aligning guide, the hole being long in the direction in which the paper feeding deck moves,

the engaging member comprising a swing member mounted swingably on the width aligning guide supporting member and being disposed below the guide bar,

the swing member having a swing end with an upwardly oriented claw which can be engaged with a groove of the guide bar,

the engaging and detaching mechanism comprising an urging spring for urging the swing member in an upward direction of the claw of the swing member when the claw is engaged with a groove of the guide bar, and an operating bar supported so as to be movable up and down on the width aligning guide, the operating bar having a projection received on the side of the swing end of the swing member, and a lower end which passes through a hole for permitting moving of the operating bar, the hole being long in the direction in which the paper feeding deck moves and being formed in the bottom plate;

a first member, extending along the hole, being fixed to a lower surface of the bottom plate; and

a second member, engagable with the first member when the claw of the swing member is engaged with a groove of the guide bar, being formed at a lower end of the operating bar.

5,172,903

PAPER FEED CASSETTE

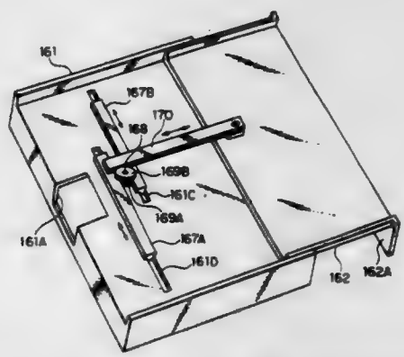
Satoshi Haneda; Hisao Satoh; Tadayoshi Ikeda; Shizuo Morita, and Masakazu Fukuchi, all of Hachioji, Japan, assignors to Konica Corporation, Tokyo, Japan

Filed Sep. 25, 1991, Ser. No. 765,569

Claims priority, application Japan, Sep. 28, 1990, 2-262403; Oct. 11, 1990, 2-272550

Int. Cl.[5] B65H *1/00*

U.S. Cl. 271—171 5 Claims



3. A sheet feed cassette for holding various sizes of sheets to be fed to an image recording apparatus in a feed direction, said cassettes comprising

a casing having a sheet placement area on which a pile of sheets is placed;

a width regulating plate to regulate placement of the sheets in a width direction which is perpendicular to a sheet feed direction;

a first moving device to move the width regulating plate, including a first rack gear and a firs pinion gear;

a back edge regulating plate to regulate placement of the sheets in the sheet feed direction; and

a second moving device to move the back edge regulating plate including a second rack gear and a second pinion gear;

wherein the first pinion gear and the second pinion gear have a common axis of rotation so that each of said width regulating plate and said back edge regulating plate moves a predetermined distance simultaneously when one of said width regulating plate or said back edge regulating plate is moved.

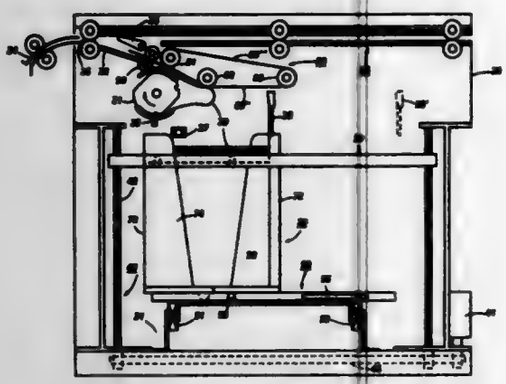
SHEET STACKING APPARATUS WITH ANGLED SHEET TRANSPORT BELTS

Cho Sue; Frederick A. Nichols, and Richard F. Scarlata, all of Rochester, N.Y., assignors to Xerox Corporation, Stamford, Conn.

Filed Sep. 10, 1991, Ser. No. 758,989
Int. Cl.[5] B65H *29/40*
U.S. Cl. 271—187 3 Claims



1. A sheet stacking apparatus for stacking a wide variety of sheet sizes and weights including flimsy sheets, comprising:

rotatable disc means having a slot therein for receiving and inverting sheets fed thereinto from a source;

receiving means for receiving the sheets after they have been inverted;

at least one belt for ensuring that flimsy sheets are inverted, said at least one belt being closely spaced to said disc means and having span portions of three different slopes with a first slope being adjacent said disc means and extending at an acute angle with respect to a horizontal plane along the top surface of said disc means and a second slope extending parallel with the horizontal plane; and

a feeding means for feeding a sheet from said source at a predetermine velocity, and wherein said at least one belt is driven at a velocity substantially greater than said predetermine velocity of said feeding means.

5,172,905

FILM RECEIVE MAGAZINE FOR A LASER IMAGER

James C. Vanous, Roseville; Robert L. Rydeen; Thomas J. Lundgren, both of Woodbury; Bert A. Munthe, Marine on St. Croix, all of Minn., and Arnold B. Dammermann, Grand Rapids, Mich., assignors to Minnesota Mining and Manufacturing Company, St. Paul, Minn.

Filed Jun. 19, 1991, Ser. No. 717,617
Int. Cl.[5] B65H *31/00*
U.S. Cl. 271—209 18 Claims

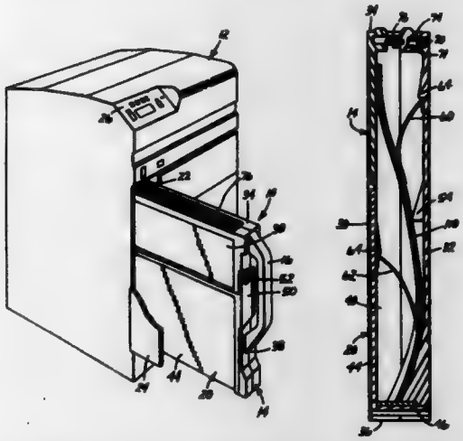
1. A magazine configured to be positioned in a generally upright, vertical orientation for passively collecting and transporting a plurality of flexible sheets of photosensitive media, including:

an elongated, vertically oriented and light-tight enclosure having front and back walls, top and bottom walls, and first and second end walls;

a collection door on the top wall of the enclosure through which sheets of media are passively received in an entrance within the magazine;

a first breakaway biasing mechanism for engaging the sheets of media as they are inserted into the magazine; and

structure on the interior of the enclosure for arcing the



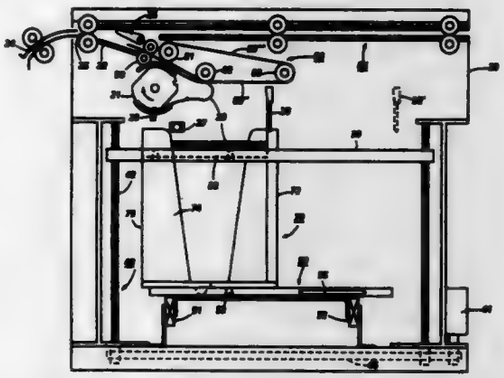
collected sheets about a first axis extending between the end walls and about a second axis extending between the top and bottom walls, the first breakaway biasing mechanism and the structure on the interior of the enclosure cooperating to urge collected sheets into a vertically curved and stacked arrangement.

5,172,906

TWO CORNER SHEET STACKING APPARATUS

Otto R. Dole, Walworth, N.Y., assignor to Xerox Corporation, Stamford, Conn.

Filed Sep. 10, 1991, Ser. No. 757,090
Int. Cl.[5] B65H *31/08*
U.S. Cl. 271—215 2 Claims



1. A device for receiving sheets from a machine for stacking while simultaneously allowing improved visibility from any angle for determining stacking progress within the machine, comprising:

a container for receiving the copy sheets, said container including a bottom support member, said bottom support member having only two corners and walls connected to said two corners of said bottom support member to form two diametrically opposed sheet guide surfaces; and

container pallet means for positioning on said bottom support member and receiving the copy sheets from the machine.

5,172,907

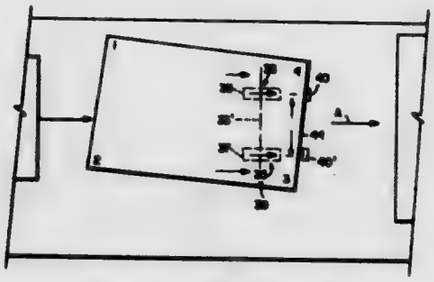
COMPENSATION FOR SKEWING OF DOCUMENTS DURING A ROTATION THROUGH A FINITE ANGLE

Michael S. Kalisiak, North Tonawanda, N.Y., assignor to Moore Business Forms, Inc., Grand Island, N.Y.

Continuation-in-part of Ser. No. 697,994, May 10, 1991. This application Sep. 20, 1991, Ser. No. 763,267

Int. Cl.[5] B65H 7/14

U.S. Cl. 271—227 16 Claims



1. Apparatus for rotating a sheet, comprising:

a conveyance surface on which a sheet, having a first orientation, travels in a first direction;

first and second rollers for engaging a sheet travelling on said conveyance surface and spaced from each other in a second direction, generally transverse to said first direction;

first and second drive means, operatively driving said first and second rollers, respectively, independently of each other;

sensing means for sensing the leading edge of a sheet, having said first orientation, with respect to said rollers;

control means for controlling the speed and direction of rotation of said drive means in response to said sensing means to rotate the sheet so that it has a predetermined second orientation, a significant angular displacement from the first orientation; and

wherein said sensing means further comprises means for sensing if the leading edge of a sheet is skewed with respect to said second direction, and wherein said control means comprise means, in response to a determination that the leading edge is skew, for controlling the speed and direction of rotation of said drive means to compensate for the skew orientation of the sheet leading edge by adding or subtracting for the significant angular displacement so that the sheet is rotated to the desired predetermined second orientation, with the skew automatically compensated for.

SORTING DEVICE FOR STORING SHEET-FORM RECORDING MEDIA

Helmut Steinhilber, Sonnenbergstrasse 40, CH-6052 Hergiswil, Switzerland

Filed Mar. 27, 1991, Ser. No. 675,569

Claims priority, application Fed. Rep. of Germany, Mar. 27, 1990, 4009731

Int. Cl.[5] B65H 39/10

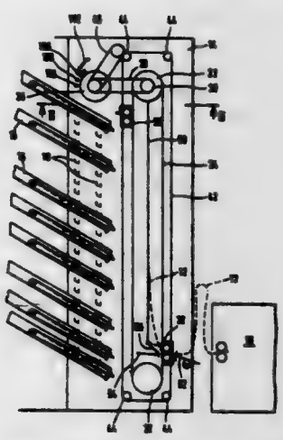
U.S. Cl. 271—288 24 Claims

1. A sorting device for storing sheet-form recording media comprising:

a plurality of storage compartments in parallel array and each having an insertion side for receiving recording media;

means comprising a transport unit having a pair of driven rollers for selectively seizing and discharging a recording medium; and

means for moving said transport unit between first and second selected positions comprising a motor, an endless positioning belt, said endless positioning belt having a first run extending along the insertion sides of said storage compartments, and a second run spaced from said first run, means comprising said motor for driving said endless positioning belt, and means for attaching said transport unit to said endless positioning belt; said first position



being on the first run of said endless belt adjacent the insertion side of a selected storage compartment, and said second position being a receiving position on the second run of said endless belt.

5,172,909

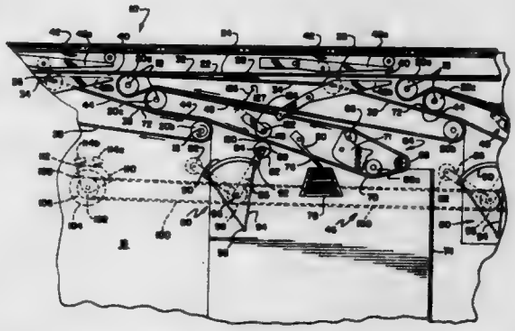
SECONDARY PIVOTAL DRIVE STACKER ROLLER ENABLING STACKING OF SMALL AND LARGE DOCUMENTS

Mario Ricciardi, Glenview, Ill., assignor to Bell & Howell Company, Skokie, Ill.

Filed Dec. 3, 1991, Ser. No. 802,049

Int. Cl.[5] B65H 39/10, 43/00

U.S. Cl. 271—305 19 Claims



1. A secondary pivotal drive stacker roller assembly for a document sorting and conveying apparatus adapted for advancing and sorting documents of various lengths, said roller assembly comprising:

a roller oriented for rotation about a vertical axis and adapted for engaging shorter length documents advanced along a document path of the sorting apparatus;

pivot means for reciprocally pivoting said roller into and out of engagement with the documents advanced along the document path, said pivot means including a pivot arm having a first end configured for accommodating said roller and a second end connected to a pivot shaft;

drive means for selectively and reciprocally rotating said pivot means between a first position wherein said roller engages the shorter length documents, and a second posi-

tion wherein said roller is disengaged from the documents; and

control means for controlling said drive means to selectively position said roller for engaging the shorter length documents, said control means including a rotatable cam, means for causing said cam to rotate in response to the pivoting of said pivot shaft, and at least one directional switch arranged to be actuated by rotation of said cam.

13. In a conveyor system for conveying generally flat documents on-edge, said system including a primary conveyor means defining a primary document path, means for diverting documents from said primary document path, and at least one secondary conveyor means defining a secondary document path arranged to receive documents diverted from said primary document path, a secondary pivotal drive stacker roller assembly disposed in operational relationship to each said secondary document path and comprising:

a roller oriented for rotation about a vertical axis adapted and for engaging shorter length documents advanced along each of said secondary document paths;

pivot means for reciprocally pivoting said roller into and out of engagement with the documents advanced along said secondary document path; and

control means for controlling said pivot means to selectively position said roller for engaging the shorter length documents.

5,172,910

METHOD AND APPARATUS FOR IMPROVING BOWLING BALL CONTROL

Donald O. Asburst, P.O. Box 1878, Gardnerville, Nev. 89410

Filed Aug. 12, 1991, Ser. No. 743,971
Int. Cl.[5] A63B 71/04
U.S. Cl. 273—54 B 2 Claims

1. An overlay for a bowler's thumb comprising a first cylinder of material suitable to be in contact with a human thumb and having a ridge over a portion of its interior suitable to be gripped at the interior joint of a thumb; a second cylinder of a flexible material bonded to and surrounding said first cylinder; and a third cylinder of a material suitable to contact the interior walls of a hole in a bowling ball bonded to and surrounding said second cylinder.

5,172,911

METAL RACKET FRAME

Chen-Chung Chang, No. 912, Chung-Shang Rd., Shen-Kong Hsiang, Taichung Hsien, Taiwan

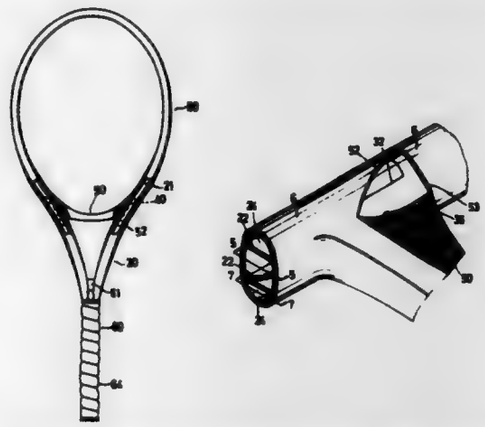
Filed Dec. 31, 1991, Ser. No. 815,487
Int. Cl.[5] A63B 49/12
U.S. Cl. 273—73 H 6 Claims

1. A metal racket frame, comprising:

a metal tube including a curved head portion, a converging throat portion which extends from said head portion, a handle portion which extends from said throat portion, a pair of spaced elongated partitions which extend along the length of said metal tube, a central space between said elongated partitions and a side space on each side of said central space; said throat portion having two branches, each of which includes at least one elongated cut-out portion to access one of said side spaces;

a plurality of sealing members, each of which is provided inside one of said side spaces accessed by said cut-out portion adjacent to one end of said cut-out portion;

a bridge portion which extends between said branches of said throat portion and which cooperates with said head



portion to define an oval-shaped, web holding structure; and

a plastic coating covering said metal tube and having an engaging projection received in each said cut-out portion; said bridge portion, said engaging projection and said plastic coating being made of a fiber-reinforced composite material and being simultaneously and integrally formed in a mold after placing said metal tube therein.

5,172,912

ROTATABLE MANIPULABLE PUZZLE

Ferdinand Laumertink, Hengelo, Netherlands, assignor to Binary Arts Corporation, Alexandria, Va.

Filed Jan. 15, 1992, Ser. No. 820,984
Int. Cl.[5] A63F 9/08
U.S. Cl. 273—153 S 17 Claims

1. A manipulable puzzle, comprising:

a selected plurality of substantially equally dimensioned transferable members;

a first generally planar member having an upper surface and a lower surface, said first planar member including a first selected number of first apertures extending in a first direction and a second selected number of second apertures extending in a second direction different from said first direction, said first and second apertures being spaced apart and the dimensions of said first and second apertures being equal to the dimensions of a selected integral number of said transferable members, said first planar member further including collars with lips formed around said first and second apertures on said upper surface, said lips on said collars defining an opening of a width less than the width of a said transferable member;

a second generally planar member having an upper and a lower surface, said second planar member including said first selected number of first apertures extending in a first direction and said second selected number of second apertures extending in a second direction different from said first direction, said first and second apertures being spaced apart and the dimensions of said first and second apertures being equal to the dimensions of a selected integral number of said transferable members, said second planar member further including collars with lips formed around said first and second apertures on said lower surface, said lips on said collars defining an opening of a width less than the width of a said transferable member;

connecting means for rotatably connecting said first and second planar members where said first apertures and second apertures of said first and second planar members, respectively, are alignable upon relative rotation of the first and second planar members to allow for sequential displacement of a selected one of said transferable members between said first and second members through the apertures therein.

5,172,913

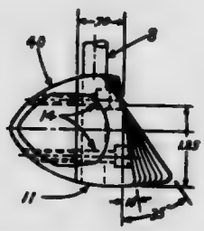
METAL WOOD GOLF CLUBHEAD ASSEMBLY

Harry Bouquet, 13582 Mindora Ave., Sylmar, Calif. 91342

Continuation-in-part of Ser. No. 702,183, May 20, 1991, Pat. No. 5,076,585, and a continuation-in-part of Ser. No. 629,699, Dec. 17, 1990, abandoned, and a continuation-in-part of Ser. No. 351,835, May 15, 1989, abandoned. This application Nov. 12, 1991, Ser. No. 790,517

Int. Cl.[5] A63B *53/04*

U.S. Cl. 273—167 F **2 Claims**



1. In a golf clubhead assembly wherein a hollow metal clubhead has a heel portion, drilled to receive a tubular clubshaft, a flat clubface extending from said heel to a toe portion, a sole forming a bottom of said clubhead, and a smooth, convex surface forming a top of said clubhead, and wherein said clubhead assembly has a longitudinal axis extending horizontally through the vertical center of said clubface, the improvement comprising:

a forward metal forging forming said clubface and for receiving a tubular clubshaft, said metal forging having uniformly thick walls for weighting; said thick walls subtending an arc of at least 270° about said longitudinal axis, the weight of said forward metal forging comprising 55% to 85% of the total weight of said clubhead assembly, said clubface having no bulge or roll radius and

a metal fairing having walls forming a rear portion of said clubhead assembly, the walls of said fairing having a thickness less than 50% of said thick walls of said forward metal forging, whereby the center of gravity of said clubhead is located between 0.6 and 0.7 inches rearwardly from said clubface.

5,172,914

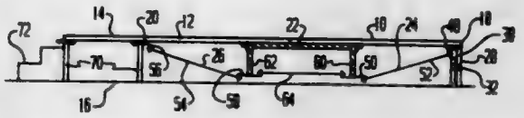
APPARATUS FOR PROVIDING AN ADJUSTABLY CONTOURED PUTTING SURFACE

James Primerano, 327 Wegner Ave., Trenton, N.J. 08619

Filed Dec. 16, 1991, Ser. No. 807,330

Int. Cl.[5] A63B *67/02*

U.S. Cl. 273—176 H **17 Claims**



1. An apparatus for providing an adjustably contoured putting surface which comprises:

A. a main platform means defining an upper surface thereon for putting, said main platform means being positioned spatially disposed above the adjacent environmental floor area, said main platform means defining a first securement position and a second securement position thereon spatially disposed with respect to one another;

B. at least one intermediate suspended support member fixedly secured with respect to said main platform means between said first securement position and said second securement position to facilitate supporting thereof, said intermediate suspended support member extending downwardly to a distance less than the distance from said main platform means to the adjacent environmental floor area to be spatially disposed therefrom, said intermediate suspended support member including:

(1) a first suspension leg member secured to said main platform means and extending downwardly therefrom;

(2) a second suspension leg member secured to said main platform means and extending downwardly therefrom;

C. a first longitudinally extending suspension member attached with respect to said main platform means at said first securement position and attached with respect to said intermediate suspended support member to facilitate supporting suspension thereof;

D. a second longitudinally extending suspension member attached with respect to said main platform means at said second securement position and attached with respect to said intermediate suspended support member to further facilitate supporting suspension thereof;

E. a third longitudinally extending suspension member attached with respect to said first suspension leg member and said second suspension leg member to facilitate supporting suspension thereof; and

F. at least one pivotable platform support assembly being secured with respect to said main platform means for adjusting the contour of said upper surface of said main platform means responsive to pivoting of said pivotable platform support assembly.

5,172,915

PRACTICE PUTTING KIT AND METHOD

Albert J. Flis, 11427 Blodgette Creek Trail, Strongsville, Ohio 44136

Filed Jan. 21, 1992, Ser. No. 822,901

Int. Cl.[5] A63B *69/36*

U.S. Cl. 273—193 R **6 Claims**

4. A golf putting practice kit comprising:

1) a first putter including a first head, the first head having a first weight and comprising:

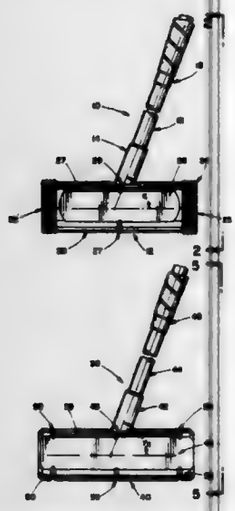
a first body,

a horizontally rotatable axle, having a first end and a second end, associated with the first body,

a first wheel attached to the first end, and,

a second wheel attached to the second end; and,

2) a second putter devoid of wheels including a second head, the second head having a second weight and comprising: a second body, and,



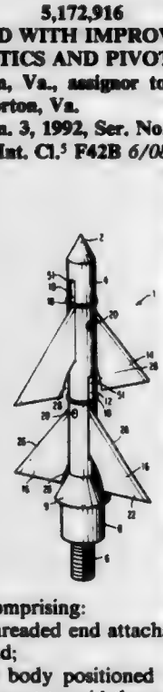
weight means associated with the second body for rendering the second weight substantially identical to the first weight.

5,172,916

BROADHEAD WITH IMPROVED FLIGHT CHARACTERISTICS AND PIVOTABLE BLADES

Riley Puckett, Lorton, Va., assignor to Pucketts Blodtrailer Broadhead, Inc., Lorton, Va.

Filed Jan. 3, 1992, Ser. No. 816,472
Int. Cl.[5] F42B 6/08
U.S. Cl. 273—421 5 Claims



1. A broadhead, comprising:

a body having a threaded end attachable to an arrow shaft and a pointed end;

a first slot in said body positioned at a first longitudinal location with respect to said threaded end of said body;

a first pair of cutting blades pivotally mounted on a first pivot pin within said first slot in said body, each of said first pair of cutting blades having a fulcrum end and a projecting end wherein said fulcrum end is connected to said pivot pin and said projecting end projects out of said first slot and radially away from said body, said first pair of cutting blades being pivotable from a barbed configuration wherein a rear portion of each of said first pair of cutting blades forms an acute angle with a longitudinal axis of said body extending from said threaded end of said body to a nonbarbed configuration wherein said rear portion of each of said first pair of cutting blades forms an obtuse angle with said longitudinal axis of said body extending from said threaded end of said body; and

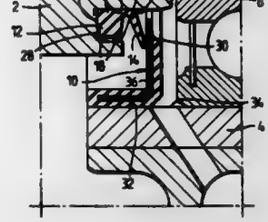
a first ring member frictionally secured to an outer perimeter of said body, said first ring member slidable to a position for holding said first pair of cutting blades in said barbed configuration.

5,172,917

SEALING DEVICE FOR SEALING AN ANNULAR SPACE BETWEEN TWO MACHINE ELEMENTS WHICH ARE ROTATABLE IN RELATION TO EACH OTHER

Frank da Gay, Basel, Switzerland, assignor to Forsheda AB, Forsheda, Sweden

Filed Apr. 29, 1991, Ser. No. 692,727
Claims priority, application Sweden, Apr. 27, 1990, 9001564
Int. Cl.[5] F16J 15/32, 15/34
U.S. Cl. 277—95 8 Claims



1. A sealing device for sealing an annular space between first and second machine elements which are rotatable relative to each other, said sealing device comprising an elastic material sealing ring comprising a main body which is at least partially received in a groove provided in said first machine element said groove formed by two concentric, axially extending side surfaces and a bottom surface extending radially between said side surfaces said sealing ring further comprising a sealing lip unitary with said main body and contacting a counterface which is non-rotatably supported by said second machine element and said sealing lip sliding against the counterface when the machine elements are rotated relative to each other, wherein said main body of the sealing ring received in the groove as a whole consists of elastic material and is compressed between and engages said two concentric side surfaces of said groove, said main body of said sealing ring contacting at least one of said two side surfaces of said groove and at least one annular projection contacting the opposite side surface of the groove, said projection being adapted to allow departure of air from said groove when said main body of said sealing ring is introduced into said groove and to seal said groove to prevent penetration of undesired matter to surfaces of said groove.

5,172,918

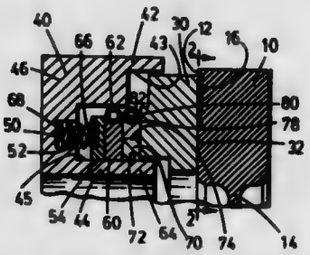
SECONDARY SEAL FOR GAS TURBINES

Glenn G. Pecht, Vernon Hills, and Peter L. Kay, Arlington Heights, both of Ill., assignors to John Crane Inc., Morton Grove, Ill.

Filed Apr. 28, 1992, Ser. No. 874,828
Int. Cl.[5] F16J 15/34
U.S. Cl. 277—96.1 10 Claims

1. A secondary seal in a rotary mechanical end face seal assembly for use in a high temperature environment, the seal assembly comprising a first seal ring sealed against a rotating shaft and having a generally planar annular first seal ring face with spiral grooves extending at least part way across said first seal ring face and a second seal ring sealed against the housing, the second seal ring having a second seal ring face being generally planar and opposed to said first seal ring face, said second

seal ring being movable axially of the shaft, said seal assembly further comprising a first biasing means adapted to urge the axially movable second seal ring toward the other seal ring to bring said seal faces close to one another to have a rotatable sealing engagement relative to one another, means positioning said axially movable ring generally coaxially of the other ring, a retainer means for retaining said second seal ring and a secondary seal ring and said retainer means, said secondary seal comprising a first annular secondary seal ring, said first annular secondary seal ring including at least two arcuate segments joined together and being retained and biased in a radial direction against said retainer by a second biasing means, said first annular secondary seal ring further comprising one end wall for receiving the biasing force applied by said first biasing means and a second end wall for transmitting the biasing force received from said first biasing means, said secondary seal further having a second annular secondary seal ring, said sec-



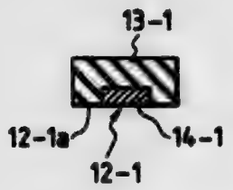
ond annular secondary seal ring comprising an inner portion having at least two arcuate segments and an outer portion having at least two arcuate segments, said inner portion being disposed radially inwardly of said outer portion, said inner portion and said outer portion together comprising said second secondary seal ring and a third biasing means for biasing said outer portion against said inner portion and also biasing said inner portion against said retainer, said secondary seal rings being disposed adjacent each other and being axially movable and being disposed between said first biasing means and said first seal ring, whereby said second and third biasing means radially bias said respective first and second secondary seal rings to provide a fluid tight seal to the retainer, and said first biasing means providing a biasing force through the secondary seal rings and to said end wall of said second secondary seal ring and biasing said second secondary seal end wall against said first seal ring and thereby providing a fluid tight seal between said secondary seal and said first seal ring.

5,172,919

APPLIANCE FOR PREVENTING WATER FROM LEAKING THROUGH JOINT

Kazuhiro Takasaki; Michiyoshi Terauchi, and Hiroshi Shiajo, all of Tokyo, Japan, assignors to C. I. Kasei Co., Ltd., Tokyo, Japan

Filed Feb. 19, 1991, Ser. No. 656,327
Claims priority, application Japan, Feb. 22, 1990, 2-16150[U]
Int. Cl.[5] F16J *15/10*
U.S. Cl. 277—227 **12 Claims**



1. In a sealing device for preventing water from leaking through a joint constituted by two mutually facing surfaces, a seal adhered to at least one of said mutually facing surfaces which constitutes an adhered surface, said seal comprising:

at least one expansible portion made of a water-expansible material capable of being expanded by absorbing said water; and

an unexpansible portion made of a water-unexpansible rubber virtually incapable of being expanded with said water;

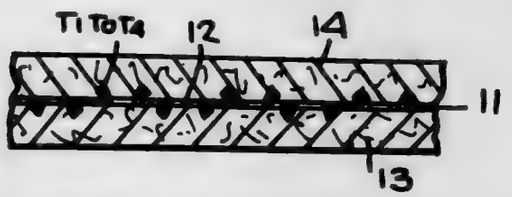
wherein said expansible portion and said unexpansible portion are laid on each other continuously along a longitudinal direction of said seal so that said portions constitute said seal in the form of a band; a part of said unexpansible portion is exposed at said adhered surface continuously in said longitudinal direction; and said expansible portion surrounds said unexpansible portion on all sides thereof except for said part of said unexpansible portion which is adhered to said adhered surface.

5,172,920

COMPOSITE MATERIAL FOR GASKETS

Walter Schleuk, Nuremberg, Fed. Rep. of Germany, assignor to Diamond Manufacturing Co., Wyoming, Pa.

Filed Jan. 28, 1992, Ser. No. 827,016
Int. Cl.[5] F16J *15/12*
U.S. Cl. 277—235 R **9 Claims**



1. A composite material usable for forming gaskets, said material comprising:

(a) a perforated metal core sheet having square holes punched therein, each hole being bordered by a set of four triangular tangs whose apex portions are flared outwardly with respect to the hole, the sets projecting from at least one side of the sheet; and

(b) a non-metallic facing layer having sealing properties compression laminated to said one side of the core sheet, whereby the tangs pierce the layer and are bent back downwardly onto the facing layer by a compressive force applied to the apex portions to create four lobes that clinch the layer to the core sheet omnidirectionally and thereby mechanically lock the layer securely thereto.

5,172,921

SEALING DEVICE

Stig Stenlund, Saltsjöbaden, Sweden, assignor to Flutron AB, Tyreso, Sweden

PCT No. PCT/SE86/00399, § 371 Date Mar. 25, 1987, § 102(e) Date Mar. 25, 1987, PCT Pub. No. WO87/01783, PCT Pub. Date Mar. 26, 1987
Continuation of Ser. No. 323,124, Mar. 13, 1989, abandoned, which is a continuation of Ser. No. 46,061, Mar. 25, 1987, abandoned. This PCT application Sep. 9, 1986, Ser. No. 887,664
Claims priority, application Sweden, Sep. 16, 1985, 8504286
Int. Cl.[5] F16J *15/00*
U.S. Cl. 277—237 R **9 Claims**

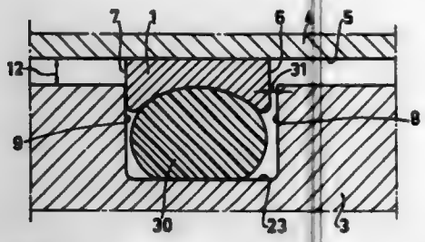
1. Sealing means for effecting a fluid-tight seal between two members respectively defining cylindrical, spaced, opposed surfaces movable relative to each other and defining a gap therebetween;

said sealing means including a sealing ring having the characteristics of being gap-less and formed of a hard material that even after long-time deformation with a stress less than its yield point springs back to its original dimensions, said sealing ring also being substantially non-deformable

in cross-section in response to the maximum circumferential stress, less than its yield point, which is expected to be applied thereto during its intended use, said ring having a radial thickness in cross-section not exceeding about three millimeters and preferably less than one millimeter, the radial thickness of the cross-section of said ring being less than its axial length;

an annular recess in one of said opposed surfaces for receiving said sealing ring;

said sealing ring defining a contacting surface which, in the unstressed state of said sealing ring, has a circumference which, in relation to the circumference of the other of said opposed surfaces, requires the altering of said contacting surfaces's circumference by means of circumferential pre-stressing resulting primarily from the physical assembly of said sealing ring between said two members to a degree that causes its circumference to substantially equal that of said other opposed surface;



the difference in circumferences between said contacting surfaces of said sealing ring when unstressed and said opposed surface being such that the radial contact pressure exerted by said contacting surface upon said opposed surface in opposition to said sealing rings' circumferential pre-stressing urges said contacting surface into sealing engagement with the other of said opposed surfaces with a circumferential stress in said sealing means less than its yield point but sufficiently high to ensure that said contacting surface maintains at least a predetermined minimum contact pressure against the other of said opposing surfaces over substantially their entire mutual circumferential lengths notwithstanding the expected dimensional variations resulting from manufacturing tolerances, wear, deformation, non-circularity and other surface perturbations of said other opposing surface in response to the pressure acting thereon;

said minimum contact pressure being caused substantially only by said circumferential stressing of said sealing means.

5,172,922

SELF ALIGNING VACUUM NOZZLE

Kelli L. Kowaleski, Arlington; Yuen-Foo M. Kou, Melrose, both of Mass., and Gary D. Roberts, Hollis, N.H., assignors to Digital Equipment Corporation, Maynard, Mass.

Filed Apr. 25, 1991, Ser. No. 691,630
Int. Cl.[5] B25J *15/06*
U.S. Cl. 279—3 **23 Claims**

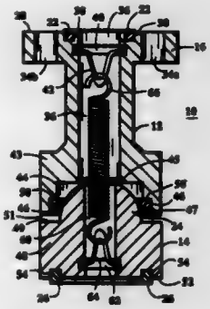
1. A vacuum end effector for picking up and moving a work piece while maintaining alignment of said work piece comprising:

a nozzle base having a base passageway extending therethrough into a cavity in said nozzle base;

a nozzle tip having first and second portions, said first portion being generally semi-spherically shaped and having a given diameter, and said second portion having a work piece contact surface, said nozzle tip having a tip passageway extending through said first portion and through said contact surface of said second portion;

engagement means disposed within said cavity, said engagement means having a circular opening of a diameter less than said diameter of said semi-spherical portion for sealably and slidably engaging said semi-spherical portion of said nozzle tip when said semi-spherical portion is placed in slidable, abutting contact with said opening of said engagement means; and

retention means at least partially within said cavity for retaining said semi-spherical portion in abutting contact with said opening of said engagement means, said cavity and said tip passageway being configured such that with



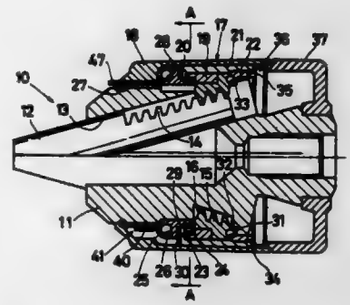
said semi-spherical portion of said nozzle tip in abutting contact with said opening of said engagement means said base and tip passageways are in fluid flow communication with one another so that a vacuum applied at one end of said base passageway will be communicated to said opening in said contact surface for enabling the pick up of a work piece.

5,172,923

TOOL CHUCK

Daijiro Nakamura, Ono, Japan, assignor to Kabushiki Kaisha Delta, Kobe, Japan

Filed Mar. 30, 1992, Ser. No. 859,837
Claims priority, application Japan, Apr. 8, 1991, 91/103806
Int. Cl.[5] B23B *31/12*
U.S. Cl. 279—62 **4 Claims**



1. A tool chuck having a plurality of inclined chuck claws mounted centrally of a forward end of a chuck body to be slidable toward and away from one another, a nut ring meshed with the chuck claws and rotatable to screw-feed the chuck claws toward and away from one another, a revolvable input ring loosely eccentrically mounted in a control ring fitted to an outer peripheral surface of the chuck body, an output ring fixed to the nut ring, a fixable ring fixable under pressure to the chuck body by a backlash produced by tightening of the nut ring, the input ring, the output ring and the fixable ring being arranged axially of the chuck body, a forward end of the fixable ring extending to the input ring such that opposed surfaces thereof are engageable to allow revolution and restrict rotation of the input ring, and an inbuilt torque amplifying mechanism with gears having different numbers of teeth and formed on portions of the input ring and the output ring overlapping each other in an eccentric relationship, said tool chuck comprising:

a support ring for relatively rotatably supporting said input

ring, said support ring including a holder portion supported on said chuck body; and

an enlargement allowing portion formed in said holder portion for varying a supporting position in a direction to cause slipping of engagement between said gears.

5,172,924

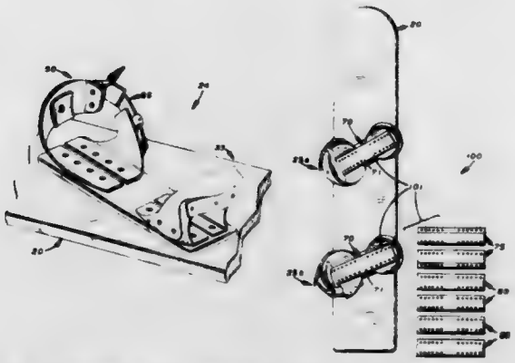
HARD SHELL BOOT SNOWBOARD BINDINGS AND SYSTEM

Robert S. Barci, 36110 SE. 25th, Fall City, Wash. 98024

Filed Mar. 27, 1991, Ser. No. 676,935

Int. Cl.[5] A63C 9/00

U.S. Cl. 280—14.2 **23 Claims**



22. A binding system attaching hard shell boots to a snowboard, comprising:

a. a left and right opening binding attached to the top surface of said snowboard, each said binding comprising a flexible heel piece having an inside surface, said flexible heel piece being sufficiently flexible to allow selective lateral movement and axial rotation of said boot when attached to said binding, a heel holding means pivotally mounted to said inside surface of said flexible heel piece and capable of engaging the rear portion of a hard shell boot when attached to said binding, an adjustable securing means attached to said flexible heel piece capable of adjusting the tension of said flexible heel piece around said boot when attached to said binding, a semi-rigid toe piece being attached to said snowboard in front of said flexible heel piece, said toe piece being capable of slidingly receiving and holding the toe portion of said boot on said snowboard when attached to said binding, and;

b. a set of exchangeable base members containing at least two base members, each said base member capable of being rigidly attached between said flexible heel piece and said semi-rigid toe piece of each said binding, each said base member having a boot support surface capable of disposing said boot in a selected position when attached to said binding.

5,172,925

MOBILE PRONE STANDER WITH POSITIONING CHAIR

Talton C. Kendrick, San Francisco; Sterling D. Wiemken, Fremont, and Christopher Lacson, Portola Valley, all of Calif., assignors to Quickie Designs Inc., Fresno, Calif.

Continuation of Ser. No. 364,368, Jun. 9, 1989, abandoned. This application Mar. 6, 1992, Ser. No. 847,432

Int. Cl.[5] A61H 3/04; B62M 1/14

U.S. Cl. 280—250.1 **27 Claims**

1. In a mobile ambulatory apparatus including a mobile frame having a first end and a second end, a ground engaging stabilizing member mounted to said mobile frame proximate at least one of said first end and said second end, a pair of drive wheels mounted to opposed sides of said mobile frame between said first end and said second end; and a body support frame mounted to said mobile frame between said drive wheels, a foot rest mounted to said body support frame, a support member mounted to said body support frame in spaced relation above said foot rest for support of a user while standing on said foot rest, and a seat assembly mounted to said body support frame, an improvement in said mobile ambulatory apparatus comprising:

said seat assembly being removably mounted to said body support frame in a position relative to said support member for support of said user's back by said support member while sitting on said seat assembly.

5,172,926

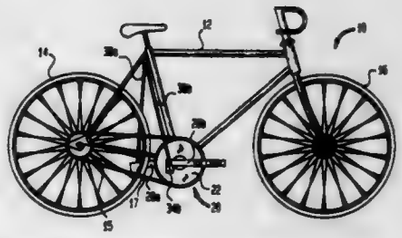
PEDAL DRIVE MECHANISM

Paul V. Mannino, 144 Barbara Dr., North Plainfield, N.J. 07062

Filed Dec. 6, 1990, Ser. No. 623,016

Int. Cl.[5] B62M 1/00, 5/00

U.S. Cl. 280—252 **33 Claims**



1. A drive mechanism comprising:

(a) a rotatable drive wheel, said drive wheel having an axis;

(b) a lever arm having a first end and a second end, said lever arm being rotatably connected to said drive wheel at a medial connection point between said first end and said second end, said medial connection point being moveable in a substantially circular path about said axis of said drive wheel;

(c) a guide rod rotatably connected to said lever arm for supporting said second end and limiting the movement of said lever arm, said guide rod and said lever arm being constructed and arranged with respect to one another such that when a force is exerted against said first end, said first end moves through an arcuate path with respect to said axis to thereby rotate said drive wheel about its axis, and that upon completion of said arcuate path, said first end moves through a return path to position said first end at the beginning of said arcuate path, said arcuate path being longer than said return path, said first end moving closer to said axis during said return path than during said arcuate path;

(d) a crank connecting said drive wheel and said lever arm, said medial connection point being at the connection of said lever arm to said crank; and

(e) a pedal rotatably connected at said first end of said lever arm at a first connection point to facilitate the application of force to said first end, and wherein said guide rod is rotatably connected at or adjacent said second end of said lever arm at a second connection point, said second con-

nection point being offset from an imaginary line drawn through said first connection point and said medial connection point.

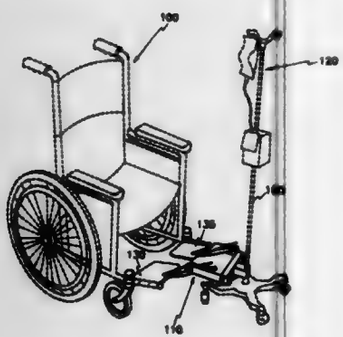
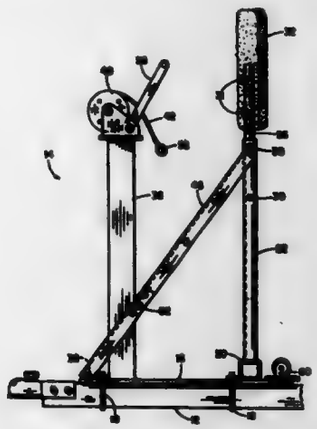
TV STAND COUPLING DEVICE
James R. Bobb, Timonium, and James J. Zaloudek, Glenn Burnie, both of Md., assignors to Church Home and Hospital of the City of Baltimore, Baltimore, Md.
Continuation of Ser. No. 629,614, Dec. 18, 1990, Pat. No. 5,083,807. This application Sep. 26, 1991, Ser. No. 765,676
Int. Cl.[5] A47C 7/62
U.S. Cl. 280—304.1 2 Claims



1. A system comprising:
a wheelchair having first and second footrests and a plurality of wheels in contact with a first surface;
a wheeled IV stand having a pole and plurality of wheels in contact with a second surface;
a coupling means for connecting said wheeled IV stand to said wheelchair, for confining relative movement of said wheeled IV stand and said wheelchair within a fixed, substantially vertical, geometric plane, and for maintaining said wheels of said wheelchair in contact with said first surface and said wheels of said wheeled IV stand in contact with said second surface when said first surface and said second surface become uneven, comprising;
a first arm and a second arm rotatably connecting a support member to said first and second footrests, respectively;
means for connecting said support member to said IV stand; and
a locking plier for releasably connecting each of said first and second arms to said footrests, respectively.

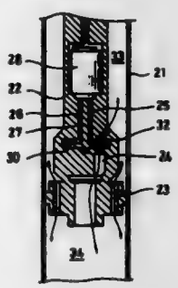
5,172,928
BOAT BOW STOP MECHANISM
Lloyd O. Capps, Rte. 5, Box 338, Claremore, Okla. 74017
Filed May 8, 1991, Ser. No. 697,256
Int. Cl.[5] B60P 3/10
U.S. Cl. 280—414.1 10 Claims

1. A boat trailer bow stop assembly comprising:
a base plate movably attached to a trailer tongue;
a horizontal support member attached to said plate;
a first vertical winch support post secured to said base plate;
a first step means having first ends and second ends;
a left side rail attached to said first ends of said step means;
a right side rail attached to said second ends of said step means;
a left vertical pad support means attached at its lower end to said horizontal support member and attached near its upper end to said left side rail;
a right vertical pad support means attached at its lower end to said horizontal support member and attached near its upper end to said right side rail;
a winching means attached to the top portion of said winch support post; and



left and right pad members attached to the upper ends of said pad support members.

5,172,929
SUSPENSION SYSTEM FOR A VEHICLE
Tetsuro Butsuen; Yasunori Yamamoto, and Tohru Yoshioka, all of Hiroshima, Japan, assignors to Mazda Motor Corp., Hiroshima, Japan
Filed Oct. 28, 1991, Ser. No. 783,137
Claims priority, application Japan, Oct. 26, 1990, 2-289749
Int. Cl.[5] B60G 17/00
U.S. Cl. 280—707 9 Claims



1. A suspension system for a vehicle comprising;
a shock absorber provided between a sprung member and an unsprung member for changing a damping force characteristic into three or more characteristics,
running state detecting means for detecting the predetermined running state of the vehicle,
damping force characteristic limiting means for receiving signals from the running state detecting means so as to limit the damping force characteristics to be selected from the three or more characteristics for the shock absorber according to the predetermined running state of the vehicle,
damping force characteristic changing and controlling means for changing and controlling the damping force characteristic of the shock absorber of the basis of a given control rule only within the damping force characteristics limited by the damping force charateristic limiting means, and
threshold changing means for changing the threshold of the control rule such that the damping force charateristic of the shock absorber can easily be changed into the higher or lower level side according to the rate of change in the predetermined running state of the vehicle.

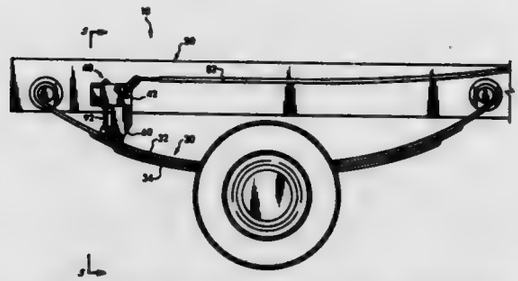
LOAD LEVELING ATTACHMENT FOR LEAF SPRING SUSPENSION AND METHOD THEREFOR

Brian A. Boye, 1102 Sunhaven, Laurel, Mont. 59044; Richard A. Holzinger, Box 395, Lake Andes, S. Dak. 57356, and Leslie H. Zack, 3306 Zack Burke La., Billings, Mont. 59106

Filed Mar. 6, 1991, Ser. No. 665,565
Int. Cl.[5] B60G *11/02*
U.S. Cl. 280—718 26 Claims



1. A load-leveling suspension attachment for a vehicular leaf spring suspension system having a pair of leaf springs mounted on the vehicle frame for fully supporting the load on the vehicle, said attachment comprising:

a first body adapted to be mounted onto the frame of the vehicle adjacent a first of said pair of leaf springs;

first means connected to said first body for operatively shortening said first leaf springs as said suspension system undergoes heavy loading conditions to balance the load on said vehicle;

said first means include abutment means for selectively engaging said first leaf springs in a position normal to the planar surface of said first leaf springs at the point of engagement;

a second body adapted to be mounted onto said frame adjacent the second of said pair of leaf springs; and

second means connected to said second body for operatively shortening said second leaf springs as said suspension system undergoes heavy loading conditions to balance the load on said

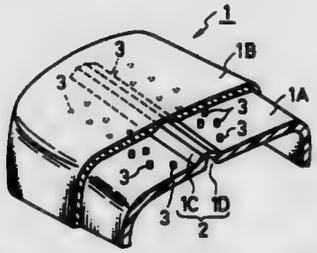
said second means include abutment means for selectively engaging said second leaf springs in a position normal to the planar surface of said second leaf springs at the point of engagement.

5,172,931

MODULAR COVER FOR AN AIR BAG

Yoshiyuki Baba, and Takayasu Zushi, both of Shiga, Japan, assignors to Takata Corporation, Tokyo, Japan

Filed Oct. 3, 1991, Ser. No. 770,236
Claims priority, application Japan, Oct. 26, 1990, 2-290545
Int. Cl.[5] B60R *21/16*
U.S. Cl. 280—728 6 Claims



1. A modular cover for an air bag comprising:

a rigid inner layer having outer and inner surfaces,

a soft outer layer directly molded over the outer surface of the inner layer and having a smooth outer surface without depressions,

a tear line formed in the inner and outer layers for tearing the modular cover when the air bag is opened, said tear line being formed of a raised portion formed in the inner layer and extending outwardly from the outer surface of the inner layer, a recessed portion formed in the raised portion and extending toward the outer layer from the inner surface of the inner layer, and a thin portion formed in the outer layer and located above the raised portion, and

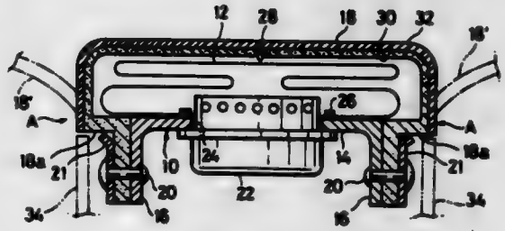
a plurality of convex portions integrally formed with the inner layer to extend outwardly from the outer surface thereof and to engage the outer layer, said convex portions being located near and along the tear line so that when the outer layer is molded and cured, a portion near the tear line does not partly shrink to thereby substantially form the smooth outer surface without forming a depression along the tear line.

5,172,932

AIR BAG DEVICE

Kazuo Watanabe, and Takayasu Zushi, both of Shiga, Japan, assignors to Takata Corporation, Tokyo, Japan

Filed Apr. 11, 1991, Ser. No. 683,617
Claims priority, application Japan, May 24, 1990, 2-134681
Int. Cl.[5] B60R *21/16*
U.S. Cl. 280—731 7 Claims



1. An air bag device comprising:

a retainer for constituting a base plate in the device and having a flat plate portion with an air bag mounting side and an erected piece extending oppositely to the air bag mounting side from a side of the flat plate portion,

an air bag fixed to the retainer, said air bag being folded and placed above the flat plate portion,

an inflator adapted to generate an air bag development gas and attached to the retainer, and

a module cover for covering the air bag, said module cover being formed of a hard inner layer and a soft outer layer and having a portion near an edge of the inner layer, said portion near the edge being attached to the retainer and having a thickness and a rigidity greater than those of the other portion so that a bending region in a tearing operation of the module cover is set at a vicinity above the high rigidity portion.

5,172,933

AIR BAG DIVERTER

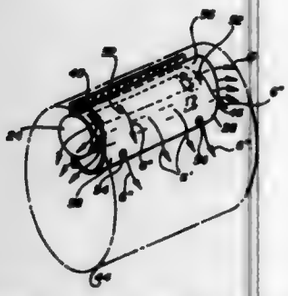
Robert A. Strasser, Livonia, Mich., assignor to Ford Motor Company, Dearborn, Mich.

Filed Oct. 10, 1989, Ser. No. 419,185
Int. Cl.[5] B60R *21/28*
U.S. Cl. 280—740 17 Claims

1. An inflatable occupant restraint device for an automotive vehicle for restraining the movement of an occupant of the vehicle with respect to the device comprising:

a gas generating device mounted on the vehicle including means for effecting the flow of gas and having gas discharge openings arranged to direct said gas flow toward said occupant;

a flexible bag fixedly secured to said gas generating device and having interior surfaces in fluid communication with said gas discharge openings for effecting inflation of said flexible bag; and



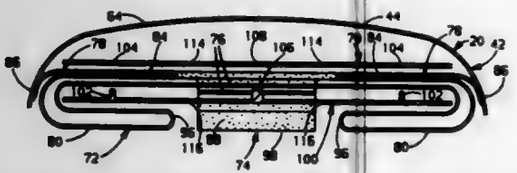
a fluid permeable diverter carried within said flexible bag adjacent said gas discharge openings and operative to deflect a portion of said gas flow away from said occupant.

5,172,934

OCCUPANT RESTRAINT SYSTEM

Brian H. Frantz, Royal Oak; Jack L. Jessen, Highland, and Gregory A. Miller, Troy, all of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Aug. 29, 1991, Ser. No. 752,132
Int. Cl.[5] B60R *21/20, 21/26, 21/22*
U.S. Cl. 280—740 4 Claims



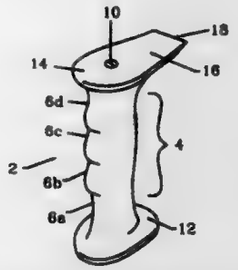
1. An occupant restraint system comprising, support means, an inflatable occupant restraint cushion mounted to the support means and including a lower wall portion secured to the support means, an upper wall portion spaced from the lower wall portion, and folded wall portions interconnecting the upper and lower wall portions, means mounting the lower wall portion to the support means, a source of pressure fluid for inflating and deploying the occupant restraint cushion, a pressure fluid reaction member covering the inside of the upper wall portion, means mounting the reaction member to the support means in overlying relationship to the source of pressure fluid, a plurality of flap means, each arranged in overlapping relationship to a respective peripheral edge portion of the reaction member and to each other, means securing the flap means to the inside of the upper wall portion of the cushion adjacent the peripheral edge portions of the reaction member, the flap means providing a pocket sealing the interface between the reaction member and the upper wall portion of the cushion against the entry of pressure fluid, means releasably locating the flap means in overlapping relationship to the reaction member and to each other until the pressure and volume of pressure fluid within the cushion attain predetermined levels and move the upper wall portion and flap means relative to the reaction member and toward the occupant, and means interconnecting the flap means and the reaction member and cooperating with the flap means to provide tethers interconnecting the reaction member and upper wall portion of the cushion to limit the movement of such upper wall portion relative to the reaction member and toward the occupant.

5,172,935

SKI POLE HAND GRIP WITH GOGGLE SCRAPER

Robert Marona, 81 Charter Cir., Ossinger, N.Y. 10562; Anthony Sheehan, 91 Brook St., Croton, N.Y. 10520, and David Oxton, Scarborough Manor, Scarborough, N.Y. 10510

Filed Aug. 5, 1991, Ser. No. 740,102
Int. Cl.[5] A63C *11/18*; G02C *13/00*
U.S. Cl. 280—821 6 Claims



1. A ski pole hand grip comprising handle means adapted to be gripped by a human hand and means for scraping integrally connected to said handle means, said handle means and said scraping means being formed of a unitary piece of material, said handle means having means for receiving an end of a ski pole and seating means for forming a plurality of seats on a forward portion of said handle means for receiving a plurality of fingers when said hand grip is held in a user's hand said handle means having a main body with first flange means integrally connected to a top end thereof, said scraping means comprises an extension integrally formed with said first flange means and extending rearwardly away from said seating means and overlying the thumb of said hand, and said scraping means having a cross-sectional area which decreases in a rearwardly direction and which terminates in a rearward straight edge.

5,172,936

IN-MOLD LABEL HAVING REMOVABLE COUPON PORTION

Brian P. Sullivan; Robert J. Wojewoda, both of Cincinnati, and Theodore R. Zeiter, Amelia, all of Ohio, assignors to Multi-Color Corporation, Cincinnati, Ohio

Filed Apr. 8, 1991, Ser. No. 682,421
Int. Cl.[5] B42D *15/00*
U.S. Cl. 283—81 49 Claims

1. A label for attaching to a surface and adapted to allow removal of at least one portion of said label from said surface, said label comprising:

(1) at least one permanent portion and

(2) at least one removable portion, each of said portions

having adhering and display sides; said display sides having indicia thereupon;

and wherein said adhering side of said at least one permanent portion is provided with an adhesive coating providing sufficient adhesion to adhere said at least one permanent portion to said surface

and wherein said adhering side of said at least one removable portion is provided with an adhesive coating providing less adhesion than said adhesive provided by said adhesive coating on said adhering side of said at least one permanent portion so as to allow said at least one removable portion to be adhered to said surface while being capable of being removed from said surface.

5,172,937

COMBINED FLUORESCENT AND PHOSPHORESCENT STRUCTURES

Terrance W. Sachetti, 145 Pitsch Ct., #12, Sault Ste. Marie, Mich. 49783

Continuation-in-part of Ser. No. 437,625, Nov. 17, 1989, Pat. No. 5,018,232, which is a continuation-in-part of Ser. No. 223,424, Jul. 25, 1988, Pat. No. 4,894,101, which is a division of Ser. No. 934,462, Nov. 24, 1986, Pat. No. 4,759,090. This application Mar. 18, 1991, Ser. No. 670,909

Int. Cl.[5] B42D *15/00*

U.S. Cl. 283—81

7 Claims

3. A label for use with a structure for accommodating a product comprising: a sheet member adapted to be attached to said structure, said sheet member having a surface, first means of phosphorescent material anchored to said surface to form a first visual light means thereon whereby when the label is exposed to a lighted environment and subsequently to a dark environment the phosphorescent material emits light creating said visual light means, and second means of fluorescent material secured to the surface to form a second visual light means hereon, said second means reflecting visible light and said first means emitting visible light when subjected to light in the ultra violet wavelength range.

5,172,938

I.D. CARD PRODUCT

Eric Schmidt, Elgin, Ill., assignor to Wallace Computer Services, Inc., Hillside, Ill.

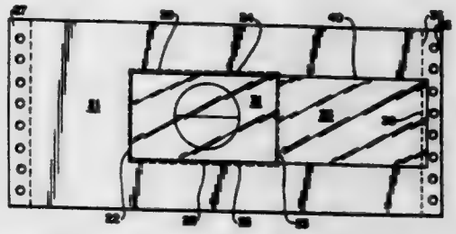
Continuation-in-part of Ser. No. 415,877, Oct. 2, 1989, Pat. No. 4,982,894. This application Nov. 19, 1990, Ser. No. 615,309

Int. Cl.[5] B42D *15/00*

U.S. Cl. 283—109

10 Claims

1. An I.D. product comprising a generally rectangular ply having a front, a rear and a pair of longitudinally-extending side edges, said ply including card stock having intersecting longitudinal and transverse lines of weakness defining an I.D. card, a pressure sensitive adhesive-equipped transparent film having first and second portions, said first portion being attached to one face of said I.D. card, said second portion of said film being in face-to-face relation with said ply, said second portion of said film being equipped with a release liner in covering relation to said pressure sensitive adhesive and interposed between said film and said ply and said film second portion being movable into covering relation with the other



face of said I.D. card, said film second portion and release liner having longitudinally extending side edges constituting an attachment part, a longitudinally extending line of potential severance in said attachment part spaced slightly inward of the longitudinally extending side edge of said film second portion, and adhesive means securing said attachment part to said ply whereby said attachment part remains with said ply upon severing along said line of potential severance.

5,172,939

CONNECTION STRUCTURE FOR BRANCH PIPE IN HIGH-PRESSURE FUEL RAIL

Yoshiyuki Hashimoto, Tagata, Japan, assignor to Usui Kokusai Sangyo Kaisha Ltd., Japan

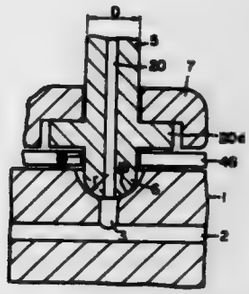
Filed Oct. 11, 1990, Ser. No. 595,532

Claims priority, application Japan, Oct. 14, 1989, 1-120416[U]

Int. Cl.[5] F16L *35/00*

U.S. Cl. 285—24

8 Claims



1. A connection structure for a branch pipe in a high-pressure fuel rail, wherein a through hole is formed at a plurality of positions in the axial direction in the peripheral wall of a through passage formed axially in said rail and serving to pass a high-pressure fuel and wherein an outwardly opening pressure receiving bearing surface is formed in said through hole so that a branch pipe having a flow path communicating with said through passage is provided, said pressure receiving bearing surface being abutted by a pressure head portion formed on the connection terminal of said branch pipe, a joint piece provided externally on the fuel rail in such a manner as to enclose the pressure receiving bearing surface, and said branch pipe being fixed to said fuel rail by threadedly tightening a nut incorporated on said branch pipe with said joint piece, which connection structure is so designed that a spherical pressure bearing surface is formed on the terminal of said pressure head portion, a straight line portion is formed on said pressure head portion in continuity with said pressure bearing surface, and at the end of said straight line portion is formed an annular projection

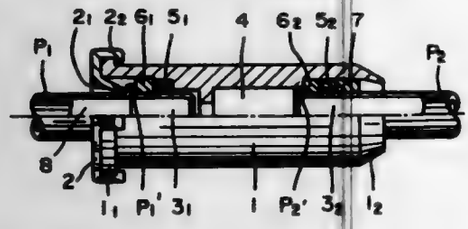
which comes in contact with said nut, the curvature radius of said pressure bearing surface being set at 0.4 D to 10 D, wherein D is the diameter of said branch pipe, and a guide being provided in the joint piece, the guide having an aperture concentric with the pressure receiving bearing surface and dimensioned for guiding the straight line portion formed on the pressure head portion for facilitating positioning and installation of the branch pipe.

5,172,940

CONNECTOR DEVICE FOR CONNECTING SMALL DIAMETER PIPE

Masayoshi Usui, Mumaza, and Katsushi Washizu, Sunto, both of Japan, assignors to Usui Kokusai Sangyo Kaisha, Ltd., Japan

Filed Nov. 20, 1989, Ser. No. 439,611
Claims priority, application Japan, Nov. 21, 1988, 63-294429
Int. Cl.[5] F16L *27/00*
U.S. Cl. 285—31 **21 Claims**



1. A connector device for connecting first and second small diameter pipes, each said pipe having an end portion, said end portions being spaced apart and disposed in generally aligned relationship, said connector device comprising:

a joint body having opposed first and second axial ends and a bore formed coaxially through the inside of said joint body, said bore defining first and second chambers adjacent the respective first and second ends of the joint body, the first and second chambers defining cross sections for receiving the end portions of the respective first and second pipes therein, the first end of the joint body including first sealing means and fixing means for sealingly connecting the first pipe to said joint body simultaneously upon engagement of said first end of said joint body over the end portion of said first pipe; second sealing means in the second end of the joint body for sealing the second pipe in the second chamber; and a holding means formed at the second end of said joint body for holding sealingly but movably the end portion of the second pipe in the second chamber after engagement of said second end of said joint body over the end portion of the second pipe, the second chamber defining an axial length to enable sufficient axial movement of the joint body relative to the second pipe to enable the first chamber to be moved toward and sealingly connect with the end portion of the first pipe, whereby the connector device enables connection of the first and second pipes without moving either of said pipes.

5,172,941

SNAP-RING ASSEMBLY

Manfred Pawelzik, Soest, and Friedhelm Weise, Fröndenberg, both of Fed. Rep. of Germany, assignors to Friedrich Grohe Aktiengesellschaft, Hemer, Fed. Rep. of Germany

Filed Oct. 1, 1991, Ser. No. 769,294
Claims priority, application Fed. Rep. of Germany, Oct. 26, 1990, 4034088
Int. Cl.[5] F16L *35/00*
U.S. Cl. 285—39 **4 Claims**

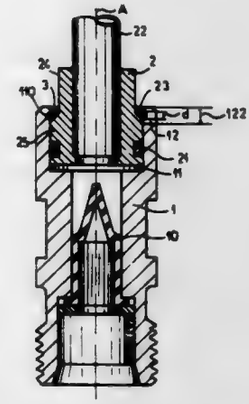
1. In a snap-ring assembly having:

a sleeve formed with a bore centered on an axis and having an axially outwardly open end formed with a radially inwardly open groove;

a pipe having a collar projecting axially inward into the bore end past the groove;

a nap ring seated in the groove, wholly enclosed within the sleeve, and projecting radially into the bore to block outward displacement of the collar; and

a seal ring in the bore between the collar and the sleeve,



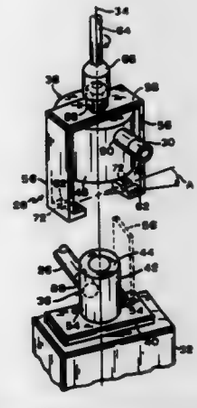
the improvement wherein the sleeve is formed at its open end with an axially outwardly open and radially throughgoing notch extending axially inward and having a floor spaced axially inward of the snap ring and wherein the groove and snap ring are complementarily shaped so that the snap ring is snugly received in the groove thereby preventing the snap ring from axially shifting in the groove, whereby a tool can be inserted in the groove under the snap ring to remove same from the groove.

5,172,942

FLUID COUPLING

Charles W. Dillmann, Morgan Hill, Calif., assignor to General Electric Company, San Jose, Calif.

Filed Feb. 12, 1991, Ser. No. 654,447
Int. Cl.[5] F16L *35/00*
U.S. Cl. 285—39 **9 Claims**



1. A fluid coupling having a longitudinal axis comprising:

a first fitting including:

a first body;

an annular first seat disposed at a mating end of said first body;

a first fluid channel extending through said first body and said first seat; and

a pair of spaced latch bosses extending outwardly from said first body; a second fitting including:

a second body;

an annular second seat disposed at a mating end of said second body facing said first seat;

a second fluid channel extending through said second body and said second seat;

a base member fixedly joined to said second fitting perpendicularly to said longitudinal axis;

a wrenching lug fixedly joined to said base member; and

a pair of spaced latch arms being elongate and fixedly joined together at proximate ends thereof by said base member extending therebetween; and

said second fitting being rotatable relative to said first fitting by said wrenching lug to:

a latched position wherein said first and second channels are aligned parallel to said longitudinal axis, said latch arms extend generally parallel to said longitudinal axis, said latch bosses extend generally perpendicularly to said longitudinal axis, and said latch arms engage said latch bosses for maintaining said first seat adjacent to said second seat for allowing said fluid to flow between said first and second channels, and

to a disengaged position wherein said latch arms and pins are disengaged to allow said first and second seats to be separated.

5,172,943

PIPE JOINT AND ITS PIPE SLIPOUT PREVENTIVE MECHANISM

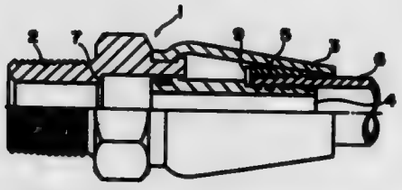
Haruki Shimada, Nara, Japan, assignor to Nitta-Moore Co., Ltd., Osaka, Japan

Filed Dec. 26, 1990, Ser. No. 634,876

Claims priority, application Japan, Jan. 7, 1990, 2-150240; Jan. 7, 1990, 2-150241

Int. Cl.[5] F16L *33/00*

U.S. Cl. 285—323 **3 Claims**



1. A pipe joint having a main body formed by coupling a nipple and a socket comprising:

an insert on which a pipe to be connected is fitted externally being slidably installed to the nipple,

a collet for tightening the pipe being installed outside the insert with a spacing thereto,

the socket having a tapered part diminishing in diameter toward a pipe insertion port, and

a stopping member having a larger outer diameter than the smallest inner diameter of the tapered part of the socket and being provided on the outer surface of the insert, wherein when the insert moves in a slipout direction, the stopping member engages with and stops at the tapered part of the socket.

5,172,944

MULTIPLE POINT CAM-PINION DOOR LATCH

Terry L. Munich, Isanti; Robert G. Lau, Anoka; Marc T. Fuller, Minneapolis, and David A. Swan, Shoreview, all of Minn., assignors to Federal-Hoffman, Inc., Anoka, Minn.

Filed Nov. 27, 1991, Ser. No. 800,051

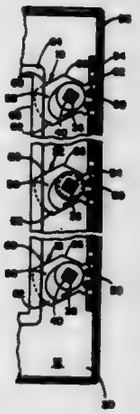
Int. Cl.[5] E05C *3/10*

U.S. Cl. 292—39 **26 Claims**

1. An enclosure with a multiple point door latching assembly comprising:

(a) enclosure having opening-defining portions and a door pivotally mounted thereto, said door having top, bottom and side edges and being movable between open and closed positions, and said door having an inside and outside surface and an integral peripheral flange extending away from said inside surface along at least one of said side edges of said door, said inside surface being constructed and arranged to cover and seal against said opening-defining portions of said enclosure when closed;

(b) a plurality of latch members disposed exteriorally of said door, said latch members being rotatably mounted in spaced relation to each other along peripheral portions of said inside surface of said door adjacent said peripheral flange thereof, each of said latch members being movable between a latched and unlatched position;



(c) a drive means for causing simultaneous rotation of all said latch members between their said latched and unlatched positions upon rotation of one of said latch members, said drive means being disposed in abutting relation with said peripheral flange of said door and being constructed and arranged to be supported thereby in inter-engaging relation with each of said latch members;

(d) a lever disposed external to said enclosure and connected to one of said latch members to facilitate rotation of same between its said latched and unlatched position; and

(e) each of said latch members including means for engaging said enclosure and drawing said door into tightly sealed relation therewith upon closure of said door and rotation of said lever, and said latch member connected thereto, into said latched position.

5,172,945

TRI-AXIAL SUPPORT DOOR LATCH

Terence M. Doherty, White Lake; Michael G. Bogas, Howell; Jeffrey D. Polzin, Fenton, and Giovanni A. Perin, Rochester Hills, all of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Mar. 23, 1992, Ser. No. 857,551

Int. Cl.[5] E05C *19/10*

U.S. Cl. 292—49 **4 Claims**

1. A latch mechanism in a vehicle wherein said vehicle has a body structure defining an access opening and has a closure supported by said body structure for movement between a closed position to close said access opening and an open position to open said access opening, and wherein aid latch mechanism provides a releasable latching of said closure to said body structure when in its closed position, said latch mechanism comprising,

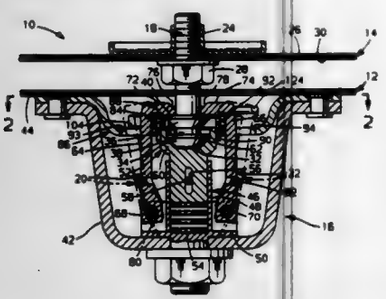
a latch bolt rigidly mounted to one of said body structure and closure and having a distal end,

said distal end having sides and a bottom,

a latch assembly mounted to the other of said body structure and closure and wherein said other body structure and

closure provide an opening for receiving and engaging said distal end of said latch bolt to latch said closure to said body structure when said closure is moved to its closed position,

said latch assembly including a support means, a cup shaped member slidably supported by said support means for movement between outer and inner positions, biasing means for biasing said cup shaped member toward its outer position, said cup shaped member being shaped complementary to said distal end of said latch bolt so as to surround said distal end around said said sides and said bottom of aid distal end, said cup shaped member slidably receiving said distal end of said latch bolt and being movable from its outer position toward its inner position on opposition to the biasing force of said biasing means when said closure is moved toward its closed position whereby lateral movement of said latch bolt along its longitudinal axis is prohibited,



a latch means located wholly within said opening in said other body structure and closure and pivotally supported by said support means for movement between a latched position and an unlatched position, said latch means being biased towards its latched position, said latch means being engaged by said distal end of said latch bolt and cammed to its unlatched position when said closure is moved toward its closed position, said latch means returning toward its latched position to latch the distal end of said latch bolt within said cup shaped member when said closure is moved to its closed position whereby said latch bolt is also restrained against outward longitudinal movement toward the open position and resisted against inward longitudinal movement toward the closed position, and

means for moving said latch means from its latched position to its unlatched position to enable said closure to be moved to its open position.

5,172,946

FRAME ASSEMBLY OF TRUNK LID LOCKING DEVICE

Patrick J. Dowling, Nirasaki, Japan, assignor to Mitsui Kinzoku Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Mar. 25, 1992, Ser. No. 857,156

Claims priority, application Japan, Mar. 26, 1991, 3-86209

Int. Cl.[5] E05C *3/26*

U.S. Cl. 292—216 **1 Claim**

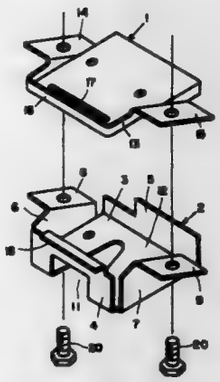
1. A frame assembly of a trunk lid locking device comprising:

a lower frame of a vessel shape formed by bending four sides of a base plate approximately at a right angle, and a top end of a front wall of said lower frame into an engagement portion of an L-shape

a latch placed in an interior of said lower frame and engagement with a striker to rotate, and a ratchet for preventing said latch from reverse-rotating,

an upper frame of approximately flat plate shaped for closing an upper opening of the lower frame, and

wherein a hole extending in a left-and-right direction is formed on a front side of said upper frame, and said L-shape engagement portion formed on the top end of the front wall for assemblage of said locking device by en-



gagement of said L-shape engagement portion into said hole extending in a front side of said upper frame.

5,172,947

POWER STRIKER FOR SLIDING DOOR LATCH

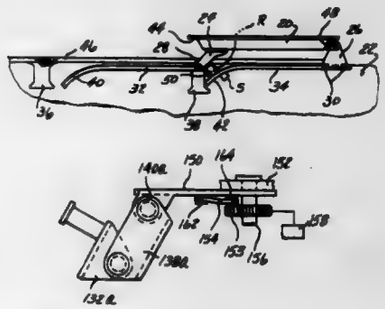
William W. Schap, Jackson, Mich., assignor to ITT Corporation, New York, N.Y.

Division of Ser. No. 476,206, Mar. 3, 1989, Pat. No. 5,004,280.

This application Jan. 14, 1991, Ser. No. 640,672

Int. Cl.[5] E05B *15/02*

U.S. Cl. 292—341.16 **14 Claims**



1. In a sliding door assembly including a fixed frame defining a door opening, a door mounted on said frame for sliding movement along a fixed door path between a first end limit wherein said door is located in a closed position closing said opening and a second end limit wherein said door is in an open position, a striker pin mounted on said fixed frame, and latch means mounted on said door engageable with said striker pin for releasably latching said door in said closed position, said latch means being operable during movement of said door toward said closed position to interlock with said striker pin to releasably latch said door against movement relative to said striker pin;

the improvement comprising means mounting said striker pin for movement relative to said frame along a fixed pin path between a ready position and an actuated position, said pin when in said ready position being engageable by said latch means upon closing movement of said door to an approach position spaced from its closed position and being operable when in said actuated position to latch said door in its closed position, and means for driving said pin between said ready and closed positions comprising a first slide member mounted on said frame for sliding movement along a first fixed linear slide path, a second slide member carrying said striker pin for displacement along a second fixed linear slide path angularly offset from said first slide path, means interconnecting said slide members

to effect synchronized displacement therebetween, a drive member mounted for rotation about a fixed axis normal to said first slide path, first coupling means coupling said drive member to said first slide member for transmitting that component of rotary motion of said first drive member which is parallel to said first slide path to said first slide member to move said first slide member along said first slide path between a first and a second rest position in response to a 180 degree rotation of said drive member about said axis, second coupling means coupling said pin to said second slide member for locating said pin in said ready position when said first slide member is in said first rest position and for locating said pin in said actuated position when said first slide member is in said second rest position, and actuating means operable in response to closing movement of said door past said approach position for rotating said drive member to drive said first slide member from said first rest position to said second rest position and operable in response to opening movement of said door past said approach position to rotate said drive member to drive said first slide member from said second position to said first position.

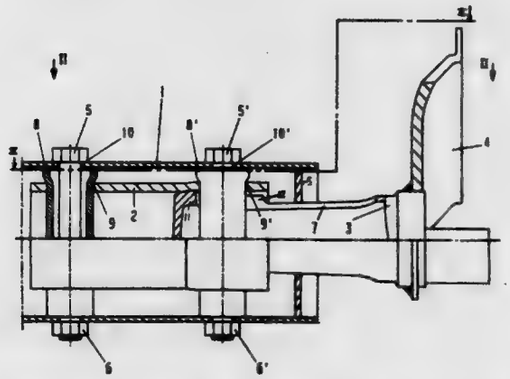
SHOCK ABSORBER FOR MOTOR VEHICLE BUMPERS AND THE LIKE

Peter Garaweidner, Lamprechtshausen, Austria, assignor to Austria Metall Aktiengesellschaft, Braunau am Inn, Austria

Filed Nov. 18, 1991, Ser. No. 793,541
Claims priority, application Austria, Nov. 16, 1990, 2320/90
Int. Cl.[5] B60R *19/34*
U.S. Cl. 293—133 **18 Claims**



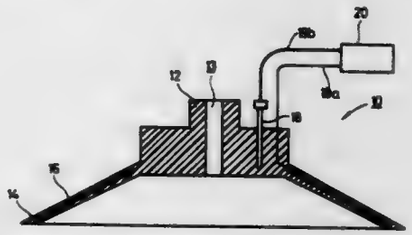
1. Shock absorber for motor vehicles comprising tubes that can be pushed one into another, and an inside one of said tubes having a portion with an outside contour that is larger than an original inside contour of an adjacent area of an outside one of the tubes, such that the outside tube is deformed by pushing in of the inside tube into the outside tube; wherein the outside tube has at least two bores which extend through it perpendicular to a lengthwise axis thereof, at least one of said bores being located in an area in which a portion of the inside tube lies within the outside tube; wherein the inside tube has lengthwise slots which overlap said at least one of the bores and extend from the overlap at least toward an end of the inside tube located outside of the outside tube; and wherein screws are provided that extend through said bores and at least one said screw extends through the lengthwise slots said screws extending beyond the outside tube.

5,172,949

SUCTION PAD WITH TEMPERATURE CONTROL MECHANISM

Shigekazu Nagai; Shunzou Sakurai, and Tadasu Kawamoto, all of Sohka, Japan, assignors to SMC Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 2, 1991, Ser. No. 739,430
Int. Cl.[5] B65H *3/08*
U.S. Cl. 294—64.1 **13 Claims**



1. A suction pad for attracting a workpiece under vacuum, comprising:

a base adapted to be connected to a vacuum source;

a skirt integrally joined to said base and projecting radially outwardly from said base, for developing a vacuum therein to attract the workpiece; and

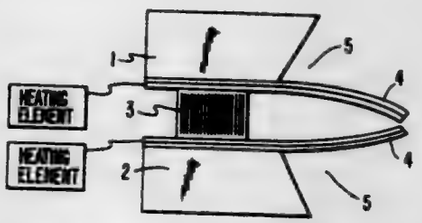
a temperature control mechanism including an electric heater disposed in contact with said skirt, said electric heater comprising at least one electric heating element extending substantially from said base along said skirt.

5,172,950

MICROMANIPULATOR FOR GRIPPING OBJECTS

Wolfgang Benecke, Berlin, Fed. Rep. of Germany, assignor to Fraunhofer Gesellschaft zur Forderung der angewandten Forschung e.V., Fed. Rep. of Germany

PCT No. PCT/DE89/00270, § 371 Date Oct. 26, 1990, § 102(e) Date Oct. 26, 1990, PCT Pub. No. WO89/10243, PCT Pub. Date Nov. 2, 1989
PCT Filed Apr. 27, 1989, Ser. No. 601,750
Claims priority, application Fed. Rep. of Germany, Apr. 29, 1988, 3814617
Int. Cl.[5] B25J *15/12*
U.S. Cl. 294—86.4 **26 Claims**



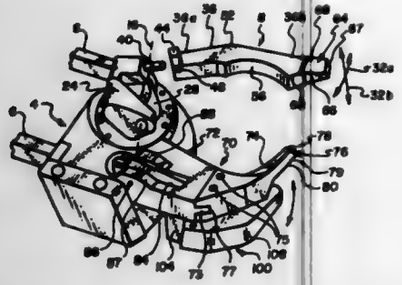
1. A gripping device for gripping microscopically small objects comprising at least one basic body and gripping elements, said gripping elements being in the form of tongues attached at one side of said at least one basic body; said tongues consisting of layers of different materials with varying thermal expansion arranged on top of each other, one of said materials being one of silicon and a silicon compound, wherein

said at least one basic body comprises at least one semi-conductor chip,

said tongues are each composed of thin layers of the different materials produced with a deposition process, and

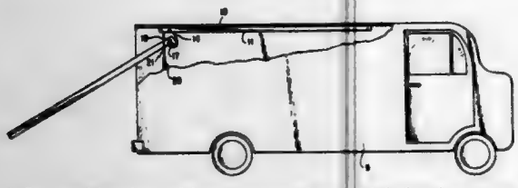
for changing the temperature, said tongues are operatively associated with heating element layers being one of on and between the layers of said tongues.

5,172,951
ROBOTIC GRASPING APPARATUS
Stephen C. Jacobsen, and Fraser Smith, both of Salt Lake City, Utah, assignors to University of Utah Research Foundation, Salt Lake City, Utah
Filed Aug. 6, 1990, Ser. No. 563,399
Int. Cl.[5] B25J *15/10*
U.S. Cl. 294—104 18 Claims



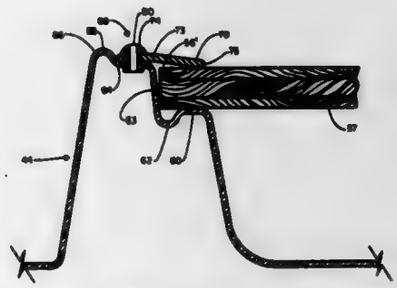
1. Grasping apparatus comprising:
a fixed finger having a base section, a narrowed middle section extending outwardly from the base section, and a curved end section which extends outwardly and upwardly from the middle section to terminate in a tip having first and second lateral sides, an outermost side, and an end,
an elongate moveable thumb having a fixed end mounted in the base of the finger to pivot selectively about either of two axes which are generally at right angles to one another and which both extend laterally of the long axis of the thumb, and a free end selectively moveable to a position in contact with the end of said tip and to a position in contact with the lateral sides of said tip, wherein said free end has first and second lateral sides, a bottom side, and a distal surface,
a moveable finger pivotally mounted to the fixed finger at a base end to pivot a free end toward and against one side of the fixed finger, and away from the fixed finger, and
wherein said moveable finger extends generally parallel with the fixed finger when the moveable finger is positioned against the fixed finger, and wherein the free end of the moveable finger is formed to curve upwardly alongside of the end section of the fixed finger.

5,172,952
OVERHEAD STORAGE RACK FOR STORING LADDERS OR THE LIKE
Ron Lametski, R.R. 1, Box 128, Lake Benton, Minn. 56149
Filed Jun. 5, 1992, Ser. No. 894,648
Int. Cl.[5] B60R *11/00*
U.S. Cl. 296—37.8 11 Claims



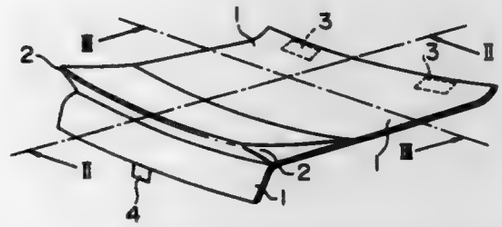
1. In combination with an automotive vehicle having a cargo compartment with a ceiling, storing means for a ladder comprising a track attached to said ceiling, carrier means movably mounted on said track for travel longitudinally thereof, said carrier means being formed to engage one end of said ladder, yoke means attached to said ceiling, said yoke means adapted to surround said ladder and thereby to suspend it from said ceiling, said carrier means being movable on said track away from said yoke means whereby said one end of said ladder can be moved to a position remote from said yoke means, said yoke means then being positioned to support the end of said ladder opposite said first-named end.

5,172,953
PICKUP TRUCK BED LINER AND BALLAST
Eugene R. Chamberlain, 18086 Fruitport Rd., Spring Lake, Mich. 49456
Continuation-in-part of Ser. No. 560,210, Jul. 31, 1990, abandoned. This application Apr. 3, 1991, Ser. No. 679,891
Int. Cl.[5] B62D *33/00*
U.S. Cl. 296—39.2 12 Claims



1. A protective liner for a pickup truck bed having a bed floor, said liner comprising a floor adapted to rest upon the bed floor, a pair of opposing side walls, a rear wall, and a front wall, said floor, side walls, rear wall, and front wall being integrally connected to form a well, one of said pair of side walls and said front wall having means to receive and retain a panel to cover the well and each of said pair of side walls having a drainage channel formed thereon for directing fluids away from said well, wherein said well can retain substantially dry ballast for providing stability and traction for the pickup truck.

5,172,954
INTEGRAL AUTOMOBILE TRUNK LID AND AIR SPOILER
Yoshio Yamazaki, Mie; Yasuzi Ozaki, Aichi, and Toshio Hayashi, Inazawa, all of Japan, assignors to Toyoda Gosei Co., Ltd., Nishikasugai, Japan
Continuation of Ser. No. 651,463, Feb. 6, 1991, abandoned. This application Dec. 9, 1991, Ser. No. 803,731
Claims priority, application Japan, Feb. 19, 1990, 2-15441[U]
Int. Cl.[5] B62D *37/02*
U.S. Cl. 296—180.1 4 Claims



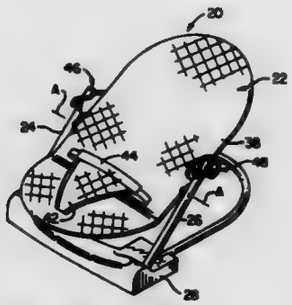
1. An automobile trunk lid having an air spoiler both made of fiber-reinforced plastic, the entire trunk lid and said spoiler being integrally molded in one piece, said air spoiler and said trunk lid each having a reinforcing material embedded therein, said reinforcing material being made of one of a rigid resin foam and a hollow body.

5,172,955

BOUNCING INFANT SEAT RECLINING BETWEEN UPRIGHT POSITION AND RECLINE POSITION WITH DISTINCT RESILIENT ELEMENT

Theodore B. Freese, Westminster; Robert M. Parker, Aurora, and Gregg W. Harvey, Boulder, all of Colo., assignors to Gerry Baby Products Company, Denver, Colo.

Filed Feb. 28, 1991, Ser. No. 662,273
Int. Cl.[5] A47C 3/00
U.S. Cl. 297—302 15 Claims



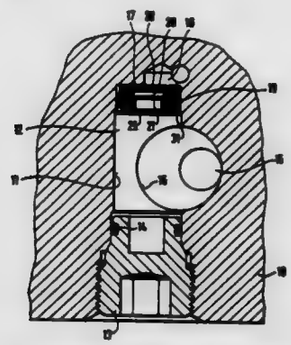
9. An infant seat comprising:
a seat shaped to support an infant;
a pair of support arms connected to said seat for supporting said seat;
means for forming a pivot point including a pivot pin between said seat and said arms such that said seat pivots continuously about said pivot point to a generally upright position and a generally reclined position;
base means for holding said support arms at an elevated position; and
resilient means connected to said base means for imparting a bouncing action to said seat in both said upright and reclined positions.

5,172,956

HYDRAULIC SYSTEM FOR A MOTOR VEHICLE BRAKE SYSTEM HAVING A PUMP WITH PULSATION REDUCTION

Michael Klose, Besigheim; Ernst-Dieter Schaefer, Gerlingen; Frank Schumann, Moeglingen; Gerhard Wetzel, Korntal, and Klaus Mueller, Tamm, all of Fed. Rep. of Germany, assignors to Robert Bosch GmbH, Stuttgart, Fed. Rep. of Germany

Filed Jul. 12, 1991, Ser. No. 729,288
Claims priority, application Fed. Rep. of Germany, Sep. 29, 1990, 4030862
Int. Cl.[5] B60T 13/14
U.S. Cl. 303—10 16 Claims



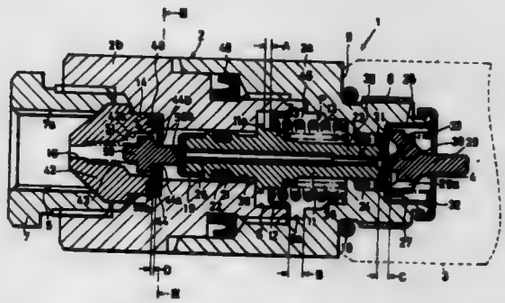
1. A hydraulic system, for a motor vehicle brake system, having a pulsating feeding pressure generator (15), having a damper chamber (12) disposed downstream of the pulsating feeding pressure generator in a housing (10), a throttle body (19) having a rupture disk (21) with a throttle bore (20) is received in said damper chamber (12), said throttle bore communicates with an outlet bore (18) which is associated with the damper chamber (12), and said rupture disk (21) is followed on a downstream side by a collection screen (28).

5,172,957

FLUID PRESSURE CONTROL APPARATUS

Yoshifumi Ihara, Kanagawa, Japan, assignor to Nippon Air Brake Co., Ltd., Kobe, Japan

Filed May 6, 1991, Ser. No. 696,182
Claims priority, application Japan, May 18, 1990, 2-52395[U]
Int. Cl.[5] B60T 8/32
U.S. Cl. 303—9.75 7 Claims



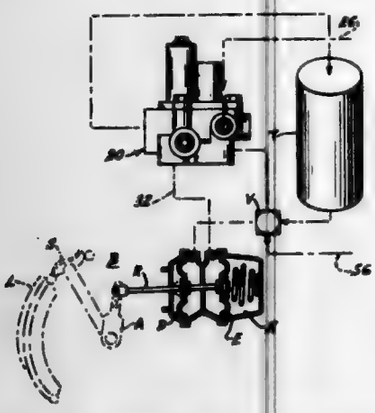
1. In a fluid pressure control apparatus for a vehicle including:
(A) a main body in which an input opening is formed in communication with a master cylinder side and an output opening is formed in communication with a wheel cylinder side;
(B) a stepped bore made in said main body, in communication with said input opening and output opening;
(C) a stepped piston slidably fitted into said stepped bore, having a smaller diameter portion at the input opening side and a larger diameter portion at the output opening side;
(D) throttle means for limiting fluid flowing from the wheel cylinder side of said output opening towards said input opening in response to a predetermined length movement of said stepped piston;
(E) valve means for closing said path in response to a longer movement of said stepped piston then said predetermined length; and
(G) an urging apparatus for urging said stepped piston in a direction to open said valve means, wherein, when said smaller diameter portion and said larger diameter portion receive an equal fluid pressure, said stepped piston is movable in a direction to close said valve means, and said valve means cooperates with said stepped piston and said urging apparatus so that, when the pressure of the fluid supplied from the master cylinder side towards the wheel cylinder side rises up to a control start pressure, said valve means closes and then repeatedly opens and closes with the forward and backward movement of said stepped piston for increasing the fluid pressure of the wheel cylinder side at a reduced rate relative to the fluid pressure of the master cylinder side, the improvement in which said urging apparatus comprises a first spring for always urging said stepped piston in the direction to open said valve means, and a second spring for urging said stepped piston in the direction to open said valve means i response to said movement longer than said predetermined length, said control start pressure being determined by the spring force of said second spring, and including means for compressing said second spring only after said stepped piston is subjected to movement to the input opening side for a distance longer than said predetermined length.

5,172,958

AIR BRAKE CONTROL VALVE SYSTEM

Edward D. Sell, Iola, Kans., assignor to Tramec Corporation, Iola, Kans.

Filed Feb. 4, 1992, Ser. No. 830,672
Int. Cl.[5] B60T 13/22
U.S. Cl. 303—9.76 11 Claims



1. A vehicle brake system having brake means including spring brakes having actuator means which is compressor air operated to hold the spring brakes "OFF" and including service brakes operative above a minimum service brake pressure to apply the service brakes and the system including, a reservoir tank, an emergency supply line through which supply air is supplied to the spring brakes, a brake control valve means comprising:

a) a housing having a service brake input port and an emergency supply inlet port, at least two spring brake ports, a reservoir tank outlet port, and a spring brake exhaust port;

b) a first valve cluster mounted within said housing intermediate said supply inlet port and said spring brake ports, said first valve cluster being operable to open said spring brake ports to said supply inlet port immediately upon the application of supply pressure to said supply inlet port and until a maximum supply pressure is achieved at said supply inlet port, said first valve cluster being operable to close said spring brake ports from said supply inlet port upon a subsequent decrease in supply air pressure at said supply inlet port from said maximum supply pressure to thereby retain the spring brakes in an "OFF" position until such time as said supply line pressure at said supply inlet port drops below a predetermined spring brake isolation pressure below which said first valve cluster opens to communicate said spring brake ports to said spring brake exhaust port and thereby allowing the spring brakes to be "ON";

c) a second valve cluster mounted within said housing and intermediate said supply inlet port and said reservoir tank outlet port, said second valve cluster including a shuttle means for sealing said reservoir outlet port from said supply inlet port until the supply pressure at said supply inlet port is above a threshold pressure for said spring brakes which is below said maximum pressure, said shuttle means opening at pressures above said threshold pressure to thereby allow said supply air pressure to be applied to said reservoir outlet port; and

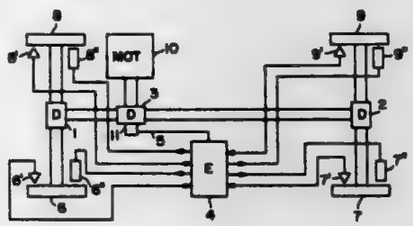
d) a third valve cluster mounted between said supply inlet port and said service inlet port, said third valve cluster being operable to discharge said service inlet port to atmosphere upon the supply air pressure at said supply inlet port falling below said spring brake isolation pressure to thereby prevent compounding of service brake pressure in the braking system when the spring brakes are "ON".

5,172,959

ANTI-LOCK BRAKING SYSTEM FOR ALL-WHEEL DRIVE VEHICLES

Jürgen Eickhoff, Walsrode; Konrad Rode, Seelze, and Henrich Riedemann, Hanover, all of Fed. Rep. of Germany, assignors to WABCO Westinghouse Fahrzeugbremsen GmbH, Hanover, Fed. Rep. of Germany

Filed Nov. 26, 1991, Ser. No. 798,216
Claims priority, application Fed. Rep. of Germany, Nov. 27, 1990, 4037654
Int. Cl.[5] B60T 8/32, 8/60, 8/92, 8/88
U.S. Cl. 303—100 6 Claims



1. An anti-lock braking system for an all-wheel drive vehicle having first and second axles, wheels mounted on said first and second axles, brake cylinders and solenoid valves associated with each of said wheels, first and second intra-axle differentials on said first and second axles, and an engageable inter-axle differential which interconnects said first and second axles, comprising

sensing means associated with each of said wheels for sensing a rotational behavior of each of said wheels, and for producing output signals in response thereto, and

electronic regulating means for receiving said output signals from said sensing means and for regulating a braking effort applied to each of said wheels based on said output signals,

said electronic regulating means further including means for determining whether said inter-axle differential is engaged or not, for determining whether a malfunction associated with one of said wheels has occurred, for switching off regulation of the braking effort applied to said one wheel, and for also switching off regulation of the braking effort applied to a diagonally opposite wheel if said inter-axle differential is engaged.

5,172,960

BRAKE CONTROL MINIMIZING THE NUMBER OF BRAKES ACTIVATED AND OPTIMIZING WEAR CONDITIONS

Jean-Louis Chareire, Levallois Perret, France, assignor to Aerospatiale Societe Nationale Industrielle, Paris, France

Filed Feb. 7, 1992, Ser. No. 832,465
Claims priority, application France, Feb. 12, 1991, 91 01582
Int. Cl.[5] B60T 13/66, 8/62
U.S. Cl. 303—100 19 Claims

1. A system for controlling the braking devices of a vehicle driven by a driver and having a plurality of wheels provided with carbon disk brakes controlled by braking devices, said system being provided with:

an adjustable member for voluntary actuation of braking and actuatable by the driver;

a transducer controlled by said adjustable member for voluntary actuation of braking, and delivering a first signal representative of the adjustment of said adjustable member as set by the driver to obtain desired deceleration of said vehicle;

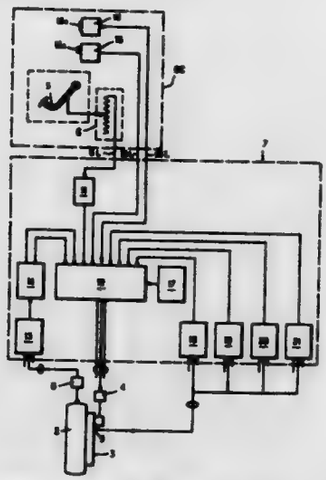
a computer which controls said braking devices; and

a first link connecting the transducer to said computer to transmit said first signal thereto;

said computer includes:

first calculation means connected to said first link, receiving said first signal, and responding thereto by supplying a

second signal representative of a minimum number D of braking devices that ought to be in the activated state to obtain the desired deceleration; and



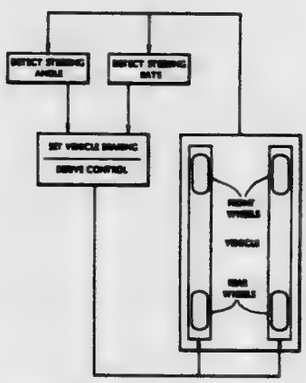
second calculation means which respond to said second signal to draw up a first list of D identities of braking devices that ought to be in the activated state, said computer using said first list to activate said D braking devices.

5,172,961

VEHICLE BRAKE SYSTEM INCLUDING CORNERING CHARACTERISTIC CONTROL

Hideaki Inoue, Yokosuka; Hirotsugu Yamaguchi, Chigasaki; Sunao Hano, and Shinji Matsumoto, both of Yokosuka, all of Japan, assignors to Nissan Motor Co. Ltd., Yokohama, Japan

Filed Jul. 5, 1991, Ser. No. 725,310
Claims priority, application Japan, Jul. 5, 1990, 2-176529
Int. Cl.[5] B60T *8/58*
U.S. Cl. 303—100
19 Claims



1. A method of controlling a plurality of brakes of an automotive vehicle comprising the steps of:

sensing a steering angle;

deriving a rate at which said steering angle is changing;

sensing an application of said brakes;

deriving a target braking force difference which is desired to be established between a first road wheel on a first side of said vehicle and a second road wheel on a second side of said vehicle using said sensed steering angle and derived rate at which said steering angle is changing, in response to sensing said application of said brakes, said first side being a side to which a turn is being made;

reducing a first braking force which is applied to said second road wheel in accordance with said target braking force difference, when said rate at which said steering angle is changing is relatively high; and

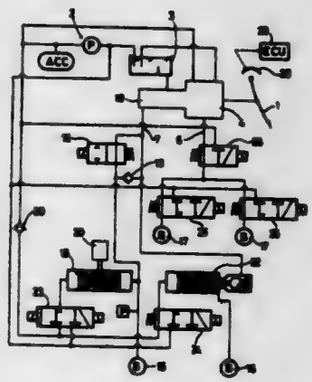
reducing a second braking force which is applied to said first road wheel in accordance with said target braking force difference when said steering angle is relatively large.

5,172,962

BRAKE SYSTEM

Koji Takata, Itami, Japan, assignor to Sumitomo Electric Industries, Ltd., Osaka, Japan

Continuation of Ser. No. 563,986, Aug. 7, 1990, abandoned. This application May 26, 1992, Ser. No. 887,680
Claims priority, application Japan, Aug. 7, 1989, 1-205308
Int. Cl.[5] B60T *13/14*
U.S. Cl. 303—113 TR
9 Claims



1. A brake system, comprising:

at least one wheel brake;

a static pressure line connected to said wheel brake, said static pressure line having a static pressure generator operated by a manual control input device having a manual control stroke for generating a brake pressure;

a fluid pressure source connected to a control pressure line;

a bilateral driving piston having a first end fluidly connected to said static pressure line and a second end fluidly connected to said control pressure line, said bilateral driving piston having a neutral position and being moveable in the direction of said first end decreasing a volume of said static pressure line and in the direction of said second end increasing the volume of said static pressure line;

a flow control valve fluidly connected to said control pressure line controlling the position of said bilateral driving piston;

a changeover valve in said static pressure line between said bilateral driving piston and said static pressure generator for selectively shutting off a fluid flow from said static pressure generator to said wheel brake when activated and not shutting off the fluid flow end deactivated; and

an electronic control means controlling said flow control valve and said changeover valve in at least a non-operation phase in which no operational input is applied to said manual control input device, a normal operation phase in which an operational input is applied to said manual control input device by a manual control stroke, and an antilock control phase, such that

in said non-operation phase said changeover valve is deactivated and said flow control valve maintains said bilateral driving piston in said neutral position,

in said normal operation phase said changeover valve is deactivated and said flow control valve causes said bilateral driving piston to move from said neutral position to decrease the volume of said static pressure line to offset a portion of an expansion in said wheel brake so as

to shorten the manual stroke of said manual control input device, and

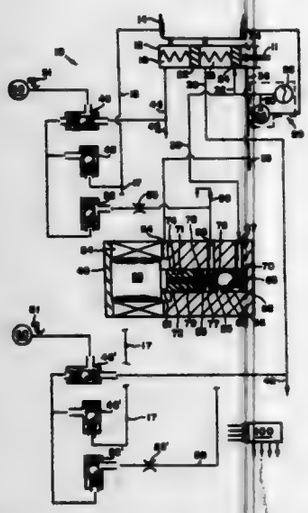
in said antilock control phase said changeover valve is activated and said flow control valve causes said bilateral piston to increase the volume of said static pressure line to thereby decrease the fluid pressure in said wheel brake.

5,172,963

PRESSURE SUPPLY VALVE FOR AN ADAPTIVE BRAKING AND TRACTION CONTROL SYSTEM

G. Emerson Brown, Niles, Mich., assignor to Allied-Signal Inc., Morristown, N.J.

Filed Aug. 17, 1990, Ser. No. 570,930
Int. Cl.[5] B60T *15/00*
U.S. Cl. 303—113.3 6 Claims



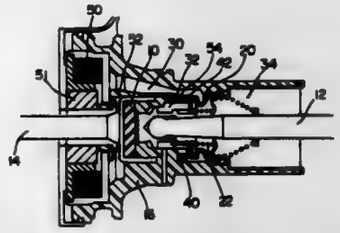
1. In an adaptive braking and traction control system, comprising a hydraulic pressure boosted master cylinder receiving hydraulic pressure from a pressure source, the pressure source and a boost chamber of said master cylinder communicating with a traction control supply valve, a pressure chamber of the master cylinder and the traction control supply valve each connected with a wheel brake via modulator means of the system, the traction control supply valve comprising an armature which when energized displaces a piston valve, and supply valve means for normally preventing said pressure source from communicating with said wheel brake, and control means for controlling operation of said adaptive braking and traction control system, so that the control means causes said armature to energize and displace said piston valve only during traction control system operation in order to prevent the boost chamber from receiving fluid pressure from the traction control supply valve and to open the supply valve means and permit controlled fluid flow from the pressure source to said modulator means, said traction control supply valve having a stepped bore and the piston valve comprising a large diameter valve section slidable in said bore, a reduced diameter valve section, and a longitudinal through opening of the piston valve which enables fluid pressure from said boost chamber to communicate, during adaptive braking system operation, with build and decay valve means of said modulator means, the bore including resilient means biasing said piston valve away from said supply valve means, the supply valve means comprising a ball valve biased by a spring against a bore valve seat which is disposed within said stepped bore, and the displacement of the piston valve causing substantially simultaneously an end of the reduced diameter valve section to engage the ball valve such that the ball valve is moved away from said valve seat and engagement of the ball valve with said end preventing fluid flow through said longitudinal through opening of the piston valve.

5,172,964

VACUUM BOOSTER WITH ELECTROMAGNETIC VALVE CONTROL

Roland Levrai, Stains, and Philippe Castel, Paris, both of France, assignors to Bendix Europe Services Techniques, Drancy, France

Filed Aug. 5, 1991, Ser. No. 740,250
Claims priority, application France, Sep. 28, 1990, 90 12016
Int. Cl.[5] B60T *13/57*
U.S. Cl. 303—114.1 6 Claims



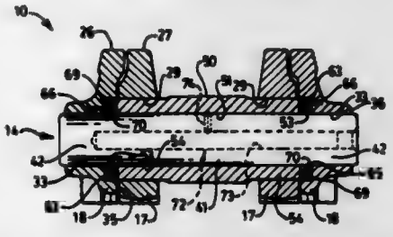
1. A vacuum-type booster, comprising a case divided internally into a vacuum chamber and a working chamber by a piston comprising valve means having a double valve provided with first and second seats and enabling, in a rest position, a communication between the chambers which are then isolated from environment and, in a working position, an isolation of the vacuum chamber and a communication between the working chamber and the environment at atmospheric pressure, said valve means being normally controlled by means of an actuating rod extending out of said case, said booster further comprising electromechanical means for controlling movement of said valve means independently of said actuating rod which remains stationary during activation of said electromechanical means and consisting of an electromagnet which moves a ring forming said first seat of the double valve.

5,172,965

LOW GROUND PRESSURE TRACK WITH OFFSET LINK BORES

Morris E. Taft, Metamora, Ill., assignor to Caterpillar Inc., Peoria, Ill.

Filed Nov. 26, 1991, Ser. No. 798,445
Int. Cl.[5] B62D *55/205*
U.S. Cl. 305—58 R 5 Claims



1. In a low ground pressure track chain for track-type vehicles, said track chain including a plurality of low ground pressure track shoes and a like plurality of link sets articulately coupled by a like plurality of joints, each link set having one of said track shoes secured thereto and including a pair of laterally spaced links, each link having a laterally offset inboard end collar having a first bore, an opposite laterally offset outboard end collar having a second bore, and a rail surface, said rail surface having a predetermined overall width between an inner edge and an outer edge, and each of said joints including a pin and a bushing, each of said pins having opposite end

portions secured within a respective one of said second bores of said outboard end collars, and each of said bushings being rotatably disposed about said pin and having opposite end portions secured within a respective one of said first bores secured within a respective one of said first bores of said inboard end collars, the improvement comprising:

said inboard end collar of each link having an inner surface and an outer surface, said inner surface of said inboard end collar being offset inwardly from said inner rail edge/and said outer surface thereof being substantially offset outwardly to a position where it is closer to said outer rail edge than to said inner rail edge to provide said first bore with a predetermined press length that is greater than one-half the width of said rail surface; and

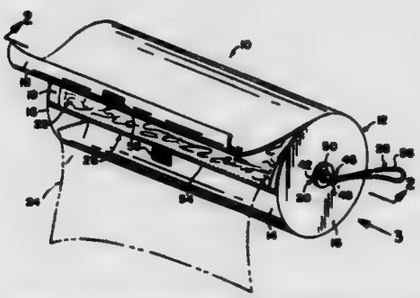
said outboard end collars of each link having an inner surface and an outer surface, said inner surface of said outboard end collar being likewise offset outwardly so as to lie outboard of the offset outer surface of the inboard end collar of an adjoining link and said outer surface thereof being substantially offset laterally at least 0.75 times the rail width beyond the outer edge of said rail surface to provide said second bore with a predetermined press length that is at least as great as the overall width of said rail surface.

5,172,966

PAPER TOWEL AND TOILET PAPER PORTABLE DISPENSER

Patricia A. Myatt, 191 Willoughby St., Apt. 4-A, Brooklyn, N.Y. 11201

Filed May 31, 1991, Ser. No. 710,747
Int. Cl.[5] B65H *19/00*
U.S. Cl. 312—34.8 **4 Claims**



1. A paper towel and toilet paper portable dispenser which comprises:

a) a housing having a cylindrical body, a pair of end walls and a longitudinal flap between the end walls to provide an opening in the cylindrical body of said housing;

b) means for rotatively retaining a roll of paper toweling/toilet tissues within the cylindrical body of said housing between the pair of end walls so that a free portion of the roll can extend through the opening in the cylindrical body of said housing, wherein said rotative retaining means includes;

i) the end walls of said housing having aligned apertures therethrough;

ii) an elongated rod having an enlarged head on a first end and a threaded bore in a second end, said rod extendable through one of the aligned apertures with the enlarged head bearing against one of the end walls;

iii) an end cap having a hole therethrough and sized to fit into one of the apertures an onto the second end of the said rod; and

iv) an eye bolt having a looped head, a collar and a threaded shank to pass through the hole in said end cap to engage the threaded bore in the second end of said rod;

c) means along an edge of the opening in the cylindrical body of said housing for tearing off the free portion of the roll so that a person can utilize the free portion; and

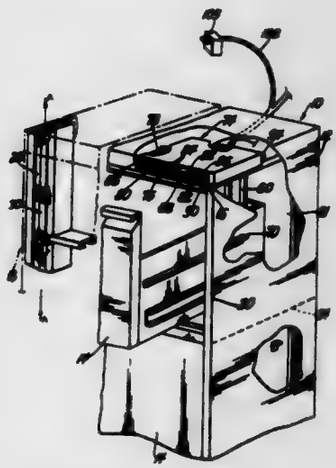
d) means affixed to said rotative retaining means for carrying said dispenser.

5,172,967

ELECTRO-MECHANICAL LOCKING SYSTEM

Gregory Pipe, Fruitport, Mich., assignor to Meridian Incorporated, Spring Lake, Mich.

Filed Aug. 23, 1991, Ser. No. 749,113
Int. Cl.[5] A47B *88/00*
U.S. Cl. 312—217 **21 Claims**



1. A file cabinet apparatus comprising:

housing means (2) defining an enclosure;

a plurality of storage units (14) to be supported by said housing means (12) for moving between a closed position and an open position;

blocking means (28) disposed along a side of said storage units (14) for preventing opening movement from said closed position of all but one of said storage units (14) in response to opening of said one of said storage units (14),

a locking bar (62) disposed along said storage units (14) having a locking position for locking all of said storage units (14) in said closed position and an unlocked position for unlocking all of said storage units (14) allowing operation of said blocking means (28);

control means (74) connected to said locking means (60) for locking and unlocking said locking means (60);

said apparatus characterized by said control means (74) including electric input means (76) for receiving an input code, electric data memory means (124) for storing an access code, processor means (110) for receiving and comparing said access code with said input code to produce an electrical unlocking signal when said access code has a predetermined relationship with said input code, and

electronic actuator means (72) operatively connected between said control means (74) and said locking bar (62) for receiving said unlock signal to allow movement of said locking bar to said electrical unlocked position and an for retaining said locking bar in the locking position in the absence of said unlock signal.

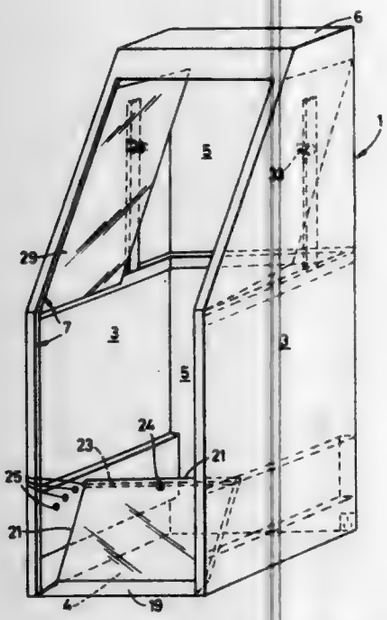
SECURITY CASING

Nigel Robinson, Barnsley, England, assignor to Shutters of Substance Limited, Barnsley, England

Filed Apr. 29, 1991, Ser. No. 693,312
Int. Cl.[5] A47B 88/00
U.S. Cl. 312—297 20 Claims



1. A security casing for protecting a bandit type gaming machine from cash theft, said casing comprising

(i) a sheet steel carcase made up of two side panels reflecting the profile of conventional side panels of a bandit type gaming machine, a base panel, a back panel and a top panel, said base back and top panels being rectangular and approximating in dimensions to the base, back, and top dimensions of an industry-standard bandit type gaming machine, so that said casing as a whole is a reasonably close fit about such gaming machine, said panels being secured together to define an open fronted casing;

(ii) a cash container-protecting lower door which is removable by an authorized person to allow insertion of a gaming machine having a cash container into said casing, or removal of a gaming machine from said casing, and, after insertion of said gaming machine, is positionally adjustably by said authorised person into close proximity with said cash container of said gaming machine remaining permanently locked in said protecting position until unlocked by an authorised person, said lower door extending upwardly from said base panel, and extending laterally with respect to said side panels to which it is also releasably attached;

(iii) a metal-latch shutter located within said casing, at a front zone of said casing, and being movable between a retracted position in which said casing is open-fronted to provide access to said gaming machine, and a deployed position, in which said casing and hence the gaming machine are closed-off, said shutter when deployed defining a front of said casing;

(iv) front edges provided on said side panels, guide tracks provided along said front edges, a plurality of laths defining said shutter with said ends of said shutter being displaceable along said guide tracks, and

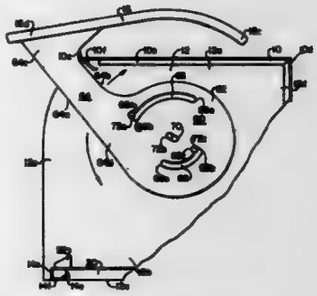
(v) means to lock said shutter in its deployed position.

5,172,969

OVERHEAD CABINET WITH ROTATING DOOR

Robert Reuter, Stony Brook, N.Y.; Wallace C. Bullwinkle, Norristown, Pa.; Larry L. Hoff, East Greenville, Pa.; Robert E. Anderson, Palm, Pa.; Arkady Golynsky, Allentown, Pa., and Al Schmidt, Reinholds, Pa., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Sep. 9, 1991, Ser. No. 756,742
Int. Cl.[5] A47B 96/00
U.S. Cl. 312—328 30 Claims



1. An article of furniture comprising:

first and second opposed, parallel walls;

a door;

first and second mounting means rotatably mounted adjacent said first and second walls, respectively, for moving said door between an open position and a closed position, each of said first and second mounting means comprising:

a disk portion at least a portion of which has a substantially circular circumference and a center and

a tangential arm portion extending outwardly from said disk portion;

said arm portion having a first side tangent to said circumference of said disk portion, a second side spaced apart from said first side, an outer end connecting said first and second sides, and an inner end at least partially coextensive with said circumference of said disk portion; and

said disk portion having an elongate central slot axially aligned along a diameter of said disk portion, a first circularly arcuate slot inset from said circumference of said disk portion and having a first radius, and a second circularly arcuate slot having a second radius which is smaller than said first radius, said first and second arcuate slots each having first and second ends, and said first and second arcuate slots being concentric with said disk portion;

pivot means providing a pivot point for rotation of said elongate central slot about a horizontal axis extending therethrough; and

first and second guide means received respectively in said first and second arcuate slots for guiding said disk portion as said elongate central slot rotates about said pivot means.

5,172,970

ELECTRIC LOCKER APPARATUS WITH EMERGENCY UNLOCKING

Yoshinori Momose; Hideto Watabe; Masahisa Kujiraoka; Keizo Watanabe; Masanori Takagi, and Hiroshi Sato, all of Tokyo, Japan, assignors to Cleanup Corporation, Tokyo, Japan

Filed Apr. 2, 1991, Ser. No. 679,307
Claims priority, application Japan, Jul. 12, 1990, 2-73373[U]
Int. Cl.[5] A47B 88/00
U.S. Cl. 312—329 5 Claims

1. An electric locker apparatus comprising:

A) a base frame member;

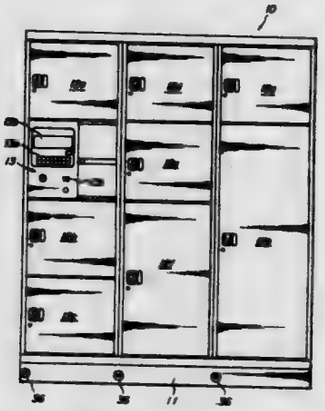
B) a plurality of rows of locker boxes mounted on the base frame member, each row including at least two locker boxes which are vertically aligned with each other, and each locker box having a door and an interior space which is accessible from outside when the door is opened;

C) electric lock devices associated with respective locker boxes, each lock device being arranged in the interior space of the relevant locker box near the door and including

(i) a latch member normally maintained by a stopper member in a lock position in engagement with the door, and movable into and normally biased toward an unlock position for allowing the door to be disengaged from the latch member and thereby opened, and

(ii) an actuator operative in response to an electric command signal and having an output member which is movable into a predetermined operative position for allowing the latch member to be released from the stopper member and moved into said unlock position;

D) an electric control unit for normally controlling the operation of the lock device of a selected locker box by providing said command signal to the actuator of the relevant locker box, said control unit including



(i) a console box which is vertically aligned with the locker boxes of selected ones of said rows,

(ii) a keyboard arranged on a front panel of the console box so that a user can operate the control unit for actuating the lock device of a locker box, and

(iii) at least one component which is accommodated inside of said console box and accessible from outside by using a predetermined master key; and

E) a plurality of emergency unlocking devices arranged in said base frame member and associated with said rows of the locker boxes, respectively, for forcibly opening the doors of the relevant locker boxes without requiring said command signal, said unlocking devices each including

(i) an emergent key cylinder into which said master key can be inserted from outside, and

(ii) a mechanical motion conversion means for converting an angular motion of said master key into a linear motion of the output members of the actuators of the relevant locker boxes toward the respective operative positions.

5,172,971

DRAWER

Alfred Albiez, Langen, Austria, assignor to Alfit Aktiengesellschaft, Götzis, Austria

Filed Feb. 20, 1991, Ser. No. 658,107

Claims priority, application Austria, Feb. 21, 1990, 395/90

Int. Cl.[5] A47B *88/00*

U.S. Cl. 312—348.1 **3 Claims**

1. A drawer comprising:

(a) two metal side walls laterally delimiting an interior of the drawer, each side wall having

(1) a top flange bent laterally outwardly to constitute a guide rail and

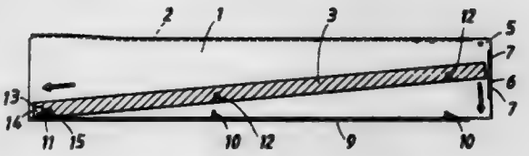
(2) a bottom flange bent laterally inwardly,

(3) the flanges extending in a longitudinal direction and the bottom flange having a plurality of stamped-out and upwardly bent, flat retaining lugs spaced from each other in the longitudinal direction and extending substantially perpendicularly to the longitudinal direction,

(b) a bottom plate extending between the side walls and having an underside supported on the bottom flanges, the bottom plate having a front face, a rear end and lateral portions extending between the front face and the rear end adjacent the bottom flanges of the side walls,

(1) the front face of the bottom plate defining recesses in alignment with the bottom flanges of the side walls,

(2) the bottom flanges having stamped-out and upwardly



bent, hook-shaped holding-down members engaging the recesses in the front face of the bottom plate, and

(3) the lateral portions defining openings in the underside of the bottom plate, the openings extending substantially perpendicularly to the longitudinal direction and receiving respective ones of the flat retaining lugs in a clamping fit whereby the retaining lugs hold the bottom plate against displacement, and

(c) a rear wall extending between the side walls and secured thereto, the rear wall extending over the rear end of the bottom plate and holding the bottom plate rear end on the bottom flanges.

5,172,972

MOTOR VEHICLE HEADLAMP

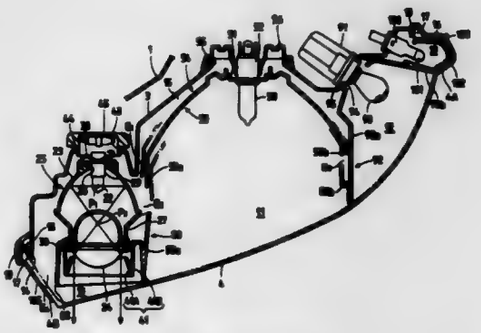
Hidetoshi Terao, Shizuoka, Japan, assignor to Koito Manufacturing Co., Ltd., Tokyo, Japan

Filed Aug. 15, 1991, Ser. No. 745,306

Claims priority, application Japan, Aug. 17, 1990, 2-215722

Int. Cl.[5] B60Q *1/06*

U.S. Cl. 362—66 **16 Claims**



1. A motor vehicle lamp comprising:

a headlamp comprising a lamp body and a main headlamp reflector and a light bulb mounted in said reflector, an aiming mechanism for mounting said main reflector within said lamp body in such a manner that an aiming operation of said main reflector can be freely achieved;

a front lens covering a front opening in said lamp body forward of said main reflector; and

an extension reflector provided between said reflector and said front lens, an inner surface of said extension reflector being reflective and acting as an extension of a reflecting surface of said main reflector, said extension reflector being formed separate from said lamp body, a front end of said extension reflector being adjacent to or in contact with an inner surface of said front lens to minimize a gap

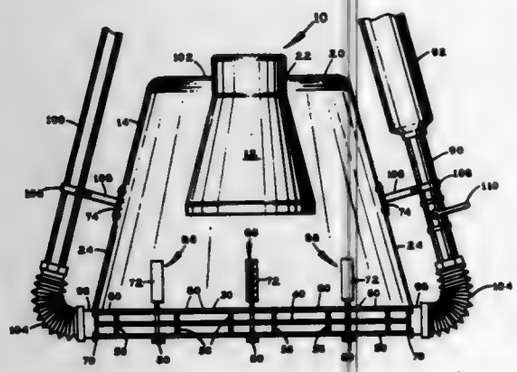
between said extension reflector and said front lens, and a rear end of said extension reflector being spaced from said main reflector so that said extension reflector cannot interfere with an opening end portion of said reflector during the aiming operation of said main reflector.

5,172,973

AIR COOLED HOUSING FOR LIGHT SOURCE

Ronald M. Spada, 524 Osprey Dr., Apt. 9B, Delray Beach, Fla. 33444

Filed Feb. 10, 1992, Ser. No. 832,950
Int. Cl.[5] F21S *3/00*
U.S. Cl. 362—74 8 Claims



1. An apparatus for cooling a light source within a structure, comprising:

a housing for surrounding said light source, wherein said light source is a light fixture on a ceiling within said structure and said housing attaches to said ceiling around said light fixture,

an air conditioning system comprising a compressor, an evaporator and a cooling fluid,

conduit means for delivering a stream of cooled air into said housing from a portion of said air conditioning system,

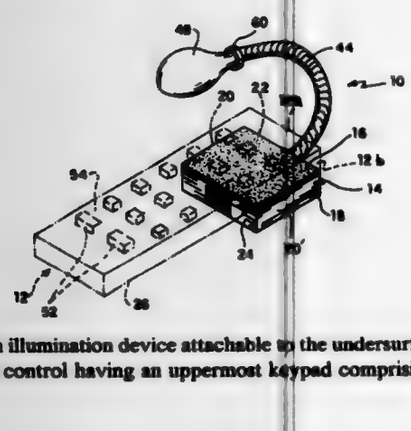
wherein said housing has an open base and there are three spaced apart lenses at said open base for retaining heated air within said housing, at least one said lens being perforated to permit air to enter and exit said housing, said conduit means delivering said stream of cooled air between said lenses to absorb and carry away heat.

5,172,974

ILLUMINATION DEVICE

Robert C. Riban, 224 S. Villa Ave., Addison, Ill. 60101

Filed Dec. 13, 1991, Ser. No. 806,227
Int. Cl.[5] F21V *33/00*
U.S. Cl. 362—109 17 Claims



1. An illumination device attachable to the undersurface of a remote control having an uppermost keypad comprising:

a base member having a top wall, bottom wall and a plurality of peripheral walls;

a flexible arm attached to one of said peripheral walls and terminating in an upper end, a light bulb adjacent said upper end;

said base member provided with a compartment containing a power source and circuitry leading to said light bulb;

attachment means intermediate said remote control undersurface and said base member top wall affixing said base member beneath said remote control;

said flexible arm displaceable to position said light bulb substantially centrally above said remote control keypad to fully illuminate said keypad;

switch means operable to activate and deactivate said circuitry between said power source and light bulb;

said base member includes a removable bottom panel to provide access to said compartment containing said power source; and

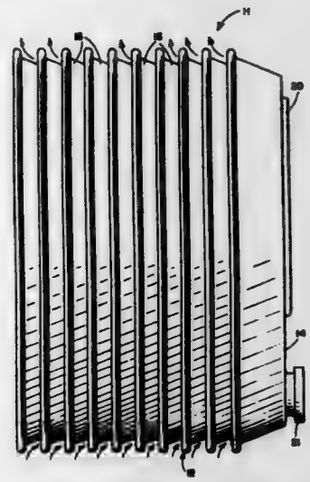
said removable bottom panel includes an anti-slip means.

5,172,975

LIGHT ASSEMBLY WITH VENTILATED HOUSING

Warren K. Parker, Hollywood, Calif., assignor to Mole-Richardson Co., Hollywood, Calif.

Filed Apr. 27, 1992, Ser. No. 874,416
Int. Cl.[5] B60Q *1/06*
U.S. Cl. 362—373 9 Claims



1. A light assembly comprising a housing and a light unit mounted within said housing, said housing comprising:

a plurality of fins forming the side portion of said housing, said fins being in the form of endless strips,

said fins being spaced from each other to form ventilation channels running completely around said housing from the outside to the interior thereof, said fins extending towards the interior of said housing but being angled away from the center thereof so as to minimize the escape of light from said light unit through the ventilation channels,

means for structurally joining said fins together to form an integral unit,

a front housing end portion having a light passing portion therein for passing light emitted by said light unit therethrough, and

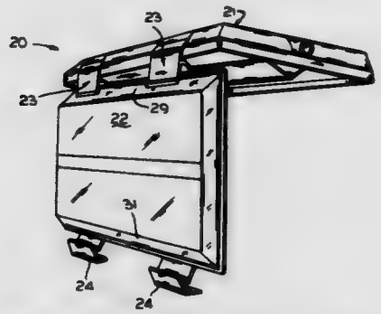
a rear housing end portion directly opposite said front housing end portion.

5,172,976

LIGHT FIXTURE LATCH AND LATCH HINGE ASSEMBLIES

Andris Bogdanovs, Liverpool, N.Y., assignor to Cooper Industries, Inc., Houston, Tex.

Filed Sep. 27, 1991, Ser. No. 766,562
Int. Cl.[5] F21V *21/00*
U.S. Cl. 362—374 40 Claims



7. A latch assembly for a light fixture comprising: a latch connector having

a) a hand section, said hand section having a length greater than a width, said hand section having an inner face and an outer face,

b) a latch section, said latch section having a first portion extending from said hand section and a catch formed on the end of said first portion, and

c) a keeper holder section extending from the inner face of said hand section,

a keeper, said keeper having a lens attaching portion for securely attaching said keeper to a light lens by insertion into a light lens cavity, and

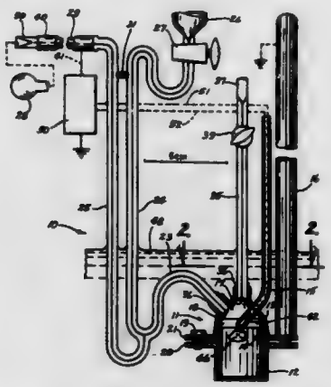
means to pivotally attached said keeper to said latch keeper holder section of said latch connector.

5,172,977

ISOBARIC DILATOMETER

Bekir V. Ezustun, Ames, Iowa, and Turgut Demirel, Seattle, Wash., assignors to Iowa State University Research Foundation, Inc., Ames, Iowa

Filed Jan. 3, 1992, Ser. No. 816,719
Int. Cl.[5] G01N *15/00, 25/16*
U.S. Cl. 374—55 12 Claims



1. A dilatometer apparatus for measuring volume changes of solid specimens comprising:

means for sealingly holding a solid specimen having a volume change to be measured, said holding means including a container;

means connected to said container for filling said container with an electrically conductive liquid; and

means for measuring changes in volume of said solid specimen comprising:

(a) conduit means operatively fluidly connected at one end thereof to said holding means for permitting said conductive liquid to flow therethrough due to changes in volume of said solid specimen;

(b) an electrically conductive sleeve disposed about a longitudinal axis;

(c) a stem portion of said conduit means being surrounded by said conductive sleeve, the longitudinal axis of said conductive sleeve and stem portion of said conduit means within said conductive sleeve is horizontally disposed, said stem portion of said conduit means being remote from said container; and

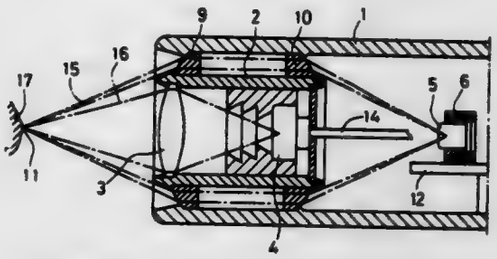
(d) means associated with said conductive sleeve for generating an electronic volume signal which is proportional to a capacitance across the conductive sleeve and that part of the conductive liquid in the stem portion of the conduit means which is surrounded by said conductive sleeve, said capacitance being a linear function of the volume of conductive liquid in the stem portion.

5,172,978

RADIANT THERMOMETER WITH AIMING SYSTEM

Toshiyuki Nomura, Kyoto; Naohiro Osuga, Takatsuki; Yuiji Tsujioka, and Naoyuki Matsumoto, both of Kyoto, all of Japan, assignors to Horiba, Ltd., Kyoto, Japan

Filed May 20, 1991, Ser. No. 703,181
Claims priority, application Japan, May 23, 1990, 2-53942[U]
Int. Cl.[5] G01J *5/08;* G02B *27/30*
U.S. Cl. 374—130 16 Claims



1. An improved radiant thermometer having a detector on an optical axis for measuring infrared rays from an object to determine its temperature comprising:

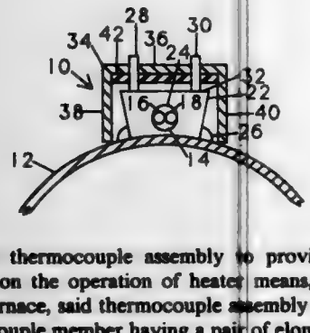
a housing for supporting the detector having an opening for receiving the infrared rays;

means for focusing the infrared rays onto the detector from a measurement point on the object;

a visible sighting light source for providing an aiming light, and

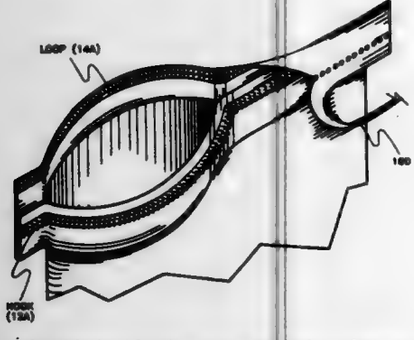
means for directing the sighting light from a position off axis of the detector optical axis to merge to a focus position on the optical axis, including a peripheral ring lens substantially surrounding the detector housing to provide a cone-shaped transmission of light having a larger field angle than a field angle of the detector, the cone-shaped transmission of light being focused to a point coincident with the measurement point whereby sighting of the radiant thermometer can be accomplished without blocking infrared rays to the detector.

5,172,979
HEATER TUBE SKIN THERMOCOUPLE
Rich W. Barkley, Houston; Ken C. Leung, Sugarland, and Jordan Loftus, Houston, all of Tex., assignors to Texaco Inc., White Plains, N.Y.
Filed Nov. 29, 1991, Ser. No. 800,319
Int. Cl.[5] H01L *35/00*; G01K *1/14*
U.S. Cl. 374—147 10 Claims



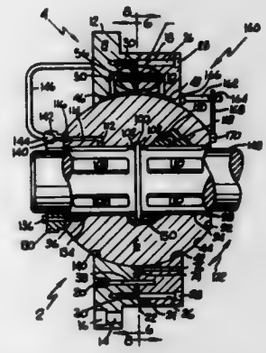
1. A skin thermocouple assembly to provide diagnostic information on the operation of heater means, such as heat pipes of a furnace, said thermocouple assembly comprising:
a thermocouple member having a pair of elongated thermosensitive elements contained within an elongated sheathing;
a thermocouple block having a through bore receiving therein one end of said thermocouple member;
means to secure said block to a curved surface to be monitored;
thermocouple heat shield means defining a cavity receiving said block therein, said heat shield means having a layer of insulation abutting said block to prevent the heat from adjacent heat pipes from affecting the operation of said thermocouple member;
means for mounting said shield on said block; and an elongated thermocouple lead radiant shield.

5,172,980
RECLOSABLE BAG HAVING HOOK AND LOOP SEALING STRIPS
George A. Provost, Manchester, N.H., assignor to Velcro Industries, B.V., Netherlands
Filed May 19, 1992, Ser. No. 885,519
Int. Cl.[5] B65D *33/16*
U.S. Cl. 383—204 8 Claims



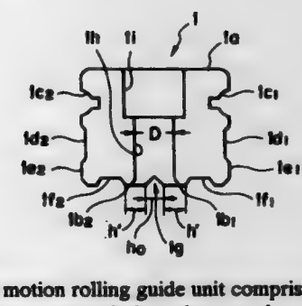
3. A reclosable bag having an open end, a closure strip for reclosably sealing said open end, said closure strip comprising a hook fastener means extending longitudinally along one portion of said strip, a loop fastener means extending longitudinally along a second portion of said strip, said two portions being parallel to each other and spaced apart, a frangible section of said strip running lengthwise thereof and spaced parallel to and between said two fastening portions of said trip, at least two adhesive stripes running lengthwise said strip on opposite sides of said frangible section and sealing said closure strip to said open end.

5,172,981
HYDROSTATIC BEARING APPARATUS
Warren R. Williams, Fort Collins; Roger A. Hahn, Arvada, and Bruce A. Moen, Golden, all of Colo., assignors to Coors Brewing Company, Golden, Colo.
Filed May 22, 1991, Ser. No. 703,913
Int. Cl.[5] F16C *32/06*
U.S. Cl. 384—12 19 Claims



1. A hydrostatic bearing comprising:
a socket having an inner surface shaped as a frustum of a sphere and having a longitudinal axis;
a ball having an outer surface shaped as a frustum of a sphere and having a longitudinal axis coinciding with said longitudinal axis of said socket;
mounting means for mounting said socket at a fixed location; said ball being mounted in said socket;
hydrostatic bearing means for permitting substantially friction free movement of said ball in said socket; and
a linear hydrostatic bearing extending through said ball and having a longitudinal axis coinciding with said longitudinal axis of said ball for permitting substantially friction-free sliding movement of a rod therein.

5,172,982
LINEAR MOTION ROLLING GUIDE UNIT
Yoshiyuki Komiya, Kawasaki, Japan, assignor to Nippon Thompson Co., Ltd., Tokyo, Japan
Filed Aug. 26, 1991, Ser. No. 749,720
Claims priority, application Japan, Aug. 27, 1990, 2-88404
Int. Cl.[5] F16C *29/06*
U.S. Cl. 384—45 2 Claims



1. A linear motion rolling guide unit comprising a track rail of substantially rectangularly columnar shape and a slider slidably movable on said track rail, said track rail being formed with arcuate raceway grooves at both right and left shoulders of sidewall surfaces thereof, said slider being formed with an arcuate raceway groove on an inner peripheral surface thereof

opposed to the arcuate raceway grooves of said track rail, balls being arranged between said arcuate raceway grooves,

wherein said track rail has bottom mounting portions,

relieves are formed longitudinally at both sides of the bottom mounting portions,

a relief groove is longitudinally at an axially central position of the track rail so that the width of bottom mounting portions thereof interposed between relieves is smaller than the diameter of the mounting hole of said track rail.

5,172,983

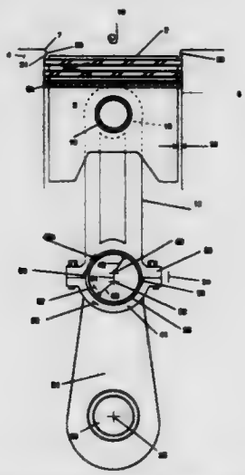
ECCENTRIC ROD BEARING

Anderson Landrum, Rte. 2, Box 311MM, Jackson, Miss. 39209

Filed Feb. 6, 1991, Ser. No. 652,678

Int. Cl.[5] F16C *9/06, 23/10*; F02B *75/04*

U.S. Cl. 384—294 **7 Claims**



1. An improved reciprocating engine rod end bearing for replacement of a used rod end bearing of standard design in a worn reciprocating engine comprising:

a bearing having an inner cylinder surface defined by a first center and an outer cylindrical surface defined by a second center;

said first center being offset from said second center by an amount sufficient to lower the piston top dead center within the engine a distance greater than a cylinder wear ridge length within the engine.

5,172,984

VENTING END CAP FOR VEHICLE WHEEL BEARING

Frederick E. Lederman, Sandusky, Ohio, assignor to General Motors Corporation, Detroit, Mich.

Filed Sep. 30, 1991, Ser. No. 767,444

Int. Cl.[5] F16C *33/78*

U.S. Cl. 384—489 **2 Claims**

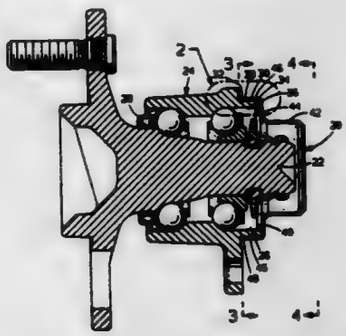
1. For use in a wheel bearing of the type having an inner spindle surrounded by a hub, said hub having a cylindrical outer surface and a cylindrical inner surface defining a bearing interior space that is subject to an internal pressure that changes relative to the outside pressure, a one-piece end cap that compensates for said pressure changes, comprising,

a cylindrical outer wall fixed to said hub cylindrical outer surface,

an elastic annular web integral with said outer cylindrical wall having a least one venting port formed therethrough,

a cylindrical inner wall integral with said annular web that is sufficiently flexible to bulge outwardly from its unflexed condition in response to an internal pressure rise, thereby pulling axially outwardly on said web, and to contract in response to an internal pressure fall, thereby pulling radially inwardly on said web, and,

a continuous internal seal lip on said web located radially inboard of said port and engaged closely with said hub inner surface when said cap is in its unflexed condition, thereby blocking said interior space from said venting port,



whereby, when said internal pressure rises, said outwardly bulging inner wall bends said annular web axially outwardly about said fixed outer wall, thereby bending said seal lip away from said hub inner surface to open said venting port, and when said internal pressure falls, said radially contracting inner wall stretches said annular web radially inwardly from said outer wall, thereby pulling said seal lip radially inwardly from said hub inner surface to open said venting port.

5,172,985

MULTIDIRECTIONAL PROPELLER SHAFT BEARING

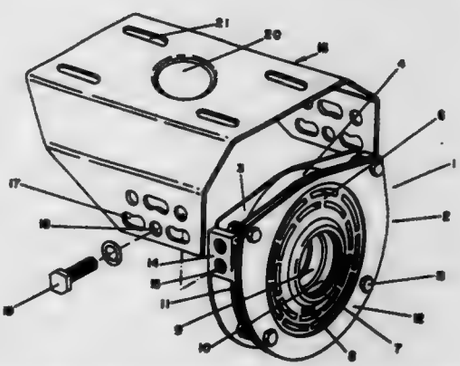
Silvio J. C. Constancio, Sao Paulo, Brazil, assignor to Industria E Commercio de Auto Pecas Rei Ltda, São Paulo, Brazil

Filed Jan. 3, 1992, Ser. No. 816,738

Claims priority, application Brazil, Jan. 3, 1991, 7100032

Int. Cl.[5] F16C *27/06*

U.S. Cl. 384—536 **1 Claim**



1. A multidirectional propeller shaft bearing, comprising: an essentially crescent-shaped body, said body obtained from a fore die-stamped plate and an aft die-stamped plate, the fore die-stamped plate being provided with a portion in the shape of a liner or cylindrical box, a fore end of said liner or cylindrical box being outwardly bent to thereby provide an anchoring flange while an aft end of said liner or cylindrical box has an attached, welded and equally shaped other flange made up by the aft die-stamped plate, wherein said liner or cylindrical box houses a virtually ring-shaped, equally cylindrical rubber part whose inside diameter includes a core of harder material, said core being provided with a grease nipple, wherein said core defines an inner housing for a conventional bearing so that any type of propeller shaft may be accurately passed therethrough,

said rubber part providing multidirectional springiness, wherein an outside diameter of said rubber part forms a flange or collar shaped so as to fit closely against the anchoring flange and so that it may be affixed thereto by an equally shaped, die-stamped plate, attached by nuts and bolts, in sandwich type arrangement; the anchoring flange and the aft-die stamped plate being solidly interconnected to one another by rectangular side blocks, said side blocks closely fitted between said anchoring flange and said aft die-stamped plate and adjustable in a vertical and parallel direction, said side blocks being provided with threaded holes so that the bearing may be secured under a bent sheet-metal bracket, the bracket resembling the shape of an inverted "U"whose lateral rims are provided with slots and holes, whereby the bearing may be attached by means of bolts and adjusted according to each type of vehicle, with an adjustment being enabled at an upper part of the bracket where the bracket is provided with a large central opening and lengthwise slots, which provide an adjustable means for the bearing to be affixed to the vehicle.

5,172,986

ROLLER BEARING HAVING ROLLER HOLDING PROJECTIONS FORMED BY CALKING

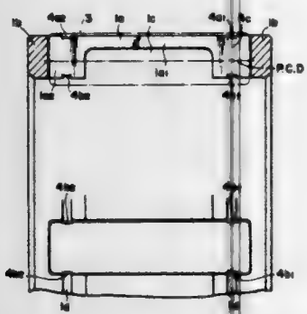
Yasunori Yokota, Ebina, Japan, assignor to Nippon Thompson Co., Ltd., Tokyo, Japan

Filed Aug. 1, 1991, Ser. No. 739,619

Claims priority, application Japan, Aug. 3, 1990, 2-82211[U]

Int. Cl.[5] F16C *33/46*; B21D *53/12*

U.S. Cl. 384—580 **3 Claims**



1. A roller bearing comprising:

a plurality of rollers, and

a cylindrical cage for holding said plurality of rollers in position, said cage comprising:

a pair of circumferential sections; and

a plurality of axial sections extending between the pair of circumferential sections and arranged spaced apart at a predetermined pitch in a circumferential direction, thereby defining a plurality of windows generally rectangular in shape at a predetermined pitch, wherein:

each of said windows receives therein a corresponding one of said plurality of rollers rotatably; and

each of said axial sections has a central inner portion of an inner surface thereof removed to thereby define a relatively tin central portion and a pair of relatively thick end portions; wherein:

said pair of relatively thick end portions form a recess with said relatively thin central portion so that said recess extends to a depth beyond the pitch circular diameter of the plurality of rollers; and

each of said pair of relatively thick end portions has inner and outer peripheral surfaces provided respectively with inner roller holding projections and an inner groove and outer roller holding projections and an outer groove which are formed by calking said inner and outer peripheral surfaces, whereby said inner and outer roller holding projections prevent a roller from slipping away from a corresponding window in which it is rotatably received.

5,172,987

PRINTER SUCH AS A COMPUTER PRINTER HAVING A SPACING ADJUSTMENT APPARATUS FOR THE PRINT HEAD

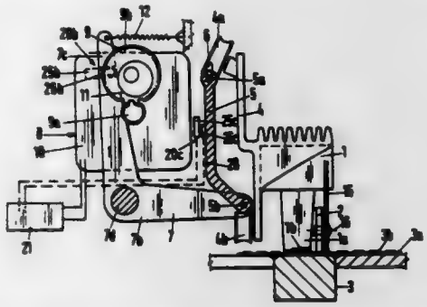
Dieter Stellmach, and Martin Storz, both of Villingen, Fed. Rep. of Germany, assignors to Mannesmann Aktiengesellschaft, Düsseldorf, Fed. Rep. of Germany

Filed Dec. 20, 1991, Ser. No. 811,264

Claims priority, application Fed. Rep. of Germany, Dec. 21, 1990, 4041985

Int. Cl.[5] B41J *11/20*

U.S. Cl. 400—56 **20 Claims**



1. A matrix printer, such as a matrix printer for a computer, said matrix printer comprising:

first surface means for supporting materials to be printed upon;

a print head movable along the first surface

carriage means for moving the print head in a direction parallel to the first surface;

carriage guide means for guiding the carriage means parallel to the first surface, said carriage guide means being movable in a direction towards and away from the first surface to thereby move the print head towards and away from the first surface;

means for adjusting a distance between the print head and the first surface to allow for printing on a printing surface of materials of varying thicknesses, the materials of varying thicknesses having a first dimension for being disposed in a direction parallel to said first surface, said distance adjusting means comprising:

first sensing means rigidly mounted to the print head, said first sensing means being movable along with the print head in the direction parallel to the first surface to sense the thickness of the material being printed upon along at least said first dimension;

said first sensing means comprising a portion for contacting the printing surface of the materials of varying thicknesses, said contacting portion of said first sensing means extending a fixed distance away from the print head towards the printing surface to define a fixed distance between the print head and the printing surface when said contacting portion of said first sensing means is in contact with the printing surface;

means for tensioning the print head towards the printing surface of the materials of varying thicknesses to thereby follow a contour of the printing surface and maintain said fixed distance between the print head and the printing surface when said contacting portion of said first sensing means is in contact with the printing surface;

second sensing means mounted adjacent the print head, said second sensing means being movable along with the print head in the direction parallel to the first surface to sense the thickness of the material being printed upon along at least said first dimension;

said second sensing means comprising:

a portion for sensing the thickness of the material being printed on;

signal generating means for generating a signal corre-

sponding to the thickness of the material sensed by said second sensing means along at least said first dimension;

control means for receiving said signal from said signal generating means and producing an output signal for variably adjusting the distance from the print head to the printing surface along at least said first dimension; and

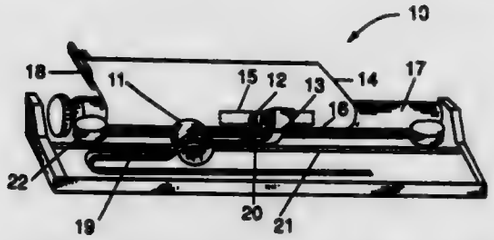
drive means for adjusting the distance from the print head to the printing surface to a distance of at least the fixed distance based upon said output signal from said control means.

5,172,988

FORM PRINTER WITH INTERACTIVE CAMERA AND COMPUTER CONTROL

Robert S. Lodley, 1002 LaGrande Rd., Silver Spring, Md. 20903, and Thomas J. Golab, 13000 Greenmount Ave., Beltsville, Md. 20705

Filed Mar. 6, 1991, Ser. No. 665,395
Int. Cl.[5] B41J *3/46, 21/16*; G06K *9/20*
U.S. Cl. 400—83 **9 Claims**



1. A system providing a user with the capability of interactively and sequentially printing entered data on sequentially selected portions of a form positioned in a printer, comprising:

camera means mounted on said printer in proximity to the form for providing output signals corresponding to a view of each selected portion of the form;

display means connected to said camera means for receiving the output signals of said camera means and responsive thereto for displaying to the user the view of each selected portion of the form;

printhead means mounted on said printer in proximity to the form for printing the entered data on the sequentially selected portions of the form; and

control means operable by the user for selecting given portions of the form for display on said display means, said camera means being responsive to said control means for moving into a viewing position adjacent to each selected given portion of the form.

5,172,989

THERMAL TRANSFER COLOR PRINTER WITH TENSIONING ROLLER

Chikara Imaseki, Yokohama, and Masahiro Shiigi, Machida, both of Japan, assignors to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed Dec. 12, 1990, Ser. No. 626,064
Claims priority, application Japan, Dec. 14, 1989, 1-324400; Dec. 14, 1989, 1-324401; Dec. 14, 1989, 1-324402
Int. Cl.[5] B41J *2/32, 15/16*; B65H *23/14*
U.S. Cl. 400—120 **3 Claims**

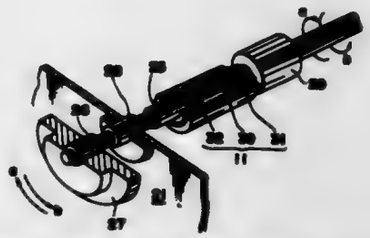
1. A thermal transfer color printer for recording color images on recording paper by successively transferring inks of different colors from an ink film onto the recording paper at a recording position, the printer comprising:

a rotatable platen roller disposed at the recording position;

a thermal head for heating the ink film and transferring the ink from the ink film onto the recording paper, said thermal head pressing the recording paper and the ink film against the platen roller at the reoording position;

transport means, disposed downstream from the platen roller with respect to a direction of transport of the recording paper during thermal transfer, for transporting the recording paper in a forward direction and a reverse direction at the recording position; and

tension means, disposed upstream from the platen roller with respect to the direction of transport of the recording paper



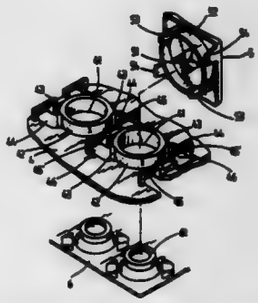
during thermal transfer, for providing a predetermined tension to the recording paper, said tension means including a roller provided on an axle, a torque limiter disposed between the axle and the roller, and a one-way clutch disposed between the axle and a member connected to a power supply.

5,172,990

STRUCTURES OF PUSH - BUTTON KEY OF KEYBOARD

Phil Weng, Taipei, Taiwan, assignor to Cal-Comp Electronics, Inc., Taipei, Taiwan

Filed May 23, 1991, Ser. No. 704,954
Int. Cl.[5] B41J *5/12*; H01H *3/12, 13/70*
U.S. Cl. 400—490 **6 Claims**



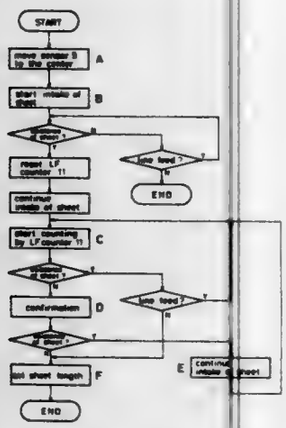
1. A push-button keyboard structure comprising an upper housing panel having thereon a plurality of circular barrels each having a barrel wall of a predetermined height, and a push-button key for each barrel, each push-button key comprising a key body with a bottom surface, a press-column extending centrally from said bottom surface, and an enclosing wall extending from said bottom surface to engage over the barrel wall of a respective barrel, first elongate slide members on each enclosing wall, second elongate slide members on each barrel wall to engage with and guide the first elongate slide members, respective slots in the upper housing panel adjacent the respective second elongate slide members for receiving the first elongate slide members, first hook elements extending from the bottom surface of each key body outwardly spaced from the respective enclosing wall, second hook elements on the upper housing panel for engaging the respective first hook elements and preventing removal of the respective push-button keys, and retreat holes in the upper housing panel adjacent the respective second hook elements for receiving the respective first hook elements.

5,172,991

METHOD FOR DETECTING THE LENGTH OF SHEET IN A PRINTER

Kazuaki Ikeda, Tokyo, Japan, assignor to Seikosha Co., Ltd., Tokyo, Japan

Filed Dec. 2, 1991, Ser. No. 801,333
Claims priority, application Japan, Jan. 19, 1991, 4793/91
Int. Cl.[5] B41J 29/20, 29/44
U.S. Cl. 400—708 7 Claims



1. In the method for detecting the length of a sheet in a printer, comprising the step of detecting the sheet length with an optical sensor while advancing the sheet in the lengthwise direction of the sheet in the printer, the improvement comprising moving said sensor in a direction transverse to the lengthwise direction of the sheet in the printer to steer clear of undetectable portions of said sheet, and detecting the length of the sheet at a position clear of said undetectable portions.

5,172,992

MASCARA CONTAINER WITH STIRRER

Walter T. Ackermann, Watertown, Conn., assignor to Risdon Corporation, Naugatuck, Conn.

Filed Mar. 9, 1992, Ser. No. 848,322
Int. Cl.[5] A45D 40/00
U.S. Cl. 401—4 5 Claims

1. A mascara container having a cylindrical body comprising a side wall and a circular bottom end wall and an externally threaded reduced neck at the upper end, a stirrer for said container comprising a molded plastic hub rotatably secured in the neck and a collapsible agitator within the container and secured to and integrally molded with the hub, the agitator being in the form of an oblong open frame of uniform cross-section and having straight parallel side elements, and semi-circular ends, the side elements being proximate but spaced from the side wall of the cylindrical container and the semi-circular end remote from the hub being spaced above the bottom wall, the hub having an opening therethrough, and an internally threaded cap for the container and an elongate mascara applier secured to and extending axially from the cap, the end of the applier proximate the cap being keyed for rotation with the hub.

5,172,993

LIPSTICK CASE WITH RESILIENT FRICTION TAB

Walter T. Ackermann, Watertown, and Thomas F. Holloway, Southbury, both of Conn., assignors to Risdon Corporation, Naugatuck, Conn.

Filed Feb. 10, 1992, Ser. No. 833,053
Int. Cl.[5] A45D 40/06, 40/12
U.S. Cl. 401—69 3 Claims

1. A cosmetic container comprising:

(a) a tubular base having an internally threaded lower section and an internally smooth upper section and retaining means about the inside of the upper section,

(b) a tubular sleeve having a reduced lower section rotatably disposed in the upper section of the base and a shoulder above the reduced lower section riding on the top of the base and a cooperant means on the reduced section engaging the retaining means to hold the sleeve and base together, a downward tab formed integrally with the reduced lower section of the sleeve and an outward nib on the lower end of the tab pressing against the smooth inner surface of the upper section of the base,

(c) a tubular cam having an internal thread of the same hand as the thread of the base and an outward lug adjacent the lower end thereof disposed in the thread in the base, the upper end of the internal threads in the tubular cam being formed with an incline up to the inside surface of the tubular cam,

(d) a cup formed with a central downward stem having an outward lug at the lower end thereof disposed in the thread in the cam, the cup riding vertically in the sleeve,

(e) means holding the sup and the sleeve against relative rotation,

whereby the nib exerts a frictional drag on the rotation of the sleeve with respect to the base and the lugs in the stem can be smoothly driven up the incline to liberate the stem from the cam, all to give the operation of the container a silky "feel".

5,172,994

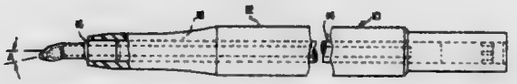
BALL POINT PEN WITH BENT TIP

Robert L. Brown, Boston, Mass., assignor to The Gillette Company, Boston, Mass.

Division of Ser. No. 501,077, Mar. 28, 1990, Pat. No. 5,012,663. This application Dec. 6, 1990, Ser. No. 622,857

Int. Cl.[5] B43K 7/00, 7/12

U.S. Cl. 401—209 4 Claims



1. A ball point member for use in a ball point pen comprising: a cylindrical point member comprising a tubular body member formed by a thin wall structure having a spherical ball retained in one end thereof and open at the opposite end for receiving writing fluid, said thin wall structure having at least one groove circumferentially formed from the outer surface thereof and terminating within said thin wall structure, said groove covering less than the entire outer circumference of the thin wall structure and leaving a non-grooved surface wherein said body member is bent in a direction whereby the grooved surface is on the compression side of the bend and the ungrooved surface is on the tension side of the bend.

5,172,995

PLOTTER PEN WITH COAXIAL RESERVOIR

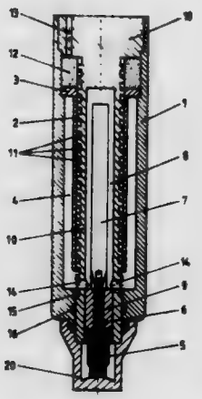
Peter Felgentreu, Hamburg, Fed. Rep. of Germany, assignor to Koh-I-Noor Inc., Bloomsbury, N.J.

Filed Apr. 19, 1991, Ser. No. 687,748

Claims priority, application Fed. Rep. of Germany, Apr. 27, 1990, 40135101

Int. Cl.[5] B43K 8/16

U.S. Cl. 401—258 11 Claims



1. A technical pen, suitable for use in drafting plotters, said pen comprising a writing tube (5) provided in a front end of the pen, and into which a cleaning wire (6) extends from a rear direction, said cleaning wire being fixed at a front end of a drop weight body (7) which is movable back and forth axially to a limited degree in an inner bore (8), said inner bore (8) being connected with a writing fluid reservoir (4), wherein coaxially to the inner bore a pressure equalization chamber (11) is provided, a front end of said pressure equalization chamber (11) being connected with said writing fluid reservoir (4) and the other end of said pressure equalization chamber being connected with ambient air, wherein further said writing fluid reservoir (4) forms an annular chamber that coaxially surrounds at least a front section of said inner bore (8), and at least a portion of the pressure equalization chamber (11) is connected proximate the front end through at least one lateral opening (14) to said inner bore (8), whereby the front end of said pressure equalization chamber (11) is proximate the front end of the inner bore, and the other end of said pressure equalization chamber (11) is proximate a rear end of the technical pen.

5,172,996

IMPLEMENT AND APPLYING LIQUID WITH PLURAL INDEPENDENT VALVES

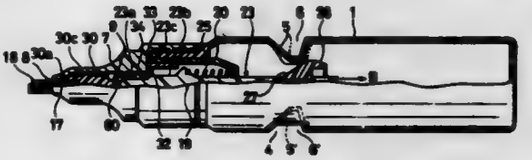
Fumiyuki Tamiya, Hashimoto; Nobuaki Kobayashi, Ikoma, and Mitsuhiro Fukuoka, Osaka, all of Japan, assignors to Kabushiki Kaisha Sakurakurepasu, Osaka, Japan

Continuation of Ser. No. 541,179, Jun. 18, 1990, abandoned, which is a continuation of Ser. No. 329,460, Mar. 28, 1989, abandoned, which is a division of Ser. No. 143,915, Jan. 13, 1988, Pat. No. 4,960,340. This application Aug. 29, 1991, Ser. No. 754,263

Claims priority, application Japan, Jan. 23, 1987, 62-9104; Jan. 25, 1987, 62-8824; Apr. 10, 1987, 62-55199; Apr. 10, 1987, 62-55200

Int. Cl.[5] A46B 11/00

U.S. Cl. 401—273 19 Claims



1. An implement for applying liquid to a surface comprising a container means containing a liquid, a liquid applicator means for applying said liquid to said surface, a valve means disposed between said container means and said applicator means, said valve means having an actuatable part adapted to be actuated from the outside so as to move said actuatable part between a closed position to preclude the flow of said liquid from said container means to said applicator means and an open position to permit flow of liquid from said container means to said applicator means, said applicator means having a cavity and an end passage leading from said cavity, said applicator means further comprising a sliding means having an applicator element slidable in said end passage and a head valve, said applicator element being connected to said head valve, said head valve being slidable in said cavity such that the slidable position of said head valve in said cavity is operable to control the flow of liquid from said cavity to said end passage, said cavity having a diameter greater than the diameter of said end passage, said cavity having a transition surface between said cavity and said end passage, said head valve being slidable in one direction to an extended position in which said head valve is engagable with said transition surface, said head valve having a downstream end portion engaging and seated on said transition surface when said head valve is in said extended position, said actuatable part being actuatable between said closed and said open positions to control the flow of liquid from said container means to said cavity of said applicator means independently of the sliding movement of said head valve in said cavity such that the flow of liquid from said container means to said cavity is controlled substantially independently of the control of flow of liquid from said cavity to said end passage, said head valve being operable to control the flow of liquid from said cavity to said end passage substantially independently of said valve means, said valve means comprising a forward projecting portion extending into said cavity when said valve means is in said closed position, said projection having an outer peripheral surface, said cavity having an inner cavity surface encircling said outer peripheral surface of said projection, said projection having a diameter smaller than said diameter of said cavity such that said outer peripheral surface of said projection is radially spaced from said inner cavity

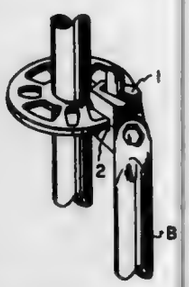
surface to define an annular space between said outer peripheral surface and said inner cavity surface, said forward projecting portion being partially withdrawn from said cavity when said valve means is moved from said closed to said open position, said head valve being in said extended position when said forward projecting portion is partially withdrawn from said cavity, whereby said partial withdrawal of said projecting portion from said cavity increases the volume of said cavity and thereby facilitates flow of said liquid from said container means to said cavity and mitigates against leakage of drops from said end passage when said liquid passes from said container means to said cavity.

5,172,997

CONNECTING PIECE FOR SCAFFOLDING

John G. Brasil, Mississauga, Canada, assignor to Etobicoke Ironworks, Ltd., Canada

Filed Nov. 13, 1991, Ser. No. 792,029
Claims priority, application Canada, Apr. 12, 1991, 2040341
Int. Cl.[5] F16D *1/00*
U.S. Cl. 403—4 **6 Claims**



1. A connecting piece for connecting an elongate bracing element to an apertured locking disk on a scaffolding standard, said locking disk being of the sort that is provided with a plurality of apertures spaced around its perimeter, said connecting piece being provided with an upper portion, a lower portion and a slot between said upper and lower portions of suitable width to accommodate insertion of said disk therein, said upper and lower portions being provided with aligned apertures situated to align with an aperture on a said disk, said connecting piece being provided with a locking wedge element captive in said apertures of said upper and lower portions and drivable through the aligned apertures of said upper and lower portions and said locking disk, said connecting piece being adapted for attachment to a said brace element, characterized in that said connecting piece is provided with a vertical portion spanning said upper and lower portions at the rear thereof, said vertical portion being provided with a pair of bevelled surfaces extending rearwardly angled at substantially 45° thereto each surface being adapted for connection of said connecting piece to a said brace.

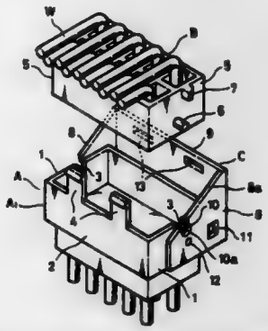
5,172,998

CONNECTOR WITH A LEVER

Yuji Hatagishi, Shizuoka, Japan, assignor to Yazaki Corporation, Tokyo, Japan

Filed Dec. 12, 1991, Ser. No. 805,944
Claims priority, application Japan, Dec. 15, 1990, 2-410807
Int. Cl.[5] B25G *3/00*
U.S. Cl. 403—27 **8 Claims**

1. A connector with a lever comprising:
- a pair of opposed housings capable of being fitted to and detached from each other;
- guide slits formed in one of said pair of housings so as to extend generally in the direction of fitting to the other of said housings;
- driven pins provided on the other of said housings on the outside thereof;
- lever means rotatably attached to said one of said housings, said lever means having drive slits capable of engaging with said driven pins, said lever means being rotatingly operated to fit or detach said housings;
- first lock means having a pair of members, one of which is provided on one of said pair of housings and the other provided on said lever means, said members being connected when said housings are normally fitted to each other; and



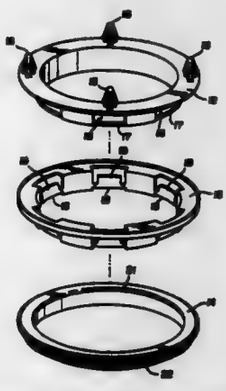
- second lock means having a pair of members, one of which is provided on one of said pair of housings and the other provided on said lever means, said members being operative as confirmation of normal fitting when said housings are normally fitted to each other.

5,172,999

FIXING BRACKET FOR FLEXIBLE TUBE

Tetsuya Ijima, Sagamihara, and Tomoyoshi Ohzaki, Kawasaki, both of Japan, assignors to Nissan Motor Co., Ltd. and Kato Hatsujo Kaisha, Ltd., both of Kanagawa, Japan

Filed Oct. 3, 1991, Ser. No. 770,429
Claims priority, application Japan, Oct. 12, 1990, 2-106573[U]
Int. Cl.[5] F16B *7/10*
U.S. Cl. 403—51 **6 Claims**



1. A fixing bracket for fixing the end of a flexible tube to a member, comprising:
- a stationary ring fixed to said member, said member having a plurality of engaging holes therein, said stationary ring comprising a first horizontal wall portion, a first vertical wall portion connected with said first horizontal wall portion and having an outer side, a plurality of resilient engaging legs projecting upwardly from said horizontal wall portion and engaging said engaging holes of said member, a plurality of depressions having lower edges spaced equidistantly about said outer side of said vertical wall portion and a plurality of lock claws disposed along said lower edges of respective said depressions;
- a spacer ring fitted to said stationary ring comprising a

second horizontal wall portion, a second vertical wall portion connected with said second horizontal wall portion and having an inner side, a plurality of engaging claws on said inner side of said second vertical wall engaging said lock claws of said stationary ring and a plurality of resilient supporting arms extending outwardly from said engaging claws; and

a fastening ring fitted to said spacer ring and fastened with said flexible tube, comprising a third horizontal wall portion having an inner terminal edge, a third vertical wall portion having an outer side and connected with said third horizontal wall portion, an annular shoulder projecting inwardly along said inner terminal edge rotatably supported by said resilient supporting arms of said spacer ring, and an annular projection projecting from said outer side of said third vertical wall portion fastened with said flexible tube.

5,173,000

FLEXIBLE COUPLING

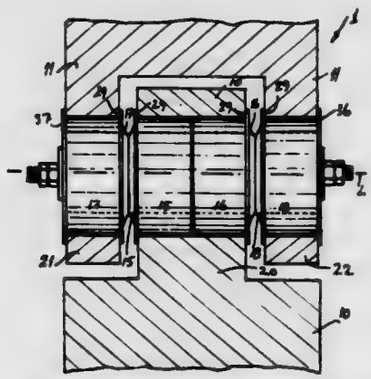
Terence P. Nolan, Lagore Road, Dunshaughlin, County Meath, Ireland

Filed Sep. 6, 1989, Ser. No. 405,830

Claims priority, application Ireland, Sep. 7, 1988, 2696/88; May 30, 1989, 1686/89

Int. Cl.[5] F16D *1/00*

U.S. Cl. 403—224 **11 Claims**



1. A fish breeding enclosure coupling for joining frame members of a fish breeding enclosure framework to permit controlled movement between adjacent frame members in use, said coupling comprising;

a first mounting means for mounting to a frame member, said first mounting means having a first outer casing part comprising a central casing part associated with the one frame member;

a second mounting means for mounting to another frame member, said second mounting means having a second outer casing part comprising a pair of side casing parts flaking said central casing part and being associated with the other frame member, said central casing part being approximately twice the width of each side casing part;

a connecting body of flexible material between said first and second mounting means, said connecting body comprising at least two axially aligned flexible body parts;

a housing for confining each flexible body part, each housing comprising an inner housing part and an outer housing part, each outer housing part being fitted into a respective one of the first and second outer casing parts of the first and second mounting means and including a radially outwardly extending flange for locating and limiting the entry of the outer housing part into the associated outer casing part, said inner and outer housing parts of each housing being radially spaced-apart to confine the respective flexible body part therebetween, and each inner housing part defining a bore aligned with the bores of the other inner housing parts to form a central longitudinally extending bore, there being four identical housings, one within each side casing part and two within the central casing part;

a retaining rod extending axially through said central longitudinally extending bore, said retaining rod being shaped to prevent relative rotational movement between said inner housing parts in use; and

washer means on said retaining rod, said washer means extending radially outwardly to engage said first and second outer casing parts in use.

5,173,001

APPARATUS FOR CONNECTING TOGETHER A PAIR OF PROFILE BARS

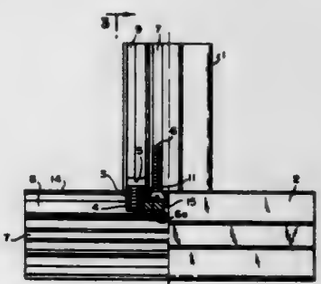
Kurt Schunke, Minden, Fed. Rep. of Germany, assignor to Phoenix Mecano AG, Stein am Rhein, Fed. Rep. of Germany

Filed Jun. 3, 1991, Ser. No. 709,287

Claims priority, application Fed. Rep. of Germany, Jun. 5, 1990, 9006344[U]

Int. Cl.[5] F16B *9/00*

U.S. Cl. 403—252 **10 Claims**



1. Apparatus for releasably connecting together first and second profile bars (1,2) formed of a relatively soft rigid material, said bars each having a generally rectangular cross-sectional configuration defining four sides each containing a longitudinal groove (9,8) that is undercut to define a pair of groove shoulder portions, each of said grooves including a bottom wall spaced from said shoulder portions, said first bar (1) being arranged orthogonally relative to said second (2), said first bar having one end adjacent one side of said second bar, comprising:

(a) at least one groove connecting member (4) slidably mounted in the undercut longitudinal groove contained in said second bar one side, the width of the groove opening between said shoulder portions of said one side longitudinal groove being less than the corresponding width dimension of said groove connecting member, whereby said groove connecting member is retained behind the shoulder portions of said one side longitudinal groove;

(b) an end connecting member (3) arranged in said one side longitudinal groove intermediate said groove connecting member and said first bar, said end connecting member including locator projection means (11) that extend within the adjacent end of at least one of the grooves contained in said first bar, thereby to position said end connecting member relative to said first bar;

(c) means fastening said end connecting member with said first bar, said fastening means consisting solely of a pair of first fastening screws (6); and

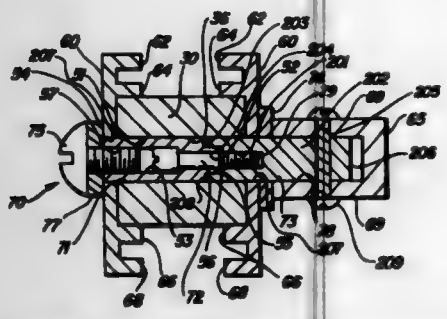
(d) means including a pair of second screws (5) fastening said groove connecting member with said end connecting member, said first screws and said second screws being parallel and arranged orthogonally of, and in longitudinally spaced relation relative to, said end connecting member.

5,173,002

LIFTING AND POSITIONING DEVICE FOR CABINETS AND CONSTRUCTION PANELS

Richard Brennan, Sr., North Babylon, N.Y., assignor to Kim-Rick, Inc., Bayonne, N.J.

Division of Ser. No. 226,851, Aug. 1, 1988, Pat. No. 4,955,592. This application Nov. 13, 1989, Ser. No. 435,607
Int. Cl.[5] B25G *3/36*
U.S. Cl. 403—388 10 Claims



1. A clamp for holding at least two adjacent members together, said at least two adjacent members having portions defining a bore, said clamp comprising:

a cylindrical body into the bore of one of said at least two members;

a cylindrical member into the bore of the other of said at least two members; and

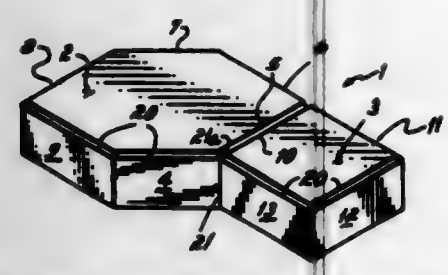
threaded fastener means engaging said cylindrical body to said cylindrical member such that the operative adjustment of said threaded fastener means through the bore in one of the at least two adjacent members changes the distance between said cylindrical body and said cylindrical member.

5,173,003

INTERLOCKING SLAB ELEMENT AND GROUND SURFACE COVER

Roberta A. Hair, 7554 Wooster Rd., Cincinnati, Ohio 45227

Continuation of Ser. No. 619,901, Nov. 29, 1990, abandoned, which is a continuation-in-part of Ser. No. 504,044, Apr. 3, 1990, abandoned, which is a continuation of Ser. No. 238,496, Oct. 31, 1988, abandoned. This application Aug. 30, 1991, Ser. No. 754,278
Int. Cl.[5] E01C *5/00*
U.S. Cl. 404—41 18 Claims



3. A ground or similar surface cover comprising a plurality of interlocking ceramic slab elements, each slab element including:

a hexagonal section and a square section integrally formed of a single piece of ceramic material having a thickness less than half of the greatest dimension of the stone;

said hexagonal section having a periphery formed of six vertical faces, said six faces including four identical lateral faces and two identical longitudinal faces;

said four lateral faces disposed as two opposing pair of adjacent lateral faces with the lateral faces of each pair forming an internal angle of approximately 90° with the other, the lateral faces having equal lengths of from approximately 3¼ inches to approximately 5 inches;

said two longitudinal faces each forming at opposite ends thereof an angle of approximately 135° with one of the lateral faces of each pair, to thereby define a hexagon, the longitudinal and lateral sides having lengths such that the length of the hexagon section from one 90° angle to the other is from approximately 9 inches to approximately 11 inches;

said square section having a periphery of four vertical faces each having a length equal to the length of the lateral faces of said hexagonal section, said square section having one of its vertical faces lying adjacent one of the lateral faces of said hexagonal section, whereby another of the lateral faces of said square section lies in the plane of one of the lateral faces of the hexagonal section.

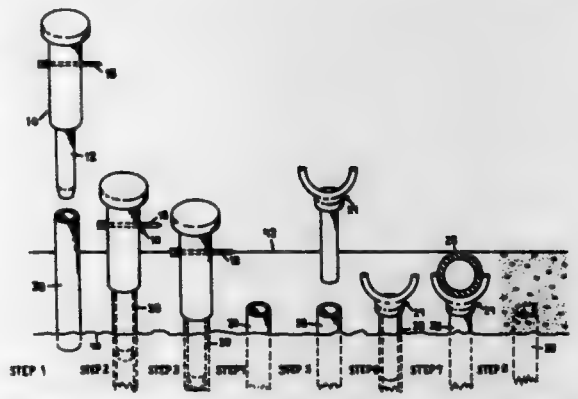
CONCRETE POURING AND LEVELING DEVICES AND METHOD OF USING

William H. Fahrenkrog, 2226 Mississippi Ave., Davenport, Iowa 52803

Filed Dec. 9, 1991, Ser. No. 803,523
Int. Cl.[5] E04G *21/20*
U.S. Cl. 404—72 4 Claims



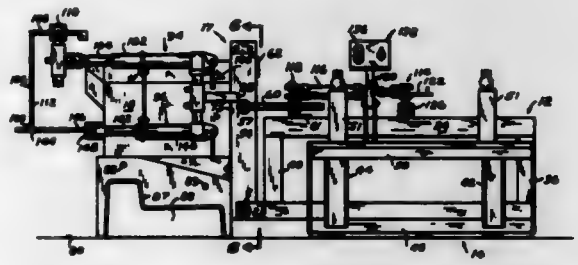
1. Devices for leveling new concrete comprising vertically positioned cylindrical rigid tubes having reusable yokes positioned thereon and screed pipes horizontally positioned on said yokes.

5,173,005

PRIME MOVER ACTUATED CONCRETE CURB EXTRUDER

John W. Henderson, Rte. 1, Box 460A,, Tuttle, Okla. 73089, and Gary L. Green, Rte. 1, Box 31B1Y1,, Washington, Okla. 73093

Filed May 31, 1991, Ser. No. 708,312
Int. Cl.[5] E01C *19/48*
U.S. Cl. 404—96 2 Claims



1. A continuous concrete street curb extruding apparatus, comprising:

a prime mover having hydraulically actuated controls operated by an onboard hydraulic system and having implement connecting forwarding disposed hitch means;

concrete hopper means having upper and lower inlet and outlet openings for receiving and depositing, by gravity flow, a quantity of wet concrete mixture in a pliable state on the surface of a roadbed;

primary frame means connecting said hopper means with said hitch means for movement in a path laterally of the path of travel of said prime mover;

curb forming channel means operatively connected with said hopper means adjacent its outlet opening for forming a curb shaped surface on the concrete deposited on the surface of the roadbed in response to forward movement of said prime mover;

direction sensing means supported by said hopper means and responsive to the position of a horizontal tautly stretched strand defining a predetermined path of travel and operatively connected with said hydraulic system for guiding said prime mover and said hopper means along the predetermined travel path;

elevating frame means interposed between said hopper means and said primary frame means for maintaining said hopper means and said curb forming means in close spaced relation with respect to the surface of the roadbed, said elevating frame means comprising: a pair of upstanding channel members pivotally connected at their depending end portions with said primary frame means for vertical pivoting movement about a horizontal axis;

sliding frame members supported by said channel members for vertical movement of said sliding frame members relative to said channel members;

plate means for connecting said hopper means with said sliding frame members;

pressure cylinder means disposed between and connected with said sliding frame members for raising and lowering said hopper means relative to said channel members; and,

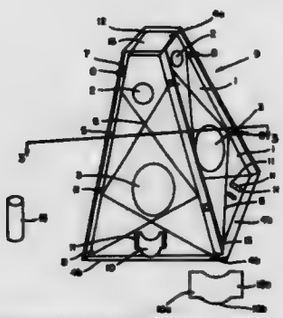
I-bolt means interposed between said channel members and said primary frame means for positioning said channel members at a predetermined angle with respect to the top surface of the primary frame means.

5,173,006

ARTIFICIAL REEF STRUCTURE

William R. Lowe, 6630 Viking Way Dr., Theodore, Ala. 36582

Filed Jul. 18, 1991, Ser. No. 731,983
Int. Cl.[5] A01B *61/00*; E02B *3/00*
U.S. Cl. 405—25 12 Claims



1. An artificial reef enclosure comprising:

(a) a plurality of panels having a top, a foot and two sides, said panels having opening means operating to create turbulance within the enclosure comprising a plurality of openings at a height above the foot of the panel which openings are of variable size and location in order to control the amount of circulation and turbulance desired within the enclosure to prevent the buildup of sand or silt;

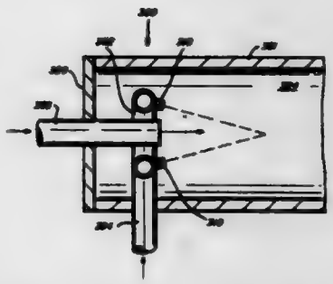
(b) a bracing means on either side of said panels operating to join one panel with another and in a supported position.

5,173,007

METHOD AND APPARATUS FOR IN-LINE BLENDING OF AQUEOUS EMULSION

Richard W. Krajicek, Houston, Tex., assignor to Serv-Tech, Inc., Houston, Tex.

Filed Oct. 23, 1989, Ser. No. 425,827
Int. Cl.[5] B01F *5/04*; B01J *13/00*; B65G *65/00*
U.S. Cl. 405—59 9 Claims



1. A dynamic tubular in-line blender for homogeneously mixing an aqueous hydrocarbon emulsion with a crude oil which comprises a tubular housing, a circular crude oil header circumferentially coaxially mounted in said tubular housing, an emulsion inlet line coaxially mounted in said tubular housing inside of and in coaxial alignment with said circular header and said tubular housing, a crude oil charge line fluidly connected with said circular header and a plurality of crude oil ejection nozzles peripherally mounted about said circular header and angled toward a coaxial focal point to about 2 to 4 circular header diameters downstream from said circular header, whereby crude oil charged to said circular header will be discharged therefrom through said ejection nozzles into the interior of said dynamic blender in the form of a flowing crude oil shear curtain defining a zone of flow conjunction and whereby an aqueous hydrocarbon emulsion charged to said dynamic blender through said emulsion inlet line will flow into and be impacted upon and fragmented by the flowing crude oil shear curtain in said zone of flow conjunction to form a flowing suspension of finely divided aqueous emulsion particles in the said oil.

9. A method for removing and transporting an aqueous crude oil emulsion from a subterraneous storage cavern in a subterraneous salt dome wherein said aqueous emulsion layer is positione din said cavern intermediate a lower water layer and an upper crude oil layer, wherein a casing extends from a discharge line at surface to said emulsion layer in said cavern, wherein a tubing extends from a surface water line through said casing into said cavern and into said water layer, said method comprising the steps of:

injecting water through said tubing into said water layer in said storage cavern to thereby force a portion of said aqueous emulsion through the hanging casing-tubing annulus to and throughs aid surface line,

interconnecting said surface line with the chamber of a dynamic in-line blender comprising a chambered housing having a crude oil header mounted therein crosswise of the direction of flow of said aqueous emulsion through said chamber,

charging crude oil to said header and discharging said crude oil from said header into said chamber in the form of a flowing crude oil shear curtain, at a flow rate of about 200 to about 500 feet/second and a pressure of about 2,000 to about 4,000 psi, defining a zone of flow conjunction, and

charging said aqueous emulsion from said surface line into the chamber of said dynamic blender at a flow rate of about 0.1 to about 0.3 times the rate of flow of each stream of crude oil and flowing said aqueous emulsion into said zone of flow conjunction,

whereby said aqueous emulsion will be impacted upon in said zone of flow conjunction by said flowing crude oil shear curtain and fragmented to thereby form a flowing

suspension in said conjunction zone of finely divided aqueous emulsion particle shaving diameters of from about 0.1 to about 10 microns in the said crude oil.

FLOATING BARRIER

Dan Thorell, Lyckeby; Kjell Tunér, Västerhaninge, and Jim Sandkvist, Partille, all of Sweden, assignors to Kustbevakningen, Karlskrona, Sweden

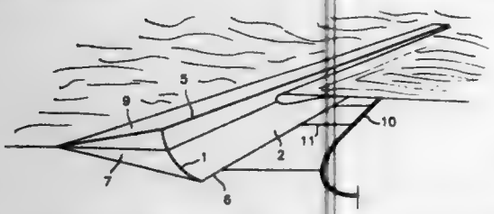
PCT No. PCT/SE90/00044, § 371 Date Sep. 6, 1991, § 102(e) Date Sep. 6, 1991, PCT Pub. No. WO90/08231, PCT Pub. Date Jul. 26, 1990

PCT Filed Jan. 19, 1990, Ser. No. 730,881

Claims priority, application Sweden, Jan. 20, 1989, 8900213

Int. Cl.[5] E02B *15/04*

U.S. Cl. 405—68 10 Claims



1. An elongated floating barrier for use in controlling substances on a liquid surface, and for moving relative to the liquid surface at an oblique angle with respect to the direction of movement, comprising:

a front shield (1) having a front side (2), a back side (3), an upper edge (5) and a lower submerged edge (6) and being inclined so that its upper edge (5) is abaft its lower edge (6);

a towing means (4) attached to the lower edge of the front shield and arranged to give a mainly horizontal pull on the barrier when it is moved relative to the liquid surface; and

a body forming member disposed along the back of the front shield having an upper face (9) connected with an upper part of the front shield and a lower face (8) connected with the lower edge (6) of the front shield and forming between said faces and said front shield a buoyant body (7) extended in a backward direction wherein lower face (8) intersects the liquid surface when the barrier is in operational position.

5,173,009

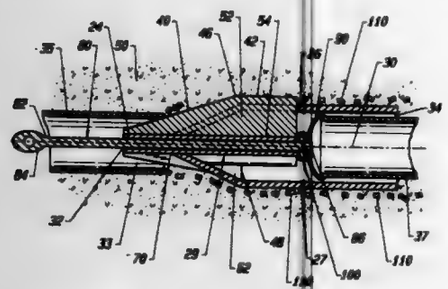
APPARATUS FOR REPLACING BURIED PIPE

Martin Moriarty, Valentia Island, County Kerry, Ireland

Filed Jan. 8, 1992, Ser. No. 817,905

Int. Cl.[5] F16L *1/00, 55/00*

U.S. Cl. 405—154 15 Claims



1. Apparatus for replacing an existing buried pipe with a replacement pipe, comprising:

a body having a first end, a second end, and a body axis, said body including a first cylindrical portion, a second cylindrical portion generally coaxial with said first cylindrical portion and having a diameter smaller than the diameter thereof, and a frustro-conical portion joining said first and second cylindrical portions;

at least three protrusions extending radially outward from said body, said protrusions having an outermost edge including a sloping portion and a straight portion, said sloping portion inclined to said body axis and extending from said first end of said body along said first cylindrical portion and said frustro-conical portion, and said straight portion extending generally parallel to said body axis and extending partially along said second cylindrical portion;

a rod having a first end and a second end, said rod slidably extending axially through said body;

means attached to said rod for attaching the new pipe; and

means attached to said rod for transmitting a pulling force to said apparatus.

5,173,010

CABLE LAYING METHOD, DEVICE AND APPARATUS

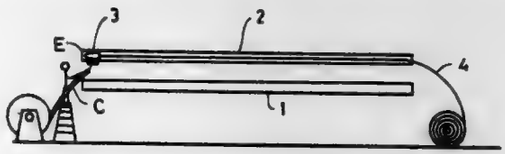
Shohachi Shimizu, Gifu, Japan, assignor to Mirai Industry Co., Ltd., Gifu, Japan

Filed Dec. 28, 1990, Ser. No. 635,753

Claims priority, application Japan, Dec. 30, 1989, 1-344457

Int. Cl.[5] F16L *1/00*

U.S. Cl. 405—154 9 Claims



1. A cable laying method comprising the steps of:

installing a cable receiver and a chute, said chute having a slit extending in the longitudinal direction thereof, said cable receiver and said chute being attached to a wall or a ceiling;

inserting in said chute at a starting point a shuttle to which is connected a first rope hard enough to push itself in said chute, said shuttle having a cable connecting means for travelling within said slit;

pushing said shuttle through said chute by means of said rope;

connecting a cable to said shuttle at an ending point after said shuttle is sent through said chute;

drawing back said shuttle to said starting point through said chute with said first rope and carrying said cable along said cable receiver and

releasing said cable from said shuttle and laying said cable on said cable receiver.

5,173,011

METHOD AND APPARATUS FOR LEVELING CONCRETE PADS AND SIMILAR HEAVY STRUCTURES

Frank J. Daniel, Jr., 2008 Garden Oaks, Arlington, Tex. 76012; Rickey A. Hofmann, 103 Bryson, Midlothian, Tex. 76065, and Ralph M. Miller, P.O. Box 115, Poynor, Tex. 75782

Filed Oct. 25, 1991, Ser. No. 782,495

Int. Cl.[5] E02D *5/00*

U.S. Cl. 405—230 12 Claims

1. An apparatus for restoring a concrete pad to a generally horizontal condition without the necessity of removing a load from the pad, said pad having a thickness as measured from its top to its bottom, and having at least one edge that is accessible from the ground adjacent the pad, comprising:

a. a portable frame having a generally upright configuration with a top and a bottom, and having right and left sides and a longitudinal axis therebetween;

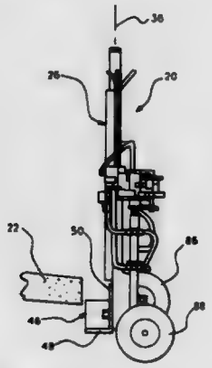
b. a lifting platform selectively attachable to the bottom of the frame, said platform having horizontal and vertical legs such that it has a generally L-shaped appearance

when viewed from one side thereof, and the horizontal leg protruding outwardly from the front of the frame when the platform is attached to the frame, and said horizontal leg protruding forwardly from the frame for a distance such that it may be inserted under an edge of a pad for a distance sufficient to put it into load-bearing contact with the bottom of the pad;

c. a pair of vertically oriented hydraulic cylinders mounted on the frame, each of said cylinders having a barrel and a rod which moves linearly with respect to its respective barrel;

d. a yoke mounted on the frame and connected to the distal ends of the two rods, such that the yoke will move downward with respect to the frame when the two cylinders are pressurized;

e. a source of pressurized hydraulic fluid connected to the



pair of hydraulic cylinders through a valve, such that the hydraulic cylinders may be selectively used to push the yoke downward when the valve is opened;

f. a chuck mounted on the yoke for selectively engaging a generally linear member that is positioned so that it rests near the longitudinal axis of the frame;

g. means associated with the frame for holding a generally linear member centrally of the frame while the generally linear member is being pushed into the ground in a generally vertical manner; and

h. means for rigidly connecting the platform to the generally linear member after the pad has been restored to a generally horizontal elevation, whereby the platform may be separated from the frame after the pad has been restored to a desired elevation, and whereby the frame may be removed for use at another location while leaving the pad supported by the generally linear member.

5,173,012

GROUND-BORNE NOISE AND VIBRATION DAMPING

Hermann Ortwein, Köln, and Heinz Fischer, Gelnhausen, both of Fed. Rep. of Germany, assignors to Clouth Gummiwerke Aktiengesellschaft, Köln, Fed. Rep. of Germany

Filed Dec. 10, 1990, Ser. No. 655,291
Int. Cl.[5] E02D *3/00, 31/08*
U.S. Cl. 405—258 **6 Claims**

1. A ground-borne noise and vibration damping system comprising:

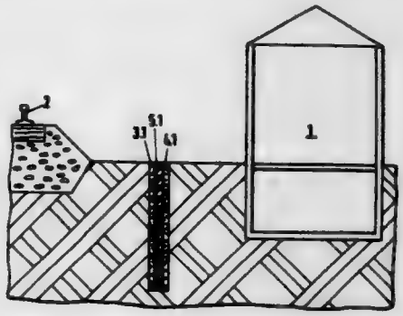
a track bed formed with rails for a railway vehicle and generating noise and vibration;

a structure to be protected against said noise and vibration; and

a damper for ground-borne noise and vibration embedded vertically in the ground and interposed between said track bed and said structure, said damper comprising:

two upright rigid concrete plates defining a vertical gap between them, and

a rubber mat sandwiched between said concrete plates and in contact therewith, said concrete plates extending substantially to the surface of the ground in which said



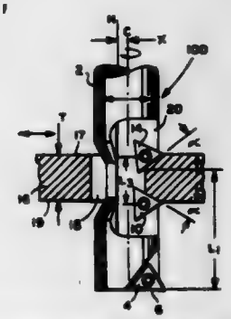
damper is embedded, a textile layer being inlaid in said mat.

5,173,013

COMBINED HOLE CUTTING AND CHAMFERING TOOL

John M. Gorse, Euclid, and Joseph A. Kovach, Aurora, both of Ohio, assignors to Eaton Corporation, Cleveland, Ohio

Filed Feb. 28, 1992, Ser. No. 843,035
Int. Cl.[5] B23B *51/08, 51/10*
U.S. Cl. 408—22 **7 Claims**



1. A combined hole cutting and chamfering tool comprising a body member having a central rotational axis:

said body member having a lead section having at least one hole cutting edge operative to cut a hole of selected diameter through a workpiece having a finite thickness upon rotary advancement of the hole cutting edge therethrough from one side to an opposite side;

said body member having a chamfering section spaced axially apart from the lead section and having at least one first and at least one second chamfering machining element spaced axially apart from each other with the first chamfer machining element facing towards the lead section and the second chamfer machining element facing away from the lead section and closer thereto than the first chamfer machining element;

said first and second chamfer machining elements disposed in respective angular relationship to the rotational axis operative to provide a chamfer angle respectively desired at the workpiece edge surrounding the one side and opposite side of the hole therethrough upon machining engagement therewith with at least one of said first and second chamfer machining elements additionally operative to provide a boring function;

at least said second chamfer machining element having a maximum machining diameter and said body member having a maximum breadth in a plane substantially transverse to the rotational axis that is no greater than the hole diameter from the lead section to at least the axial location along the body member in registration with an inner diam-

eter of the chamfer to be machined by the first chamfering machining element; and

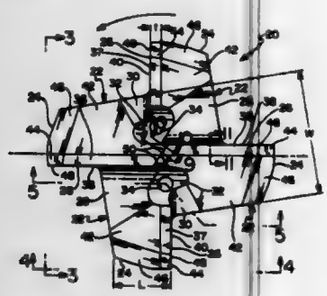
said first and second chamfer machining elements spaced axially apart from each other such that, upon cutting the hole through the workpiece either; (i) selected lateral movement of one or both the body member and the workpiece relative the other enables the first and second chamfer machining elements to respectively machine the one side and opposite side workpiece chamfers simultaneously from the one side thereof upon rotation of the body member or; (ii) selected combinations of lateral and axial movement of one or both of the body member and workpiece relative the other enables the first and second chamfer machining elements to machine the one side and opposite side chamfers one at a time from the one side of the workpiece upon rotation of the body member and optionally provide the boring function when such is desired.

5,173,014

FOUR FLUTE CENTER CUTTING DRILL

John S. Agapiou, Sterling Heights, and Wayne Szostak, Warren, both of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Feb. 7, 1992, Ser. No. 832,513
Int. Cl.[5] B23B 51/02
U.S. Cl. 408—59 2 Claims



2. A generally cylindrical, center cutting drill for drilling a hole in a workpiece including a cutting end with a center axis and operating with a predetermined direction of rotation about said axis, said drill comprising,

four evenly spaced, axially extending side flutes in said drill shaft, each opening through said cutting end at a planar rake face, two of said rake faces being generally parallel to and offset to opposite sides of a plane that bisects said drill shaft lengthwise, said four flutes thereby producing four evenly spaced lands between each adjacent pair of flutes,

a chip removal gash machined into each flute at said drill shaft cutting end generally tangent to a rake face and sloped radially outwardly and axially away from said center axis,

a pair of generally semi cylindrical intermediate gashes in said cutting end offset to either side of said bisecting plane and sloped slightly toward the chip removal gashes that are tangent to said two rake faces, thereby interconnecting said chip removal gashes in two pairs,

four planar lead facets on said cutting end, each adjacent to a rake face, including two complete lead facets extending from said bisecting plane to a respective adjacent rake face and two incomplete lead facets extending from a plane normal to said bisecting plane to a respective rake face, thereby creating a pair of complete cutting edges and a pair of incomplete cutting edges at the intersection with said rake faces,

a pair of planar clearance flanks, each extending from said bisecting plane to a respective side flute, each being adjacent to one complete lead facet and opposed to the other complete lead facet so as to intersect with said opposed lead facet and thereby create a pair of chisel edges, each of which is adjacent to a respective intermediate gash, and,

a pair of coolant holes through which pressurized coolant is supplied, each opening into a respective intermediate gash proximate said chisel edges,

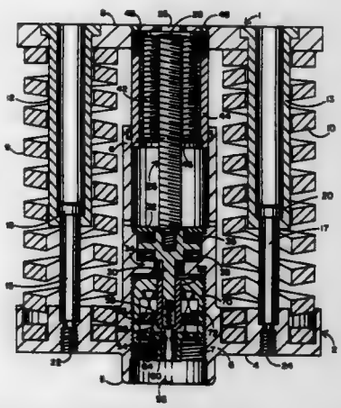
whereby, said chisel edges and complete cutting edges can center cut a hole in said workpiece as said four lands simultaneously pilot inside said hole, while pressurized coolant is distributed to said chisel edges and to said interconnected pairs of chip removal gashes to flush the chips formed by said chisel edges into an adjacent intermediate gash and then into a chip removal gash, thereby preventing said chisel edge chips from building up in front of said chisel edges or interfering with chips formed by said incomplete cutting edges.

5,173,015

IN-DIE TAPPING TOOL

Scott D. Maynard, 270 Cagney La., #304, Newport Beach, Calif. 92633

Filed Jan. 21, 1992, Ser. No. 823,205
Int. Cl.[5] B23B 47/02
U.S. Cl. 408—137 20 Claims



1. A tapping tool for threading a hole in a workpiece and comprising:

an end cap to which an impact force is to be applied;

a base spaced from said end cap;

spring means located between said end cap and said base, said end cap adapted to be moved towards said base and against the normal bias of said spring means when an impact force is applied to said end cap;

shaft means having a threaded end and extending between said end cap and said base;

a planetary roller nut coupled to and adapted to move axially along the threaded end of said shaft means to cause said shaft means to rotate when said end cap is moved towards said base;

tap carrying means retaining a tap at one end thereof and being coupled to said shaft means at the opposite end, such that a rotation of said shaft means is imparted to said tap carrying means; and

means responsive to the rotation of said tap carrying means for advancing said tap carrying means axially relative to said shaft means and towards the hole in the workpiece.

5,173,016

APPARATUS AND METHOD FOR FORMING FINGER AND THUMB HOLES IN BOWLING BALLS

John D. Ellison, Torrence, Calif., and Ronald F. Hoppe, Tacoma, Wash., assignors to Pro Shops Unlimited, Kent, Wash.

Filed Apr. 17, 1991, Ser. No. 687,585
Int. Cl.[5] B23C 3/00; B25B 11/00
U.S. Cl. 409—132 14 Claims

1. A method for precision milling and placement of a finger or thumb hole in a bowling ball, comprising:

providing a rigid vacuum dish which has a rigid annular sidewall defining a vacuum chamber and including an upwardly directed circular hard rim and a rigid base;

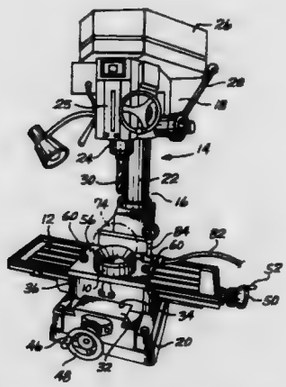
placing the vacuum dish on a horizontal support table portion of a vertical axis milling machine which is supported for precision adjustment in position within a horizontal plane along X and Y axes below a spindle which is supported for precision rotation about a vertical axis;

rigidly securing the vacuum dish base to said support table;

positioning in said spindle an elongated hole boring bit of a type including a cutting tip having end and side portions which cut when the bit is rotated about, and advanced endwise downwardly along, said vertical axis;

placing a bowling ball on the circular hard rim of the vacuum dish;

sealing between the vacuum dish and the bowling ball;



connecting the vacuum chamber with a source of negative pressure sufficient to hold the bowling ball into a fixed position against the circular hard rim;

adjusting the horizontal support table in position to place the tip of the hole boring bit in alignment with the starting point for a finger or thumb hole;

then rotating said milling bit and moving it downwardly along the vertical axis into contact with the bowling ball and then into the bowling ball to form a hole of a desired depth;

then withdrawing the hole boring bit out from said hole; and

adjusting the horizontal support table in position after withdrawing the drilling bit out from the hole, to move the hole slightly to one side of the drill path of the hole boring kit, then rotating and advancing the hole boring bit endwise downwardly into the bowling ball to widen the previously formed hole.

5,173,017

APPARATUS TO ADAPT A TOOLHOLDER FOR MOUNTING TO A BASE MEMBER

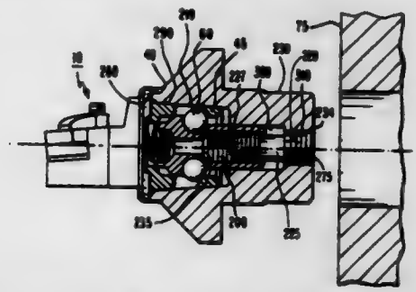
Robert E. Oshnock, and Robert A. Erickson, both of Raleigh, N.C., assignors to Kennametal Inc., Latrobe, Pa.

Filed Dec. 20, 1991, Ser. No. 811,561
Int. Cl.[5] B23B *31/02*
U.S. Cl. 409—234 **18 Claims**

1. An apparatus to adapt a toolholder (10) for mounting to a base member (75) in which the toolholder (10) is designed for use with a quick release system and is comprised of a forward end (15) for receiving a tool (20), a rearwardly facing abutment face (40), a tubular shank (45) extending rearwardly away from said forward end (15) and having a longitudinal axis (56), said shank (45) perforated by perforations (55) at spaced locations, a forwardly facing concave contact surface (60) in each of said perforations (55), said forwardly facing concave contact surface (60) extending forwardly while extending away from the inner surface of said tubular shank (45) toward the outer surface of said tubular shank (45) and at least one slot (53) within said shank (45) by which said toolholder (10) may be held nonrotatably, said apparatus comprising:

a) adapter canister (200) capable of being inserted within the toolholder shank (45), said adapter canister (200) having:
i) a forward end (202) and a rearward end (204);
ii) depressions (205) located upon the canister (200) in positions corresponding to said perforations (55) such that in the inserted position the depressions (205) are generally aligned with said shank perforations (55); and
iii) a protruding key portion (220) on the canister (200) for engaging said slot (53) within said shank (45) when said adapter canister (200) is inserted into said toolholder shank (45);

b) a locking element (210) positioned within each perforation (55) and depression (205) to provide a coupling and to provide rigidity along the longitudinal axis (56) between said toolholder (10) and said adapter canister (200) by capturing said locking elements (210) between the respective depressions (205) and the toolholder perforation forwardly facing concave contact surfaces (60) when said adapter canister (200) is urged away from said toolholder (10);



c) toolholder support member (230) having a forwardly facing abutment face (280) for contact with said toolholder rearwardly facing abutment face (40) and an opening (285) extending rearwardly therefrom to receive said toolholder (10) and said adapter canister (200) with said locking elements (210), said opening (285) having an opening first portion (290) to receive said shank (45), an opening second portion (300) to receive and hold nonrotatably said adapter canister (200) and an opening third portion (310) from which said toolholder (10) and said canister (200) with said locking elements (210) may be urged into said toolholder support member (230); and

d) means for urging the canister (225) into and out of said toolholder support member (230).

5,173,018

SECURITY SYSTEM FOR WHEELED VEHICLES RESIDING ON A MOVING DECK

James L. Kissel, 2204 Cedar Dr., and Earl J. Dalley, 4831 W. Main St., both of, Cedar Rapids, S. Dak. 57702

Filed Mar. 12, 1991, Ser. No. 667,874
Int. Cl.[5] B60F *3/00*
U.S. Cl. 410—30 **9 Claims**

1. An improved wheel clamp comprising:

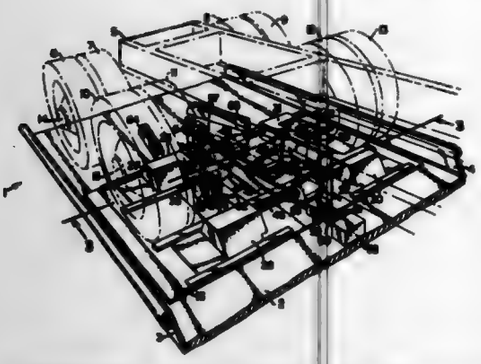
(a) a first wheel chock, the wheel chock being configured so as to receive a wheel, the first wheel chock being slidably mounted so as to be capable of movement along a single transverse axis;

(b) a second wheel chock, the second wheel chock being adapted to receive a wheel, the second wheel chock being slidably mounted so as to be capable of one dimensional movement along the single transverse axis;

(c) at least one threaded rod, the threaded rod having a first end and a second end, the first end having an opposite handed thread from the second end, the first end of the threaded rod being engaged in a threaded orifice within the first wheel chock, the second end of the threaded rod

being threadably engaged into a threaded orifice within the second wheel chock, such that rotation of the threaded rod in a first direction urges the first and second wheel chocks toward each other, and rotation of the threaded rod in a second direction urges the first and second wheel chocks away from each other;

(d) a substantially planar base member, the first and second wheel chocks being slidably mounted on the substantially planar base member, the planar base member having a longitudinal axis and a transverse axis, the one dimensional movement of the first and second wheel chocks being



parallel to the transverse axis of the planar base member; and

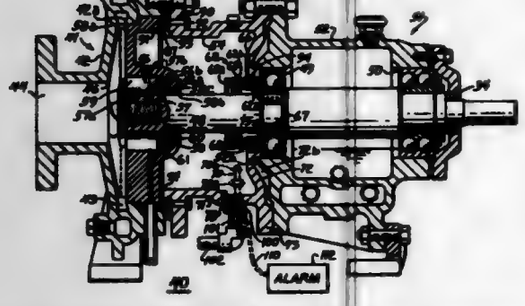
(e) a first hold down clamp and a second hold down clamp, the first and second hold down clamps being pivotally mounted on the planar base member, at least a portion of the first hold down clamp being in an abutting relationship with the first wheel chock, an at least a portion of the second hold down clamp being in an abutting relationship with the second wheel chock such that operation of the threaded rod which causes the first and second wheel chocks to move away from each other causes rotation of the hold down clamps so as to engage the wheel.

5,173,019

PUMP INCLUDING SECONDARY CONTAINMENT WITH ALARM SYSTEM

Arnold R. Szabo, Elkhart, Ind., assignor to American Gage and Machine Company, Elgin, Ill.

Filed Aug. 5, 1991, Ser. No. 740,454
Int. Cl.[5] F04D *15/00, 29/08*
U.S. Cl. 415—118 **18 Claims**



1. In a pump assembly having a fluid barrier assembly and including an impeller enclosed within a casing and mounted on a shaft for rotation to move liquid through the casing from an inlet to an outlet thereof, the shaft being supported by bearings located in a bearing housing containing bearing lubricating fluid, first seal means providing a fluid seal between the shaft and the impeller casing to prevent liquid flow therebetween, second seal means providing a fluid seal between the shaft and the bearing housing, the fluid barrier assembly comprising: containment means interposed between the impeller casing and the bearing housing with a portion of the shaft passing through said containment means, said containment means connecting the impeller casing to the bearing housing and said containment means maintaining a predetermined spacing therebetween and maintaining alignment between the shaft and the impeller, said containment means enclosing said shaft portion and said first and second seal means and defining an inner compartment for retaining liquid which passes the first seal means into said compartment, said compartment having flow control means for communicating said compartment with a liquid storage container, said flow control means being constructed and arranged to pass liquid emissions from said first seal means to the storage container during normal pumping operations, but to restrict the amount of pumped liquid that is passed to the storage container when said first seal means fails.

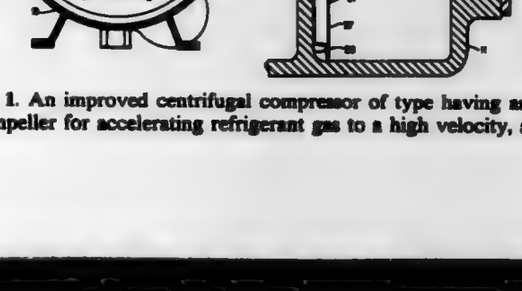
9. In a pump assembly including an impeller enclosed within a casing and mounted on a shaft for rotation to move liquid through the casing from an inlet to an outlet thereof, the shaft being supported by bearings located in a bearing housing containing bearing lubricating fluid, first seal means providing a fluid seal between the shaft and the impeller casing, second seal means providing a fluid seal between the shaft and the bearing housing, the combination comprising: containment means interposed between the impeller casing and the bearing housing with a portion of the shaft passing through said containment means, said containment means connecting the impeller casing to the bearing housing, and said containment means maintaining a predetermined spacing therebetween and maintaining alignment between the shaft and the impeller, said containment means enclosing said shaft portion and said first and second seal means and defining an inner compartment for holding liquid, said compartment having flow control means for communicating said compartment with a liquid storage container, said flow control means being constructed and arranged to pass liquid emissions from said first seal means to the storage container during normal pumping operations, but to restrict the amount of pumped liquid that is passed to the storage container, causing a change in a condition in the compartment, when said first seal means fails, and sensing means responsive to a change in said condition in said containment vessel for causing an alarm to be generated.

5,173,020

COLLECTOR SILENCER FOR A CENTRIFUGAL COMPRESSOR

Charles E. Ebbing, Fayetteville; Thomas M. Zimmeyer, Pearellville, and Edson H. Byrns, Dewitt, all of N.Y., assignors to Carrier Corporation, Syracuse, N.Y.

Filed Feb. 19, 1991, Ser. No. 656,537
Int. Cl.[5] F01D *5/10*
U.S. Cl. 415—119 **19 Claims**



1. An improved centrifugal compressor of type having an impeller for accelerating refrigerant gas to a high velocity, a

diffuser for converting a kenetic energy of the gas to pressure energy, and a discharge chamber for receiving the decelerated gas from the diffuser for further transfer to a condenser, wherein the improvement comprises;

a plurality of sound absorbent elements disposed in the discharge chamber for absorbing sound that is transmitted thereto; and

retaining means for retaining said elements in substantially fixed positions within the discharge chamber.

11. An improved method of installing a silencer apparatus into a centrifugal compressor of the type having in serial flow relationship, an impeller, a diffuser and a discharge chamber, wherein the improvement comprises the steps of;

providing a discharge chamber with an annular opening formed therein;

inserting a plurality of silencer segments into said annular opening and placing said segments against a wall of said discharge chamber;

securing said silencer segments to said discharge chamber wall; and

closing said annular opening by attaching the diffuser to said discharge chamber.

5,173,021

COMPRESSORS

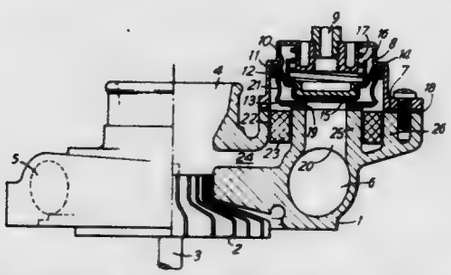
John K. Grainger, Liverpool, and David Flaxington, Formby, both of England, assignors to Garrett Automotive Limited, Lancashire, England

Filed Jul. 12, 1991, Ser. No. 729,116

Claims priority, application United Kingdom, Jul. 26, 1990, 9016399

Int. Cl.[5] F01D *5/10*

U.S. Cl. 415—119 **8 Claims**



1. A compressor having a housing defining an air intake port and an air delivery port, a compressor member rotatable in said housing to induce air at said intake port for delivery at elevated pressure at said delivery port, said housing further defining a recirculation flow path between said delivery port and said intake port, a control valve in said recirculation path for regulating flow rate via the compressor member, said recirculation path also including an open cell or mesh element, the open cellular or mesh structure of the element being such as to attenuate noise production resulting from the action of said control valve.

5,173,022

PROCESS FOR PUMPING A GAS/LIQUID MIXTURE IN AN OIL EXTRACTION WELL AND DEVICE FOR IMPLEMENTING THE PROCESS

Daniel Sango, Serres Castet, France, assignor to Societe Nationale Elf Aquitaine (Production), France

Filed Oct. 1, 1990, Ser. No. 591,376

Claims priority, application France, Sep. 29, 1989, 89 12759

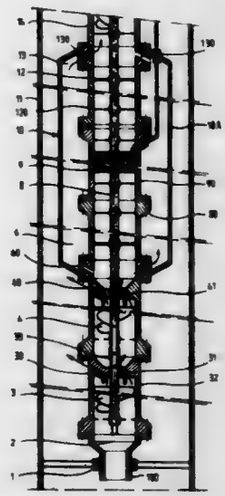
Int. Cl.[5] F01D *11/00*

U.S. Cl. 415—169.1 **8 Claims**

1. A process for pumping a two-phase gas/liquid mixture in an extraction well whose initial gas percentage is greater than approximately 40% by volume, comprising:

passing said mixture through at least a first centrifugal separating module to reduce the percentage of free gas in said mixture to below 40%;

passing the mixture which emerges from said first separating module annularly around a drive motor to cool said motor;



passing the mixture through at least a second centrifugal separating module to reduce the percentage of free gas in said mixture to below about 10% by volume; and

pumping the mixture emerging from said second centrifugal module by means of a centrifugal pump driven by said drive motor.

5,173,023

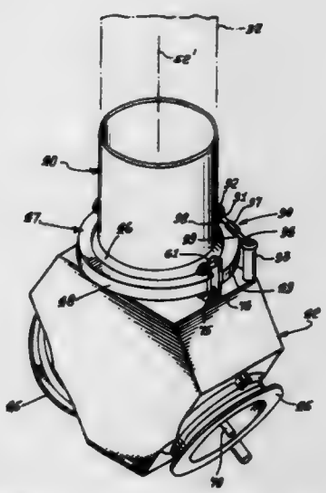
WIND TURBINE GENERATOR BLADE AND RETENTION SYSTEM

Joseph W. Pawlowski, Granada Hills, and J. Ford Johnston, Sunland, both of Calif., assignors to Cannon Energy Corporation, Mojave, Calif.

Filed Aug. 12, 1991, Ser. No. 743,926

Int. Cl.[5] B63H *1/20*

U.S. Cl. 416—207 **6 Claims**



1. In combination with a propeller blade cuff having a root end and a first annular flange at said root end, and a wind turbine generator hub having a second annular flange to be attached to said first flange, the improvement comprising

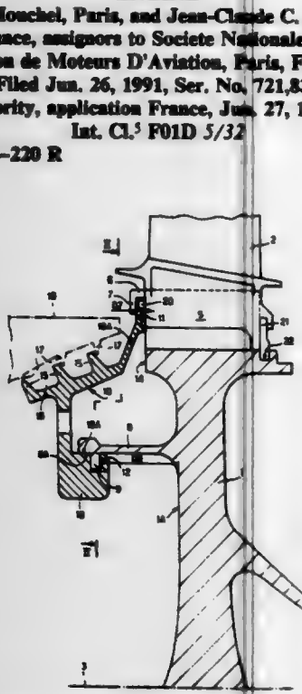
a) a clamp ring having multiple sections, said sections having flange-receiving and clamping grooves, each extending part way about said annular flanges,
b) and fastener means interconnecting said ring sections to exert adjustable tension for adjustably retaining said flanges in said grooves,
c) there being two of said sections, each extending about half way about said flanges, said sections having opposed ends and said fastener means having adjustable connection with said opposed ends, said sections having auxiliary flanges projecting away from said grooves, and defining said opposed ends, said fastener means having attachment to said auxiliary flanges,
d) there being first and second of said auxiliary flanges at each end of each section, said first and second auxiliary flanges projecting in opposite directions, said fastener means including a primary fastener interconnecting said first auxiliary flanges at opposed ends of two sections, and said fastener means including a secondary fastener interconnecting said second auxiliary flanges at said opposed ends of said two sections,
e) said primary fastener including turnbuckle structure, and said secondary fastener including bolt structure,
f) and including guide means integral with the hub and interfitting said primary fastener for maintaining the primary fastener in predetermined alignment relative to said hub.

5,173,024

FIXING ARRANGEMENT FOR MOUNTING AN ANNULAR MEMBER ON A DISK OF A TURBOSHAFT ENGINE

Jacques H. Mouchel, Paris, and Jean-Claude C. Taillant, Evry, both of France, assignors to Societe Nationale D'Etude et de Construction de Moteurs D'Aviation, Paris, France

Filed Jun. 26, 1991, Ser. No. 721,838
Claims priority, application France, Jun. 27, 1990, 90 08068
Int. Cl.[5] F01D 5/32
U.S. Cl. 416—220 R 7 Claims



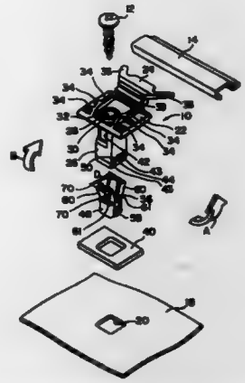
1. An assembly comprising a disk of a turboshaft engine, an annular member, and mounting means for attaching said annular member coaxially to said disk, said mounting means comprising:
a first set of interengageable lugs including a first ring of lugs provided on said disk and arranged such that said lugs of said first ring are spaced apart at regular angular intervals, and a second ring of lugs provided on said annular member and arranged such that said lugs of said second ring are also spaced apart at regular angular intervals, said first and second rings of lugs being arranged to be interleaved and then overlapped in order to provide a bayonet-type fixing of said annular member on said disk,
a second set of interengageable lugs offset radially with respect to said first set and including third and fourth rings of evenly spaced lugs provided on said disk and said annular member respectively, said lugs of said third ring being disposed at angular positions corresponding to the angular positions of said lugs of said first ring, and said lugs of said fourth ring being disposed at angular positions corresponding to the angular positions of said lugs of said second ring, whereby said third and fourth rings of lugs are interleaved and overlapped simultaneously with said first and second rings of lugs during fixing of said annular member on said disk,
and centering means comprising a first substantially cylindrical surface on said disk coaxial with the axis of said disk, and a second substantially cylindrical surface on said annular member coaxial with the axis of said annular member, said first surface mating with said second surface to centre said annular member on said disk when said annular member is attached to said disk.

5,173,025

SCREW GROMMET HAVING A SECURED INTERNAL THREAD MEMBER

Goro Asami, Yokohama, Japan, assignor to Nifco Inc., Japan

Filed Dec. 26, 1991, Ser. No. 813,382
Int. Cl.[5] F16B 13/04, 21/00
U.S. Cl. 411—344 25 Claims



1. A screw grommet with which an externally threaded member is threadedly engaged in a state in which said screw grommet is inserted through an attaching hole formed in a panel member for attachment of said screw grommet thereto, said screw grommet comprising:
a body member which is adapted to abut against said panel member for attachment of said screw grommet thereto and through which said externally threaded member is passed; and
an internal thread member for threaded engagement with the externally threaded member which passes through said body member, said internal thread member comprising holding means cooperable with said body member to clamp said panel member for attachment of said screw grommet thereto as said externally threaded member inserted through said body member is threadedly engaged with said internal member, wherein
said holding means is integrally formed as one-piece with said internal thread member, said holding means being adapted to cause said internal thread member to be drawn out of said attaching hole with said body member at the time of removal of said body member.

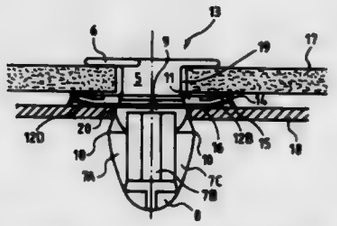
CLIP HAVING PERIPHERAL SEALING

Jean-Pierre Cordois, Garches, and Pierre Guillon, Taverny, both of France, assignors to ITW de France, Beauchamp, France

Filed Feb. 19, 1992, Ser. No. 836,897
Claims priority, application France, Feb. 22, 1991, 91 02164
Int. Cl.[5] F16B *19/00, 43/02*
U.S. Cl. 411—508 11 Claims



1. A clip for fixing a panel (17) to a support (18), comprising:

a relatively stiff, molded plastic material body member (1) having a head (2) adapted to engage and be mounted within said panel through means of an orifice (19), a foot (3) adapted to be mounted within said support (18) through means of an orifice (20), and a flange (4) disposed at a location where said foot (3) and said head (2) merge; and

a relatively soft, plastic material annular washer (14) cooperating with said flange (4) so as to provide a seal between said panel and said support;

characterized in that said annular washer (14) envelops a peripheral portion of said flange (4).

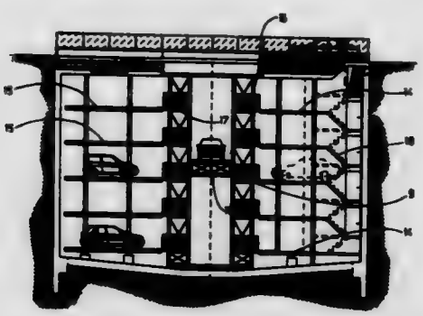
AUTOMATED PARKING SYSTEM AND SUBASSEMBLIES THEREFOR

Davide Trevisani, Cesena, Italy, assignor to Sollmec S.p.A., Cesena, Italy

Filed Mar. 7, 1991, Ser. No. 665,898
Claims priority, application Italy, Mar. 9, 1990, 67165 A/90
Int. Cl.[5] E04H *6/20*
U.S. Cl. 414—257 2 Claims



1. A substantially circular underground parking place having a center, a ground level with an entry and an exit area for vehicles, and several lower stories where a plurality of vehicle parking areas are arranged along radii extending from the center of the parking place on each story, comprising:

a lift truck with a rotating bearing column located substantially in the center of the parking place which moves vehicles vertically between the ground level to the lower stories and rotates around a vertical axis defined by said bearing column, whereby all parking areas and the entry and exit areas are accessible from said lift truck;

a platform attached to said lift truck for retaining vehicles, said platform having an upper plane with a first and second end which moves in a first and a second direction along a horizonal axis, said upper plane further having a first pair of rotating chains attached to moveable staves for moving the vehicle in said first and second directions along said horizonal axis and hooking lists to avoid sliding of the vehicle;

first engaging means on said first and second ends of said upper plane in mechanical communication with said first pair of rotating chains;

a plurality of frame structures spatially separated from said lift truck and said platform for supporting the vehicles at said parking areas and at said entry and exit areas, said frame structures having a second pair of rotating chains attached to moveable staves, said moveable staves designed to move a vehicle in a direction along said horizonal axis of said upper plane, said frame structure further including a second engaging means in mechanical communication with said second pair of rotating chains and positioned opposite said first engaging means;

first motor means for moving said upper plane in said first and second directions along said horizonal axis with respect to said platform to abut one of said frame structures and for temporarily connecting said first and second engaging means; and

second motor means for moving said first pair of rotating chains on said frame structure at said upper plane, said second motor means also moving said second pair of rotating chains at said parking area and on said entry and exit areas when said first and second engaging means are engaged.

SEMITRAILER

Jaakko Heikkinen, Kello; Markku Huttunen, Hankipudas, and Pentti Mollanen, Oulu, all of Finland, assignors to Rautaruukki Oy, Oulu, Finland

PCT No. PCT/FI90/00141, § 371 Date Oct. 23, 1991, § 102(e) Date Oct. 23, 1991, PCT Pub. No. WO90/14268, PCT Pub. Date Nov. 29, 1990
PCT Filed May 21, 1990, Ser. No. 768,873
Claims priority, application Finland, May 19, 1989, 892419; Jun. 20, 1989, 893020
Int. Cl.[5] B60P *1/16*
U.S. Cl. 414—498 8 Claims

1. A semitrailer (1) comprising means (6) for shifting a load, such as a container (9), to a support of the trailer (1), and away from the support thereof; as well as means (3) for shifting a bogie (2) in a lengthwise direction of the trailer and means (10, 11; 12, 14) for raising and lowering both a front end (1*a*) and a rear end (1*b*) of the trailer, characterized in that

the means for raising the front end (1*a*) of the semitrailer (1) include a lever arm (10), a free end (10*a*) whereof is directed towards the front end of the trailer (1), and at least one power unit, such as a pressure fluid cylinder (11; 11*a*, 11*b*) which is located in connection with the trailer (1), on an opposite side of the articulation point (20) of the lever arm (10), with respect to the said lever arm (10);

the means for raising and lowering the rear end (1*b*) of the semitrailer 1), comprise support legs (12) including leg members (12*a*, 12*b*), which are attached, at an articulation point (22), at such a distance from the rear end (1*b*) of the trailer that roughly corresponds to a total length (b) of the leg member, so that a free end (12*c*, 12*d*) of the leg member (12*a*, 12*b*) is in a high position located in an immediate vicinity of a rear edge (1*g*) of the rear end (1*b*) of the

trailer; and at least one power unit, such as a pressure fluid cylinder (14; 14*a*, 14*b*, 14*c*, 14*d*), which is placed in the trailer (1), on an opposite side of the articulation point (22) with respect to the leg member (12*a*, 12*b*), by aid of which means the front and rear ends of the trailer can be raised and lowered irrespective of each other for loading and unloading the trailer.

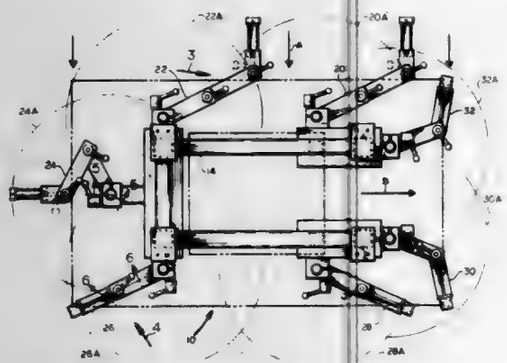
GLASS SHEET POSITIONING DEVICE

Kent A. Delventhal, Genoa, Ohio, and James M. Klempner, Bloomfield, Mich., assignors to Toledo Automated Concepts, Inc., Oregon, Ohio

Filed Jul. 16, 1991, Ser. No. 730,488

Int. Cl.[5] B65G *47/24*

U.S. Cl. 414—754 **14 Claims**



1. Apparatus for positioning a rigid, generally planar sheet, said apparatus comprising:

support means for supporting the sheet in a stationary position;

a spaced apart plurality of first stop means, each first stop means having a first contacting element for contacting an edge of the sheet and first reciprocation means for reciprocating said first containing element in a plane extending generally transversely of the sheet between a first position where said contacting element is aligned with the sheet and a second position where all of said first stop means including said first contacting element is out of alignment with the sheet, each of said first stop means being fixed in its position relative to the sheet during the positioning of the sheet, and

a spaced apart plurality of second stop means, each second stop means having a second contacting element for contacting an edge of the sheet and second reciprocation means for reciprocating said second contacting element in a plane extending generally parallel to the sheet between a first position out of contact with each of said first contacting elements, and a second position in contact with the edge of the sheet when the edge of the sheet is in contact with each of said first contacting elements, said second reciprocating means further including means to swivel said second contacting element in a plane extending at a substantial angle with respect to the sheet to a third position out of alignment with the sheet;

whereby a sheet can be transferred to and from said support means when each of said first contacting elements is in its second position and each of said second contacting elements is in its third position;

wherein each of said first stop means comprises a first arm having a plurality of first arm sections joined end-to-end, each first arm section being pivotable in a plane extending generally parallel to the sheet with respect to the first arm section to which it is joined, and locking means for locking the position of each first arm section with respect to the position of the first arm section to which it is joined to prevent pivoting movement therebetween, whereby to ensure that the first position of said first contacting element will always be substantially the same until said locking means is released to permit adjustment of the position of each first arm section with respect to the position of the first arm section to which it is joined.

JET PIPE

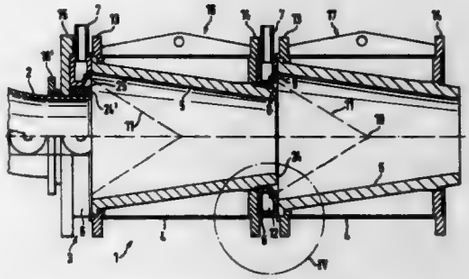
Hans-Jürgen Heimhard, Mülheim-Saarn, and Manfred Brüner, Bensheim, both of Fed. Rep. of Germany, assignors to Klockner Oecotec GmbH, Duisburg, Fed. Rep. of Germany

Continuation of Ser. No. 617,461, Nov. 26, 1990, which is a continuation of Ser. No. 426,639, Oct. 26, 1989. This application Aug. 15, 1991, Ser. No. 746,188

Claims priority, application Fed. Rep. of Germany, Oct. 27, 1988, 3836661

Int. Cl.[5] F04F *5/22*

U.S. Cl. 417—163 **13 Claims**



1. A jet pipe flow system, comprising:

a jet pipe housing having a first flange at a flow inlet end and a second flange at a flow outlet end;

a conical tubular insert formed to be inserted into said jet pipe housing, the conical tubular insert having a large diameter end locatable adjacent said inlet flow end of the jet pipe housing and tapering toward a small diameter end locatable adjacent said flow outlet end of the jet pipe housing;

a ring having an inlet and a plurality of discharge openings that are arranged peripherally at an annular surface, said ring being formed to fit to said conical tubular insert with said discharge openings disposed to enable a flow of a flow-generating medium within the largest diameter of said conical tubular insert,

said ring being fixed between the first flange of said jet pipe housing and an inlet element connected to the inlet end of the jet pipe housing.

5,173,031

DELIVERY FLOW AND PRESSURE CONTROLLING DEVICE FOR A HYDROSTATIC PUMP

Gerhard Nonnenmacher, Korntal-Münchingen; Egon Tittmann, Leonberg; Heinz Walter, Rutesheim; Walter Robeller, Böblingen, and Dieter Bertsch, Neuhausen, all of Fed. Rep. of Germany, assignors to Robert Bosch GmbH, Stuttgart, Fed. Rep. of Germany

PCT No. PCT/DE90/00100, § 371 Date Oct. 26, 1990, § 102(e) Date Oct. 26, 1990, PCT Pub. No. WO90/10793, PCT Pub. Date Sep. 20, 1990

PCT Filed Feb. 16, 1990, Ser. No. 601,741

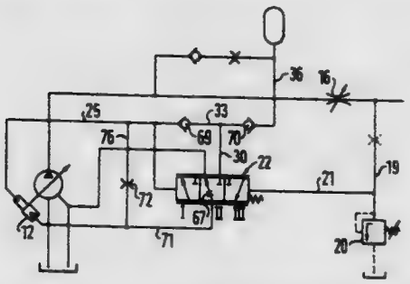
Claims priority, application Fed. Rep. of Germany, Mar. 8, 1989, 3907409

Int. Cl.[5] F04B *49/08*

U.S. Cl. 417—218 **4 Claims**

1. In a flow controlling device on an adjustable hydrostatic pump having an actuating element, said hydrostatic pump delivering a delivery flow over a delivery line at a delivery pressure and said flow controlling device regulating the delivery flow and also, as needed, the delivery pressure of same,

said actuating element being adjustable against a counterforce by at least one servo-piston which is acted upon by a control pressure, wherein the control pressure is controlled by a regulating valve, and, when an actual value of one of a delivery flow and delivery pressure is in approximate agreement with a reference value of one of the delivery flow and delivery pressure provided by means for providing the reference value of same, the control pressure is formed by a pressure divider which comprises a combination of a fixed throttle and a variable throttle in the regulating valve acted upon by one of a pressure differential across a measuring throttle arranged in the delivery line and a pressure differential across a throttle arranged in a line to a pilot valve, and also by a control spring which acts against a higher one of the two pressures producing the pressure differential on the regulating valve, said flow



controlling device also comprising an auxiliary pressure source which can act on the servo-piston indirectly via the regulating valve, the improvement comprising means for obtaining the control pressure from a pressure of the delivery flow from the pump (switching position II) via the pressure divider, when the actual value and reference value approximately agree, and, when there is not approximate agreement between the actual value and the reference value, means for obtaining the control pressure from a source of higher pressure for adjusting the pump (switching position III or IV), and means for relieving the servo-piston of pressure for resetting the pump (switching position I), and wherein a connection line (76,71) having a fixed throttle (72) therein connects the delivery line (15) to the servo-piston (12), only said fixed throttle (72) being present in said connection line (76,71).

5,173,032

NON-CLUTCH COMPRESSOR

Tatsuhiko Taguchi, Katano, and Yoshikazu Abe, Neyagawa, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Continuation of Ser. No. 545,894, Jun. 29, 1990. This application Feb. 7, 1992, Ser. No. 830,750

Claims priority, application Japan, Jun. 30, 1989, 1-170147

Int. Cl.[5] F04B *1/26*

U.S. Cl. 417—222.2 **4 Claims**

1. A non-clutch compressor, comprising:

a crank chamber;

a cylinder connected to said crank chamber;

an oscillating plate in said crank chamber having a piston connected thereto, said piston being disposed in said cylinder for movement therein,

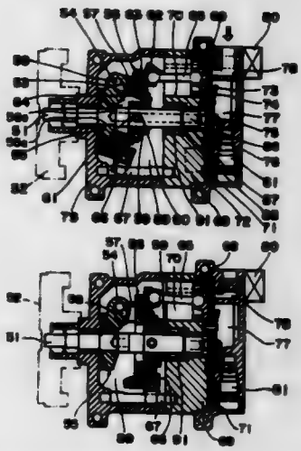
means for mounting said oscillating plate in said crank chamber such that said oscillating plate can be oscillated to move said piston in said cylinder and such that said oscillating plate has a variable angle of inclination for varying the amount of movement of said piston in said cylinder;

a suction chamber fluidly connected to said cylinder for a suction stroke of said piston, said suction chamber having a suction inlet;

a discharge chamber fluidly connected to said cylinder for a discharge stroke of said position;

a passage opening and closing means disposed in said suction inlet for opening and closing said suction inlet;

a pressure control valve means connected between said discharge chamber and said crank chamber for fluidly connecting said discharge chamber with said crank chamber when said suction inlet is opened by said passage opening and closing means in a normal cooling operation and when the pressure in said suction chamber is less than a predetermined value for regulating the angle of inclination of said oscillating plate;



a discharge hole fluidly connecting said crank chamber with said suction chamber, said discharge hole having a passage with a predetermined cross-sectional area; and

a driving means for driving said oscillating plate, said driving means including a belt pulley and said means for mounting including a rotary shaft directly connected to said belt pulley.

5,173,033

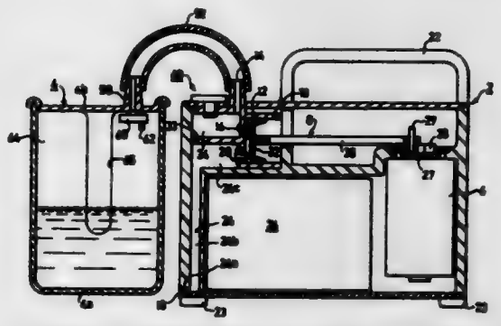
ONE-WAY UMBRELLA VALVE AND PORTABLE FLUID PUMPING DEVICE INCLUDING SAME

Carmeli Adahan, Jerusalem, Israel, assignor to Adahan Inc., Chicago, Ill.

Continuation-in-part of Ser. No. 625,339, Dec. 11, 1990, Pat. No. 5,116,206, and Ser. No. 712,759, Jun. 10, 1991. This application Nov. 25, 1991, Ser. No. 797,656

Int. Cl.[5] F16K *15/14*; F04B *17/00*

U.S. Cl. 417—234 **14 Claims**



1. A one-way umbrella valve for controlling the flow of a fluid through a valve opening in a wall, comprising: a valve stem having a neck received within a mounting opening in said wall, and an umbrella skirt integrally joined to said neck to overlie said valve opening on one side of the wall; the juncture between the umbrella skirt and neck of the valve stem being of frusto-conical configuration increasing in diameter from the neck to the umbrella skirt; said umbrella skirt being relatively thin for its complete extent; said one side of the wall being formed with a cavity of frusto-conical configuration with said

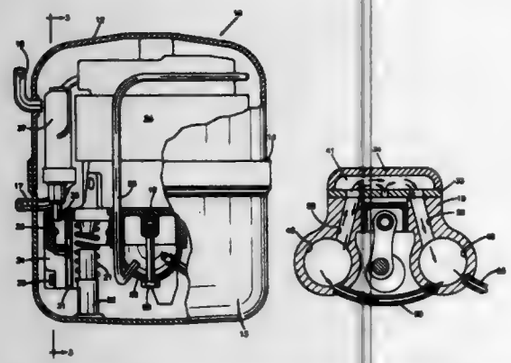
mounting opening at the center of the cavity and said valve opening adjacent to the outer periphery of the cavity.

5,173,034

DISCHARGE MUFFLER FOR REFRIGERATION COMPRESSOR

Delmer R. Riffe, Callman, Ala., assignor to White Consolidated Industries, Inc., Cleveland, Ohio

Filed Jul. 18, 1991, Ser. No. 732,499
Int. Cl.[5] F04B *21/00*; F01N *1/04*
U.S. Cl. 417—312 8 Claims



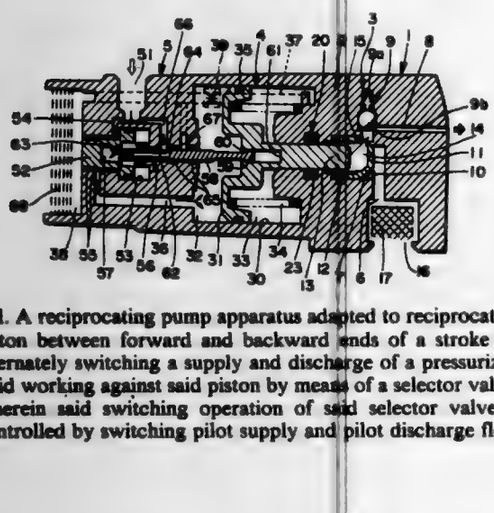
1. A hermetic refrigeration compressor comprising a case, a motor compressor mounted inside said case, a discharge line for discharging the output of said compressor from said case, said motor compressor including a cylinder block having a single cylinder and a piston reciprocably mounted therein, a cylinder head secured to said cylinder block and having a discharge plenum for receiving gas compressed by said piston, first and second muffler chambers on said cylinder block, a first passage connecting said discharge plenum to said first muffler chamber, a second passage connecting said discharge plenum to said second muffler chamber, a third passage connecting said first muffler chamber to said second muffler chamber, and a fourth passage connecting one of said muffler chambers to said discharge line.

5,173,035

RECIPROCATING PUMP

Eiichi Mukumoto, and Mitsufumi Kishimoto, both of Hyogo, Japan, assignors to Konan Electric Co., Ltd., Hyogo, Japan

Continuation-in-part of Ser. No. 335,913, Apr. 10, 1989, Pat. No. 4,993,924. This application Dec. 27, 1990, Ser. No. 634,375
Claims priority, application Japan, Apr. 15, 1988, 63-91778
Int. Cl.[5] F04B *17/04*
U.S. Cl. 417—402 5 Claims



1. A reciprocating pump apparatus adapted to reciprocate a piston between forward and backward ends of a stroke by alternately switching a supply and discharge of a pressurized fluid working against said piston by means of a selector valve, wherein said switching operation of said selector valve is controlled by switching pilot supply and pilot discharge flow passages by a pilot valve body which is switched by switching of said piston between forward movement and backward movement, and a fluid to be pumped is sucked through a suction valve and discharged through a delivery valve by a plunger reciprocated by said piston, the improvement wherein:

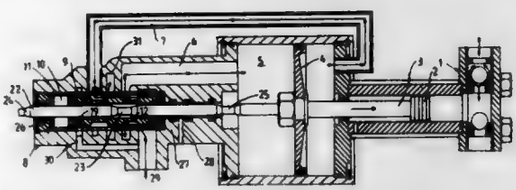
said pilot valve body has first and second means for engaging said piston for predetermined distances to and from the ends of the respective forward and backward strokes of said piston, for moving said pilot valve between a first position connecting said supply to a pilot chamber of said selector valve via said pilot supply passage to apply working pressure to said pilot chamber and a second position connecting said pilot chamber of said selector valve to said discharge via said pilot discharge passage to remove working pressure from said pilot chamber in said second position, said selector valve is moved from one switching position to another switching position by changing of the pressure in said pilot chamber, said means for engaging comprising means for releasing said pilot valve body from engagement with said piston and holding it at said each of said switching positions for a predetermined distance of movement of said piston after the stroke of said piston is reversed, said pilot valve body being mounted to be moved solely by contact between said engaging means and said piston.

5,173,036

METHOD AND AN ARRANGEMENT FOR CONTROLLING A LINEAR MOTOR

Tron-Halvard Fladby, Nittedal, Norway, assignor to Speeder, A.S., Nittedal, Norway

PCT No. PCT/NO90/00058, § 371 Date Oct. 4, 1991, § 102(e) Date Oct. 4, 1991, PCT Pub. No. WO90/12197, PCT Pub. Date Oct. 18, 1990
PCT Filed Mar. 30, 1990, Ser. No. 768,312
Claims priority, application Norway, Apr. 6, 1989, 891427
Int. Cl.[5] F04B *9/12*
U.S. Cl. 417—403 7 Claims



1. An arrangement in a fluid driven linear motor, for instance for operating a high pressure pump (1), comprising a cylinder (5) and a piston (4) the two opposite sides of which are being supplied with driving fluid from a slide valve device (8) having a slide (9) which is moved between its terminal positions under the effect of a pilot device (22) which is moved synchronously with the movements of the piston (4), the slide (9) being provided with an axially continuous cavity (12) in which said pilot device (22) is slidingly received and arranged to alternately bring the cavity (12) in fluid communication with the ends of the slide (9) when the piston (4) is at its terminal positions, the slide (9) further being provided with means (15, 19–21) for the supply of driving fluid to the cavity (12), characterized in that the cavity (12) of the slide (9) at its axially separated ends is provided with inwardly protruding seals (13, 14) which interact with the pilot device (22), and that the pilot device (22) has a first section (23) of reduced cross section which opens the said cavity (12) towards the ends of the slide when it is in a position opposite one or the other of the seals (13, 14).

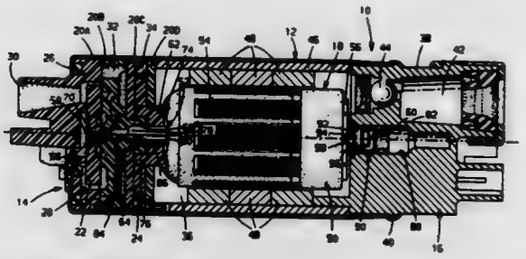
AUTOMOTIVE FUEL PUMP

James N. Martin, Clio, and John E. Creager, Linden, both of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Dec. 9, 1991, Ser. No. 803,837
Int. Cl.[5] F04B 17/00, 35/04
U.S. Cl. 417—423.3 4 Claims



1. An automotive fuel pump comprising:
a tubular shell,
a pump group in said shell at a first end thereof including an impeller and a partition wall,
an end housing in said shell at a second end thereof,
an electric motor in said shell including an armature shaft,
means defining a drive end on said armature shaft adjacent a first end thereof drivingly connected to said impeller whereby said impeller is rotatable as a unit with said armature shaft,
means defining an integral annular first spherical shoulder on said armature shaft axially inboard of said drive end and having a center on a longitudinal centerline of said armature shaft,
a first bearing in an aperture in said partition wall having a bearing seat engageable on said first spherical shoulder and being operative to react axial thrust and radial bearing forces between said armature shaft and said partition wall whereby said armature shaft is supported on said partition wall for rotation about said centerline of said armature shaft and for universal pivotal movement about said center of said first spherical shoulder,
means defining an integral second spherical shoulder in said armature shaft adjacent a second end thereof having a center on said centerline of said armature shaft and being symmetric on opposite sides of a plane perpendicular to said centerline of said armature shaft through said center of said second spherical shoulder, and
a second bearing on said end housing having a cylindrical bearing seat closely receiving said second annular shoulder operative to react only radial bearing forces between said armature shaft and said end housing in a plane perpendicular to a longitudinal centerline of said cylindrical bearing seat whereby said second end of said armature shaft is supported on said end housing for rotation about said centerline of said armature shaft.

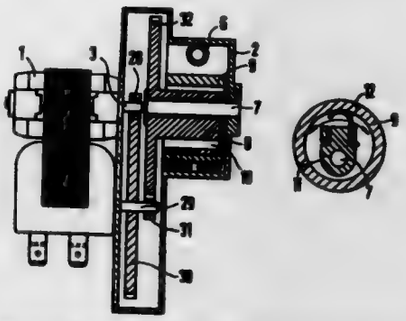
PERISTALTIC PUMP

Reinhold Hopfensperger, Dietelskirchen; Rudolf Tungl, Ergolding, and Albert Rockermeier, Herrnglersdorf, all of Fed. Rep. of Germany, assignors to Standard Elektrik Lorenz Aktiengesellschaft, Stuttgart, Fed. Rep. of Germany

Filed Feb. 14, 1991, Ser. No. 655,149
Claims priority, application Fed. Rep. of Germany, Feb. 23, 1990, 4005725; Oct. 5, 1990, 4031554
Int. Cl.[5] F04B 43/12
U.S. Cl. 417—476 13 Claims

1. A peristaltic pump comprising:
an electric motor;
a flexible tube arranged along a substantially circular path; and
a rotatable compression member disposed adjacent to said flexible tube for progressively and recurrently compressing said flexible tube, said compression member including



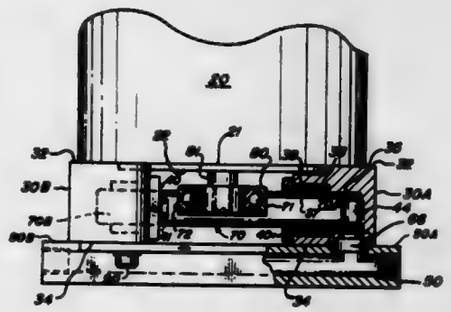
an integrally formed speed-reduction drive means coupled to said electric motor;
wherein said compression member comprises a blocklike cam, a leaf spring disposed at an end of said cam, and a rigid substantially circular cylinder loosely surrounding said cam and said leaf spring.

5,173,039

DOUBLE ACTING SIMPLEX PLUNGER PUMP

James E. Cook, 418 Rice St., Anoka, Minn. 55303

Filed Sep. 27, 1991, Ser. No. 766,331
Int. Cl.[5] F04B 21/02
U.S. Cl. 417—534 8 Claims



1. A double acting simplex plunger pump comprising:
a) first and second unitary combined stuffing box and head members each member comprising (i) a unitary block having two spaced apart and parallel surfaces respectively designated a motor end face engaging surface and a pump manifold engaging surface, (ii) a recess in said block for receiving a cylindrically shaped plunger, said recess having a circular cross section and a longitudinal axis lying parallel to and in between said spaced apart parallel surfaces, (iii) a set of first and second pump port recesses in said block and each extending from said pump manifold engaging surface into said block and into connective relationship with said plunger receiving recess, and (iv) first and second check valve means respectively and reversely positioned in said first and second pump port recesses so that said first check valve means will admit fluid flow from said plunger recess and so that said second check valve means will admit fluid flow toward said plunger recess,
b) a manifold having a longitudinal axis, a bottom flat surface adapted to be abutted by said pump manifold engaging surfaces, first and second transversely spaced apart manifold inlet/outlet ports extending longitudinally therethrough from a first end to a second end and being mutu-

ally parallel to said longitudinal axis, and first and second longitudinally spaced apart sets of ports connecting said manifold inlet/outlet ports to said bottom flat surface,

c) plunger means comprising a shaft having a longitudinal axis and a preselected longitudinal length, first and second pumping means on the ends thereof, and a centrally located crank engaging means,

d) motor means having a planar axial end face, an output shaft rotatable about a shaft axis and extending axially from and perpendicular to said end face, and crank means on an end of said shaft, and

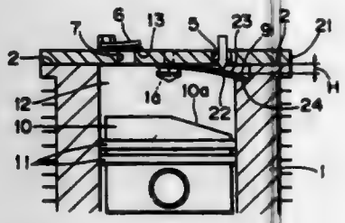
e) means connecting said members, said manifold, said plunger and said motor means, whereby: (i) said members are preassembled with said plunger means with said first and second pumping means of said plunger means being disposed in said plunger receiving recesses, (ii) said members are spaced apart along said plunger longitudinal axis a preselected longitudinal length, (iii) said motor end face engaging surfaces of said members are abutting said planar axial end face of said motor means, (iv) said pump manifold engaging surfaces of said members are abutting said bottom flat surface of said manifold, (v) said two sets of first and second pump port recesses of said members are respectively in register with said first and second longitudinally spaced apart sets of ports in said manifold, and (vi) said crank means is operatively connected to said crank engaging means of said plunger means.

5,173,040

AIR COMPRESSOR

Tatsuya Yamazawa, Sagamihara; Iwao Ohtani, Yokohama; Gen Kano, Yokohama, and Hiroshi Mitsuhashi, Yokohama, all of Japan, assignors to Tokico Ltd., Kawasaki, Japan

Filed Feb. 20, 1991, Ser. No. 658,094
Claims priority, application Japan, Feb. 20, 1990, 2-15778[U]
Int. Cl.[5] F04B 39/10
U.S. Cl. 417—571 10 Claims



1. An air compressor comprising:

a cylinder;

a piston fitted into a cylinder chamber within said cylinder in a manner so that said piston can slide along said cylinder chamber;

a valve seat plate which has suction holes and at least one discharge hole provided at an end portion of said cylinder, therefore said valve seat plate compartmentalizing a compression chamber between said piston and said valve seat plate, inside of said cylinder chamber, wherein said suction holes are formed through said valve seat plate inside a projection space of said cylinder chamber, said suction holes are arranged at a distance from each other around a circumference of said cylinder chamber, wherein said at least one discharge hole is formed through said valve seat plate inside the projection space of said cylinder chamber;

a discharge valve plate opening and closing said at least one discharge hole;

a suction valve plate formed from a V-shaped ribbon material, connecting to an end face of said valve seat plate confronting said cylinder chamber, said V-shaped portion of which is positioned inside of the projection space of said cylinder chamber so that said V-shaped portion opens and closes all of said suction holes, both end portions of said suction valve being fixed to said valve seat plate outside of the projection space of said cylinder chamber; and

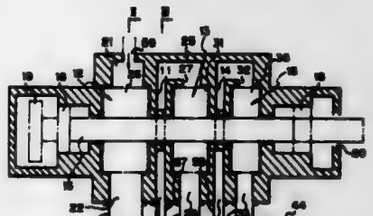
a suction valve plate receptor which overlaps said suction valve plate when said suction valve plate is in suction stroke, and which has enough rigidity to restrict the amount of lift of said suction valve plate.

5,173,041

MULTISTAGE VACUUM PUMP WITH INTERSTAGE SOLID MATERIAL COLLECTOR AND COOLING COILS

Yasuhiro Niimura, and Haruaitsu Saito, both of Tokyo, Japan, assignors to Ebara Corporation, Tokyo, Japan

Filed Sep. 12, 1991, Ser. No. 757,954
Claims priority, application Japan, Sep. 21, 1990, 2-252988
Int. Cl.[5] F04C 23/00
U.S. Cl. 418—9 3 Claims



1. In a multistage vacuum pump including a plural set of two lobe type vacuum pumps arranged on a common shaft for rotors and in a common casing, the adjacent pumps being connected in series with each other through a communicating passage formed in a pump casing;

the improvement characterized in that a solid material collector having a cooling means for collecting a solid material in a pump fluid by cooling is provided in said communicating passage so that the whole pump fluid is passed through said cooling means, wherein said solid material collector is dismountable from said pump casing, said communicating passage on a downstream side of said solid material collector is formed adjacent to a discharge portion of a pump chamber on a front pump stage, and a fluid from the front pump stage flows into a pump chamber on a rear pump stage by way of said communicating passage while being heated by heat transmitted from said discharge portion.

5,173,042

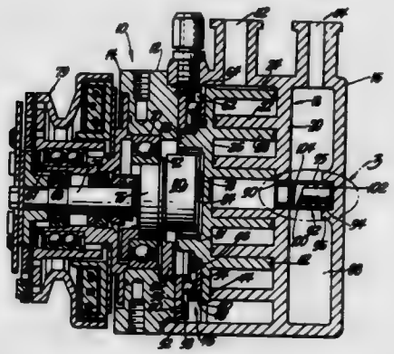
SCROLL COMPRESSOR AND DISCHARGE VALVE

Dale T. Chambers, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich.

Filed Nov. 4, 1991, Ser. No. 787,845
Int. Cl.[5] F04C 18/04; F16K 15/00
U.S. Cl. 418—55.1 3 Claims

1. A scroll type fluid compressor having a housing with a front section and a rear section; a fluid inlet in the housing; a fluid outlet in the housing; a fixed scroll integral with the housing rear section; in one piece an orbital scroll cooperating with the fixed scroll to form fluid pockets; a rotation prevention assembly which permits orbital movement and prohibits rotation of the orbital scroll; a driven crankshaft rotatably journaled in the housing front section and connected to the orbital scroll and operable to move the orbital scroll in an orbital path, move the fluid pockets toward the center of the scrolls and compress the fluid in the pockets; the integral one piece housing rear section and fixed scroll including an integral enclosed exhaust cavity and a scroll discharge aperture near the center of the fixed scroll connecting the region at the center of the two scrolls with the integral enclosed exhaust

cavity; a one way discharge valve including a tubular valve body pressed into the scroll discharge aperture from the side of the fixed scroll end plate that faces the orbital scroll unit, the value being out of the orbital path of the orbital scroll and extending into the exhaust cavity, a valve seat mounted in the tubular valve body, a valve plate seated on the valve seat, a



spring to bias the valve plate toward the valve seat, at least one radial port in the tubular body operable to allow the passage of fluid from the scrolls to the exhaust cavity when the valve plate is forced off the valve seat by compressed fluid in the scrolls; and wherein the fluid outlet port in the housing is in a wall of the exhaust cavity.

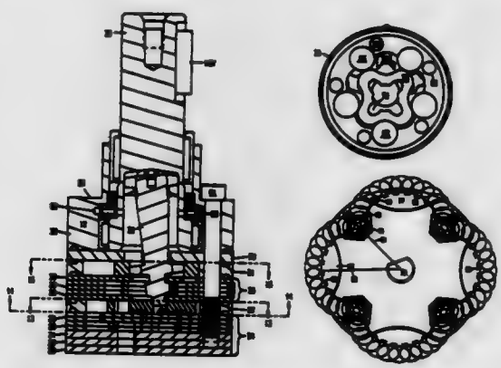
REDUCED SIZE HYDRAULIC MOTOR

Hollis N. White, Jr., Hopkinsville, Ky., assignor to White Hydraulics, Inc., Hopkinsville, Ky.

Continuation of Ser. No. 471,475, Jan. 29, 1990, abandoned. This application Oct. 11, 1991, Ser. No. 777,435

Int. Cl.[5] F03C *2/08*

U.S. Cl. 418—61.3 **47 Claims**



1. In a gerotor hydraulic pressure device having a wobble stick with integral teeth having an outer diameter directly drivingly engaging a rotor having rotor lobes with a minor diameter, the improvement of the teeth of the wobble stick being laid out in the pattern of the lobes of the rotor and the outer diameter of the integral teeth of the wobble stick being larger than the minor diameter of the rotor lobes.

3. In a gerotor hydraulic pressure device having bi-directional valving openings in the body of the device adjacent to a rotor cavity and a wobble stick driven rotor, the valving openings extending about a center of a stator and having an inner edge and the wobble stick having teeth which trace a pattern on the surface containing the valving openings, the pattern having an outside diameter having a distance from the center of the stator, the improvement of the inner edge of the cell openings being within the distance of the outside diameter of the pattern, the inner edge of the cell openings having a recessed shape so as to avoid the areas traced by the teeth of the wobble stick so as to allow a clearance for such teeth.

7. In a gerotor motor having an orbiting valve connected to a valve drive member for rotation therewith, which valve has openings cooperating with bi-directional valving openings in the body of the gerotor motor to selectively connect the pressure cells of the gerotor motor to two fluid connections in the body of the gerotor motor, the valving openings being of a certain number and the valve having a number of null positions per each revolution of the valve wherein a particular valving opening is closed by the valve and not interconnected to the openings of the valve, the improvement of the valve having a number of null positions different than one less than the number of valving openings.

5,173,044

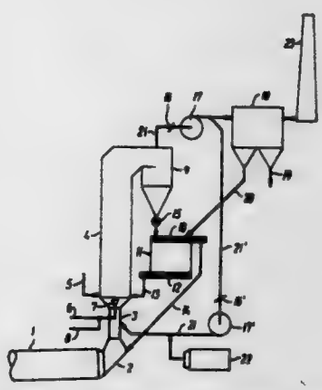
METHOD AND APPARATUS FOR THE MANUFACTURE OF CLINKER OF MINERAL RAW MATERIALS

Peter B. Nellsen, Valby, Denmark, assignor to F. L. Smidth & Co. A/S, Denmark

Filed May 15, 1990, Ser. No. 523,854

Int. Cl.[5] F27B *15/00*

U.S. Cl. 432—14 **6 Claims**



1. A method for manufacturing clinker or raw materials according to the wet-process wherein a slurry of wet-ground raw material is preheated, dried, burned and sintered to clinker in a rotary kiln plant, said method comprising the steps of

a) feeding substantially the total amount of wet-ground raw material slurry to be treated to a gas suspension drier having a substantially verticle axis,

b) passing substantially all of the hot kiln gases from the kiln to the bottom of the gas suspension drier,

c) adding a dry desulfuring raw mix material such as fly ash at or near the bottom of the gas suspension drier,

d) causing the hot kiln gases, raw material slurry and desulfuring dry raw mix material to form a gas suspension and to pass upwardly through the gas suspension drier, thereby preheating and drying the raw material in the slurry and causing the absorption of sulfur dioxide contained in the hot kiln gases,

e) passing the resulting preheated dried material-gas suspension upwardly and out of the gas suspension drier and separating the preheated dried material from the suspension gas in a separator, and

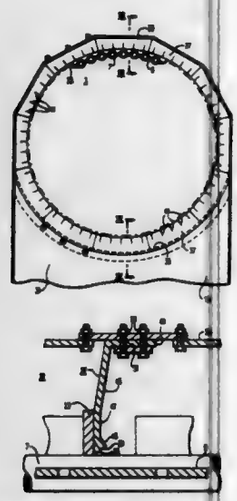
f) passing the preheated dried material to the rotary kiln and burning the material in the kiln to form clinker.

5,173,045

RADIAL SEAL FOR ROTARY COMBUSTOR

Cornel Macri, Monrovia, Calif., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Sep. 27, 1991, Ser. No. 766,931
Int. Cl.[5] F27B 7/24
U.S. Cl. 432—115 7 Claims



1. A radial seal for a rotary combustor formed by a circular array of water cooled spaced apart pipes having a perforated web disposed between adjacent pipes, the combustor being disposed for rotation on an inclined axis within a windbox, the upper portion of which is spaced a relatively short distance,- from said pipes, said radial seal comprising a ring extending girth wise around the rotary combustor and having a flat surface disposed normal to the axis of the rotary combustor and a plurality of thin bent plates depending from the upper portion of the windbox and disposed adjacent each other; the lower portion of the windbox having a wall portion generally normal to the axis of the rotary combustor and said wall having a rim spaced from the rotary combustor; a plurality of thin bent plates extending from said wall portion adjacent said rim; all of said thin bent plates having a distal margin disposed adjacent the pipes, a plurality of kerfs extending inwardly, from the distal margin of each thin bent plate and a portion of each thin bent plate adjacent the distal margin engaging the flat surface on the ring to form a running seal, which allows for differential thermal expansion of the windbox and the rotary combustor and runout of the rotary combustor.

5,173,046

APPARATUS FOR TREATING THE EXTERIOR SURFACE OF PLASTIC CONTAINERS

Stuart M. Walker, 860 Carver Blvd., Toledo, Ohio 43607

Filed Apr. 4, 1990, Ser. No. 504,578
Int. Cl.[5] F27B 9/14
U.S. Cl. 432—121 20 Claims

1. An apparatus for flame treating an exterior surface of a plastic container comprising:

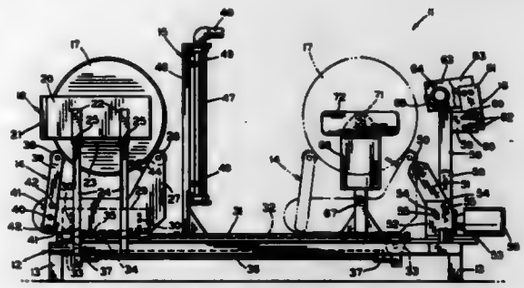
a frame;

a carriage for rotatably supporting a plastic container, said carriage mounted for movement on said frame and having means for engaging an exterior surface of and rotatably supporting the plastic container;

a first treatment station to said frame for flame treating an end of the container;

a second treatment station attached to said frame and spaced from said first treatment station for flame treating sides of the container;

means mounted on said frame for moving said carriage from a starting position past said first treatment station to said second treatment station and moving said carriage from said second treatment station past said first treatment station to said starting position; and



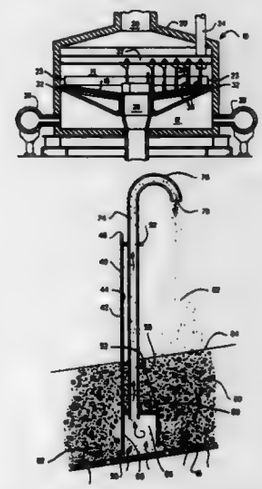
means attached to said frame adjacent said second treatment station for ejecting the container from said carriage.

5,173,047

SHROUDED RABBLES FOR USE IN ROTARY HEARTH FURNACES

Paul K. Shefsiek, Washington, Pa., assignor to Salem Furnace Co., Pittsburgh, Pa.

Filed Sep. 6, 1991, Ser. No. 755,867
Int. Cl.[5] F27B 9/16; F23G 5/00
U.S. Cl. 432—138 18 Claims



1. A shrouded rabble for use in a rotary furnace having an upper furnace chamber and a lower furnace chamber, said furnace chambers separated by a perforated hearth, said upper chamber further defined by a roof above said perforated hearth, wherein a heating gas is passed from said lower chamber through said perforated hearth and into said upper chamber, said rabble suspended above the perforated hearth for urging a charge material from one location to another on the perforated hearth in response to relative rotation between the perforated hearth and said rabble, wherein charge fines accumulate on the perforated hearth due to breakdown of charge materials, said rabble comprising:

a blade having an active face, a backface, an upper edge and a lower edge;

means for supporting said blade in a position directly above the perforated hearth;

a shroud extending from the backface of said blade adjacent its lower edge substantially along a length of said lower edge, said shroud cooperating with a portion of said backface to define a shroud chamber directly above the perforated hearth, said shroud screening charge materials from

said shroud chamber to expose charge fines on the perforated hearth; and

at least one opening in fluid communication with said shroud chamber;

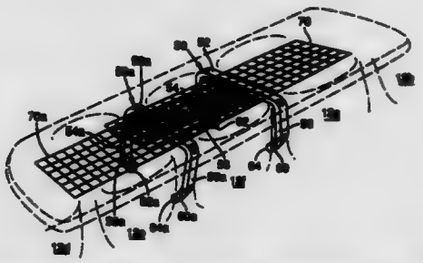
wherein said charge fines become fluidized in the upflowing heating gas and exit the shroud chamber through s id opening.

5,173,048

DENTAL INTEROCCLUSAL SPLINT

John D. Summer, 1427 NW. 23rd, Portland, Oreg. 97210-2615

Filed Apr. 15, 1991, Ser. No. 685,550
Int. Cl.[5] A61C 3/00
U.S. Cl. 433—6
22 Claims



1. A method for manufacturing an interocclusal splint for covering the teeth of a first dental arch and interdigitating with or engaging the teeth of a second opposing dental arch, the method comprising the steps of:

placing a clasp on the first dental arch; and

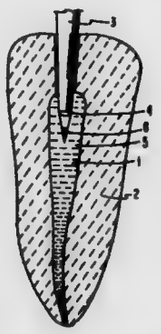
placing a moldable material in contact with the clasp and allowing it to harden with the teeth of the first and second dental arches engaging the material such that the material hardens with the dental arches in a desired alignment.

5,173,049

REMOVING A POST EMBEDDED IN A TOOTH

Guy Levy, Tustin, Calif., assignor to Endo Technic Corporation, San Clemente, Calif.

Division of Ser. No. 663,425, Mar. 1, 1991, Pat. No. 5,116,227. This application Mar. 5, 1992, Ser. No. 846,662
Int. Cl.[5] A61C 5/00, 5/02
U.S. Cl. 433—215
2 Claims



1. A process for loosening a post having a portion embedded in natural tooth material, comprising:

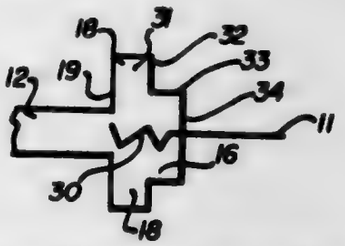
providing an optical fiber having a free end provided with a radiation focussing element; bringing the free end of the fiber to a location adjacent the embedded portion of the post; providing a liquid around the free end of the optical fiber; and supplying pulses of laser radiation to the fiber so that the radiation exits the fiber via the free end to transform a portion of the liquid into vapor and provoke a cavitation of the vapor at the interior of the liquid.

5,173,050

DENTAL CORTICAL PLATE PERFORATOR

Frank J. Dillon, 39 Eglington Road, Donnybrook, Dublin 4, Ireland

Continuation of Ser. No. 188,966, May 2, 1988, Pat. No. 5,057,013. This application Dec. 27, 1990, Ser. No. 634,543
Claims priority, application Ireland, May 19, 1987, 1308/87
Int. Cl.[5] A61C 3/02
U.S. Cl. 433—165
7 Claims



1. A dental device for forming a perforation in the cortical plate of human maxillary and mandibular bones in order to permit intraosseous injection of local anesthetic solution, said dental device comprising:

a shank having a first end, formed with recess means for latching in a latching-type powered dental handpiece, and a second end;

a perforator needle extending from said shank second end and having a free end opposite said shank, the diameter of said perforator needle corresponding to the diameter of a dental injection needle, said free end being beveled to provide a cutting edge to form the perforation by rotating said perforator needle while gently pressing said perforator needle against the cortical plate; and

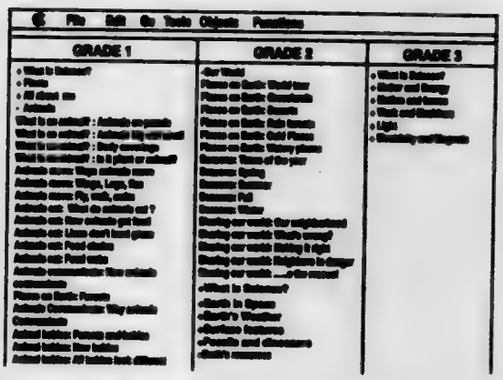
protective cover means enclosing said perforator needle, said cover means being secured to a part of said device and being removable therefrom to expose said perforator needle when said device has been latched in the powered dental handpiece.

5,173,051

CURRICULUM PLANNING AND PUBLISHING METHOD

Theodore May, Layfayette, N.J.; Ronald Chalmers, New Hyde Park, N.Y.; Timothy Walker, Long Valley, N.J.; William Clark, Bedminster, N.J., and Anne Dudley, Basking Ridge, N.J., assignors to Optical Data Corporation, Warren, N.J.

Filed Oct. 15, 1991, Ser. No. 776,174
Int. Cl.[5] G09B 19/00, 17/00; A47B 41/00
U.S. Cl. 434—118
2 Claims



1. A method of curriculum planning and publishing which comprises:

(a) providing recallable information capable of being conveyed from an information source to an information repository;

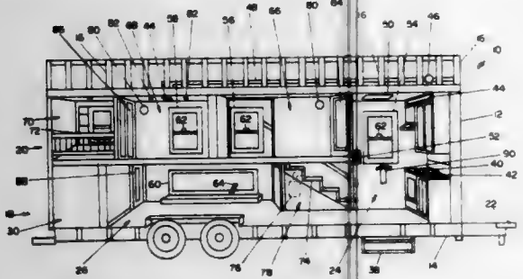
(b) selecting and segregating portions of the information to be conveyed from an information source to an information repository;
(c) ordering the selected and segregated portions of information;
(d) translating the ordered information into a curriculum that can be conveyed from an information source to an information repository; and
(e) providing coded material onto the curriculum to prompt a computer or videodisc player.

5,173,052

FIRE SAFETY TRAINING TRAILER FOR CHILDREN

Eugene H. Duncan, Jr., Lancaster, Pa., assignor to Duncan Associates, Inc., Lancaster, Pa.

Filed Sep. 17, 1991, Ser. No. 760,933
Int. Cl.[5] G09B *19/00*; B60P *1/00*
U.S. Cl. 434—226 **6 Claims**



1. A fire safety training apparatus comprising:
a wheeled trailer;
a structure mounted on the trailer and permanently attached to the trailer, the structure including exterior walls which define an interior of the structure, interior partitioning walls and portions which are constructed as two levels, with an upper level above a lower level, with the upper level being accessible from within the structure;
stairs accessible from both levels and interconnecting the upper and lower levels; and
at least one operating window in an exterior wall of the structure, the window being of a type which is in use in permanent residential structures;
wherein the lower level includes a control room within the interior of the structure and a door in an interior partitioning wall of the structure which directly interconnects the control room with another portion of the interior of the structure; and
further including an interior window provides visibility between the control room and other portions of the interior of the structure.

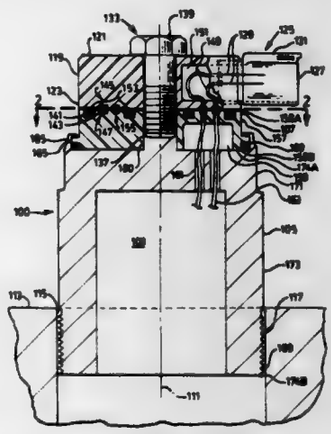
5,173,053

ELECTRICAL CONNECTOR FOR AN ELECTROMECHANICAL DEVICE

Morris A. Swanson, Washington; Peter Hakkenberg, Dunlap, both of Ill., and Jeffrey R. Albers, Yucaipa, Calif., assignors to Caterpillar Inc., Peoria, Ill.

Filed Nov. 26, 1991, Ser. No. 798,388
Int. Cl.[5] H01R *39/02*
U.S. Cl. 439—27 **8 Claims**

1. An electrical connector for an electromechanical device, comprising:
a housing having first and second ends and an axis extending longitudinally through said housing, and being adapted to be connectable to a surface bore, said electromechanical device being disposable in said housing;
a rotatable portion having first and second ends and being rotatably connected to said housing, said second end of said rotatable portion being positioned adjacent to said first end of said housing along said axis;
means for fastening said rotatable portion to said housing, said rotatable portion being adapted to turn about said axis;
a first and second set of radially spaced, electrically conductive contacts being axially aligned with and radially disposed from said axis, said first set of contacts being disposed on said second end of said rotatable portion and said



second set of contacts being disposed on said first end of said housing, wherein said first set of contacts is biased by said fastening means into slidable electrical contact with said second set of contacts to deliver electrical energy to said electromechanical device;
said first end of said housing defining a plurality of annular recesses being radially spaced from and coaxially disposed about said axis, said second set of contacts being disposed in said annular recesses;
a pair of circular bands of elastomeric material, each band having a circular cross sectional area and being disposed in said annular recesses; and
wherein said second set of contacts are positioned between said pair of circular bands.

5,173,054

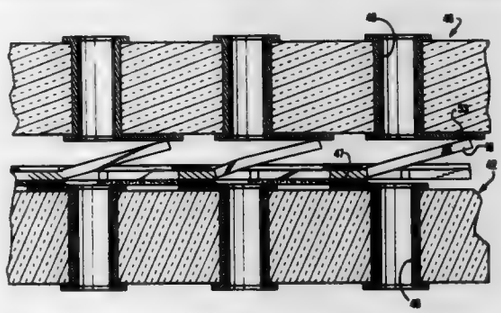
Patent Not Issued For This Number

5,173,055

AREA ARRAY CONNECTOR

Dimitry G. Grabbe, Middletown, Pa., assignor to AMP Incorporated, Harrisburg, Pa.

Filed Aug. 8, 1991, Ser. No. 742,771
Int. Cl.[5] H01R *9/09*
U.S. Cl. 439—66 **10 Claims**



1. An electrical area array connector for use in interconnecting first and second electronic devices, each having an array of

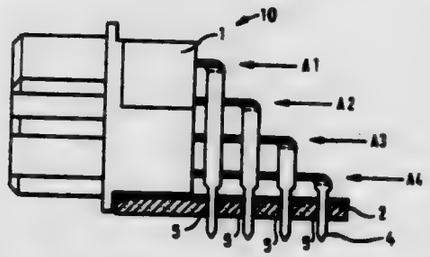
contact pads disposed on a planar surface thereof, an array of contact elements each including a plate portion electrically and mechanically attached to the contact pad of the second device and at least one contact spring finger extending freely and obliquely relative to the plane of the plate portion an second element to resiliently engage the contact pad of the first device and provide an interconnection of the contact pads of the first and second devices.

5,173,056

MULTIPOLE PLUG-IN CONNECTOR

Wolfgang Kniese, and Otto Schempp, both of Bad Rappenau, Fed. Rep. of Germany, assignors to Molex Incorporated, Lisle, Ill.

Filed Aug. 29, 1991, Ser. No. 751,496
Int. Cl.[5] H01R *9/09, 23/70*
U.S. Cl. 439—79 5 Claims



1. A right angle electrical connector comprising a housing adapted for mounting on a printed circuit board,

a plurality of substantially identical contacts mounted in the housing and arranged in a matrix of rows and columns the rows arranged one above the other,

each contact having a portion extending away from the housing and terminating in a free end,

a plurality of conductive areas located on the printed circuit board and arranged in a matrix of rows and columns,

the contact portions extending from the housing in each column are mutually offset and formed to connect their free ends to predetermined conductive areas located in the same column on the printed circuit board,

wherein all the individual contact portions are of substantially the same length

wherein the uppermost row of contacts in the housing located the farthest from the printed circuit board is connected to conductive areas located in a row on the board located closest to the housing, and the lowermost row of contacts in the housing located closest to the printed circuit board is connected to conductive areas located in a row on the board located the farthest away from the housing,

wherein the extending contact portions located in the same column in the housing are formed with a predetermined offset such that overlapping contact portions do not come in contact with each other and the free end of each contact is located above a predetermined conductive area located in a corresponding column of conductive areas,

wherein the contacts are of flat metallic strips and the contact portions extending from the housing have a major surface substantially parallel to the surface of the printed circuit board, and

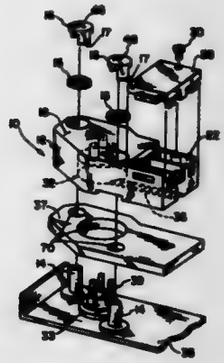
wherein the offset is formed by bending the free end of the contact down and positioning it under the contact portion extending from the housing, the bent down portion forming a substantially 45° angle with the portion of the contact extending from the housing, and further bending the free end at a predetermined location at a substantially right angle down towards the surface of the printed circuit board.

5,173,857

PERMANENT PROTECTIVE COVER

Ricky L. Bunch, Tecumseh, and Anthony S. Carstensen, Adrian, both of Mich., assignors to Tecumseh Products Company, Tecumseh, Mich.

Filed Feb. 7, 1992, Ser. No. 832,378
Int. Cl.[5] H01R *13/00*
U.S. Cl. 439—217 18 Claims



1. A hermetic compressor including a housing with a hermetic terminal cluster thereon and a protective cover assembly covering said hermetic terminal cluster, said cover assembly comprising:

a protective cover attached to said housing, said cover including a recess for enclosing said hermetic terminal cluster;

terminal means located on said cover for connecting power to said hermetic terminal cluster; and

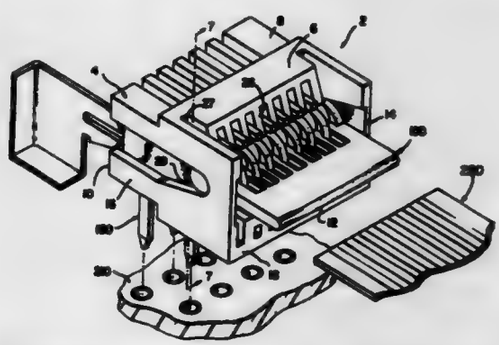
connection means disposed within said cover for electrically connecting said terminal means and said hermetic terminal cluster, whereby said hermetic terminal cluster is enclosed at all times while electrical connection to said hermetic terminal cluster is permitted.

5,173,058

ZERO INSERTION FORCE ELECTRICAL CONNECTOR

Johannes M. Broeksteeg, Ag Oss, and Lucas Seus, Rosmalen, both of Netherlands, assignors to AMP Incorporated, Harrisburg, Pa.

Filed May 5, 1989, Ser. No. 348,612
Claims priority, application United Kingdom, May 5, 1988, 8810581
Int. Cl.[5] H01R *11/22*
U.S. Cl. 439—267 10 Claims



1. An electrical connector comprising an insulating housing having a plurality of terminal receiving passageways for receiving a like plurality of electrical terminals, the housing further comprising a mating force for receipt of a plurality of electrical conductors, the terminals each including a fixed contact arm and a movable spring arm, where each of the arms

contains an opposed contact portion for contacting the electrical conductors and a lever portion integrally formed with the movable spring arm which can be lifted by an actuator member to open the opposed contact portions, the connector being characterized in that:

the housing includes an open nest area proximate to the mating face with the lever sections extending over the open nest area, and in that the actuator member is defined as a cam shaft having a shaft portion and eccentric cam portions, the cam shaft being positioned within the open nest area and rotatable therein in continuous slidable engagement against the open nest area, the lever portions extending over the cam shaft eccentric cam portions and being adapted for slidable engagement against the eccentric cam portions upon rotation of the cam shaft, the cam shaft being rotatable from an initial angle where the lever is proximate to the shaft portion, through an angle where the eccentric cam portions slidably engage the lever portions and raise the movable spring arm to take the opposed contact portions out of contact with each other.

5,173,059

LOCK MECHANISM OF INNER LOCK TYPE FOR ELECTRICAL CONNECTOR

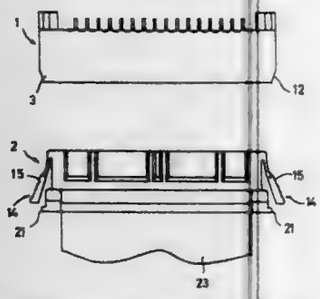
Keisaku Sato, and Naohisa Nakata, both of Tokyo, Japan, assignors to Hirose Electric Co., Ltd., Tokyo, Japan

Filed Jul. 19, 1991, Ser. No. 731,788

Claims priority, application Japan, Jul. 20, 1990, 2-76544[U]

Int. Cl.[5] H01R *13/627*

U.S. Cl. 439—354 **5 Claims**



1. An electrical connector consisting of a connector socket having a rectangular socket block having a rectangular cavity and a connector plug having a rectangular plug block designed to fit into said rectangular cavity;

said rectangular socket block comprising:

a pair of lock recesses formed on insides of opposite side walls of said socket block thus forming an inner-lock type connector socket, each having a pair of lock shoulders and a central cutout formed through each of said side walls in a front portion thereof; and

a pair of sloped outer surfaces in opposite front portions of said side walls;

said rectangular plug block comprising:

a pair of lock arms having a base portion extending backwardly from front ends of opposite side walls of said plug block and a front portion extending backwardly and outwardly from said base portion, said base portions having a pair of lock projections for engagement with said lock shoulders of the lock recesses with the lock arm extending through the central cutouts.

5,173,060

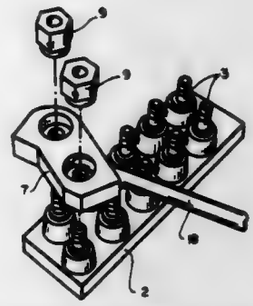
TELECOMMUNICATIONS TERMINAL BLOCK OR ADAPTER

Gerald L. Shimirak, Danville, and Paul S. Chan, San Francisco, both of Calif., assignors to Raychem Corporation, Menlo Park, Calif.

Continuation-in-part of Ser. No. 231,775, Aug. 12, 1988, abandoned, which is a continuation-in-part of Ser. No. 164,261, Mar. 4, 1988, abandoned, and a continuation-in-part of Ser. No. 164,301, Mar. 4, 1988, abandoned. This application Jun. 12, 1990, Ser. No. 537,205

Int. Cl.[5] H01R *4/24*

U.S. Cl. 439—416 **47 Claims**



1. An adapter by means of which cores of a multi-core drop wire can be connected to a pair of binding posts of a terminal block, which comprises:

(a) two caps that can be received on respective binding posts, and

(b) a housing having:

(i) two first apertures each extending from a first surface to a second surface of the housing, the housing being positionable with the first surface adjacent the terminal block and the binding posts within respective said first apertures such that the posts can receive respective caps at the second surface, the caps extending within respective said first apertures; and

(ii) a second aperture that passes between, and is in communication with each of, said first apertures, the second aperture being capable of receiving said drop wire such that respective cores thereof pass through respective first apertures and are contacted by respective caps when received by respective binding posts within the first apertures.

5,173,061

TELECOMMUNICATIONS OUTLET

Joseph D. Comerci, Elmhurst; Mark M. Data, Bolingbrook, and Robert DeRose, Naperville, all of Ill., assignors to Molex Incorporated, Lisle, Ill.

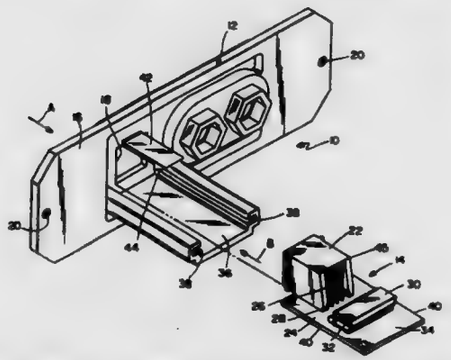
Filed Feb. 12, 1992, Ser. No. 836,041

Int. Cl.[5] H01K *13/74*

U.S. Cl. 439—536 **16 Claims**

1. In a telecommunications outlet which includes an outlet housing and a telecommunications module assembly, the outlet housing including an opening into which a complementary mating telecommunications plug can be inserted from the front of the housing, and the telecommunications module assembly including a telecommunications module mounted on a printed circuit board, wherein the improvement comprises complementary interengaging guide means on the rear of the housing and an edge of the printed circuit board for guiding the module assembly into an operable position with the telecommunications module aligned with said opening for mating with the telecommunications plug therethrough, and complementary interengaging latch means between the housing and the tele-

communications module for holding the module assembly in said operable position, wherein said latch means include a



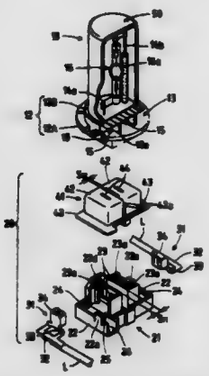
flexible cantilevered locking arm for engaging and locking behind a portion of the telecommunications module.

5,173,062

DISCHARGE LAMP CONNECTOR ASSEMBLY

Kihachiro Uchida, Shizuoka, Japan, assignor to Koito Manufacturing Co., Ltd., Tokyo, Japan

Filed Aug. 30, 1991, Ser. No. 753,451
Claims priority, application Japan, Aug. 31, 1990, 2-228217; Nov. 29, 1990, 2-325362
Int. Cl.[5] H01R *19/00*
U.S. Cl. 439—617 8 Claims



1. A discharge lamp connector assembly, comprising:

a male connector having at least two male terminals, said male connector serving as a base of the discharge lamp, said male connector comprising a discharge preventing partition insulator projecting from substantially the center of a region between said male terminals;

a female connector engageable with said male connector for securely retaining at least two female terminals which are engageable with said male terminals, said female connector comprising:

a housing having spaced partitions which define compartments for repectively accommadating therein said female terminals, said partitions defining a space therebetween, and

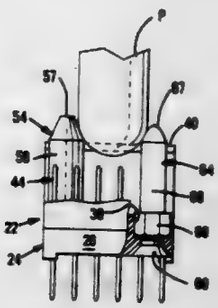
a holder fitting over said housing by an elastic engagement thereby securely retaining said female terminals, said holder having slits for inserting said male terminals, said holder comprising means, engageable with the space between said partitions and said female terminals, for receiving therein said partition insulator of said male connector.

5,173,063

RECEPTACLE CONNECTOR HAVING PROTECTED POWER CONTACTS

Lee A. Barkus, Millersburg; David B. Simini, and Matthew M. Sucheski, both of Harrisburg, all of Pa., assignors to AMP Incorporated, Harrisburg, Pa.

Continuation of Ser. No. 670,505, Mar. 15, 1991, abandoned, which is a continuation-in-part of Ser. No. 481,253, Feb. 20, 1990, abandoned. This application Jan. 17, 1992, Ser. No. 824,767
Int. Cl.[5] H01R *13/64*
U.S. Cl. 439—681 15 Claims



1. An electrical connector having a dielectric housing including a transverse body section and a shroud portion extending forwardly therefrom to a leading edge, and further having an open array of pin contact members disposed in a plurality of rows and extending forwardly of said body section and within an open cavity defined by said shroud portion to respective leading ends recessed inwardly of said leading edge of said shroud portion, said open array of pin contact members being spaced from sidewalls of said shroud portion for mating with a complementary connector having a plurality of contact means complementary to said pin contact members and exposed for mating therewith at the mating face of said complementary connector, said connector further comprising at least one pair of closely spaced elongate members within said shroud portion, each of said elongate members being substantially surrounded by adjacent ones of said pin contact members of said open array, said elongate members being affixed only to said transverse body section between and isolated from said sidewalls of said shroud portion, enabling said elongate member to be disposed at selected locations in the midst of said open array and intermediate the ends of said open array of pin contact members, said elongate members being self-supporting and extending upwardly from said transverse body section to respective leading ends forwardly beyond said leading edge of said shroud portion, said elongate members being received within apertures of said complementary connector, said elongate members cooperating with said shroud portion and with each other to disallow inadvertent entry into said cavity proximate said recessed pin contacts adjacent said elongate members which would result in undesirable engagement with said adjacent pin contact members, whereby said pair of elongate members minimizes hazards from accidental contact with the adjacent pin contacts.

5,173,064

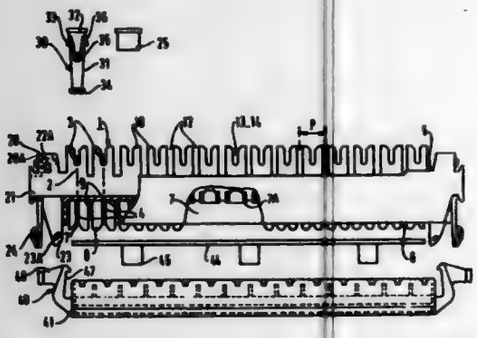
SYSTEM COMPRISING HIGH-RELIABILITY TERMINAL BLOCK AND ASSOCIATED JUMPER LINK STOWAGE DEVICE

Fabrice Audeval, Aiglemont, France, assignor to Mars Actel, Vrigne Aux Bois, France

Filed Oct. 15, 1991, Ser. No. 775,468
Claims priority, application France, Oct. 12, 1990, 90 12624
Int. Cl.[5] H01R *9/22*
U.S. Cl. 439—709 8 Claims

1. High-reliablity terminal block and associated jumper link stowage device system comprising; a terminal block including

an insulative body having a front and a rear, rows of projecting chimneys evenly spaced at a regular pitch on the front of said body, grooves between said rows of chimneys, transverse slots between said chimneys of each row, individual connecting members mounted in said body and insulated from each other and defining front connections in respective chimneys proximate to the front of said body and rear connections proximate to the rear of said body, said rear connections being assigned to cable conductors and said front connections being assigned to



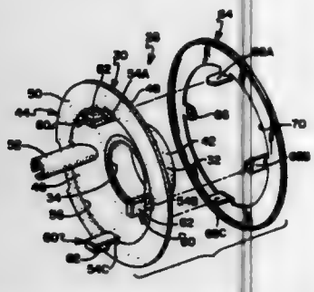
jumper link conductors, said terminal block lacking means fixed to said body and forming part of said terminal block for guiding and stowing preconnected jumper link conductors in said grooves, and said system further comprising a jumper link stowage device consisting of a separate tool comprising a plate having an upper edge and a lower edge and provided in a lower end part with teeth extending perpendicular to the plane of said plate and said teeth being evenly spaced at the same pitch as the pitch of said chimneys.

5,173,065

CONTACT RING ASSEMBLY AND METHOD

Russell L. Herlache, Saginaw, and Gary L. Stebner, Birch Run, both of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Dec. 16, 1991, Ser. No. 807,324
Int. Cl.[5] H01R *13/415*
U.S. Cl. 439—741 **5 Claims**



5. A contact ring assembly comprising:

a plastic substrate rigidly attached to a rotatable shaft and including an integral annular plastic flange in a plane perpendicular to a centerline of said shaft and a plurality of slots in said substrate perpendicular to the plane of said annular flange and adjacent to and angularly spaced around an inner edge of said annular flange,

a flat annular metal contact plate corresponding in size to the size of said annular flange and seated against said annular flange,

means on said annular contact plate defining a plurality integral deformable tabs adjacent to and angularly spaced around an inside edge of said annular contact plate and projecting through respective ones of said slots in said plastic substrate,

each of said deformable tabs being bent against said flange on said plastic substrate to clamp said contact plate against said annular flange, and

means defining a plurality of integral shrouds on said plastic substrate adjacent respective ones of said slots therein each having an integral pocket at a distal end thereof receiving a corresponding one of said deformable tabs whereby said shrouds are held over said deformable tabs to shield said deformable tabs against spurious electrical contact.

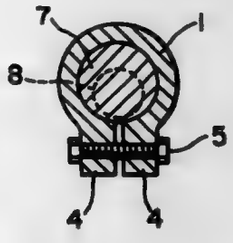
CHIP HOLDER FIXING DEVICE

Shigeru Umeda, Tokyo, Japan, assignor to Obara Corporation, Tokyo, Japan

Filed Sep. 4, 1991, Ser. No. 754,762
Claims priority, application Japan, Jan. 24, 1991, 3-6426[U]
Int. Cl.[5] H01R *4/30*
U.S. Cl. 439—803 **2 Claims**



1. A chip holder fixing device comprising:

an arm having a recessed hole, the recessed hole composed of a first circular hole having a large diameter and a second circular hole having a small diameter and eccentic relative to the first circular hole; and

a chip holder having a rear portion which is inserted into the recessed hole of the arm, the rear portion having a first cylindrical portion having a large diameter which is inserted into the first circular hole of the recessed hole and a second cylindrical portion having a small diameter which is inserted into the second circular hole of the recessed hole and eccentric to the first cylindrical portion of the rear portion of the chip holder.

5,173,067

SCUBA TAKE-UP REEL

Scott I. Biba, Mazomanie, Wis., assignor to Pegasus Products, Inc., Waukesha, Wis.

Filed Feb. 11, 1992, Ser. No. 833,983
Int. Cl.[5] B63C *7/02*
U.S. Cl. 441—26 **8 Claims**

1. A handheld portable reel for scuba diving comprising:

a) a housing having portions a defining an opening for the entrance of water;

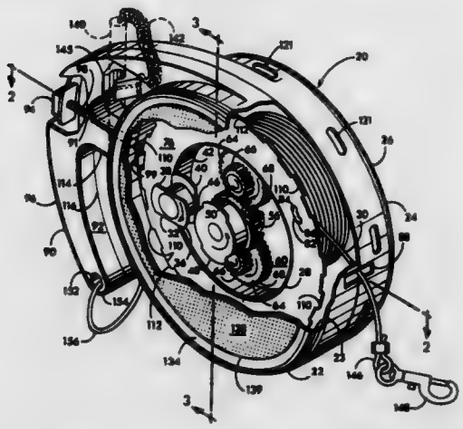
b) a take-up spool rotatably mounted to the housing and adapted to be used with a length of line wound about the spool, the spool defining an axis of rotation;

c) a spring motor having a first spool rotatably mounted to the housing and a second rotatable spool;

d) a first gear fixed to the second spool and rotatable with the second spool; and

e) a second gear fixed to the take-up spool, and engaged with the first gear as part of a gear train such that a single rotation of the spring motor second spool results in greater than one revolution of the take-up spool, wherein the gear train further comprises two outer gear assemblies rotatably mounted to the housing, each assembly having an upper gear and a lower gear which are fixed together

about a common axis, the lower gears of the two outer gear assemblies being in driving relation with the first



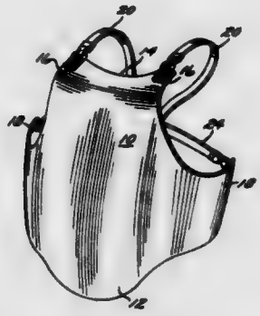
gear, and the upper gears being in driven relation with the second gear.

5,173,068

BODY SURFING APPARATUS

Daniel R. Dunn, 3744 Arnold Ave., San Diego, Calif. 92104, and James L. Dunn, 315 Vecino Ct., San Diego, Calif. 92177

Filed Oct. 22, 1991, Ser. No. 781,492
Int. Cl.[5] B63B *35/85*
U.S. Cl. 441—65 **12 Claims**



6. Body surfing apparatus adapted to be worn by a surfer and comprising:

a body ski made of non-buoyant sheet material having a smooth outer surface for planing on water, and further having sufficient rigidity and non-pliability to resist local deformation by wave action, the body ski including a breast portion configured to generally overlie and conform to the front of the surfer's body between the neck and waist, the breast portion having neck and shoulder upper edge portions configured to generally overlie the surfer's body adjacent the neck and shoulders, respectively, the shoulder upper edge portions being rearwardly curved to generally overlie and conform to the upper forward regions of the surfer's shoulders, the body ski further including a pair of side portions rearwardly curved and extending from the breast portion to generally overlie and conform to the sides, respectively, of the surfer's body between the armpit and waist regions of the body; and

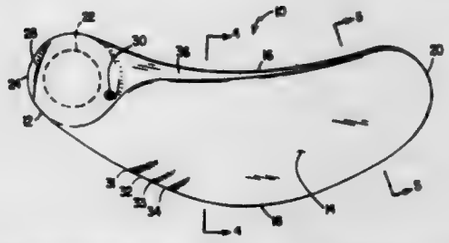
mounting means for disposition about the surfer's body, and including shoulder straps attached to the shoulder upper edge portions, and side straps attached to the side portions, the mounting means being operative to urge the shoulder and neck upper edge portions and the side portions snugly against the surfer's body to reduce scooping of water by the shoulder and neck upper edge portions and the side portions when the surfer mounts and planes on a wave.

5,173,069

AUTOROTATIVE FLYER

Mark A. Litos, East Taunton, and Petrus A. M. Spierings, Boston, both of Mass., assignors to Mainstream Marketing, Inc., Taunton, Mass.

Continuation of Ser. No. 593,249, Oct. 5, 1990, abandoned. This application Nov. 21, 1991, Ser. No. 799,679
Int. Cl.[5] A63H *27/12*; A63B *65/00*
U.S. Cl. 446—36 **14 Claims**



1. An autorotative flyer comprising a single thin wing and a thick root portion integrally formed at one end of the wing, said root providing a counterweight placing the center of gravity of said flyer toward the root portion thereof at a distance behind the leading edge of said wing equal to from 28% to 29% of the mean aerodynamic chord of said wing, characterized in that:

the center of gravity of said flyer is located at a distance from the root end of the flyer of from 10% to 21% of the span of the flyer from the end of the flyer at the root to the wing tip at the other end of the flyer,

said autorotative flyer further characterized in that the total weight of the flyer divided by the area of the wing provides a wing loading of not more than about 0.5 lbs./ft.^{2},

said autorotative flyer being further characterized in that the weight of said root portion is from 55% to 85% of the total weight of the flyer, and

said autorotative flyer being further characterized in that a thin vane, thinner than said thick root, is provided in the plane of the wing on the edge of the root at the end of the flyer opposite the wing tip and the center of gravity for initiating autorotation, said vane comprising an inner edge at the edge of said root, said vane extending only part of the way about the outer circumferential portion of the root, and said vane having its inner edges concentric with the center of gravity, the concentric nature of said inner edge acting to reduce drag during autorotation.

5,173,070

PIZZA PIE PROTECTION DEVICE CONVERTIBLE TO CHILDS TOY

John C. Gould, 12 Mine Hill Rd., West Reading, Conn. 06896

Filed May 18, 1992, Ser. No. 884,374
Int. Cl.[5] A63H *1/00*
U.S. Cl. 446—79 **6 Claims**

1. A plastic pizza pie protection device which can be converted into a childs toy, a finger flicking flying disc or spinnible top, said device comprising:

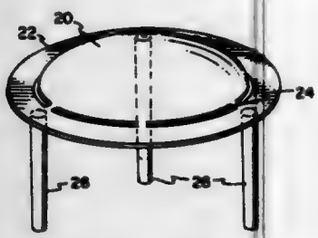
a shallow inverted circular saucer shaped first member having upper and lower exposed surfaces;

a flat ring shaped second member having an inner periphery spaced from and surrounding the first member and also having upper and lower exposed surfaces;

means detachably interconnecting the first and second members; and

a plurality of vertical prongs, one prong having an upper end

secured to the center of the lower surface of the first member, the remaining vertical prongs having upper ends



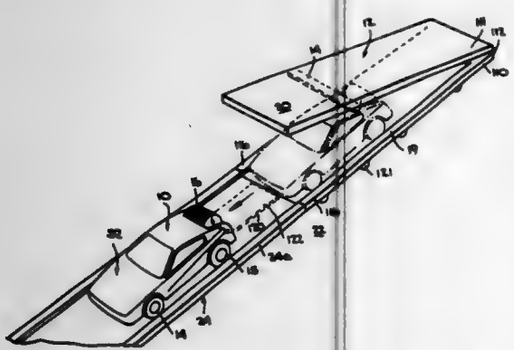
secured to the lower surface of the second member and being equidistantly spaced from each other.

5,173,071

HIGH SPEED TOY VEHICLE AND LAUNCHER THEREFOR

Michael G. Hoeting, Chicago, Ill., assignor to Toymax Inc., Cedarhurst, N.Y.

Filed Sep. 24, 1991, Ser. No. 764,521
Int. Cl.[5] A63H *29/00, 17/34*
U.S. Cl. 446—429 18 Claims



1. A toy vehicle comprising a chassis, two wheels, means mounting said wheels to said chassis to rotate about a first axis, a roller, means for mounting said roller to said chassis to rotate about an axis generally above said first axis, a body having an opening through which said roller projects, and means for attaching said body to said chassis.

5,173,072

TRAVELLING TOY VEHICLE WITH SIMULATED STARTUP VIBRATION

Akio Ozawa, Tokyo, Japan, assignor to Tomy Company, Ltd., Japan

Filed Aug. 16, 1991, Ser. No. 745,670
Claims priority, application Japan, Aug. 23, 1990, 2-88150[U]
Int. Cl.[5] A63H *29/02, 29/24, 17/26, 17/06*
U.S. Cl. 446—462 10 Claims

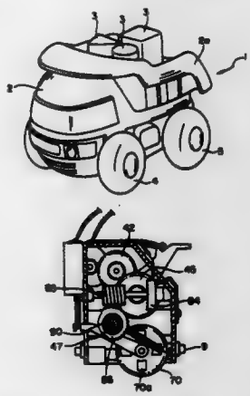
1. A travelling toy vehicle having an external body and at least one drive wheel, comprising:

a motor to provide drive power;

a travelling mechanism rotatingly coupled to the at least one drive wheel;

a vibrating mechanism vibratingly cooperating with the external body and comprising a spur gear drivably connected to said motor and including a plurality of semi-cylindrical cams on each side of said spur gear and cylindrical force receiving pieces connected to the external body and cooperating with said semi-cylindrical cams on each side of said spur gear; and

a power transmission route change mechanism operatively coupled to said motor and selectively coupling the drive



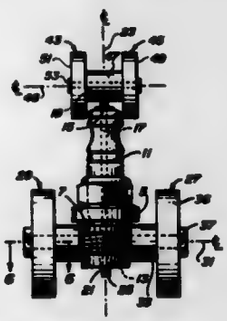
power from said motor to either one of said travelling mechanism and said vibrating mechanism.

5,173,073

WHEELED SPARKPLUG TOY VEHICLE

Victor E. Franzone, 15 Berger St., Emmaus, Pa. 18049

Filed Feb. 11, 1991, Ser. No. 654,290
The portion of the term of this patent subsequent to Apr. 23, 2008, has been disclaimed.
Int. Cl.[5] A63H *17/00, 17/26*
U.S. Cl. 446—465 7 Claims



1. A wheeled toy vehicle comprising:

a. a sparkplug, having a longitudinal axis, a tubular threaded shank rear end and a center electrode, said center electrode having a contact terminal front end;

b. means for affixing a pair of spaced-apart, parallel rear wheels to said shank, said wheels being rotatable about a rear axle-line perpendicular to said longitudinal axis; and affixing a pair of spaced-apart, parallel

c. means for affixing a pair of spaced-apart, parallel front wheels to said contact terminal, said wheels being rotatable about a front axle-line perpendicular to said longitudinal axis; and

d. said rear axle-line and said front axle-line being parallel, when viewed in plan.

5,173,074

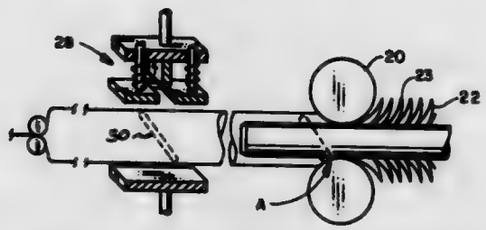
METHOD AND APPARATUS FOR SEVERING SHIRRED TUBULAR FOOD CASING, AND ARTICLE

John Farkonas, Glenview, and Michael P. Kazaitis, Chicago, both of Ill., assignors to Viskase Corporation, Chicago, Ill.

Continuation-in-part of Ser. No. 775,861, Oct. 15, 1991, Pat. No. 5,145,449. This application Apr. 15, 1992, Ser. No. 868,431

Int. Cl.[5] A22C *13/02*

U.S. Cl. 452—29 10 Claims



1. A method of severing a shirred casing stick from a length of feed stock casing comprising the steps of:

a) weakening a flattened section of feed stock casing prior to shirring to form a frangible band of casing extending transverse the casing longitudinal axis and around its circumference;

b) drawing feed stock casing in the direction of the casing longitudinal axis on to a shirring mandrel towards and through a shirring zone and conducting a shirring operation in the zone which gathers the feed stock casing into pleats about the shirring mandrel to form the shirred stick;

c) continuing the conducting of the shirring operation until said frangible band is at the shirring zone; and

d) thereafter restraining the feed stock casing from moving and utilizing said shirring operation for tensioning the casing across the frangible band and tearing apart the casing along the frangible band thereby separating the shirred stick from the feed stock casing.

5,173,075

CUTTING OF SAUSAGE MEAT

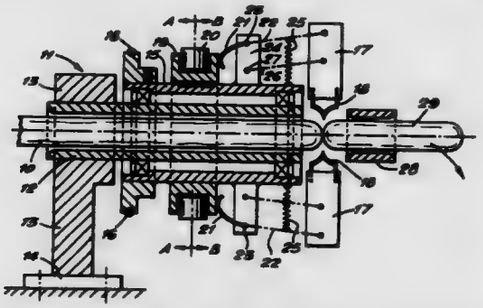
Lars G. A. Wadell, Aengelholm, Sweden, assignor to Nestec S.A., Vevey, Switzerland

Filed Jul. 8, 1991, Ser. No. 726,864

Claims priority, application European Pat. Off., Aug. 31, 1990, 90116712.2

Int. Cl.[5] A22C *11/00*

U.S. Cl. 452—46 14 Claims



1. A sausage cutting device comprising a cutting head, which includes a tube, and a reciprocable cutting means which is positioned adjacent an exit of the tube and which is connected to the cutting head so that the cutting means is rotatable with at least a part of the head and so that the cutting means reciprocates transversely to and from a longitudinal axis of the tube for cutting sausage fed from the tube exit into pieces having convex ends.

5,173,076

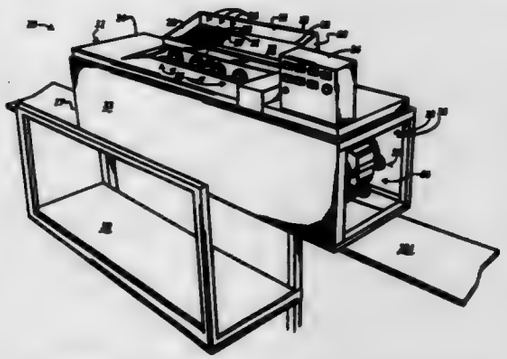
THIGH DEBONER WITH TRAY CONVEYOR

Jacobus E. Hazenbrook, Burg de Zeeuwstraat 52, Nunnumdorp, Netherlands

Filed Jan. 22, 1992, Ser. No. 823,717

Int. Cl.[5] A22C *25/16*

U.S. Cl. 452—135 18 Claims



1. A method of removing the bones from poultry thighs and similar edible bone and meat parts, comprising the steps of:

moving a plurality of poultry thighs in series along a processing path with the bones of each thigh extending transverse to the direction of the processing path;

as the poultry thighs move along the processing path urging the bone of each poultry thigh longitudinally through an aperture formed in a meat stripper disc assembly;

as each bone is urged through the aperture of a meat stripper disc assembly, retarding the movement of the meat with the meat stripper disc assembly to remove the meat from the bone;

urging the trailing end of the bone through the opening of the meat stripping disc assembly while retaining the meat at the meat stripper disc assembly; and

moving the bone and meat of the poultry thighs adjacent a cutting means and cutting with the cutting means any meat remaining attached between the separated meat and bone of the poultry thigh.

5,173,077

METHOD AND DEVICE FOR PERFORMING AN ACCURATE CUTTING OPERATION NEAR THE KNEE JOINT OF A LEG OF A SLAUGHTERED ANIMAL

Adrianus J. van den Nieuwelaar, Gemert; Jan W. Bos, Ede, and Hein Annema, Stevensbeek, all of Netherlands, assignors to Stork PMT B.V., Boxmeer, Netherlands

Filed Jan. 29, 1991, Ser. No. 647,580

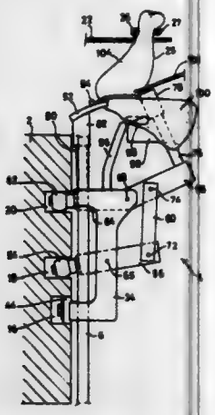
Claims priority, application Netherlands, Jan. 30, 1990, 9000228; Nov. 12, 1990, 9002470

Int. Cl.[5] A22C *21/00*

U.S. Cl. 452—163 30 Claims

1. A method for positioning a knee joint of a leg of a slaughtered animal, the knee joint including a kneecap, in particular

a bird, in preparation of a cutting operation performed by a cutting means, comprising the step of engaging the kneecap



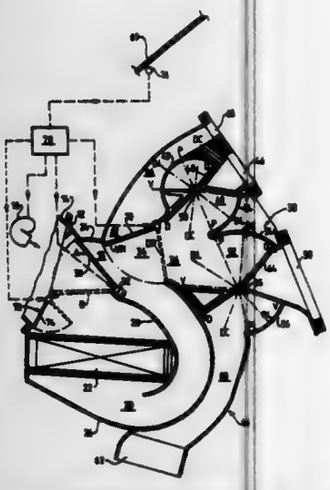
with kneecap positioning means to position the knee joint relative to the cutting means prior to the cutting operation.

5,173,078

HEATING AND VENTILATING APPARATUS FOR THE CABIN OF A MOTOR VEHICLE

Roger Robin, 7, Clos du Gandouget, Les Elancourtines, 78990 Elancourt, and Jean-François Bouvot, 2, rue des Grands Prés, Le Mesnil-Sévin, 78720 Dampierre, both of France

Filed Oct. 29, 1991, Ser. No. 783,916
Claims priority, application France, Oct. 31, 1990, 90 13568
Int. Cl.[5] B60S *1/54*
U.S. Cl. 454—126 8 Claims



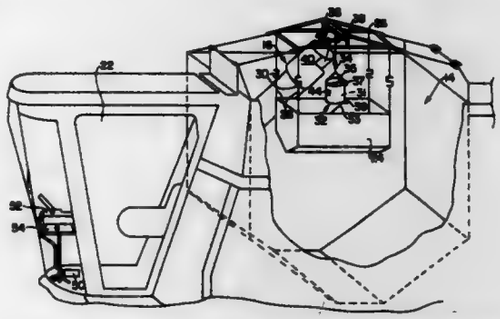
1. Heating and ventilating apparatus for the cabin of a motor vehicle having a windshield with a rear surface, wherein the apparatus comprises: an air inlet duct; an admission and heating circuit connected to the cold air admission duct for producing a stream of cold or heated air; a distribution circuit connected to the admission and heating circuit and having an inlet for the introduction of the cold or heated air stream, a plurality of air outlet ducts, and distribution means arranged between the said inlet of the distribution circuit and the said air outlet ducts thereof for distributing the said air stream into different parts of the cabin of the vehicle, with at least one of the said outlet ducts being open adjacent to the rear surface of the windshield for demisting the latter, and wherein the apparatus further includes: a priority demisting duct separate from the said distribution circuit, the priority demisting duct having an inlet communicating with the admission and heating circuit, together with an outlet disposed adjacent to the rear surface of the windshield; a first shut-off valve; means mounting the first shut-off valve for displacement of the latter between a priority demisting position closing the said inlet of the distribution circuit, and a normal position closing the inlet of the priority demisting duct; and control means operatively connected with the first shut-off valve, for controlling the displacement of the latter.

5,173,079

CROP TESTING AND EVALUATION SYSTEM

Steven R. Gerrish, Rte. 5 WH7, Elkhorn, Wis. 53121

Filed Feb. 28, 1991, Ser. No. 661,345
Int. Cl.[5] A01D *41/00*; A01F *12/00*
U.S. Cl. 460—7 34 Claims



1. A testing and evaluating assembly for testing selected characteristics of a crop and evaluating the quality of the crop and for use with a vehicle having a crop storage tank, comprising:

first crop collection means for collecting a first quantity of the crop;

weighing means for determining a weight of the first quantity of crop collected by said first crop collection means and outputting a first signal corresponding to the weight;

an attachment assembly comprising a support frame which is removably attached to the outer perimeter of said crop storage tank and at least one suspension member coupled to said frame, said weight means and said first crop collection means, such that said first crop collection means is suspended in said crop storage tank; and

processing means for receiving and processing said first signal and determining a quality of the crop based on said first signal.

19. A testing and evaluating assembly for testing characteristics of a crop and evaluating the quality of the crop, comprising:

a vehicle having a crop storage tank therein;

weighing means coupled to said crop storage tank for determining a weight of a first quantity of crop collected n said crop storage tank and outputting a first signal corresponding to the weight;

first means for attaching said weighing means to said vehicle; and

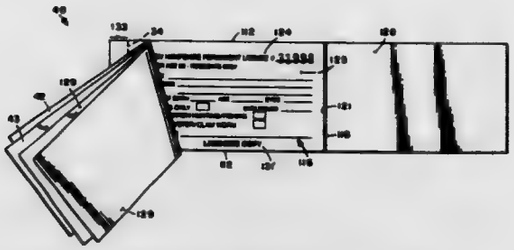
processing means, coupled to the weighing means, for receiving and processing said first signal and determining a quality of the crop based on said first signal.

5,173,080

MULTIPLE PART IDENTIFICATION CARD PRODUCTION

Andre Longtin, Weare, N.H., assignor to Moore Business Forms, Inc., Grand Island, N.Y.

Filed Jul. 29, 1992, Ser. No. 921,211
Int. Cl.[5] B42D 15/00
U.S. Cl. 462—2 20 Claims



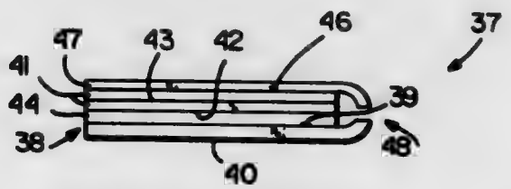
1. An identification card intermediate comprising:
a transparent plastic substrate having first and second edges parallel to each other, and third and fourth edges perpendicular to said parallel edges, and having first and second faces;
a base stock having first, third, and fourth edges in substantial alignment with said substrate first, third, and fourth edges, respectively, and a second edge; and having first and second faces;
indicia printed on said first face of said base stock;
a release liner having second, third, and fourth edges in substantial alignment with said substrate second, third, and fourth edges, respectively, and having first and second faces;
an adhesive layer substantially covering said first face of said substrate, and connecting said second face of each of said base stock and said release liner to said substrate;
the length of said third and fourth edges of each of said release liner and said base stock being roughly one half the length of said substrate third and fourth edges; and
at least one paper layer having first through fourth edges in substantial alignment with said base stock first through fourth layers and removably attached thereto, and transfer means between said at least one paper layer and said base stock for transferring indicia applied to said paper layer to said base stock first face.

5,173,081

SECURITY/PROTECTION FEATURE BUSINESS FORM WITH REPOSITIONAL ADHESIVE

Walter G. Greig, Lewiston, N.Y., assignor to Moore Business Forms, Inc., Grand Island, N.Y.

Filed Jan. 6, 1992, Ser. No. 817,363
Int. Cl.[5] B42D 15/00
U.S. Cl. 462—6 20 Claims



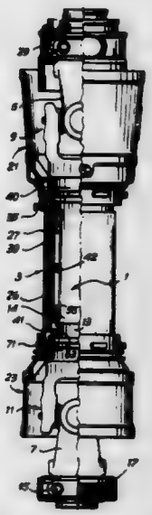
1. A business form intermediate comprising:
a first paper sheet having a quadrate configuration including two longitudinal edges and two end edges, and a face and back;
means defining a fold line at a central portion of said first paper sheet, essentially perpendicular to said longitudinal edges, dividing said sheet into first and second portions;
a pattern of repositional adhesive disposed on said sheet face first portion;
indicia disposed on said first sheet face second portion;
a transparent plastic film having a face and a back and dimensions substantially the same as those of said first sheet first portion, said film face disposed covering said first sheet face first portion and removably attached thereto by said repositional adhesive;
permanent adhesive disposed on said plastic film back; and
a second sheet having a release material face and dimensions substantially the same as said first sheet first portion, said second sheet release material face in removable contact with said permanent adhesive.

5,173,082

TELESCOPIC PROTECTIVE CASING FOR A TRANSMISSION SHAFT WITH LUBRICATION DISTRIBUTION SYSTEM

Edi Bondioli, Via Gina Bianchi n.18, Suzzara, Mantova, Italy

Filed Jan. 19, 1991, Ser. No. 718,341
Claims priority, application Italy, Jun. 22, 1990, 9433 A/90
Int. Cl.[5] F16C 1/24
U.S. Cl. 464—7 9 Claims



1. A protective casing for a transmission shaft, comprising:
a telescopic transmission shaft including an internal telescopic transmission shaft element with a free end and a joint end and an external telescopic transmission shaft element with a free end and a joint end, said internal telescopic transmission shaft element being connected to a first universal joint at said internal telescopic transmission shaft joint end and said external telescopic transmission shaft element being connected to a second universal joint at said external telescopic transmission shaft joint end;
said protective casing including an outer protective telescopic tube and an inner protective telescopic tube, said outer protective telescopic tube and said inner protective telescopic tube cooperating to cover said internal and external telescopic transmission shaft elements;
a grease nipple connected to said inner protective telescopic tube of said protective casing;
means defining a chamber surrounding said free end of said external telescopic transmission shaft element for holding lubricant at said free end of said external telescopic transmission shaft element;
connection means for connecting said grease nipples and said means defining a chamber for supplying lubricant between said internal and external telescopic elements,

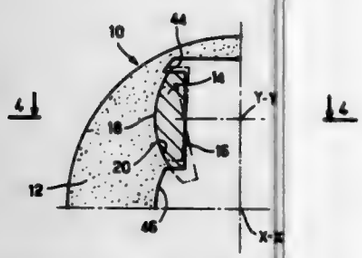
said connection means comprises a lubrication tube, and said grease nipple has two sections that are respectively at an angle, one of said sections projecting from the exterior of said protective casing, and the other of said sections being inside the protective casing and having a seat into which said tube fits.

5,173,083

TRANSMISSION JOINT BODY HAVING ARTICULATION ELEMENT RACEWAYS COMPRISING A SURFACE OF A MEMBER MOVABLY MOUNTED IN THE JOINT BODY, AND A METHOD MAKING THE TRANSMISSION JOINT BODY

Jean-Claude Van Dest, Saintry sur Seine, France, assignor to Glaenzer Spicer, Poissy, France

Filed Jun. 10, 1991, Ser. No. 712,712
Claims priority, application France, Jun. 21, 1990, 90 07787
Int. Cl.[5] F16C 3/00; F16D 3/26
U.S. Cl. 464—111 18 Claims



9. A transmission joint body, comprising:

a plurality of bearing passageways distributed about said central axis, each said bearing passageway comprising two raceways;

a joint body portion made of composite material;

a plurality of members on said joint body portion, each said member having first and second surfaces, and each said raceway comprising a said first surface of a respective said member for cooperation with an articulation element of a transmission joint; and

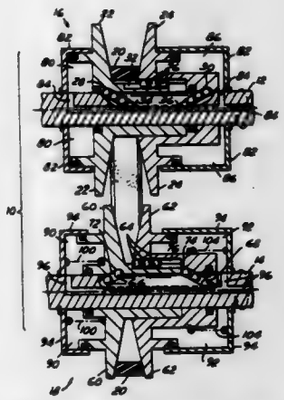
means for mounting each said member on said joint body portion for displacement of each said member relative to said joint body portion, said means including a complementary surface on said joint body portion for each said member receiving a respective said second surface of a said member, said second surfaces being displaceable relative to said complementary surfaces.

5,173,084

SELF-CLAMPING ASSIST FOR "V" BELT CONTINUOUSLY VARIABLE TRANSMISSIONS

George E. Lemieux, Northville, Mich., assignor to Ford Motor Company, Dearborn, Mich.

Filed Dec. 23, 1991, Ser. No. 812,400
Int. Cl.[5] F16H 59/00
U.S. Cl. 474—8 15 Claims



1. Apparatus for transmitting torque from a driving shaft to a driven shaft, the apparatus comprising:

a driving sheave provided on the driving shaft and including a first sheave member rotatable with the driving shaft, a second sheave member rotatable with the driving shaft, the first and second sheave members defining a first circumferentially continuous groove, means for maintaining the first and second sheave members rotationally fixed with respect to each other, a first plurality of angularly spaced apart helical ramps formed in the driving shaft, and a plurality of rolling elements disposed in each of the first helical ramps and cooperating with the first sheave member such that the first sheave member is axially biased toward the second sheave member upon application of torque through the driving shaft;

a driven sheave provided on the driven shaft and including a third sheave member rotatable with the driven shaft, a fourth sheave member rotatable with the driven shaft, the third and fourth sheave members defining a second circumferentially continuous groove, and means for maintaining the third and fourth sheave members rotationally fixed with respect to each other; and

means for transmitting torque between the driving sheave and the driven sheave.

5,173,085

HAIR DYEING PROCESS AND COMPOSITONS PACKAGE

Keith Brown, New Canaan; Bryan P. Murphy, Trumbull, and Loszek J. Wolfram, Stamford, all of Conn., assignors to Clairol Incorporated, Stamford, Conn.

Continuation of Ser. No. 348,106, Apr. 28, 1989, abandoned, which is a continuation of Ser. No. 712,465, Mar. 15, 1985, abandoned, which is a continuation of Ser. No. 447,557, Dec. 7, 1982, abandoned. This application Jan. 29, 1991, Ser. No. 649,132

Int. Cl.[5] A62K *7/13*

U.S. Cl. 8—405 21 Claims

1. A process for dyeing hair to a given color by melanogenesis of a melanin precursor which is 5,6-dihydroxyindole, the process comprising the steps of:

(a) first applying to the hair an aqueous alkaline pretreatment solution containing a melanogenesis-promoting transition metal cation for a period of time sufficient to retain a melanogenesis-promoting amount of said metal cation in association with the hair subsequent to rinsing of the hair;

(b) rinsing the hair, and

(c) thereafter applying to the rinsed hair an aqueous, alcoholic or hydroalcoholic dye solution containing an effective hair dyeing amount of 5,6-dihydroxyindole for a period of time sufficient for the hair to acquire said given color by melanogenesis.

5,173,086

CONCENTRATED AQUEOUS SOLUTIONS OF 2-PHENYLBENZOTHIAZOLEAZO DYES WITH MIXED CATIONS

Rudolf Bernes, Ludwigshafen, Fed. Rep. of Germany, assignor to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Sep. 12, 1991, Ser. No. 758,691

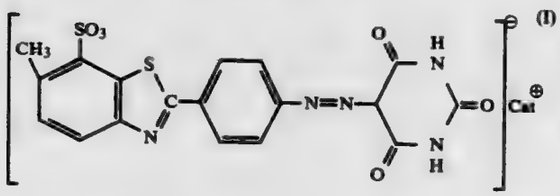
Claims priority, application Fed. Rep. of Germany, Sep. 29, 1990, 4030915

Int. Cl.[5] C09B *67/26;* D21H *21/28*

U.S. Cl. 8—527 4 Claims

1. An aqueous solution, containing, each percentage being based on the weight of the aqueous solution,

a) from 5 to 20 % by weight of the dye of the formula I



(calculated as free acid) where cat⊕is a mixture of cations comprising from 5 to 50 mol % of lithium ions, from 5 to 40 mol % of diethanolammonium ions and from 20 to 90 mol % of triethanolammonium ions, and

b) from 0 to 15 % of urea.

5,173,087

CRYSTAL GROWTH IN A MICROGRAVITY ENVIRONMENT

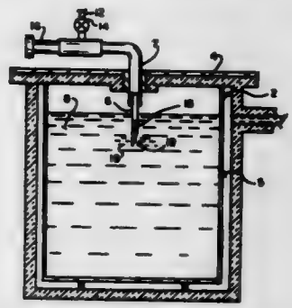
Roger L. Kroes; Donald A. Reiss, and Sandor L. Lehoczky, all of Huntsville, Ala., assignors to The United States of America as represented by the Administrator of the National Aeronautics and Space Administration, Washington, D.C.

Filed Jun. 19, 1991, Ser. No. 717,447

Int. Cl.[5] B01D *9/02*

U.S. Cl. 23—295 R 3 Claims

1. A process for effecting nucleation in microgravity crystallization where buoyancy-driven convection does not exist, which comprises cooling a solution of solute in a solvent in a cooling chamber to the saturation temperature and then further cooling that saturated solution to a state of metastable supersaturation thus forming a metastable host solution, then in a local region injecting a saturated solution of solute at a saturation temperature above the temperature of the metastable host solution into the lower temperature host solution, thus



exceeding the metastable limit of saturation at the point of injection to form crystals in that local region before its concentration can be reduced by mass diffusion into the host solution, wherein said local region is located so that no contact occurs between the crystals and the solid surfaces of the cooling chamber.

5,173,088

PROCESS FOR PREPARING CRYSTALS OF ANHYDROUS SODIUM SULFIDE

Kazuosuke Maeda, Ashiya, and Yoshio Aoyama, Kyoto, both of Japan, assignors to Sankyo Kasei Co., Ltd., Osaka, Japan

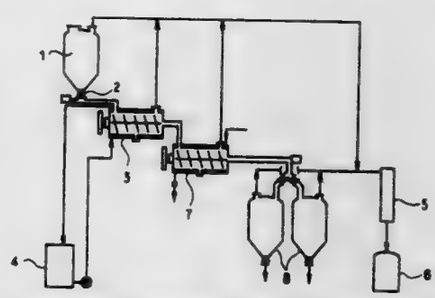
Filed May 26, 1989, Ser. No. 357,497

Claims priority, application Japan, May 31, 1988, 63-134854; Dec. 6, 1988, 63-309263

The portion of the term of this patent subsequent to Dec. 10, 2008, has been disclaimed.

Int. Cl.[5] C01B *17/22*

U.S. Cl. 23—295 R 5 Claims



1. A process for preparing crystals of anhydrous sodium sulfide, comprising the steps of heating crystals of polyhydrate of sodium sulfide in a solid state under a pressure of about 500 torr or less at a temperature varying not more than ± about 10° C. from the phase transition point between polyhydrate crystals and monohydrate crystals of sodium sulfide for about 2 hours or longer and further heating the monohydrate under atmospheric or reduced pressure at about 90° to about 200° C. for about 2 hours or longer.

5,173,089

METHOD FOR PRODUCING THE POLYCRYSTALLINE DIAMOND TOOL

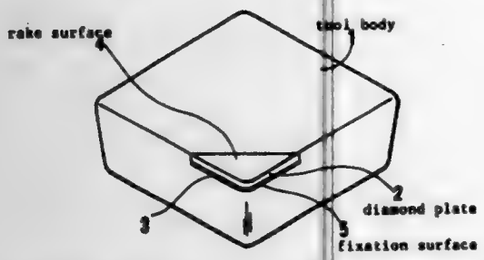
Keiichiro Tanaka, and Naoji Fujimori, both of Hyogo, Japan, assignors to Sumitomo Electric Industries, Ltd., Osaka, Japan

Division of Ser. No. 678,210, Apr. 1, 1991. This application Mar. 20, 1992, Ser. No. 854,689

Claims priority, application Japan, Mar. 30, 1990, 2-86044; May 17, 1990, 2-128564

Int. Cl.[5] B24D 5/00

U.S. Cl. 51—293 7 Claims



1. A chemical vapor phase deposition method for producing a polycrystalline diamond tool comprising the steps of:

supplying material gas including a carbon-containing gas and hydrogen gas into a vacuum chamber;

exciting the material gas into a state including one of plasma and radicals;

introducing the material gas to a heated substrate;

first depositing of diamond on the substrate, the material gas having a first density of carbon, a first density of oxygen and a first density of nitrogen;

second depositing of diamond on the first deposited diamond, the material gas having at least one of a density of carbon higher than the first density of carbon, a density of oxygen lower than the first density of oxygen and a density of nitrogen higher than the first density of nitrogen till the diamond becomes more than 40 μm in thickness;

etching the substrate away from the deposited diamond by an etchant to thereby obtain a diamond plate;

metalizing a surface of the diamond plate which was grown in the second depositing step; and

fixing the metalized surface on an end surface of a tool body to thereby obtain a diamond tool with a rake surface which was grown in the first depositing step and with a fixation surface which was grown in the second depositing step.

ROCK BIT COMPACT AND METHOD OF MANUFACTURE

Danny E. Scott, and Stephen R. Jurewicz, both of Houston, Tex., assignors to Hughes Tool Company, Houston, Tex.

Filed Mar. 1, 1991, Ser. No. 663,266

The portion of the term of this patent subsequent to Jun. 9, 2009, has been disclaimed.

Int. Cl.[5] B24D 3/00

U.S. Cl. 51—293 17 Claims

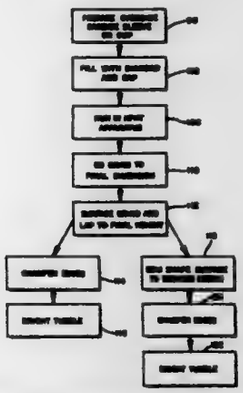
1. A method of manufacturing a diamond filled compact of the type used as a cutting insert which is received in a cutting insert pocket in a drill bit used to drill an earthen formation, the method comprising the steps of:

forming a hard metal jacket having at least one initially open end and an open interior;

substantially filling the open interior of the jacket with a diamond material;

subjecting the diamond filled jacket to a temperature and a pressure sufficient to sinter the diamond material, thereby integrally forming a diamond core within the hard metal jacket;

reducing the outer dimensions of the hard metal jacket to a size selected to conform to a cutting insert pocket provided on a drill bit; and



wherein the compact so formed has a top surface comprised of an exposed diamond surrounded by a ring of jacket material and wherein at least 75% of the top surface of the compact is exposed diamond.

5,173,091

CHEMICALLY BONDED ADHERENT COATING FOR ABRASIVE COMPACTS AND METHOD FOR MAKING SAME

Henry S. Marek, Worthington, Ohio, assignor to General Electric Company, Worthington, Ohio

Filed Jun. 4, 1991, Ser. No. 710,725

Int. Cl.[5] B24B 1/00

U.S. Cl. 51—295 18 Claims

1. A tool component comprising a cluster compact of polycrystalline diamond or cubic boron nitride having a metallic phase, wherein said cluster compact has a coating chemically bonded thereto-with a bond shear strength greater 10,000 psi.

5,173,092

HYDROCARBON REMOVAL SYSTEM

Tucker D. Rudder, Lubbock, Tex., assignor to Hydrocarbon Recovery Equipment, Inc., Lubbock, Tex.

Filed Dec. 29, 1990, Ser. No. 636,615

Int. Cl.[5] B01D 19/00

U.S. Cl. 55—53 21 Claims

16. A method of removing and recovering volatile organic compounds which are contained in water supplies in an aquifer including the following steps:

a. placing a single submersible pump in a well that has been sunk into an aquifer,

b. positioning the pump within the well so that said pump is submerged by liquid contained within the aquifer and any volatile organic compounds floating at the top of said liquid,

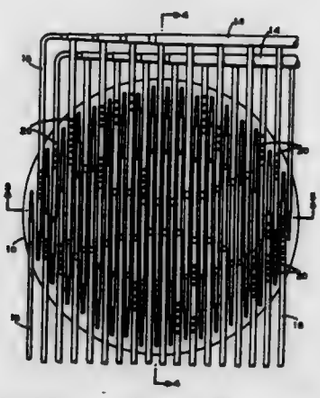
c. establishing a primary operation by
i. running the submersible pump at a flow sufficient for
ii. drawing down a cone of depression in the liquid about the well,
iii. trapping floating volatile organic compounds within the cone of depression thereby
iv. creating a floating phase of volatile organic compounds within the cone, and
v. maintaining a level of liquid above an intake of the pump sufficient to prevent cavitation during primary operation while also
vi. preventing the floating phase of the volatile organic compounds from entering the pump,
d. establishing a secondary operation by
i. increasing the pump's flow sufficiently above said pump's flow during primary operation for
ii. pulling the cone of depression down further so that the floating phase of volatile organic compounds within the cone of depression is drawn down to the level of the pump's intake, and
iii. pumping liquid from the floating phase of volatile organic compounds,
e. cycling between primary operation and secondary operation so that during primary operation liquid is drawn predominantly from a phase of the liquid below the floating phase of volatile organic compounds and during secondary operation liquid is drawn predominantly from the floating phase of volatile organic compounds thereby
f. pumping fluid from the well during both primary and secondary operation.

5,173,093

SINGLE SPRAY LEVEL FOR FLUE GAS DESULFURIZATION SYSTEM

Dennis W. Johnson, Barberton, and Paul J. Lieb, Norton, both of Ohio, assignors to The Babcock & Wilcox Company, New Orleans, La.

Filed Jul. 26, 1991, Ser. No. 736,334
Int. Cl.[5] B01D 47/00
U.S. Cl. 55—73 17 Claims



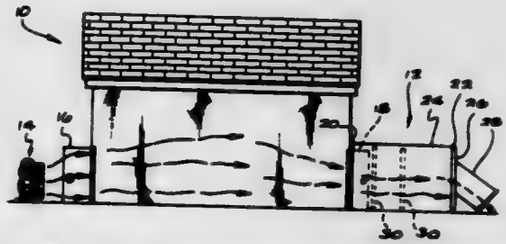
1. A method of spraying sulfur containing flue gas with a liquid absorbent in a flue gas desulfurization absorber tower having a flue gas inlet and outlet, comprising the steps of:
(a) securing at least two headers to the tower for supplying the liquid absorbent to the tower;
(b) attaching multiple feeder lines to each said header, said feeder lines from each said header extending into the tower and being staggered so as to alternately extend across the flue gas flow path within the same, or nearly the same, plane within the tower;
(c) securing a series of nozzles to each said feeder line within the tower;
(d) spraying the liquid absorbent through said nozzles onto the flue gas within the tower thereby desulfurizing the flue gas; and,
(e) discharging a flue gas with low sulfur content from the flue gas outlet.

5,173,094

POSITIVE-PRESSURE FILTER ARRANGEMENT FOR HAZARDOUS GASES

Timothy S. Brady, P.O. Box 41376, Bakersfield, Calif. 93384-1376

Filed Apr. 30, 1991, Ser. No. 693,381
Int. Cl.[5] B01D 47/00
U.S. Cl. 55—233 17 Claims



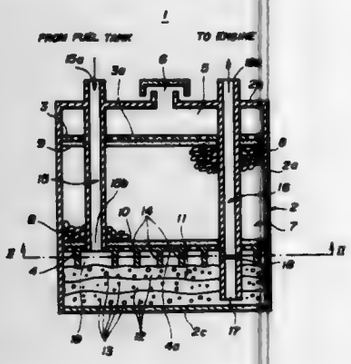
1. A filtration and neutralization system for removing particulates and contaminants from a contaminated structure, with the contaminated structure having an outlet opening and with the system including:
a) a fan forming positive pressure means for raising the pressure within the contaminated structure above an ambient pressure; and
b) substantially rectangular channel means, with an outer end wall, for creating a seal around the outlet opening and for containing and channeling the particulates and contaminants as they exit the contaminated structure, with the channel means having an internal cross-sectional shape and including:
i) an outer skin;
ii) removable support means for supporting the skin, including a separable, sectioned frame formed of tubing and connecting corner joints;
iii) filter means, located within the skin, for filtering out the particulates and neutralizing the contaminants from the air within the channel means, with the filter means including a filter pad and a filter frame that substantially conforms to the internal cross-sectional shape of the channel means and substantially seals against the outer skin;
iv) exhaust means for channelling from the channel means air from which the particulates have been filtered and in which the contaminants have been neutralized, comprising a closable opening in the outer end wall, and including a cowling having an outer frame for holding the cowling open and a flap which closes over the closable opening;
v) securing means for holding the removable support means in the channel means, including pockets in the outer skin for substantially containing the frame tubing at either end of the channel means;
vi) attachment means for rapid installation and removal of the filter means within the outer skin; and
vii) neutralizing means, including a source of a neutralization agent, for applying the neutralizing agent to the filter pad.

5,173,095

EVAPORATIVE FUEL CONTROL CANISTER CONTAINING ABSORBENT SWELLING BY ABSORBING LIQUID FUEL

Masao Yasukawa, Okazaki; Tomohide Aoki, Gifu, and Takashi Ohta, Nagoya, all of Japan, assignors to Toyota Jidosha Kabushiki Kaisha, Toyota; Toyota Gosei Kabushiki Kaisha, Inazawa and Kabushiki Kaisha Toyota Chuo Kenkyusho, Aichi, all of, Japan

Filed Sep. 11, 1991, Ser. No. 757,524
Claims priority, application Japan, Sep. 12, 1990, 2-241459
Int. Cl.[5] B01D *53/04*
U.S. Cl. 55—316 8 Claims



1. An evaporative fuel control canister for use in an internal combustion engine, comprising:

a canister main body having a vapor absorbing chamber and a liquid separate chamber, said vapor absorbing chamber having a first portion filled with a vapor absorbing material and a second spatial portion, said liquid separate chamber having an expansible and contractible member containing a liquid absorbing material, and said vapor absorbing chamber being adjacent to said liquid separate chamber in a ventilation state;

a vapor passage coupling a fuel tank and said liquid separate chamber;

a purge passage coupling said internal combustion engine and said liquid separate chamber, said purge passage having a first opening positioned in said expansible and contractible member, and a second opening positioned in said second spatial portion; and

stopper means for maintaining a surface of said expansible and contractible member at a position where said expansible and contractible member does not reach said second opening so that said second spatial portion is always maintained.

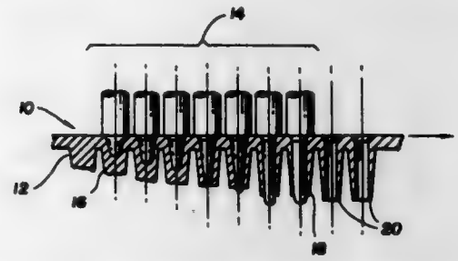
5,173,096

METHOD OF FORMING BUSHING PLATE FOR FORMING GLASS FILAMENTS WITH FORMING TIPS HAVING CONSTANT SIDEWALL THICKNESS

Mark P. DeLong, Sylvania, Ohio, assignor to Manville Corporation, Denver, Colo.

Filed Jul. 10, 1991, Ser. No. 728,168
The portion of the term of this patent subsequent to Aug. 25, 2009, has been disclaimed.
Int. Cl.[5] C03B *37/08*
U.S. Cl. 65—1 4 Claims

1. A method for forming nozzle tips in a metal bushing plate used in glass filament production from a plate preformed with integral embossments in positions corresponding to the nozzle tips comprising the steps of feeding the preformed plate through a punching station and progressively punching the embossments to cause the metal to cold flow into nozzle tips having hollow bodies with frusto-conical outer shapes, frusto-conical bores extending completely therethrough with lower bore openings for the glass filaments to exit and walls of constant thickness; selecting a desired diameter for the lower bore openings of the nozzle tips to form glass filaments to a predetermined diameter; and finishing the ends of the nozzle tips to a predetermined, uniform length to obtain the desired diameter of the lower bore openings.

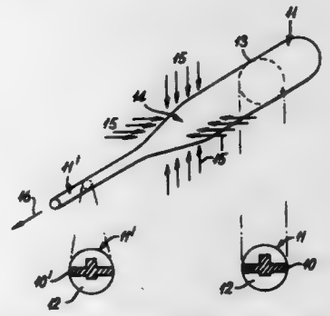


5,173,097

PROCESS FOR THE MANUFACTURE OF OBJECTS WITH SMALL COMPLEX CROSS-SECTIONS

Klaus Jansen, Hamburg, Fed. Rep. of Germany, assignor to National Research Development Corporation, London, United Kingdom

PCT No. PCT/GB90/00765, § 371 Date Jan. 2, 1991, § 102(e) Date Jan. 2, 1991, PCT Pub. No. WO90/14316, PCT Pub. Date Nov. 29, 1990
PCT Filed May 17, 1990, Ser. No. 634,862
Claims priority, application Fed. Rep. of Germany, May 17, 1989, 3916078; Nov. 5, 1989, 3936713
Int. Cl.[5] C03C *25/06*; G02B *6/00*
U.S. Cl. 65—3.15 25 Claims



1. A method of manufacturing objects from material which can be drawn plastically, comprising the steps of:

forming a secondary preform from at least one primary preform formed in a first glass by combining a second glass with the primary preform, the first and second glasses both being deformable plastically and one of the said glasses being removable from the other glass,

reducing the viscosity of a zone of the secondary preform while plastically drawing out the secondary preform to give an elongated product with a reduced cross-section, the secondary preform having a cross-sectional boundary whose shape, as defined by relative dimensions, is preserved during drawing by the presence of the first and second glasses,

removing the one glass from at least part of the elongated product, said removing step including etching the one glass, and

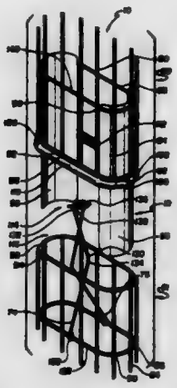
plastically deforming the material of the elongated product, after the one glass has been at least partially removed, to reshape the product permanently.

5,173,098

WIRE FILTER CAGE

Howard W. Pipkorn, Arden Hills, Minn., assignor to Pipkorn Environmental Technologies, Inc., Minneapolis, Minn.

Filed Dec. 18, 1991, Ser. No. 809,679
Int. Cl.[5] B01D 46/04
U.S. Cl. 55—379 8 Claims



1. A wire frame assembly for supporting a filter bag or the like, comprising:

a first section having a first section junction end and a plurality of wire elements extending generally along the length thereof, presenting a first section external periphery, said wire elements presenting generally sharp ends terminating at said first section junction end generally in the plane of said first section external periphery;

a second section having a second section junction end and a plurality of wire elements extending generally along the length thereof defining a second section external periphery, said wire elements presenting generally sharp ends terminating at said second section junction end generally in the plane of said second section external periphery, said first and second sections being adapted for operably, detachably coupling to each other at said first and second junction ends to present a frame junction; and

ring means operably carried by said first section junction end for isolating said filter bag from contact with said first section and second section generally sharp wire element ends when said first and second sections are coupled together to present said junction,

said first section external periphery and said second section external periphery presenting a wire frame external periphery, said ring means presenting a bag engaging surface outwardly from said frame external periphery whereby said bag is carried by said wire frame assembly spaced apart from said generally sharp wire element ends at said junction.

5,173,099

PROCESS FOR MANUFACTURING ROAD WARNING DEVICE FOR DIVIDED DRIVEWAY

Hung-Chun Chen, Nan-San Road, Chang-He, Taiwan 235

Filed May 29, 1991, Ser. No. 706,844
Int. Cl.[5] C03C 25/02; C03B 11/00
U.S. Cl. 65—60.51 5 Claims

1. A process for manufacturing a road warning device for a divided roadway comprising:

pouring potash-glass into a tank;

inserting a potash-glass tube into the tank such that at least some of the potash-glass in the tank will adhere to the tube;

pressing the tube with the adhered potash-glass such that a spherical-shaped top surface is formed; and

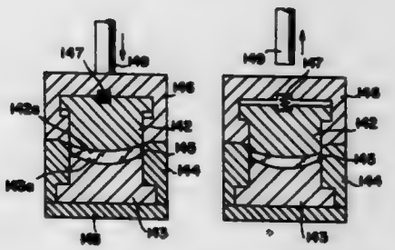
spraying a metal compound selected from the group consisting of a metal-oxide and metal-halide on at least a portion of the spherical-shaped top surface when the top surface is still in a softened condition such that the metal compound adheres to the top surface and chemically reacts with the potash-glass to alter the reflective color thereof.

5,173,100

MOLDING METHOD FOR OPTICAL ELEMENT

Izumu Shigyo, Chiba; Masaki Ohmori, Kawasaki, and Fumitaka Yoshimura, Yokohama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 437,208, Nov. 16, 1989, abandoned. This application Apr. 29, 1991, Ser. No. 697,901
Claims priority, application Japan, Nov. 16, 1988, 63-287849; Jan. 19, 1989, 1-8551
Int. Cl.[5] C03B 23/00
U.S. Cl. 65—102 7 Claims



1. A method for molding an optical element, comprising the steps of:

disposing an upper mold and a lower mold for forming optical functional surfaces of the optical element and a side mold for guiding the upper and lower molds;

coupling the upper mold, the lower mold and the side mold together so the side mold can guide the upper and lower molds in an axial direction;

forming a gap between either the upper mold or the lower mold and the side mold to allow axial movement of the upper mold and the lower mold relative to the side mold;

inserting a glass material between the upper and lower molds;

heating at least the upper and lower molds and glass material to a predetermined temperature;

pressing the glass material between the upper and lower molds such that an adhesive force results between the glass material and the upper and lower molds;

cooling at least the press-molded glass material, while the adhesive force causes one of the upper and lower molds to move toward the glass material in the axial direction within the gap; and

limiting the movement of either the upper mold or lower mold which is moving in the axial direction which movement is caused by said adhesive force, so as to thereby control the thickness of the molded glass material.

5,173,101

METHOD OF PREPARATION MINIATURIZED SENSORS ON BASIS OF FLUIDS AND ARRANGEMENT OF THE MEASURING SYSTEM

Ladislav Novotny, 3 Za Posta,, Praha 10, Czechoslovakia

Filed Jan. 31, 1991, Ser. No. 648,193
Claims priority, application Czechoslovakia, Jan. 31, 1990, 456-90; Jan. 31, 1990, 457-90; Jan. 31, 1990, 458-90; Aug. 17, 1990, 4049-90
Int. Cl.[5] C03B 21/06
U.S. Cl. 65—110 3 Claims

1. A method of preparing a miniaturized sensor for use with fluids, comprising:

providing a capillary (21) made of material which softens when it is heated, the capillary having a first initially closed end and an opposite initially open second end with

a channel (59) extending through the capillary and between the ends thereof;

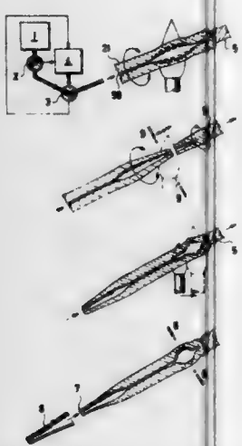
heating the capillary to at least a temperature for softening the material in a first selected area along the capillary near the first end thereof;

passing a gas into the channel through the second initially open end of the capillary for expanding a first chamber in the channel at the first selected area;

varying the passing of gas into the channel through the second end while heating the capillary in the vicinity of the first selected area for shaping and sizing the first chamber;

cutting the first end of the capillary to open the first end near the first chamber;

inverting the capillary end for end;



heating the capillary at the second end to close the second end;

heating the capillary to at least a temperature for softening the material in a second selected area along the capillary near the second end thereof;

passing a gas into the channel through the first now open end of the capillary for expanding a second chamber in the channel at the second selected area;

varying the passing of gas into the channel through the first end while heating the capillary in the vicinity of the second selected area for shaping and sizing the second chamber;

cutting the now closed second end of the capillary to reopen the second end near the second chamber; and

smoothing the first and second now open ends to form a miniaturized sensor element.

5,173,102

APPARATUS FOR CURVING GLASS SHEETS

Frederic Weber, Compiegne, and Claude Didelot, Thourotte, both of France, assignors to Saint-Gobain Vitrage International, Courbevoie, France

Filed Feb. 19, 1991, Ser. No. 656,846

Claims priority, application France, Feb. 21, 1990, 90 02090

Int. Cl.[5] C03B *23/023*

U.S. Cl. 65—273 **10 Claims**

1. An apparatus for curving glass sheets mounted on curving molds, comprising:

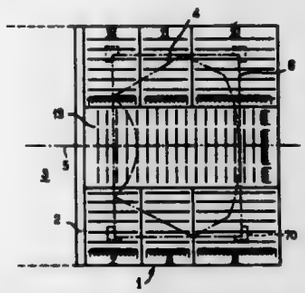
a furnace having at least one heating section;

means for carrying a curving mold through the heating section in a direction parallel to the height of the glass sheets;

a curving mold carried by said carrying means through the at least one heating section;

a plurality of heating elements mounted in said at least one heating section, including a plurality of heating elements positioned above said curving mold and comprising:

a) a plurality of heating elements forming a plurality of axial heating zones and extending in the direction of the height of the glass sheets, and



b) another plurality of heating elements forming a central transverse heating zone positioned between said axial heating zones and extending transverse to the height of the glass sheets; and

means for independently supplying heating power to the heating elements of each of said heating zones.

5,173,103

HERBICIDAL COMPOSITION COMPRISING2-[7-FLUORO-3,4-DIHYDRO-3-OXO-4-(2-PYROPYNYL)-2H-1,4-BENZOXAZIN-6-YL]-4,5,6,7-TETRAHYDRO-1H-ISOINDOLE-1,3(2H)-DIONE AND EITHER GLUFOSINATE OR BIALAPHOS

Ryo Yoshida, Misawa; Yoshihiro Mano, Toyonaka, and Hideyuki Shibata, Takarazuka, all of Japan, assignors to Sumitomo Chemical Co., Ltd., Osaka, Japan

Continuation of Ser. No. 373,456, Jun. 30, 1989, abandoned. This application Feb. 26, 1992, Ser. No. 841,277

Claims priority, application Japan, Jul. 5, 1988, 63-167925

Int. Cl.[5] A01N *43/38, 43/84, 57/10*

U.S. Cl. 71—86 **18 Claims**

1. A herbicidal composition which comprises a herbicidally effective amount of the combinations of (a) 2-[7-fluoro-3,4-dihydro-3-oxo-4-(2-propynyl)-2H-1,4-benzoxazin-6-yl]-4,5,6,7-tetrahydro-1H-isoindole-1,3(2H)-dione and (b) one of (2-amino-4-methylphosphinobutyryl)-alanylalanine and its salt or DL-homoalanin-4-yl(methyl)-phosphinic acid and its salt, and an inert carrier or diluent, wherein the weight proportion of the components (a) and (b) is from 1:0.33 to 1:34.

5,173,104

SELECTIVELY HERBICIDAL METRIBUZIN PLUS BROMOXYNIL

Dieter Feucht, Bayerwerk, Fed. Rep. of Germany, assignor to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Oct. 2, 1990, Ser. No. 592,032

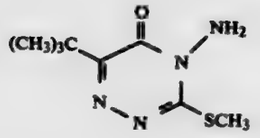
Claims priority, application Fed. Rep. of Germany, Nov. 10, 1989, 3937475

Int. Cl.[5] A01N *43/707*

U.S. Cl. 71—93 **1 Claim**

1. In the growing of corn, the method of selectively combating weeds which comprises, after emergence of the corn, applying to the corn or the locus in which the corn is growing a selectively effective herbicidal amount of a synergistic composition comprising

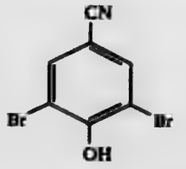
(1) 4-amino-6-(1,1-dimethylethyl)-3-(methylthio)-1,2,4-triazin-5-(4H)-one of the formula



and

(2) 3,5-dibromo-4-hydroxybenzonitrile of the formula

(I)



(II)

wherein the ratio by weight of the active compound of the formula (I) to the active compound of the formula (II) is between about 1:1 and 1:10.

5,173,105

CERTAIN SUBSTITUTED BIS(2-BENZOYL-3-OXO-CYCLOHEXENYL)DIAMINES

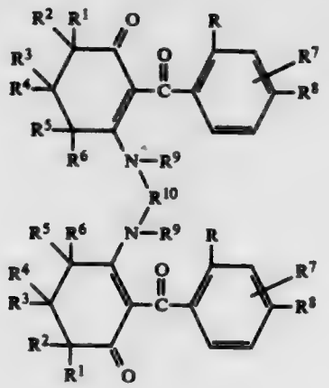
Christopher G. Knudsen, Berkeley, Calif., assignor to Imperial Chemical Industries Plc, London, England

Filed Feb. 5, 1991, Ser. No. 650,525

Int. Cl.[5] A01N *41/10*; C07C *317/06*

U.S. Cl. 71—103 **31 Claims**

1. A compound of the formula



wherein

R is halogen, C_1–C_2 alkyl, C_1–C_2 alkoxy, nitro; cyano; C_1–C_2 haloalkyl, or R^aSO_n—wherein n is 0 or 2 and R^a is C_1–C_2 alkyl;

R^1 is hydrogen or C_1–C_4 alkyl;

R^2 is hydrogen or C_1–C_2 alkyl; or

R^1 and R^2 together are alkylene having 2 to 5 carbon atoms;

R^3 is hydrogen or C_1–C_4 alkyl;

R^4 is hydrogen or C_1–C_4 alkyl; or

R^3 and R^4 together are oxo;

R^5 is hydrogen or C_1–C_4 alkyl;

R^6 is hydrogen or C_1–C_4 alkyl; or

R^5 and R^6 together are alkylene having 2 to 5 carbon atoms;

R^7 and R^8 independently are (1) hydrogen; (2) halogen; (3) C_1–C_4 alkyl; (4) C_1–C_4 alkoxy; (5) trifluoromethoxy; (6) cyano; (7) nitro; (8) C_1–C_4 haloalkyl; (9) R^bSO_n—wherein n is the integer 0, 1 or 2; and R^b is (a) C_1–C_4 alkyl; (b) C_1–C_4 alkyl substituted with halogen or cyano; (c) phenyl; or (d) benzyl; (10) —NR^cR^d wherein R^c and R^d independently are hydrogen or C_1–C_4 alkyl; (11) $R^eC(O)$—wherein R^e is C_1–C_4 alkyl or C_1–C_4 alkoxy; (12) $SO_2NR^cR^d$ wherein R^c and R^d are as defined; (13) —$N(R^c)C(O)R^d$ wherein R^c and R^d are as defined; or (14) —$CH_2CH_2OCH_3$ or —$CH_2CH_2OC_2H_5$; with the proviso that R^7 is not at the 6-position; and

R^9 is hydrogen or C_1–C_4 alkyl; and

R^{10} is C_2–C_6 alkylene, C_4–C_8 alkenylene or C_4–C_8 alkynylene with the proviso that R^7 is not at the 6-position.

5,173,106

METHOD FOR INHIBITING FLOWERING OF PLANTS USING S-(+)-ABSCISIC ACID

Yasuo Kamuro, 2-15-16, Hanaike, Ichinomiya-shi, Aichi, 491, and Shingo Marumo, 3-403, Honjigahara Jutaku, 100-8, Midorigaoka, Mideri-cho, Owariasahi-shi, Aichi, 488, both of Japan

Filed Jun. 24, 1991, Ser. No. 719,244

Claims priority, application Japan, Jun. 26, 1990, 2-167588

Int. Cl.[5] A01N *35/06, 37/06*

U.S. Cl. 71—113 **3 Claims**

1. A method for inhibiting flowering of plants comprising applying 5–25 ppm of (S-(+)-abscisic acid to said plants by drenching before floral bud initiation of said plants.

5,173,107

COMPOSITE HARD METAL BODY AND PROCESS FOR ITS PRODUCTION

Klaus Dreyer, Essen, and Hans Kolaska, Bottrop, both of Fed. Rep. of Germany, assignors to Krupp Widia GmbH, Essen, Fed. Rep. of Germany

PCT No. PCT/DE89/00740, § 371 Date Jun. 10, 1991, § 102(e) Date Jun. 10, 1991, PCT Pub. No. WO90/07017, PCT Pub. Date Jun. 28, 1990

PCT Filed Nov. 27, 1989, Ser. No. 689,237

Claims priority, application Fed. Rep. of Germany, Dec. 16, 1988, 3842439; Dec. 22, 1988, 3843219

Int. Cl.[5] B22F *3/00*

U.S. Cl. 75—229 **17 Claims**

1. A composite hard metal body comprising:

a matrix of a binder metal material selected from the group consisting of cobalt, iron, nickel or combinations thereof;

a first phase of hard material integrated in said matrix and selected from the group consisting of tungsten carbide, or the carbides and nitrides of an element selected from the Group IVb or Group Vb of the Periodic Table; and

a monocrystalline reinforcing material second phase in said matrix in an amount of 2 to 40% by volume and selected from the group which consists of:

platelet reinforcing materials selected from the group consisting of borides, carbides, nitrides, carbonitrides of the elements Ti, Zr, Hf, V, Nb, Ta, Cr, Mo, W, of SiC, Si_3N_4, Si_2N_2O, Al_2O_3, ZrO_2, AlN, and BN, and mixtures thereof, and

a mixture of said platelet reinforcing materials and needle reinforcing materials selected from the group consisting of SiC, Si_3N_4, Al_2O_3, ZrO_2, AlN, BN and mixtures thereof, said platelet and needle reinforcing materials being present in a minimum of 2% by volume.

5,173,108

METHOD FOR CONTROLLING THE OXYGEN CONTENT IN AGGLOMERATED MOLYBDENUM POWDERS

David L. Houck, Towanda, Pa., assignor to GTE Products Corporation, Stamford, Conn.

Continuation of Ser. No. 515,535, Apr. 13, 1990, abandoned, Continuation of Ser. No. 326,826, Mar. 21, 1989, abandoned. This application Nov. 12, 1991, Ser. No. 790,120

Int. Cl.[5] B22F *9/00*

U.S. Cl. 75—365 **1 Claim**

1. A method of producing an agglomerated molybdenum plasma spray powder with a controlled level of oxygen, said method comprising:

a) milling molybdenum dioxide powder to a particle size less than about 10 micrometers;
b) forming a slurry consisting of said milled molybdenum dioxide powder and ammonium paramolybdate crystals dissolved in water;
c) forming a uniform mixture of agglomerated powders consisting of molybdenum dioxide and ammonium paramolybdate by drying said slurry, wherein the mixture has an oxygen content of greater than about 25% by weight; and
d) reducing said mixture in a rotating bed furnace in a hydrogen atmosphere at a temperature of from about 700° C. to about 1000° C. for a sufficient time to remove a portion of the oxygen therefrom and form reduced molybdenum powder agglomerates having an oxygen content of from about 7% to about 10% by weight.

5,173,109

PROCESS FOR FORMING REFLOWABLE IMMERSION TIN LEAD DEPOSIT

Richard Iantosca, West Palm Beach, Fla., assignor to Shipley Company Inc., Newton, Mass.

Continuation of Ser. No. 532,819, Jun. 4, 1990, abandoned. This application Oct. 3, 1991, Ser. No. 771,843
Int. Cl.[5] C23C *20/04, 18/54, 18/31, 18/16*
U.S. Cl. 106—1.22 **23 Claims**

1. A process for providing a bondable tin lead alloy having a tin content ranging between 50 and 82 weight percent and a lead content ranging between 50 and 18 weight percent on a cupreous metal substrate, said process comprising the steps of immersing the substrate in a displacement plating solution comprising stannous ions in an amount of from 0.05 to 0.50 moles per liter, plumbous ions in an amount of from 0.01 to 0.15 moles per liter, a total content of stannous ions and plumbous ions in an amount of from 0.05 to 0.60 moles per liter, a ratio of stannous ions to plumbous ions varying from about 1.0:3.0 to 50.0:1.0, and a thickness promoter in an amount up to 1.00 moles per liter of solution, permitting plating to continue until a porous deposit of at least 100 microinches is formed, and heating said deposit to a temperature not exceeding about 400° F. for a time sufficient to reflow said deposit into a coherent alloy.

ABRASION RESISTANT PRINTING INKS

Ramasamy Krishnan, Sewaren, and Prasad K. Adhikari, Carlstadt, both of N.J., assignors to Sun Chemical Corporation, Fort Lee, N.J.

Filed Nov. 18, 1991, Ser. No. 793,745
The portion of the term of this patent subsequent to Mar. 24, 2009, has been disclaimed.
Int. Cl.[5] C09D *11/02*
U.S. Cl. 106—20 R **6 Claims**

1. A printing ink comprising a pigment and an aqueous or non-aqueous solvent or a mixture of such solvents and having reduced abrasiveness towards printing surfaces characterized in that the ink contains an alkoxylated dibasic phosphate ester and at least one alkali metal salt of a dialkylsulfosuccinic ester, said alkoxylated dibasic phosphate ester being present in an amount 2–6 weight %, based on the weight of the printing ink, and said alkali metal salt of a dialkylsulfosuccinic ester being present in an amount of about 0.5–3 weight %, based on the weight of the printing ink.

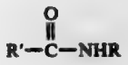
5,173,112

NITROGEN-CONTAINING ORGANIC COSOLVENTS FOR AQUEOUS INK JET INKS

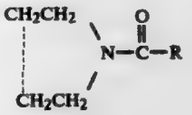
Howard Matrick, Highlands, N.J.; Dominic M. Chan, Wilmington, Del., and Glenn M. Russo, Mullica Hill, N.J., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del.

Filed Apr. 3, 1992, Ser. No. 863,011
Int. Cl.[5] C09D *11/02*
U.S. Cl. 106—20 **23 Claims**

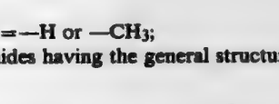
1. An aqueous ink jet ink composition consisting essentially of:
(a) an aqueous carrier medium;
(b) a colorant selected from the group consisting of a pigment dispersion and a dye; and
(c) an organic cosolvent having a solubility in water of at least 4.5% at 25° C., and which is selected from the group consisting of:
1) alkyl amides having the general structure:



wherein
R=—H or —CH_3,
R′=—C_3H_8 or —$C(CH_3)_2$, when R=—H, and
R′=—C_2H_5, when R=—CH_3;
2) cyclic amides having the general structure:



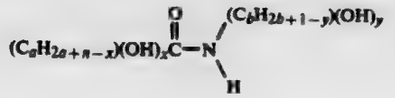
wherein R=—H or —CH_3;
3) cyclic diamides having the general structure:



wherein R=—H or —CH_3;
4) alkyl diamides having the general structure:

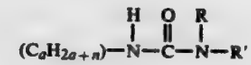
wherein R=—H or —CH_3;
5) alkyl diol diamides having the general structure:

wherein R=—H, —CH_3 or —C_2H_2;
6) hydroxyamides having the general structure:



wherein
a=1–6,
b=2–4,
x=0–3,
y=0–3,
x+y=1–6,
n=+1 or −1,
a≧x,
b≧y;

7) hydroxyalkyl ureas having the general structure:



wherein
a=1–7,
n=+1 or −1,
R is selected from the group consisting of —CH_2-CHOHCH$_2$OH and —CH_2CH_2OH, and
R′ is selected from the group consisting of —CH_2CH_2OH and —H; and

8) mixtures thereof.

5,173,113

COMPOSITION FOR INK VEHICLES AND PROTECTIVE COATINGS

Gerald Sugerman, Allendale, N.J., and Michael W. O'Neill, Abbotsford, Canada, assignors to Topez Company, British West Indies

Filed Mar. 12, 1991, Ser. No. 668,072
Int. Cl.[5] C09D *11/06;* C08L *91/00*
U.S. Cl. 106—27R **21 Claims**

1. A liquid vehicle for use in ink formulations comprising combinations at least about 10% by weight of each (i) a di unsaturated fatty acid ester, oligo unsaturated fatty acid ester or mixtures thereof and (ii) a difunctional or multi-functional alpha, beta unsaturated carboxylate ester and the balance essentially additives.

5,173,114

BASAL CERAMIC LAYER - RECONSTRUCTION

Michel Heurtaux, Romorantin, France, assignor to Suissor, S.A., Angers, France

Continuation of Ser. No. 590,324, Jun. 20, 1990, abandoned, which is a continuation of Ser. No. 346,298, May 1, 1989, abandoned, which is a continuation of Ser. No. 226,560, Jul. 18, 1988, abandoned, which is a continuation of Ser. No. 910,847, Sep. 24, 1986, abandoned, which is a continuation of Ser. No. 699,987, Feb. 11, 1985, abandoned. This application Jan. 30, 1992, Ser. No. 827,497
Claims priority, application France, Feb. 15, 1984, 84 02295
Int. Cl.[5] A61C *13/083;* C03C *8/02*
U.S. Cl. 106—35 **1 Claim**

1. In a ceramo-metallic dental reconstruction applied to a tooth stump, including: a basal ceramic opacifying layer adhered to the tooth stump; a dentine intermediate layer adhered to the basal ceramic opacifying layer and an incisal intermediate layer adhered to the dentine intermediate layer; and a transparent surface layer, the improvement wherein the basal ceramic opacifying layer comprises:

an undercoat of opaque slip produced from a first glass frit having a mean particle size of about 12 μm; and

an opaque layer covering the undercoat of opaque slip produced from a second glass frit having a mean particle size of about 30 μm, and containing additionally 30% by weight of refractory particles having a particle size ranging from about 40 μm to about 100 μm, wherein the first glass frit corresponds to the following composition:

SiO_2	46 to 48% by weight;
AL_2O_3	10 to 12% by weight;
CaO	1 to 1.5% by weight;
MgO	0.5 to 1.5% by weight;
K_2O	10 to 11% by weight;
Na_2O	6 to 9% by weight;
B_2O_3	9 to 11% by weight;
ZrO_2	1.5 to 2% by weight;
SnO_2	6 to 8% by weight; and
TiO_2	0.5 to 1% by weight,

and the second glass frit corresponds to the following composition:

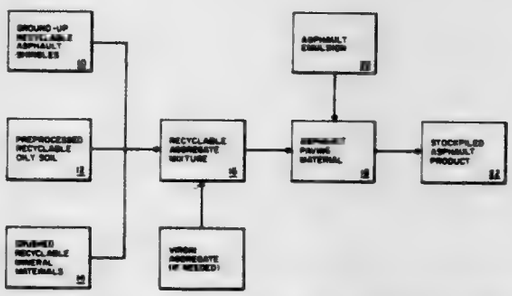
SiO_2	42 to 46% by weight;
AL_2O_3	14 to 18% by weight;
CaO	0.8 to 1.7% by weight;
MgO	0.5 to 1.5% by weight;
K_2O	11 to 13% by weight;
Na_2O	3 to 6% by weight;
B_2O_3	5 to 8% by weight;
ZrO_2	3 to 5% by weight;
SnO_2	11 to 14% by weight; and
TiO_2	0.5 to 3% by weight.

5,173,115

ASPHALTIC CONCRETE PRODUCT AND A METHOD FOR THE FIXATION OF CONTAMINATED SOILS IN THE ASPHALTIC CONCRETE

John J. Glynn, Jr., Natick, and Nathan Wiseblood, Hopkinton, both of Mass., assignors to American Reclamation Corporation, Southborough, Mass.

Continuation of Ser. No. 496,962, Mar. 20, 1990, abandoned. This application Jul. 8, 1991, Ser. No. 726,858
Int. Cl.[5] C08L *95/00*
U.S. Cl. 106—281.1 **17 Claims**



1. A method for both the manufacture of a cold mix asphaltic concrete and the fixation of hydrocarbons in contaminated oily soil which includes:

(a) mixing the following components:
asphalt roof cuttings containing fibers,
contaminated oily soil containing 60,000 ppm hydrocarbons, and
mineral aggregate to form an aggregate mixture;

(b) effecting the mixing without melting the asphalt in the roof cuttings;

(c) coating the mixture with a cold mix emulsion to form the asphaltic concrete; and

(d) setting the concrete to fix the hydrocarbons whereby the hydrocarbons will not leach from the concrete when the concrete is set.

5,173,116

PREPARATION OF READILY DISPERSIBLE PIGMENT GRANULES

Karl Roth, Limburgerhof, Fed. Rep. of Germany, assignor to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Apr. 20, 1992, Ser. No. 871,077
Claims priority, application Fed. Rep. of Germany, Apr. 24, 1991, 4113318
Int. Cl.[5] C09C *3/04, 3/08, 3/10, 3/12*
U.S. Cl. 106—401 3 Claims

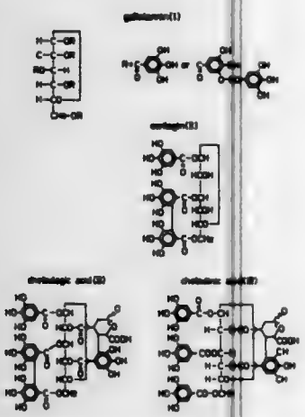
1. A process for preparing readily dispersible pigment granules which comprises dispersing, in an aqueous suspension of the pigment, by thorough stirring, a gas which does not react with the suspension, in fine bubbles under essentially atmospheric pressure and converting the resulting pigment suspension into pigment granules by spray drying or by mechanical removal of the liquid, shaping of the resulting still-moist pigment cake and subsequent drying.

5,173,117

ADDITIVES FOR ROLLER COMPACTED CONCRETE PAVEMENT

Hitoshi Inokawa, Matsudo; Kiyohiko Uchida, Narashino; Kazuo Inada, Funabashi, and Noriyuki Kozakai, Matsudo, all of Japan, assignors to Sumitomo Cement Co. Ltd., Tokyo, Japan

Continuation of Ser. No. 593,010, Oct. 5, 1990, abandoned. This application Nov. 21, 1991, Ser. No. 795,761
Claims priority, application Japan, Oct. 27, 1989, 1-278365
Int. Cl.[5] C04B *24/04*
U.S. Cl. 106—823 4 Claims



1. An additive composition for use in roller compacted concrete pavement comprising:

a hydrolyzable tannin compound as an active ingredient; and a surface active agent selected from the group consisting of polyoxyethylene alkyl allyl ether, alkyl sulfate, dialkyl sulfosuccinate or propylene glycolethylene glycol block copolymer wherein said composition contains 1 to 99 percent by weight of said hydrolyzable tannin compound and 1 to 99 percent by weight of said surface active agent.

5,173,118

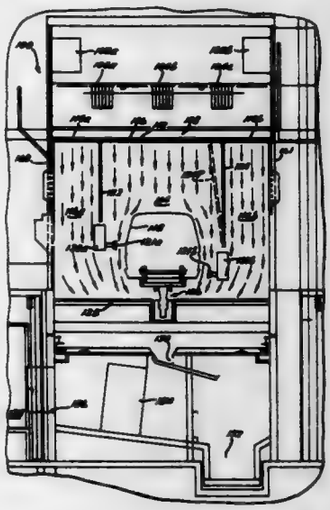
PAINT SPRAY BOOTH WITH ADJUSTABLE PARTITIONS

Leif E. B. Josefsson, Sterling Heights, Mich., assignor to ABB Flakt, Inc., Madison Heights, Mich.

Filed May 20, 1991, Ser. No. 702,825
Int. Cl.[5] B05B *15/12*
U.S. Cl. 118—309 15 Claims

1. In a paint spray booth enclosure having controlled air flow through a perforated ceiling and a perforated floor, the floor and ceiling interconnected by vertically extending booth outer side walls, the improvement comprising:

at least one partition wall positioned interiorly of the booth's outer side walls, the partition wall coupled to and extending downwardly from the perforated ceiling to a preselected non-zero height above the perforated floor; and



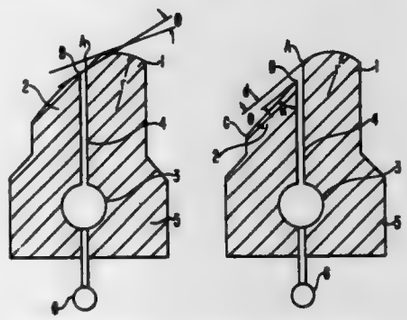
air flow control means operative to alter the controlled air flow through a space between the partition and side walls.

5,173,119

COATING APPARATUS BASE FILM COATING APPARATUS WITH DIE NOZZLE

Masaru Watanabe, Nishinomiya, and Satoshi Hirose, Amagasaki, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Jun. 29, 1990, Ser. No. 545,890
Claims priority, application Japan, Jun. 29, 1989, 1-169297
Int. Cl.[5] B05C *5/02*
U.S. Cl. 118—410 3 Claims



1. A coating apparatus for continuously applying a coating liquid, comprising:

a die nozzle having a front lip and a rear lip which are spaced to form therebetween a slit extending into said die nozzle away from said lips, said slit opening onto a front surface of a base film which runs over said lips while being spaced at a distance from said die nozzle and in a direction from said front lip to said rear lip, said coating apparatus being free of any base film supporting structure at a position corresponding to a back surface of the base film, said rear lip having a curved convex surface facing the base film and the sectional profile in the direction from said front to said rear lip having a slit end point A at an intersection of said slit and said rear lip surface, and said front lip having

a curved convex surface facing the base film and the sectional profile in the direction from said front to said rear lip having a slit end point B at an intersection of said slit and said front lip surface, said end point B being spaced in the direction in which said slit extends into said die nozzle from said point A, and an angle between a first line tangent to the curved convex surface of said rear lip at said point A and a second line tangent to the curved convex surface of said front lip at said point B being less than 45°.

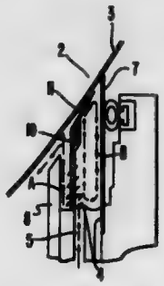
2. A coating apparatus for continuously applying a coating liquid, comprising:

a die nozzle having a front lip and a rear lip which are spaced to form therebetween a slit extending into said die nozzle away from said lips, said slit opening onto a front surface of a base film which runs over said lips while being spaced at a distance from said die nozzle and in a direction from said front lip to said rear lip, said coating apparatus being free of any base film supporting structure at a position corresponding to a back surface of the base film, said rear lip having a curved convex surface facing the base film and the sectional profile in the direction from said front to said rear lip having a slit end point A at an intersection of said slit and said rear lip surface, and said front lip having a planar surface facing the base film and the sectional profile in the direction from said front to said rear lip having a slit end point B at an intersection of said slit and said front lip surface and an opposite end point C spaced along said front lip from said point B, said planar surface being spaced in a direction in which said slit extends into said die nozzle from a first line tangent to the curved convex surface of said rear lip at said point A, and said planar surface and a longitudinal axis of said slit extending in the direction in which said slit extends into said die nozzle being at an angle of from 30° to 80°.

5,173,120
COATING APPARATUS HAVING A PARTITIONED COATING CHAMBER

Hiroshi Suzumura, Hiroshima; Kazuo Hirota, Takasago; Mitsuo Yamamoto, Mihara, and Hiroto Jakunen, Hiroshima, all of Japan, assignors to Mitsubishi Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Jan. 7, 1991, Ser. No. 638,429
Claims priority, application Japan, Jan. 5, 1990, 2-91[U]
Int. Cl.[5] B05C 5/02
U.S. Cl. 118—410 6 Claims

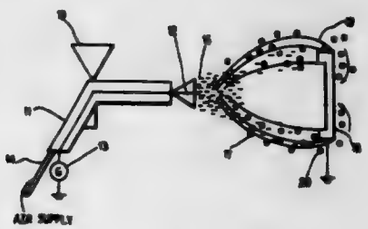


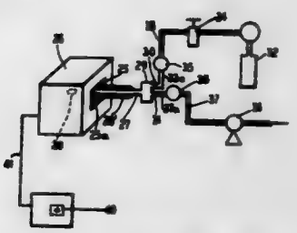
1. The combination of a backing roller and a coating apparatus confronting an outer circumferential surface of said backing roller for coating a web traveling in a web transport direction over said surface with a coating liquid, said apparatus including a plate-like member disposed at an upstream side of the apparatus with respect to the web transport direction, said plate-like member extending toward the outer circumferential surface of said backing roller, a blade disposed downstream of said plate-like member with respect to said web transport direction and biased in a direction toward the outer circumferential surface of said backing roller such that a chamber is defined between said blade and said plate-like member, a blow-off section defining a bottom of said chamber remote from the outer circumferential surface of said backing roller and a liquid feed passageway open to said chamber at the bottom thereof, a partition plate having upper and lower portions extending substantially parallel to said blade through said chamber toward the outer circumferential surface of said backing roller and spaced from said plate-like member and said blade in the web transport direction so as to divide said chamber into a first section delimited by said plate-like member and the partition plate on the upstream side of the apparatus and a second section delimited by said blade and the partition plate on the downstream side of the apparatus, and a resilient body fixed to the upper portion of said partition plate adjacent said backing roller and so disposed as to resiliently engage a web traveling in said web transport direction over the outer circumferential surface of said backing roller, said resilient body being oriented at an inclination relative to said partition plate and extending from said upper portion of the partition plate in a direction toward said blade, said resilient body and the outer circumferential surface of said backing roller defining a wedge-shaped space therebetween, said partition plate having holes extending through the lower portion thereof which place said first and said second sections in communication with one another, said liquid feeding passageway having an inlet end open to the bottom of said second section of said chamber at a location adjacent the lower portion of said partition plate, said blow-off section defining a bottom of said second section of the chamber extending between the inlet end of said liquid feed passageway and said blade such that the inlet end of said liquid feed passageway is spaced from the downstream side of the second section of said chamber with respect to the web transport direction, and said chamber being open at the bottom thereof only to said liquid feeding passageway such that when liquid is being fed into said chamber from said liquid feeding passageway the liquid must pass out of said first section of the chamber only toward the outer circumferential surface of said backing roll.

5,173,121
APPARATUS FOR THE DEPOSITION AND FILM FORMATION OF SILICON ON SUBSTRATES

Roger M. Hawk, Conway, and Kamesh V. Gadepally, Little Rock, both of Ark., assignors to The Board of Trustees of the University of Little Rock, Little Rock, Ark.

Division of Ser. No. 611,428, Nov. 9, 1990, Pat. No. 5,075,257.
This application Mar. 27, 1991, Ser. No. 675,674
Int. Cl.[5] B05B 5/025; B05C 5/00
U.S. Cl. 118—629 11 Claims





1. An apparatus for forming silicon film on a substrate, comprising:

a) a corona charging gun having means for aerosolizing and

spraying a stream of particulated silicon powder particles through an electrostatic field, and thereby to electrostatically charge the particles with one polarity;

b) electrically grounded support means for holding and retaining a substrate and giving said substrate a polarity opposite to that on the charged particles;

c) said means for aerosolizing and spraying comprising nozzle means for directing the charged particles in the form of a stream to uniformly coat the substrate with a layer of silicon powder particles, and wherein the thickness of the silicon powder is controlled by the position of the corona charging gun, the length of the spray time, the velocity of the powder flow, and the electrostatic charge level; and

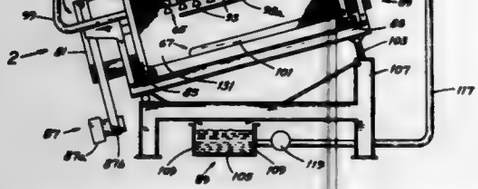
d) heat treatment furnace means having means for receiving the powder coated substrate inside of a controllable heat treating zone for heat treating the coated substrate followed by cooling of the coated substrate at a controlled temperature, time interval, and atmosphere, thereby converting the layer of particles into a silicon film.

5,173,122

APPARATUS FOR WASHING SUGARCANE BILLETS

Sydney E. Tilby, 989 Wagonwood Drive, Victoria, Canada V8X 4M1 , and David G. Jansson, 4415 Laguna Pl. Apt. 208, Boulder, Colo. 80303

Filed Jan. 4, 1991, Ser. No. 637,343
Int. Cl.[5] B01J *3/00*; B08B *3/06*
U.S. Cl. 127—2 **5 Claims**



1. Apparatus for washing sugarcane billets comprising:

a container for receiving sugarcane billets to be washed and having a discharge end with a quiescent region adjacent thereto;

a used-water handling apparatus for collection of water already used for washing;

a spray bar having a first input end for receiving used water from the used-water tank and a second input end for receiving fresh water thereby to selectively emit fresh and recycled water in a spray in such container;

valve means to adjust the relative quantities of fresh water and used water being sprayed; and,

means to randomly re-orient such billets moving toward the quiescent region,

whereby substantially the entire surface of each billet is washed to remove dirt adhering thereto and such billets are easily discharged from the apparatus.

5,173,123

METHOD FOR FREEING OBSTRUCTIONS FORMED IN A HOLLOW SURGICAL SUCTION IMPLEMENT

Jerry L. Moore, 6229 N. Lafayette St., Fresno, Calif. 93711

Division of Ser. No. 620,712, Dec. 3, 1990, Pat. No. 5,115,532. This application Sep. 5, 1991, Ser. No. 755,447
Int. Cl.[5] B08B *5/04, 9/00*
U.S. Cl. 134—8 **4 Claims**

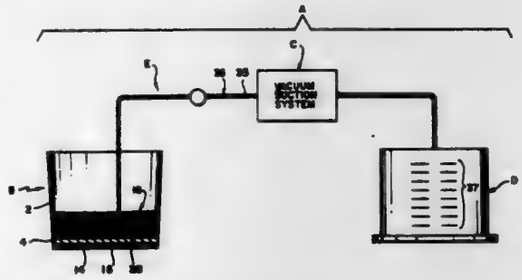
1. A method of freeing obstructions formed in a hollow surgical suction implement having first and second open ends, comprising the steps of:

a) providing a fluid container having a plurality of bristles formed therein;

b) providing a fluid in the fluid container;

c) providing a hollow surgical suction implement having first and second open ends;

d) inserting the first end of the hollow surgical suction implement into the fluid container such that at least one of the bristles extends into the hollow cavity to free any obstructions therein;



e) connecting a suction member to the second end of the hollow surgical suction implement for directing at least a portion of the fluid in the fluid container into the first end and out through the second end of the hollow surgical suction implement to carry obstructions freed by the bristles therethrough; and,

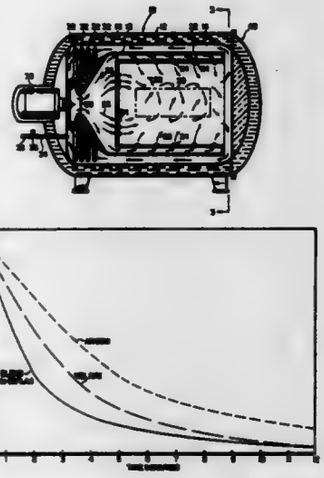
f) directing at least a portion of the fluid in the fluid container through the hollow surgical suction implement to carry obstructions freed by at least one bristle therethrough.

5,173,124

RAPID GAS QUENCHING PROCESS

William J. Baxter, Macungie; Paul T. Kilbefner, III, Wescosville, and Charles E. Bankal, Jr., Harleysville, all of Pa., assignors to Air Products and Chemicals, Inc., Allentown, Pa.

Filed Jun. 18, 1990, Ser. No. 540,027
Int. Cl.[5] C21D *1/74*
U.S. Cl. 148—633 **10 Claims**



1. A method of increasing the cooling rate of an article heated to an elevated temperature comprising the steps of:

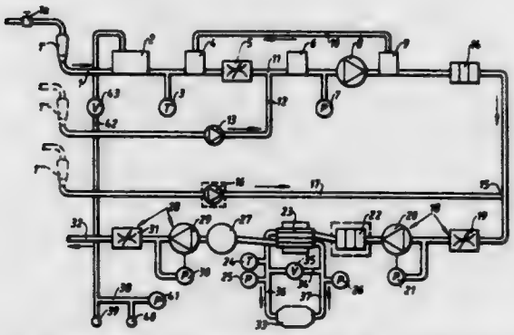
preparing a gaseous mixture of helium gas and a second inert gas wherein there is at least 50% of the second inert gas in the mixture; and injecting said gaseous mixture into said furnace under conditions of turbulent flow.

5,173,125

SYSTEM FOR CONTROLLING MEDICAL TREATMENTS SUCH AS DIALYSIS

Anders Felding, Malmö , Sweden, assignor to Gambro AB, Sweden

Filed May 17, 1991, Ser. No. 702,622
Claims priority, application Sweden, May 25, 1990, 9001890
Int. Cl.[5] B08B *3/00, 9/00*
U.S. Cl. 134—22.11 40 Claims



21. A method for controlling the flow of a treatment fluid through a medical treatment device which subjects said treatment fluid to contamination, said method comprising feeding said treatment fluid through a fluid flow inlet path to said medical treatment device, withdrawing said contaminated fluid through a fluid flow outflow path from said medical treatment device, diverting a fluid flowing in said fluid flow inlet path from a point upstream of said medical treatment device through a diversion path so as to bypass said medical treatment device, providing a cleaning fluid in place of said treatment fluid for cleaning said fluid flow inlet path and said diversion path by providing a solvent, connecting a cartridge containing a cleaning composition to said solvent and said fluid flow inlet path, whereby said solvent is mixed with said cleaning composition in said cartridge, and passing said mixture through said fluid flow inlet path ,so as to clean said fluid flow inlet path when said cleaning fluid is diverted through said diversion path.

5,173,126

ALUMINUM BRAZING PASTE

Toshiaki Ogura, Minoo; Tadashi Takemoto, Toyonaka, and Tatsuyuki Ujie, Shiga, all of Japan, assignors to Kabushiki Kaisha Nihon Genma and Toyo Aluminium Kabushiki Kaisha, both of Osaka, Japan

Filed May 7, 1992, Ser. No. 879,308
Claims priority, application Japan, May 7, 1991, 3-101336
Int. Cl.[5] B23K *35/34*
U.S. Cl. 148—23 4 Claims

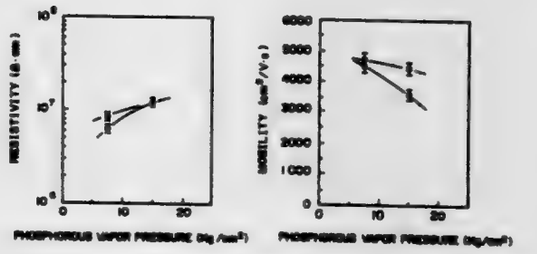
1. An aluminum brazing paste comprising 0.5 to 15 parts by weight of a fluorine-containing flux and 30 to 80 parts by weight of liquid polyisobutylene and/or its hydrogenated product with 300 to 2000 of average molecular weight, per 100 parts by weight of aluminum-containing metal powder with 10 to 500 μm of mean particle size for brazing of aluminum or aluminum alloys.

5,173,127

SEMI-INSULATING INP SINGLE CRYSTALS, SEMICONDUCTOR DEVICES HAVING SUBSTRATES OF THE CRYSTALS AND PROCESSES FOR PRODUCING THE SAME

Haruhito Shimakura; Osamu Oda, and Keiji Kainosho, all of Toda, Japan, assignors to Nippon Mining Co., Ltd., Tokyo, Japan

Filed Feb. 28, 1991, Ser. No. 661,616
Claims priority, application Japan, Mar. 2, 1990, 2-51370; May 1, 1990, 2-115403; May 11, 1990, 2-122669
Int. Cl.[5] H01L *29/12*
U.S. Cl. 148—33.6 8 Claims



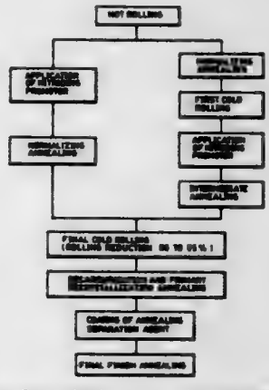
1. An undoped semi-insulating InP single crystal having a concentration of all native Fe, Co and Cr of 0.05 ppmw or less, said crystal having a resistivity of 10^6 Ω-cm or more and a mobility of above 3,000 $cm^2/V \cdot s$ both at 300° K.

5,173,128

METHOD OF PRODUCING ORIENTED SILICON STEEL SHEET HAVING VERY HIGH MAGNETIC FLUX DENSITY

Michiro Komatsubara; Toshio Sadayori; Katsuo Iwamoto; Yasuyuki Hayakawa, and Takahiro Kan, all of Chiba, Japan, assignors to Kawasaki Steel Corporation, Japan

Filed Oct. 28, 1991, Ser. No. 784,163
Claims priority, application Japan, Nov. 1, 1990, 2-293515
Int. Cl.[5] H01F *1/04*
U.S. Cl. 148—111 10 Claims



1. A method of producing an oriented silicon steel sheet having a very high magnetic flux density by performing a series of steps comprising hot rolling an oriented silicon steel sheet containing AlN as the main inhibitor and also containing Sb, effecting one time or a plurality of times the combined steps of annealing and cold rolling including a final cold rolling with a rolling reduction of about 80 to 95%, decarburization and primary recrystallization annealing of the sheet, coating an annealing separation agent on the sheet and thereafter final finish annealing said sheet, further comprising:

before said annealing step prior to said final cold rolling step, applying a nitriding promoter to the surface of the steel

sheet, and adjusting the partial pressure of N_2 in the atmosphere present in the annealing step prior to said final cold rolling step to a value of about 20% or more.

5,173,129

GRAIN-ORIENTED SILICON STEEL SHEET HAVING A LOW IRON LOSS FREE FROM DETERIORATION DUE TO STRESS-RELIEF ANNEALING AND A METHOD OF PRODUCING THE SAME

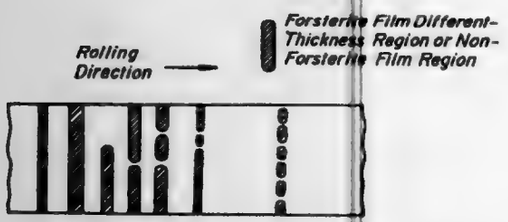
Ujihiro Nishilke; Michiro Komatsubara; Yoshiaki Iida, and Isao Matoba, all of Chiba, Japan, assignors to Kawasaki Steel Corporation, Kobe, Japan

Continuation of Ser. No. 120,203, Nov. 5, 1987, Pat. No. 4,952,253, which is a continuation of Ser. No. 918,604, Oct. 10, 1986, abandoned, which is a continuation of Ser. No. 663,385, Oct. 22, 1984, Pat. No. 4,655,854. This application Dec. 8, 1989, Ser. No. 448,059

Claims priority, application Japan, Oct. 27, 1983, 58-201279; Oct. 27, 1983, 58-201280

Int. Cl.[5] H01F *1/04*

U.S. Cl. 148—111 6 Claims



1. A grain-oriented silicon steel sheet having a low iron loss free from deterioration due to stress-relief annealing carried out at a temperature range of 600° to 900° C., said steel sheet containing about 2.0–4.0% by weight of Si, and having no plastically strained regions in a matrix surface layer and having a forsterite film, said forsterite film locally having regions where the film has been removed which have been periodically or regularly formed on the steel sheet surface and do not coat the steel sheet surface, and said steel sheet further having a tension-giving type insulating coating film having a linear thermal expansion coefficient of not higher than 9.8×10^{-6} 1/°C. formed on the top of the forsterite film.

PROCESS FOR SURFACE TREATMENT OF COPPER AND COPPER ALLOY

Masashi Kinoshita, Marugame; Takayuki Murai, Kagawa, and Takashi Yoshioka, Marugame, all of Japan, assignors to Shikoku Chemicals Corporation, Marugame, Japan

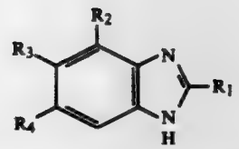
Filed Nov. 13, 1990, Ser. No. 611,660

Claims priority, application Japan, Nov. 13, 1989, 1-295253; Jul. 7, 1990, 2-180239; Aug. 10, 1990, 2-212285

Int. Cl.[5] C23C *22/06*

U.S. Cl. 148—268 15 Claims

1. A process for forming a chemically formed layer on the surface of copper or a copper alloy to be soldered, wherein the layer protects the copper or the copper alloy from oxidation upon heating, which comprises immersing the surface of the copper or the copper alloy in an aqueous solution containing a benzimidazole compound and an organic acid, wherein the benzimidazole compound has an alkyl group of at least 3 carbon atoms at the 2-position and has the formula



wherein R_1 represents an alkyl group having at least 3 carbon atoms, and R_2, R_3 and R_4 represent a lower alkyl group, a halogen atom, a nitro group or a hydrogen atom.

5,173,131

SHAPE MEMORY STAINLESS ALLOY

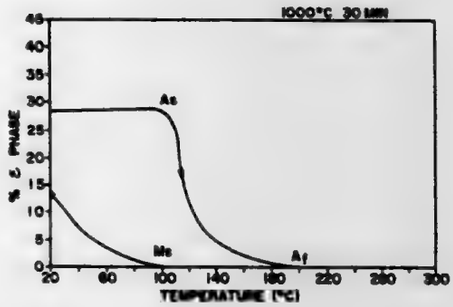
Marc Mantel, Albertville, France, assignor to Ugine, Aciers De Chatillon Et Gueugnon, Puteaux, France

Filed Nov. 21, 1990, Ser. No. 617,032

Claims priority, application France, Nov. 22, 1989, 8915341

Int. Cl.[5] C22C *38/38*

U.S. Cl. 148—402 3 Claims



1. Stainless iron-base alloy having a total shape memory effect comprising, after a given cold mechanical deformation, a restoration of the initial shape by heating, the composition by weight of said alloy being the following:

9 to 13% chromium,

15 to 25% manganese,

3 to 5% silicon,

the remainder being iron and residual impurities resulting from fusion of substances necessary for the production of said alloy, the proportions of the elements of said alloy satisfying the relation:

$$1.43(\%Si)+1(\%Cr)\leqq 17$$

5,173,132

GOLD SPRING ALLOY COMPOSITION

Louis P. Solomon, Stratford, Conn., assignor to Handy & Harman, Fairfield, Conn.

Filed Apr. 1, 1991, Ser. No. 678,917

Int. Cl.[5] C22C *5/02*

U.S. Cl. 148—405 16 Claims

1. A gold spring alloy consisting essentially of about 52 to 64 weight percent gold, about 9 to 15 weight percent silver, about 20 to 27 weight percent copper, about 1 to 5 percent zinc, about 1 to 5 weight percent nickel and about 0.1 to 0.7 weight percent cobalt; said gold spring alloy having been formed by a two step heat treatment process, said process including a solution treatment first step comprising treating said alloy in a non-oxidizing atmosphere at a sufficient temperature for a sufficient time to place substantially all alloying elements in solution and thereafter quenching said alloy to provide a formable alloy, and, after the formable alloy is worked into a desired shape, subjecting said alloy to an age hardening second step comprising heating said alloy in a non-oxidizing atmosphere at a sufficient temperature for a sufficient time to pro-

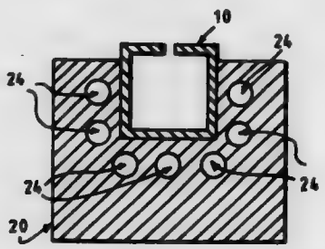
vide a gold spring alloy having a resilient and durable second stage and a superior heat treatability as compared to conventional gold alloys having the same heat treatability ratio.

5,173,133

METHOD FOR ANNEALING STAPLER ANVILS

Donald A. Morin, Litchfield, Conn., and Bartolo Sciano, Jr., Glen Rock, N.J., assignors to United States Surgical Corporation, Norwalk, Conn.

Filed Jul. 23, 1991, Ser. No. 734,596
Int. Cl.[5] C21D 9/00
U.S. Cl. 148—567 21 Claims



1. A method for annealing a delimited portion of an anvil member for use in a surgical stapler said method comprising:

a) providing a means for heating;

b) placing said anvil member in cradle means, said cradle means comprising a member fabricated from a thermally conductive material and possessing means configured and dimensioned to receive said anvil such that a first part of the exterior surface of the anvil is in thermally conductive contact with the interior surface of the receiving means and a second part of the exterior surface of the anvil is exposed;

c) positioning said cradle in proximity to said heating means such that the delimited portion of the second part of the exterior surface of the anvil member is within the heating range of said heating means; and

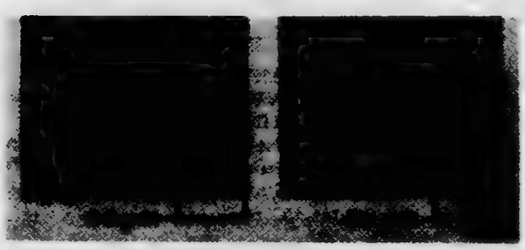
d) operating said heating means such that the delimited exposed portion of the anvil member is heated to an annealing temperature.

5,173,134

PROCESSING ALPHA-BETA TITANIUM ALLOYS BY BETA AS WELL AS ALPHA PLUS BETA FORGING

Amiya K. Chakrabarti, Monroeville; George W. Kuhlman, Jr., Pepper Pike, and Robert Pishko, Murrysville, all of Pa., assignors to Aluminum Company of America, Pittsburgh, Pa.

Division of Ser. No. 284,090, Dec. 14, 1988, Pat. No. 4,975,125, and a continuation-in-part of Ser. No. 284,090,. This application Dec. 3, 1990, Ser. No. 626,282
Claims priority, application European Pat. Off., Nov. 28, 1990, 90403381.8
Int. Cl.[5] C22F 1/00
U.S. Cl. 148—671 29 Claims



1. A method of processing titanium alpha-beta alloy, comprising finish β-fabricating without significant recrystallization, α-βsolution heat treating, and aging, having in the alloy a microstructure of coarse and fine, acicular to plate-type secondary alpha (about 60–80%) in an aged beta matrix (FIGS. 2 and 3).

5,173,135

RADIAL TIRE FOR PSSENGER CARS WITH SIDEWALL RUBBER INCLUDING ELECTRICALLY CONDUCTIVE CARBON BLACK

Akinori Tokioka, Chigasaki, and Tetsuji Kawamura, Hiratsuka, both of Japan, assignors to The Yokohama Rubber Co., Ltd., Japan

Continuation of Ser. No. 670,524, Mar. 18, 1991, abandoned, which is a continuation of Ser. No. 473,171, Jan. 31, 1990, abandoned. This application Nov. 21, 1991, Ser. No. 794,837
Claims priority, application Japan, Feb. 1, 1989, 1-20880
Int. Cl.[5] B60C 13/00, 19/08
U.S. Cl. 152—152.1 1 Claim

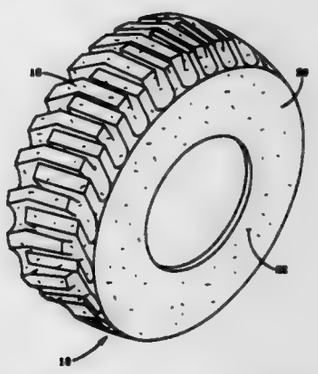
1. A radial-ply tire for use in passenger cars, which comprises a tread portion and two opposite sidewall portions, each of said sidewall portions being formed, at least on an outer surface thereof, from a rubber composition comprising a vulcanizable rubber selected from the group consisting of natural rubber, polyisoprene rubber, butadiene rubber, styrene-butadiene rubber and combinations thereof and an electrically conductive carbon black having a surface area by nitrogen adsorption in the range of from 100 to 150 m^2/g, a dibutyl phthalate adsorption in the range of from 90 to 130 ml/100 g, a pH in the range of from 7.0 to 8.0 and a volatile content in the range of from 1.0 to 3.0, said carbon black being present in an amount of from 5 to 25 parts by weight per 100 parts by weight of said rubber and said rubber composition having a volume resistivity of not more than 10^4 Ωcm.

5,173,136

CUT RESISTANT TIRE WITH EMBEDDED OBLONG FIBERS

Subhash C. Agarwal, Akron, and George H. Fisk, Stow, both of Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio

Filed Oct. 19, 1990, Ser. No. 600,380
Int. Cl.[5] B60C 11/00, 1/00
U.S. Cl. 152—209 R 6 Claims



4. A cut resistant off the road heavy duty pneumatic tire which comprises at least a pair of annular beads, carcass plies containing parallel cord reinforcement wrapped around said beads, a tread disposed in a crown area of said tire over said carcass plies, and sidewalls disposed over said carcass plies between said tread and said beads, wherein said tread and sidewalls have disposed therein 1–20 phr chopped adhesive coated indivisible high modulus monofilament nylon fibers, wherein said fibers have an oblong cross section about 0.051 cm to 0.127 cm (0.020 to 0.050 inches) wide, about 0.013 cm to 0.043 cm (0.005 to 0.017 inches) thick and about 0.254 cm to

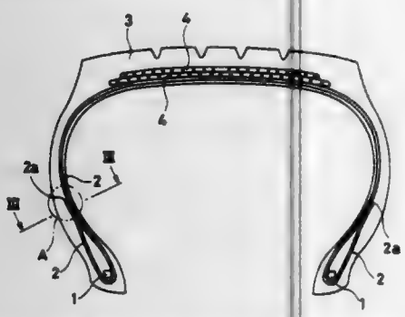
1.27 cm (0.1 to 0.5 inches) long and wherein said monofilament used to make said nylon fibers has a tenacity of at least 6 g/denier, an initial modulus of at least 30 g/denier and a shrinkage of not greater than 5%.

5,173,137

PNEUMATIC TIRE WITH IMPROVED DURABILITY OF THE BEAD PORTION

Masakazu Okihara, Hiratsuka; Tomohiko Kogure, Ashigara; Yusaku Miyazaki, Hiratsuka; Tuneo Morikawa, Hadano, and Toru Horikawa, Hiratsuka, all of Japan, assignors to The Yokohama Rubber Co., Ltd., Tokyo, Japan

Filed May 15, 1991, Ser. No. 700,273
Claims priority, application Japan, Jul. 9, 1990, 2-179635
Int. Cl.[5] B60C 9/02, 9/04
U.S. Cl. 152—552 4 Claims



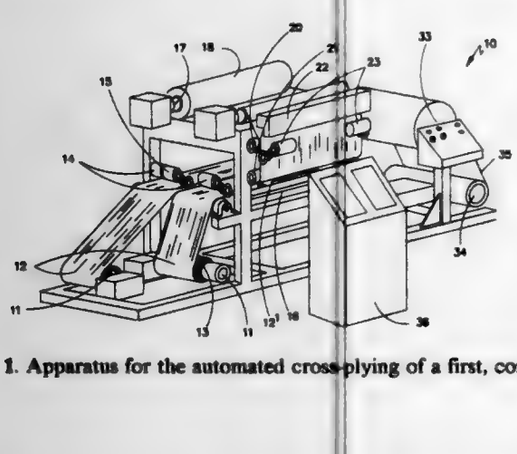
1. A pneumatic tire characterized in that a carcass layer is constructed by arranging non-twisted polyamide monofilament cords each having a flat cross-section such that the major axis of said flat cross-section is disposed along a surface direction of said carcass layer, that said carcass layer is folded up from the inside to the outside of said tire around a bead portion, and that the folded-up end portions are constructed such that the thickness thereof becomes smaller toward the distal end thereof, wherein an additional angle β of the end portion of said carcass layer with reference to the surface direction of said carcass layer ranges from 45 degrees to 75 degrees.

5,173,138

METHOD AND APPARATUS FOR THE CONTINUOUS PRODUCTION OF CROSS-PLIED MATERIAL

Denise A. Blauch, 934 Lime Spring Way, Louisville, Ky. 40223; Steven A. Young, 2821 Wicklow La., Richmond, Va. 23236; Rex B. Gosnell, 3114 Via DeCaballo, San Diego, Calif. 92024; Virgil W. Jainicke, 4408 Mayapan Dr., La Mesa, Calif. 92024, and Lawrence E. Swarts, 14520 Biddeford St., Poway, Calif. 92064

Filed Aug. 8, 1990, Ser. No. 564,214
Int. Cl.[5] B32B 31/18
U.S. Cl. 156—177 45 Claims



1. Apparatus for the automated cross-plying of a first, continuous ply of material and plurality of second, discontinuous plies of material into a cross-plied continuous length of material, each of said first and said second plies of material having a longitudinal axis, comprising:

a) means for advancing said first ply of material into a cross-plying zone;

b) means for sequentially laying said second plies of material coplanarly on said first ply in the cross-plying zone with the longitudinal axis of each of said second plies rotated relative to the longitudinal axis of said first ply, said means for laying comprising a second carrier web on which said discontinuous plies are separately carried; second pull means to pull the second carrier web with said discontinuous plies thereon so that each discontinuous ply and said first ply face each other, without contact, in the cross-plying zone; and means for guiding each discontinuous ply and said first ply into contact with one another;

c) means for preconsolidating said first and said second plies in the cross-plying zone; and

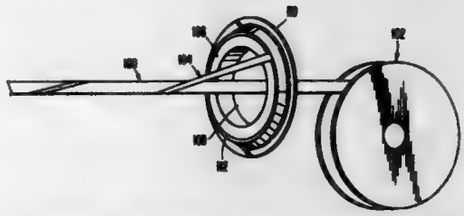
d) means for withdrawing the cross-plied material from the cross-plying zone.

5,173,139

METHOD FOR PROVIDING MAGNETIC MARKERS ON ELONGATED HIDDEN OBJECTS

John B. Rippingale, Leesburg, and Erick O. Schonstedt, Reston, both of Va., assignors to Schonstedt Instrument Company, Reston, Va.

Division of Ser. No. 477,447, Feb. 9, 1990, Pat. No. 5,114,517, which is a continuation-in-part of Ser. No. 428,757, Oct. 30, 1989, Pat. No. 5,006,806, which is a continuation-in-part of Ser. No. 323,860, Mar. 15, 1989, abandoned. This application Feb. 12, 1992, Ser. No. 834,388
Int. Cl.[5] B32B 31/04
U.S. Cl. 156—185 8 Claims



1. A method of providing a magnetic marker on an elongated object so that the object can be located and identified magnetically while hidden from view, comprising advancing said object lengthwise, providing an elongated tape of magnetic material permanently magnetized in a direction transverse to the length of the tape, and helically winding said tape about said object as said object is advanced so as to provide a magnetic field having a series of peaks and valleys along the length of said object, whereby the object may be located and identified by detecting variations of the magnetic field with a magnetic field detector moved along the length of the object.

5,173,140

TAPE APPLYING DEVICE AND METHOD FOR APPLYING TAPE

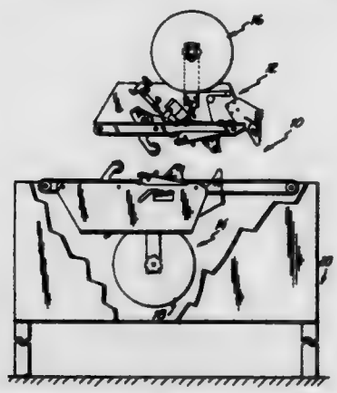
Lloyd S. Vasilakes, North Saint Paul, Minn., assignor to Minnesota Mining and Manufacturing Company, Saint Paul, Minn.

Filed Jul. 30, 1990, Ser. No. 559,696
Int. Cl.[5] B31F 1/72
U.S. Cl. 156—212 11 Claims

11. A method for applying a length of pressure-sensitive adhesive tape to an object moving along a predetermined path past a device that applies a length of tape to an object, the device including an application mechanism that is disposed

initially at a first dispensing position, and then is retracted to a second dispensing position, the method comprising:

applying the tape in a continuous length with a first portion of the length of tape being applied to a first leading surface of the object at a selected force at the first dispensing position and then applying a second portion of the continuous length of tape to a mid-portion of the object with the



application mechanism disposed in its second dispensing position while restricting movement of the application mechanism towards the object and thereby reducing the force at which the tape is applied to the object, and then applying the continuous length of tape to a trailing surface portion of the object with the application mechanism returning to its first dispensing position.

5,173,141

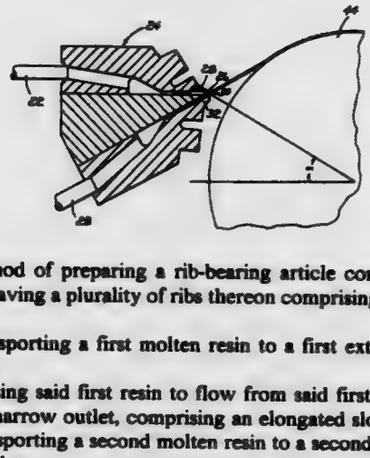
PREPARING TAPE HAVING IMPROVED TEAR STRENGTH

Ronald P. Leseman, Newport; Robert L. Gordier, Fridley, both of Minn.; Stephen C. Koehn, Round Rock, Tex.; Dart S. Moy, St. Paul, and Thomas L. Wood, Maplewood, both of Minn., assignors to Minnesota Mining and Manufacturing Company, St. Paul, Minn.

Division of Ser. No. 250,182, Sep. 29, 1988, Pat. No. 5,079,066, which is a continuation-in-part of Ser. No. 196,181, May 25, 1988, abandoned. This application Nov. 12, 1991, Ser. No. 791,090

Int. Cl.[5] B29C *47/56*

U.S. Cl. 156—244.15 **10 Claims**



1. Method of preparing a rib-bearing article comprising a backing having a plurality of ribs thereon comprising the steps of

(1) transporting a first molten resin to a first extrusion die inlet,

(2) causing said first resin to flow from said first inlet to a first narrow outlet, comprising an elongated slot,

(3) transporting a second molten resin to a second extrusion die inlet,

(4) causing said second resin to flow from said second inlet to a second outlet comprising a plurality of orifices,

(5) causing said first resin to flow from said first outlet to form said backing,

(6) causing said second resin to flow from said second outlet to form said ribs, and

(7) causing said backing to fuse with said ribs to form a rib-bearing article, at least 50% of the original cross-section of said ribs projecting from the rib-bearing surface of said article.

5,173,142

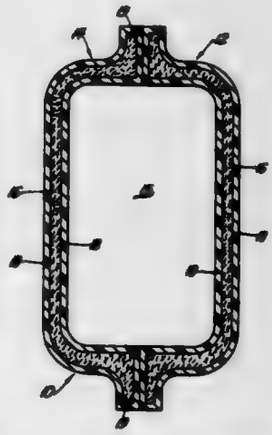
METHOD OF MAKING REINFORCED STRUCTURAL COMPOSITE ASSEMBLIES

Charles R. Billin, Mount Clemens, Mich., assignor to Wellman Machinery of Michigan, Inc., Mich.

Filed Jul. 19, 1991, Ser. No. 732,618

Int. Cl.[5] B32B *31/28*

U.S. Cl. 156—245 **15 Claims**



1. A method of making a hollow section fiber reinforced composite assembly, comprising the steps of:

a) forming a first rigid, fiber reinforced, EB curable-thermoplastic composite member,

b) forming a second rigid, fiber reinforced, EB-curable thermoplastic composite member,

c) fusion bonding the first and second fiber reinforced, thermoplastic members to form a hollow section, and

d) subjecting the hollow section to irradiation by electrons effective to cure the bonded first and second fiber reinforced, EB-curable thermoplastic members to a thermoset condition.

5,173,143

PROCESS OF SEALING THERMOPLASTIC RESIN SHEET

Atsushi Fujii, Himeji, and Kouzaburo Matsunawa, Tokyo, both of Japan, assignors to Idemitsu Petrochemical Co., Ltd., Tokyo, Japan

Filed Aug. 29, 1990, Ser. No. 575,129

Claims priority, application Japan, Aug. 31, 1989, 1-227178

Int. Cl.[5] B32B *31/20*; B65B *7/16*

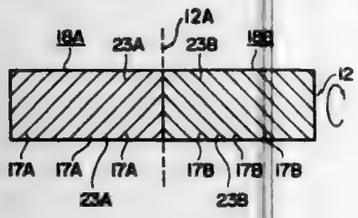
U.S. Cl. 156—290 **6 Claims**

1. A process of sealing a thermoplastic resin sheet having pockets to a mount by means of seal members, comprising the steps of:

sealing said thermoplastic resin sheet to said mount with a first seal member provided with first and second notch portions each including a plurality of parallel notches, said notches of said first notch portion extending at an angle less than 180° with respect to said notches of said second notch portion; and

thereafter sealing said thermoplastic resin sheet to said mount with a second seal member provided with third and

fourth notch portions each including a plurality of parallel notches, said notches of said third notch portion extending at an angle less than 180° with respect to said notches of said fourth notch portion, said notches of said third notch portion producing seals on said mount and resin sheet



which intersect seal produced thereon by said notches of said first notch portion to yield a crosshatched pattern, and said notches of said fourth notch portion producing seals on said mount and resin sheet which intersect seals produced thereon by said notches of said second notch portion to yield a crosshatched pattern.

5,173,144

ENAMEL RECEPTIVE BANNER FABRIC AND METHOD OF MANUFACTURED THEREOF

Dwight E. Chapman, Columbus, Ohio, and David R. Morse, Sandown, N.H., assignors to Borden, Inc., Columbus, Ohio

Division of Ser. No. 283,717, Dec. 13, 1988, Pat. No. 4,946,739. This application Jun. 28, 1990, Ser. No. 544,875

Int. Cl.[5] B32B *31/00*

U.S. Cl. 156—278 **8 Claims**

1. A method of making a banner, flag or sign comprising

(a) applying a water-based dispersion of a copolymeric reaction product of vinyl and acrylic monomers to one surface of a plasticized polyvinyl chloride film;

(b) drying said dispersion to form a vinyl acrylic copolymeric coating adhered to said one surface of said plasticized polyvinyl chloride film;

(c) laminating the uncoated side of said plasticized polyvinyl chloride film to the surface of a base fabric material with a plastisol adhesive;

(d) curing said vinyl acrylic coating; and

(e) applying an enamel paint to the outer surface of said vinyl acrylic copolymeric coating wherein said copolymeric coating provides superior enamel paint receptiveness over said polyvinyl chloride film.

INSTALLATION FOR THE PRODUCTION OF INSULATING GLASS

Peter Lisec, A-3363, Amstetten-Hausmening, Austria

Filed Jan. 11, 1991, Ser. No. 640,115

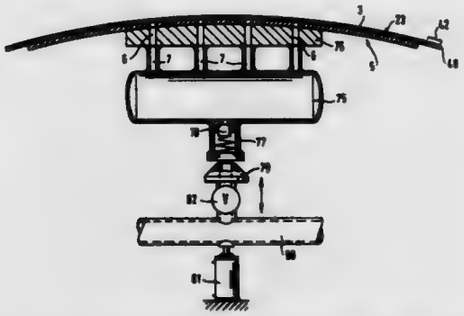
Claims priority, application Austria, Jan. 11, 1990, 53/90

Int. Cl.[5] B05C *13/02*

U.S. Cl. 156—578 **40 Claims**

1. In a facility for the production of insulating glass panes from at least two glass panes (3) curved in at least one direction comprising a station (III) for the application of a synthetic

resin rope (2) serving as the spacer and a station (IV) for the application of a caulking compound (29) in parallel to a spacer (2) to one of the glass panes, a station (V) for assembly of two glass panes with said caulking compound and spacer between them, a station (VI) for pressing the composed pane set, and a conveying device for the transport of the glass panes (3) through the stations (I through VI) of the facility; the improvement wherein said conveying device has support means (5) for the glass panes (3), said support means has a supporting surface facing a glass pane (3), said supporting surface in an undeformed condition being curved in correspondence with the shape of the glass pane (3) and having bores (6) therethrough connected to a source of vacuum for fixing the glass pane (3) in position on the support means (5).

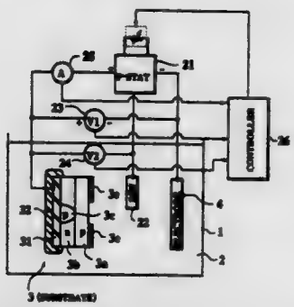


5,173,149

METHOD OF ETCHING SEMICONDUCTOR SUBSTRATE

Hidetoshi Nojiri, Yokosuka, and Makoto Uchiyama, Zushi, both of Japan, assignors to Nissan Motor Company, Ltd., Yokohama, Japan

Filed Mar. 7, 1991, Ser. No. 665,546
Claims priority, application Japan, Mar. 7, 1990, 2-55790
Int. Cl.[5] H01L *21/00*
U.S. Cl. 156—627 **11 Claims**



1. A method of etching a semiconductor substrate having a first conductivity type layer and a second conductivity type layer opposite to the first conductivity type layer and immersed in an electrolytic solution, comprising the steps of:
(1) applying an etching voltage to the first conductivity type layer;
(2) integrating etching current flowing through the semiconductor substrate; and
(3) controlling the etching voltage on the basis of the integrated etching current to selectively etch the second conductivity type layer wherein the step of controlling the etching voltage comprises the steps of:
(a) comparing the integrated etching current value with a predetermined reference value;
(b) if the integrated etching current value is equal to or higher than the reference value, increasing the etching voltage;
(c) detecting the etching current;
(d) checking whether etching potential of the semiconductor substrate relative to a reference electrode reaches a predetermined value;
(e) if the checked etching potential is less than the predetermined value, further increasing the etching voltage;
(f) if the checked etching potential reaches the predetermined value, keeping the increased etching voltage to continuously etch the substrate;
(g) checking whether the etching current drops sharply;
(h) if the etching current does not drop sharply continuing to etch the substrate; and
(i) if the checked etching current drops sharply, stopping etching the semiconductor substrate.

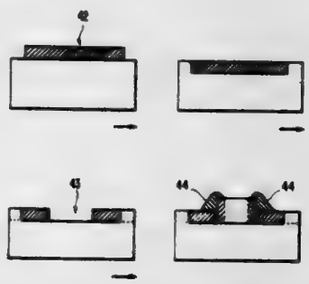
PROCESS FOR PRODUCING PRINTED CIRCUIT BOARD

Takeo Kanaoka, and Norio Sayama, both of Tokyo, Japan, assignors to Mitsubishi Gas Chemical Co., Ltd., Tokyo, Japan

Filed Apr. 23, 1991, Ser. No. 689,428
Claims priority, application Japan, Apr. 23, 1990, 2-105373; Apr. 23, 1990, 2-105374; Apr. 23, 1990, 2-105375; Apr. 23, 1990, 2-105376
Int. Cl.[5] B44C *1/22*; C23F *1/02*
U.S. Cl. 156—630 **12 Claims**



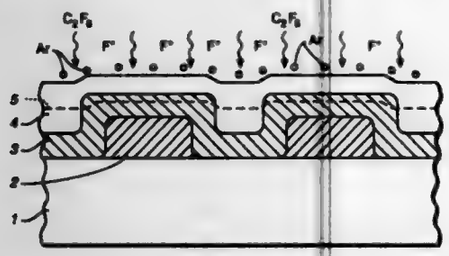
1. A process for producing a printed circuit board which can mainly shield electromagnetic waves generated therefrom, which comprises
(i) preparing a semicured resin-based copper-clad laminate by continuous pressing by means of a double-belt pressing method or by batch-wise continuous pressing in which one laminate is produced by press molding between a pair of hot platens, said semicured resin-based copper-clad laminate having a copper foil peel strength of 0.2 kg/cm or more and 90% or less of the peel strength thereof as measured after the resin is completely cured,
(ii) forming a predetermined printed circuit by etching, thereby to prepare a semicured resin-based printed circuit board,
(iii) pressing the semicured resin-based printed circuit board, thereby to give a printed circuit board in which the conductor surface is on almost the same level with the substrate surface,
(iv) forming an electrically insulating layer in a predetermined portion of the surface of the printed circuit board, and
(v) forming an electrically conductive layer as an electromagnetic wave-shielding layer on the electrical insulating layer and curing the semicured resin.

5,173,151

METHOD OF DRY ETCHING IN SEMICONDUCTOR DEVICE PROCESSING

Izumi Namose, Suwa, Japan, assignor to Seiko Epson Corporation, Tokyo, Japan

Filed Jul. 29, 1991, Ser. No. 736,855
Claims priority, application Japan, Jul. 30, 1990, 2-201811; Apr. 5, 1991, 3-72811
Int. Cl.[5] B44C 1/22; C03C 15/00, 25/06
U.S. Cl. 156—643 10 Claims



1. A method of producing a semiconductor device including a step for simultaneously dry etching first and second deposited silicon oxide layers of different types comprising the steps of

providing an etching gas mixture absent of an inhibitor such as oxygen comprising a carbon fluoride gas, C_nF_{2n+2}, wherein n is an integer, and an inert gas,

creating a plasma wherein fluorine radicals, F*, are liberated in the plasma,

applying the fluorine radicals, F*, to an etching surface of said first and second deposited silicon oxide layers,

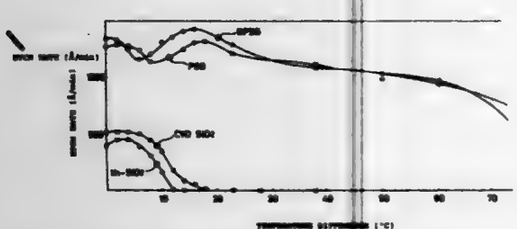
supplying a volume of inert gas in the created plasma of fluorine radicals, F*, so that a buffering effect is created on the application of the fluorine radicals, F*, to the etching surface enhancing the etching rate while maintaining etching uniformity.

5,173,152

METHOD FOR SELECTIVELY REMOVING AN INSULATING FILM

Masato Tanaka, Shiga, Japan, assignor to Dainippon Screen Mfg. Co., Ltd., Japan

Filed Oct. 2, 1990, Ser. No. 591,707
Claims priority, application Japan, Oct. 2, 1989, 1-258174
Int. Cl.[5] H01L 21/00
U.S. Cl. 156—646 22 Claims



1. A method for selectively removing a first insulating film with respect to a second insulating film from a wafer surface, said method comprising the steps of:

(a) preparing vapor containing hydrogen fluoride and water;

(b) maintaining a temperature of said wafer surface higher than a temperature of said vapor by a prescribed temperature difference range, said prescribed temperature difference range being determined by reference to characteristics of said first insulating film and said second insulating film, so that said first insulating film is capable of being selectively etched and removed with respect to said second insulating film by said hydrogen fluoride; and

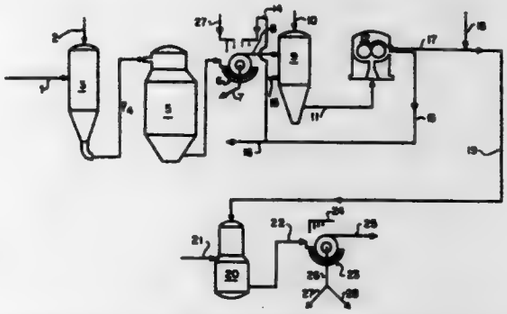
(c) applying said vapor to said wafer surface, whereby said first insulating film is selectively etched and removed with respect to said second insulating film by said hydrogen fluoride.

5,173,153

PROCESS FOR ENHANCED OXYGEN DELIGNIFICATION USING HIGH CONSISTENCY AND A SPLIT ALKALI ADDITION

Stuart T. Terrett, Elgin, S.C.; Spencer W. Eachus, Allentown, N.J., and Bruce F. Griggs, Columbia, S.C., assignors to Union Camp Patent Holding, Inc., Wilmington, Del.

Filed Jan. 3, 1991, Ser. No. 637,100
The portion of the term of this patent subsequent to Feb. 4, 2009, has been disclaimed.
Int. Cl.[5] D21C 9/147
U.S. Cl. 162—40 15 Claims



1. A process for obtaining enhanced delignification selectivity of brownstock pulp during high consistency oxygen delignification which comprises:

applying a first amount of alkaline material to brownstock pulp having a low consistency of less than about 5% by weight by combining the low consistency pulp with a sufficient quantity of alkaline material with uninterrupted mixing in a manner to ensure that all pulp fibers are exposed to the alkaline material to obtain a substantially uniform distribution of alkaline material throughout the pulp, and then increasing the consistency of the alkaline material containing pulp to at least about 18% by weight to obtain high consistency pulp and to remove pressate while retaining the first amount of alkaline material substantially uniformly distributed throughout the high consistency pulp, said pulp fibers containing the alkaline material being directly passed from the combining step to the consistency increasing step;

recycling a substantial portion of at least about 40% of the pressate directly to the alkaline material combining step;

applying a second amount of alkaline material onto the high consistency pulp to obtain a total amount of alkaline material on the pulp of at least about 0.8 to 7 percent by weight based on the oven dry weight of the pulp;

oxygen delignifying the alkaline material containing high consistency pulp to obtain enhanced delignification of the brownstock pulp without a corresponding decrease in pulp viscosity compared to brownstock pulp which is not combined with alkaline material at low pulp consistencies;

wherein at least about 55% to about 90% of the total amount of alkaline material is added to the low consistency pulp.

HEAT SEALABLE TEA BAG PAPER AND PROCESS OF PRODUCING SAME

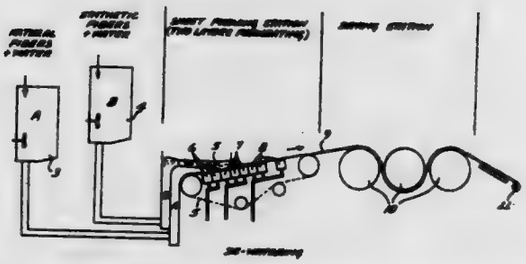
Günter Heinrich, Gernsbach, Fed. Rep. of Germany, assignor to Unicon Papier und Kunststoffhandel gesellschaft mbH, Gernsbach, Fed. Rep. of Germany

Continuation of Ser. No. 467,669, Jan. 19, 1990. This application Sep. 16, 1991, Ser. No. 762,725

Claims priority, application Fed. Rep. of Germany, Jan. 26, 1989, 3902298

Int. Cl.[5] D21H *13/00*

U.S. Cl. 162—129 4 Claims



1. A process of producing a tea bag paper, comprising the steps of:

depositing an aqueous suspension of natural fibers having a stock density of less than 0.1% on a paper machinewire or screen in order to form a first layer, the first layer having first and second sides and forming 60–85 weight % of the tea bag paper;

depositing a second layer comprising heat-sealing thermoplastic synthetic fibers forming 15–40 weight % of the tea bag paper on the first side of the first layer;

dewatering the first and second layers so that said layers merge together and said second layer penetrates said first layer to the extent that said synthetic fibers exist on both first and second sides of said first layer;

melting said synthetic fibers in a subsequent drying process and reconsolidating said synthetic fibers in such a way that they cover said natural fibers when being reconsolidated;

whereby said tea bag paper is heat-sealing on both sides and the weight of said tea bag paper is between 10 and 15 g/m^2.

VACUUM BOILER TYPE EVAPORATOR

Yoshiaki Miyata, Yokohama; Akio Seta, Misato; Nobuhiko Tsui, Tokyo; Hiroshi Kujirai, Yokohama; Youji Satoh, Mino; Hitonobu Shotani, Amagasaki; Kazuya Sahara, Sanda, and Yoshimichi Ikeda, Daito, all of Japan, assignors to Tokyo Gas Co., Ltd, Tokyo and Sumitomo Precision Products Co., Ltd., Hyogo, both of, Japan

Filed Jun. 10, 1991, Ser. No. 712,740

Claims priority, application Japan, Sep. 28, 1990, 2-261008; Nov. 30, 1990, 2-338569

Int. Cl.[5] B01D *3/10*

U.S. Cl. 202—205 2 Claims

1. A vacuum boiler evaporator which comprises:

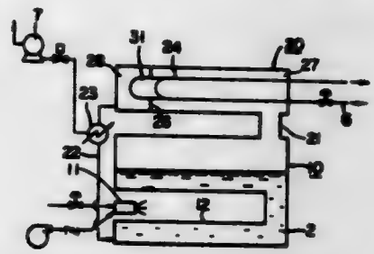
a sealed vacuum boiler vessel having a lower tubular portion containing water and an upper portion which defines a steam chamber,

a separate sealed vacuum condenser vessel which includes a partition that defines a first chamber and a second chamber, said second chamber constituting a noncondensable gas collector,

a conduit which connects the upper portion of said sealed vacuum boiler vessel with said first chamber of said sealed vacuum condenser vessel,

a plurality of U-shaped, parallel heat transfer tubes which extend through said first chamber of said sealed vacuum condenser, some of which extend past said partition and into said second chamber as noncondensable gas collector tubes,

a return pipe which extends from said second chamber of



said sealed vacuum condenser vessel to said lower tubular portion of said sealed vacuum boiler vessel,

a vacuum pump connected to said return pipe, and

heating means for heating water in said lower portion of said sealed vacuum boiler vessel.

5,173,156

DEHYDRATION OF FORMIC ACID BY EXTRACTIVE DISTILLATION

Lloyd Berg, 1314 S. 3rd Ave., Bozeman, Mont. 59715; Kraig M. Wendt, and Rudolph J. Szabados, both of Bozeman, Mont., assignors to Lloyd Berg, Bozeman, Mont.

Filed Dec. 9, 1991, Ser. No. 803,589

Int. Cl.[5] B01D *3/40*; C07C *53/02*

U.S. Cl. 203—15 3 Claims

1. A method for recovering formic acid from a mixture consisting solely of formic acid and water which comprises distilling said mixture of formic acid and water in a rectification column in the presence of about one part of an extractive agent per part of said formic acid-water mixture, recovering water as overhead product and obtaining the formic acid and the extractive agent from the stillpot, wherein the extractive agent consists of cyclohexanone.

5,173,157

METHOD FOR PROCESSING RESIDUAL FIXING-BATHS

Leonardus M. M. Nevels, Daalzicht 37, 6097, Ek Heel, Netherlands

Filed Nov. 21, 1990, Ser. No. 618,250

Claims priority, application Netherlands, Nov. 21, 1989, 8902870

Int. Cl.[5] C02F *9/00*

U.S. Cl. 204—149 10 Claims

1. A method for processing a residual fixing-bath which has been demetallized by the addition of sulfide or by electrolysis, comprising the steps of

(a) acidifying said fixing-bath by adding a mixture of nitric acid and sulphuric acid to precipitate sulphur;

(b) removing the precipitated sulphur from said acidified fixing-bath;

(c) adjusting the pH of said acidified fixing-bath to 7 by the addition of $Ca(OH)_2$ milk;

(d) stirring said fixing-bath;

(e) removing the precipitate formed in said fixing bath; and

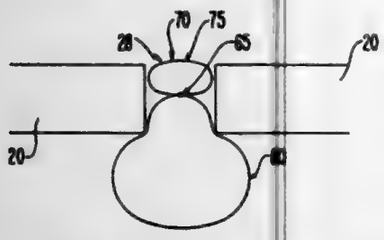
(f) aerating the remaining liquid for a sufficient period of time to convert all the sulfite in said remaining liquid into sulfate.

5,173,158

APPARATUS AND METHODS FOR ELECTROPORATION AND ELECTROFUSION

Robert E. Schmukler, 13905 Vista Dr., Rockville, Md. 20853

Filed Jul. 22, 1991, Ser. No. 733,854
Int. Cl.[5] C25B 1/00, 7/00
U.S. Cl. 204—182.3 13 Claims



9. A method of electrofusion of a first type of cells with a second type of cells, the first type of cells being larger than the second type of cells, the method comprising the step of:

causing the first type of cells to become trapped in different ones of the pores such that a portion of each of the trapped first type of cells extends into a different one of the pores, the trapped cells extending into a portion of the pores on a first side of the insulating film;

placing the first type of cells in a solution held by a container in which an insulating film divides the container into two portions, the insulation film being penetrated by pores whose diameter is smaller than the diameter of the first type of cells;

placing the second type of cells in the container;

causing trapped ones of the second type of cells to enter certain ones of the pores of the insulating film side into which trapped first type of cells extend and to contact trapped first type of cells, the trapped second type of cells entering the certain pores from a second side of the insulating film; and

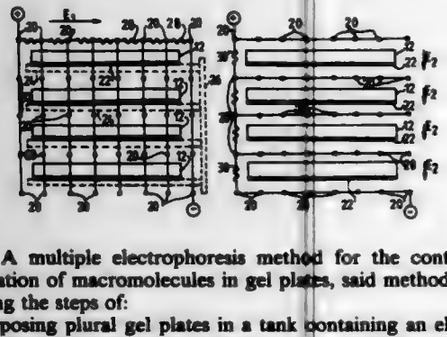
applying an electric field to the container to cause electrofusion of the first type of cells and second type of cells which are in the same pores in contact with one another.

5,173,159

MULTIPLE ELECTROPHORESIS METHOD FOR THE CONTROLLED MIGRATION OF MACROMOLECULES THROUGH RECTANGULAR GEL PLATES

Bernard Dutertre, Neuilly sur Seine, France, assignor to Bertin & Cie, Cedex, France

Division of Ser. No. 477,903, Apr. 30, 1990. This application Dec. 11, 1991, Ser. No. 805,138
Claims priority, application France, Sep. 6, 1988, 88 11626; Nov. 23, 1988, 88 15246
Int. Cl.[5] G01N 27/26; B01D 57/02
U.S. Cl. 204—182.8 10 Claims



1. A multiple electrophoresis method for the controlled migration of macromolecules in gel plates, said method comprising the steps of:

disposing plural gel plates in a tank containing an electrophoresis liquid, said gel plates being provided with samples of macromolecules along one of their edges and forming a stack in which said plates are spaced apart from each other, said tank including a plurality of elongate electrodes which are parallel to each other and to the gel plates and disposed at the intersections of two series of planes, said planes of a first series being perpendicular to the plates and to a first migration direction of the macromolecules through the plates, said planes of the second series being perpendicular to the planes of the first series and parallel to the plates,

applying electric potentials to the electrodes for creating successively in the gel plates and in the electrophoresis liquid a first electric field parallel to the first migration direction and then a second electric field parallel to a second migration direction which is perpendicular to the gel plates,

the first electric field being created by applying different electric potentials to different electrode planes of the first series, with the electrodes in a same plane of the first series being at a same electric potential,

the second electric field being created by applying different electric potentials to different electrode planes of the second series, with the electrodes in a same plane of the second series being at a same electric potential.

5,173,160

ANALYSIS OF CARRIER AMPHOLYTES USING IMMOBILIZED PH GRADIENTS

L. Scott Rodkey, Houston, and Keith A. Knisley, Lubbock, both of Tex., assignors to Board of Regents, The University of Texas System, Austin, Tex.

Filed Feb. 27, 1991, Ser. No. 663,378
Int. Cl.[5] C25B 1/00, 7/00
U.S. Cl. 204—182.9 40 Claims

1. A method of analyzing chemical compounds, comprising the steps of:

applying a chemical compound to an immobilized pH gradient;

isoelectrically focusing the chemical compound on the immobilized pH gradient; applying a precipitating chemical solution to the immobilized pH gradient and the isoelectrically focused chemical compound;

precpitating the isoelectrically focused chemical compound; and

visualizing the chemical compound.

5,173,161

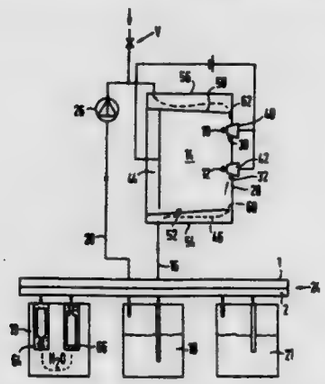
DEVICE FOR APPLYING AND/OR REMOVING COATINGS ON WORKPIECES

Gerhard Gramm, Waldstrasse 15, D-7533 Tiefenbronn-Mühlhausen, Fed. Rep. of Germany

PCT No. PCT/DE89/00600, § 371 Date May 24, 1991, § 102(e) Date May 24, 1991, PCT Pub. No. WO90/05801, PCT Pub. Date May 31, 1990
PCT Filed Sep. 22, 1989, Ser. No. 700,130
Claims priority, application Fed. Rep. of Germany, Nov. 24, 1988, 3839755; Feb. 8, 1989, 3903696
Int. Cl.[5] C25D 17/00, 21/10, 21/22
U.S. Cl. 204—232 36 Claims

1. In a device for one of applying and removing coatings on

workpieces, having a conveying device and a container which receives the workpieces, an inlet line connected to at least one medium source and an outlet line connecting the container to the medium source, the medium source being disposed below the conveying device, where the inlet line and the outlet line



are connected to the medium source by a control device which is connectable to at least three different said medium sources and disposed below the container,

the improvement comprising,

the conveying device (26) is a vacuum pump and is incorporated in the outlet line (20) of the container (14).

5,173,162

MULTI-LAYERED ELECTROSTRICTIVE EFFECT ELEMENT

Atsushi Hagimura, Kanagawa; Mutsuo Nakajima, Tokyo; Kunio Nishihara, and Ikuo Inage, both of Kanagawa, all of Japan, assignors to Mitsui Toatsu Chemicals, Inc., Tokyo, Japan

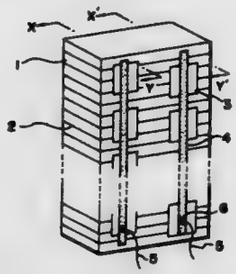
Continuation-in-part of Ser. No. 544,256, Jun. 26, 1990, abandoned. This application Jan. 4, 1991, Ser. No. 637,554

Claims priority, application Japan, Jul. 5, 1989, 1-171854; Nov. 15, 1989, 1-294900; Feb. 6, 1990, 2-25264

Int. Cl.[5] G01N *27/26*

U.S. Cl. 204—299 R

6 Claims



1. A multi-layered electrostrictive effect element which comprises films or thin plates of an electrostrictive material and inner electrodes alternatively arranged in layers, the inner electrodes being formed on the entire surface of the films or thin plates of the electrostrictive material, wherein insulating layers which insulate the inner electrodes exposed on the side end faces of the element comprise m groups wherein m is an even number of not less than 4, the insulating layer which comprises the first group continuously extending over and insulating the inner electrodes other than the $(m \times n+1)$-th electrode wherein n is 0 or a positive integer, the insulating layer which comprises the second group continuously extending over and insulating the inner electrodes other than the $(m \times n+2)$-th electrode, the insulating layer which comprises the third group continuously extending over and insulating the inner electrodes other than the $(m \times n+3)$-th electrode and so forth, and the insulating layer which comprises the m-th group continuously extending over and insulating the inner electrodes other than the $(m \times n+m)$-th electrode; and a plurality of external electrodes being electrically connected to every m layers of inner electrodes laminated is formed over the insulating layer of each group.

5,173,163

CAPILLARY ELECTROPHORESIS TECHNIQUE

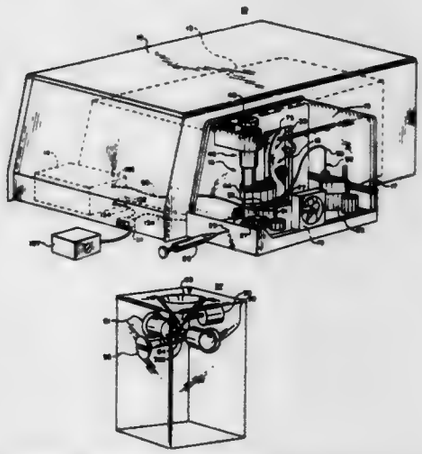
Yoosef Tehrani, Lincoln, Nebr., assignor to Isco, Inc., Lincoln, Nebr.

Filed Jan. 11, 1990, Ser. No. 463,357

Int. Cl.[5] G01N *27/26*; B01D *57/02*

U.S. Cl. 204—299 R

41 Claims



1. Apparatus for detecting bands in a capillary tube having a predetermined direction of motion in a separation medium within the capillary tube comprising:

a cabinet;

an enclosure mounted to the cabinet;

said enclosure being openable to permit manual opertion of the apparatus;

a capillary tube adapted to contain a separating medium;

power supply means for applying an electrical potential across said capillary tube;

said power supply means including a power supply within said cabinet;

flow cell means located within a detector means including a detector and a detection volume;

said detection volume being less than 100 nanoliters;

said flow cell means including means for holding the capillary tube within the detector means;

said capillary tube having a diameter no greater than 700 micrometers;

split-flow means for injecting samples into said tube;

said split-flow means being within said enclosure and at least a portion of said flow cell means being within said cabinet;

means for permitting said capillary tube to pass from said enclosure through said flow cell and;

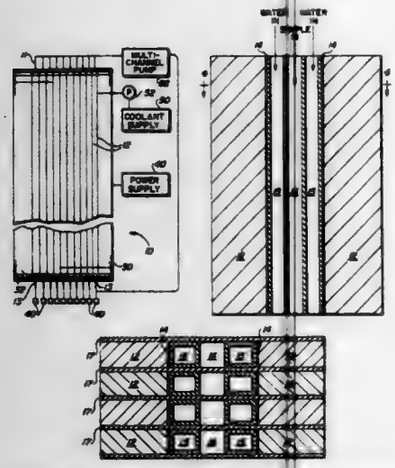
opening means having internal walls defining an opening into said enclosure for enabling sample to be injected into said split flow means without opening said enclosure, whereby the interior of the enclosure is not exposed during sample injection.

5,173,164

MULTI-MODALITY ELECTRICAL SEPARATOR SPPARATUS AND METHOD

Ned B. Egen; Garland E. Twitty; David W. Sammons, and Rizwan Sharnez, all of Tucson, Ariz., assignors to Bioseparations, Inc., Tucson, Ariz.

Filed Sep. 11, 1990, Ser. No. 580,959
Int. Cl.[5] G01N *27/26*; B01D *57/02*
U.S. Cl. 204—301 25 Claims



1. An apparatus for multi-modality electrophoretic separations of component charges species from a solution, comprising:

a plurality of planar spacers, each spacer having a generally elongate planar shape defined by front and back planar surfaces thereof, top and bottom edges thereof and lateral edges thereof and a longitudinal opening defining a narrow longitudinal separation chamber in each of said plurality of planar spacers, said longitudinal separation chamber being open to the front and back surfaces of the planar spacer and having top, bottom and opposing lateral edges defined by the planar spacer;

at least one solution inlet port and at least one opposing solution outlet port passing through said top and bottom edges of each of said plurality of planar spacers and in fluid flow communication with said separation chamber;

a plurality of elongate tubular cooling members associated with said opposing lateral edges of said longitudinal separation chamber, said cooling members having high thermal conductance properties and a surface area which contacts the solution in said separation chamber;

a plurality of ion non-selective permeable membranes, at least one of said plurality of ion non-selective permeable membranes being interdisposed between a front surface and a back surface of a pair of adjacent planar spacers thereby defining a boundary between the respective separation chambers of the adjacent pair of adjacent planar spacers and oriented generally parallel to the direction of flow of the sample solution within said separation chamber;

at least one cooling member inlet port and at least one cooling member outlet port, each in fluid flow communication with said plurality of cooling members, wherein said at least one cooling member inlet port conducts a cooling medium from an external source into said plurality of cooling members and said at least one cooling member outlet port conducts the cooling medium from said separation chamber;

means for applying an electrical potential to the sample solution within said separation chamber; and

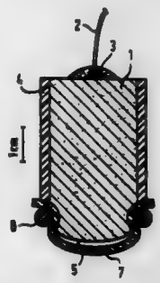
a multi-channel pump for pumping the solution into said solution inlet port of said planar spacer and withdrawing solution from said solution outlet port.

5,173,165

ENZYME ELECTRODE AND THE USE THEREOF

Rolf Schmid, Braunschweig, Fed. Rep. of Germany, and Juozas Kulys, Vilnius, U.S.S.R., assignors to Gesellschaft fur Biotechnologische Forschung mbH (GBF), Braunschweig, Fed. Rep. of Germany

Filed Oct. 11, 1990, Ser. No. 595,536
Claims priority, application Fed. Rep. of Germany, Oct. 13, 1989, 3934299
Int. Cl.[5] G01N *27/26*
U.S. Cl. 204—403 9 Claims



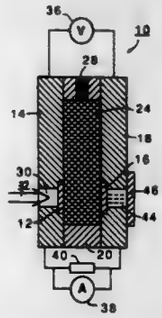
1. Enzyme electrode having a bienzyme system, characterized in that the bienzyme system which comprises; fungal peroxidase and one or more oxidase, and is free of mediators.

5,173,166

ELECTROCHEMICAL GAS SENSOR CELLS

Klaus Tomantschger, Mississauga, Canada; Allan A. Jasiu; Norman L. Weinberg, both of Amherst, and Joseph M. Rait, Buffalo, all of N.Y., assignors to Miniteh Co., Buffalo, N.Y.

Filed Apr. 16, 1990, Ser. No. 513,441
Int. Cl.[5] G01N *27/416*
U.S. Cl. 204—412 32 Claims



1. An electrochemical gas sensor cell for quantitative measurement of gaseous or volatile contaminants in an atmosphere being monitored, said gas sensor cell comprising at least a first gas permeable porous sensor electrode mounted in a first frame member, a second gas permeable porous counter electrode mounted in a second frame member, a third electrically non-conductive frame member, an ion conductive electrolyte contained within an electrolyte chamber formed in said third frame member, said first and second electrodes and said first and second frame members being located at first and second sides, respectively, of said electrolyte such that at least a portion of each of said first electrode and said second counter electrode contact said electrolyte;

wherein at least one of said first and second frame members is electrically conductive, and conductor means is associated with the other of said first and second frame members when said other frame member is electrically non-conductive;

wherein said electrolyte is retained in said third frame mem-

ber in such a manner as to substantially accomodate changes in temperature or humidity of said atmosphere;

wherein said first sensor electrode and optionally also said second counter electrode contains a catalyst;

each of said first, second, and third frame members being formed of an inert plastics material which is impervious to said electrolyte;

said sensor electrode being mounted and secured with respect to said first frame member so as to be exposed to said atmosphere, and said counter electrode being mounted and secured with respect to said second frame member so as to be isolated from any exposure to said atmosphere; and

wherein each of said first and second electrodes is connected to electrical measurement means;

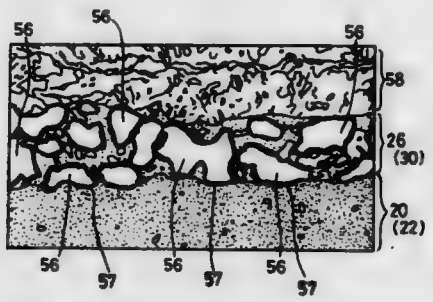
whereby, when said atmosphere contains a gas contaminant for which the catalyst on said sensor electrode is chosen to produce a change in electrical potential with respect to said counter electrode when said sensor electrode is exposed to said gas contaminant in the presence of the chosen ion conductive electrolyte, said electrical measurement means detects the change of said electrical potential, which thereby is indicative of the presence of said gas contaminant.

5,173,167

OXYGEN CONCENTRATION SENSOR HAVING SENSING ELEMENT WITH ELECTRODES HAVING MINUTE CRACKS ON SURFACES THEREOF

Takao Murase, Kohnan, and Tsunenori Yoshimura, Nagoya, both of Japan, assignors to NGK Insulators, Ltd., Japan

Division of Ser. No. 610,799, Nov. 8, 1990, Pat. No. 5,130,002.
This application Apr. 28, 1992, Ser. No. 874,701
Claims priority, application Japan, Nov. 15, 1989, 1-296625
Int. Cl.[5] G01N *27/26*
U.S. Cl. 204—426 3 Claims



1. An oxygen concentration sensor having a sensing element which includes an electrochemical oxygen pumping cell having an oxygen-ion conductive first solid electrolyte layer, and a first and a second electrode disposed on said first solid electrolyte layer, an electrochemical oxygen sensing cell having an oxygen-ion conductive second solid electrolyte layer and a third and a fourth electrode disposed on said second solid electrolyte layer, and diffusion-resistance means for introducing an external measurement gas under a predetermined diffusion resistance, for contact with said second and third electrodes;

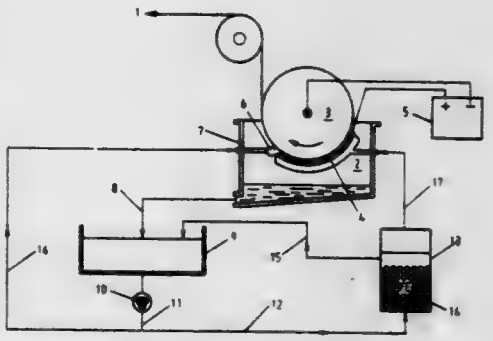
wherein at least one pair of electrodes selected from the group consisting of said first and second electrodes of said oxygen pumping cell and said third and fourth electrodes of said oxygen sensing cell consist of metal grains each having minute cracks on a surface thereof.

5,173,168

METHOD OF MAKING IRON FOIL BY ELECTRODEPOSITION

Gijsbertus C. van Haastrecht, Heemskerk, and Joop N. Mooij, Castricum, both of Netherlands, assignors to Hoogovens Groep B.V., Ijmuiden, Netherlands

Filed Feb. 10, 1992, Ser. No. 832,890
Claims priority, application Netherlands, Feb. 27, 1991, 9100352
Int. Cl.[5] C25D *1/04*
U.S. Cl. 205—77 8 Claims



1. Method of making iron foil by electrodeposition, comprising

(i) passing current through an acid electrolyte in an electrochemical cell having an insoluble anode so as to cause iron to deposit from the electrolyte onto a moving cathode by the reaction:

$$Fe^{2+} + 2e^- \rightarrow Fe \text{ (foil)} \quad \text{(I)},$$

(ii) removing the iron foil so made from the cathode,

(iii) supplying hydrogen in the form of a gas selected from hydrogen gas and a gas containing hydrogen to the anode, the anode being such that the anode reaction:

$$H_2 \rightarrow 2H^{30} + 2e^- \quad \text{(II)}$$

takes place, said reaction (II) predominating at the anode over the reaction:

$$2Fe^{2+} \rightarrow 2Fe^{3+} + 2e^- \quad \text{(IV)},$$

and

(iv) dissolving iron into the electrolyte in a regenerator at least partly by the reaction:

$$Fe + 2H^+ \rightarrow Fe^{2+} + H_2 \quad \text{(III)}.$$

5,173,169

ELECTROPLATING METHOD AND APPARATUS

Alexander J. Garrison, Selmer, and Otto N. Fanini, Adamsville, both of Tenn., assignors to Aqua Dynamics Group Corp., Adamsville, Tenn.

Filed May 8, 1991, Ser. No. 697,269
Int. Cl.[5] C25D *5/00, 17/00, 21/10*
U.S. Cl. 205—91 21 Claims

1. A method of electroplating comprising the steps of:

providing an aqueous electroplating bath containing metal ions;

providing an anode for the introduction of current for electroplating;

providing a cathode for the introduction of current for electroplating;

providing articles to be electroplated and arranged to contact the cathode at least periodically;

passing a current between the anode and cathode, the improvement comprising the additional step of treating the

bath by injecting into said bath electromagnetic radiation generated by an electromagnetic radiation generator, said injection being through at least one electrical conductor other than said anode and said cathode in direct contact with the bath.

5,173,170

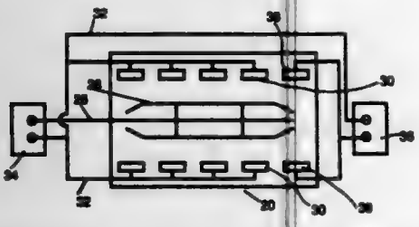
PROCESS FOR ELECTROPLATING METALS

Craig J. Brown, Pickering, and Antonio G. Mazza, Downsview, both of Canada, assignors to Eco-Tec Limited, Pickering, Ontario, Canada

Filed Jun. 3, 1991, Ser. No. 709,479

Int. Cl.[5] C25D *21/12*

U.S. Cl. 205—96 **5 Claims**



1. A process for electroplating metals, comprising the steps of:

providing a bath containing a plating solution of a metallic salt, a cathode comprising a workpiece to be plated, a first anode and a second anode;

connecting a positive side of a first direct current source to said first anode and a negative side of said source to said cathode;

selecting the voltage of the first direct current source to obtain a desired reaction at said anode;

connecting a negative side of a second direct current source to the positive side of the first direct current source and connecting a positive side of the second direct current source to the second anode; and

selecting the voltage of the second direct current source to achieve a desired reaction at said anode.

FCC FEED INJECTOR

Todd R. Steffens, Mine Hill, N.J., and Stephen D. Challis, Fetcham, England, assignors to Exxon Research and Engineering Company, Florham Park, N.J.

Filed Apr. 27, 1990, Ser. No. 515,814

Int. Cl.[5] B01J *8/20*; F27B *15/08*

U.S. Cl. 208—157 **18 Claims**

11. A process for injecting a feed oil into a reaction zone of a fluid catalytic cracking zone, comprising: providing a fluid catalytic cracking zone, atomizing and distributing said feed oil into said fluid catalytic cracking zone by means of a feed injector which comprises:

a conduit section of diameter D_1 for providing a mixture of a feed and an atomizing enhancing medium, said conduit section followed in sequence by

a conduit section of length L_1 in side view which is straight in side view and is converging in plan view, and con-

verges to a width in plan view of L_4,

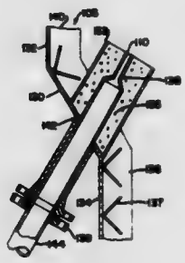
a throat conduit section of length L_2 in side view which simultaneously converges inside view and diverges in plan view,

a fan-shaped distribution end section of length L_3 which is simultaneously substantially straight in side view and diverging in plan view having a maximum width in plan view of L_5 and exit thickness in side view of L_6, said fan-shaped distributor end section diverging at an angle θ in plan view to define a fan-shaped spray pattern, and wherein the dimensions of the feed injector range as follows:

$0.5D_1 < L_3 < 2D_1$

$D_1 < L_5 \leqq 10''$

$0.5'' \leqq L_6 \leqq 0.5D_1$



$30° \leqq \theta \leqq 90°$

$0 \leqq L_1 \leqq D_1$

$0.5D_1 < L_4 \leqq D_1$

wherein the internal cross-sectional area of the injector is continually decreased in said throat conduit section, said throat conduit creating an orifice for atomization of an oil feed and wherein said throat section has a cross-sectional shape selected from the group consisting of a rectangular or oval.

DIALKYLATED ARYL MONOSULFONATE COLLECTORS USEFUL IN THE FLOTATION OF MINERALS

Richard R. Klimpel, Midland; Donald E. Leonard, Shepherd, and Kevin A. Frazier, Midland, all of Mich., assignors to The Dow Chemical Company, Midland, Mich.

Continuation-in-part of Ser. No. 628,264, Dec. 17, 1990, abandoned, which is a continuation-in-part of Ser. No. 484,038, Feb. 23, 1990, Pat. No. 5,015,367. This application Nov. 27, 1991, Ser. No. 800,172

Int. Cl.[5] B03D *1/012, 1/02*

U.S. Cl. 209—166 **27 Claims**

1. A process for the recovery of minerals by froth flotation comprising subjecting an aqueous slurry comprising particulate minerals selected from the group consisting of copper oxides, nickel oxides, titanium oxides, noble metals, sulfides, carbon based inks and mixtures thereof to froth flotation in the presence of a collector for the minerals comprising at least one aryl monosulfonic acid or salt thereof having at least two alkyl substituents or mixtures of such salts or acids under conditions such that the minerals are floated and recovered.

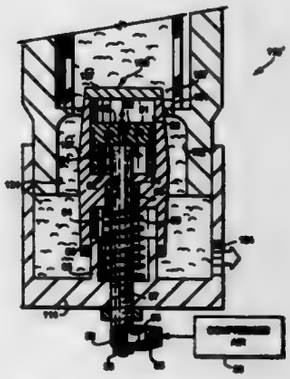
ANTI-PLUGGING ADJUSTABLE ORIFICE FOR GAS SPARGED HYDROCYCLONE

Brian F. Greenwood; John W. Chambles, and Thomas R. Delcourt, all of Glens Falls, N.Y., assignors to Kamyr, Inc., Glens Falls, N.Y.

Filed Mar. 27, 1991, Ser. No. 675,807

Int. Cl.[5] B04C *5/16, 5/181, 5/10*; B03D *1/14*

U.S. Cl. 209—170 **6 Claims**



1. A hydrocyclone, comprising:

a substantially hollow body having first and second ends, and having a wall disposed about an axis and axially elongated;

inlet means for introducing a suspension into the hollow body at the first end thereof, so that the suspension flows in a vortex within said hollow body;

first withdrawing means for withdrawing fluid from adjacent the axis at said first end of said body;

a porous surface of revolution disposed within said hollow body wall generally symmetrical with said axis, a plenum defined between said body wall and said porous surface of revolution;

means for introducing fluid into said plenum to pass through said porous surface of revolution into said vortex;

second withdrawing means for withdrawing suspension from adjacent said second end of said body;

movable plug means, comprising a generally cylindrical plug element having an internal area and being mounted within said body between said second withdrawing means and said porous surface of revolution for defining an annular space controlling the flow rate through said second withdrawing means;

means for substantially linearly moving said plug means through a substantially linear length of travel which in its entirety is within said hollow body, to release any substance that becomes trapped in said annular space restricting the flow through said second withdrawing means;

said means for moving said movable plug means comprises means for automatically moving as a result of back pressure caused by any substance that becomes trapped in said annular space, to automatically release the substance and, said means for moving said plug element comprises fluid powered means for selectively moving said plug element against the bias of a spring by feeding fluid pressure into said internal area of said plug element; and further comprising means for providing an expanded volume between said annular space and said second withdrawal means compared to the volume at said plug means when defining said annular space; and

said means providing said expanded volume including a first, relatively small, internal open diameter near said second end of said hollow body, and a second, relatively large, internal open diameter between said first diameter and said second withdrawing means of said hollow body; and wherein said plug element is biased by said spring into a

position normally defining said annular space between said plug element and said body at said first diameter, and movable against the spring bias to a position wherein the plug is in association with said second diameter, at which position any substance trapped in said annular space is released to flow to said second withdrawing means.

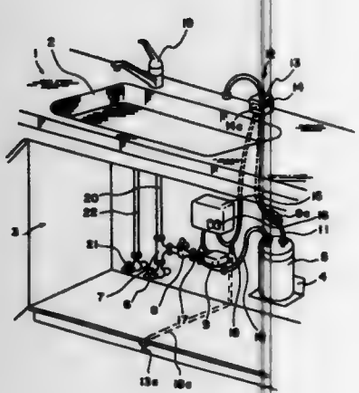
WATER PURIFYING APPARATUS WITH TIMED DISCHARGE AFTER NON-USE PERIODS

Eiichi Kawashima, Sayama, and Kyohei Shinozaki, Urawa, all of Japan, assignors to Osaki Electric Co., Ltd., Tokyo, Japan

Filed Sep. 24, 1991, Ser. No. 764,739
Int. Cl.[5] B01D *35/157*
U.S. Cl. 210—85 9 Claims



1. A water purifying apparatus having an under-sink type water purifier comprising:

a water-tap portion connected to a purified-water outlet of said water purifier to discharge purified water from said water purifier;

an object sensor arranged for sensing an object and in response issuing detection signals upon sensing object to initiate the starting and the stopping of the discharge of said purified water from said water purifier;

a solenoid valve arranged for starting and stopping the discharge of said purified water from said water-tap portion in response to said detection signal issued from said object sensor; and

a control circuit arranged for opening and closing said solenoid valve in response to issuance of one of said detection signals issued from said object sensor, said control circuit being provided with a timer means for initiating the opening of said solenoid valve, after completion of, a preset time interval, for a short time and arranged such that said present time interval is interrupted and said timer means is reset to begin a new interval in response to a new detection signal being issued.

5,173,179

REMOVAL OF CONTAMINANTS AND RECOVERY OF METALS FROM WASTE SOLUTIONS

Irving W. DeVoe, Thousand Oaks, Calif.; Olwyn A. D'Syiva, Montreal, Canada, and David A. Fine, Santa Monica, Calif., assignors to Metanetix, Inc., Palm Springs, Calif.

Division of Ser. No. 316,201, Feb. 24, 1989, Pat. No. 5,066,371.
This application Aug. 26, 1991, Ser. No. 749,745
Int. Cl.[5] B01D *15/02*
U.S. Cl. 210—97 8 Claims

1. Apparatus for removal of a desired material from a liquid, comprising:

a plurality of liquid treatment containers;

means for cycling the liquid from a first liquid treatment container through the plurality of liquid treatment containers to a final liquid treatment container;

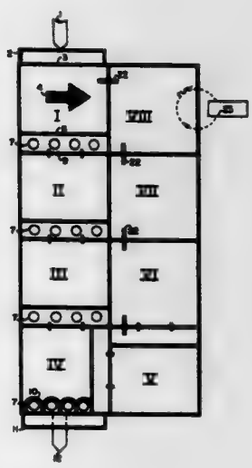
particulate recovery medium;

means for cycling recovery medium for recovery of the desired material from the final liquid treatment container through the plurality of liquid treatment containers to the first liquid treatment container in a direction countercurrent to flow of the liquid;

a plurality of medium regeneration containers;

means for cycling medium from a first medium regeneration container for receiving the medium from the first liquid treatment container through the plurality of medium regeneration containers to a final medium regeneration container from which at least partially regenerated medium may be recovered;

means for cycling a medium regeneration liquid from the



final medium regeneration container through the plurality of medium regeneration containers to the first medium regeneration container in a direction countercurrent to

cycling of the medium through the medium regeneration means;

means for transferring at least a portion of the medium from the first liquid treatment container into the first medium regeneration container; and

means for transferring at least a portion of the at least partially regenerated medium from the final medium regeneration container into the final liquid treatment container;

overflow means for the introduction of overflow medium regeneration liquid, containing no medium, from the first medium recovery container into said first liquid treatment container.

DOMESTIC WATER CONSERVATION SYSTEM

Gary Stewart, 2838 N. Myers St., Burbank, Calif. 91504, and John M. Bozeman, 530 E. Grinnell Dr., Burbank, Calif. 91501

Filed Dec. 6, 1990, Ser. No. 623,074
Int. Cl.[5] B01D *36/00*
U.S. Cl. 210—167 12 Claims

1. A water conservation apparatus in connection with a domestic water system having a source of water under pressure, at least one lavatory sink having an outlet, at least one bathtub having an outlet, at least one shower having an outlet, a dishwasher having an inlet and an outlet, a washing machine having an inlet and an outlet, and an outdoor multi-outlet irrigation system, said water conservation apparatus comprising:

(a) a main storage tank;

(b) a dishwasher recycling subsystem interconnected with said main storage tank, comprising:

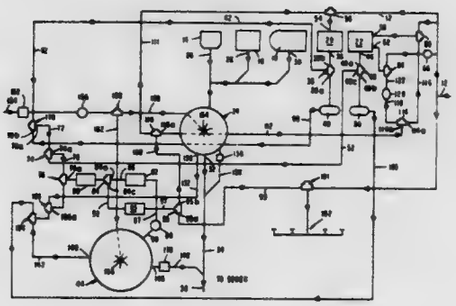
(i) a dishwasher storage tank having an inlet and an outlet;

(ii) a first conduit having first and second ends, said first end being connected to said dishwasher outlet;

(iii) a valve having first, second and third ports, said first port being connected to said second end of said first conduit;

(iv) a second conduit interconnecting said second port of said valve with said main storage tank;

(v) a third conduit interconnecting said third port of said valve with said dishwasher storage tank;



(vi) means for causing water within said dishwasher storage tank to flow toward said inlet of said dishwasher;

(c) a holding tank having an inlet interconnected with at least one of said lavatory sink outlet, said bathtub outlet, and said shower outlet and having an outlet interconnected with said main storage tank; and

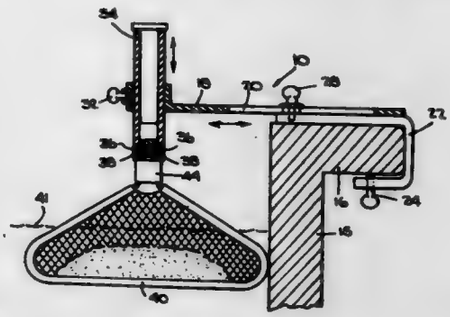
(d) means interconnecting said main storage tank with said irrigation system for causing water contained within said main storage tank to flow to said irrigation system.

5,173,181

POOL SKIMMING APPARATUS

Greg McFarland, 127 Wood Ave., Staten Island, N.Y. 10307

Filed Jun. 21, 1990, Ser. No. 541,597
Int. Cl.[5] B01D *35/027*
U.S. Cl. 210—169 41 Claims



25. A bracket constructed and arranged for receiving a strainer member for removing floating debris from the surface of a pool of liquid disposed in a container comprising:

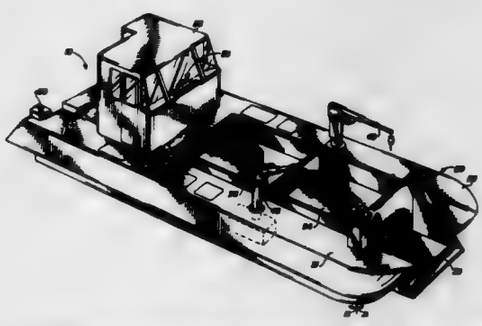
an arm constructed and arranged to be fastened adjacent a wall of the container and extending interiorly over the pool of liquid, said arm being adjustable horizontally and further comprising a vertically extending member directed perpendicularly with respect to the surface of the pool of liquid constructed and arranged to receive the strainer member through which the liquid will flow during circulation of the liquid, the vertically extending member and the strainer member having mating coupling members for releasably coupling the vertically extending member to the strainer member, said vertically extending member being adjustably disposed with respect to the arm such that the strainer member will receive debris floating on the surface of the liquid as the liquid circulates in the pool, said mating coupling means comprising quick disconnect means on the vertically extending member and the strainer member, such that said strainer member having said quick disconnect means can be removed from said arm when straining has been completed, so that the strainer member can be removed from the container of liquid and used releasably secured with said quick disconnect means to a pole having corresponding coupling means for use in manual straining of said pool of liquid.

5,173,182

MULTI-PURPOSE ENVIRONMENTAL WORK VESSEL

Gabriel J. Debellian, 1007 N. America Way, Fifth Floor, Miami, Fla. 33132

Filed Feb. 12, 1992, Ser. No. 834,368
Int. Cl.[5] E02B *15/04*
U.S. Cl. 210—170 17 Claims



1. A multi-purpose, environmental work vessel comprising:

a catamaran-type hull being substantially lightweight and capable of allowing the vessel to run at high speeds and at a substantially low draft,

said hull including a pair of elongate pontoons connected to one another, at a rear portion thereof, by a deck area,

a trash scoop pivotally positioned between said pontoons at a forward end of said hull, said scoop being structured and disposed to allow the passage of water therethrough while trash is captured therein,

at least one trash container,

said trash scoop being further structured and disposed to retain large and small articles of floating debris and comprising means to dump and unload the debris into an adjacently positioned active one of said at least one trash container,

said active trash container being removably positioned between said pontoons directly behind said trash scoop,

suction dredging means for dredging a bottom surface of canals, waterways, and the like for debris,

an inboard crane being centrally mounted on one of said pontoons,

fire monitor means being centrally mounted on one of said pontoons to assist the putting out of fires on boats and waterfront facilities,

oil spill cleanup means retractably mounted between said pontoons at a rear end of said hull, said spill cleanup means comprising means to skim oil from the water and pump said skimmed oil directly to an oil holding means, and

propulsion means to move said hull through the water.

5,173,183

Patent Not Issued For This Number

5,173,184

WASTEWATER TREATMENT APPARATUS

Joseph P. Krieger, Edmond, Okla., assignor to Hydro Modular System, Inc., Norman, Okla.

Filed Nov. 21, 1990, Ser. No. 616,583

Int. Cl.[5] C02F *1/24*

U.S. Cl. 210—195.1 **25 Claims**

20. An apparatus for removing contaminates from industrial wastewater to produce an effluent suitable for discharge or recycle, the apparatus comprising:

a housing having a bottom and defining an internal chamber, the internal chamber having a plurality of serially connected treatment cells comprising a first treatment cell and a terminal treatment cell, each of the treatment cells having a mixing zone, a separation zone, a quiescent zone and a reservoir zone, the housing cooperating with the terminal treatment cell to define an effluent discharge zone, the housing having an inlet port communicating with the mixing zone of the first treatment cell and an outlet port communicating with the effluent discharge zone;

means for introducing wastewater into the mixing zone of the first treatment cell via the inlet port of the housing;

means for injecting compressed air into the wastewater prior to the wastewater being introduced into the mixing zone in an amount sufficient so that large air bubbles are formed in the mixing zone;

spray means for spraying aerated water into the mixing zone of each of the treatment cells so that the sprayed water contacts the large air bubbles in the mixing zone and substantially reduces the size of the large air bubbles in the mixing zone;

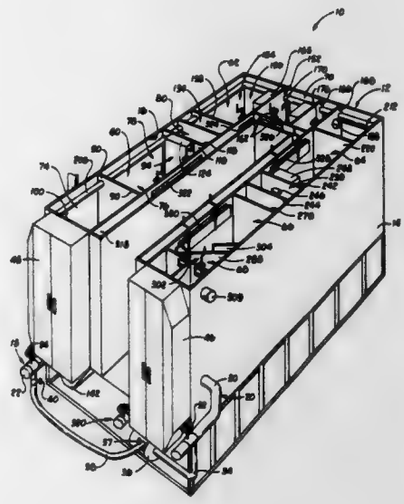
effluent transfer means for selectively passing a portion of a treated wastewater from each of the reservoir zones to the mixing zone of each subsequently disposed treatment cell;

means for introducing air into the treated wastewater prior to discharge of the treated wastewater into the mixing zone of the subsequent treatment cell so that large air bubbles are formed in the mixing zone of said subsequent treatment cell;

effluent discharge means for discharging a treated wastewater from the housing; and wherein each of the treatment cells comprises:

a first baffle member and a second baffle member and wherein the first treatment cell and each of at least some of the subsequent treatment cells includes an effluent reservoir means wherein:

(a) the first baffle member of the first treatment cell being spatially disposed from one end of the internal chamber



so as to define the mixing zone of the first treatment cell, the first baffle member of each subsequent treatment cell spatially disposed from the preceding treatment cell so as to define the mixing zone of each subsequent treatment cell, each first baffle member having an upper end portion and a lower end portion, the upper end portion extending upwardly above a predetermined liquid level, the lower end portion terminating a first distance from the bottom of the housing so as to provide a fluid flow passageway from the mixing zone of each treatment cell to the separation zone thereof;

(b) the second baffle member being spatially disposed from the first baffle member so as to define the separation zone therebetween, the second baffle member having an upper end portion and a lower end portion, the upper end portion disposed below the predetermined liquid level to provide an upper fluid flow passageway from the separation zone to the quiescent zone; and

(c) the effluent reservoir means, which defines the reservoir zone, being spatially disposed from the second baffle member, the second baffle member and the effluent reservoir means cooperating to define the quiescent zone, the effluent reservoir means having an upper end portion, a lower end portion, a fluid inlet opening and a

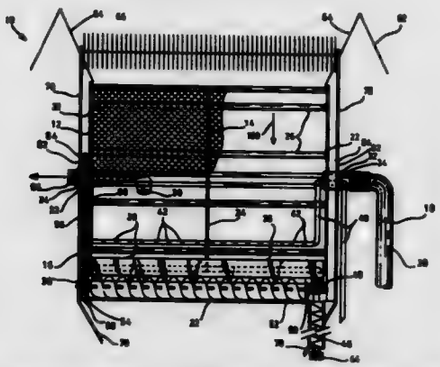
fluid outlet opening, the first end portion thereof extending upwardly above the liquid level, the lower end portion terminating a distance from the bottom of the housing so as to provide a fluid flow passageway between the reservoir zone, the quiescent zone and the effluent discharge zone.

5,173,185

OIL RECOVERY SYSTEM

Gary W. Stokes, 1628 Ramsey St., Alcoa, Tenn. 37701

Filed Jul. 22, 1991, Ser. No. 733,883
Int. Cl.[5] E02B 15/04
U.S. Cl. 210—242.3 18 Claims



1. An apparatus for the separation and removal of oil from a body of water, said apparatus being carried by a marine vessel and comprising:

an oil pickup drum defining a substantially cylindrical configuration for extracting said oil from said water, said oil pickup drum having a perforated outer surface for the filtration of said water therethrough, said oil pickup drum being rotatably attached to said marine vessel about a longitudinal axis of said drum, said longitudinal axis being oriented substantially parallel to the horizon and substantially perpendicular to a direction of travel of said marine vessel;

a pressure differentiator means for creating a vacuum within said oil pickup drum for forcibly introducing said water through said perforated outer surface of said oil pickup drum;

an oil remover for removing said oil from said outer surface of said oil pickup drum, said oil remover including at least a blade member fixed proximate to said outer surface of said oil pickup drum and a fluid spray apparatus fixed within said oil pickup drum for spraying a selected fluid toward a selected fixed location, said selected fixed location being defined as a line at a point on said oil pickup drum above said blade member such that as said selected fluid is sprayed toward said selected fixed location, said oil is forced away from said perforated outer surface of said oil pickup drum toward said blade member, thereby assisting said blade member is removing said oil from said oil pickup drum;

an oil collector means for collecting said oil removed from said oil pickup drum;

a conveyor means carried by said marine vessel for conveying said oil removed from said oil pickup drum to a selected location;

a storage receptacle carried by said marine vessel at said selected location for collecting and storing said oil removed from said oil pickup drum and conveyed by said conveyor; and

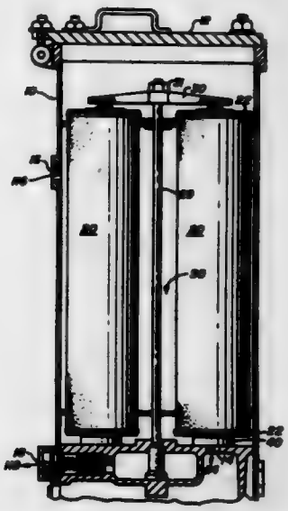
an actuator for selectively rotating said drum and activating said conveyor.

5,173,186

FLUID FILTER CARTRIDGE AND HOUSING

Scott E. Spafford, Algonquin, and Robert M. Holden, Addison, both of Ill., assignors to Allied Filter Engineering, Inc., Bensenville, Ill.

Filed Mar. 28, 1991, Ser. No. 676,828
Int. Cl.[5] B01D 27/08
U.S. Cl. 210—455 13 Claims



1. A locomotive engine fluid filter assembly comprising a filter housing, fluid conducting apertures for allowing ingress and egress of fluid to be filtered, an elongate fluid filter cartridge having an interior cavity, and biasing means for securing said filter cartridge within said housing;

an elongate rigid, hollow, perforated standpipe having first and second ends and sized to fit within the interior cavity of said fluid filter cartridge, said standpipe being independent of said filter cartridge and connected at its first end to a fluid conducting aperture of the fluid filter housing and its second end to said biasing means;

a bushing adapted to overfit a projection at the fluid conducting aperture and sized to fit interior of the standpipe to facilitate attachment and communication of said rigid standpipe with the fluid conducting aperture; and

a stop structure interior of the standpipe to restrict travel of said bushing.

5,173,187

METHOD FOR CONTROL AND MONITORING OF ACTIVATED SLUDGE IN A BIOLOGICAL CLARIFICATION SYSTEM

Werner Nader, Heidelberg; Carl T. Nebe; Gerhard Nebe, both of Ladenburg, and Christian Birr, Heidelberg, all of Fed. Rep. of Germany, assignors to Orpegen Medizinisch-Molekularbiologische Forschungsgesellschaft m.b.H., Heidelberg, Fed. Rep. of Germany

Filed Mar. 23, 1989, Ser. No. 327,770
Claims priority, application Fed. Rep. of Germany, Mar. 31, 1988, 3811097
Int. Cl.[5] C02F 3/34
U.S. Cl. 210—614 9 Claims

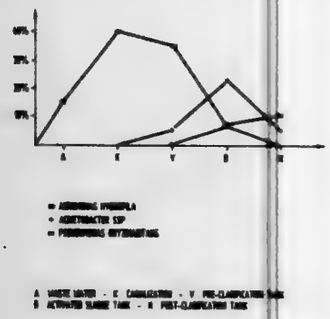
1. A process for the control of a biological clarification stage of an aerobic activated sludge type containing micro-organisms, comprising:

monitoring at least one of the micro-organisms most frequently present in the activated sludge continuously and quantitatively by means of a representative sample of the micro-organism from the activated sludge or from an inlet of a containment vessel of the activated sludge wherein the micro-organism is bound to a fluorescence-labelled

antibody specific for the micro-organism or reacting the micro-organism with a fluorogenic substrate by means of a metabolic ability specific to the micro-organism,

determining the amount of the fluorescencelabelled micro-organism by flow cytometry and, simultaneously determining the total amount of the micro-organism present by scattered light measurement of coloration of the DNA and,

regulating the amount of at least the one micro-organism or the growth conditions for this micro-organism with reference to the above measurement values obtained.



5,173,188

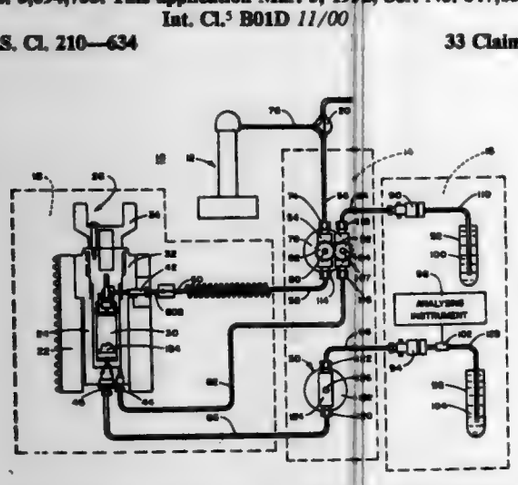
APPARATUS AND METHOD FOR SUPERCRITICAL FLUID EXTRACTION

Robin R. Winter; Robert W. Allington; Daniel G. Jameson, and Dale L. Clay, all of Lincoln, Nebr., assignors to Isco, Inc., Lincoln, Nebr.

Continuation-in-part of Ser. No. 795,987, Nov. 22, 1991, which is a continuation-in-part of Ser. No. 553,119, Jul. 13, 1990, Pat. No. 5,094,753. This application Mar. 5, 1992, Ser. No. 847,652

Int. Cl.[5] B01D *11/00*

U.S. Cl. 210—634 **33 Claims**



1. Apparatus comprising: means for supercritical fluid extraction; said means for supercritical fluid extraction including an extraction cartridge having an interior for containing material to be extracted, a plurality of fluid lines in fluid contact with said cartridge interior, a first line of said plurality of fluid lines capable of supplying supercritical fluid at high pressure to said cartridge interior and a second line of said fluid lines capable of depressurizing fluid carrying extractant from said interior to a pressure lower than said high pressure, at least one of the said plurality of fluid lines incorporating a programmable valve having a valve body, said valve being disposed to regulate fluid flow in said one of the fluid lines, said valve further comprising:

a linear actuator;

a nonrotating stem having a first face and a second face;

said nonrotating stem being reciprocally mounted within the valve body wherein said stem may be moved in forward and reverse directions by said linear actuator;

a valve seat in said valve body, with a larger diameter fluid opening on one side and a smaller fluid opening on the other side;

said smaller opening in said valve seat being connected to a fluid inlet port in the valve body and said larger opening in the seat connected to a fluid outlet port in said valve body; and

a ball which cooperates with said valve seat and enters said seat through its larger opening but is too small to pass through said smaller opening of the seat;

said ball being adapted to be pressed into said seat by contact with said first face of said stem as said stem moves in said forward direction thereby forming a conformal seal and stopping flow between said inlet and said outlet ports;

said ball being free to rotate upon being released from said seat as said stem moves in said reverse direction thereby opening flow between said inlet port and said outlet port, wherein the first face of said stem has a compression yield point at least 1.3 times the compression yield point of the seat and no more than 0.5 times the compression yield point of said ball, the compression yield point of the ball being at least three times the compression yield point hard of said seat and said seat having a compression yield point of at least 20,000 psi.

5,173,189

MEMBRANE FOR SEPARATING AN ORGANIC SOLVENT FROM A WATER-ORGANIC SOLVENT MIXTURE

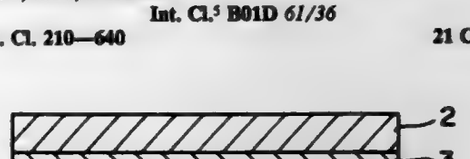
Masaru Hoshi, Urawa; Tsutomu Nakagawa, Musashino; Akon Higuchi, Tokyo, and Toshio Sugizaki, Urawa, all of Japan, assignors to Lintec Corporation, Tokyo, Japan

Filed Jun. 12, 1991, Ser. No. 714,036

Claims priority, application Japan, Jun. 14, 1990, 2-154004; Jun. 3, 1991, 3-131400

Int. Cl.[5] B01D *61/36*

U.S. Cl. 210—640 **21 Claims**



19. A process for separating an organic solvent from a liquid mixture containing the organic solvent, comprising: providing a membrane comprising a polymeric membrane of a copolymer consisting essentially of an α,β-unsaturated carbonyl compound as a main monomer, and feeding a liquid mixture containing an organic solvent to be separated to one side of said membrane.

5,173,190

RECONDITIONING AND REUSE OF CHILLED WATER FOR POULTRY AND FOOD PROCESSING

Charles R. Picek, 10322 Malcolm Cir., Cockeysville, Md. 21030

Filed Apr. 6, 1992, Ser. No. 864,056

Int. Cl.[5] B01D *61/16*

U.S. Cl. 210—651 **5 Claims**

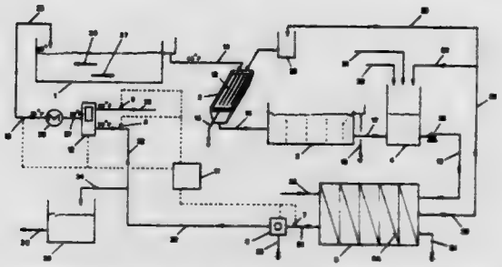
1. A process for effectively, reliably and continuously reconditioning overflow waste water from carcass chilled tanks as used in poultry processing industries for direct reuse without the addition of chemicals and filter-aid compounds and by processing said overflow waste water through a series of progressively dedicated apparatus comprising:

a screening means for removal of gross lumps of fat and carcass debris that contribute to excessive equipment pluggages;

a static flotation means for removal of emulsified lighter-than-water materials including fats, oils, grease and encapsulated micro-organisms;

a high speed pumping means to provide pressure for microfiltration and to reduce the size of remaining suspended particles;

a final microfiltration means for removal of deleterious



emulsified haze producing compounds and encapsulated micro-organisms, and, that said microfiltration means does utilize microporous membrane elements with discrete oleophobic and hydrophilic characteristics in a 0.2 micron or smaller porosity range, operates in a tangential and continuous filter mode, is designed for periodic fluid backwashing to maintain steady flux flow rates, and does remove said deleterious contaminants.

5,173,191

INTERFACIALLY POLYMERIZED MEMBRANES FOR THE REVERSE OSMOSIS SEPARATION OF ORGANIC SOLVENT SOLUTIONS

Laura E. Black, Sarnia, Canada, assignor to Exxon Research and Engineering Company, Florham Park, N.J.

Filed Oct. 5, 1989, Ser. No. 417,333
Int. Cl.[5] B01D *61/02*
U.S. Cl. 210—654 26 Claims

19. A method for separating N-methyl-2-pyrrolidone (NMP) from mixtures comprising said NMP and oil, said method comprising contacting the NMP and oil mixture with an interfacially polymerized crosslinked membrane on microporous organic solvent resistant ultrafiltration backing under reverse osmosis conditions and recovering the NMP as permeate, said interfacially polymerized membrane comprising the reaction product of a multi-functional polyimine compound dissolved in water with a polyfunctional agent dissolved in an organic solvent, at least one of which reactants is trifunctional, on a backing.

5,173,192

METHOD AND APPARATUS FOR FILTERING WATER

Amnon Shalev, 21900 Marlee St. #244, Woodland Hills, Calif. 91367

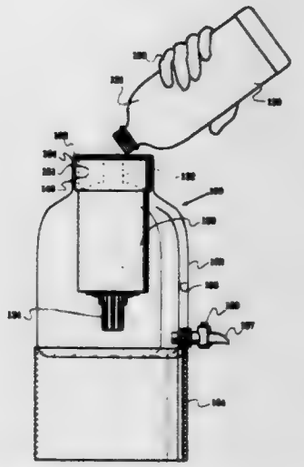
Continuation-in-part of Ser. No. 769,876, Oct. 1, 1991. This application Jan. 15, 1992, Ser. No. 821,462
Int. Cl.[5] B01D *37/00, 24/00*
U.S. Cl. 210—767 7 Claims

5. A method enabling a user thereof to conveniently prepare and dispense filtered tap water thus eliminating the need to purchase bottled water and/or install permanent or semipermanent filter devices, the method comprising the steps of:

providing a hollow storage container having a dispensing faucet mounted in a wall thereof wherein said container defines an opening through said wall;

inserting a filter having an entrance spout and an exit spout into said opening with said entrance spout disposed external to said storage container and said exit spout disposed to drain into said storage container;

mounting a tap water dispensing container on said entrance spout for discharging tap water into said entrance spout for filtering through said filter into said storage container; and



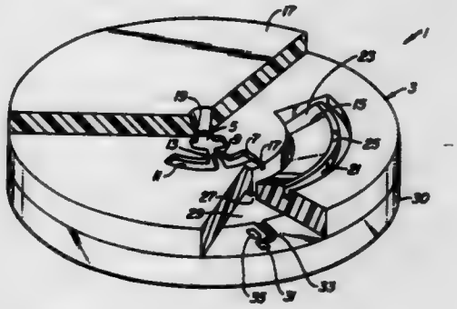
pooling said tap water about said entrance spout, to prevent overflow therefrom.

5,173,193

CENTRIFUGAL ROTOR HAVING FLOW PARTITION

Carol T. Schembri, 3912 Marshall Ave., San Mateo, Calif. 94403

Filed Apr. 1, 1991, Ser. No. 678,823
Int. Cl.[5] G01N *1/28;* B04B *5/12;* B01D *21/26*
U.S. Cl. 210—782 21 Claims



1. A centrifugal rotor comprising:

a bulk fluid chamber adapted to receive a fluid;

a metering chamber connected to the bulk fluid chamber, the metering chamber being positioned radially outward from the bulk fluid chamber such that fluid in the bulk fluid chamber enters the metering chamber at a first rotational speed;

an overflow chamber connected to the metering chamber;

a receiving chamber positioned radially outward from the metering chamber; and

a capillary means for delivering the fluid from the metering chamber to the receiving chamber, the capillary means having a cross sectional area such that flow of fluid from the metering chamber to the receiving chamber is prevented at a first rotational speed and allowed at a second higher rotational speed.

13. A method for delivering a predetermined volume of fluid to a receiving chamber in a centrifugal rotor, the method comprising the steps of:

introducing a volume of fluid greater than the predetermined volume into a bulk fluid chamber;

spinning the rotor at a first rotational speed to effect the radially outward flow of the fluid from the bulk fluid

chamber into a metering chamber such that excess fluid flows out of the metering chamber into an overflow chamber, and a predetermined volume of fluid remains in the metering chamber, and

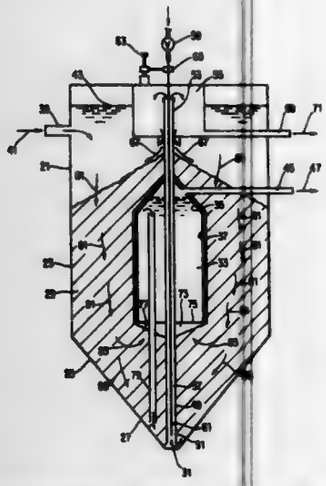
spinning the rotor at a second, higher rotational speed to effect the flow of the predetermined volume of fluid from the metering chamber into the receiving chamber, through a capillary means having a cross sectional area such that flow of fluid from metering chamber to the receiving chamber is prevented at the first rotational speed and allowed at the second rotational speed.

5,173,194

FILTRATION METHOD AND APPARATUS HAVING A FILTRATE COLLECTION CHAMBER WITHIN THE FILTER BED

Carl J. Hering, Jr., 2920 NW. 67th Ct., Ft. Lauderdale, Fla. 33309

Filed Dec. 5, 1989, Ser. No. 446,119
Int. Cl.[5] B01D *24/46*
U.S. Cl. 210—792 **17 Claims**



1. A method for filtering a liquid comprising the steps of:

providing a vertical column of varying sized filter media within a liquid-impervious vessel;

providing a filtrate collection chamber in a fixed position in said media column, said chamber comprising a liquid impervious top wall and attached liquid impervious side walls, said chamber having an open bottom which allows liquid in said column to enter said chamber in an upward direction;

supplying liquid to be filtered to the upper portion of said vessel above said media column, whereby said supplied liquid passes downward through said media column past said collection chamber and then passes upward into said collection chamber; and

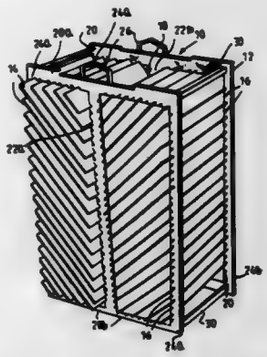
removing filtrate from said collection chamber and said vessel.

5,173,195

PHASE SEPARATOR MODULE

Francis C. Wright, Yardville, and David A. Goding, Dover, both of N.J., assignors to Mercer International, Inc., Mendham, N.J.

Continuation of Ser. No. 484,682, Feb. 23, 1990, Pat. No. 5,028,333. This application Apr. 29, 1991, Ser. No. 693,338
The portion of the term of this patent subsequent to Jul. 2, 2008, has been disclaimed.
Int. Cl.[5] B01D *21/00*
U.S. Cl. 210—802 **36 Claims**



19. A process for separating a mixture of liquids and suspended particles comprising:

a) directing the flow of the liquids and suspended particles to be separated into an inlet in a tank of a phase separator apparatus;

b) directing the liquids and suspended particles to be separated towards a phase separator module placed in the flow path of the liquids and suspended particles to be separated, wherein the phase separator module includes a self supporting frame for retaining a plurality of impingement plates, a plurality of rigid impingement plates retained within the frame, and removable retention means for removably retaining said plates within said frame; and

c) allowing the components of the fluid to be removed on the basis of their density, heavier particles being removed from a lower sump region, less dense phase being removed from an upper float region and the intermediate phase being removed from a liquid outlet region.

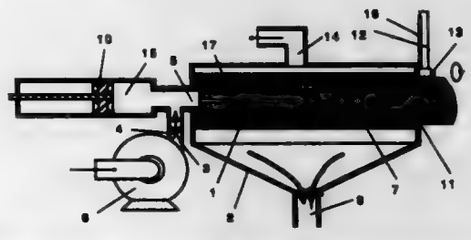
DEWATERING AND COMPACTING EQUIPMENT WITH HIGH PRESSURE PUMPING ARRANGEMENT

Dennis P. Macrae, 3 Trevithick Crescent, Redwood Park, Australia

Filed Nov. 17, 1989, Ser. No. 438,731
Int. Cl.[5] B01D *33/82*; B30B *9/06*
U.S. Cl. 210—808 **11 Claims**



10. A method of dewatering a slurry on a continuous basis to produce a solid product and a filtrate comprising the steps of utilizing a pumping arrangement for pumping a slurry under high pressure into an elongate filter chamber having at least one side wall, the filter chamber having an open exit end,

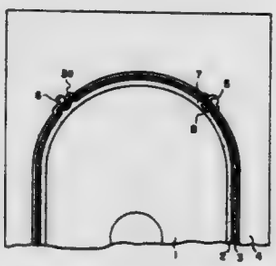
causing the dewatering of said slurry by substantially maintaining the high pressure thereon throughout said filter chamber by said pumping arrangement to produce a wad of solid product, causing said solid product to build up in the chamber towards the open exit end and continuously extruding the wad from the open end by means of the high pressure exerted on the slurry within the chamber, by the pumping arrangement.

5,173,197

SLIDE PLATE FOR SLIDE GATE VALVES

Schmuel Kleeblatt, Mamer, Luxembourg, assignor to Cerafer S.A.R.L., Mamer, Luxembourg

Filed Mar. 5, 1991, Ser. No. 664,059
Int. Cl.[5] B22D *41/34*
U.S. Cl. 222—600 20 Claims



1. A metallurgical vessel slide gate valve slide plate comprising:

a frame exhibiting one or more circumferential outcrimpings with tapered configurations, said outcrimpings taper from an upper edge of said frame to a lower edge of said frame;

a ceramic plate located within said frame; and

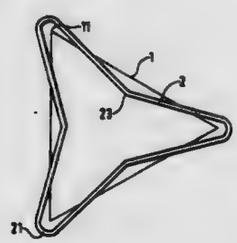
binder material securing said ceramic plate to said frame.

5,173,198

DEVICES USED FOR TEEMING LIQUID METALS

Ferdinand P. Blum, Echternach, Luxembourg, assignor to Arbed S.A., Luxembourg

Filed Jun. 12, 1991, Ser. No. 714,788
Claims priority, application Luxembourg, Jun. 20, 1990, 87752
Int. Cl.[5] B22D *41/34*
U.S. Cl. 222—600 9 Claims



1. A device for discharging liquid metal from a vessel comprising:

an elongated discharge member having an upper end and a lower end, said discharge member defining a discharge channel therethrough from the upper end to a discharge opening in the lower end, said discharge channel exhibiting, at least towards the discharge opening, a star shaped cross section, said star shaped cross section comprising a central opening having at least three branches extending radially outwards from the central opening; and

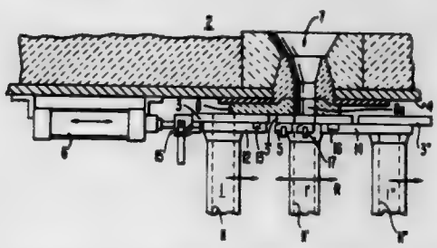
gate means, transversely displaceable relative to said discharge member, for controlling the flow through said discharge channel, said gate means having a closed position in which the gate means closes the discharge channel and said gate means being displaceable in an open position in which the gate means opens the cross section of said discharge channel, wherein the star shaped cross section is oriented so that an extremity of one of said branches is first opened to the flow as the gate means is moved from said closed to said open position.

5,173,199

APPARATUS FOR USE IN REPLACING A WORN POURING PIPE AND FOR ADJUSTING MOLTEN METAL FLOW THROUGH A POURING PIPE

Raimund Brückner, Engenhahn-Niederahausen; Ernst Lährsen, Bad Schwalbach; Hans Rothfuss, Taunusstein; Ullrich Hintzen, Taunusstein-Watzhahn, and Peter Keutgen, Kreuzau, all of Fed. Rep. of Germany, assignors to Didier-Werke AG, Wiesbaden, Fed. Rep. of Germany

Filed Jul. 24, 1991, Ser. No. 735,244
Claims priority, application Fed. Rep. of Germany, Jul. 24, 1990, 4023484
Int. Cl.[5] B22D *41/56*
U.S. Cl. 222—600 27 Claims



1. An apparatus for replacing a worn pouring pipe and for adjusting molten metal flow through the pouring pipe from a discharge opening in a bottom of a metallurgical vessel by moving the pouring pipe along with its head plate along guide rails from a waiting position remote from the discharge opening to a pouring position in which the pouring pipe and a through-hole of the head plate are aligned with the discharge opening, and, when worn beyond a certain limit, from the pouring position into a discharge position, said apparatus comprising:

a first single linear actuator comprising first drive means for moving the head plate from the waiting position to the pouring position and from the pouring position to the discharge position, and reciprocably moving the head plate and the pouring pipe along the guide rails to selectively vary alignment of the head plate with the discharge opening so as to adjust flow of molten metal through the discharge opening.

5,173,200

LOW-SOLVENT GELLED DRYER-ADDED FABRIC SOFTENER SHEET

George W. Kellett, Cranford, N.J., assignor to Creative Products Resource Associates, Ltd., Clifton, N.J.

Continuation-in-part of Ser. No. 568,836, Aug. 17, 1990, Pat. No. 5,066,413, and Ser. No. 521,242, May 9, 1990, Pat. No. 5,062,973, which is a continuation-in-part of Ser. No. 331,870, Apr. 4, 1989, Pat. No. 4,938,879. This application Oct. 28, 1991, Ser. No. 783,501
Int. Cl.[5] D06M *10/08*
U.S. Cl. 252—8.8 15 Claims

1. A fabric-softener comprising a dimensionally stable gelled sheet comprising about 40–70% water, about 5–30% of a water-miscible solvent selected from the group consisting of a liquid polyalkylene glycol, a liquid monomethoxypolyalkylene glycol and mixtures thereof; and an amount of a fatty acid salt gelling agent effective to form a dimensionally gelled stable sheet, having uniformly distributed therein an effective amount of a zwitterionic fabric softening agent; wherein said sheet leaves an insignificant residue in a rotary hot air dryer following a laundry drying cycle.

5,173,201

MICROEMULSIFIED AMINE FUNCTIONAL SILICONE IN LIQUID FABRIC SOFTENERS FOR REDUCING FIBER-FIBER AND YARN-YARN FRICTION IN FABRICS

Timothy W. Coffindaffer, Loveland, Ohio, and Sheila G. Buzzee, Fort Mitchell, Ky., assignors to The Procter & Gamble Company, Cincinnati, Ohio

Continuation of Ser. No. 557,438, Jul. 23, 1990, abandoned. This application Oct. 7, 1991, Ser. No. 771,892

Int. Cl.[5] D06M *10/08*

U.S. Cl. 252—8.8 19 Claims

1. A liquid fabric care composition comprising:

(1) a suitable microemulsified amine functional silicone for improved reduction of fiber-fiber/yarn-yarn friction, wherein said microemulsified amine functional silicone has an average molecular weight of from about 1,000 to about 100,000;

(2) from about 2% to about 35% by weight of the total composition of fabric softener, wherein said fabric softener is selected from the group consisting of:

i. quaternary ammonium compounds;

ii. fatty amines;

iii. fatty amides;

iv. fatty acids;

v. fatty alcohols; and

vi. mixtures thereof; and

(3) a suitable carrier for (1) and (2), wherein the weight ratio of microemulsified amine functional silicone to fabric softener is from about 17:1 to about 1:350.

5,173,202

LUBRICANT COATING MATERIAL: ITS CHARACTERISTICS AND METHOD OF MANUFACTURE

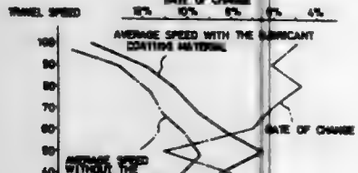
Kodo Kawabata; Tetunosuke Oharu, both of Tokyo, and Mikio Naisei, Aizu-Wakamatsu, all of Japan, assignors to Kabushiki Kaisha Kawabata Seisakusho, Tokyo, Japan

Continuation of Ser. No. 933,038, Nov. 20, 1986, abandoned. This application Dec. 24, 1990, Ser. No. 633,613

Claims priority, application Japan, Dec. 27, 1985, 60-266925

Int. Cl.[5] C10M *125/10, 125/00*

U.S. Cl. 252—12.2 6 Claims



1. A method of forming a friction-reducing lubricant coating layer between at least two metal surfaces which are in a frictional mating relationship with each other comprising the steps of

contacting said metal surface with a lubricant coating composition comprising a lubricating oil including from about 1.64 to 11.1 grams per liter of oil of substantially spheroidal ceramic particles which are characterized by a maximum particle diameter of 0.5 microns, a melting point of a least 1800° C. and Vickers hardness in the range from 300 Hv to 1500 Hv,

depositing on at least a portion of the mating surface of at least one of said metal surfaces a wear layer comprising said ceramic particles, said particles being substantially permanent to said mating surface.

5,173,203

MAGNESIUM OVERBASING PROCESS

Willis P. Nichols, Cleveland, and Jack L. Karn, Richmond Heights, both of Ohio, assignors to The Lubrizol Corporation, Wickliffe, Ohio

Continuation of Ser. No. 383,466, Jul. 20, 1989, Pat. No. 5,032,299, which is a continuation of Ser. No. 209,250, Jun. 20, 1988, abandoned, which is a continuation of Ser. No. 80,286, Jul. 30, 1987, Pat. No. 4,775,490. This application Apr. 30, 1991, Ser. No. 693,540

The portion of the term of this patent subsequent to Oct. 4, 2005, has been disclaimed.

Int. Cl.[5] C10M *159/20*

U.S. Cl. 252—18 24 Claims

1. A product by process obtained by overbasing a substrate comprising mixing the substrate, water, a phenol, a source of magnesium and a carbonating agent, wherein the water is retained throughout the overbasing reaction and provided further that the weight ratio of the water to the magnesium is in a 10:1 to 1:5 weight ratio, thereby obtaining a magnesium overbased substrate.

5,173,204

SOLID LUBRICANT WITH HIGH AND POSITIVE FRICTION CHARACTERISTIC

Kelvin S. Chiddick, North Vancouver, and Joseph Kalousek, Vancouver, both of Canada, assignors to Century Oils (Canada), Inc., Canada

Continuation of Ser. No. 492,815, Mar. 13, 1990, abandoned, which is a continuation-in-part of Ser. No. 364,453, Jun. 8, 1989, abandoned. This application Oct. 2, 1991, Ser. No. 769,578

Int. Cl.[5] C10M *111/04, 169/04*

U.S. Cl. 252—30 27 Claims

1. A solid lubricant composition comprising:

(a) at least 20 percent by weight of a polymer medium;

(b) at least 5 percent by weight of a solid lubricant; and

(c) at least 5 percent by weight of a friction modifier wherein the coefficient of friction between steel bodies in rolling-sliding contact lubricated using the composition is greater than 0.10 and increases with an increase in the relative speed of sliding movement between said bodies.

5,173,205

SOLID POLYMER ELECTROLYTE BASED ON CROSS-LINKED POLYVINYLETHER

Luca Marchese, Milan; Arnaldo Roggero, San Donato Milanese; Maria Andrei, Berceto, and Paola Prosperi, Rome, all of Italy, assignors to Enitricerche S.p.A., Milan, Italy

Filed Dec. 19, 1991, Ser. No. 810,288

Claims priority, application Italy, Dec. 21, 1990, 22482 A/90

Int. Cl.[5] H01G *4/18;* H01M *6/18*

U.S. Cl. 252—62.2 11 Claims

1. A solid polymer electrolyte in membrane form, consisting of a solid solution of an ionic compound dissolved in a polyether, characterised in that said electrolyte is obtained by:

a) copolymerizing a vinyl ether of formula:

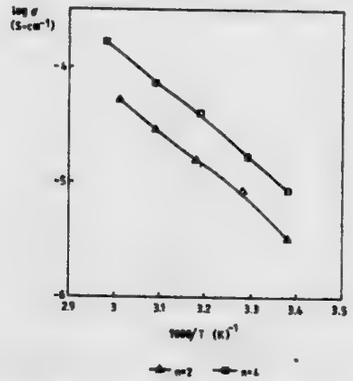
$$R-(O-CH_2-CH_2-)_n-O-CH=CH_2 \quad (I)$$

where

R is a methyl or ethyl radical
n is a whole number between 1 and 16,
with an allyl vinyl ether of formula:

$$CH_2{=}CH{-}CH_2{-}(O{-}CH_2{-}CH_2{-})_m{-}O{-}CH{=}CH_2 \quad (II)$$

where
m is a whole number between 1 and 10,
the molar ratio of (II) to (I) being between 1/100 and 10/100, to obtain a copolymer having allyl unsaturations;



b) hydrosilylating the allyl double bond of the copolymer obtained in stage a) by reaction with an alkoxysilane chosen from trimethoxy and triethoxy silane, to obtain a hydrosilylated copolymer;
c) cross-linking the hydrosilylated copolymer obtained in stage b) by means of a diprotic cross-linking agent, operating in solution in an organic solvent containing an ionic compound, and evaporating the solvent to obtain a membrane.

5,173,206

PASSIVATED RARE EARTH MAGNET OR MAGNETIC MATERIAL COMPOSITIONS

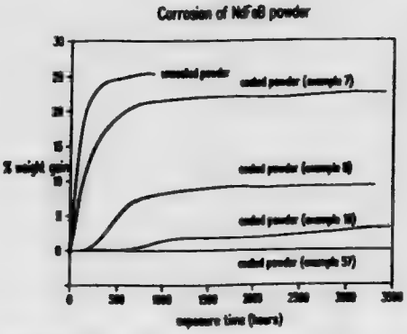
E. Douglas Dickens, Jr., Richfield, and Anthony M. Mazany, Akron, both of Ohio, assignors to The B. F. Goodrich Company, Brecksville, Ohio

Continuation-in-part of Ser. No. 409,538, Sep. 19, 1989, Pat. No. 4,988,755, which is a continuation-in-part of Ser. No. 132,890, Dec. 14, 1987, Pat. No. 4,876,305, which is a continuation-in-part of Ser. No. 313,662, Feb. 21, 1989, Pat. No. 4,869,964, which is a division of Ser. No. 132,890,. This application Jan. 24, 1991, Ser. No. 645,426

The portion of the term of this patent subsequent to Jan. 29, 2008, has been disclaimed.

Int. Cl.[5] C04B *35/04*; C08K *3/00*

U.S. Cl. 252—62.54 **78 Claims**



1. An essentially binder-free rare earth magnet, comprising: a fully dense sinter-free rare earth magnet, the surface of said rare earth magnet passivated by a coating of a passivating agent, said passivating agent being an (A) oxidation-resistant composition, or an (B) corrosion inhibitor, or mixtures of (A) and (B), or layers of (A) and (B) in any order.

5,173,207

POWERED AUTOMATIC DISHWASHING COMPOSITION CONTAINING ENZYMES

Julien Drapier, Seraing; Patrick Durbut, Verviers, both of Belgium, and Fahim U. Ahmed, Dayton, N.J., assignors to Colgate-Palmolive Company, New York, N.Y.

Filed May 31, 1991, Ser. No. 708,576

Int. Cl.[5] C11D *3/395, 3/386, 3/08, 3/37*

U.S. Cl. 252—99 **9 Claims**

1. A powdered automatic dishwashing composition which has a bulk density of less than about 0.8 kg./liter which by weight comprises:
(a) a builder system comprising:
(i) 2.0 to 40.0 percent of at least one alkali metal detergent builder salt; said detergent builder salt being selected from the group consisting essentially of alkali metal carbonates and alkali metal citrates and mixtures thereof:
(ii) 1.0 to 17.0 percent of a low molecular weight polyacrylate polymer;
(b) 1.0 to 12.0 percent of a liquid nonionic surfactant, said liquid nonionic surfactant being absorbed on said builder system;
(c) a blend of:
(i) 3.0 to 30.0 percent of an alkali metal silicate;
(ii) 0.1 to 1.5 percent of an antifoaming agent;
(iii) 0.5 to 15.0 percent of a protease enzyme derived from a high alkaline mutant proteolytic enzyme derived from bacillus alcalophylus;
(iv) 0.3 to 8.0 % of an amylase enzyme, said blend being mixed with said builder system, said composition having less than 8.0 weight percent of water and a 1.0 wt. percent aqueous solution of said composition having a pH of less than about 10.5.

5,173,208

LIQUID SUSPENSION OF POLYETHYLENE OXIDE FOR USE IN TREATING PAPER AND PULP WASTEWATER

Daniel K. Chung, Burlington, and Stephen B. Warrick, Ancaster, both of Canada, assignors to Nalco Canada Inc., Burlington, Canada

Filed Jun. 17, 1991, Ser. No. 716,075

Int. Cl.[5] C09K *3/00*; C07F *5/10*; B01D *21/01*

U.S. Cl. 252—180 **6 Claims**

1. A flocculating agent which comprises:
a particulate polyethylene oxide having a molecular weight in the range between about 100,000 to about 20,000,000, said polyethylene oxide being present in an amount of between about 20 to about 35% by weight;
an inert liquid vehicle comprising a mixture of a glycol which is present in an amount between 25 to about 30% by weight, and glycerine which is present in an amount between about 45 to about 50% by weight, wherein the specific gravity of said polyethylene oxide is approximately the same as the specific gravity of said inert liquid vehicle; and
a suspension agent comprising a mixture of a polymeric fatty acid ester and a second dispersing agent selected from the group consisting of stearic monoethyanolamide, N,N'-ethylene bis stearamide, polyacrylic acid, polyacrylate and aluminum stearate, said suspension agent being present in an amount between about 0.4 to about 0.6% by weight, wherein said flocculating agent has a viscosity in the range between about 1800 to about 5900 cps.

5,173,209

STABLE LITHIUM CYCLOALKYLIMIDES

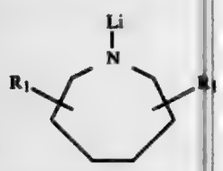
W. Novis Smith, Jr., and Christopher Loner, both of Philadelphia, Pa., assignors to Cyprus Foote Mineral Company, Malvern, Pa.

Continuation-in-part of Ser. No. 374,740, Jun. 30, 1990, and a continuation-in-part of Ser. No. 521,743, May 10, 1990, Pat. No. 5,068,368. This application Sep. 13, 1990, Ser. No. 581,900

Int. Cl.[5] C09K *3/00*

U.S. Cl. 252—182.14 4 Claims

1. An ether-free reagent composition which comprises a lithium cycloalkylimide of the formula:



wherein R and R_1 are each selected from the group consisting hydrogen and alkyl of 1 to 4 carbon atoms, and

a hydrocarbon solvent, said reagent composition having a concentration greater than about 1.6 M.

5,173,210

COMPOSITION AND USE

Leonard F. Lindoy, Cranbrook; Darren S. Baldwin, Gulliver, both of Australia, and Peter A. Tasker, Oldham, England, assignors to Imperial Chemical Industries PLC, Millbank, England

Filed Jul. 11, 1989, Ser. No. 377,995

Claims priority, application United Kingdom, Aug. 15, 1988, 8819375

Int. Cl.[5] C01B *31/16*

U.S. Cl. 252—184 5 Claims

1. A composition which comprises:

(a) a chelating compound which is a macrocyclic compound having at least 12 and not more than 30 ring atoms and containing two or three nitrogen moieties and two or three further coordinating centers which are oxygen and-/or sulphur moieties: and

(b) a carboxylic acid which contains at least one alkyl or alkenyl group having 8 or more carbon atom

wherein said composition contains at least one mole of component (b) for each mole of component (a).

5,173,211

FERROELECTRIC CHIRAL SMECTIC LIQUID CRYSTAL COMPOSITION AND LIQUID CRYSTAL DEVICE USING SAME

Masataka Yamashita, Hiratsuka; Takeshi Togano, Yokohama; Masahiro Terada, Atsugi; Akio Yoshida, Chigasaki; Yoshiko Kimura, Hiratsuka; Kenji Shinjo, Atsugi; Hiroyuki Kitayama, Sagamihara, and Shinichi Nakamura, Atsugi, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 12, 1989, Ser. No. 378,824

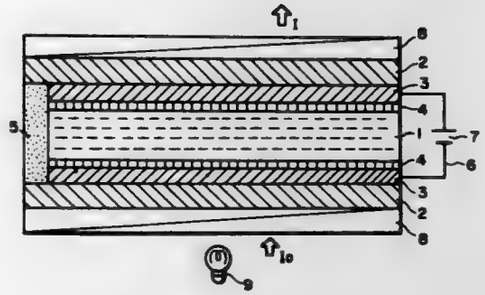
Claims priority, application Japan, Jul. 13, 1988, 63-175787; Aug. 13, 1988, 63-202445; Feb. 3, 1989, 64-25047

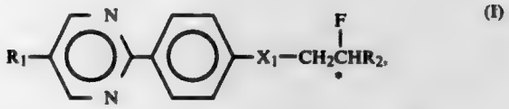
Int. Cl.[5] C09K *19/34, 19/30*

U.S. Cl. 252—299.61 7 Claims

1. A ferroelectric chiral smectic liquid crystal composition, comprising:

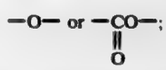
at least one optically active compound represented by the following formula (I):



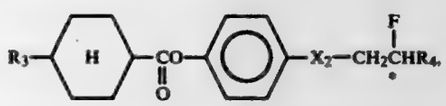


(I)

wherein R_1 denotes a linear or branched alkyl group having 1-18 cabon atoms which is optionally substituted with alkoxy group; R_2 denotes a linear or branched alkyl group having 1-14 carbon atoms; and X_1 denotes a single bond, —O— or



and at least one optically active compound represented by the following formula (II):



(II)

wherein R_3 denotes a linear alkyl group having 1-14 carbon atoms; R_4 denotes a linear or branched alkyl group having 1-14 carbon atoms; and X_2 denotes a single bond,

ALUMINOPHOSPHATE GLASS CONTAINING COPPER(II) OXIDE

Burkhard Speit, Mainz; Ansgar Karnehm, Saulheim, and Magdalena Winkler-Trudewig, Mainz, all of Fed. Rep. of Germany, assignors to Schott Glaswerke, Mainz, Fed. Rep. of Germany

Filed Oct. 4, 1991, Ser. No. 773,010

Claims priority, application Fed. Rep. of Germany, Oct. 5, 1990, 4031469

Int. Cl.[5] C09K *11/08;* G02B *5/22;* C03C *3/16, 3/17*

U.S. Cl. 252—301.4 P 20 Claims

1. A substantially color-neutral, CuO-containing aluminophosphate glass having a low transmission in the infrared range and a substantially higher transmission in the near UV and visible ranges, consisting essentially of in % by weight of an oxide basis:

P_2O_5	67–77	MgO	2.5–4.9
Al_2O_3	8–13	CaO	0–2.5
B_2O_3	0–5.5	SrO	0–2.5

-continued

SiO_2	0–2.1	BaO	0–2.5
Li_2O	0–2.5	ZnO	0–2.5
Na_2O	0–6	ΣRO	<5
K_2O	0–14	CuO	2–7.5
Rb_2O	0–2.5	V_2O_5	0.001–0.5
Cs_2O	0–2.5	ΣCuO + V_2O_5	2–7.5
ΣR_2O	0–14		

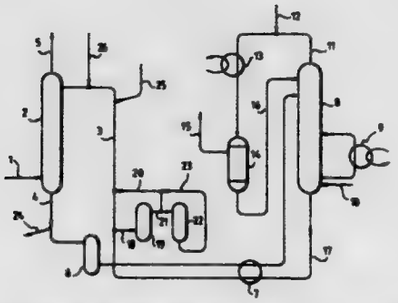
wherein ΣR_2O is the sum of all alkali metal oxides and ΣRO is the sum of ZnO and all alkaline earth metal oxides.

5,173,213

CORROSION AND ANTI-FOULANT COMPOSITION AND METHOD OF USE

Richard F. Miller, Humble, and John Petersen, Robstown, both of Tex., assignors to Baker Hughes Incorporated, Houston, Tex.

Filed Nov. 8, 1991, Ser. No. 790,196
Int. Cl.[5] C23F *11/14*
U.S. Cl. 252—394 5 Claims



1. A composition for the reduction of corrosion and fouling of metal surfaces in contact with corrosive acid fluids or salts in the presence of an aqueous medium, which comprises

(a) an antifouling amount of a hydroxyl amine compound, and

(b) a corrosion inhibiting amount of a reaction product of a polyalkylene polyamine and an alkynediol or a mixture including a polyalkylene polyamine and an alkynediol for the purpose of a reaction product of a polyalkylene polyamine and an alkynediol only, wherein said reaction product results from reacting the polyalkylene polyamine with the alkynediol at a weight ratio of from about 1–4 parts by weight of the polyalkylene polyamine to 1 part by weight of the alkynediol under conditions effective to react substantially all the alkynediol.

5,173,214

PRECURSOR COMPOSITION FOR SOLS AND GELS

Charles L. Kissel, Anaheim, Calif., assignor to Union Oil Company of California, Los Angeles, Calif.

Division of Ser. No. 305,451, Feb. 1, 1989, Pat. No. 5,004,562.
This application Nov. 29, 1990, Ser. No. 619,939
Int. Cl.[5] B01J *13/00*
U.S. Cl. 252—518 40 Claims

1. An intermediate non-aqueous composition useful in the preparation of a sol or gel, said composition consisting essentially of:

(1) at least one nonaqueous solvent,

(2) at least one salt, and

(3) at least one stabilizer comprising a nonionic surfactant, and wherein said composition has a pH of less than 7.0.

5,173,215

CONDUCTIVE TITANIUM SUBOXIDE PARTICULATES

Robert L. Clarke, Orinda, Calif., assignor to Atraverda Limited, United Kingdom

Filed Feb. 21, 1991, Ser. No. 659,082
Int. Cl.[5] H01B *1/06;* C04B *35/46;* C01G *23/04*
U.S. Cl. 252—520 4 Claims

1. A composition of matter consisting essentially of titanium suboxide of the formula Ti_nO_{2n-1}, where n is 4 or greater, in the form of particles as a Magneli phase, and said particles have a diameter of about one micron or more and a surface area less than 0.2 m^2/g.

5,173,216

COMPOSITION FOR DECONTAMINATING AND/OR DISINFECTING THE HANDS, DISPENSABLE BY SOAP DESPENSERS

Bernd G. Uhlig, Frankfurt am Main, Fed. Rep. of Germany, assignor to CWF-Chemie Frankfurt GmbH, Mainstal-Dornigheim, Fed. Rep. of Germany

PCT No. PCT/EP90/00463, § 371 Date Sep. 18, 1991, § 102(e) Date Sep. 18, 1991, PCT Pub. No. WO90/11342, PCT Pub. Date Oct. 4, 1990
PCT Filed Mar. 21, 1990, Ser. No. 768,392
Claims priority, application Fed. Rep. of Germany, Mar. 25, 1989, P3910534S
Int. Cl.[5] C11D *1/62, 1/65*
U.S. Cl. 252—547 5 Claims

1. Composition for decontaminating and/or disinfecting the hands, and being dispensable from soap dispensers, characterized in that it contains a combination of

a) 1 to 8 parts by weight of an amphoteric-cationic surfactant with the structure:

N[N'(N''-alkyl-N''-carboxyalkyl aminoethylcarbamoylmethyl]-N,N-dimethyl-N-alkylammonium chloride

where

$R = C_{12}$–C_{18} alkyl

$R' = C_1$–C_4 alkyl of C_1 to C_4 hydroxyalkyl and n = 1–4,

b) 2 to 10 parts by weight of a cationic surfactant selected from the group consisting of benzalkonium chloride and lauryl dimethylammonium methosulfate,

c) 0.5 to 3 parts by weight of a wetting agent compatible with cationic surfactants, selected from the group consisting of sulfosuccinates naphthalene sulfonate and amine oxides, and

d) 1 to 4 parts by weight of a nonionogenic regreasing agent.

5,173,217

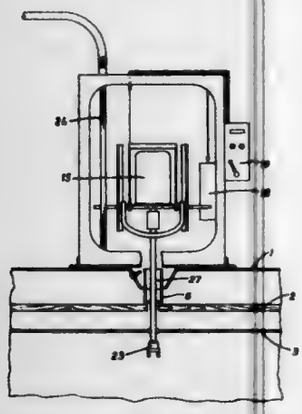
METHOD AND APPARATUS FOR CONTAINING WASTES

John Buckle, Highlands Ranch, Colo., assignor to British Nuclear Fuels plc, Warrington, United Kingdom

Filed Dec. 9, 1991, Ser. No. 804,035
Claims priority, application United Kingdom, Dec. 15, 1990, 9027236
Int. Cl.[5] G21F *9/16*
U.S. Cl. 252—628 19 Claims

1. A method of containing wastes and comprising, placing the wastes in a container and introducing a grout slurry into the container to fill voids in the container, thereby to embed the wastes into a solidified mass upon setting of the grout slurry, wherein the improvement comprises, closing the con-

tainer with the wastes therein, piercing the container with hollow cutting means, introducing the grout slurry into the



container through the cutting means, and retaining the cutting means in the container.

UNIFORM SPHERICAL MULTILAMELLAR LIPOSOMES OF DEFINED AND ADJUSTABLE SIZE DISTRIBUTION

Sinil Kim, Solana Beach, Calif., assignor to Research Development Foundation, Carson City, Nev.

Continuation-in-part of Ser. No. 111,695, Oct. 21, 1987, abandoned, which is a continuation-in-part of Ser. No. 828,667, Feb. 12, 1986, abandoned. This application Apr. 25, 1990, Ser. No. 514,665

Int. Cl.[5] A61K *9/127;* **B01J** *13/04*

U.S. Cl. 264—4.6 **10 Claims**

1. An improved method for producing spherical multilamellar liposomes of adjustable average size, substantially uncontaminated with unilamellar vesicles, comprising the steps of:

(a) completely dissolving an amount of membrane-forming materials containing one or more amphiphatic lipid components, at least one of said components being capable of imparting a net negative charge, in one or more hydrophobic organic solvents, each of which is capable of totally dissolving said lipid components;

(b) placing said hydrophobic solution containing said lipid components resulting from step (a) within a low ionic strength aqueous solution;

(c) forming an oil-in-water emulsion from the hydrophobic solution and the aqueous solution and;

(d) slowly adding said emulsion into an aqueous solution of ionic strength greater than 0.005 units, while simultaneously evaporatively removing said one or more hydrophobic organic solvents.

5,173,220

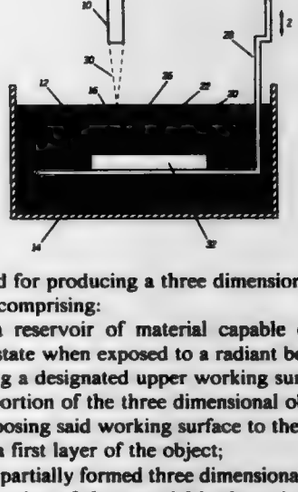
METHOD OF MANUFACTURING A THREE-DIMENSIONAL PLASTIC ARTICLE

David E. Reiff, Fort Lauderdale; Dale W. Dorinski, Coral Springs, and Stephen D. Hunt, Davie, all of Fla., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Apr. 26, 1991, Ser. No. 691,769

Int. Cl.[5] B29C *35/08, 41/20*

U.S. Cl. 264—22 **15 Claims**



1. A method for producing a three dimensional object having an insert, comprising:

providing a reservoir of material capable of altering its physical state when exposed to a radiant beam, the material having a designated upper working surface;

forming a portion of the three dimensional object by selectively exposing said working surface to the radiant beam, creating a first layer of the object;

coating the partially formed three dimensional object with a further portion of the material by lowering the partially formed object into the material;

fixturing the insert by placing the insert onto the partially formed three-dimensional object;

continuing to form the three dimensional object by selectively exposing said working surface to the radiant beam; and

repeating the coating and exposing steps, to form a plurality of successive layers comprising a three-dimensional object having the insert at least partially contained within the object.

5,173,221

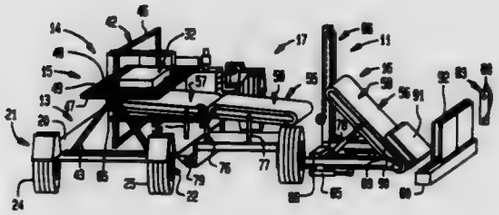
METHOD OF MOLDING AND ASSEMBLING STRUCTURAL

LeRoy Payne, 3300 Nicholas La., Molt, Mont. 59057

Continuation-in-part of Ser. No. 495,621, Mar. 19, 1990, Pat. No. 5,011,636, which is a continuation-in-part of Ser. No. 271,717, Nov. 16, 1988, Pat. No. 4,909,718, said Ser. No. 692,917, Continuation of Ser. No. 417,502, is a continuation-in-part of Ser. No. 271,686, Nov. 16, 1988, Pat. No. 4,956,133, which is a continuation-in-part of Ser. No. 202,267, Jun. 6, 1988, Pat. No. 4,956,135, which is a continuation-in-part of Ser. No. 890,742, Jul. 30, 1986, Pat. No. 4,749,533, which is a division of Ser. No. 766,498, Aug. 19, 1985, Pat. No. 4,671,753. This application Apr. 29, 1991, Ser. No. 692,917

Int. Cl.[5] B29C *41/06*; E04B *1/16*

U.S. Cl. 264—34 12 Claims



1. A method of continuously molding and assembling structural units including the steps of providing a plurality of raw material reservoirs, continuously moving raw materials from said reservoirs independently to a mixing chamber located adjacent to a rotatable mold assembly including separable mold sections, introducing said raw materials into said mixing chamber, passing a freshly formed mixture flowing from said mixing chamber directly into a cavity of said mold assembly, rotating said mold assembly about more than one axis, flowing said mixture over all surfaces of said mold cavity by said rotation, continuing said rotation of said mold assembly while said mixture forms a structural unit within said cavity thereof, monitoring the delivery of raw materials to said mixing chamber, the resulting mixture flowing therefrom and the multiple axis rotation of said mold assembly, separating said mold sections of said mold assembly, removing a molded structural unit from said separated mold sections, transferring said unit along a substantially continuous conveying surface to a preselected position remote from said mold assembly while said unit possesses structural integrity and is not fully cured and while edges thereof are adhesive, orienting said unit in an inclined orientation, sensing when a leading edge of said unit is properly located for assembly and moving said unit into a preselected final orientation assembled with previously positioned units and repeating the above steps on a continuing basis to form a structure.

REPAIRING RAIL TIES

Hartley F. Young, Maidstone, and William D. Hossack, Gawler East, both of Australia, assignors to McKay Australia Limited, Maidstone, Australia

Filed Jun. 5, 1991, Ser. No. 710,562

Claims priority, application Australia, Jun. 7, 1990, PK0532

Int. Cl.[5] B32B *35/00*; E02D *37/00*; E04G *23/02*

U.S. Cl. 264—35 2 Claims

1. A method of repairing an eroded rail seat of a concrete rail tie, said rail seat comprising two support shoulders embedded in said rail tie which support shoulders are adapted to receive rail clamps, and a rail tie being adapted to lie between said shoulders, said method comprising applying to an eroded area of said rail seat an abrasion resistant repair composition which includes a curable binder, pressing said composition into said eroded area with a pressure plate which is associated with a registration means which registers on undamaged parts of said rail tie so that said repair composition is evenly distributed into said eroded area and so that said rail seat is restored to its original alignment during said pressing, biasing said pressure plate against said rail tie, and applying heat to said pressure

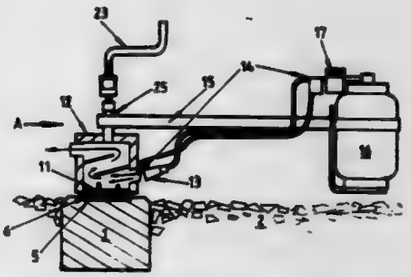

plate to cure said repair composition, said heat and pressure applied to said repair composition by said heated pressure plate being sufficient to accelerate curing of said composition for rapid repair of said eroded area of said rail seat.

5,173,223

PRODUCT ACCEPTANCE/REJECTION JUDGMENT METHOD IN AN INJECTION MOLDING MACHINE

Masao Kamiguchi; Noriaki Neko, both of Oshino, and Kazuo Kubota, Fujiyoshida, all of Japan, assignors to Fanuc Ltd., Minamitsuru, Japan

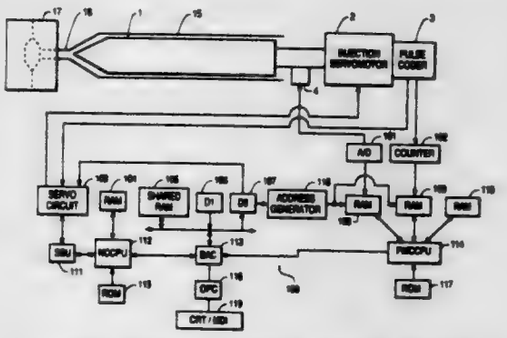
PCT No. PCT/JP90/01479, § 371 Date Jul. 12, 1991, § 102(e) Date Jul. 12, 1991, PCT Pub. No. WO91/07268, PCT Pub. Date May 30, 1991

PCT Filed Nov. 14, 1990, Ser. No. 730,850

Claims priority, application Japan, Nov. 14, 1989, 1-294035

Int. Cl.[5] B29C *45/76*

U.S. Cl. 264—40.1 16 Claims



1. A product acceptance/rejection judgment method in an injection molding machine, comprising the steps of:

(a) displaying a group of pressure curves, which respectively represents, as a function of a predetermined parameter, changes in pressure during a plurality of injection processes in nondefective product molding;

(b) selecting at least one value of the predetermined parameter;

(c) setting a permissible pressure range, corresponding to the selected parameter value, based on the group of pressure curves;

(d) effecting a judgment as to whether or not an actual pressure, generated when the predetermined parameter reaches the parameter value during one actual injection process, falls within the permissible pressure range; and

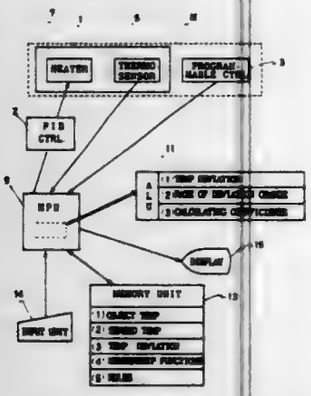
(e) effecting a determination as to whether a product is acceptable or not in dependence on results of the judgment effected in said step (d).

5,173,224

FUZZY INFERENCE THERMOCONTROL METHOD FOR AN INJECTION MOLDING MACHINE WITH A PID CONTROL

Nobuyuki Nakamura, and Masashi Sugazama, both of Sakaki, Japan, assignors to Nissei Jushi Kogyo Kabushiki Kaisha, Nagano, Japan

Filed Sep. 4, 1991, Ser. No. 754,765
Claims priority, application Japan, Sep. 10, 1990, 2-240429
Int. Cl.[5] B29C 45/78
U.S. Cl. 264—40.6 10 Claims



1. A thermocontrol method for an injection molding machine so as to control thermocontrolled components to maintain an object temperature corresponding to an operating status of the injection molding machine comprising the step of performing PID control for controlling means for heating or cooling the thermocontrolled components of the injection molding machine, the PID control including a proportional control in proportion to deviation between the object temperature of the thermocontrolled components and the present temperature thereof, an integrated control based on integrated value of the deviation, and a differential control based on the differential coefficient of the rate of deviation change with respect to time,

wherein the improvement comprises the steps of;

detecting the operating status of the injection molding machine and the temperature of the thermocontrolled components thereof;

calculating the deviation between the object temperature of the thermocontrolled components corresponding to the present status of the injection molding machine and the present temperature detected, and the rate of deviation change between the present deviation and the previous deviation;

performing fuzzy inference to define coefficients for defining actional sensitivities of the proportional control, the integrated control and the differential control as fuzzy variables by inferring the status of the injection molding machine, the deviation calculated and the rate of deviation change, wherein the status of the injection molding machine, the temperature deviation, the rate of deviation change and the control value of the means for heating or the means for cooling are defined as fuzzy variables, and wherein the inference is based on rules governing a mutual relationship among membership functions and groups into which the member grades assigned to previously and optionally divided areas which correspond to respective optional values of the fuzzy variables;

calculating actual actional sensitivities of the proportional control, the integrated control and the differential control on the basis of the fuzzy inference; and

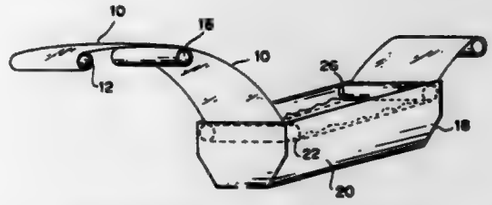
controlling the temperature of the means for heating or cooling with the PID control.

5,173,225

METHOD FOR MAKING ULTRA-THIN DENSE SKIN MEMBRANE

Franklin W. Range, and N. Lee Wolfe, both of Athens, Ga., assignors to Bowolfe, Inc., Watkinsville, Ga.

Filed May 7, 1990, Ser. No. 520,050
Int. Cl.[5] B29C 67/20
U.S. Cl. 264—45.5 8 Claims



1. A method for making an ultra-thin dense skin gas-controlling membrane comprising the steps of:

a) feeding porous substrate material to a polymer solution tray containing a solution of a hydrophobic polymer overlaid with a non-polymer solvent having a density less than the polymer solution, wherein the substrate is submerged in polymer solution, to produce a polymer solution-saturated substrate;

b) floating the polymer solution-saturated substrate on the surface of the non-polymer solvent until polymer is spread evenly throughout the interstices of the substrate material while concurrently evaporating the solvent from the polymer solution to form an ultra-thin dense base skin asymmetric membrane permeable to gases and impermeable to liquids and bacteria and viruses;

c) removing the ultra-thin dense skin membrane from the non-polymer solvent; and

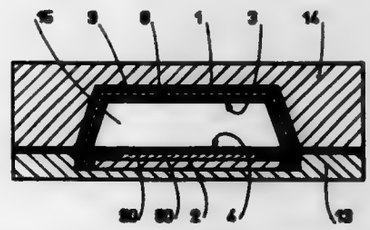
d) drying the membrane to remove the remaining solvent.

5,173,226

PROCESS OF MANUFACTURING AN INJECTED SKI

Jean-Mary Cazaillon, Cran Gevrier, and Bernard Chatellard, Veyrier du Lac, both of France, assignors to Salomon S.A., Annecy Cedex, France

Filed Oct. 31, 1990, Ser. No. 608,648
Claims priority, application France, Nov. 22, 1989, 89 15664
Int. Cl.[5] B29C 67/22
U.S. Cl. 264—46.6 17 Claims



1. A process of manufacturing an injected ski comprising the steps of injection of constituents of a hardenable foam, expanding and hardening the hardenable foam, between at least a first element and a second element, said process comprising a preliminary step during which said first element is formed by the following succeeding steps:

a) providing a solid polymer base film having good adhesion properties with the hardenable foam during the ultimate injection step;

b) providing said first element in the form of a substrate whose internal surfaces are formed by a reinforcement, said reinforcement comprising a member selected from the group consisting of: (1) a textile reinforcement sheet

pre-impregnated with a member selected from the group consisting of: thermosetting resin and thermoplastic resin, and (2) a metallic reinforcement;

c) positioning said solid film on said internal surface of said first element to cover said reinforcement;

d) hot forming under pressure said solid film and said first element, after said step of positioning said solid film on said internal surface of said first element, to make said film adhere to said first element; and

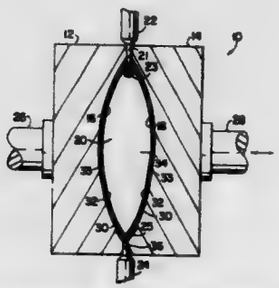
whereby during said injection step said solid film constitutes a screen between the hardenable foam and the reinforcement and, after injection and hardening said foam adheres perfectly to said film.

5,173,227

IN-SITU MOLDING OF FIBER REINFORCED COMPOSITES TO NET SHAPE

James H. Ewen, Orange; Nestor J. Diaz, Seymour; Robert L. Faiz, Sandy Hook, and David J. Parker, Newtown, all of Conn., assignors to United Technologies Corporation, Hartford, Conn.

Filed Dec. 6, 1990, Ser. No. 623,822
Int. Cl.[5] B29C *67/22*
U.S. Cl. 264—46.6 6 Claims



1. A method for fabricating an integrated foam core composite structure, using a molding apparatus that includes a set of dies having contoured molding surfaces defining a mold cavity having the shape of said integrated foam core composite structure to be fabricated, means for injecting foam, and means for injecting a resin binder, comprising:

laying up a plurality of unpreformed fiber reinforcement plies in the contoured molding surfaces of the set of dies;

closing the set of dies wherein exposed layers of said layed-up plurality of unpreformed fiber reinforcement plies define a core cavity; injecting a foam material into said core cavity, said injected foam material penetrating said exposed layers of said layed-up plurality of unpreformed fiber reinforcement plies;

allowing said injected foam material to cure to form a foam core mechanically interlocked to said layed-up plurality of unpreformed fiber reinforcement plies, curing of said injected foam generating heat and pressure that simultaneously compresses said layed-up plurality of unpreformed fiber reinforcement plies into conformance with the contoured molding surfaces such that said layed-up plurality of unpreformed fiber reinforcement plies are debulked;

injecting the resin binder into a plenum of the mold cavity to impregnate said layed-up plurality of debulked fiber reinforcement plies; and

curing said resin binder-impregnated layed-up plurality of debulked fiber reinforcement plies to form composite skins, and wherein said formed foam core is simultaneously post cured;

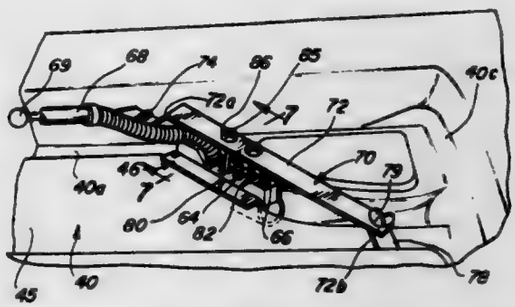
said formed foam core and said composite skins in combination defining said integrated foam core composite structure having said formed foam core mechanically interlocked with said composite skins.

5,173,228

METHOD FOR FORMING A 360 DEGREE SKIN HANDLE

Reza Kargarzadeh, Riceville, Tenn.; Ken E. Tuttle, S.Berwick, Me., and John A. Grimes, Dover, N.H., assignors to Davidson Textron Inc., Dover, N.H.

Division of Ser. No. 377,254, Jul. 10, 1989, Pat. No. 5,037,687.
This application May 20, 1991, Ser. No. 702,312
Int. Cl.[5] B29C *67/22, 41/00*
U.S. Cl. 264—46.7 3 Claims



1. In a method of forming an integral handle in a composite plastic structure in which a reinforcing member is located in a forming mold in spaced relationship to a skin of fused and cured thermoplastic material and wherein foam precursors are directed into a space formed between the skin and the reinforcing member and reacted to form a soft foam backing behind the skin the improvement comprising:

providing a skin having a generally flat extended area cover portion and a tube portion integrally connected with the flat extended area cover portion and having opposite open ends in the tube portion;

providing an elongated reinforcing strip having a center portion and opposite ends bent outwardly of the center portion thereon;

snaking the elongated reinforcing strip through said tube portion and locating the center portion centrally of the tube portion and the opposite ends thereof on the outside of the opposite open ends of the tube portion;

providing an cavity mold;

placing the skin and reinforcing strip in the cavity mold following snaking of the reinforcing strip into the tube portion;

providing an insert member having a first generally flat portion with an opening therein and a second portion having connector segments on either side of the opening;

locating the insert member within the cavity mold so as to place the first generally flat portion thereon in spaced relationship to the generally flat extended area cover portion of the skin and so as to place the opening therein in overlying relationship to the integrally formed tube portion at a point wherein the connector segments are connectible to the opposite ends of the reinforcing strip;

connecting the connector segments to the opposite ends of the reinforcing strip;

directing foam precursors between the insert member and the skin and filling the annular space between the reinforcing strip and the integrally formed tube portion with the foam precursors;

closing a mold lid and reacting the foam precursors to form a soft foam backing between the skin and the insert member and to form a full 360 degree soft foam backing between the reinforcing strip and the integrally formed tube portion; and

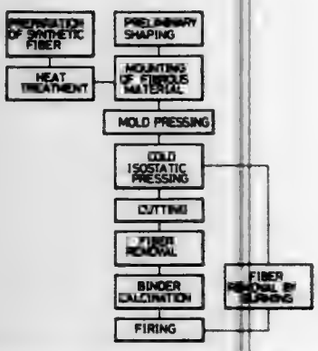
thereafter opening the mold and removing the skin, backing foam, insert and reinforcing strip from the mold cavity.

5,173,229

PROCESS FOR PRODUCING PERFORATED CERAMIC

Mitsuru Miyamoto, Kariya, Japan, assignor to NGK Insulators, Ltd., Japan

Filed Mar. 29, 1991, Ser. No. 676,699
Claims priority, application Japan, Mar. 31, 1990, 2-86000
Int. Cl.[5] C04B 41/91
U.S. Cl. 264—59 6 Claims



1. A process for producing a perforated ceramic body, comprising the steps of:

placing ceramic powder in a mold;

shaping said ceramic powder to form a preliminarily shaped body;

placing a fibrous material on said preliminary shaped body;

adding ceramic powder to said preliminary shaped body and said fibrous material;

mold pressing and cold isostatic pressing said preliminary shaped body, said fibrous material and said ceramic powder into a shaped body;

removing said fibrous material by cutting said shaped body to expose a portion of said fibrous material thereby enabling removal of said fibrous material from said shaped body;

firing said shaped body.

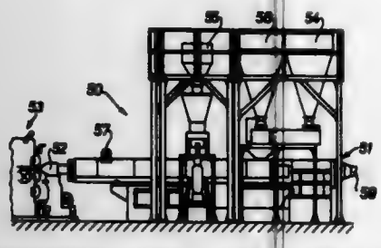
METHOD AND APPARATUS FOR PRODUCING PANELS

Gian C. Colombo, San Giorgio su Legnano, Italy, assignor to ICMA San Giorgio S.p.A., Italy

Filed Oct. 29, 1990, Ser. No. 604,232
Claims priority, application Italy, Oct. 31, 1989, 22235 A/89
Int. Cl.[5] B29C 47/76
U.S. Cl. 264—102 13 Claims



1. The method of producing remoldable self-supporting thin panels consisting essentially of a polymer/filler composition in which said polymer consists, at least in part, of a thermo-plastic polymer having a softening temperature of above 150° C. and wherein said filler consists, at least in part, of a thermosensitive particulate organic material; said method comprising the steps of:

(a) forming a mixture of said polymer and said filler wherein said polymer is polypropylene and said thermosensitive filler is wood, and wherein substantially all of said thermosensitive filler is added downstream of the first extrusion zone and of the first kneading zone;

(b) extruding said mixture to form a web; and

(c) calendaring said web prior to its solidification;

wherein said mixture is formed nd extruded in a single step by feeding said thermoplastic polymer and said thermosensitive filler into an integral mixing and extruding space having a feeding end and an extrusion end and comprising a pair of co-rotating and mutually co-acting elongated elements arranged essentially in parallel and each having:

a length extending essentially between said feeding end and said extrusion end of said space;

at least three feedingly effective helical extrusion sections mutually distanced along said length;

at least two essentially non-feeding kneading sections each of which is positioned between adjacent extrusion sections;

wherein said kneading sections and said extrusion sections of each of said elongated elements are provided substantially at radially adjacent positions along said length to form in said space at least two kneading zones and at least three extrusion zones so as to provide one kneading zone between adjacent extrusion zones; and wherein a part, at least, of said polymer is introduced into said space at a portion thereof in the area of a first extrusion zone located near said feeding end while a portion, at least, of said thermosensitive filler is introduced into said space at a portion thereof in the area of a second extrusion zone situated closer to said extrusion end than said first extrusion zone.

6. Apparatus adapted for producing remoldable self-supporting thin panels from a high tenactity polymer having a softening temperature above 150° C. and from at least one thermosensitive organic filler by forming a mixture of said polymer and said filler, extruding said mixture to form a web and calendaring said web prior to its solidification; said apparatus comprising:

an integral mixing and extrusion chamber having a feeding end and an extrusion end and including a pair of elongated rotatable elements arranged essentially in parallel and each having:

a length extending essentially between said feeding end and said extrusion end of said chamber;

at least three feedingly effective helical extrusion sections mutually distanced along said length;

at least two essentially non-feeding kneading sections each of which is positioned between adjacent extrusion sections;

each of said elongated elements defining, upon rotation, an essentially cylindrical space and both elongated elements defining, upon rotation, two parallel and mutually overlapping cylindrical spaces;

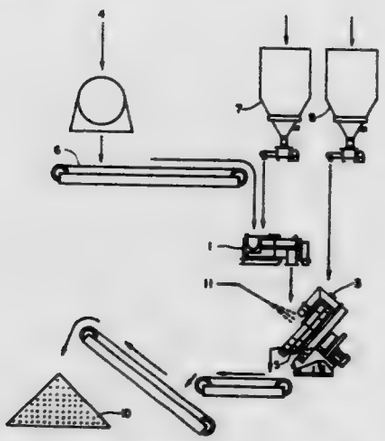
said kneading sections and said extrusion sections of each of said elongated elements being provided at radially adjacent positions along said length to form at least two kneading zones and at least three extrusion zones so as to provide one kneading zone between adjacent extrusion zones;

said chamber having a first opening in a first extrusion zone located near said feeding end adapted for introducing said polymer into said chamber; a second opening in the area of a second extrusion zone situated closer to said extrusion end than said first extrusion zone adapted for introducing all of said thermosensitive filler downstream of said polymer feed; and a third opening in the extrusion zone nearest said extrusion end of said integral chamber adapted for venting the same, wherein said polymer is polypropylene and said filler is wood.

5,173,231
PROCESS FOR HIGH STRENGTH POLYESTER INDUSTRIAL YARNS
Lyman L. Holland, Kinston, N.C., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.
Filed Dec. 29, 1989, Ser. No. 459,367
Int. Cl.[5] D01D *5/088, 5/098, 5/12*
U.S. Cl. 264—210.7 6 Claims

1. A process for preparing high strength poly(ethylene terephthalate) industrial yarn of fine denier per filament about 2.5 or less, and of tenacity at break at least about 8 g/d, characterized by first melt-spinning poly(ethylene terephthalate) polymer of intrinsic viscosity at least about 0.9 at a withdrawal speed of at least about 2 km/min to provide an intermediate partially-oriented yarn, and then warp-drawing the said intermediate partially-oriented yarn at an appropriate draw ratio within the approximate range of ratios 1.5× to 3.5× according to the elongations of the intermediate yarn and of the desired high strength yarn, wherein the spinning throughput and the draw ratio are such as to provide drawn filaments of denier about 2.5 or less.

5,173,232
PROCESS FOR AGGLOMERATING STACK GAS DESULFURIZATION RESIDUE
Carl A. Holley, 14315 Tall Oaks, Riverview, Mich. 48192
Filed Apr. 25, 1991, Ser. No. 691,481
Int. Cl.[5] B29C *67/02*
U.S. Cl. 264—113 1 Claim

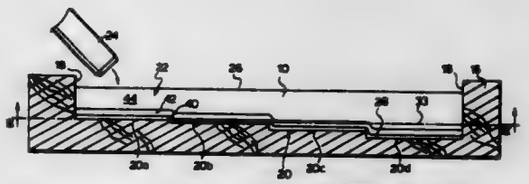


1. A process for producing spherical pellets from stack gas desulfurization residue filter cake of 10% to 20% moisture, before the stack gas has been treated to remove sulphur dioxide, comprising mixing dry fly ash with the filter cake in a high intensity mixer and discharging the blend onto a shallow pan disc pelletizer, where pellets are produced and then coating the pellets in a reroll ring, surrounding the shallow pan disc pelletizer having about ¼ the depth of said disc pelletizer, with more fly ash, the proportions of said shallow pan disc pelletizer being:

$$d = D^{0.58}$$

Where d = pan depth in inches and D = pan diameter in inches.

5,173,233
PROCESS FOR FORMING DECORATIVE CONCRETE SLABS
Z. Grant Kafarowski, 523 Bower Road, Concord, Ontario, Canada L4K 1B2
Filed Oct. 16, 1991, Ser. No. 777,651
Claims priority, application Canada, Jul. 24, 1991, 2047787
Int. Cl.[5] B28B *1/08;* B29C *39/12;* B32B *31/00*
U.S. Cl. 264—113 15 Claims



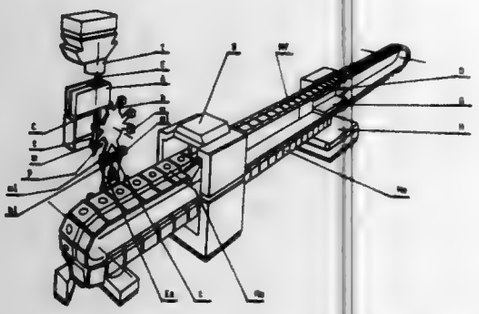
1. A process for forming a decorative slab comprising:
providing a substantially horizontal mould having a mould cavity with a bottom surface of varying vertical height,
providing a wet, flowable, curable mixture comprising particulate matter mixed in a binder, wherein the mixture includes first particles of first colours and second particles of second colours different from the first colours;
filling the cavity with the mixture;
settling the mixture in the cavity such that the first particles at least partially settle out from the second particles forming a transition layer proximate the bottom surface of the mould cavity in which a relative proportion of first particles to second particles progressively changes with changes in distance of the mixture from the bottom surface of the mould cavity;
curing the mixture in the cavity to form a cured slab which has an initial outer surface of varying vertical height conforming to the varying vertical height of the bottom surface of the mould cavity;
mechanically removing surface portions from the cured slab extending from the initial outer surface of the slab to a cut plane passing horizontally through the slab to expose the mixture along the cut plane at different distances from the initial outer surface of the slab over different portions of the slab due to the initial outer surface of the slab being of varying vertical height, the different portions including a first portion and a second portion, wherein over the first portion the cut plane passes through the mixture at a first distance from the initial outer surface where the mixture has a first relative proportion of first particles and second particles, and wherein over the second portion the cut plane passes through the mixture at a second distance from the initial outer surface where the mixture has a second relative proportion of first particles and second particles, the first relative proportion of the differently coloured particles differing from the second relative proportion of the differently coloured particles such that the mixture exposed over the first portion of the slab has an appearance different in colour from an appearance of the mixture exposed over the second portion of the slab to thus form the decorative slab.

5,173,234

PROCESS AND AUTOMATIC MACHINE FOR MANUFACTURE OF CALIBRATED RINGS FROM AN EXTRUDATE

Blaise F. Figuereo, Triel-Sur-Seine, France, assignor to Eropol Finance et Developpement, Vernouillet, France

Filed Aug. 1, 1991, Ser. No. 738,823
Claims priority, application France, Aug. 3, 1990, 90 09942
Int. Cl.[5] B29C *69/00*; B29L *31/26*
U.S. Cl. 264—148 10 Claims



1. A method of making annular devices comprising the steps of extruding continuously material of a cross section of the annular devices, vulcanizing superficially the extruded material, cutting the extruded material into lengths corresponding to the mean circumference of the devices in such manner that one end of each cut is of conical configuration and the other end thereof is of complementary funnel configuration, abutting the opposite ends of each cut length by inserting the conical end into the funnel-shaped end under heated conditions to form a ring-like structure, depositing such ring-like structure into a half cavity yieldably mounted in one part of an open mold, moving a complementary part of said open mold into a closed position so that a half cavity yieldably mounted in said complementary part of said open mold traps said ring like structure in said closed half cavities, said one and complementary mold parts defining one of a series of molds connected together to form an endless conveyor with forward and return paths, moving said molds intermittently on said paths, vulcanizing said ring like structure by heating said mold, imparting a force to a push device movably mounted in one of said parts of said mold and in engagement with at least one of said half cavities so as to produce a shearing action of the burrs of said ring-like structure which are gripped between the complementary edges of said half cavities, tilting the mold into an upside down position on said return path, and finally opening the two parts of said mold so as to extract said ring-like structure in clean and deburred condition.

4. An automatic machine for forming a deburred ring-like structure, said machine comprising an extrusion head for continuously forming a vertical extrusion of circular cross section, a furnace disposed below said extrusion head and through which said extrusion is passed for performing a superficial vulcanization, a cutting device disposed at the outlet of said furnace for cutting said extrusion into lengths by forming control tips and complementary funnel-shaped cavities on each length, a grasping device for engaging said cut lengths and for manipulating said cut lengths into horizontal positions, a forming device for manipulating said cut lengths into circular configurations and for securing the conical tip of each of said cut lengths into the associated funnel-shaped cavity under hot and controlled pressure conditions to form a ring-like structure a series of interconnected vulcanizing molds movable intermittently under said forming device and having forward and return paths, each of said molds being initially open and including half cavities yieldably mounted in each of said molds for receiving the ring-like structures, a gantry for closing said molds in sequence, a push device movable into each mold in sequence for engaging and moving said half cavities thereby to deburr the associated ring-like structure, and a device for opening the molds in sequence on said return path of molds, so as to accommodate removal of said ring-like structures from said molds.

5,173,235

METHOD OF PRODUCING MICROPOROUS FILM

Eiichi Kamei, Hirakata; Hidetomo Ashitaka, and Toru Takahashi, both of Ichihara, all of Japan, assignors to Ube Industries, Ltd., Ube, Japan

Division of Ser. No. 404,382, Sep. 8, 1989, Pat. No. 4,994,335. This application Dec. 3, 1990, Ser. No. 620,805
Claims priority, application Japan, Sep. 10, 1988, 63-226882; Sep. 26, 1988, 63-240441
Int. Cl.[5] B29C *55/02, 67/00*
U.S. Cl. 264—154 3 Claims

1. A method of producing a polyolefin microporous film having a multiplicity of fine through-pores by a stretching process, comprising the steps of:

preparing an unstretched polyolefin film whose crystallinity is 50–90%, whose diffraction images obtained by small angle X-ray scattering are two-point figures each having an approximately circular form, the magnitude of a diffraction angle being not greater than 15' at the degree of diffraction which is equivalent to ½ (half-value width) of the maximum degree of diffraction of each of said figures, the long period being not smaller than 120Å; and

stretching said unstretched film at a strain rate corresponding to a strain rate of less than 10%/min. in the lowest temperature within a temperature range which is 10°–60° C. lower than the melting point of a polyolefin employed, without any pre-stretching step at room temperature.

METHOD FOR SPINNING PARA-ARAMID FIBERS OF HIGH TENACITY AND HIGH ELONGATION AT BREAK

Hung H. Yang, Richmond, Va., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.

Filed Mar. 8, 1991, Ser. No. 673,552
Int. Cl.[5] D01F *6/60*
U.S. Cl. 264—184 6 Claims

1. In the process for making poly(p-phenylene terephthalamide) fibers comprising the steps of extruding an anisotropic spinning dope through the capillaries of a spinneret, passing the extruded dope through an air gap and into and through an aqueous coagulating bath to yield a coagulated fiber, and washing and drying the coagulated fiber:

the improvement comprising:

a) extruding the anisotropic spinning dope through a capillary having a diameter of less than 2.5 mils;

b) maintaining the coagulation bath at a temperature of less than 10 C.; and

c) washing and drying the coagulated fiber at a controlled, substantially constant, tension of 0.05 to 0.35 gpd to yield fibers exhibiting a yarn tenacity greater than 26 grams per denier and an elongation at break greater than 4%.

5,173,237

METHOD OF MAKING A METALLIC CORE ASSEMBLY

Thomas F. Kidd, Candiac, Canada, assignor to Electrovert Ltd., Ontario, Canada

Filed Jan. 24, 1990, Ser. No. 469,164
Int. Cl.[5] B29C *33/34, 33/52*
U.S. Cl. 264—221 3 Claims

1. A method of forming multiple metallic cores into a core assembly for use in production of a plastic injection-molded component, said method comprising the steps of:

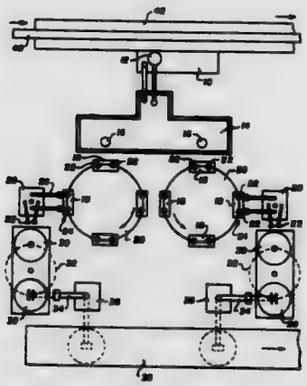
a) providing a tank containing molten metal alloy,

b) injecting molten metal alloy supplied from the molten metal tank into at least one core die located at a fill stage of an indexing means,

c) indexing the core die through a cooling stage to an unloading stage,

d) removing a core formed in the core die therefrom by robotic handling means and inserting the core into one of a plurality of locations in the core assembly,

e) continuing forming individual cores as set forth in steps b-d until all locations of the plurality of locations are filled, and the core assembly is complete,



f) removing the complete core assembly and transporting the core assembly to a plastic molding machine to produce the plastic component, and

g) melting the core assembly out from the produced plastic component in hot oil and returning the molten alloy produced thereby to the molten metal alloy-containing tank.

5,173,238

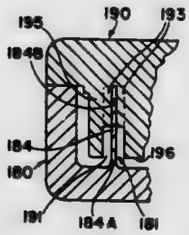
METHOD FOR INJECTION MOLDING A TRANSACTION TERMINAL CASE

Karl Chang, Honolulu; William R. Pape, III, Papaaloa; Victor J. Crosetti, Jr., Honolulu; Lance S. Nakamura, Pearl City; Daniel B. C. Leong, and Robert K. L. Loui, both of Honolulu, all of Hi., assignors to Verifone, Inc., Redwood City, Calif.

Division of Ser. No. 276,914, Nov. 28, 1988, Pat. No. 5,019,696, which is a division of Ser. No. 85,287, Aug. 10, 1987, Pat. No. 4,788,420, which is a continuation of Ser. No. 770,725, Aug. 28, 1985, abandoned. This application Apr. 10, 1991, Ser. No. 682,982

Int. Cl.[5] B29C *45/00, 71/00*

U.S. Cl. 264—232 **10 Claims**



1. A method for injection molding a card reader case with an integrally formed card slot comprising the steps of:

providing a female mold section having an interior cavity with walls which define the configuration of the front and side wall sections of said card reader case and including a knife blade element extending between opposing end walls of said interior cavity and partially through the depth of said interior cavity to define the configuration of bottom and side walls of said card slot, said knife blade element including a central section having a thin transverse dimension extending a substantial portion of the length of said knife blade element;

providing a male mold section having one portion with exterior walls defining in cooperative relation with said interior cavity of said female mold section said configuration of front and side wall sections of said card reader case and a second portion comprising an interior cavity with walls which cooperate with said knife blade element of said female mold section to define said side and bottom walls of said card slot, said interior cavity including a projecting side wall section adapted to contact a central region of said knife blade element to define the configuration of a read head window in a central region of one of said side walls of said card slot, said interior cavity further including a plurality of pairs of narrow buttress sections projecting from opposite side walls of said interior cavity at regularly spaced intervals from one end of said interior cavity to the other end and adapted to contact opposite side walls of said knife blade element when said male mold section is mated with said female mold section;

bringing said male and female mold sections together in mating relationship; and

injecting plastic material into void regions within said mated mold sections; said narrow buttress sections supporting said knife blade element during the injection molding process to prevent distortion thereof and thereby to produce a well formed straight card slot in said molded case with narrow fenestrations in side walls of said card slot defined by said narrow buttress sections.

5,173,239

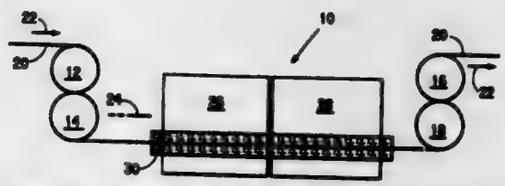
PROCESS FOR STRETCHING A WEB OF MATERIAL

Jack E. Gunter, Jr., Pisgah Forest, N.C.; Neil I. Steinberg, Greer, S.C., and John A. Stewart, III, Pickerington, Ohio, assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Aug. 29, 1991, Ser. No. 751,850

Int. Cl.[5] B29C *55/06*

U.S. Cl. 264—288.4 **10 Claims**



1. In a process for longitudinally stretching a sheet of film having thickened longitudinal edges while the film is being transported and stretched in the longitudinal direction and while constraining the film in the lateral dimension with a plurality of successive pairs of grippers disposed inside and adjacent to the thickened longitudinal edges of the film and above and below the film, wherein the improvement comprises:

(a) first guiding the film for a predetermined distance with a first group of said pairs of grippers having a predetermined clearance therebetween; and

(b) gripping the film with a second group of said pairs of grippers with a predetermined amount of force applied substantially perpendicular to the film.

5,173,240

TENSION-FREE HEAT-TREATMENT OF ARAMID FIBER AND FIBRIDS

Robert S. Irwin, Wilmington, Del., assignor to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Apr. 26, 1991, Ser. No. 692,162

Int. Cl.[5] D01F *6/60*

U.S. Cl. 264—345 **8 Claims**

1. A process for strengthening and heat stabilizing fibers of poly[4,4'-(2,2'-dicarboxy)biphenyleneterephthalamide], consisting essentially of heating the fibers, free from tension, at a

temperature in the range of from 210° C. to 365° C. for at least 2 minutes to increase the tenacity of the fibers by at least 25%.

5,173,241

METHOD AND APPARATUS FOR INJECTION MOLDING HOLLOW SHAPED ARTICLE

Takehiro Shibuya; Yasuyoshi Ishihara, both of Yokohama, and Susumu Imai, Zama, all of Japan, assignors to Asahi Kasei Kogyo Kabushiki Kaisha, Osaka, Japan

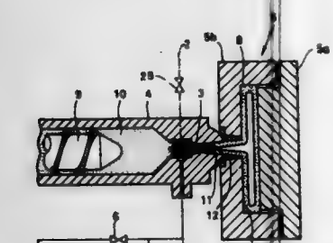
PCT No. PCT/JP89/01282, § 371 Date May 24, 1990, § 102(e) Date May 24, 1990, PCT Pub. No. WO90/07415, PCT Pub. Date Jul. 12, 1990

PCT Filed Dec. 21, 1989, Ser. No. 490,597

Claims priority, application Japan, Dec. 26, 1988, 63-325923; Feb. 20, 1989, 1-38245

Int. Cl.[5] B29C *45/00*; B29D *22/00*

U.S. Cl. 264—572 13 Claims



1. A method for injection molding of a hollow shaped article comprising the steps of:

injecting molten synthetic resin through an injection nozzle into a die;

injecting compressed gas by a multistage compressor through a gas nozzle into said die, the compressor increasing the pressure of the gas;

solidifying the synthetic resin by cooling said molten synthetic resin within said die;

discharging gas from the formed hollow shaped article in said die the step of gas discharging further comprising recovering the compressed gas from the hollow shaped article through a gas inlet into a recovery container connected to a suction side of said multistage compressor wherein gas flows from the recovery container to the multistage compressor while keeping forced contact between a resin inlet of said injection nozzle and said die and between the gas inlet of said gas nozzle and said die in the respective positions assumed during the forced introduction of said compressed gas; and

removing the hollow shaped article from the die.

5,173,242

MEANS AND METHOD FOR FORMING A SEALED CONNECTION

Ernst Lährsen, Bad Schwalbach, and Ulrich Schneider, Lauf, both of Fed. Rep. of Germany, assignors to Didier-Werke AG, Wiesbaden, Fed. Rep. of Germany

Filed Jul. 30, 1991, Ser. No. 738,141

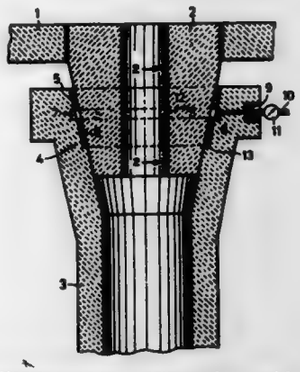
Claims priority, application Fed. Rep. of Germany, Aug. 2, 1990, 4024520

Int. Cl.[5] B22D *41/58*

U.S. Cl. 266—44 32 Claims

1. In an assembly including a discharge member of a metallurgical vessel and a pipe member connected to said discharge member at mutual surfaces thereof defining a seat therebetween, an annular recess formed in the region of said seat, a seal sealing said seat, and means for supplying gas to said annular recess, the improvement comprising:

said seal comprising a pair of compressible sealing rings positioned between said mutual surfaces at locations spaced on opposite sides of said annular recess; and



pressure indicator means connected to said gas supplying means for providing an indication of the pressure of gas in said annular recess.

5,173,243

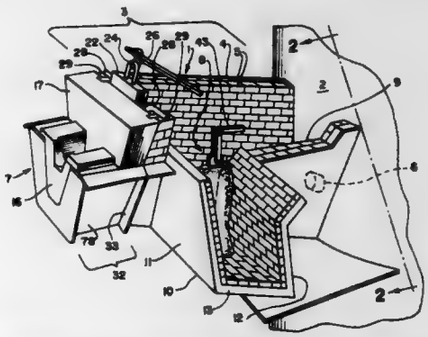
SLAG CONTROL METHOD AND APPARATUS

William S. Laszlo, Lockport, Ill., assignor to Industrial Maintenance and Contract Services Limited Partnership, Munster, Ind.

Filed Jul. 31, 1990, Ser. No. 560,598

Int. Cl.[5] B22D *41/04*

U.S. Cl. 266—45 19 Claims



1. A method for controlling the amount of slag in a tap disclosure of molten metal and floating slag from a tap hole of a tilting furnace, said furnace having a discharge trough means mounted to, and extending outwardly from, said furnace below said tap hole for tilting with said furnace, said trough means defining an open discharge end and a lateral opening inwardly of said open discharge end, said method comprising the steps of:

(a) sufficiently tilting said furnace end and trough means to discharge said molten metal and slag from said tap hole and into said trough means whereby said molten metal can flow under the influence of gravity out of said trough means at said discharge end;

(b) damming said molten metal and slag and retaining said slag in said tilted trough means while permitting said molten metal to flow out of said trough means; and

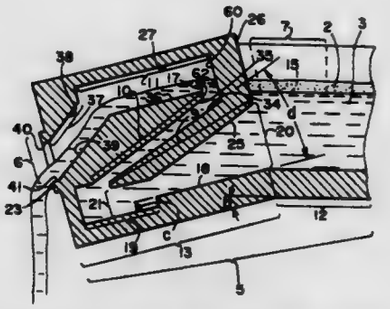
(c) discharging said retained slag through said lateral opening in said tilted trough to a location remote from said discharge end.

5,173,244

SLAG CONTROL APPARATUS AND METHOD

William S. Laszlo, Lockport, Ill., assignor to Industrial Maintenance And Contract Services Limited Partnership, Munster, Ind.

Continuation-in-part of Ser. No. 560,598, Jul. 31, 1990. This application Jun. 27, 1991, Ser. No. 722,524
Int. Cl.[5] B22D *41/04*
U.S. Cl. 266—45 36 Claims



30. A method for controlling slag in a tap discharge of molten metal and floating slag from a tap hole of a tilting furnace which is variably tiltable between an upright, non-tilted position and a fully tilted position, said furnace having a trough extending outwardly from said tap hole to a discharge outlet, said trough defining a lateral opening located inwardly of said discharge outlet and from which said slag can be discharged, said method comprising the steps of:

(a) sufficiently tilting said furnace and trough to discharge said molten metal and slag from said tap hole into said trough whereby said molten metal can flow under the influence of gravity out of said discharge outlet;

(b) directing said flow of molten metal through a generally Z-shaped flow path in said trough;

(c) damming and retaining said slag in said trough while permitting said molten metal to flow out of said discharge outlet; and

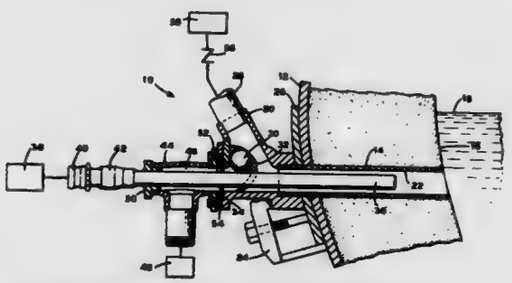
(d) discharging said retained slag through said lateral opening to a location remote from said discharge outlet.

5,173,245

TUYERE INJECTOR

David E. Hall, and Robert C. Francki, both of Sudbury, Canada, assignors to Inco Limited, Toronto, Canada

Filed Dec. 19, 1991, Ser. No. 810,193
Claims priority, application Canada, Feb. 1, 1991, 2035542
Int. Cl.[5] C21C *5/48*
U.S. Cl. 266—47 7 Claims



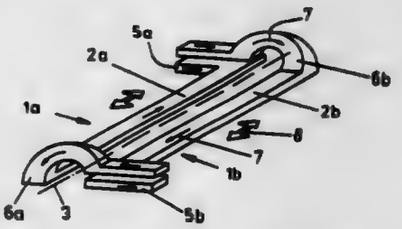
1. An injector for introducing particulate matter into a tuyere extending through the wall of a vessel, the injector comprising a pipe adapted to be inserted into the tuyere, a housing circumscribing a portion of the pipe and forming an annular space therebetween, the annular space extending into the tuyere adjacent to the pipe, a blast air source directly communicating with the annular space, means for affixing the injector to a tuyere body affiliated with the tuyere, means for introducing a source of pressurized fluid directly to the annular space through the housing, and means for connecting the pipe to a source of the particulate matter.

5,173,246

DEVICE FOR THE SURFACE HARDENING OF WORKPIECES OF DIFFERENT LENGTHS

Hans-Rudolf Schwarz, Wermelskirchen, and Friedrich Moritz Oertel, Hückeswagen, both of Fed. Rep. of Germany, assignors to AEG-Elotherm GmbH, Remscheid-Hasten, Fed. Rep. of Germany

PCT No. PCT/EP89/01601, § 371 Date Aug. 20, 1990, § 102(e) Date Aug. 20, 1990, PCT Pub. No. WO90/07594, PCT Pub. Date Jul. 12, 1990
PCT Filed Dec. 22, 1989, Ser. No. 572,999
Claims priority, application Fed. Rep. of Germany, Dec. 23, 1988, 3843457
Int. Cl.[5] C21D *1/10*
U.S. Cl. 266—129 4 Claims



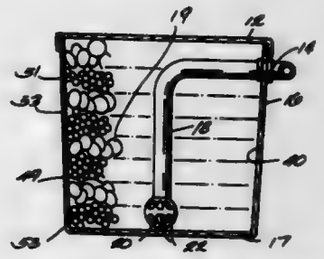
1. A device for hardening the surface of workpieces of different lengths, having: two clamping heads and a rotary drive, for clamping and rotating the workpiece to be hardened; inductors for the electroinductive heating of the workpiece surface; and a quenching spray, wherein disposed on opposite sides of the workpiece with provision for displacement in relation to one another in the direction of the workpiece axis for adaptation to this particular workpiece length are two separate line inductors (*1a, 1b*), having two parallel conductor portions (*2a, 2b*) extending parallel to each other and to an axis of the workpiece and two end portions (**5, 6**) which are bent at right angles to the conductor portion and having a portion (*6a, 6b*) which extends arcuately or polygonally at right angles over the workpiece (**4**).

5,173,247

SILVER RECOVERY DEVICE

Gunter Woog, 5435 Baners Dr., West Bend, Wis. 53095

Filed Oct. 10, 1989, Ser. No. 418,495
Int. Cl.[5] C22B *3/00, 11/00*
U.S. Cl. 266—170 5 Claims



1. Apparatus for recovering silver from a liquid solution, comprising:

wall means defining a metallic replacement chamber;

said chamber having means defining a fluid inlet and a fluid

outlet to permit said solution to flow within said chamber from said inlet to said outlet in one or more flow paths;

a quantity of discrete metallic replacement pieces; and

a quantity of support particles loosely mixed with the replacement pieces, for supporting the replacement pieces in spaced relationship with respect to each other and the chamber walls and in said flow paths between the inlet and outlet to afford free percolating movement of the influent to be treated through the chamber from the inlet to the outlet and into contact with the metallic replacement pieces and through interstices formed by and between the particles;

said support particles comprising polystyrene chips which are shell shaped with a recess open to the outside.

5,173,248

REMOTE CONTROL APPARATUS FOR MAINTAINING IN-VESSEL COMPONENTS IN A STRUCTURE HAVING AN INNER TORUS SPACE

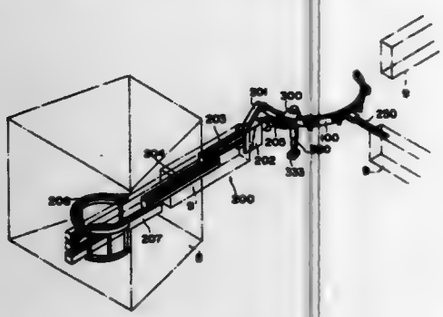
Kiyoshi Shibanuma, Tokyo; Shin Murakami, Hachioji; Tadashi Munakata, Tokyo, and Yoshinobu Ishikawa, Hino, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Feb. 12, 1991, Ser. No. 654,056

Claims priority, application Japan, Feb. 14, 1990, 2-32729; Nov. 30, 1990, 2-340600; Nov. 30, 1990, 2-340601

Int. Cl.[5] G21C *19/00*

U.S. Cl. 376—260 **22 Claims**



1. A remote control apparatus for maintaining a tokamak type nuclear fusion reactor comprising a vessel having a torus space formed therein and a plurality of maintenance ports extending radially for communicating said torus space with the outside of said vessel, and in-vessel components arranged in said vessel, comprising:

a rail having generally similarly arcuated links pivoted to one after another and extendable in the circumferential directions in said torus space, said links forming, in said torus space, a continuous semi-circular arc having a center substantially coincident with a center of said torus space when said links are extended;

a vehicle carrying at least one manipulator for handling said in-vessel components and guided along said rail extended in said torus space;

rail housing means arranged outside of said vessel, for housing said rail when said remote control device is not used;

rail mounting means supporting the last link of said rail and delivering, into said torus space, said links housed in said rail housing means from the first link to the last link in succession through one of the maintenance ports and causing the links to form the continuous semi-circular arc; and

a rail supporting device inserted in said torus space through another maintenance port adjacent to the first mentioned maintenance port, for supporting a central portion of said rail.

5,173,249

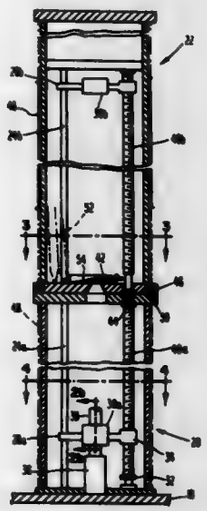
FLUX THIMBLE REMOVAL TOOL

Daniel Merkovsky, Trafford, Pa., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Sep. 27, 1991, Ser. No. 766,933

Int. Cl.[5] G21C *19/00*

U.S. Cl. 376—260 **8 Claims**



4. A pressurized water nuclear reactor (PWR), having a reactor vessel, a core, a seal table and at least one detector thimble slidably inserted through said reactor vessel and into said core, in combination with a thimble removal tool disposed externally to said reactor vessel, said tool comprising:

(a) first pulling means for extracting said thimble, through said seal table, from said reactor vessel;

(b) cutting means for severing portions of said thimble, said cutting means adapted to sever successive portions of said thimble as said thimble is extracted from the reactor vessel; and

(c) second pulling means for receiving said thimble after said thimble is partially extracted by said first pulling means and thereafter further extracting said thimble, said second pulling means disposed on a side of said cutting means opposite said first pulling means.

5,173,250

APPARATUS FOR DEMOLISHING BIOLOGICAL SHIELD WALL OF A NUCLEAR REACTOR AND A METHOD OF DEMOLISHING THE SAME

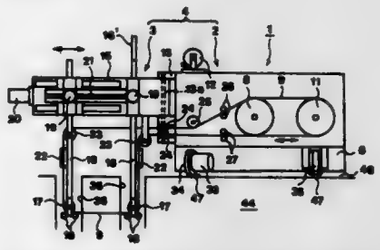
Makoto Ichikawa, and Tetsuo Hasegawa, both of Tokyo, Japan, assignors to Shimizu Construction Co., Ltd., Tokyo, Japan

Filed Jun. 4, 1991, Ser. No. 710,185

Claims priority, application Japan, Jun. 7, 1990, 2-150394

Int. Cl.[5] G21C *19/42*

U.S. Cl. 376—310 **11 Claims**



1. A method of demolishing a biological shield wall of a nuclear reactor using a demolishing apparatus comprising a concrete cutter device, consisting of a driving part for a wire

saw and a concrete cutting part attached to an engaging receiver of the driving part, a core boring machine and a carrier truck to carry the wire saw driving part of said cutter device, said method comprising the steps of:

setting a carrier truck on a operating floor of a reactor building, with a core boring machine attached on the engaging receiver of the driving part;

boring holes downwardly from atop the shield wall a predetermined distance;

substituting the concrete cutting part for the boring machine on the engaging receiver;

inserting a pair of vertical rods in corresponding bored holes and circulating the wire saw between the lower ends of the vertical rods, the vertical rods being controlled and adjusted to the distance between bored holes to enable the cutting action of the wire saw to cut a concrete block from the shield wall;

cutting a concrete block from the shield wall with the wire saw; and

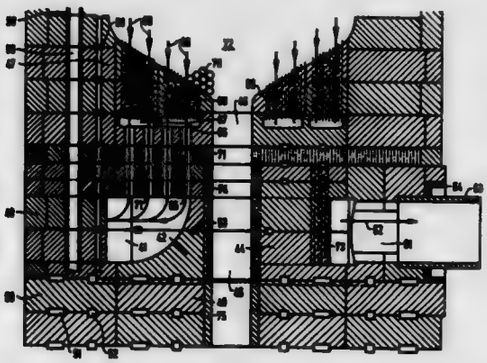
removing the cut concrete block from the shield wall.

5,173,251

MIXING APPARATUS FOR FLUIDS

Manfred Ullrich, Bergisch Gladbach; Gunter Damm, Köln, and Ralf Wehrlein, Bochum, all of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Munich, Fed. Rep. of Germany

Continuation of PCT/DE90/00315, May 2, 1990
This application filed Nov. 4, 1991, Ser. No. 787,042
Claims priority, application PCT Int'l Appl., May 3, 1989, PCT/EP89/00486
Int. Cl.[5] G21C *1/00*
U.S. Cl. 376—389
9 Claims



1. In a gas-cooled, high-temperature nuclear reactor with a circular outline, a mixing apparatus for a plurality of turbulently flowing fluid flows varying in at least one of temperature and composition, comprising a horizontal, annular mixing chamber having a plurality of sectors, horizontal annular conduits for receiving at least one fluid flow, a plurality of vertical conduits being disposed above said sectors and having upper ends connected to said horizontal annular conduits and lower ends connected to said mixing chamber, an outlet opening communicating with said mixing chamber, said sectors having a plurality of bores formed therein in the vicinity of said outlet opening for receiving absorber material, and one of said sectors forming a plurality of deflector elements for deflecting the at least one fluid flow into said mixing chamber.

5,173,252

REMOVABLE SPRINGS FOR FERRULE SPACER

Eric B. Johansson, Wrightsville Beach, N.C., assignor to General Electric Company, San Jose, Calif.

Filed May 17, 1991, Ser. No. 702,643
Int. Cl.[5] G21C *3/32*
U.S. Cl. 376—448
24 Claims

1. A spacer for use in combination with a fuel bundle, said fuel bundle having a plurality of fuel rods, a lower tie plate for supporting said plurality of fuel rods in side-by-side upstanding relation and defining a plurality of apertures for permitting water to be heated to enter said fuel bundle, an upper tie plate for maintaining the upper ends of said fuel rods in parallel side-by-side relation as supported on said lower tie plate and defining a plurality of apertures for permitting heated water and steam to escape from said fuel bundle, a channel for surrounding said fuel rods and extending from said lower tie plate toward said upper tie plate for confining said water flow around said fuel rods within said fuel bundle, and a plurality of spacers for placement within said channel between said tie plates around said fuel rods for maintaining said fuel rods in designed side-by-side spacing, the improvement to said spacer comprising:

at least first and second side-by-side ferrules forming a ferrule pair for fitting around respective side-by-side fuel rods to maintain said fuel rods spaced apart one from another;

each ferrule of said ferrule pair having at least one internal stop for permitting said fuel rod internal of said ferrule to be biased against said stop to a position of designed side-by-side alignment with respect to said fuel bundle at said spacer within said ferrule;

each ferrule of said ferrule pair further defining an aperture for confrontation with a corresponding aperture of said adjacent ferrule of said ferrule pair to define a common aperture between said ferrule pair for receiving a spring between said ferrules, said common aperture of each ferrule defining at the sides thereof an opening sufficient to define respective first and second tab receiving slots to the exterior of said ferrule when confronted to a similar said ferrule at said tab receiving slot;

a loop spring having first and second legs, said first spring leg for biasing a fuel rod interior of said common aperture of a first ferrule of said ferrule pair and a second spring leg for biasing a fuel rod interior of said common aperture of said second ferrule of said ferrule pair, said first and second legs of said spring moveable from a first position of compression for insertion of said spring through one of said first and second tab receiving slots to a second position of expansion with respect to said first and second tab receiving slots for trapping said spring in said common aperture;

at least first and second tabs protruding from at least one of said spring legs, said first tab protruding from a first side of said spring and said second tab protruding from a second side of said spring, said tabs for maintaining said loop spring in said second position of expansion in said common aperture at said tab receiving slots; and

said first and second ferrules confronted at said apertures and said main body of said loop spring being inserted in said common aperture, said tabs protruding into said tab receiving slots to maintain said loop spring in said com-

mon aperture and said rod biasing projection passing through said common aperture whereby said rod biasing projections on the respective spring legs of said loop spring can bias respective fuel rods in each said ferrule of said ferrule pair against said stops to maintain said fuel rods in designed side-by-side spacing.

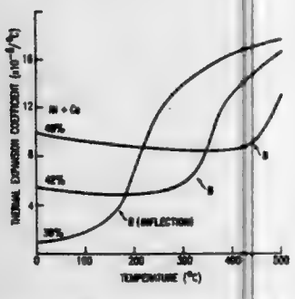
LOW EXPANSION CAST IRON

Takanobu Nishimura; Motoo Suzuki, and Tsutuyoshi Aisaka, all of Kanagawa, Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Division of Ser. No. 501,319, Mar. 14, 1990, Pat. No. 5,030,299, which is a division of Ser. No. 262,784, Oct. 26, 1988, abandoned. This application Apr. 15, 1991, Ser. No. 684,877
Claims priority, application Japan, Oct. 26, 1987, 62-268249
Int. Cl.[5] C22C *38/52, 38/56*
U.S. Cl. 420—27 9 Claims



1. A cast iron having an austenitic matrix and consisting essentially of from 1% to 3.5% carbon, up to 1.5% silicon, 32% to 39.5% nickel, 1% to less than 4% cobalt, up to 41% of the combined total of nickel plus cobalt and the balance substantially all iron. (% is meant for % by weight)

5,173,254

STEEL HAVING EXCELLENT VIBRATION-DAMPENING PROPERTIES AND WELDABILITY

Kenji Amano; Tomoya Koseki; Shozaburo Nakano, and Syuzo Ueda, all of Chiba, Japan, assignors to Kawasaki Steel Corporation, Japan

Filed Nov. 4, 1991, Ser. No. 787,028
Int. Cl.[5] C22C *38/06, 38/16*
U.S. Cl. 420—77 3 Claims

1. Steel having excellent vibration-damping properties, weldability, toughness and a tensile strength of not less than 41 kgf/mm^2, said steel comprising about:

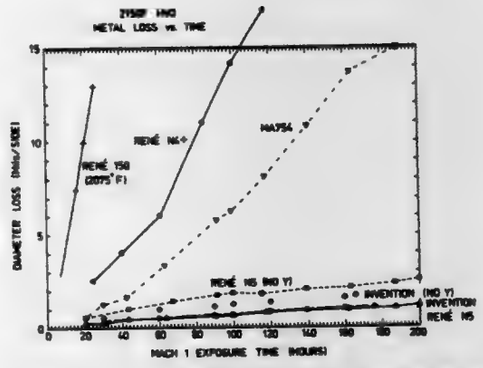
0.02 wt. % or less of C;
0.02 wt. % or less of Si;
0.08 wt. % or less of Mn;
0.05 to 1.5 wt. % of Cu;
1.0 to 7.0 wt. % of Al;
0.008 wt. % or less of N; and
Fe and incidental impurities which together constitute the remaining wt. %.

5,173,255

CAST COLUMNAR GRAIN HOLLOW NICKEL BASE ALLOY ARTICLES AND ALLOY AND HEAT TREATMENT FOR MAKING

Earl W. Ross, Cincinnati, Ohio, and Kevin S. O'Hara, Boxford, Mass., assignors to General Electric Company, Cincinnati, Ohio

Continuation of Ser. No. 253,109, Oct. 3, 1988, abandoned. This application Apr. 17, 1991, Ser. No. 686,882
Int. Cl.[5] C22C *19/05*
U.S. Cl. 420—445 11 Claims



1. A nickel base superalloy consisting essentially of in weight percent about 0.12% carbon, about 1.5% hafnium, 12% cobalt, about 6.35% tantalum, about 6.8% chromium, about 1.5% molybdenum, about 4.9% tungsten, about 6.15% aluminum, about 2.8% rhenium, about 0.015% boron, the substantial absence of zirconium, the substantial absence of titanium, the substantial absence of vanadium and the balance nickel and incidental impurities.

6. In a method of heat treating a cast nickel base alloy article made of an alloy consisting essentially of, in weight percent, 0.1–0.15 C, 0.3–2 Hf, 11–14 Co, 5–9 Ta, less than 0.05 Zr and the substantial absence of V and Ti at no more than about 1 each, 5–10 Cr, 0.5–3 Mo, 4–7 W, 5–7 Al, 1.5–4 Re, 0.005–0.03 B, up to 1.5 Cb, up to 0.5 Y and the balance Ni and incidental impurities, the steps of:

(a) heating at a solutioning temperature in a non-oxidizing atmosphere for a time sufficient to solution at least 90% of the gamma-gamma prime eutectic and coarse secondary gamma prime and so that there is no more than about 4% incipient melting, and then cooling in the atmosphere to a temperature in the range of about 2025°–2075° F.;

(b) heating at a first aging temperature in the range of about 2025°–2075° F. in a non-oxidizing atmosphere for about 1–10 hours and then cooling in the atmosphere to a temperature in the range of about 1950°–2000° F.; and

(c) heating at a second aging temperature lower than the first aging temperature in the range of about 1950°–2000° F. for about 4–12 hours.

LIQUID METAL MATRIX THERMAL PASTE

Richard B. Booth, Wappingers Falls; Gary W. Grube, Washingtonville; Peter A. Gruber, Mohegan Lake; Igor Y. Khandros, Peekskill, and Arthur R. Zingher, White Plains, all of N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Division of Ser. No. 389,131, Aug. 3, 1989. This application Nov. 8, 1991, Ser. No. 790,904
Int. Cl.[5] C22C *1/00*
U.S. Cl. 420—590 5 Claims

1. A thermal cooling system comprising:

a component to be cooled;

a cooling system; and a liquid metal matrix thermal paste comprising a dispersion of thermally conductive particles

disposed in a liquid metal matrix selected from the group consisting of liquid gallium and its alloys, said particles being non-reactive with said liquid metal matrix at a temperature below approximately 100° C., whereby the fraction and dispersion of the particles in the liquid metal matrix are such that the resulting paste has a predetermined thermal conductivity and permanently remains compliant, said paste being dispersed between said component and said cooling system.

5,173,257

CONTINUOUS PROCESS AND APPARATUS FOR THE SEPARATION OF RECYCLABLE MATERIAL FROM AND THE DISINFECTION OF INFECTIOUS MEDICAL WASTE

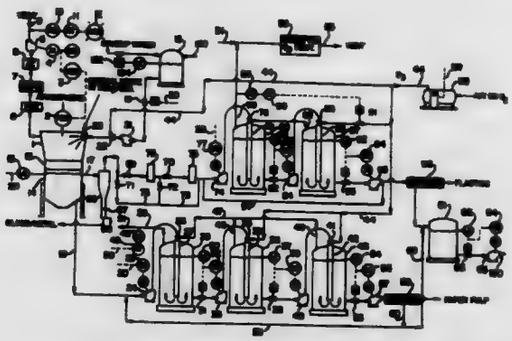
Erich H. Pearson, 925 Oakwood Ct., Glen Ellyn, Ill. 60137

Continuation-in-part of Ser. No. 679,601, Apr. 3, 1991, Pat. No. 5,116,574. This application May 13, 1991, Ser. No. 699,202

Int. Cl.[5] A61L 2/00

U.S. Cl. 422—3

27 Claims



1. A process for the continuous treatment of infectious waste material, which comprises:

(a) introducing bulk unseparated infectious waste material comprising pulpable components and nonpulpable components into a receiving container means, said receiving container means being in communication with a primary shredding means whereby bulk unseparated infectious waste material supplied to said receiving container means is conducted to said primary shredding means;

(b) shredding said bulk unseparated waste material by said primary shredding means;

(c) transferring the shredded waste material from said primary shredding means to a pulping means having a means to provide a predetermined fluid level to said pulping means, said pulping means effective for repulping said pulpable components and creating a pulped slurry therefrom and also effective for creating a nonpulpable slurry from said nonpulpable components and separating said pulped slurry from said nonpulpable slurry;

(d) transferring said pulped slurry from said pulping means to a first reactor vessel means, said first reactor vessel means comprising a first reactor means communicating in series relationship with at least one second reactor means, and transferring said nonpulpable slurry from said pulping means to a separator means to separate and remove from said nonpulpable slurry glass and metal components contained therein and to form a separated nonpulpable slurry and thereafter transferring said separated nonpulpable slurry to a second reactor vessel means, said second reactor vessel means comprising a primary tank means communicating in series relationship with at least one second tank means;

(e) contacting, in said first reactor vessel means, said pulped slurry with a disinfecting fluid comprising ozone in gas phase and in aqueous solution, said contacting being achieved by flowing said pulped slurry and said disinfecting fluid through a mixer of said first reactor means for mixing said pulped slurry with said disinfecting fluid and flowing the resulting mixture into said first reactor means of said first reactor vessel means, retaining the resulting mixture in said first reactor means for sufficient time to achieve at least partial disinfection of said pulped slurry and further discharging from said first reactor means undissolved gas which emits from the resulting mixture, said contacting being further achieved by additionally mixing said pulped slurry from said first reactor means with disinfecting fluid in a mixer of said at least one second reactor means and flowing the resulting mixture into said at least one second reactor means of said first reactor vessel means, retaining the resulting mixture in said at least one second reactor means for sufficient time to achieve substantially complete disinfection of said pulped slurry and further discharging from said at least one second reactor means undissolved gas which emits from the resulting mixture, and contacting, in said second reactor vessel means, said separated nonpulpable slurry from said separator means with said disinfecting fluid, said contacting being achieved by flowing said separated nonpulpable slurry and said disinfecting fluid through a mixer of said primary tank means for mixing said separated nonpulpable slurry with said disinfecting fluid and flowing the resulting mixture into said primary tank means of said second reactor vessel means, retaining the resulting mixture in said primary tank means for sufficient time to achieve at least partial disinfection of said separated nonpulpable slurry and further discharging from said primary tank means undissolved gas which emits from the resulting mixture, said contacting being further achieved by additionally mixing said separated nonpulpable slurry from said primary tank means with said disinfecting fluid in a mixer of said at least one second tank means of said second reactor vessel means and flowing the resulting mixture into said at least one second tank means, retaining the resulting mixture in said at least one second tank means for sufficient time to achieve substantially complete disinfection of said separated nonpulpable slurry and further discharging from said at least one second tank means undissolved gas which emits from the resulting mixture; and

(f) transferring said disinfected pulped slurry from said at least one second reactor means and transferring said disinfected separated nonpulpable slurry from said at least one second tank means to dewatering means to remove liquid therefrom and to recover solid disinfected waste material.

17. An apparatus for the continuous treatment of infectious waste material, which comprises:

(a) a receiving container means for receiving bulk unseparated infectious waste material comprising pulpable components and nonpulpable components;

(b) a primary shredding means in communication with said receiving container means for reducing the particle size of said bulk unseparated infectious waste material and forming a shredded waste material;

(c) a pulping means in communication with said primary shredding means, said pulping means having a fluid filling means for providing a predetermined fluid level in said pulping means, for repulping said pulpable components and creating a pulped slurry therefrom and also effective for creating a nonpulpable slurry from said nonpulpable components and separating said pulped slurry from said nonpulpable slurry;

(d) a separator in communication with said pulping means for receiving said nonpulpable slurry from said pulping means and separating and removing therefrom glass and metal components contained therein thereby forming a separated nonpulpable slurry;

(e) a reaction zone for disinfecting said pulped slurry and said separated nonpulpable slurry, said reaction zone comprising:

(i) a first reactor vessel means communicating with said pulping means for receiving said pulped slurry, said first

reactor vessel means comprising a first reactor means communicating in series relationship with at least one second reactor means for disinfecting said pulped slurry;

(ii) a second reactor vessel means communicating with said separator for receiving said separated nonpulpable slurry, said second reactor vessel means comprising a primary tank means communicating in series relationship with at least one second tank means for disinfecting said separated nonpulpable slurry;

(iii) a disinfecting fluid generating means communicating with each of said first reactor vessel means and said second rector vessel means for continuously introducing a disinfecting fluid, comprising ozone in gas phase and in aqueous solution, into said first and second reactor vessel means, said first reactor means being provided with a mixer to mix said disinfecting fluid, comprising ozone in gas phase and in aqueous solution, into said first and second reactor vessel means, said first reactor means being provided with a mixer to mix said disinfecting fluid with said pulped slurry received from said pulping means, said at least one second reactor means being provided with a mixer to mix said disinfecting fluid with said pulped slurry received from said first reactor means, said primary tank means being provided with a mixer to mix said disinfecting fluid with said nonpulpable slurry received from said separator, said at least one second tank means being provided with a mixer to mix said disinfecting fluid with said nonpulpable slurry received from said primary tank means, each of said first reactor means and said at least one second reactor means being further provided with a discharge vent to discharge undissolved gas from said pulped slurry and each of said primary tank means and said at least one second tank means being further provided with a discharge vent to discharge undissolved gas from said nonpulpable slurry; and

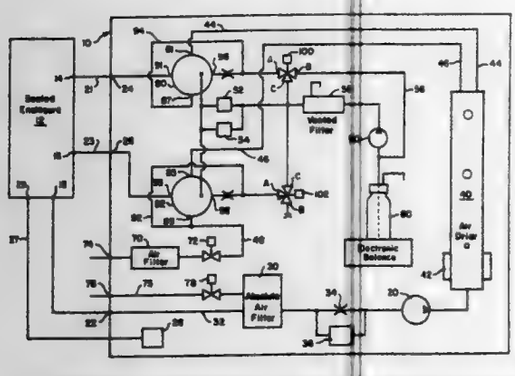
(f) dewatering means communicating with said first and second reactor vessel means, for receiving and recovering solid, disinfected waste material from the disinfected slurry.

5,173,258

RECIRCULATION, VAPOR AND HUMIDITY CONTROL IN A SEALABLE ENCLOSURE

Robert W. Childers, Erie, Pa., assignor to American Sterilizer Company, Erie, Pa.

Filed Oct. 11, 1989, Ser. No. 419,993
Int. Cl.[5] A61L 2/20
U.S. Cl. 422—27 **18 Claims**



1. A method of conditioning and decontaminating the interior of a sealable enclosure and the contents thereof comprising:

providing a sealable enclosure and processing means associated therewith;

sealing said enclosure from fluid communication with unfiltered atmospheric air;

filtering a gas and establishing a continuous recirculating flow of said filtered gas through said enclosure and through a means for processing said flow of filtered as fluidly connected to said enclosure and selectively sealed from fluid communication with unfiltered atmospheric air, wherein said processing means comprises a means for drying said flow of filtered gas, a means for heating said flow or filtered gas and conduit means fluidly connecting said drying means to said heating means;

reducing the relative humidity of said filtered gas to a predetermined level within said recirculating flow of filtered gas by directing said flow and filtered gas through said drying means;

selectively introducing a vapor decontamination at a predetermined concentration into said flow of recirculating filtered gas after said flow of filtered gas exists said drying means and before said flow of filtered gas enters said enclosure so that said flow of recirculating filtered gas carries said vapor decontaminant into and through said enclosure wherein said vapor is a multicompound vapor and one component is water vapor;

maintaining said continuous recirculating flow of filtered gas and vapor decontaminant through said enclosure for a first predetermined period of time sufficient for decontaminating said enclosure and any contents therein;

continuously reducing the relative humidity of said recirculating flow of filtered gas to maintain the relative humidity at about said predetermined level for at least during said first period of time; and

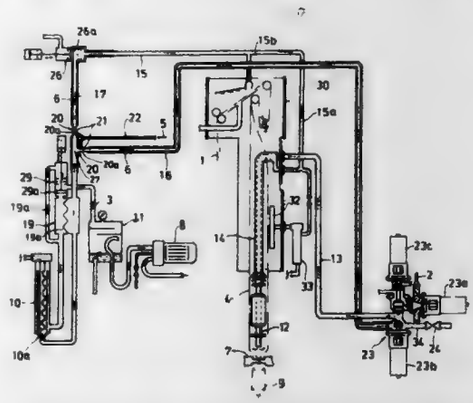
following said first period of time, discontinuing introduction of vapor decontaminant and continuing said flow of filtered gas into and through said enclosure for a second period of time sufficient for removing residual vapor decontaminant from said enclosure.

5,173,259

STERILIZATION METHOD FOR A PACKING MACHINE THAT USES LIQUID DISINFECTANT

Giorgio Bordini, Modena, Italy, assignor to Tetra Dev-Co, Modena, Italy

Continuation of Ser. No. 336,030, Apr. 11, 1989, abandoned. This application Jun. 3, 1991, Ser. No. 709,801
Claims priority, application Japan, Apr. 27, 1988, 63-107384
Int. Cl.[5] A61L 2/18, 2/20
U.S. Cl. 422—28 **26 Claims**



1. A sterilization method for a sterile liquid content packing machine using liquid disinfectant for sterilizing parts of a filler pipe and connecting piping in free communication with the filler pipe requiring sterilization comprising the following steps:

preheating heat-storage piping having a capacity for holding a predetermined quantity of heat transferred to the heat

storage piping by passing a first stream of super heated air therethrough;

spray charging a predetermined quantity of liquid disinfectant for a predetermined period of time in the super heated air passing through the heat-storage piping and vaporizing said liquid disinfectant while inhibiting a drop in temperature of the mixture of vaporized disinfectant steam and super heated air due to the vaporization by heat stored within the heat-storage piping;

communicating the mixture within the connecting piping to be sterilized extending from the heat-storage piping, said connecting piping being at a lower temperature than the dew point temperature of the mixture without cooling said connecting piping, whereby the mixture is condensed evenly as a film of liquid disinfectant on the surfaces of inner walls thereof; and

communicating a second stream of heated air having a lower temperature relative to the super heated air into contact with said liquid disinfectant for vaporizing the condensed liquid disinfectant and removing the condensed liquid disinfectant from the surfaces of the connecting piping;

wherein the thickness of the heat-storage piping is of a predetermined thickness being thicker relative tot he thickness of the connecting piping extending from the heat-storage piping.

5,173,260

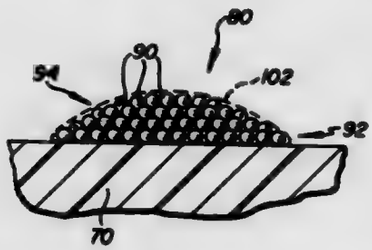
BEADS FUSED TO A TEST DEVICE SUPPORT

Dennis R. Zander, Penfield, and Richard C. Sutton, Rochester, both of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Continuation-in-part of Ser. No. 583,106, Sep. 17, 1990, abandoned. This application Jan. 10, 1991, Ser. No. 639,454

Int. Cl.[5] **B01L** *3/00;* **C12Q** *1/68;* **C12N** *11/02;* **C12M** *1/00*

U.S. Cl. 422—57 **5 Claims**



1. In a test device comprising inert beads to which reagents are attached, and an inert support on which said beads are disposed to react with a test sample liquid, the support and beads comprising different materials;

the improvement wherein said support is attached to said beads solely by being physically melt-fused to at least some of said beads, said material of said support being selected to have a melting point which is at least 20 degrees C. less than that of said material of said beads,

so that the fused beads cannot be washed off the support by the test sample liquid.

5,173,261

TEST CARRIER FOR THE ANALYSIS OF FLUIDS

Manfred Krause, Viernheim, and Gerhard Schindler, Grünstadt, both of Fed. Rep. of Germany, assignors to Boehringer Mannheim GmbH, Mannheim, Fed. Rep. of Germany

PCT No. PCT/DE91/00310, § 371 Date Dec. 12, 1991, § 102(e) Date Dec. 12, 1991, PCT Pub. No. WO91/16626, PCT Pub. Date Oct. 31, 1991

PCT Filed Apr. 12, 1991, Ser. No. 778,096

Claims priority, application Fed. Rep. of Germany, Apr. 14, 1990, 4012216

Int. Cl.[5] **G01N** *33/52*

U.S. Cl. 422—58 **9 Claims**

1. Test carrier for the analysis of fluids with a test field held in a frame, in which the frame comprises a top part and a base part connected with the top part and at least the top part comprises a test field opening through which a sample fluid can be applied to an upper surface of the test field,

wherein

the base part comprises a seat for the test field,

the seat in the base part is surrounded by positioning means for the test field which are higher than the test field,

the area of the test field opening is greater than the area of the upper surface of test field thereby forming a visible rim on the periphery of the upper surface of the test field, and

the top part further comprises pressure tongues resting on the upper surface of the test field and projecting into the test field opening.

5,173,262

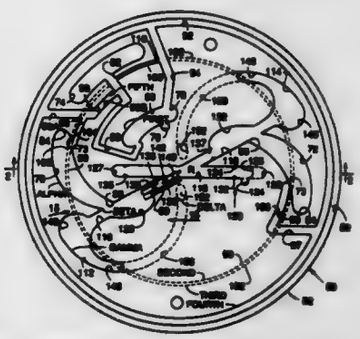
ROTOR ASSEMBLY AND METHOD FOR AUTOMATICALLY PROCESSING LIQUIDS

Carl A. Burtis, Oak Ridge; Wayne F. Johnson, Loudon, and William A. Walker, Knoxville, all of Tenn., assignors to Martin Marietta Energy Systems, Inc., Oak Ridge, Tenn.

Continuation-in-part of Ser. No. 74,739, Jul. 17, 1987, Pat. No. 4,835,106. This application May 30, 1989, Ser. No. 359,007

Int. Cl.[5] **G01N** *1/10, 9/30, 35/00;* **B04B** *5/02*

U.S. Cl. 422—72 **44 Claims**



1. A rotor assembly for processing a liquid comprising:

a rotor body rotatable about an axis of rotation, said rotor body comprising:

a loading chamber having an entrance for accepting an

excess amount of a liquid, said loading chamber having a loading chamber exit through which said liquid leaves said loading chamber, said loading chamber exit being located at a first radial distance from said axis of rotation,

a measuring chamber for receiving a volumetric amount of said excess amount of said liquid, said measuring chamber having a measuring chamber entrance through which said volumetric amount of said excess amount of said liquid enters said measuring chamber, said measuring chamber entrance being located at a second radial distance from said axis of rotation, said second radial distance being greater than said first radial distance,

an overflow chamber for receiving a portion of said excess amount of said liquid, said overflow chamber having an overflow chamber entrance through which said portion of said excess amount of said liquid enters said overflow chamber, said overflow chamber entrance being located at a third radial distance from said axis of rotation, said third radial distance being greater than said second radial distance, and,

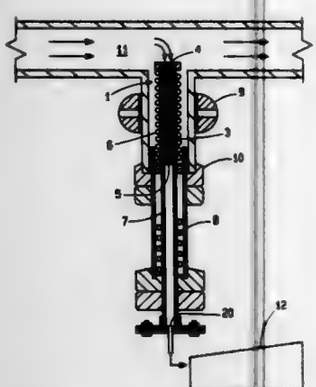
a fluid communication means for defining a fluid communication path between said loading chamber exit, said measuring chamber entrance, and said overflow chamber entrance, said fluid communication means extending to a fourth radial distance from said axis of rotation, said fourth radial distance being greater than said third radial distance, said fluid communication means having greater flow capacity to said measuring chamber than to said overflow chamber.

5,173,263

REGENERABLE ACTIVATED BAUXITE ADSORBENT ALKALI MONITOR PROBE

Sheldon H. D. Lee, Willowbrook, Ill., assignor to The United States of America as represented by the United States Department of Energy, Washington, D.C.

Filed Jan. 22, 1991, Ser. No. 643,318
Int. Cl.[5] G01N *30/48, 33/20, 30/60*; B01D *53/04*
U.S. Cl. 422—88 **14 Claims**



1. An apparatus for detecting alkali vapors in a gas stream comprising:

a hollow member having a first end opening and a second end opening;

a predetermined quantity of a regenerable activated bauxite adsorbent, wherein said predetermined quantity of said regenerable activated bauxite used is determined by the following equation:

$$L_o = LES + LUB$$

where

$$LES = \frac{100G}{\rho_b} \times \frac{\Delta Y}{\Delta X} \theta$$

MTZ=mass transfer zone

LUB=½ MTZ

L_o=predetermined quantity of regenerable activated bauxite

G=superficial mass velocity of the feed, g/h-cm^2

ρ_b=bulk density of the adsorbent, g/cm^3

ΔY=change in concentration of adsorbable component in the feed, g/g of feed

ΔX=delta adsorbate loading, g/100 g of adsorbent

Θ=time, hrs,

said predetermined quantity of said regenerable activated bauxite deposed in flow through relation within said hollow member and wherein said predetermined quantity of said regenerable activated bauxite adsorbent being selected to detect a pre-established alkali concentration in the gas stream;

means for retaining attached at said first end opening and second end opening of said hollow member and in contact with said regenerable activated bauxite adsorbent; and

means for selectively conducting a predetermined quantity of said gas stream through said regenerable activated bauxite adsorbent via said first and second end openings.

5,173,264

HIGH THROUGHPUT LIQUID ABSORPTION PRECONCENTRATOR SAMPLING INSTRUMENT

Solomon Zaromb, Hinsdale, Ill., and Ralph M. Bozek, Hattiesburg, Miss., assignors to The United States of America as represented by the United States Department of Energy, Washington, D.C.

Continuation-in-part of Ser. No. 330,654, Mar. 30, 1989, Pat. No. 4,912,051, and a continuation-in-part of Ser. No. 330,655, Mar. 30, 1989, Pat. No. 4,977,095. This application Mar. 26, 1990, Ser. No. 499,602
Int. Cl.[5] G01N *1/18*
U.S. Cl. 422—88 **16 Claims**

1. Apparatus for preconcentrating traces of an analyte in a gaseous medium comprising:

an elongated gas impermeable container having a longitudinal wall, an upper end and a lower end, and wettable material disposed in the container and extending through most of the length thereof,

means for continuously wetting the wettable material at one end thereof with an analyte-sorbing liquid so that the liquid flows toward the other end of the material for wetting most of the length thereof,

means for flowing the gaseous medium through means defin-

ing an inlet opening into the container in contact with said wettable material for trapping and preconcentrating traces of analyte in the sorbing liquid,

means for removing from the container the sorbing liquid containing the preconcentrated traces of analyte,

detection means adjacent to the liquid removing means in which the removed sorbing liquid is injected, the detection means responsive to the analyte or to a derivative thereof,

control means coupled to the wetting means, flowing means, removing means and detection means for controlling the operations thereof, and

wherein any dry surfaces within the apparatus that the gaseous medium may encounter before coming into contact with the liquid either have a negligibly small area or are at a temperature at which adsorption of analyte is negligibly low.

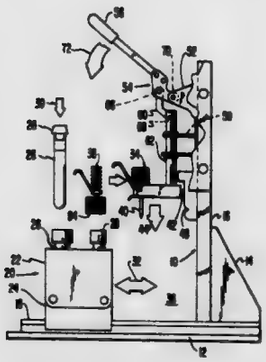
MANUALLY OPERATED PUMP INSERTER FOR TEST TUBES

Tipton L. Golias; Ovay H. Mayes, and Robert J. Sarrine, all of Beaumont, Tex., assignors to Helena Laboratories Corporation, Beaumont, Tex.

Continuation-in-part of Ser. No. 383,339, Jul. 24, 1989, Pat. No. 5,055,271. This application Jun. 25, 1991, Ser. No. 720,372

Int. Cl.[5] B01L *9/00*

U.S. Cl. 422—99 **14 Claims**



14. A manually operated apparatus for attaching pump mechanisms to sealed test tubes, each test tube sealed by a resilient, puncturable closure, comprising:

a frame including a base;

support means attached to said frame for releasably supporting one or more pump mechanisms;

means for releasably holding at least one test tube, said holding means movably engaging and being displaceable on the base of said frame into position in alignment with the support means, each test tube having an elongated axis; and

manually operated insertion means, attached to said frame, for applying a force to said support means along an axis offset from said test tube elongated axis for displacing said support means and the pump mechanisms supported thereon towards said holding means and test tubes held therein, wherein said support means holds said pump mechanisms to thereby puncture the closures of the test tubes with said pump mechanisms upon operation of said insertion means.

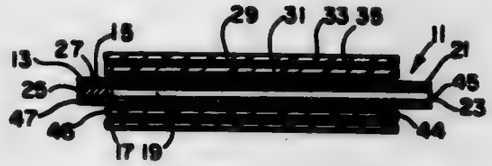
SAFETY PIPET

James W. Kenney, Broomall, Pa., assignor to Drummond Scientific Company, Broomall, Pa.

Filed Jul. 19, 1989, Ser. No. 382,547

Int. Cl.[5] G01N *1/10*

U.S. Cl. 422—100 **11 Claims**



1. A disposable one-time use, inexpensive, capillary-action safety micro-pipet tube for containing a sample of blood or other liquid, comprising

a transparent glass tube having an outer surface, an axial bore with an inner surface, and upper and lower ends which are open,

a vent port at the upper end of the bore for venting air from the tube,

a liquid admitting port at the lower end of the bore for admitting liquid to the tube,

said tube being constructed and arranged for drawing a liquid into the bore by capillary action,

said glass tube forming jagged edges if accidentally broken,

said tube being for the containment of blood, or other liquid, which may be contaminated and infectious,

and resilient means for covering the outer surface of the tube and any jagged edges of a broken tube and for holding the tube together and holding the blood in the tube and preventing said blood from escaping from any jagged edges of a broken tube,

said capillary-action safety tube being expendable after a single use,

whereby when blood is drawn by capillary action into the tube from a finger stick drop of blood, and the tube containing the blood is jabbed into clay to provide a clay plug in the liquid admitting port of the tube, if the glass tube breaks, the jagged glass edges are covered by the resilient covering means, the tube is held together, and the blood is held in the tube and is prevented from escaping by the covering means.

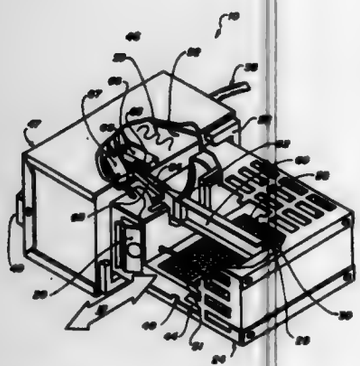
OZONE GENERATION APPARATUS

William C. Weaver, 1714 Woodvalley Dr., Carmel, Ind. 46032

Continuation-in-part of Ser. No. 721,988, Jun. 27, 1991, Pat. No. 5,160,481. This application Apr. 27, 1992, Ser. No. 874,014
Int. Cl.[5] B01J *19/08*
U.S. Cl. 422—186.15 6 Claims



1. An ozone generation apparatus adapted for installation into central air handling systems for buildings, the apparatus comprising:

a first housing positionable in air handling conduits of central air handling systems for buildings, the first housing being configured to allow air flow therethrough,

an ozone generating plate means positioned in the first housing to release ozone into air flowing through the first housing,

a second housing attached adjacent to the first housing, the second housing containing electrical circuitry for developing an electrical potential for application across the ozone generating plates, the second housing having means for supporting the electrical circuitry and a back surface adapted to be situated contiguous to an outside surface of air handling conduits of a central air handling system for buildings, the back surface including a perimeteral flange for air tight securement to the air handling conduit,

a first switch for activating and deactivating said electrical circuit, and a rocker sail positioned adjacent to the first switch and pivotally attached to one of the first and second housing for pivotal movement of the rocker sail in response to air flow through the first housing, with movement of a rocker sail in response to air flow activating the first switch, and movement of the rocker sail in response to cessation of airflow deactivating the first switch.

APPARATUS FOR REDUCING THE REACTIVITY OF ARTICLES DESTINED FOR DISPOSAL

Joseph M. Moa, Lawrenceville, and James R. Petisce, Norcross, both of Ga., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Division of Ser. No. 366,557, Jun. 15, 1989. This application Aug. 9, 1991, Ser. No. 742,961
Int. Cl.[5] G01J *00/00*; F21V *33/00*
U.S. Cl. 422—186.3 5 Claims

1. A system for preparing a disposable container, which contains a residue of a curable composition of matter for disposal, said system comprising:

a disposable container with a residue of UV-curable composition of matter therein;

a lamp device having a portion which is insertable into an opening of the disposable container which includes a bottom and an inner sidewall, said lamp device including a curing lamp; and

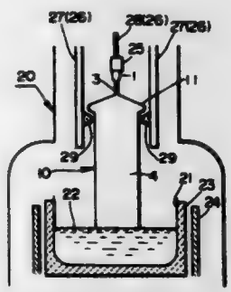
energy means for controllably supplying reproducible curing energy to said lamp device when said insertable portion of the lamp device is disposed in the disposable container, and wherein said curing energy is sufficient to cure the residue within the disposable container into a solid such that the solid residue becomes an integral part of the disposable container, said lamp device capable of exposing the complete bottom and inner sidewall surface of the disposable container to curing energy.

5,173,270

MONOCRYSTAL ROD PULLED FROM A MELT

Michio Kida, Urawa; Kensho Sahira, Yono, and Akikuni Nozoe, Hyogo, all of Japan, assignors to Mitsubishi Materials Corporation, Tokyo, Japan

Division of Ser. No. 178,966, Apr. 7, 1988. This application Aug. 16, 1990, Ser. No. 568,224
Claims priority, application Japan, Apr. 9, 1987, 62-87463
Int. Cl.[5] B01D *9/00*
U.S. Cl. 422—249 11 Claims



1. An apparatus for preparing a monocrystal rod which has a stopper section for preventing said monocrystal rod from falling, said stopper sector being a bulbous shoulder portion of said monocrystal rod located at a top portion of said monocrystal rod and having a diameter larger than a diameter of a lower portion of said crystal rod, said apparatus comprising:

a crucible for containing a melt;
heating means for heating said crucible;
supporting means for supporting a seed crystal;
an elevator means for elevating said supporting means; and
a safety means having an upper surface for supporting said monocrystal rod;
wherein said safety means moves in a horizontal direction to a position beneath said stopper section when said monocrystal rod is elevated by said elevator means to a predetermined height.

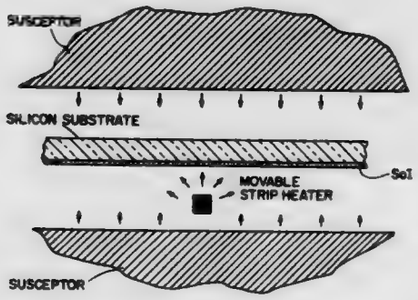
8 Claims



4. An apparatus for preparing an SOI wafer having an amorphous semiconductor material film on a substrate comprising:
a support for said wafer, said supported being arranged to position said wafer such that said film is below said substrate,
a radiative first heating means said first means being stationary with respect to said wafer for uniformly illustrating said film over the water area, said first heater being positioned opposite said film, and below said wafer,
a second heating means, said second means being stationary with respect to said wafer, positioned opposite said substrate, and above said wafer, for conductively heating said film,
said first and second heating means being adapted to heat said wafer to a temperature below the melting point of said film, and
a radiative third heating means, said third means being adapted for heating regions of said film to melt said regions by relative motion between said third means and said wafer and said third means being positioned between said wafer and said first heating means.

HEATED CONVEYOR AND PROCESS FOR DISINFECTING SIZE-REDUCED HOSPITAL REFUSE

Rolf E. Roland, Hauptstrasse 57, D-6688 Illingen, Fed. Rep. of Germany

PCT No. PCT/EP89/00904, § 371 Date Mar. 1, 1991, § 102(e) Date Mar. 1, 1991, PCT Pub. No. WO90/01340, PCT Pub. Date Feb. 22, 1990

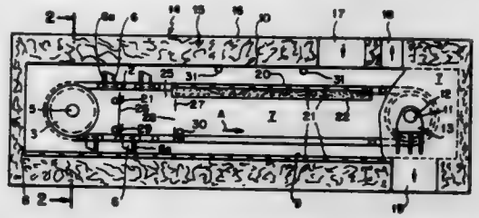
PCT Filed Aug. 2, 1989, Ser. No. 654,602

Claims priority, application Fed. Rep. of Germany, Aug. 8, 1988, 8810087

Int. Cl.[5] A61L *2/06*

U.S. Cl. 422—295

8 Claims



1. Heated conveyor for disinfecting contaminated, size-reduced hospital refuse, comprising
a scraping conveyor having two endless link chains;
flight attachments secured to each endless link chain;
a housing in which the scraping conveyor is arranged, said housing having a top, a base and long side walls;
means for electric resistance heating of said base and said long side walls;
said housing being closed with the exception of having an upper inlet opening in the top, having an outlet opening in the base and having an air vent in the top;
a drop shaft being formed by two vertical sheet metal plates said vertical sheet metal plates being attached to said scraping conveyor;
steam nozzles positioned within said drop shaft for injecting compressed, saturated steam into said drop shaft; and
one of said vertical sheet metal plates being downstream and the other vertical sheet metal plate being upstream, said sheet metal plate positioned upstream having an overflow opening.

CASSETTE FOR DENTAL INSTRUMENTS

Charles A. Brewer, 105 Via Wazier, Newport Beach, Calif. 92660

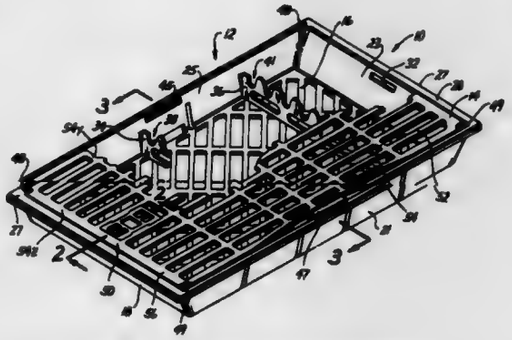
Filed Oct. 11, 1990, Ser. No. 595,971

The portion of the term of this patent subsequent to Sep. 25, 2007, has been disclaimed.

Int. Cl.[5] A61B *19/02*; B65D *1/34, 6/04, 41/18*

U.S. Cl. 422—300

20 Claims



1. A cassette for dental instruments comprising:

a tray having a bottom and a plurality of walls each extending from the bottom to a particular plane;
means extending between the walls of the tray for individually supporting dental instruments;
portions of the walls defining first and second generally opposing slots;
a lid having a generally planar configuration and an outer surface, the lid being constructed to mount on the tray with the outer surface disposed in the particular plane of the tray;
a first tab disposed in fixed relationship with the lid and adapted to register with one of the slots in the tray; and
a second tab carried by the lid and movable between an extended position and a retracted position, the second tab in the extended position being disposed to register with the second slot to lock the lid to the tray.

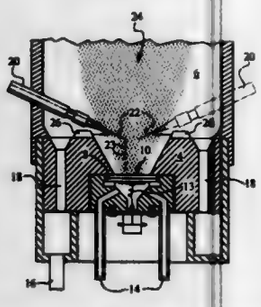
FLASH LIQUID AEROSOL PRODUCTION METHOD AND APPARTUS

Thomas E. Owen, Helotes, Tex., assignor to Southwest Research Institute, San Antonio, Tex.

Filed Aug. 16, 1991, Ser. No. 746,772
Int. Cl.[5] A61L *9/00*; B01J *7/00*
U.S. Cl. 422—306 17 Claims



1. A method for generating liquid aerosol particles having a narrow-sized distribution comprising:
(a) forming at least one column of individual liquid droplets by forcing liquid under pressure through an orifice at a rate sufficient for forming individual droplets;
(b) controlling droplet formation frequency and size;
(c) impinging said droplets onto vibrating surface;
(d) vibrating the surface to disrupt the impinging droplets and form liquid aerosol particles; and
(e) sweeping the aerosol particles away from the vibrating surface by a carrier gas stream.

5,173,275

METHOD OF REMOVING OR OF ACCUMULATING HEAVY METAL IONS FROM AN AQUEOUS SOLUTION

Gernot Koehler, Worms, and Roger Klingesch, Alsbach-Hahnlein, both of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Jun. 12, 1991, Ser. No. 714,289
Claims priority, application Fed. Rep. of Germany, Jun. 15, 1990, 4019052
Int. Cl.[5] C01G *5/00*, *9/00*, *13/00*; C22B *43/00*
U.S. Cl. 423—23 2 Claims

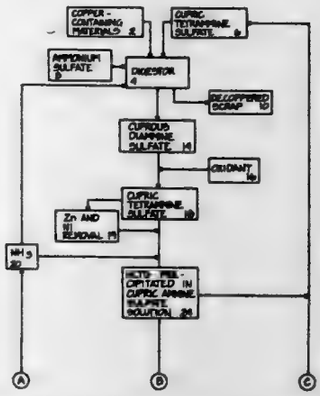
1. A method of removing the heavy metal ions mercury, uranium, silver and/or zinc from an aqueous solution containing such ions which comprises:
passing the solution containing the heavy metal ions through a chromatography column packed with granules consisting essentially of an ethylene copolymer composed of
from 40 to 87% w/w of ethylene,
from 6 to 25% w/w of (meth) acrylic acid,
from 2 to 30% w/w of (meth) acrylate and
from 5 to 25% w/w of alkyl polyglycol (meth) acrylate,
the percentages totalling 100,
the carboxyl groups in said copolymer being either non-neutralized or being neutralized to an extent of 100% or less of said carboxyl groups.

5,173,276

METHOD FOR RECOVERY OF COPPER FROM COPPER-CONTAINING MATERIALS

William H. Kruesi, Golden, Colo., assignor to Cato Research Corporation, Wheat Ridge, Colo.

Filed May 30, 1990, Ser. No. 530,824
Int. Cl.[5] C01G *1/10*; C22B *15/10*
U.S. Cl. 423—23 25 Claims



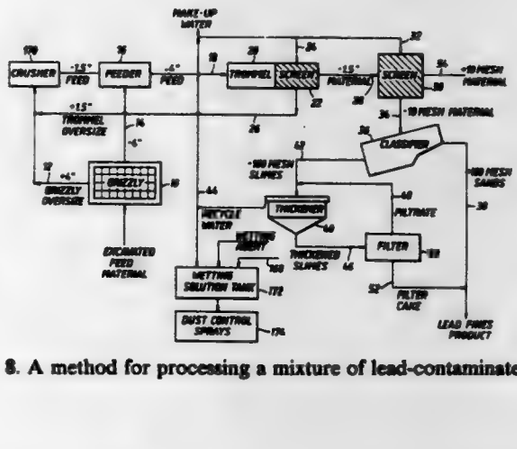
1. A process for the precipitation of hydrates of cupric tetrammine sulfate from a cupric tetrammine sulfate solution, wherein said process comprises the steps of:
(a) providing a cupric tetrammine sulfate solution;
(b) providing a concentration of ammonium sulfate in said cupric tetrammine sulfate solution of at least 50 g/l;
(c) providing a free ammonia concentration in said cupric tetrammine sulfate solution of at least 80 g/l; and
(d) adjusting the temperature of said cupric tetrammine sulfate solution to less than about 21° C. and precipitating hydrates of cupric tetrammine sulfate.

5,173,277

METHODS FOR PROCESSING BATTERY WASTE AND OTHER LEAD-CONTAMINATED MATERIALS

Alistair H. Montgomery, Lakewood, and Wolfram H. Kuhe, Denver, both of Colo., assignors to NL Industries, Inc.

Filed Feb. 22, 1991, Ser. No. 659,243
Int. Cl.[5] C01G *21/00*; H01M *10/47*
U.S. Cl. 423—92 8 Claims



8. A method for processing a mixture of lead-contaminated

materials comprising fragments of lead storage batteries and battery debris, comprising:

sizing said lead batteries and battery debris of said mixture to be less than about 4.0 inch;

mixing said sized mixture with an aqueous solution in a trommel scrubber until said fragments are sized to less than about 1.5 inch;

washing with a wash solution to remove lead fines;

separating said lead fines from said wash solution;

recycling the separated wash solution for use in wetting said mixture of lead-contaminated materials in said trommel scrubber;

scrubbing a mixture comprising about 60 to about 80 percent-by-weight of said sized fragments from said trommel scrubber in water in an attrition scrubber rotating at about 800 to about 1500 rpm to abrade lead contaminants from the surface of said materials;

separating materials from which said lead contaminants have been abraded from said water containing the abraded contaminants;

separating said abraded contaminants from said water;

recycling said separated water for use in said attrition scrubber;

contacting said lead-contaminated materials with an aqueous solution having a pH greater than about 7 to leach said lead contaminants therefrom;

separating materials from which said lead contaminants have been leached from said aqueous solution containing leached contaminants;

separating said leached contaminants from said aqueous solution; and

recycling the separated aqueous solution for use in wetting said lead-contaminated materials.

5,173,278

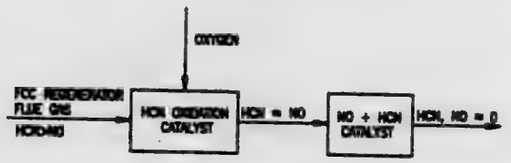
DENITRIFICATION OF FLUE GAS FROM CATALYTIC CRACKING

David O. Marler, Deptford; Ajit V. Sapre, W. Berlin; David S. Shihabi, Pennington, all of N.J.; Richard F. Socha, and Scott A. Stevenson, both of Newtown, Pa., assignors to Mobil Oil Corporation, Fairfax, Va.

Filed Mar. 15, 1991, Ser. No. 669,821

Int. Cl.[5] B01J *8/00*; C01B *21/00*; C10G *11/00, 11/02*

U.S. Cl. 423—239 **30 Claims**



1. In a process for regenerating fluid catalytic cracking catalyst that traverses a circuit comprising a cracking zone wherein fresh feed is contacted with not, active catalyst to form cracked products and a deactivating carbonaceous deposit containing bound nitrogen on the catalyst, a first separation zone wherein unconverted feed and volatile cracked products are separated form the deactivated catalyst, a regeneration zone wherein the deactivated catalyst is mixed under regeneration conditions with an amount of oxygen-containing gas effective to burn said carbonaceous deposit to form active regenerated catalyst and a flue gas comprising noxious HCN and NOx, a second separation zone wherein the regenerated catalyst and the flue gas are separated from each other with return of regenerated catalyst to the cracking zone and discharge of the flue gas to the atmosphere, the improvement comprising: passing the flue gas from the second separation zone to a denitrification zone wherein the flue gas is contacted under conversion conditions of elevated temperature with a catalyst that is active for the selective catalytic reduction of NOx by reaction with the HCN, said catalyst being selected from the group consisting of supported transition metals and crystalline zeolites, said contacting being conducted in the temperature range for converting said unwanted HCN and at least a fraction of the NOx by the reaction between the HCN and the NOx to a mixture comprising nitrogen gas, and discharging the denitrified flue gas to the atmosphere, thereby reducing air pollution.

25. A process for treating an industrial exhaust gas contaminated with HCN and NOx, and further characterized by a molar ration of HCN to NOx of about 0.1 to about 10.0, which process comprises: passing the exhaust gas to a denitrification zone wherein the gas is contacted under conversion conditions with a catalyst that is active for the selective catalytic reduction of NOx, said catalyst being selected from the group consisting of supported transition metals and crystalline zeolites, said contacting being conducted at elevated temperature for converting said unwanted HCN and at least a fraction of the NOx by reaction between the HCN and the NOx to a mixture comprising nitrogen gas, and discharging the denitrified exhaust gas to the atmosphere, thereby reducing air pollution.

5,173,279

METHOD AND COMPOSITION FOR TREATING FLUE OR EXHAUST GASES UTILIZING MODIFIED CALCIUM HYDROXIDE

Philippe A. Dumont, Auderghem, and Robert Goffin, Tross, both of Belgium, assignors to Lhoist Recherche et Developpement S.A., Belgium

Filed Nov. 21, 1990, Ser. No. 616,784

Int. Cl.[5] C01B *7/00, 17/00*; B01J *8/00*

U.S. Cl. 423—240 S **7 Claims**

1. A method for treating gases for removing therefrom undesirable compounds including sulfur oxides and hydrochloric acid, the method comprising the steps of:

preparing a specially modified calcium hydroxide in which the calcium hydroxide so prepared has a surface area of at least 35 m^2/g and a moisture content lower than 50%, the specially modified calcium hydroxide being prepared by reacting quicklime or dolomitic quicklime with water in presence of an additive selected from the group consisting of ethyleneglycol, diethyleneglycol, triethyleneglycol, monoethanolamine, diethanolamine, triethanolamine and mixtures thereof, the weight ratio of water to quicklime or dolomitic quicklime which is used in the preparation of the specially modified calcium hydroxide being in the range from about 0.6 to 2, while the weight ratio of additive to quicklime or dolomitic quicklime is at least 0.005:1; and

injecting the calcium hydroxide so prepared into the gases to be treated.

5,173,280

METHOD OF CLARIFYING PHOSPHORIC ACID USING HIGH CHARGE SULFONIC-TYPE POLYMERS

Paul A. Rey, Coraopolis, and Wood E. Hunter, Pittsburgh, both of Pa., assignors to Calgon Corporation, Pittsburgh, Pa.

Filed Oct. 15, 1921, Ser. No. 776,101

Int. Cl.[5] C01B *25/16*

U.S. Cl. 423—321 R **5 Claims**

1. A method for clarifying a phosphoric acid stream which comprises A) adding an effective amount of a high molecular weight, high charge sulfonic acid polymer to said phosphoric acid stream, wherein said polymer comprises: a) at least about 50%, by weight, of an unsaturated sulfonic acid selected from the group consisting of 2-acrylamido-2-methylpropyl sulfonic acid, 2-methacrylamido-2-methylpropylsulfonic acid, vinyl sulfonic acid, sulfoalkyl acrylate, sulfoalkyl methacrylate, allyl sulfonic acid, methallyl sulfonic acid, 3-methacrylamido-2-hydroxypropyl sulfonic acid, sulfonic acid acrylate, there salts and mixtures thereof; and b) up to about 50%, by weight of the polymer, of acrylamide or methacrylamide B) removing solids from said phosphoric acid stream.

5. A method for removing insoluble organic materials from

phosphoric acid which comprises adding an effective amount of a high molecular weight, high charge acrylamide/2-acrylamide-2-methylpropyl sulfonic acid polymer to said phosphoric acid stream and then removing said organic materials from said phosphoric acid stream.

5,173,281

SYNTHESIS OF A SYNTHETIC POROUS CRYSTALLINE MATERIAL

Clarence D. Chang, Princeton, and Donna M. Mitko, Monmouth Junction, both of N.J., assignors to Mobil Oil Corp., Fairfax, Va.

Filed Oct. 7, 1991, Ser. No. 772,178
Int. Cl.[5] C01B *33/34*
U.S. Cl. 423—702 13 Claims

1. A method for preparing a synthetic crystalline material having the X-ray diffraction pattern of Table 1, said method comprising preparing a reaction mixture capable of forming said material upon crystallization, said reaction mixture containing sufficient amounts of alkali or alkaline earth metal cations, a source of tetravalent Y oxide, a source of trivalent X oxide, water and an organic directing agent, and maintaining said reaction mixture under sufficient crystallization conditions until crystals of said material are formed, wherein said organic directing agent is selected from the group consisting of 1,4-diazacycloheptane, azacyclooctane, aminocyclohexane, aminocyclopentane and aminocycloheptane.

5,173,282

SYNTHESIS OF CRYSTALLINE MORDENITE-TYPE MATERIAL

Stuart D. Hellring, Yardley, Pa., and Randy F. Striebel, Mt. Holly, N.J., assignors to Mobil Oil Corp., Fairfax, Va.

Filed Oct. 4, 1991, Ser. No. 771,573
Int. Cl.[5] C01B *33/34*
U.S. Cl. 423—713 17 Claims

1. A method for synthesizing crystalline material exhibiting a characteristic X-ray diffraction pattern including d-spacing maxima values as follows:

TABLE 1

Interplanar d-Spacing, (A)	Relative Intensity (I/I_o)
13.59 ± 0.10	m
10.23 ± 0.10	w–m
9.05 ± 0.10	s–vs
6.57 ± 0.10	s
6.39 ± 0.06	w
6.06 ± 0.05	w
5.80 ± 0.03	w–m
4.50 ± 0.05	m–s
4.25 ± 0.15	w
4.00 ± 0.05	s–vs
3.83 ± 0.02	w–m
3.76 ± 0.02	w
3.47 ± 0.04	vs
3.41 ± 0.03	s} twin peaks
3.38 ± 0.03	s} not fully resolved
3.22 ± 0.03	m–s
2.89 ± 0.02	w–m

were vs=very strong (75–100), s=strong (50–74), m=medium (25–49) and w=weak (0–24), which comprises (i) preparing a mixture capable of forming said material, said mixture comprising sources of alkali or alkaline earth metal (M), an oxide of trivalent element (X), an oxide of tetravalent element (Y), water and directing agent (R) of 1-aminomethyl-1-cyclohexanol, and having a composition, in terms of mole ratios, within the following ranges:

YO_2/X_2O_3	1 to 70
H_2O/YO_2	10 to 100
OH^-/YO_2	0 to 0.25
M/YO_2	0 to 2.0

-continued

R/YO_2	0.01 to 2.0

(ii) maintaining said mixture under sufficient conditions including a temperature of from about 100° C. to about 200° C. until crystals of said material are formed; and (iii) recovering said crystalline material from step (ii), said recovered crystalline material containing said R.

5,173,283

PLATELETS FOR PRODUCING SILICON CARBIDE PLATELETS AND THE PLATELETS SO-PRODUCED

Luc Parent, Chicoutimi, Canada, assignor to Alcan International Limited, Montreal, Canada

Continuation of Ser. No. 591,431, Oct. 1, 1990, abandoned. This application Feb. 4, 1992, Ser. No. 830,988
The portion of the term of this patent subsequent to Jan. 14, 2009, has been disclaimed.
Int. Cl.[5] C01B *31/36;* C30B *23/00*
U.S. Cl. 423—345 9 Claims

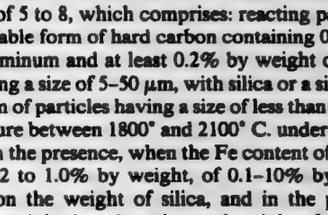
1. A process for producing unagglomerated silicon carbide platelets, 80–95% of which have a size smaller than 20 μm and aspect ratios of 5 to 8, which comprises: reacting particles of a non-graphitizable form of hard carbon containing 0.5–1.5% by weight of aluminum and at least 0.2% by weight of iron, said particles having a size of 5–50 μm, with silica or a silica precursor in the form of particles having a size of less than about 1 μm at a temperature between 1800° and 2100° C. under a noble gas atmosphere in the presence, when the Fe content of the carbon is between 0.2 to 1.0% by weight, of 0.1–10% by weight of B_2O_3 based on the weight of silica, and in the presence of 0.25–10% by weight, based on the total weight of the reaction mixture, of alpha silicon carbide particles having a size of about 5 μm or less, the ratio of the weight of silica to carbon, exclusive of impurities, being 1.67–2.3.

5,173,284

PROCESS FOR PREPARATION OF PURIFIED CALCIUM SULFATE IN AN AQUEOUS MEDIUM

Jacques Moisset, L'Isle-sur-la-Sorgue, and Alain Petit, Mouteli-mar, both of France, assignors to Lafarge Coppee, Paris, France

Filed May 23, 1990, Ser. No. 527,373
Claims priority, application France, May 23, 1989, 89 06704
Int. Cl.[5] C01F *11/46*
U.S. Cl. 423—555 28 Claims



1. A process for the preparation of purified calcium sulfate, with high whiteness, having longilinear monomorphous crystalline structures, comprising:

a) forming an aqueous solution by dissolution of impure hemihydrated calcium sulfate, at a concentration at most of 13.0 grams per liter (expressed in dissolved $CaSO_4$) and at a pH of 9–13;

b) separating the aqueous solution containing the dissolved calcium sulfate from any insoluble solid phase formed by impurities to be removed,

c) recrystallizing the purified calcium sulfate in dihydrated form from the aqueous solution resulting from step (b), to obtain a solid phase composed of recrystallized purified calcium sulfate having an average length of between 2 micrometers and 200 micrometers and a shape factor within the range 2/1 to 50/1, and an aqueous phase poor in dissolved calcium sulfate,

d) separating said aqueous phase poor in dissolved calcium sulfate from said solid phase composed of the recrystallized purified calcium sulfate, and

e) recycling the aqueous phase poor in dissolved calcium sulfate back to step (a) for dissolving impure calcium sulfate.

5,173,285

PROCESS FOR THE MANUFACTURE OF HYDROGEN SULFIDE

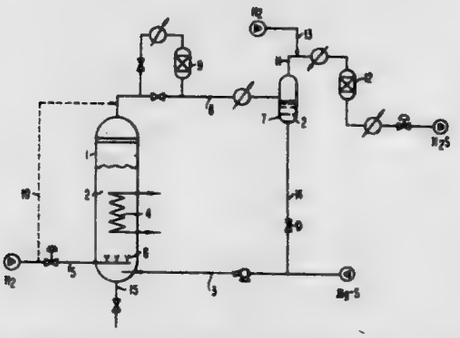
Senji Takenaka, Yokosuka; Seiichi Matsuoka, Aajyo; Tsutomu Toida, Handa; Takao Takinami, Handa; Nobuhiro Yamada, Handa, and Kouzi Tamura, Chita, all of Japan, assignors to JGC Corporation, Tokyo, Japan

Continuation of Ser. No. 335,187, Apr. 7, 1989, abandoned. This application Oct. 16, 1991, Ser. No. 779,127

Claims priority, application Japan, Apr. 7, 1988, 63-86086; Aug. 17, 1988, 63-204439

Int. Cl.[5] C01B *17/16*

U.S. Cl. 423—563 **12 Claims**



1. A process for the manufacture of hydrogen sulfide by reacting sulfur and hydrogen comprising the steps of:

(a) supplying a first stream of hydrogen gas in a first hydrogenation reactor containing sulfur, said sulfur being at least in part as molten sulfur at a first temperature ranging between about 300° C. and about 450° C.;

(b) reacting said molten sulfur and said first stream of hydrogen gas at a pressure of 0.3 to 30 kg/cm^2 G in said first hydrogenation reactor to produce a first effluent gas comprising hydrogen sulfide and unreacted sulfur vapor from said first hydrogenation reactor, said unreacted sulfur vapor having been formed by gasification of molten sulfur using heat generated by said first hydrogenation reaction;

(c) supplying a second stream of hydrogen gas into said first effluent gas in a second hydrogenation reactor;

(d) reacting said stream of second hydrogen gas with said unreacted sulfur vapor in said first effluent gas at a second temperature within the range of 200° to 300° C. to form a second effluent gas containing additional hydrogen sulfide; and

(e) recovering hydrogen sulfide from said second effluent gas.

5,173,286

FIXATION OF ELEMENTAL MERCURY PRESENT IN SPENT MOLECULAR SIEVE DESICCANT FOR DISPOSAL

Costandi A. Audeh, Princeton, N.J., assignor to Mobil Oil Corporation, Fairfax, Va.

Filed Jul. 19, 1991, Ser. No. 732,690

Int. Cl.[5] B09B *3/00*

U.S. Cl. 423—566.1 **7 Claims**

1. A process for fixing elemental mercury in a spent desiccant, comprising:

isolating a solid desiccant containing elemental mercury;

determining the quantity of elemental mercury present in the desiccant;

contacting the desiccant in an aqueous mixture with molar quantities of an alkaline metal salt sufficient for converting the elemental mercury in the solid desiccant to a water insoluble oxide or salt, resulting in a wetted desiccant impregnated with the alkaline metal salt, said alkaline metal salt is selected from the group consisting of sodium thiosulfate, sodium polysulfide, potassium peroxomonosulfate, and combinations thereof,

whereby said mercury is fixed as a water insoluble mercury oxide or salt compound in the solid desiccant.

5,173,287

CARBOXYLIC ACID COMPOSITIONS

Walton J. Smith, P.O. Box 21, Lebanon, N.H. 03766

Continuation-in-part of Ser. No. 472,389, Feb. 1, 1990, Pat. No. 5,034,416. This application Jun. 12, 1991, Ser. No. 713,854

U.S. Cl. 424—61 **8 Claims**

1. An aqueous acetone-based nail polish remover which comprises:

i. from 40 to 90% by weight acetone, and

ii. from 0.001 to 10% by weight of hydrolysed keratin.

5,173,289

AROMATIC ESTERS AND THIOESTERS, A PROCESS FOR THEIR PREPARATION AND THEIR USE IN HUMAN OR VETERINARY MEDICINE AND IN COSMETIC COMPOSITIONS

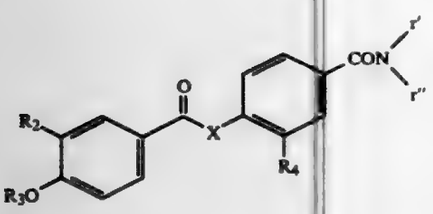
Braham Shroot, Antibes; Jacques Eustache, Grasse, and Jean-Michel Bernardon, Nice, all of France, assignors to Centre International De Recherches Dermatologiques (C.I.R.D.), Valbonne, France

Continuation-in-part of Ser. No. 298,982, Jan. 19, 1989, Pat. No. 4,925,658. This application Feb. 16, 1990, Ser. No. 480,486

Int. Cl.[5] A61K *7/06, 31/21*; C07C *69/76*

U.S. Cl. 424—70 **8 Claims**

1. A pharmaceutical composition comprising in a pharmaceutically acceptable vehicle, for enteral, parenteral, topical or ocular administration to a human or animal, a therapeutically effective amount of at least one compound of formula (I)



(I)

wherein

X represents oxygen,

r' and r'', each independently, represent hydrogen, lower alkyl, monohydroxyalkyl, polyhydroxyalkyl, phenyl, phenyl substituted by halogen, hydroxyl or nitro, benzyl or benzyl substituted by halogen, hydroxy or nitro,

R_2 represents α,α'-disubstituted alkyl having from 4–12 carbon atoms and selected from the group consisting of a tert. butyl, 1,1-dimethylpropyl, 1-methyl-1-ethylpropyl, 1-methyl-1-ethylhexyl and 1,1-dimethyl decyl radical, 1-methylcyclohexyl or 1-adamantyl, and

R_3 and R_4, each independently, represent hydrogen or lower alkyl.

5,173,290

HAIR FIXATIVES

Daniel J. Halloran, and Judith M. Vincent, both of Midland, Mich., assignors to Dow Corning Corporation, Midland, Mich.

Division of Ser. No. 609,488, Nov. 5, 1990, Pat. No. 5,085,859, which is a continuation-in-part of Ser. No. 548,810, Jul. 6, 1990, Pat. No. 5,075,103. This application Oct. 4, 1991, Ser. No. 770,823

Int. Cl.[5] A61K *7/11*

U.S. Cl. 424—71 10 Claims

1. In a hair treating method for imparting curl retention to hair in which at least one film forming ingredient is applied to the hair, the improvement comprising utilizing as the film forming ingredient an interpenetrating polymer network including a substituted vinyl copolymer having polar functionality selected from the group consisting of acrylic, carboxylate, and ether, and an organosilicon compound having a formula selected from the group consisting of

$$(R'R''SiO)_x(SiO_{4/2})_y$$

$$(R'R''SiO)_x(SiO_{4/2})_y(R_3'''SiO_4)_z$$

wherein R', R'', and R''', are selected from the group consisting of alkyl, alkenyl, aryl, and alkylaryl, radicals having from one to twenty carbon atoms; x and z are each integers having a value of from zero to about one thousand, and y is an integer having a value of from one to about one thousand.

5,173,291

FILM-FORMING EMULSION CONTAINING IODINE AND METHODS OF USE

Robert H. Brink, and Chi-Ming Tseng, both of St. Paul, Minn., assignors to Minnesota Mining and Manufacturing Company, St. Paul, Minn.

Division of Ser. No. 334,366, Apr. 10, 1989, Pat. No. 4,978,527. This application Sep. 10, 1990, Ser. No. 579,690

The portion of the term of this patent subsequent to Dec. 18, 2007, has been disclaimed.

U.S. Cl. 424—78.06 8 Claims

1. A method of promoting asepsis on mammalian skin, comprising the steps of:

(1) applying to said skin a film-forming emulsion, comprising:

a) a substantially water resistant film-forming copolymer phase comprising A, B and C monomers wherein

A is a monomer wherein the corresponding homopolymer has a glass transition temperature of less than about −15° C., and is present as about 15 to 80% of the total weight of all monomers in the copolymer,

B is a monomer wherein the corresponding homopolymer has a glass transition temperature of more than about −5° C., and is present as about 20 to 70% of the total weight of all monomers in the copolymer, and

C is a monomer capable of complexing iodine and delivering it to the skin and is present as about 1 to 15% of the total weight of all monomers in the copolymer;

b) about 0.05 to 15% of iodine based on total emulsion weight;

c) an effective amount of an emulsifying agent; and

d) about 30 to 95% by weight of water; said monomers in the copolymer phase selected such that said emulsion, when applied to human skin in an amount sufficient to form a film having a thickness of about 0.01 mm., dries in less than five minutes to form a film having the properties of

i) being hydrophobic, as determined by scrubbing the film using light finger pressure with a saline-soaked gauze for at least 40 scrubs with no observable removal of film or loss of iodine color, and

ii) being capable of elongating at least about 5% before breaking;

(2) allowing said emulsion to dry to form a film;

and (3) allowing said film to remain on said skin to promote asepsis.

5,173,292

MONOCLONAL ANTIBODIES WHICH SPECIFICALLY RECOGNIZE GALACTOSYL-GLOBOSIDE, COMPOSITIONS CONTAINING SAME AND METHODS OF USING SAME

David S. Schrump, Chicago, Ill.; Koichi Furukawa, New York, N.Y.; Hiroshi Yamaguchi, Nagoya, Japan; Kenneth O. Lloyd, Bronx, and Lloyd J. Old, New York, both of N.Y., assignors to Sloan-Kettering Institute for Cancer Research, New York, N.Y.

Filed Jun. 14, 1988, Ser. No. 212,312

Int. Cl.[5] A61K *37/66;* C12H *5/00;* C61K *35/14*

U.S. Cl. 530—387.5 8 Claims

1. A human monoclonal antibody which specifically recognizes a galactosyl-globoside found on the surface of a human cancer cell, which galactosyl-globoside is specifically recognized by a monoclonal antibody produced by a hybridoma cell line (ATTC Accession No. HB 9748) or a hybridoma cell line (ATTC Accession No. HB 9749).

5,173,293

ANTI-T-CELL ANTIBODIES AS ADJUVANTS

Sherree L. Friend, Sunnyvale, and Vernon T. Oi, Mountain View, both of Calif., assignors to Becton Dickinson and Company, Franklin Lakes, N.J.

Filed Feb. 23, 1989, Ser. No. 314,731

Int. Cl.[5] A61K *39/02, 39/12, 39/395;* G01N *33/531*

U.S. Cl. 424—85.8 20 Claims

1. A method for immunizing a host against an antigen by administering to said host an effective amount of an antigen-/antibody complex formed between an anti-T cell antibody and said antigen wherein the antibody recognizes a cell surface structure other than MHC Class I or Class II glycoproteins and wherein said complex is formed by conjugating or coupling said antibody to said antigen.

5,173,294

DNA PROBE FOR THE IDENTIFICATION OF HAEMOPHILUS INFLUENZAE

Timothy F. Murphy, Amherst, and Michael A. Apicella, Pendleton, both of N.Y., assignors to Research Foundation of State University of New York, Buffalo, N.Y.

Continuation-in-part of Ser. No. 932,872, Nov. 18, 1986, abandoned. This application Oct. 8, 1987, Ser. No. 92,948

Int. Cl.[5] A61K *39/42*

U.S. Cl. 424—86 25 Claims

1. A composition useful in the therapeutic treatment of disease due to typable or non-typable *Haemophilus influenzae*, said composition comprising purified antiserum which recognizes a *Haemophilus influenzae* outer membrane protein having a molecular size of from about 15,000 to about 17,000 daltons.

5,173,295

METHOD OF ENHANCING THE REGENERATION OF INJURED NERVES AND ADHESIVE PHARAMACEUTICAL FORMULATION THEREFOR

Peter Wehling, Monheim, Fed. Rep. of Germany, assignor to Advance Biofactures of Curacao, N.V., Curacao, Netherlands Antilles

Filed Oct. 5, 1990, Ser. No. 593,778

Int. Cl.[5] A61K *37/54*

U.S. Cl. 424—94.67 12 Claims

1. A method of enhancing the regeneration of injured nerves which comprises administering an effective amount of collagenase to the zone of injury of the nerve during the regeneration process.

5,173,296

COMPOSITIONS CONTAINING PSYLLIUM

James R. Andre, and John A. Colliopoulos, both of Cincinnati, Ohio, assignors to The Procter & Gamble Company, Cincinnati, Ohio

Continuation of Ser. No. 614,655, Nov. 16, 1990, abandoned. This application Mar. 25, 1992, Ser. No. 857,688

Int. Cl.[5] A61K *35/78*; A23G *3/00*; A23L *1/36*

U.S. Cl. 424—195.1 12 Claims

1. A composition comprising:
(a) from about 5% to about 50% psyllium fiber;
(b) from about 10% to about 50% almond paste; and
(c) from about 0% to about 85% carrier materials suitable for ingestion.

5,173,297

BACTERIOCIN FROM *LACTOCOCCUS LACTIS* SUBSPECIES *LACTIS*

Ebenezer R. Vedamuthu; James T. Henderson, both of Bradenton,, Fla.; John D. Marugg, Utrecht, and Pieter D. VanWassenaar, Maassluis, both of Netherlands, assignors to Quest International Flavors & Food Ingredients Company division of Indopco, Inc., Bridgewater, N.J.

Filed Jul. 1, 1991, Ser. No. 721,774

Int. Cl.[5] A01N *63/02*

U.S. Cl. 424—418 12 Claims

1. A method for inhibiting sensitive Gram-positive bacteria which comprises:
exposing the bacteria to an inhibitory amount of a precursor polypeptide having the amino acid sequence SEQ ID NO.: 2 wherein Xaa at amino acid positions 3, 5, 29 and 33 is selected from Ser, Ala-, or Dha, and Xaa at amino acid positions 2, 8, 13, 23 and 25 is selected from Abu-, or Dhb, and Xaa at amino acid positions 7, 11, 19, 26 and 28 is selected from Ala-S-, where Ala- is 3-substituted Alanine (—(CO)CH(NH—)CH_2—), Abu- is 3-substituted 2-aminobutanoic acid (—(CO)CH(NH—)CH(CH_3)—), Ala-S- is (3-alanyl)-thio, Abu is 2-amino butanoic acid, Dha is 2-amino propenoic acid and Dhb is 2-aminobut-2-enoic acid, and subunits thereof having an essentially equivalent inhibitory activity to the sensitive bacteria and wherein there are sulfur bridges between the amino acids which provide the activity to thereby inhibit the bacteria.

5,173,298

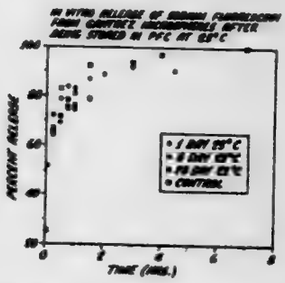
NONAQUEOUS FLUORINATED DRUG DELIVERY VEHICLE SUSPENSIONS

David L. Meadows, Mission Viejo, Calif., assignor to Allergan, Inc., Irvine, Calif.

Filed Sep. 27, 1990, Ser. No. 588,697

Int. Cl.[5] A61K *9/14, 47/34, 47/06, 47/32*

U.S. Cl. 424—427 6 Claims



1. A pharmaceutical composition comprising:
a nonaqueous fluorinated liquid carrier selected from the group consisting of polyfluoroalkylmethylsiloxanes; and
at least one polymeric drug delivery vehicle suspended in said nonaqueous liquid carrier, said drug delivery vehicle incorporating a pharmaceutically effective amount of a therapeutic or diagnostic compound.

5,173,299

SUSTAINED RELEASE COMPOSITIONS FOR TREATING PERIODONTAL DISEASE

Nalinkant C. Damani, Cincinnati, Ohio, assignor to The Procter & Gamble Company, Cincinnati, Ohio

Continuation of Ser. No. 438,545, Nov. 17, 1989, Pat. No. 5,084,267. This application Oct. 7, 1991, Ser. No. 772,398

The portion of the term of this patent subsequent to Jan. 28, 2009, has been disclaimed.

Int. Cl.[5] A61K *31/78, 47/00*

U.S. Cl. 424—435 10 Claims

1. A composition suitable for insertion into or around the periodontal pocket of a person or lower animal suffering from diseases of the oral cavity consisting essentially of polypropenoic acid crosslinked with less than about 0.004 mole percent of crosslinking agent and a drug active suitable for treating said diseases.

5,173,300

HINDERED PHENOLIC ANTIOXIDANT CONTAINING HYDROPHILIC URETHANE POLYMER; DRY CLEANING SOLVENT RESISTANT, WATERPROOF, MOISTURE-VAPOR PERMEABLE MATERIAL CONTAINING THE POLYMER; AND METHOD OF MAKING THE SAME

Malcolm B. Burleigh, St. Paul, and Roger A. Mader, Stillwater, both of Minn., assignors to Minnesota Mining and Manufacturing Company, St. Paul, Minn.

Filed Jun. 28, 1990, Ser. No. 546,260

Int. Cl.[5] A61L *15/16*; B32B *27/40*

U.S. Cl. 424—445 22 Claims

1. A waterproof, moisture vapor permeable material comprising: a microporous polymeric matrix having continuous pores comprising continuous passages extending therethrough and opening into both surfaces thereof, and a moisture-vapor permeable, water-impermeable, hydrophilic urethane polymer having about 0.1 to about 10 weight percent of a hindered phenolic antioxidant reacted into its structure bonded to said

microporous polymer matrix wherein said hindered phenolic antioxidant is selected from the group consisting of hindered phenolic antioxidants of the formula $CR[(CH_2)_x—OH]_3[(CH_2)_q—OP]_y$ wherein

R is selected from the group consisting of —H, —CH_3, —C_2H_5, —$(CH_2)_wOH$, and —$(CH_2)_wOP$;

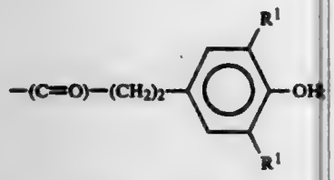
a is an integer of 0 to 2;

x is an integer of 0 to 2;

y is an integer of 0 to 2;

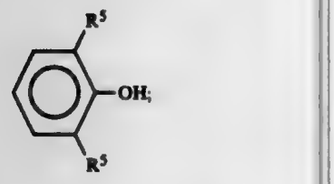
w is an integer of 0 to 2;

p has the general formula



wherein R^1 represents a tertiary butyl group and wherein the values of x, a, and w are such that not more than one of x, a, or w can equal 0 at a time; and hindered phenolic antioxidants of the general formula

wherein R^3 has the formula



wherein

R^5 is a tertiary butyl group; and

R^4 is selected from the group consisting of —H, an alkyl group, and —CH_2OH.

5,173,301

SURGICAL ADHESIVE

Tetsuo Itoh, Shiga, and Takehisa Matsuda, Minoo, both of Japan, assignors to Sanyo Chemical Industries, Ltd., Kyoto, Japan

Filed Nov. 27, 1991, Ser. No. 799,322

Claims priority, application Japan, Nov. 27, 1990, 2-327392

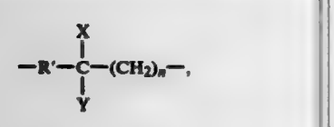
Int. Cl.[5] A61F *13/02;* C08G *18/38*

U.S. Cl. 424—448 19 Claims

1. A surgical adhesive which comprises at least one NCO-terminated hydrophilic urethane prepolymer, derived from (a) an organic polyisocyanate and (b) a polyol component comprising at least one polyester polyol derived from a dicarboxylic acid represented by the general formula:

$$HOOC—(A)_m—COOH \quad (1)$$

wherein m is 0 or 1, A is —CH_2— or an electron attracting group represented by the formula: —R—CO— or



R is a divalent hydrocarbon group containing 1–8 carbon atoms, R' is a divalent hydrocarbon group or halogen-substituted hydrocarbon group containing 1–8 carbon atoms, X is a halogen atom or nitro or cyano group, Y is hydrogen atom, a halogen atom or nitro or cyano group, n is 0, 1 or 2, wherein the polyester polyols derived from a dicarboxylic acid have an equivalent weight of 20–1000, the ratio of NCO/OH is 1.5 or more, and the NCO content of the NCO-terminated hydrophilic urethane prepolymer is 1–10%.

5,173,302

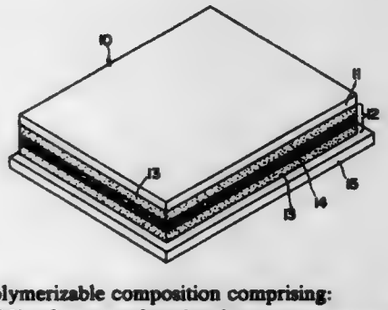
HYDROPHILIC PRESSURE SENSITIVE ADHESIVE FOR TOPICAL ADMINISTRATION OF HYDROPHOBIC DRUGS

Carolann M. Holmblad, Cambridge; Joan M. Bergstrom, and Terese A. Bartlett, Circle Pines Minneapolis, all of Minn., assignors to Medtronic, Inc., Minneapolis, Minn.

Filed Sep. 28, 1990, Ser. No. 590,648

Int. Cl.[5] A61F *13/00;* A61K *47/32*

U.S. Cl. 424—448 24 Claims



1. A polymerizable composition comprising:

20%–50% of a monofunctional monomer component, at least 75% of said component comprising 2-acrylamido-2-methylpropane sulfonic acid or a salt thereof, the balance being selected from the group consisting of acrylic acid, water soluble acrylic functional monomers and vinyl pyrrollidone;

30%–50% of a hymectant selected from the group consisting of compounds of the formula

$$HO—(C_2H_4O)_n—H,$$

$$HO—(C_3H_6O)_m—H$$

and mixtures thereof, where n is in the range of about 4 to about 16 and m is 1–4;

between about 0.02% and about 0.20% of a crosslinking monomer;

an amount of a free radical polymerization initiator effective for initiating polymerization of said monofunctional monomer and crosslinking monomer components; and

a therapeutically effective amount of a topically or transdermally deliverable drug, at least about 60% of said drug being dissolved in the formulation.

5,173,303

CUTANEOUS DELIVERY OF ORGANIC MATERIALS

John R. Lax; Blair Gebo, both of Wooster, and Darryl H. Woods, Dalton, all of Ohio, assignors to Technology Unlimited, Inc., Wooster, Ohio

Continuation-in-part of Ser. No. 356,506, May 25, 1989, abandoned. This application Jul. 5, 1991, Ser. No. 726,037

Int. Cl.[5] A61K *37/22;* A01N *25/28*

U.S. Cl. 424—450 5 Claims

1. An article of manufacture, comprising:

an insect repellent which is substantially insoluble in water and soluble in organic solvents;

a first phase which is a liposome lamellae enveloping a second phase which is a bio-organic insect repellent solu-

ble in organic solvents and substantially insoluble in water; and

an anchoring molecule of sodium pyridinethione having a moiety embedded in said liposome.

5,173,304

AGENTS FOR THE TREATMENT OF SEVERE PAIN AND PREPARATION OF SAID AGENTS

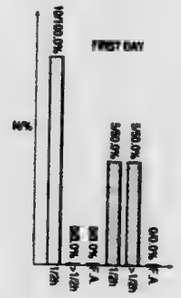
Manfred Löhner; Klaus Ponselt, both of Bonn; Ute Vogtle-Junkert, Alfter, and Hans H. Wagener, Meckenheim, all of Fed. Rep. of Germany, assignors to Dolorgiet Beteiligungs GmbH, St. Augustin, Fed. Rep. of Germany

Filed Aug. 14, 1990, Ser. No. 567,358

Claims priority, application Fed. Rep. of Germany, Aug. 17, 1989, 3927113

Int. Cl.[5] **A61K** *9/64*

U.S. Cl. 424—456 **12 Claims**



1. A pharmaceutical dosage unit for the treatment of severe pain which is a soft gelatin capsule which includes:

pain relief ingredients comprising from about 30 to about 50 parts by weight ibuprofen and from about 1.5 to about 4 parts by weight codeine or a physiologically compatible salt thereof;

at least one ingredient for partially dissolving and suspending said pain relief ingredients comprising (i) from about 68.5 to about 46 parts by weight of polyoxyethylene-polyoxypropylene-diol or (ii) from about 30 to about 76 parts by weight polyoxyethylene-polyoxypropylene-diol, polyethyleneglycol or polypropylene glycol, said pain relief ingredients being partially dissolved and partially suspended in said at least one ingredient; and

from about 5 to about 40 parts by weight of a physiologically compatible surfactant selected from the group consisting of polyoxyethylene-glycerol-tri-hydroxystearate, polyoxyethylene-(C_{12-18})-fatty alcohol ether, polyoxyethylene-stearate, polyoxyethylene-sorbitan-mono-(C_{12-18})-fatty acid ester, polyoxyethylene-polyoxypropylene-diol and mixtures thereof.

5,173,305

COMPOSITION FOR PROTECTION OF OESOGASTRODUODENAL MUCOUS MEMBRANE

Georges S. Grimberg, 123 rue de l'Universite, F-75007 Paris, France

Continuation-in-part of Ser. No. 178,641, Apr. 7, 1988, abandoned, which is a division of Ser. No. 836,475, Mar. 5, 1986, Pat. No. 4,764,374. This application Feb. 22, 1990, Ser. No. 484,729

Claims priority, application France, Mar. 6, 1985, 8503306

Int. Cl.[5] **A61K** *33/06, 33/08, 33/10*

U.S. Cl. 424—682 **7 Claims**

1. A pharmaceutical composition in powder form for the protection of the oesogastroduodenal mucous membrane having active antacid components, wherein said active antacid components consist essentially of sufficient guar gum to provide antacid and buffering effect at a pH of from 0.8 to 3.5, and at least one antacid agent other than guar gum in an amount effective as an antacid, said guar gum and at least one antacid agent other than guar gum being in a ratio of about 2.5:1 to about 2:13.

5,173,306

STABILIZED SOLID THIOCARBONATE

James A. Green, II, Chino, and Donald C. Young, Fullerton, both of Calif., assignors to Union Oil Company of California, Los Angeles, Calif.

Continuation of Ser. No. 262,961, Oct. 28, 1988, Pat. No. 5,041,240, which is a continuation-in-part of Ser. Nos. 55,923, and 55,719 are divisions of Ser. No. 490,461, and Ser. No. 56,143 is a continuation-in-part of Ser. No. 490,461, abandoned. Ser. No. 931,517, Nov. 17, 1986, abandoned, Ser. No. 55,923, May 29, 1987, Pat. No. 5,013,350, Ser. No. 55,719, May 29, 1987, abandoned, Ser. No. 56,143, May 29, 1987, abandoned, and Ser. No. 128,146, Dec. 3, 1987, Pat. No. 5,022,912, which is a continuation-in-part of Ser. No. 685,454, Apr. 30, 1984, Pat. No. 4,726,144, which is a continuation-in-part of Ser. No. 315,492, Oct. 27, 1981, Pat. No. 4,476,113, and Ser. No. 490,461, May 2, 1983, abandoned, Ser. No. 128,146, Dec. 3, 1987, Pat. No. 5,022,912

This application Jun. 28, 1991, Ser. No. 722,835

Int. Cl.[5] **A01N** *59/02;* **C01B** *31/26*

U.S. Cl. 424—715 **46 Claims**

1. A method for producing a solid tetrathiocarbonate which comprises removing the water from an aqueous solution comprising a tetrathiocarbonate selected from the group consisting of alkali, and alkaline earth metal tetrathiocarbonates, and combinations thereof, and a member selected from the group consisting of alkali and alkaline earth metal sulfides of the formula M_nS_x, wherein M is selected from alkali and alkaline earth metals and combinations thereof, x is at least 1, n is 2 when M is alkali metal, and n is 1 when M is an alkaline earth metal, the concentration of said sulfide in said solution being sufficient to increase the stability of said tetrathiocarbonate in said solution, and removing the water from said aqueous solution under conditions sufficient to obtain said solid tetrathiocarbonate of improved chemical stability.

5,173,307

FOAM-REBONDING MOLD

David E. Nestle, Coral, Mich., assignor to Herman Miller, Inc., Zeeland, Mich.

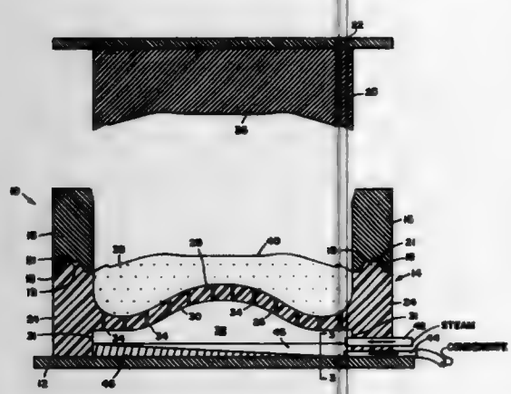
Filed Jan. 9, 1991, Ser. No. 639,140

Int. Cl.[5] **B28B** *1/50, 7/42*

U.S. Cl. 425—4 R **8 Claims**

1. A foam rebonding mold wherein a molded foam member is formed from particles of existing foam which are bonded together in a curing operation utilizing steam, said mold comprising a mold base plate, a contoured lower mold member carried by said base plate and in combination with said base plate defining a steam chamber, a foaming core cooperative with said lower mold member to define a mold cavity, a steam

inlet on one side of said mold for directing steam into said steam chamber, and a condensate drain from said steam chamber, said mold being improved by said steam inlet being adjacent said condensate drain, said base plate having an upper surface defining a bottom wall of said steam chamber and being in the form of a ramp sloping from an opposite side of said



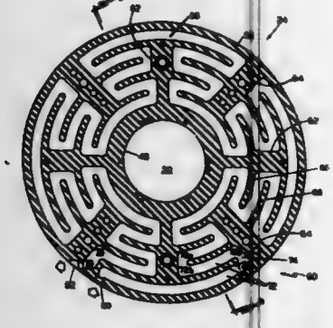
mold downwardly towards said steam inlet and condensate drain for continuously removing condensate from all parts of said steam chamber.

5,173,308

STEAM PLATEN FOR TIRE CURING PRESS

Joe F. Scantland, and Thomas A. Flory, both of Akron, Ohio, assignors to Scantland Industries, Inc., Copley, Ohio

Filed Jan. 2, 1992, Ser. No. 815,967
Int. Cl.[5] B29C *35/00*
U.S. Cl. 425—40 **9 Claims**



1. A steam platen for a rubber curing press, said steam platen being made of a rigid heat conductive material;

said steam platen having wall means and partition means which together define a steam cavity, said steam cavity consisting essentially of at least one continuous serpentine steam passage, said steam passage having an inlet end and an exit end and comprising a plurality of non-intersecting passageways and a plurality of non-intersecting connecting ducts arranged in alternating sequence, said passageways having equal cross sectional areas and being of essentially uniform cross sectional area, each said steam passage proving a continuous flow path for steam from its inlet and to its exit end;

said steam platen further comprising a steam inlet and a steam and condensate outlet in communication with said passage;

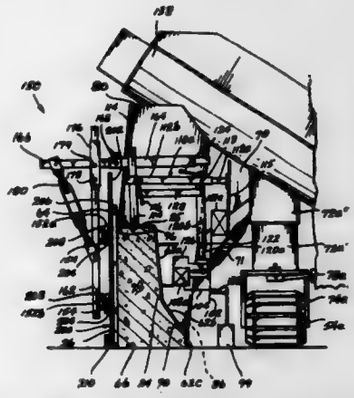
said passage means extending over substantially the entire area of said platen so as to provide a substantially uniform platen surface temperature.

5,173,309

APPARATUS FOR FORMING CONCRETE BARRIERS

John F. Belarde, 6327 114th Ave. SE., Renton, Wash. 98056

Filed Aug. 21, 1990, Ser. No. 571,458
Int. Cl.[5] B28B *13/04*
U.S. Cl. 425—64 **20 Claims**



1. A system for continuously forming a concrete structure that extends in a substantially horizontal direction and has a predetermined cross-sectional configuration, the system comprising:

a frame;

first form means, coupled to said frame, for supporting a portion of one side of a concrete structure being formed;

second form means for supporting at least a portion of an opposite side of the concrete structure, said second form means being designed to coact with said first form means so as to enclose an area having a cross-sectional configuration corresponding to the predetermined cross-sectional configuration of the concrete structure, wherein said second form means is fixed with respect to a surface on which the concrete structure is formed;

drive means coupled to said first form means and to said frame for causing said frame and said first form means to move in said substantially horizontal direction; and

support means, coupled to said frame so that said drive means causes said support means to move with said first form means in said substantially horizontal direction, for supporting successive portions of said second form means relative to said first form means as said drive means causes said first form means to move in said substantially horizontal direction so as to permit said first form means to coact with said second form means so as to enclose successive areas having a cross-sectional configuration corresponding to the predetermined cross-sectional configuration of the concrete structure.

5,173,310

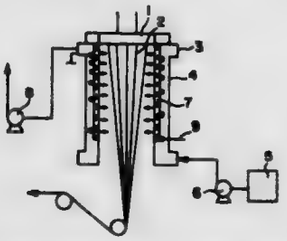
DEVICE FOR COOLING MOLTEN FILAMENTS IN SPINNING APPARATUS

Eiji Katou; Akifumi Katou, and Yoshihiro Yoshimura, all of Kuga, Japan, assignors to Mitsui Petrochemical Industries, Ltd., Tokyo, Japan

Division of Ser. No. 327,085, Mar. 22, 1989, abandoned. This application Jan. 8, 1991, Ser. No. 639,034
Claims priority, application Japan, Mar. 24, 1988, 63-70915
Int. Cl.[5] B29C *35/06*
U.S. Cl. 425—72.2 **1 Claim**

1. In a spinning apparatus having a die for extruding a plurality of molten filaments in a predetermined direction, cooling means for the blowing air to cool the molten filaments and take-up means for taking up the cooled filaments with a draft, wherein said cooling means comprises a chimney, extending a predetermined distance in said extrusion direction, connected to said die so as to surround said molten filaments, said chim-

ney having an inner peripheral surface which allows air to pass from an interior portion of said chimney to said filaments, and fan means for supplying cool air to said interior portion of said chimney to be blown through said inner peripheral surface onto said filaments, the improvement comprising a heater in the path of flow of the blowing air, said heater including heating wires wound around said inner peripheral surface of said



chimney and arranged such that the pitch of the heating wires is closer in an upstream region of said chimney with respect to the extrusion direction than in a downstream region of said chimney, whereby the temperature of the blowing air is higher near the extrusion die and lower near the take-up means, such that the draft is applied to the filaments in the upstream region having a lower temperature differential between the interior and exterior of the extruded molten filaments.

5,173,311

APPARATUS FOR MANUFACTURING BRICKS WITH SMOOTH SIDE SURFACES

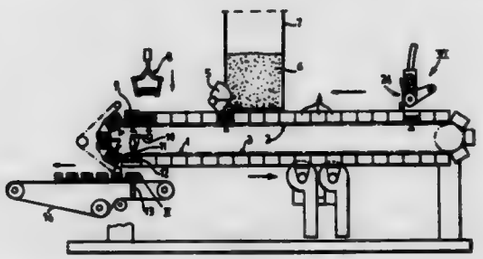
Henricus G. R. Reusen, Bemmel, Netherlands, assignor to Machinefabriek De Boer B.V., Nijmegen, Netherlands

Division of Ser. No. 59,009, Jun. 8, 1987, Pat. No. 4,832,587. This application Feb. 22, 1989, Ser. No. 313,796

Claims priority, application Netherlands, Jun. 25, 1986, 8601671

Int. Cl.[5] B28B *5/02, 7/38*

U.S. Cl. 425—99 **3 Claims**



1. A device for manufacturing bricks with smooth side surfaces, comprising a conveyor carrying a plurality of open top mould containers in a circulating path, one portion of said path being substantially horizontal, each of said mould containers having sidewalls fixed relative to the conveyor and a bottom movable relative to said sidewalls, a first container for holding releasing material, said first container positioned adjacent said conveyor at a location where the top of mould containers open upward, a means associated with said first container for applying said releasing material on only the inner surface of the bottom of each of said mould containers, a second container for holding clay positioned adjacent said conveyor downstream of said first container at a location where the top of mould containers open upward, means associated with said second container for dispensing clay out of said second container and into said mould containers, means adjacent said conveyor for pressing the clay into said mould containers, means adjacent said conveyor for trimming excess clay from said mould containers, means for placing a drying plate across the open top of said filled mould containers and a first means adjacent the conveyor where the mould containers open downward for displacing the bottom of each mould container relative to the sidewalls thereby ejecting a formed brick with smooth sides, wherein said releasing material applying means comprises a rotating roller which intermittently forms a slit relative to a wall of the first container so that releasing material is only dropped onto the bottom of said mould containers.

5,173,312

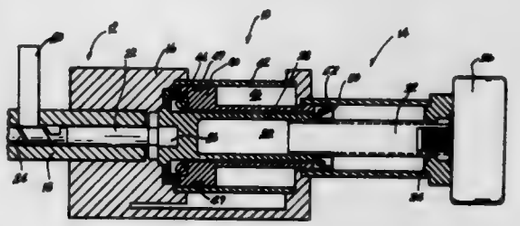
INJECTION UNIT FOR PLASTIC INJECTION MOLDING MACHINE

Helmut Julinot, Sharon, Canada, assignor to Husky Injection Molding Systems Ltd., Bolton, Canada

Continuation of Ser. No. 569,649, Aug. 20, 1990, abandoned. This application Oct. 15, 1991, Ser. No. 777,485

Int. Cl.[5] B29C *45/18*

U.S. Cl. 425—145 **3 Claims**



1. An injection molding machine comprising:

a plasticizing unit having a plasticizing screw mounted within a cylinder;

a quill having a first end fixed to said plasticizing screw and a second end provided with a bore;

a quill insert having an external surface received within said bore of said quill;

motor means connected to an end of said quill insert for rotating said quill insert, said quill and said plasticizing screw;

an injection piston mounted on said quill within an injection cylinder, said injection piston being axially fixed on said quill in a non-rotatable manner therewith;

seals positioned between said injection piston and said injection cylinder;

said injection piston including an extension portion projecting therefrom and having an end terminating at the second end of said quill;

means for reciprocating said injection piston within said injection cylinder for imparting reciprocating motion to said quill and said plasticizing screw;

first thrust bearing means provided on said quill proximate to said first end of said quill between said quill and said injection piston for allowing said quill to rotate independently of said injection piston; and

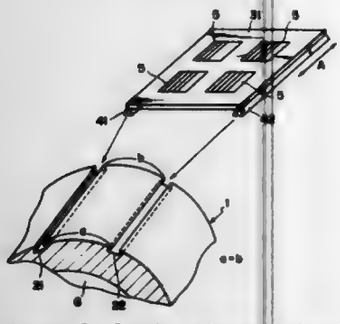
second thrust bearing means for stabilizing the injection piston and for increasing the life of the seals, said second thrust bearing means being provided on said quill proximate to said second end of said quill and between said quill and said end of said extension portion of said injection piston.

5,173,313

ROLL-STAMPER FOR FORMING SUBSTRATE OF INFORMATION-RECORDING MEDIUM

Tetsuya Sato; Osamu Kasome; Hitoshi Yoshino; Hisanori Hayashi, all of Kawasaki, and Hirofumi Kamitakahara, Yokohama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 21, 1991, Ser. No. 658,688
Claims priority, application Japan, Feb. 22, 1990, 2-39758
Int. Cl.[5] B29C *43/46;* B29D *17/00*
U.S. Cl. 425—183 31 Claims



1. A roll-stamper for forming substrates of an information-recording medium, which comprises at least one stamper being fastened along a peripheral face of a mirror roller, said stamper having on a front side patterns each corresponding to a preformat for an information recording medium, and having stoppers fixed along both edges on a reverse side thereof, and being fastened to the mirror roller by inserting said stoppers into negative stopping-grooves cut into the mirror roller in parallel with an axial direction of the mirror roller, wherein

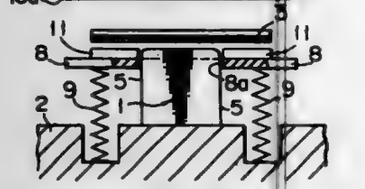
said stoppers and the stopping-grooves have a cross-sectional profile preventing said stamper from peeling off the surface of the mirror roller.

5,173,314

APPARATUS FOR BENDING AND FORMING A COMPOSITE MATERIAL SHEET

Masanori Hosoi, Tochigi, Japan, assignor to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 570,598, Aug. 21, 1990, Pat. No. 5,114,654.
This application Mar. 3, 1992, Ser. No. 845,261
Claims priority, application Japan, Aug. 28, 1989, 1-220951
Int. Cl.[5] B29C *53/00*
U.S. Cl. 425—389 11 Claims



1. Apparatus for bending and forming a composite material sheet made from laminated meshes of fibers into a product of U-shaped cross section having a reference surface and a pair of flange surfaces bent angularly along opposite curved edges of the reference surface, said apparatus comprising:

a stationary forming die having an upper reference forming surface and flange forming surfaces extending downwards from opposite edges of the reference forming surface, said edges being curved;

an auxiliary forming die surrounding the stationary forming die and having upwardly convex auxiliary forming ridges on an upper surface thereof, disposed adjacent to said edges of the stationary forming die and extending away from the edges;

resilient means for supporting said auxiliary forming die to enable the same to move downwards relative to the stationary forming die against a resilient force; and

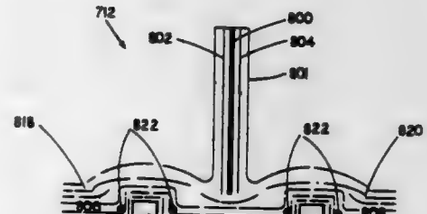
an expandable, elastic depressing die disposed above said stationary and auxiliary forming dies for moving downwards against the forming dies, thereby to form said reference surface of the product against said reference forming die and to form said flange surfaces of the product with the flange surfaces held between the depressing die and the auxiliary forming die which is moving downwards, said auxiliary forming ridges being disposed so as to extend the flange surfaces in directions to prevent creases and lines from being formed while the flange surfaces are being bent downwards in the state held between the depressing die and the auxiliary forming die.

5,173,315

TOOL FOR JOINING A SEGMENTED MANDREL FOR FORMING COMPOSITE ARTICLES

Sandra M. Charlson; Steven J. Kotula, and Michael R. McCloy, all of Salt Lake County, Utah, assignors to Hercules Incorporated, Wilmington, Del.

Division of Ser. No. 343,453, Apr. 25, 1989, Pat. No. 5,022,845.
This application Oct. 25, 1990, Ser. No. 604,548
Int. Cl.[5] B29C *33/48*
U.S. Cl. 425—403 3 Claims



1. A tool for use in aligning, supporting, fastening together and sealing adjacent sections of a mandrel having a curved outer surface, said tool having a t-shaped cross section and comprising

(a) a leg section;

(b) a top section that is integral with said leg section, said leg section intersecting a middle part of said top section of said T-shaped cross section;

(c) a top surface on said top section away from said leg section, said top surface having a pair of grooves spaced apart from each other along a length of said tool;

(d) a composite sheet extending (i) through a middle of said leg section along a direction perpendicular to said top section and (ii) into said top section, said sheet dividing said leg section into first and second portions on either side of said sheet and stopping short of said top surface;

(e) first and second filament groups extending respectively along said first and second portions from an end part of said leg section to an end part of said leg section that is remote from said top section;

(f) a third group of filaments that extends in a direction generally parallel with a plane on said top surface and substantially perpendicular to the general direction of said first and second groups of filaments, and

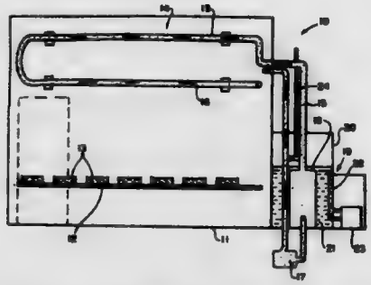
(g) o-ring means for fitting into said grooves in the top surface of said top section wherein said o-ring means provides a gas tight seal between the sections of the mandrel that the tool is aligning, supporting, and fastening together.

5,173,316

METHOD FOR PREPARING FISH BAIT

William B. Heycott, 136 Ferry Road, Southport Gold Coast, Queensland 4215, Australia

Filed Sep. 4, 1991, Ser. No. 754,558
Int. Cl.[5] A23K *3/00*
U.S. Cl. 426—1 7 Claims



1. A method for preparing baits, including fish baits comprising the steps of arranging raw aquatic product in a container, placing said container in an enclosed space and cooling and dehumidifying the air in said space for a period of time sufficient to cause internal body fluids of said product to pass out of said product.

5,173,317

GUM COMPOSITIONS CONTAINING VINYL LAURATE/VINYL ACETATE COPOLYMER

Scott E. Hartman, Roosevelt, and Steven P. Synouky, Greenbrook, both of N.J., assignors to Wm. Wrigley Jr. Company, Chicago, Ill.

Filed Oct. 29, 1991, Ser. No. 784,250
Int. Cl.[5] A23G *3/30*
U.S. Cl. 426—6 10 Claims

1. A gum base composition comprising:
(a) about 10% to about 45% by weight elastomer consisting essentially of vinyl laurate/vinyl acetate copolymer;
(b) about 10% to about 45% by weight elastomer plasticizer;
(c) about 0.5% to about 15% by weight softener selected from the group consisting of glycerol fatty acid esters, acetylated glycerol fatty acid esters, and vegetable oil and comprising at least one fatty acid having carbon chain length greater than 14; and
(d) about 1% to about 25% by weight low melting point wax; wherein said base is free of polyvinyl acetate and glycerol triacetate.

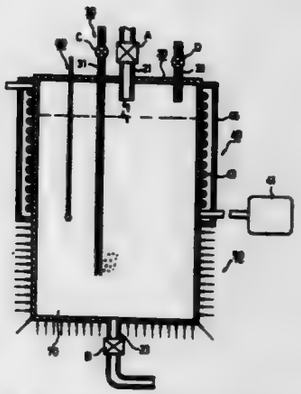
5,173,318

METHOD AND APPARATUS FOR AGING A DISTILLED LIQUOR

Sheng-I Leu, No. 26, Lane 25, Weng-Heng I Rd., Kaohsiung; I-Chang Lin, No. 40-1, Alley 18, Lane 127, Nan-Shan Rd., Chungho; Ching-Yu Chen, Kaohsiung, and Chen-Shun Chen, 2nd Fl., No. 320, Liao-Ning I St., Kaohsiung, all of Taiwan, assignors to Sheng-I Leu, Kaohsiung; I-Chang Lin, Chungho; Chen-Shun Chen, Kaohsiung and Jhy-Ming Lee, Kaohsiung, all of, Taiwan

Filed May 30, 1991, Ser. No. 707,143
Int. Cl.[5] C12H *1/00*
U.S. Cl. 426—238 3 Claims

1. A method of quickly aging a distilled liquor comprising:
(a) cooling a distilled liquor in a container to about −10° C.;
(b) introducing ozone into said cooled distilled liquor for oxidation; and
(c) after step (b), applying an ultranonic vibration at a frequency of 15.000 Hz/sec to 150.000 Hz/sec to said container to stir and increase the temperature of said distilled



liquor up to about 35° C., thereby accelerating the oxidation and thus the aging of said distilled liquor.

5,173,319

METHOD AND COMPOSITION FOR EXTENDING THE SHELF LIFE OF PROCESSED MEATS

Donald P. Boudreaux, Sarasota, Fla., and Mark A. Matrozza, North Versailles, Pa., assignors to Microlife Technics, Inc., Sarasota, Fla.

Continuation of Ser. No. 514,681, Apr. 24, 1990, abandoned. This application May 28, 1991, Ser. No. 705,764
Int. Cl.[5] A23B *4/02, 4/22*
U.S. Cl. 426—326 12 Claims

1. A method for protecting an unspoiled processed and cooked meat having a pH between about pH 6.0 and 6.5 which comprises:
(a) inoculating the meat or a solution for addition to the meat with a dried product which consists of as ingredients for the protecting, a source of an inorganic propionate salt in an amount less than about 1% by weight which inhibits bacteria present in the meat without contributing a flavor to the meat and a bacteriocin derived from *Pediococcus acidilactici* as a result of growth in a broth which produces the bacteriocins in the broth in an amount which inhibits Pediococci, Lactobacilli, Streptococci, Pseudomonas, Salmonella Listeria, Serratia, and Enterobacter wherein the dried product contains between about 10 and 99% by weight propionate salt.

5,173,320

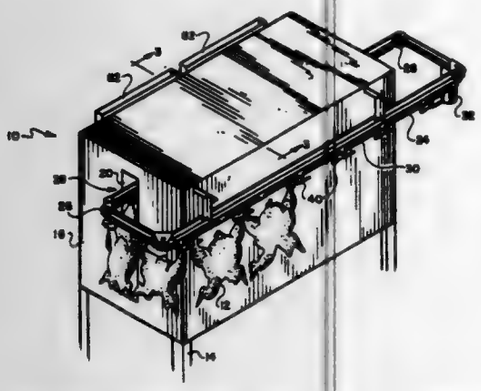
METHOD FOR COOKING WHOLE CHICKENS

Robert M. Stack, 1 Thornwood Rd., Clover, S.C. 29710, and Samuel H. Maw, Jr., 1824 Santiago Dr., Newport Beach, Calif. 92660

Division of Ser. No. 561,187, Aug. 1, 1990. This application May 11, 1992, Ser. No. 881,050
Int. Cl.[5] A23L *1/00*
U.S. Cl. 426—523 3 Claims

1. A method for cooking whole chicken carcasses comprising the steps of severing each chicken carcass along its breast bone and opening the carcass into a generally flat condition wherein its internal chest and abdominal cavity forms one side of the chicken carcass and its breast, back, wings, thighs and legs form the opposite side of the chicken carcass, generating cooking energy within a cooking area by emitting cooking energy from a pair of energy-emitting faces spaced from one another in generally upright laterally-opposed facing relation for defining therebetween the cooking area, transporting the whole chicken carcasses individually along a cooking path through said cooking area between said energy-emitting faces, and maintaining each chicken carcass in said generally flat

condition during transportation through said cooking area by suspending each chicken carcass by its legs while holding the



legs sufficiently spread from each other to maintain the chicken carcass opened in said generally flat condition.

5,173,321

FLAVORED KONNYAKU COMPOSITION, PROCESS FOR PREPARING SAME AND FOOD PRODUCT CONTAINING SAME

Masatoshi Hosogoe; Kenichi Hashimoto, both of Tokyo, and Yumi Kawauchi, Kamifukuoka, all of Japan, assignors to Nippon Oil and Fats Co., Ltd., Tokyo, Japan

Filed Apr. 24, 1991, Ser. No. 690,457

Claims priority, application Japan, Apr. 28, 1990, 2-112288; Apr. 10, 1991, 3-77790

Int. Cl.[5] A23L *1/0524*

U.S. Cl. 426—573 11 Claims

1. A process for preparing a flavored konnyaku composition comprising mixing a starting material containing powdered konnyaku and an acidic agent coated with and encapsulated in a coating agent, swelling the starting material containing the encapsulated acidic agent with water to solate said starting material, mixing the swollen starting material containing the encapsulated acidic agent with an acidic seasoning material, immediately adding an alkaline coagulating agent to the mixture of swollen starting material, encapsulated acidic agent and acidic seasoning agent to gelate said starting material and to obtain a konnyaku gel structure and heating and melting said coating agent of said acidic agent which is present in said gel structure in encapsulated form to thereby release said acidic agent into said gel structure.

5,173,322

REFORMED CASEIN MICELLES

Nicholas Melachouris, Westlake Village; Kenneth R. Moffitt, Los Angeles; Casimir E. Rasilewicz, Woodland Hills, and George F. Tonner, Simi Valley, all of Calif., assignors to Nestec S.A., Vevey, Switzerland

Filed Sep. 16, 1991, Ser. No. 760,663

Int. Cl.[5] A23C *11/08*; A23J *1/20*

U.S. Cl. 426—580 9 Claims

1. A method of producing reformed casein micelles suitable for use as a replacement for fat in food products which consists essentially of

providing an aqueous reaction medium containing a processed casein material having substantially no casein in micelle form,

adding a soluble source of calcium ions with agitation to said aqueous medium in an amount sufficient to provide a ratio of between about 0.01 to 0.1 parts by weight of calcium ion per part by weight of casein in the aqueous medium, with the soluble source of calcium ions being added to the aqueous medium over a period of at least about 15 minutes, to form casein micelles in the reaction medium, and

thereafter adding to the aqueous reaction medium a soluble source of phosphate ions in an amount sufficient to provide a ratio of about 0.01 to 0.2 parts by weight of phosphate ion per part by weight of casein in the aqueous reaction medium.

5,173,323

PROCESS FOR REMOVING THE BITTERNESS FROM POTASSIUM CHLORIDE

Yunis J. Omari, 2326 39th Ave., San Francisco, Calif. 94116

Filed Jul. 22, 1991, Ser. No. 736,454

Int. Cl.[5] A23L *1/30*

U.S. Cl. 426—649 16 Claims

1. A process for removing the bitterness from potassium chloride comprising the steps of:

1) dissolving potassium chloride in hot drinking water, up to about approximately 56.7%, by weight, forming a first solution;

2) oscillating the pH of said first solution;

3) returning the pH of said first solution to near neutral;

4) cooling said first solution, thereby causing a precipitate to form;

5) separating said precipitate from said first solution;

6) dissolving said precipitate in hot drinking water to form a second solution;

7) oscillating the pH of said second solution;

8) returning the pH of said second solution to near neutral;

9) cooling said second solution;

10) mixing said first solution and said second solution to form a third solution;

11) adding 2 grams of a compound from the group consisting of the amino acids and their salts, per 100 grams of potassium chloride to said third solution;

12) drying said third solution to obtain a crystalline product.

5,173,324

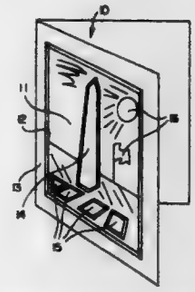
METHOD FOR MAKING UNIQUE GRAPHIC PRINTS

Catherine Newhart, 606 25th Ave. S., St. Cloud, Minn. 56301

Filed Sep. 6, 1989, Ser. No. 403,402

Int. Cl.[5] B44C *1/22*

U.S. Cl. 427—11 11 Claims



1. A method of making a unique graphic embossed art print comprising the steps of:

(a) creating an embossing pattern on a sheet of hydrophobic material;

(b) applying at least one dry and water soluble pigment upon a first surface of said pattern;

(c) wetting said applied pigment with water;

(d) providing a water absorbent sheet of art paper;

(e) placing said art paper sheet against said wetted and pigmented pattern surface;

(f) hand burnishing said art paper sheet against said pigment and over said pattern, thereby embossing the form of said pattern in relief into said art paper sheet and pressing the wetted pigment into said art paper sheet; and then

(g) withdrawing at least part of the wetted pigment from said pattern by removal of the now embossed art paper sheet from the pattern, to provide both a three dimen-

sional form and color in the print upon said art paper sheet.

5,173,325

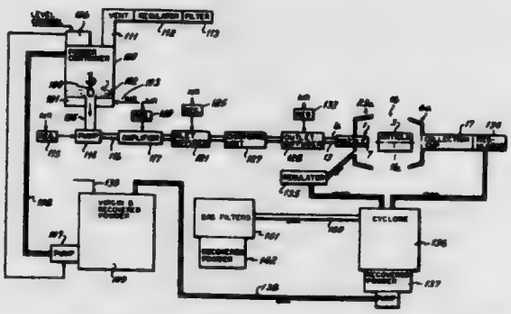
METHOD AND APPARATUS FOR COATING ARTICLES

Alan J. Knobbe, Lorain, Ohio; Joseph A. E. Pintelon, Lennik, Belgium, and Daniel Pinault, Niederkrachten, Fed. Rep. of Germany, assignors to Nordson Corporation, Westlake, Ohio

Division of Ser. No. 308,897, Feb. 9, 1989, Pat. No. 4,987,001. This application Oct. 4, 1990, Ser. No. 592,910

Int. Cl.[5] B05D *1/06, 7/22;* B05B *5/12*

U.S. Cl. 427—476 14 Claims



1. A method of applying a solid particulate powder coating to the surface of multiple articles, which method comprises

moving said articles along a path of movement past a powder spray nozzle,

intermittently directing a stream of air through a venturi pump and an air amplifier to draw powder from a powder supply source and to cause said powder to flow through a powder supply line,

directing air-entrained powder from said nozzle onto said articles when said articles are aligned with said nozzle, and

maintaining a constant flow of air through an air diffuser to said powder supply line downstream of said venturi pump and air amplifier and upstream of said nozzle so as to prevent the accumulation of powder in said line during interruption of the flow of air-entrained powder to said nozzle.

8. Apparatus for applying a solid particulate powder coating to the surface of multiple articles, which apparatus comprises

a powder supply line containing a venturi pump, and air amplifier, an air diffuser and a discharge nozzle,

means for moving said articles along a path of movement past said powder spray nozzle,

means for intermittently directing a stream of air through said venturi pump and through said air amplifier to draw powder from a powder supply source and to cause said powder to flow through said powder supply line, said air-entrained powder being directed from said nozzle onto at least one of said articles when said at least one article is aligned with said nozzle,

means for maintaining a constant flow of air through said air diffuser to said powder supply line downstream of said venturi pump and said air amplifier and upstream of said nozzle so as to prevent the accumulation of powder in said line during interruption of the flow of air-entrained powder to said nozzle, and

means for applying an electrostatic charge to air-entrained powder flowing through said powder supply line, said charge applying means being located in said powder supply line upstream of said nozzle.

5,173,326

METHOD AND APPARATUS FOR ELECTROSTATIC COATING OF WORKPIECES WITH POWDERED MATERIAL

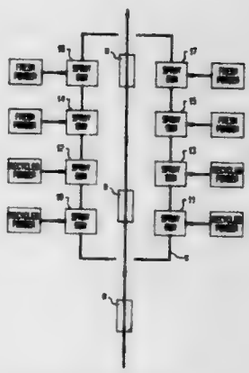
Erich Krämer, Michelau, Fed. Rep. of Germany, assignor to Metri Airfluid AG, Altstatten, Switzerland

Filed Apr. 18, 1991, Ser. No. 687,394

Claims priority, application Fed. Rep. of Germany, Apr. 24, 1990, 4013063

Int. Cl.[5] B05D *1/06;* B05B *5/03*

U.S. Cl. 427—478 26 Claims



1. A method of electrostatic coating a workpiece with powdered material comprising the steps of:

advancing the workpiece past a plurality of successively arranged spray guns;

charging at least the one of said spray guns which is passed first by the workpiece with recycled excess powder; and

charging at least the one of said spray guns which is passed last by the workpiece with fresh powder in the form of a powder-air mixture containing a low amount of air and supplied at low velocity.

5. Apparatus for electrostatic coating a workpiece with powdered material, comprising:

a plurality of successively arranged spray guns; and

charging means for feeding said spray guns with a powder-air mixture, said charging means including a first charge unit for supplying at least said spray gun which is passed first by the workpiece with recycled excess powder, and a second charge unit for supplying at least said spray gun which is passed last by said workpiece with fresh powder in the form of a powder-air mixture containing a low amount of air and supplied at low velocity.

5,173,327

LPCVD PROCESS FOR DEPOSITING TITANIUM FILMS FOR SEMICONDUCTOR DEVICES

Gurtej S. Sandhu, and Trung T. Doan, both of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Filed Jun. 18, 1991, Ser. No. 717,234

Int. Cl.[5] B05D *3/06*

U.S. Cl. 427—573 6 Claims

1. A chemical vapor deposition method for depositing a Titanium film on a silicon wafer surface during fabrication of a semiconductor device, said method comprising:

a) heating a silicon wafer inside a reaction chamber by heating a wafer holder securing said silicon wafer;

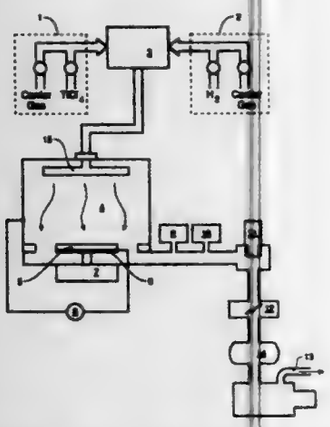
b) pre-mixing of H_2 gas and a $TiCl_4$ gas such that the flow rate of said H_2 gas is 2 to 10 times the flow rate of said $TiCl_4$ gas;

c) presenting said pre-mixture of gas to surface of said heated silicon wafer;

d) generating rf plasma inside said reaction chamber;

e) depositing said Titanium film on said heated silicon wafer

surface, said deposition caused by a chemical reaction of $TiCl_4+2H_2 \rightarrow Ti+4HCl$;



f) maintaining a constant deposition pressure between 0.2 and 2 Torr; and

g) removing reactant gases from said reaction chamber.

5,173,328

PLASMA CVD PROCESS FOR COATING A BASIC METALLIC BODY WITH A NON-CONDUCTIVE COATING MATERIAL

Norbert Reiter, Mettmann; Udo König, Essen, both of Fed. Rep. of Germany; Hendrikus Van Den Berg, Venlo-Blerick, Netherlands, and Ralf Tabersky, Bottrop, Fed. Rep. of Germany, assignors to Krupp Widia GmbH, Essen, Fed. Rep. of Germany

PCT No. PCT/DE89/00739, § 371 Date May 31, 1991, § 102(e) Date May 31, 1991, PCT Pub. No. WO90/06380, PCT Pub. Date Jun. 14, 1990

PCT Filed Nov. 27, 1989, Ser. No. 700,203

Claims priority, application Fed. Rep. of Germany, Dec. 10, 1988, 3841730

The portion of the term of this patent subsequent to Mar. 3, 2009, has been disclaimed.

Int. Cl.[5] B05D *3/06;* **C23C** *16/00*

U.S. Cl. 427—576 **9 Claims**

1. A plasma-assisted CVD process for coating a basic metallic substrate, said process comprising the steps of:

(a) producing a reactive vapor of a nonmetallic ceramic coating substance; and

(b) generating a plasma by applying a pulsed DC voltage having a peak value between said substrate formed as a cathode and another electrode, thereby plasma activating said substrate and depositing said coating substance on said substrate;

wherein between pulses of said DC voltage, a potential of residual DC voltage is maintained higher than a lowest ionization potential of said vapor but not exceeding 50% of said peak value of pulsed DC voltage.

5,173,329

PROCESS FOR CREATING MAGNETIC IMPRESSIONS ON SHEETLIKE MATERIAL

Eduardo M. Beneyto, Burriana Street No. 36, Valencia, Spain

Filed Oct. 26, 1990, Ser. No. 605,791

Claims priority, application Spain, Oct. 26, 1989, 8903616

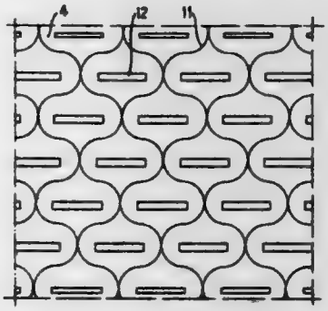
Int. Cl.[5] B05D *3/14*

U.S. Cl. 427—547 **5 Claims**

1. In a process for producing a sheetlike body having a magnetic field associated therewith, including the steps of providing a sheetlike body, and applying to a surface of the sheetlike body a first magnetizable impression in the form of a meshlike pattern, said first impression being formed by a first magnetite-rich ink having a resin incorporated therein, said meshlike pattern including a plurality of closed rings disposed in adjoining relationship on the surface of the sheetlike body, each of the closed rings defining thereinside a respective portion of the surface of the sheetlike body, the improvement comprising the further steps of:

transporting the sheetlike body at a displacement velocity in a displacement direction, including drivingly winding the sheetlike body onto a first bobbin while simultaneously unwinding the sheetlike body from a second bobbin;

applying a plurality of second magnetizable impressions to the respective portions of the surface and generally centrally with the respective rings following the application of the first magnetizable impression, each of the second impressions having a bipolar geometric shape and being formed by a second magnetite-rich ink having a resin incorporated therein;



magnetizing the second impressions by displacing the sheetlike body at the displacement velocity through an air gap of a magnetizer; and

polymerizing and fixing the resin in the ink by displacing the sheetlike body at the displacement velocity across a forced air heater.

5,173,330

PATTERNING COMPOSITION AND METHOD FOR PATTERNING ON A SUBSTRATE

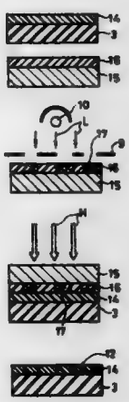
Takahiro Asano, Moriguchi; Shinichi Mizuguchi, Katano, and Toshio Ishikawa, Chiba, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Kadoma, Japan

Filed Apr. 3, 1990, Ser. No. 503,775

Claims priority, application Japan, Apr. 5, 1989, 1-86222

Int. Cl.[5] B05D *3/06, 5/12, 3/02, 1/18*

U.S. Cl. 427—558 **2 Claims**



2. Method for patterning on a substrate comprising the steps of:

applying a second coating of composition containing 4-methoxy-1-naphthol as a reducing agent which shows reducing activity by being heated and loss of said reducing

activity by being irradiated by at least one emission selected from the group consisting of UV light, visible light and infrared light, on a first face of a planar holder which is transparent for said light,

applying a first coating of composition containing copper (II) heptanoate as a metallic salt of organic acid, wherein said copper (II) heptanoate deposits a metal on a substrate when reduced,

contacting a surface of said first coating with a surface of said second coating,

irradiating through a metal mask with at least one of UV light, visible light and infrared light said second coating from a second face, opposite said first face, of said planar holder, and

applying heat to contacting surfaces of said first coating and said second coating, to cause reduction of said copper (II) heptanoate, thereby to produce a patterned deposited metal layer on said substrate.

5,173,331

ZIRCONIA TOUGHENING OF GLASS-CERAMIC MATERIALS

Richard W. Adams, Jr., Marlboro, Mass.; David R. Clarke, Katonah, N.Y.; Sarah H. Knickerbocker, Hopewell Junction, N.Y.; Linda L. Rapp, Poughkeepsie, N.Y., and Bernard Schwartz, Hartsdale, N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Division of Ser. No. 626,370, Feb. 26, 1991, which is a continuation of Ser. No. 348,980, May 9, 1989, Pat. No. 5,045,402, which is a continuation-in-part of Ser. No. 146,455, Jan. 21, 1988, abandoned, which is a continuation of Ser. No. 892,687, Aug. 1, 1986, abandoned. This application Aug. 12, 1991, Ser. No. 744,621

Int. Cl.[5] B05D 5/12; C03C 14/00

U.S. Cl. 427—123 25 Claims

1. A method comprising:

forming a body having ceramic-forming parts and electrical conductor-forming parts;

at least one of said ceramic-forming parts being formed by mixing a frit of glassy precursor to a dielectric material, comprising an aggregate of randomly oriented crystallites having interstices therebetween and optionally containing uncrystallized glass, with a power of particles of a material selected from the group consisting of ZrO_2, HfO_2 and a combination thereof, said particles containing an oxide selected from the group consisting of MgO, CaO, Y_2O_3, TiO_2 and rare earth oxides, there being at least enough of said oxide in said particles to increase the amount of said material of said particle having tetragonal structure, said particles having a diameter between about 0.5 to about 8.0 microns, said powder being added to the mixture of said powder and said precursor in an amount sufficient to form a ceramic material, from said at least one ceramic-forming part, containing a finite amount of said particles and at least about 75 volume percent of said dielectric material;

sufficiently dispersing said particles within said frit to toughen the ceramic formed from said at least one ceramic-forming part;

providing said electrical conductor forming parts;

heating said body to a temperature at least sufficient to melt said glassy precursor to form a densified material with said particles contained within said densified material said temperature being less than the crystallization temperature of said glass precursor; and

heating said densified material to at least the crystallization temperature of said glassy precursor to form said dielectric material with said particles therein, from said at least one ceramic-forming part, said crystallization temperature being less than the melting temperature of said conductor-forming parts.

METHOD OF FORMING A MANDREL

Nicole Pasturaud, Eysines, and Patrice Desrthe, Rion des Landes, both of France, assignors to Aerospatiale Societe Nationale Industrielle, Paris, France

Filed May 3, 1991, Ser. No. 695,346

Claims priority, application France, Jun. 13, 1990, 90 07319

Int. Cl.[5] B05D 3/02, 3/12

U.S. Cl. 427—133 18 Claims

1. A method for forming a mandrel used for manufacturing a hollow composite material body using a manufacturing method in which an arrangement of fibers is applied on said mandrel, then said arrangement of fibers is hardened and densified by operations requiring the application of high temperatures, after which the hollow body formed by said arrangement of fibers is removed from said mandrel, hardened and densified, said mandrel being formed by means of a graphite felt which is rigidified and which is machined so that its outer surface corresponds to the inner surface of said hollow body, wherein a graphite felt block is rigidified by impregnating with a polymerizable product capable of generating carbon, then said block of graphite felt is subjected to a high temperature in a neutral atmosphere so as to pyrolyse said polymerizable product, at least the surface layer of said mandrel is impregnated with a rubbery binder, after which said rigidified block is machined to the desired shape for the mandrel.

5,173,333

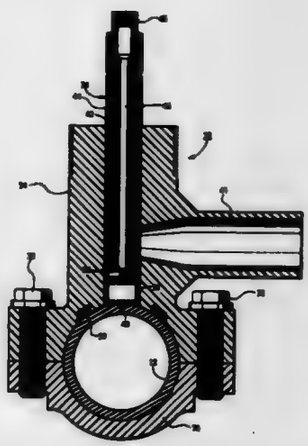
APPARATUS AND METHOD FOR DISCHARGING STATIC ELECTRICITY ON THE INTERNAL SURFACE OF PLASTIC PIPE

Oren Tranberger; Clarence R. McGinnis, and David H. Strala, all of San Antonio, Tex., assignors to Southwest Research Institute, San Antonio, Tex.

Filed Apr. 29, 1991, Ser. No. 692,581

Int. Cl.[5] B05D 7/22

U.S. Cl. 427—236 15 Claims



1. An apparatus threadably engageable with a saddle coupled to a plastic pipe for selectively cutting the plastic pipe and spraying an antistatic fluid in the plastic pipe for discharging an internal surface of the plastic pipe, which comprises:

a substantially cylindrical-shaped shaft having a first end and a second end, said shaft engageable with the saddle;

a cutter formed at said first end of said shaft for cutting the plastic pipe upon engagement of said shaft; and

a nozzle formed adjacent to said cutter on said shaft for spraying the antistatic fluid in the plastic pipe to discharge the internal surface.

8. An apparatus for discharging an internal surface of a plastic pipe with an antistatic fluid, which comprises:

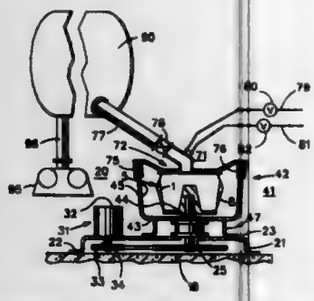
a saddle coupled to the plastic pipe, said saddle having a substantially cylindrical-shaped cavity formed therein;
a shaft having a first end and a second end, said shaft threadably engageable with said cavity;
a cutter formed at said first end of said shaft for penetrating the plastic pipe when threadably engaged; and
a sprayer integrally formed at said first end of said shaft adjacent to said cutter for spraying the antistatic fluid in the plastic pipe to discharge the internal surface of the plastic pipe.

5,173,334

APPARATUS AND METHOD FOR IMPROVED HOT DIP METALLIC COATING OF METAL OBJECTS

Pierre Lavaux, 15, Rue de Prony, Paris, France F-75017

Filed Jun. 12, 1991, Ser. No. 715,108
Int. Cl.[5] B05D *3/12*
U.S. Cl. 427—241 **29 Claims**



1. A method for improving the metal coating on metal parts immersed in a molten metal coating bath comprising the steps of:
(A) transferring the molten metal coated metal parts from the molten metal coating bath to a centrifuge drum;
(B) sealing the drum and evacuating air therefrom to create a partial vacuum therein;
(C) spinning the molten metal coated parts at a first rate within the partial vacuum of the centrifuge drum to permit excess molten coating metal to drain from the parts and to cool the molten coating metal adhering thereto;
(D) introducing a first gas from the group consisting of nitrogen and air to the centrifuge drum to bathe the molten metal coated parts therein and reducing the rate of spinning thereof to a second rate to permit the metal coating to cool below the liquidus temperature thereof and solidify on the parts;
(E) introducing a second gas from the group consisting of air and steam at a pressure greater than atmospheric pressure to the centrifuge drum to bathe the metal coated parts and further reducing the spinning thereof to a third rate to permit the metal coating on the coated parts to further cool, whereby the metal coating on the parts is of substantially uniform thickness.

5,173,335

METHOD OF PRODUCING MULTILAYER REVERSE OSMOSIS MEMBRANE OF POLYAMIDE-UREA

Samuel D. Arthur, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.

Division of Ser. No. 695,899, May 6, 1991, Pat. No. 5,084,182, which is a division of Ser. No. 560,512, Aug. 31, 1990, Pat. No. 5,019,264. This application Jun. 27, 1991, Ser. No. 720,164
Int. Cl.[5] B05D *5/00*
U.S. Cl. 427—245 **14 Claims**

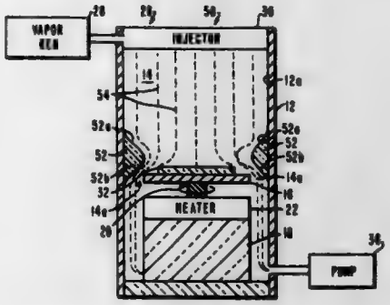
1. A method of manufacture of a reverse osmosis membrane that shows improved solute rejection and solvent flux, comprising,
casting a solution of an organic polymer onto a support to provide a porous substrate,
treating said substrate with a polyfunctional amine to provide an impregnated substrate, and
treating said impregnated substrate with a solution of isocyanate-substituted acyl halide to provide a reverse osmosis membrane with a separating layer of polyamide urea that shows improved solute rejection and solvent flux.

5,173,336

METAL ORGANIC CHEMICAL VAPOR DEPOSITION (MOCVD) REACTOR WITH RECIRCULATION SUPPRESSING FLOW GUIDE

Adam M. Kennedy, Goleta, Calif., assignor to Santa Barbara Research Center, Goleta, Calif.

Filed Jan. 22, 1991, Ser. No. 643,400
Int. Cl.[5] C23C *16/54*
U.S. Cl. 427—248.1 **6 Claims**



1. In a chemical vapor deposition apparatus including a rotating disk for supporting an object, vapor source means for generating a flow of chemical vapor toward the object for deposition thereon, and passageway means having an inner wall for guiding said flow from the vapor source means parallel to the axis of rotation of the disk onto the object, the disk being disposed inside the passageway means with a radial space provided between the periphery of the disk and the inner wall of the passageway means, rotation of the disk urging a portion of said flow to be deflected from the disk and subsequently from the inner wall of the passageway means back toward the vapor source means, the improvement including flow guide means disposed in the passageway means between the vapor source means and the disk, the flow guide means comprising:
an upstream converging section for causing said flow to accelerate; and
a downstream diverging section for subsequently causing said flow to expand, interact with, and prevent said portion of said flow from being deflected back toward the vapor source means, said upstream converting section and said downstream diverging section located in said passageway proximate said rotating disk so that said portion of said flow is deflected in a direction away from said source means and beyond said rotating disk by said accelerated flow.

5,173,337

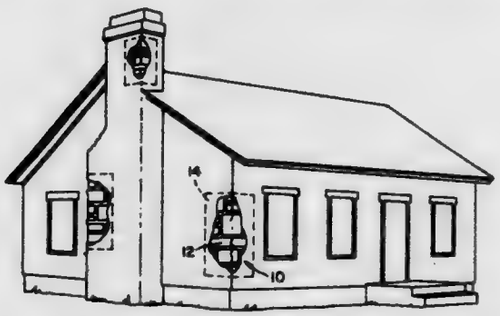
CONSTRUCTION PROCESS FOR SIMULATING A DESIRABLE APPEARANCE

David S. Nelson, 17 Parkway S., Aiken, S.C. 29801

Filed Feb. 25, 1991, Ser. No. 660,528
Int. Cl.[5] B05D *1/32*; B44F *7/00*
U.S. Cl. 427—282 **3 Claims**

1. A construction process to simulate a desirable appearance, comprising:
providing a construction frame to support an external facade;
affixing to said construction frame a surface section of a construction medium simulating the appearance of solid stone;

applying stucco on the outer surface and around said section without totally covering said section to give the appear-



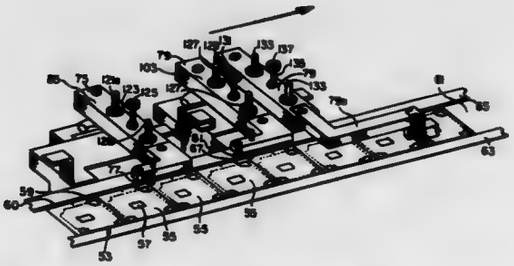
ance of stucco having peeled away from said section during a natural weathering process.

5,173,338

LEAD FRAME WORKHOLDER AND TRANSPORT APPARATUS AND METHOD

James B. Sharp, Duncanville; Roy Booth, Randolph, and Max Havenhill, Irving, all of Tex., assignors to AK Technology, Inc., Dallas, Tex.

Filed Apr. 4, 1991, Ser. No. 680,340
Int. Cl.[5] B05D *5/00;* **B05C** *9/00, 13/02*
U.S. Cl. 427—287 **8 Claims**



1. Lead frame workholder and transport apparatus (51) for holding and transporting a strip (53) of lead frames (55) from one station to another,

each lead frame (55) having a pad (57) and a locating pin hole (59), comprising

a track (61) having a near rail (63) and a far rail (65) with an input station (67) at one end and an output station (69) at the other end with an application station (71) in between,

loader means (73) for loading a strip (53) of lead frames (55) into the input station (67),

a first transport means (75) for contacting the lead frame strip (53) in the input station (67) by inserting a pin (77) into a locating pin hole (59) and moving the strip (57) along the track (61) to the application station (71),

a first drive means (89) for driving the first transport means from the input station to the application station and for returning said first transport means to the input station to engage another strip and move it to the application station,

a first release means (82) for releasing the first transport means (75) from the strip (53) at the application station so that the first transport means can be moved back to the input station,

a second transport means (79) which is separate from the first transport means for moving the strip (53) from the application station (71) toward the output station (69) by inserting a pin (81) in an open locating pin hole (59) of the strip (53), said open locating pin hole 59 being one that is not occupied by said pin (77) of the first transport means (75),

a second drive means (95) for driving the second transport means from the application station toward the exit end of the track, and for returning said second transport means to the application station to engage another strip,

and a second release means (97) for releasing the second transport means (79) from the strip (53) so that the second transport means can return to the application station.

7. A method of applying an epoxy layer to the pads of a strip of lead frames,

each lead frame having a pad and a locating pin hole near its far edge, comprising the steps of

loading a number of lead frame strips face-down in a stack in an input loader,

picking up the top lead frame strip from the stack with a vacuum arm and depositing the strip face-up onto a track having an L-shaped near rail and an L-shaped far rail,

contacting the strip by inserting a pin from a first transport means into a locating pin hole,

sliding the pin a bottom groove in the L-shaped far rail,

moving the strip forwardly in the track by moving the first transport means and its pin until the lead frame strip is positioned under an epoxy resin application station,

applying a layer of epoxy resin to the pads of a number of lead frames,

releasing the first transport means from the strip and returning it to the input station to contact another strip,

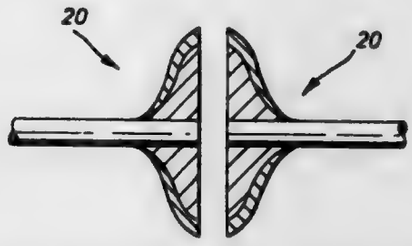
moving the first lead frame strip by means of a second transport means to an exit station.

5,173,339

POPPET VALVE MANUFACTURE

Alfred R. E. Singer, Swansea, Wales, assignor to Alcan International Limited, Montreal, Canada

Continuation of PCT/GB90/00723, May 10, 1990. This application Feb. 22, 1991, Ser. No. 660,134
Claims priority, application United Kingdom, May 10, 1989, 8910792; Jun. 8, 1989, 8913155
Int. Cl.[5] B05D *3/12, 1/02*
U.S. Cl. 427—289 **9 Claims**



1. A method of manufacturing a poppet valve including the steps of spray depositing metal on to a localized region of a workpiece in the form of a rod or tube while rotating the workpiece and a spray gun from which the spray emanates relative to one another about the lengthwise axis of the workpiece, and subsequently cutting through the rod or tube and deposited metal in a direction normal to said axis at the mid-length of said localized region thereby to form a poppet valve.

5,173,340

METHOD OF COATING A BASE OF A GOLD ALLOY OF AT LEAST 22 CARAT PURITY WITH A COATING WHICH IS ALSO OF AT LEAST 22 CARAT PURITY

Walter Holzer, Drosteweg 19, Meersburg, Fed. Rep. of Germany 7758

Filed Feb. 6, 1991, Ser. No. 651,630
The portion of the term of this patent subsequent to Jan. 22, 2008, has been disclaimed.
Int. Cl.[5] B05D 3/02
U.S. Cl. 427—376.8 4 Claims

1. A method of producing a durable gold article of investment quality, comprising the steps of:

a. producing a base of a first gold alloy of at least 22 karat purity, said alloy being composed of gold and a second element present in an amount sufficient, up to 8.33% of said alloy, to enhance the strength of said alloy;

b. overlaying said base on all but one side with a coating composed of a second gold alloy of at least 22 karat purity, said uncoated side remaining visible; and

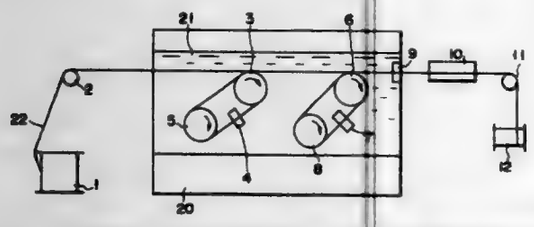
c. bonding said base and said coating by welding, cementing or sheathing to form a uniform article, the relative proportions of said base and said coating being determinable by examining said uncoated side of said base.

5,173,341

RUBBER-REINFORCING STEEL WIRES AND METHOD OF MANUFACTURING THE SAME

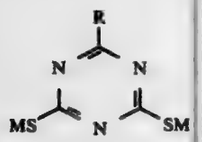
Nobuyoshi Shirotori, and Masaki Katayama, both of Chiyoda, Japan, assignors to Tokyo Rope Mfg. Co., Ltd., Tokyo, Japan

Filed Aug. 6, 1990, Ser. No. 563,259
Claims priority, application Japan, Feb. 10, 1989, 1-31353; Feb. 10, 1989, 1-31354
Int. Cl.[5] B05D 1/18
U.S. Cl. 427—434.6 20 Claims



1. A method of manufacturing a rubber-reinforcing steel wire, comprising

contacting the wire with a triazine-thiol derivative represented by the following general formula:



where R is —OR′, —SR′, —NHR′, or —N(R′)$_2$; R′ is H, alkyl group, alkenyl group, phenyl group, phenylalkyl group, alkylphenyl group, or a cycloalkyl group, and M is H, Na, Li, K, ½Mg, ½Ba, ½Ca, primary, secondary or tertiary aliphatic amine, quaternary ammonium salt, or phosphonium salt, to adsorb the traizine-thiol derivative into the wire; and thereafter

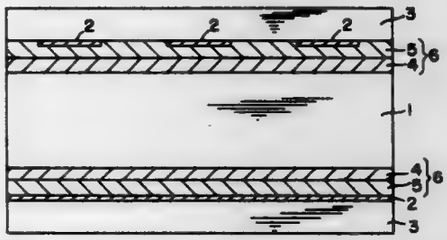
drawing the wire through a die in a bath of a lubricant containing 0.001 to 20% by weight of the triazine-thiol derivative, to form a polymer of the triazine-thiol derivative and thereby provide for better adhesion between the wire and rubber.

5,173,342

LIQUID CRYSTAL ORIENTATION FILM AND PROCESS FOR MAKING THE SAME

Shigehiro Sato; Keizo Nakajima, both of Osaka; Hirofumi Wakemoto, Neyagawa, and Shoichi Ishihara, Katano, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Sep. 20, 1990, Ser. No. 585,215
Claims priority, application Japan, Sep. 20, 1989, 1-243790
Int. Cl.[5] G02F 1/1337
U.S. Cl. 428—1 4 Claims



1. A liquid crystal display device comprising a pair of opposing substrates each having an electrode at a surface facing the other, a liquid crystal provided between the pair of substrates, and a liquid crystal orientation film formed on at least one of the substrates at the side on which the electrode is formed and comprising a support film formed on the substrate, and an orientation control film formed on and chemically coupled with the support film and having a trifluoromethyl group.

5,173,343

NARROW MOLECULAR WEIGHT DISTRIBUTION ETHYLENE-ACRYLATE CLING LAYER IN STRETCH/CLING FILMS

Marsha M. Arvedson, Houston; Patrick Brant, Seabrook; Joseph D. Domine, Humble, and Paul M. German, Friendswood, all of Tex., assignors to Exxon Chemical Patents Inc., Linden, N.J.

Continuation-in-part of Ser. No. 123,002, Nov. 19, 1987, abandoned. This application Dec. 28, 1990, Ser. No. 633,509
Int. Cl.[5] B65B 53/00
U.S. Cl. 428—34.9 34 Claims

1. A film, comprising:

a cling polymer of two or more monomers, wherein a first monomer comprises ethylene and a second monomer comprises an acrylate, said cling polymer having an acrylate content of from about 2 to about 40 percent by weight, a melt index of from about 0.1 to about 30 dg/min, a melt index swell ratio less than about 1.6, a ratio of weight average molecular weight (M_w) to number average molecular weight (M_n) less than about 3.5 and a ratio of z average molecular weight (M_z) to M_w less than about 3.0.

5,173,344

ARTICLE AND METHOD FOR SEALING SEAMS BETWEEN WATER BARRIER ARTICLES

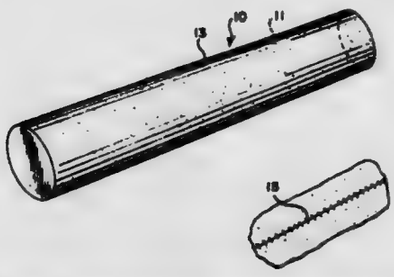
John Hughes, Long Grove, Ill., assignor to American Colloid Company, Arlington Heights, Ill.

Filed Oct. 1, 1990, Ser. No. 590,961
Int. Cl.[5] B32B 1/08, 5/16; E02B 3/16
U.S. Cl. 428—36.1 18 Claims

1. An article of manufacture in tube form adapted for dispo-

sition along a seam or joint between adjacent bentonite-containing water-sealing articles of preventing water from seeping between said adjacent water-sealing articles comprising:

an elongated tubular mass of a water-swellable clay enveloped within a tube-shaped wrapper consisting essentially of a water-porous fabric having a longitudinal seam in the enveloping material, said seam having a bursting strength



lower than a bursting strength of the fabric such that upon contact of the water-swellable clay with water, the clay will hydrate and expand thereby causing the water-porous material to tear along the seam upon a predetermined pressure from the clay against the water-porous fabric thereby enabling the clay to expand through said seam between said adjacent water-sealing articles to prevent water from seeping between said water-sealing articles.

5,173,345

FLEXIBLE MULTILAYER STRUCTURES COMPRISING A LAYER OF VINYLIDENE CHLORIDE COPOLYMER BONDED TO A LAYER OF PLASTICIZED VINYL CHLORIDE POLYMER AND THEIR USE FOR THE MANUFACTURE OF PACKAGING

Claude Debeaman, Waterloo, and Serge DuPont, Vilvoorde, both of Belgium, assignors to Solvay S.A., Brussels, Belgium

Filed Jul. 16, 1991, Ser. No. 730,591
Claims priority, application Belgium, Jul. 27, 1990, 09000748
Int. Cl.[5] B29D *22/00*
U.S. Cl. 428—36.7 11 Claims

1. A flexible multilayer structure comprising a layer of vinylidene chloride copolymer bonded to a layer of plasticised vinyl chloride polymer with a polymeric adhesive comprising a mixture of vinyl acetate polymer selected from the group consisting of vinyl acetate homopolymer and copolymers of vinyl acetate and ethylene containing at least about 50% by weight of vinyl acetate and polymethyl methacrylate, for which the product of the vinyl acetate weight content, expressed in per cent, multiplied by the dynamic viscosity at 100° C. and 1 s^{-1}, expressed in kPa s, is greater than 1.3×10^3.

5,173,346

FOLDABLE SPONGE MAT FOR SURGICAL APPLICATIONS

Breck Middleton, 611 South Tuxedo Ave., Stockton, Calif. 95204

Filed Jun. 18, 1990, Ser. No. 540,576
Int. Cl.[5] B32B *3/00*
U.S. Cl. 428—53 13 Claims

1. A surgical floor mat comprising:

(a) a plurality of compressed sponge sections each having a low profile and being generally compact allowing a chair or stool with rollers to easily roll over said sections, and wherein said compressed sponge sections are sized and arranged so as to easily fold onto one another in a dry condition, and having an expanded profile in a wet condition for absorbing fluids which fall onto said plurality of compressed sponge sections over the course of a surgical procedure; and

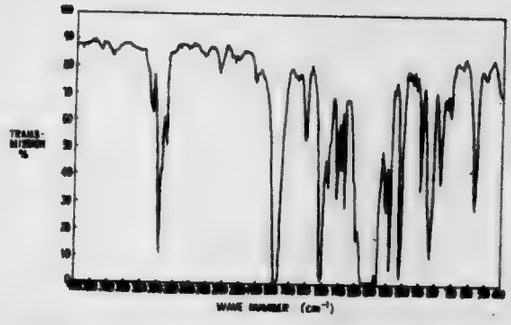
(b) a waterproof and foldable sheet having a top surface dimensioned to hold said sponge sections, wherein said sponge sections are adhered to said foldable sheets in side-by-side relationships allowing said sponge sections to be folded on top of each other; and wherein said foldable sheet having a non-slip bottom surface, whereby said surgical floor mat can be kept in a folded condition prior to surgical use, unfolded and placed on a floor in a safe condition for surgery, so as to be easily rolled over or walked over, and later refolded and discarded with any of the surgical fluid absorbed over the course of the operation trapped within said folded surgical floor mat.

5,173,347

POLYCARBONATE AND OPTICAL DISK THEREFROM

Tatsuya Kasuo; Akihiro Iwaka; Tsunehisa Katsuki; Ikuo Takahashi, and Kenichi Sasaki, all of Himeji, Japan, assignors to Daicel Chemical Industries, Ltd., Osaka, Japan

Continuation of Ser. No. 97,812, Sep. 16, 1987, abandoned. This application Oct. 16, 1991, Ser. No. 782,741
Claims priority, application Japan, Sep. 29, 1986, 61-230896; Sep. 29, 1986, 61-230897; Oct. 2, 1986, 61-233173
Int. Cl.[5] B32B *3/00*
U.S. Cl. 428—64 10 Claims



1. An optical information recording disk comprising a substrate made of an aromatic polycarbonate obtained from (1) 2,2-bis(4-hydroxy-3-isopropylphenyl)propane, (2) 2,2-bis(4-hydroxyphenyl)propane and 2,2-bis(4-hydroxy-3-isopropylphenyl)-propane or (3) 4,4'-dihydroxy-2,2,2-triphenylethane and 2,2-bis(4-hydroxy-3-isopropylphenyl)propane through a carbonate linkage; and a recording layer coated on said substrate, said polycarbonate having a viscosity-average molecular weight of from 23,000 to 100,000.

5,173,348

TABLE EDGING SYSTEM

Steven C. Gevaert, and Robert L. Blank, both of Green Bay, Wis., assignors to Krueger International, Inc., Green Bay, Wis.

Filed Nov. 7, 1990, Ser. No. 609,998
Int. Cl.[5] B32B *3/06*
U.S. Cl. 428—100 14 Claims

7. A table edging system for application to the edge of a rectangular table having a plurality of sides and corners, comprising in combination:

A. a number of extruded edging pieces for application to the table edge along the sides, each such piece including:

1) a first portion disposed in a first plane, said first portion having first and second substantially flat surfaces and

two side edges, said first surface contacting the underside of the table;

2) a second portion integrally connecting with said second surface of said first portion at a point spaced from either side edge of said first portion, said second portion positioned in a second plane substantially normal to said first plane; and

3) a third portion integrally connecting with said first surface of said first portion, at one of said side edges of said first portion, and positioned in a third plane and substantially parallel to but spaced apart from said second plane, the length of said third portion being substantially the same as the thickness of the table edge; and

B. a number of molded corner pieces for application to each of the four corners, each corner piece butting with and positioned between an adjacent pair of said edging pieces, each such corner piece including:

1) a first portion disposed in a first plane, aligned generally with said first portion of said edging pieces, and having one edge thereof being curved through an arc sufficient to permit said first portion to contact two adjoining sides of the table edge;

2) a second portion integrally connecting to the underside of said first portion and aligned generally with said second portion of said adjacent edging pieces, said corner piece second portion thus having two perpendicular sides, and joined by a smooth curved bight segment; and

3) a third portion integrally connected to said first portion all along said curved edge thereof, thus having two perpendicular sides and being joined by a smooth curved bight segment offset from said bight segment of said second portion.

5,173,349

THERMAL SHOCK AND CREEP RESISTANT MULLITE ARTICLES PREPARED FROM TOPAZ AND PROCESS OF MANUFACTURE

Bulent O. Yavuz, Plainfield; Kenneth E. Voss, Somerville, and Matthew P. Larkin, Phillipsburg, all of N.J., assignors to Engelhard Corporation, Iselin, N.J.

Continuation-in-part of Ser. No. 386,186, Jul. 28, 1989. This application Aug. 16, 1990, Ser. No. 567,995

Int. Cl.[5] B32B *3/12;* C04B *35/02*

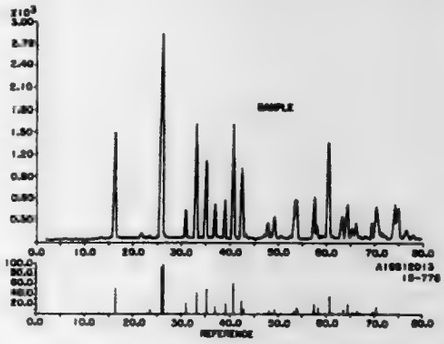
U.S. Cl. 428—116 **20 Claims**

1. A process for forming a shaped article comprised of mullite whiskers comprising the following steps:

a. preparing a mixture of aluminum fluoride and silicon dioxide in a weight ratio of about 7:3;

b. firing the mixture in air at a temperature above about 750° C. until complete conversion to topaz takes place;

c. mixing the topaz product of step (b) with silicon dioxide in a weight ratio of about 18:1 together with a binder and



firing at a temperature of above about 1400° C. until substantially complete conversion to mullite occurs.

5,173,350

THERMAL PROTECTION COATING COMPRISING A FIBER REINFORCED MAIN LAYER AND AN INSULATIVE SUBLAYER

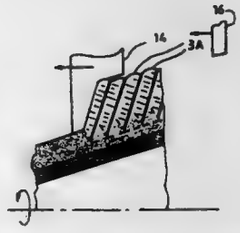
Dominique Hocquellet, Saint Medard en Jalles, France, assignor to Aerospatiale Societe Nationale Industrielle, Paris, France

Filed Sep. 18, 1990, Ser. No. 584,004

Claims priority, application France, Sep. 18, 1989, 89 12283

Int. Cl.[5] B64C *1/00;* B64G *1/00;* B32B *3/28, 7/00*

U.S. Cl. 428—163 **14 Claims**



1. A thermal protection covering for protecting a surface comprising;

a main layer comprising a succession of substantially parallel refractory fibrous reinforcement layers inclined to said surface and a succession of insulative layers essentially made of a first insulative material and alternating with said succession of substantially parallel refractory fibrous reinforcement layers; and

at least one sublayer essentially made of a second insulative material compatible with said first insulative material and lining said main layer and extending along said surface;

wherein said succession of substantially parallel refractory fibrous reinforcement layers represent less than 30% by volume of the main layer and have edges entering in said sublayer;

wherein said covering has said succession of reinforcement layers inclined to said at least one sublayer at a first angle of inclination which is less than or equal to 60.

5,173,351

ABSORBENT COMBINED SHEET MATIERIAL

Remy Ruppel, Horbourg; Pierre Laurent, Kunheim, and Joel Hungler, Colmar, all of France, assignors to Kaysersberg, S.A., Kaysersberg, France

Filed Oct. 30, 1990, Ser. No. 605,346

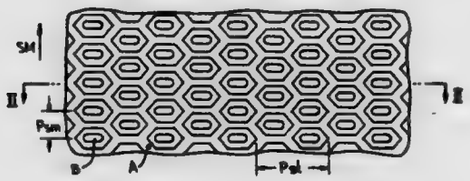
Claims priority, application France, Oct. 30, 1989, 89 14202

Int. Cl.[5] B32B *1/00, 3/00*

U.S. Cl. 428—1.74 **9 Claims**

1. A combined sheet material comprising at least two absor-

bent sheets wherein each of said sheets has a basis weight of between from 10 to 40 g/m^2, each of said sheets is separately embossed by calendaring such that each of said sheets has a pattern of protuberances formed therein which are distributed in said pattern along a first pitch in a first direction, P_1sm and P_2sm respectively for said at least two absorbent sheets, and along a second pitch in a second direction, P_1st and P_2st respectively for said at least two absorbent sheets, said second direction subtending said first direction at an angle other than zero, with said first pitch along said first direction of each of said sheets being different and related by the expression



$$|1/P_1sm - 1/P_2sm| \geq 1/L1$$

wherein P_1sm is said first pitch of a first sheet in said first direction, P_2sm is said first pitch of a second sheet in said first direction and L1 is a predetermined value corresponding to the dimension of a segment within said combined sheet material having at least one spot capable of bonding said at least two sheets together, and wherein each end of said protuberances in said sheets extending away from the plane of said sheets comprises a flat bonding element at which location said protuberances of each of said sheets are bonded to each other.

5,173,352

RESILIENT PACKING PRODUCT AND METHOD AND APPARATUS FOR MAKING THE SAME

Johnny M. Parker, Vashon, Wash., assignor to Ranpak Corporation, Concord Township, Ohio

Continuation-in-part of Ser. No. 430,861, Nov. 2, 1989, Pat. No. 5,088,972. This application Jun. 14, 1990, Ser. No. 538,181
The portion of the term of this patent subsequent to Jul. 28, 2009, has been disclaimed.
Int. Cl.[5] B32B *3/28*; D04H *1/04*
U.S. Cl. 428—174 35 Claims

1. A packing product comprising:

a plurality of narrow, elongated strip means of flat, substantially planar material;

said material having a natural resilience; and each of said strip means including a plurality of transverse folds against said natural resilience to form a longitudinally compressed said strip means.

5,173,353

AIR VENTING BELT FOR RETREADING TIRES

Kouzou Yamamoto, Nishinomiya, Japan, assignor to Sumitomo Rubber Industries, Ltd., Kobe, Japan

Filed Nov. 30, 1990, Ser. No. 620,009
Claims priority, application Japan, Dec. 6, 1989, 1-141498[U]
Int. Cl.[5] B32B *23/02*
U.S. Cl. 428—192 11 Claims

1. An air venting belt to be laid between an outer surface of a tire and an inner surface of an envelope when a retread tire is vulcanized, comprising a base cloth made of heat resistant woven cloth which is expansible at least in a longitudinal direction of the belt and means for separating the base cloth from the outer surface of the tire and for preventing the base cloth from marking the tire, the means being located at least at one end of the base cloth but being absent from a middle portion of the base cloth.

5,173,354

NON-BEADING, THIN-FILM, METAL-COATED CERAMIC SUBSTRATE

Rishi Raj, Ithaca, N.Y., assignor to Cornell Research Foundation, Inc., Ithaca, N.Y.

Filed Dec. 13, 1990, Ser. No. 626,696
Int. Cl.[5] B32B *15/04, 15/20*
U.S. Cl. 428—209 6 Claims

1. A non-beading coated ceramic substrate consisting essentially of a ceramic substrate coated with a continuous or patterned thin metal film of thickness normal to the substrate of at least about 10 nm and less than 150 nm, said film consisting of an intimate mixture of at least one transition element metal and at least one element different from said transition element metal, which is from the same group of the Periodic Table of Elements as the metallic or semimetallic atom of the ceramic of the ceramic substrate.

5,173,355

SPUN-BONDED FABRIC CONSOLIDATED BY A HOT-MELT BINDER

Günther Vock, Bobingen, and Michael Schöps, Gronsaltingen, both of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt am Main, Fed. Rep. of Germany

Filed Aug. 17, 1990, Ser. No. 569,077
Claims priority, application Fed. Rep. of Germany, Aug. 21, 1989, 3927505; Sep. 9, 1989, 3930100
Int. Cl.[5] D04H *3/14, 3/16*
U.S. Cl. 428—219 13 Claims

1. A non-needled spun-bonded fabric consolidated substantially only by a hot-melt binder, consisting essentially of load-bearing filaments and binder filaments of polyester, serving as the hot-melt binder, wherein the weight per unit area of the non-needled spun-bonded fabric is in the range between 20 and 120 g/m^2, the individual titer of the load-bearing filaments and of the binder filaments is in the range between 1 and 7 dtex and the proportion of the binder filaments is less than 10 percent by weight.

5,173,356

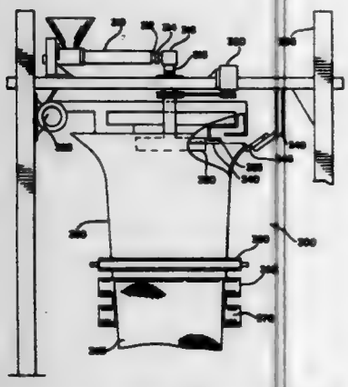
SELF-BONDED FIBROUS NONWOVEN WEBS

Geraldine M. Eaton, Acworth; Peter W. Pascavage; Walter H. Stover, both of Marietta, all of Ga.; James L. Harris, Hickson, Tenn., and Larry D. Carter, Hazlehurst, Ga., assignors to Amoco Corporation, Chicago, Ill.

Continuation-in-part of Ser. No. 411,908, Sep. 25, 1989, abandoned. This application Jul. 20, 1990, Ser. No. 556,353

Int. Cl.[5] B32B 5/06

U.S. Cl. 428—219 21 Claims



1. A uniform basis weight self-bonded, fibrous nonwoven web comprising a plurality of substantially randomly disposed, substantially continuous polymeric filaments wherein said web has a basis weight of about 0.1 oz/yd^2 or greater and a Basis Weight Uniformity Index of 1.0±0.05 determined from average basis weights having standard deviations of less than 10%.

5,173,357

TEAR-RESISTANT POLYESTER FILM AND LAMINATED SHEETS COMPRISED OF THE SAME

Toshio Nakane; Yukihiko Kageyama, and Kenji Hijikata, all of Shizuoka, Japan, assignors to Polyplastics Co., Ltd., Osaka, Japan

Filed May 29, 1991, Ser. No. 705,619

Claims priority, application Japan, May 30, 1990, 2-142116

Int. Cl.[5] B32B 27/10, 27/36

U.S. Cl. 428—220 8 Claims

1. A polybutylene terephthalate film having a thickness of between 10 to 500 μm and exhibiting excellent tear-strength retention after being subjected to thermal history conditions, said film being formed of a resin composition which consists essentially of a blend of 100 parts by weight of a polybutylene terephthalate base resin and between 0.1 to 5 parts by weight of a bisoxazoline compound, and wherein said film has an initial tear strength value determined according to JIS P 8116 of at least 15 grams-force per 10 μm thickness of said film and a tear strength retention of at least 70% after being subjected to thermal history conditions of 120° C. for 3 minutes.

5,173,358

THREE-DIMENSIONAL FABRIC

Meiji Asahara, and Yoshiharu Yasui, both of Kariya, Japan, assignors to Kabushiki Kaisha Toyoda Jidoshokki Seisakusho, Kariya; Fuji Jukogyo Kabushiki Kaisha, Tokyo and Kawasaki Jukogyo Kabushiki Kaisha, Kobe, all of, Japan

Filed Aug. 26, 1991, Ser. No. 749,885

Claims priority, application Japan, Aug. 27, 1990, 2-225999

Int. Cl.[5] D03D 3/00

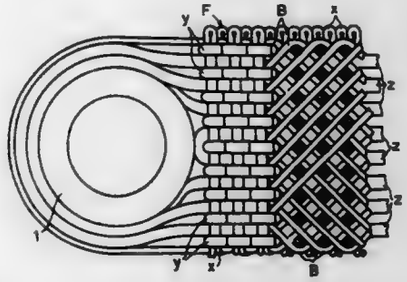
U.S. Cl. 428—224 4 Claims

1. A three-dimensional fabric comprising:

a solid member;

a multiplicity of warp strings arranged in a plurality of layers that extend in a lengthwise direction of the fabric, at least some of the warp strings being wrapped around the solid member;

a multiplicity of bias threads arranged in at least one symmetrical pair of bias thread layers, the bias threads each being inclined relative to the lengthwise direction of the fabric and the layers in said bias layer pair being symmetrically arranged relative to the lengthwise direction of the fabric, at least some of the bias threads being wrapped around the solid member; and



a plurality of vertical threads arranged substantially perpendicular relative to the warp strings and the bias thread layers, for coupling the layers of the warp strings and the bias threads.

5,173,359

COMPOSITE MATERIAL FOR ELECTRICAL APPLICATIONS REINFORCED BY PARA-ORIENTED ARAMIDE FIBROUS SUBSTANCE AND PROCESS FOR PREPARING SAME

Setuo Toyoshima, Tokyo, and Megumi Kimura, Kawasaki, both of Japan, assignors to Honshu Paper Co., Ltd., Japan

Filed Sep. 6, 1990, Ser. No. 579,079

Claims priority, application Japan, Sep. 8, 1989, 1-233498

Int. Cl.[5] B32B 27/34

U.S. Cl. 428—229 10 Claims

1. A composite material reinforced by a para-oriented aramide fibrous substance, comprising: a para-oriented aramide fibrous substance selected from the group consisting of poly(p-phenylene terephthalamide) fiber and poly(p-phenylene-3,4'-diphenyl ether terephthalamide) fiber; a thermosetting resin matrix; and an acrylic polymer having at least one specific reactive cross-linking group selected from the group consisting of carboxyl group, epoxy group, hydroxyl group and methylol group, which the polymer resides at the interface between the para-oriented aramide fibers and the thermosetting resin matrix.

5,173,360

FABRIC FOR INKED RIBBON AND ITS MANUFACTURING METHOD

Nobutake Hiroe; Toshiaki Kadota, and Tsuyoshi Hatakeda, all of Otsu, Japan, assignors to Toray Industries, Inc., Tokyo, Japan

PCT No. PCT/JP91/00403, § 371 Date Nov. 26, 1991, § 102(e) Date Nov. 26, 1991, PCT Pub. No. WO91/14580, PCT Pub. Date Oct. 3, 1991

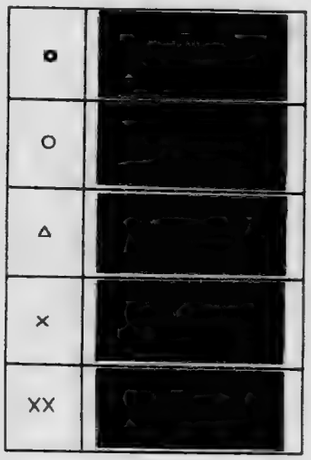
PCT Filed Mar. 27, 1991, Ser. No. 768,326

Claims priority, application Japan, Mar. 29, 1990, 2-83987

Int. Cl.[5] D03D *3/00*

U.S. Cl. 428—229

11 Claims



1. A fabric for inked ribbon characterized by being a fabric having multifilaments of a twist of 30 T/m or less for the warp and having the fiber orientation in the disturbed by high pressure fluid treatment.

5,173,361

STAINLESS STEEL FIBER REINFORCED COMPOSITE BELT

Hiroaki Yamashita, Shiki, and Takashi Toyota, Hirakata, both of Japan, assignors to Nippon Steel Chemical Co., Tokyo and Tsubakimoto Chain Co., Osaka, both of, Japan

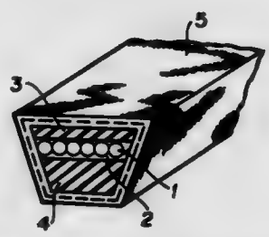
Filed Jan. 17, 1991, Ser. No. 642,501

Claims priority, application Japan, Jan. 22, 1990, 2-10559

Int. Cl.[5] B32B *7/00*; B60B *9/04*; F16G *1/00*; D04H *1/00*

U.S. Cl. 428—245

4 Claims



1. A fiber reinforced composite belt comprising a stainless steel fiber aggregate impregnated with a thermosetting matrix resin being buried as a reinforcing material in an elastomeric base material for belt wherein the amount of matrix resin with which the fiber aggregate is impregnated is in the range of from 1 to 10 weight percent based on the weight of the impregnated fiber aggregate, said stainless steel fiber aggregate comprising monofilaments each having a diameter of from 5 to 50 microns.

5,173,362

COMPOSITE SUBSTRATE FOR BIPOLAR ELECTRODES

Bora Tekkanat, Milwaukee, and James J. Bolstad, Shorewood, both of Wis., assignors to Globe-Union, Inc., Milwaukee, Wis.

Filed Feb. 1, 1991, Ser. No. 654,206

Int. Cl.[5] B32B *5/16, 27/20*; D21H *11/00*

U.S. Cl. 428—283

10 Claims

1. A substrate for a bipolar battery comprising a thermoplastic resin, a glass fiber filler, and a conductive carbon black powder prepared by a process including the following steps:

compounding a mixture of the resin and the conductive powder;

preparing at least one glass fiber mat of the fiber filler;

conveying the mat along a straight path;

introducing molten compound resin and powder onto said mat;

pressing the mat to impregnate same with molten resin containing conductive powder; and

cooling the impregnated mat to form a sheet substrate and wherein the substrate includes about 10 to 70 weight percent glass fibers and about 5 to 40 wt. % carbon black, the balance being resin.

5,173,363

COATING SHEET WHICH WICKS AWAY OIL

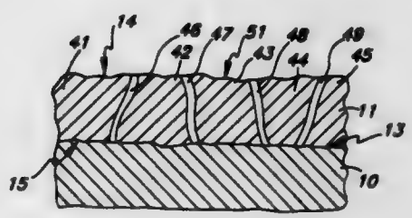
John J. Fitch, Natick, Mass., assignor to Van Leer Metallized Products (USA) Limited, Mid-Glamorgan, Wales, United Kingdom

Filed Nov. 1, 1990, Ser. No. 608,049

Int. Cl.[5] B32B *3/26*

U.S. Cl. 428—304.4

6 Claims



1. A decorative sheet comprised of:

A. a substrate

B. an oil absorbing layer associated with the substrate having an oil-absorbing surface,

C. a decorative layer having a first side and a second side, the second side being attached to the substrate, the decorative layer being formed of a porous membrane having pores which pass through the decorative layer from the first side to the second side, each pore having a surface adapted to attract skin oil from the first side of the decorative layer and convey the oil to the oil-absorbing layer.

5,173,364

GLASS FIBRE REINFORCED PLASTERBOARD AND A METHOD FOR PRODUCING SAME

Emmanuel H. C. A. Geeraert, Ekeren, Belgium, assignor to Redco, N.V., Kapelle o/d Boo, Belgium

Filed Apr. 5, 1991, Ser. No. 681,108

Claims priority, application Fed. Rep. of Germany, Apr. 12, 1990, 4011793

Int. Cl.[5] B32B *13/00*

U.S. Cl. 428—312.4

15 Claims

1. A glass fibre reinforced gypsum board adapted for use as a wallboard having a uniform isotropic high break resistance comprising a single uniform layer of body material having a generally uniform density, said single uniform layer comprising:

a) a gypsum matrix comprised of hemihydrate and water having a density of at least 1.35 g/cm^3 and a 0.4–0.55

water/gypsum ratio, said density being at least 25% higher than said uniform layer density;

b) glass fibres having a diameter of 5–20 μm and a length of 2–20 mm evenly spread throughout said body material at a quantity of 0.3–3.0 weight percentage of said single uniform layer of body material; and,

c) a plurality of voids, said voids being uniformly dispersed throughout said gypsum matrix and glass fibres, said voids having diameters larger than 5 μm and smaller than 350 μm and said voids forming a volume of 20% or more of said single uniform layer of body material.

5,173,365

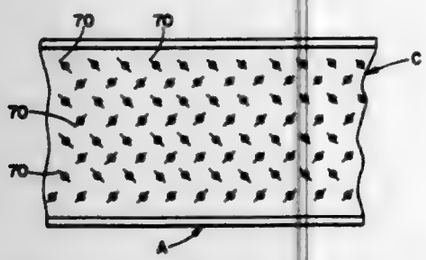
ULTRA-THIN MOLECULAR FILM

Brij P. Singh, North Royalton, and Scott E. Rickert, Lakewood, both of Ohio, assignors to NanoFilm Corporation, Valley View, Ohio

Division of Ser. No. 641,855, Jan. 16, 1991, Pat. No. 5,106,561, which is a continuation of Ser. No. 321,088, Mar. 9, 1989, abandoned, which is a continuation-in-part of Ser. No. 715,520, Mar. 25, 1985, abandoned. This application Jul. 1, 1991, Ser. No. 723,828

Int. Cl.[5] B32B *3/00*

U.S. Cl. 428—333 12 Claims



1. A film made from a film-forming solution containing amphiphilic molecules that are capable of spontaneous self-assembly on a surface on which they are placed, said film having a length, a width and a thickness respectively corresponding to x,y and z directions, said molecules being ordered in said film substantially parallel to said Z direction by being assembled in a uniform relationship relative to one another as opposed to being randomly distributed in a disordered manner, said molecules being arranged in said film in a plurality of aligned units, and said aligned units being oriented relative to one another in both said X and Y directions, whereby the film has molecular alignment in all three of its length, width and thickness directions to provide substantially uniform properties throughout the entire area of the film.

5,173,366

ELECTRICALLY CONDUCTIVE FIBERS, APPARATUS AND METHOD FOR THE PRODUCTION THEREOF

Hideyuki Mitamura; Fumikazu Yoshida, both of Ootsu, and Tatsuo Shimura, Takashima, all of Japan, assignors to Toyo Boseki Kabushiki Kaisha, Osaka, Japan

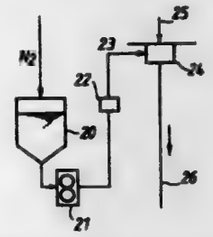
Continuation of Ser. No. 420,390, Oct. 12, 1989, abandoned. This application Nov. 8, 1991, Ser. No. 789,539

Claims priority, application Japan, Oct. 20, 1988, 63-264714; Oct. 25, 1988, 63-270136; Mar. 3, 1989, 1-52320

Int. Cl.[5] B23B *27/00*

U.S. Cl. 428—373 6 Claims

1. An electrically conductive and stretched conjugate fiber having a diameter of 50 μm or less and a tenacity of at least 2.6 g/d, comprising a thermoplastic polymer as the sheath and a discontinuous core of low-melting metal, wherein said low melting metal has a melting point equal to or greater than 50° C. and less than the melting point of said thermoplastic polymer characterized in that the sectional area of the core occupies 0.2 to 50% of that of the fiber, the percent variation of the sectional area of the core in the longitudinal direction is 25% or less and the total length of the discontinuous portions of the



core in the longitudinal direction is 5 cm or less per meter of the core.

5,173,367

CERAMIC COMPOSITES

Eric W. Lilmatta; William E. Moehle, both of Baton Rouge, and Conrad J. Langlois, Jr., New Roads, all of La., assignors to Ethyl Corporation, Richmond, Va.

Filed Jan. 15, 1991, Ser. No. 647,532

Int. Cl.[5] B32B *9/00*; C06K *3/28*

U.S. Cl. 428—408 18 Claims

1. A prepreg comprising sized carbon fibers bonded together with a matrix composition which comprises about 25–60% by weight of a polysilazane and about 75–40% by weight of at least two ceramic powders selected from silicon metal, silicon carbide, and silicon boride powders.

5,173,368

SOLUTION-APPLIED ANTIREFLECTIVE COATINGS

Hector Belmares, Petaluma, Calif., assignor to Pilkington Visioncare Holdings, Inc., Menlo Park, Calif.

Filed Sep. 14, 1988, Ser. No. 244,204

Int. Cl.[5] B32B *17/06*

U.S. Cl. 428—426 24 Claims

1. A three-layer antireflective coating composition stacked on a substrate, comprising a middle layer containing titanium compound sandwiched between top and bottom layers containing polysiloxane, wherein the top and bottom layers are titanium free.

5,173,369

TAPE CARRIER HAVING CONNECTION FUNCTION

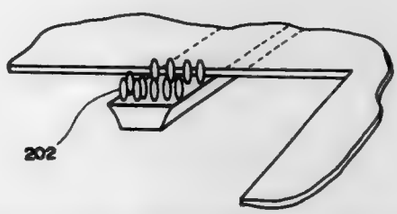
Tatsuo Kataoka, Kawaguchi, Japan, assignor to Mitsui Mining & Smelting Co., Ltd., Tokyo, Japan

Filed Oct. 19, 1990, Ser. No. 600,535

Claims priority, application Japan, Oct. 30, 1989, 1-279859

Int. Cl.[5] H01L *21/60, 23/48*

U.S. Cl. 428—620 9 Claims



1. A tape carrier having a connection function prepared by etching a metal foil to form a conductive pattern comprising outer leads and inner leads on a starting tape carrier, then providing, by plating, a connection portion of at least one group of said outer and inner lead groups with nodules for connecting said at least one group of the leads to a mating

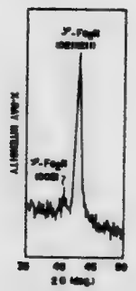
conductive pattern via the nodules, and then applying a thermosetting or thermoplastic adhesive between the nodules formed portion and said mating conductive pattern and thermo-compressive-bonding the conductive patterns to each other.

5,173,370

MAGNETIC RECORDING MEDIUM HAVING A MAGNETIC THIN FILM WITH BOTH PARAMAGNETIC PHASE AND FERROMAGNETIC PHASE IRON NITRIDE WITH PARAMAGNETIC PHASE ZETA Fe_2N AS ITS LARGEST COMPONENT

Seiichiro Takahashi, Osaka; Minoru Kume, Nara, and Kosaro Matsuura, Kyoto, all of Japan, assignors to Sanyo Electric Co., Ltd., Osaka, Japan

Filed Aug. 8, 1990, Ser. No. 564,256
Claims priority, application Japan, Aug. 10, 1989, 1-208130; Mar. 28, 1990, 2-80103
Int. Cl.[5] G11B 5/00
U.S. Cl. 428—694 4 Claims



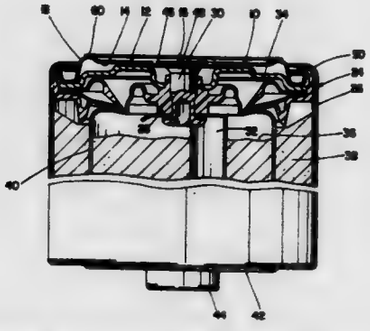
1. A perpendicular magnetic recording medium comprising:
a non-magnetic substrate having a main surface, and
a Fe-N system magnetic thin film formed on said main surface,
said magnetic film including not only a ferromagnetic phase, but also of paramagnetic phase ζ-Fe_2N as its largest component, said magnetic thin film
having a columnar crystal structure extending in a direction substantially perpendicular to said main surface and having substantially perpendicular magnetic anisotropy as a result of said ζ-Fe_2N.

5,173,371

BATTERY TO PREVENT CELL REVERSAL

Harry R. Hulsdorff, Bay Village, and Charles A. Roberts, Rocky River, both of Ohio, assignors to Eveready Battery Company, Inc., St. Louis, Mo.

Filed Mar. 11, 1991, Ser. No. 666,986
Int. Cl.[5] H01M 2/30
U.S. Cl. 429—1 23 Claims



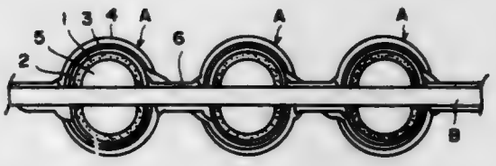
1. A pair of electrochemical cells, including:
(a) a first electrochemical cell having a cylindrical housing, a first terminal secured to one end of said housing, a second terminal secured to the end of said housing opposite said first terminal and electrically isolated from said first terminal; and
(b) a second electrochemical cell having a cylindrical housing, a first terminal secured to one end of said housing, a second terminal secured to the end of said housing opposite said second cell's first terminal and electrically isolated from said second cell's first terminal, said second cell's second terminal having an interior surface and an exterior surface, the exterior surface located on said second cell's second terminal opposite the interior surface, wherein the exterior surface of said second cell's second terminal is contoured with convex impressions which are masked with an electrically nonconductive material thereby creating an electrically nonconductive upper region and an electrically conductive lower region, the upper region protruding above the lower region, said second electrochemical cell cooperatively arranged to abut said electrically nonconductive upper region of said second cell's second terminal against said first cell's second terminal thereby preventing the flow of electrical current between said first cell and said second cell.

5,173,372

SUPPORTING MEMBER FOR SOLID OXIDE FUEL CELL

Youji Matsuo, Kurobe, and Toshio Arai, Toyama, both of Japan, assignors to Yoshida Kogyo K.K., Tokyo, Japan

Filed Feb. 7, 1992, Ser. No. 832,866
Claims priority, application Japan, Feb. 7, 1991, 3-36505
Int. Cl.[5] H01M 8/12
U.S. Cl. 429—31 2 Claims



1. A supporting member for a solid oxide fuel cell having a surface provided with a cell part comprising an inner electrode, an outer electrode and, interposed between said inner and outer electrodes, a zirconia electrolyte stabilized with yttria, characterized in that said supporting member is made of a composite material comprising (100 −A) % by mole of MgO and A % by mole of $MgAl_2O_4$ wherein A is 14 to 64.

5,173,373

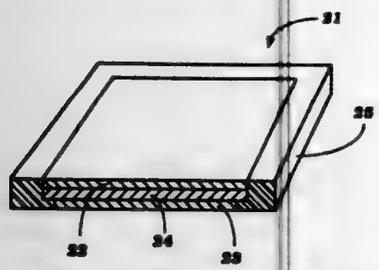
GASKET FOR FUEL CELL

Masaru Ohsuga, Iwata, Japan, assignor to Yamaha Hatsudoki Kabushiki Kaisha, Iwata, Japan

Filed Sep. 14, 1990, Ser. No. 583,030
Claims priority, application Japan, Sep. 14, 1989, 1-236975; Sep. 14, 1989, 1-236976
Int. Cl.[5] H01M 2/08
U.S. Cl. 429—35 6 Claims

1. A fuel cell comprising a pair of electrodes, an electrolyte comprised of phosphoric acid interposed between said elec-

trodes, a gasket and a bond positioned between at least one of said electrodes and said gasket, said bond being comprised of



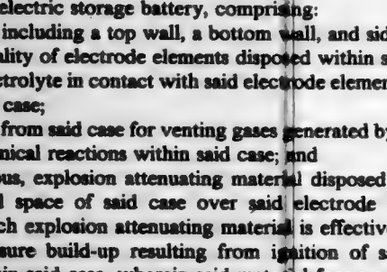
fluoric synthetic rubber and having a modulus of elasticity larger than the modulus of elasticity of said gasket.

5,173,374

EXPLOSION ATTENUATION SYSTEM AND METHOD FOR ASSEMBLY IN BATTERY

William H. Tiedemann, Cedarburg; Richard R. W. Binder, Menomonee Falls; Daniel J. Cantillon, Sussex; Allen C. Chapman, Milwaukee; Guy D. McDonald; Bryan L. McKinney, both of Shorewood, all of Wis.; John Newman, Kennington, Calif., and Richard C. Stone, Milwaukee, Wis., assignors to Globe-Union, Inc., Milwaukee, Wis.

Filed Mar. 12, 1991, Ser. No. 667,970
Int. Cl.[5] H01M 2/12
U.S. Cl. 429—53 20 Claims



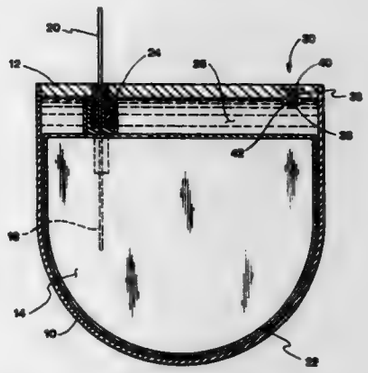
1. An electric storage battery, comprising:
a case including a top wall, a bottom wall, and side walls;
a plurality of electrode elements disposed within said case;
an electrolyte in contact with said electrode elements within said case;
a vent from said case for venting gases generated by electrochemical reactions within said case; and
a porous, explosion attenuating material disposed within a head space of said case over said electrode elements, which explosion attenuating material is effective to limit pressure build-up resulting from ignition of said gases within said case, wherein said material forms a lining on the inner surface of the top wall of the case and on the inner surface of the upper ends of each side wall between the electrode elements and the top wall so that substantially the entire inner surface of the side walls and top wall of the case within the head space is covered by the explosion attenuating material, the interior of the head space remaining essentially open.

5,173,375

ELECTROCHEMICAL CELL WITH IMPROVED FILL PORT

John W. Cretzmeyer, Richfield, and John C. Strohkirch, Coon Rapids, both of Minn., assignors to Medtronic, Inc., Minneapolis, Minn.

Filed Dec. 14, 1990, Ser. No. 627,172
Int. Cl.[5] H01M 2/08
U.S. Cl. 429—72 8 Claims



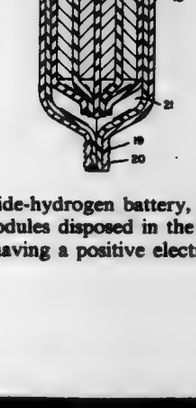
1. An electrochemical cell having a countersunk fill port and seal comprising:
a metal container portion having an exterior surface and an interior surface;
a countersunk area formed in the exterior surface;
an integral boss formed on the interior surface directly underneath the countersunk area;
a passage extending from the countersunk area through the boss, the passage of lesser diameter than the countersunk area;
a plug sealing the passage; and
a closure button in the countersunk area in sealing engagement with the countersunk area.

5,173,376

METAL OXIDE HYDROGEN BATTERY HAVING SEALED CELL MODULES WITH ELECTROLYTE CONTAINMENT AND HYDROGEN VENTING

Brian M. Page, Brown Deer; Paul J. Kaprelian, Raymond; Kenneth R. Jones, Oconomowoc; Jeffrey P. Zagrodnik, Hales Corners, and James T. Daley, Grafton, all of Wis., assignors to Globe-Union Inc., Milwaukee, Wis.

Filed Oct. 28, 1991, Ser. No. 783,005
Int. Cl.[5] H01M 12/08
U.S. Cl. 429—86 16 Claims



1. In a metal oxide-hydrogen battery, a pressure vessel, a plurality of cell modules disposed in the pressure vessel and each cell module having a positive electrode and a negative

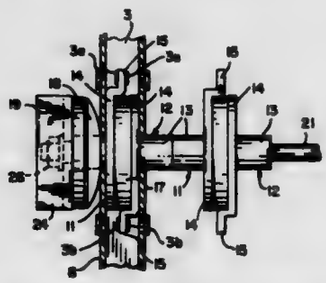
electrode, a liquid electrolyte contained in each cell module, a sealed container composed of an electrically insulating material enclosing each cell module, said container being impervious to the flow of said liquid electrolyte, vent means disposed in each container, said vent means being permeable to the flow of hydrogen gas and impermeable to the flow of said liquid electrolyte, and electrical conductor means extending in sealed relation into each container and connecting said electrodes in an exterior circuit.

5,173,377

APPARATUS FOR ELECTRICALLY CONNECTING CELL MODULES OF A METAL OXIDE-HYDROGEN BATTERY

John F. Sindorf, Pewaukee, Wis., assignor to Globe-Union Inc., Milwaukee, Wis.

Filed Oct. 28, 1991, Ser. No. 783,806
Int. Cl.[5] H01M 12/08
U.S. Cl. 429—101 15 Claims



1. A mechanism for electrically connecting cell modules of a metal oxide-hydrogen battery, said battery comprising an outer pressure vessel containing at least one cell module, said cell module having a positive terminal and a negative terminal and containing a liquid electrolyte, a sealed container composed of electrically insulating material enclosing said cell module and having a pair of aligned openings, gas vent means in the container, an insulating rod extending through said openings, a pair of annular electrical conductors associated with said cell module, said conductors disposed around said insulating rod and disposed in electrically insulated relation to each other, one of said conductors extending through one of said openings and connected to the positive terminal of the cell module and the other of said conductors extending through the other of said openings and connected to the negative terminal of the respective cell, and biasing means for urging the portions of said container bordering the openings therein into sealing relation with the respective conductor.

5,173,378

PASSIVE COOLING DEVICE FOR EXTENDING BATTERY LIFE

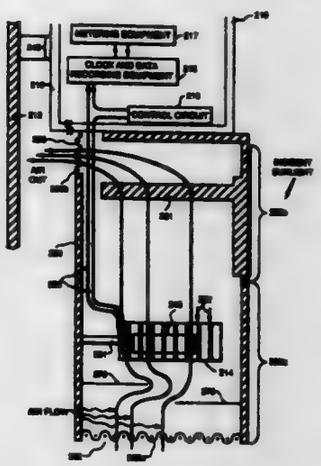
Dale M. Brown; Philip G. Kosky; Lionel M. Levinson, and Roy F. Thornton, all of Schenectady, N.Y., assignors to General Electric Company, Schenectady, N.Y.

Continuation-in-part of Ser. No. 444,338, Dec. 1, 1989, Pat. No. 5,035,964. This application May 13, 1991, Ser. No. 699,085
The portion of the term of this patent subsequent to Jul. 30, 2008, has been disclaimed.
Int. Cl.[5] H07M 10/50
U.S. Cl. 429—120 16 Claims

1. An electrical-energy-supplying device having an extended storage life and subject to heating by sunlight, comprising:

battery means for supplying electrical energy;

chimney means for producing natural convective air flow therethrough in dependence on the intensity of sunlight incident on said chimney means; and



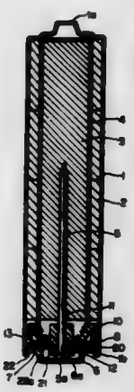
means for transferring heat from said battery means to said air flow.

5,173,379

BATTERY INCLUDING A SEALING MEMBER AND A REINFORCING MEMBER FOR THE SEALING MEMBER

Yoshinari Ichinose; Kuniyasu Oya; Shinichi Ando, and Kazuhiro Hashimoto, all of Fukushima, Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Jan. 10, 1992, Ser. No. 819,074
Claims priority, application Japan, Jan. 14, 1991, 3-004115[U]
Int. Cl.[5] H01M 2/08
U.S. Cl. 429—174 1 Claim



1. In a battery including a battery housing containing a positive electrode member and a negative electrode member, a sealing member for sealing an opening formed at one end of said battery housing, said sealing member being provided with a cylindrical portion having a through hole, a reinforcing member for reinforcing said sealing member, and a current collecting pin press-fitted in said through hole of said sealing member; the improvement characterized in that:

said reinforcing member is provided with a plate portion retained at an outer periphery thereof to said battery housing and a thick-walled portion having a hole engaging with an outer circumferential surface of said cylindrical portion of said sealing member, said thick-walled portion having a wall thickness larger than that of said plate portion; and

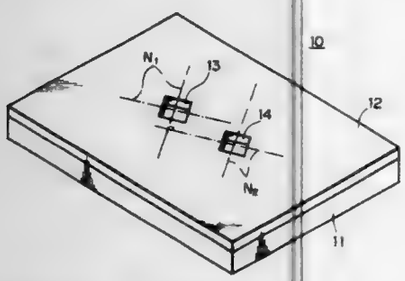
said sealing member is formed with a thin-walled portion at

a position opposed to a space defined between said sealing member and said reinforcing member.

5,173,380
PHOTOMASK

Kazuya Kamon, Itami, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 12, 1991, Ser. No. 654,057
Claims priority, application Japan, Jul. 5, 1990, 2-180103
Int. Cl.[5] G03F 9/00
U.S. Cl. 430—5 **8 Claims**



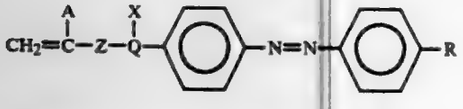
1. A photomask, comprising:
a transparent plate; and
a shield layer formed on said transparent plate, said shield layer having a first and a second rectangular openings each of which serves as a rectangular light-transmission pattern,
wherein said first rectangular opening is disposed so as to deviate off normal lines of respective sides of said second rectangular opening.

5,173,381
AZO POLYMERS FOR REVERSIBLE OPTICAL STORAGE

Almeria L. Natansohn; Paul L. Rochon, and Shuang Xie, all of Kingston, Canada, assignors to Queen's University, Kingston, Canada

Filed Aug. 5, 1991, Ser. No. 740,227
Int. Cl.[5] G11B 7/24
U.S. Cl. 430—19 **9 Claims**

1. A process for reversible optical information storage utilizing a device comprising an amorphous film of a polymer, copolymer or polymer blend incorporating, in a main chain or a side chain thereof, an azoaromatic compound having the general formula:



where
A is selected from hydrogen and methyl,
R is selected from

where R_5 is alkyl having 1–4 carbon atoms, oxyalkyl or phenyl or substituted phenyl

where R_6 is alkyl having 1–4 carbon atoms branched or not, and phenyl, substituted or not

Q is selected from N, O and S,
X is selected from hydrogen and alkyl having 1–6 carbon atoms and
Z is selected from carbonyl, oxycarbonyl and alkyloxy carbonyl, comprising the steps of:
(a) recording information below the glass temperature of said polymer by locally reorienting said polymer by linearly polarized light,
(b) reading stored information, and
(c) erasing said stored information by overwriting with light selected from light polarized in a selected zero direction and circularly polarized light.

5,173,382
PHOTOSENSITIVE COMPOSITION CONTAINING WATER-SOLUBLE BINDER AND AROMATIC DIAZONIUM CHROMATE FORMING FLUORESCENT SCREENS EMPLOYING SAME

Hajime Morishita, Tokyo; Nobuaki Hayashi, Saitama; Saburo Nonogaki, Tokyo; Masato Ito, Kokubunji; Masahiro Nishizawa, and Kiyoshi Miura, both of Mobara, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Jan. 9, 1990, Ser. No. 462,589
Claims priority, application Japan, Jan. 30, 1989, 1-17546
Int. Cl.[5] G03F 7/021, 7/04; G03C 5/56, 1/66
U.S. Cl. 430—28 **7 Claims**

1. A photosensitive composition comprising in admixture a water-soluble polymer selected from the group consisting of poly (vinyl alcohol), gelatin and gum arabic, and an organic diazonium chromate present in a range of about 5–20% by weight based on the water-soluble polymer, wherein the organic diazonium chromate is an aromatic diazonium chromate which is at least one selected from p-diazo-N,N-dimethylaniline chromate, p-diazo-morpholinobenzene chromate, p-diazo-N,N-dimethyl-2,5-dimethylaniline chromate and p-diazo-2,5-dimethoxymorpholinobenzene chromate.

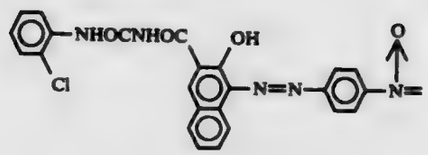
5. A method of forming a fluorescent screen, comprising the steps of:
forming a film by applying on a substrate a coating composition of a neutral or weakly acidic aqueous suspension prepared by incorporating a fluorescent substance with a photosensitive composition comprising in admixture a water-soluble polymer selected from the group consisting of poly(vinyl alcohol), gelatin and gum arabic, and an aromatic diazonium chromate selected from the group consisting of p-diazo-N,N-dimethylaniline chromate, p-diazo-morpholinobenzene chromate, p-diazo-N,N-dimethyl-2,5-dimethylaniline chromate and p-diazo-2,5-dimethoxymorpholinobenzene chromate being, the aromatic diazonium chromate present in a range of about 5–20% by weight based on the water-soluble polymer;
exposing the film with light having a desired pattern; and
forming the pattern by development.

5,173,383
ELECTROPHOTOGRAPHIC PHOTOSENSITIVE MEMBER, AND ELECTROPHOTOGRAPHIC APPARATUS AND FACSIMILE MACHINE EMPLOYING THE SAME

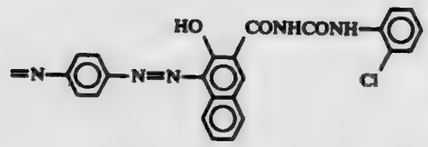
Yoshio Kashizaki; Hajime Miyazaki, both of Yokohama, and Toshie Miyaji, Kawasaki, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

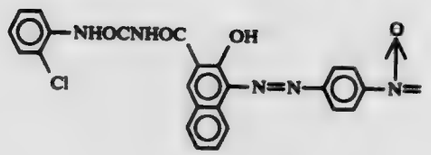
Filed Dec. 23, 1991, Ser. No. 812,108
Claims priority, application Japan, Dec. 26, 1990, 2-406670
Int. Cl.[5] G03G 5/06
U.S. Cl. 430—58 **14 Claims**

1. An electrophotographic photosensitive member comprising an electroconductive support and a photosensitive layer formed thereon, the photosensitive layer containing at least one of the azo pigments represented by the formula [1], [2], or [3] below:

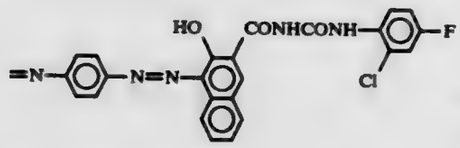


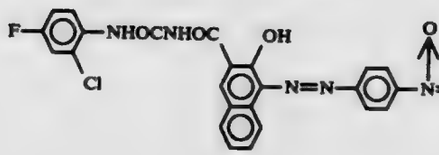
[1]





[2]





[3]

ELECTROPHOTOGRAPHIC PHOTORECEPTOR

Shigenori Otsuka, Omiya, Japan, assignor to Mitsubishi Kasei Corporation, Tokyo, Japan

Continuation of Ser. No. 593,517, Oct. 2, 1990, abandoned, which is a continuation of Ser. No. 339,710, Apr. 18, 1989, abandoned. This application Apr. 8, 1992, Ser. No. 865,706
Claims priority, application Japan, Apr. 19, 1988, 63-96144
Int. Cl.[5] G03G 5/047
U.S. Cl. 430—59 3 Claims

1. A layered-type organic electrophotographic photoreceptor in which a charge generating layer containing organic charge generating material and a charge transporting layer containing organic charge transporting material are constructed on an electroconductive support, characterized in that the photoreceptor has a value n of not greater than 0.5 in the following equation (1) of an approximated straight line obtained by plotting both the electric field of from 1×10^5 V/cm to 5×10^5 V/cm and the quantum yield in a logarithmic scale:

$$n=n_0E^n \quad (1)$$

where n represents a quantum yield as the whole photoreceptor, E represents an electric field of from 1×10^5 V/cm to 5×10^5 V/cm, and n_0 represents a constant determined by said approximation, and specific to the photoreceptor, that a film thickness of said charge transporting layer is from about 30 to 60 μm (micrometer) and that said organic charge generating material comprises at least one material selected from the group consisting of azo dyes, phthalocyanine dyes, quinacridone dyes, perylene dyes, polycyclic quinone dyes, indigo dyes, benzoimidazole dyes, pyrylium salts, thiapyrylium salts, and squarylium salt pigments.

3. A layered-type organic electrophotographic photoreceptor according to claim 2 or 1, in which said organic charge transporting material comprises at least one material selected from the group consisting of carbozole, indole, imidazole, oxazole, thiazole, oxadiazole, pyrazole, pyrazoline, thiadiazole, aniline derivatives, hydrazone derivatives, conjugated system compounds having stilbene skelton and those polymers having groups derived from such compounds in a main or side chain, 2,4,7-trinitrofluorenone and tetracyano quinodimethane.

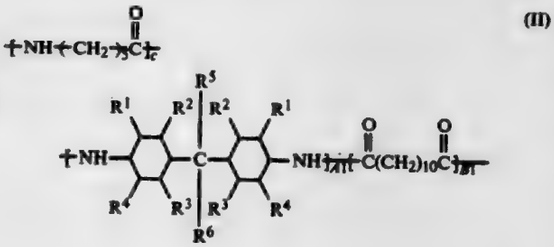
5,173,385

PHOTOSENSITIVE MEMBER FOR ELECTROPHOTOGRAPHY WITH COPOLYAMIDE INTERLAYER

Mamoru Nozomi; Kiyoshi Sekihara, and Ryoko Aso, all of Kanagawa, Japan, assignors to Mitsubishi Kasei Corporation, Tokyo, Japan

Filed May 28, 1991, Ser. No. 706,189
Claims priority, application Japan, May 28, 1990, 2-137610
Int. Cl.[5] G03G 5/14
U.S. Cl. 430—59 13 Claims

1. In the photosensitive member for electrophotography comprising at least a primer layer and a photosensitive layer formed on an electrically conductive substrate, an improved photosensitive member characterized in that the primer layer contains a copolyamide which is represented by a chemical formula



(II)

wherein each R^1, R^2, R^3, R^4, R^5 and R^6 represents independently a hydrogen atom or a methyl or ethyl group; and

A1, A2, B1, B2 and C represent the monomer ratio and satisfy the following relations:

C=33–67,

(A1+A2) is substantially equal to (B1+B2),

$A1/(A1+A2)=0.6–1$ and

$B1/(B1+B2)=0.6–1$

wherein

$A1+A2+B1+B2+C=100$ and all monomers represented by the A1, A2, B1, B2 and C ratios are present in said copolyamide.

7. The photosensitive member for electrophotography as claimed in claim 1, wherein the photosensitive layer is of the laminated type composed of a charge generation layer and a charge transport layer.

12. The photosensitive member for electrophotography as claimed in claim 7, wherein a charge transport material of the charge transport layer is one or more than one selected from a group consisting of 2,4,7-trinitrofluorenone, tetracyanoquinodimethane, carbazole, indole, imidazole, oxazole, pirrazole, oxadiazole, pirrazoline, thiadiazole, aniline deriva-

tives, hydrazone compounds, aromatic amine derivatives, stilbene derivatives and polymers having groups comprising any of the above compounds in the chain or side chain.

5,173,386

TITANIUM DIOXIDE AGGREGATES PROCESS FOR PRODUCING SAME AND ELECTROPHOTOGRAPHIC PHOTOSENSITIVE MATERIAL CONTAINING SAME

Sadao Murasawa, Itami, Japan, assignor to Ishihara Sangyo Kaisha, Ltd., Osaka, Japan

Filed Dec. 28, 1989, Ser. No. 458,349
Claims priority, application Japan, Dec. 28, 1988, 63-332298; Dec. 28, 1988, 63-332299; Feb. 2, 1989, 1-024583
Int. Cl.[5] G03G *5/08*; C01G *23/047*; C09C *1/36*
U.S. Cl. 430—84 16 Claims

1. Titanium dioxide aggregates for use in an electro-photographic photoconductor which comprises sintered aggregates of fine primary particles having a rutile type structure, an aggregate size of 1 to 5 μm and an oil absorption of 35 to 65.

5,173,387

ELECTROPHOTOGRAPHIC DRY DEVELOPER

Masao Niki, Wakayama; Koji Akiyama, Osaka, and Yutaka Kanamaru, Wakayama, all of Japan, assignors to KAO Corporation, Tokyo, Japan

Continuation of Ser. No. 429,554, Oct. 31, 1989, abandoned. This application Feb. 14, 1992, Ser. No. 834,983
Claims priority, application Japan, Nov. 2, 1988, 63-278105
Int. Cl.[5] G03G *9/00*
U.S. Cl. 430—109 4 Claims

1. A positively charged electrophotographic dry developer which comprises

(a) toner particles, said toner particles comprising

(i) a binder resin which comprises a resin component consisting of:

(A) 55 to 95% by weight based on the weight of said resin component of a polyester resin which is the condensation product of a polycarboxylic acid and a polyhydric alcohol; and

(B) 45 to 5 by weight based on the weight of said resin component of a styrene-acrylic resin which is a copolymerized product of a styrene monomer, an acrylic monomer, and a monomer containing an amino group, said resin (A) and (B) each having a softening point of 110° C. or less, and

(ii) a dyestuff or pigment of chromatic color mixed with said resin component; and

(b) a carrier coated with a fluoro resin wherein at least 80 mole percent of the univalent atoms bonded to the carbon chains of said fluoro resin are fluorine atoms.

5,173,388

DEVELOPING PROCESS EXCELLENT IN IMAGE REPRODUCIBILITY

Tsutomu Uezono, Saganihara; Akihiro Watanabe, Neyagawa; Mitsushi Kuroki, Kumamoto; Toshio Nishino, Nara, and Shoji Tomita, Yao, all of Japan, assignors to Mita Industrial Co., Ltd., Osaka, Japan

Filed Apr. 27, 1990, Ser. No. 515,711
Claims priority, application Japan, Apr. 28, 1989, 1-107330; Apr. 28, 1989, 1-107331; May 26, 1989, 1-131644
Int. Cl.[5] G03G *13/09*
U.S. Cl. 430—122 6 Claims

1. A developing process excellent in the reproducibility of images, which comprises forming a magnetic brush of a two-component type developer comprising a magnetic carrier and a toner on a developing sleeve and bringing the magnetic brush into sliding contact with a photosensitive material having a charged image thereon to form a toner image, wherein the relaxation time (τ) of a circuit constructed by the developing sleeve, the developer and the surface of the photosensitive material is set at 8 to 40 milliseconds wherein said time is measured at a frequency of 50 Hz under dynamic conditions while changing the surface of the photosensitive material to an electroconductive surface of the same size.

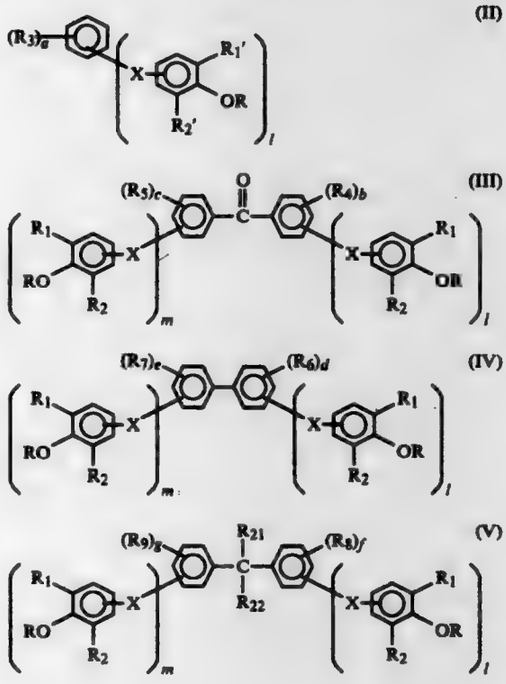
5,173,389

POSITIVE-WORKING PHOTORESIST COMPOSITION

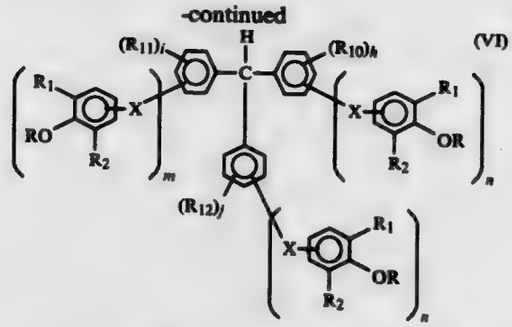
Kazuya Uenishi; Shinji Sakaguchi, and Tadayoshi Kokubo, all of Shizuoka, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Apr. 26, 1990, Ser. No. 514,811
Claims priority, application Japan, Apr. 26, 1989, 1-107013
Int. Cl.[5] G03F *7/023*, *7/32*
U.S. Cl. 430—192 13 Claims

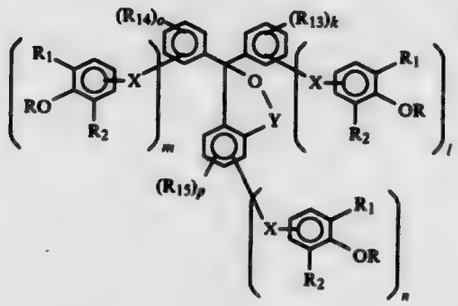
1. A positive-working photoresist composition, which contains an admixture of (1) a light-sensitive material obtained by reacting a polyhydroxy compound selected from those represented by any of formulae (II) to (IX) with at least one of 1,2-naphtho-quinonediazido-5-sulfonyl chloride and 1,2-naphtho-quinonediazido-4-sulfonyl chloride, and (2) an alkali-soluble novolak resin:



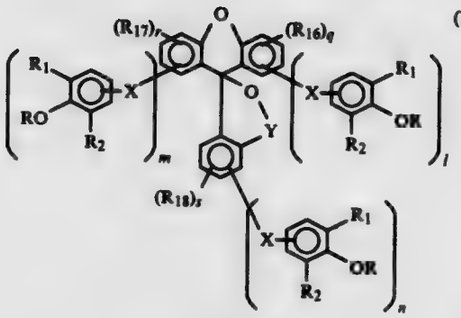
-continued



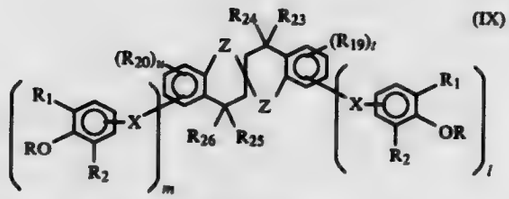
(VI)



(VII)

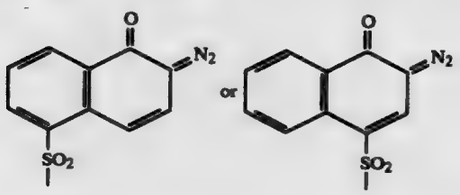


(VIII)

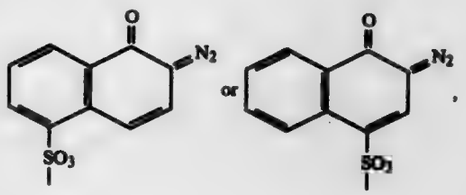


(IX)

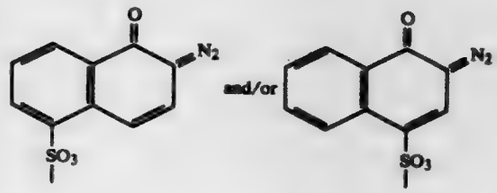
wherein R_1' and R_2' each represents a C_1–C_4 straight or branched alkyl or alkoxy group; wherein R_1 and R_2 each represents a hydrogen atom or a C_1–C_4 straight or branched alkyl or alkoxy group, provided that R_1 and R_2 do not represent hydrogen atoms at the same time; X represents a divalent organic group; R represents —H



which may be the same or different; R_3 to R_{20}, which may be the same or different, each represents —H, —OH, a substituted or unsubstituted alkyl group, a substituted or unsubstituted alkoxy group, a substituted or unsubstituted aryl group, a substituted or unsubstituted aralkyl group, a substituted or unsubstituted acyl group, a substituted or unsubstituted acyloxy group,



provided that $1 \leqq$



$\leqq 9$ within one molecule of the light-sensitive material; R_{21} to R_{26} each represents —H, —OH, —COOH, —CN, a halogen atom, —$COOR_{27}$, —R_{28}—COOH, —R_{29}—$COOR_{30}$ (wherein R_{27} and R_{30} each represents a substituted or unsubstituted alkyl group, a substituted or unsubstituted aryl group, a substituted or unsubstituted aralkyl group, and R_{28} and R_{29} each represents a substituted or unsubstituted alkylene group or a substituted or unsubstituted arylene group), a substituted or unsubstituted alkyl group, a substituted or unsubstituted alkoxy group, or a substituted or unsubstituted aralkyl group; Y represents

or —SO_2—; Z represents an oxygen atom or a single bond; and a to u represent real numbers satisfying the following conditions:

$1 \leqq l \leqq 4$,
$0 \leqq m, n \leqq 4$,
$0 \leqq a$ to k, and o to $u \leqq 5$.

5,173,390

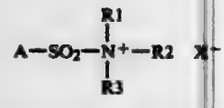
WATER SOLUBLE CONTRAST ENHANCEMENT COMPOSITION AND METHOD OF USE

John B. Covington, Richardson; Vic B. Marriott, Dallas; Larry G. Venable, Grand Prairie, and Peter Kim, Carrollton, all of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Division of Ser. No. 267,151, Dec. 9, 1988, Pat. No. 4,997,742, which is a division of Ser. No. 879,653, Jun. 27, 1986, Pat. No. 4,816,380. This application Sep. 13, 1990, Ser. No. 582,471
The portion of the term of this patent subsequent to Mar. 5, 2008, has been disclaimed.
Int. Cl.[5] G03C 1/54, 1/60; G03F 7/022, 7/023
U.S. Cl. 430—192 9 Claims

1. A photosensitive contrast enhancement composition for application on a photoresist layer during a semiconductor chip manufacturing process, said composition consisting essentially of an aqueous solution from about 25% to 67% by weight of a 1-oxy-2-diazonaphthalene sulfonamide salt and a binder in sufficient quantity for good coating properties;

wherein said sulfonamide salt consists essentially of a compound having the formula:



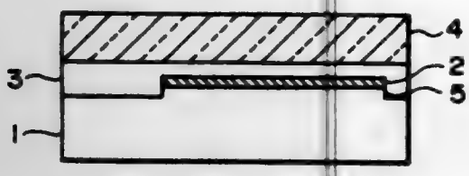
wherein "A" represents a 1-oxy-2-diazonaphthalene radical, and R1, R2, and R3 represent radicals selected from the group consisting of hydrogen, methyl, ethyl, propyl and butyl, and X is a water-solubilizing anion.

5,173,391

OPTICAL RECORDING MEDIUM

Mizuho Hiraoka, and Hiroyuki Imataki, both of Kawasaki, Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 598,748, Oct. 19, 1990, Pat. No. 5,085,925, which is a continuation of Ser. No. 229,966, Aug. 9, 1988, abandoned. This application Nov. 13, 1990, Ser. No. 611,496
Claims priority, application Japan, Aug. 12, 1987, 62-199952
Int. Cl.[5] G03C *8/00*
U.S. Cl. 430—200 24 Claims



1. A method for optically recording information in an optical recording medium, which comprises the following steps:

selecting an optical recording medium comprising an optical recording layer provided on a substrate, a protective material and a bond layer for bonding the optical recording layer to the protective material, the bond layer having a thermoplastic adhesive comprising (A) a tackifier and (B) at least one of (i) an ethylene-acrylic acid copolymer, (ii) an ethylene-acrylate ester copolymer and (iii) an ethylene-maleic anhydride-acrylic acid terpolymer; and

irradiating said optical recording medium with a light beam, thereby forming pits in the optical recording layer and recording information.

5,173,392

FORMING A PATTERN ON A SUBSTRATE

Ekkehard F. Miersch, Rye, and Jae M. Park, Binghamton, both of N.Y., assignors to International Business Machines, Corp., Yorktown Heights, N.Y.

Continuation of Ser. No. 399,058, Aug. 28, 1989, Pat. No. 5,122,439. This application Apr. 3, 1992, Ser. No. 863,114
Int. Cl.[5] G03C *5/00*
U.S. Cl. 430—311 5 Claims

1. A process for forming a metallic pattern on a substrate for the fabrication of thin film structure for multichip packaging which comprises:

a. providing a metal onto a substrate;

b. micromachining the metal down to a desired thickness;

c. depositing a photoresist layer on said metal;

d. defining desired pattern of circuit channels in said photoresist;

e. etching the desired metal pattern in the metal layer using the photoresist as the mask;

f. removing the remaining photoresist layer;

g. depositing a dielectric layer onto the metal and over the substrate;

h. micromachining the dielectric layer to the level of the metal to provide the desired pattern of dielectric material between the metal of the metallic pattern; wherein said micromachining is single crystal diamond to provide planar metallic pattern in which the flatness is within 1 micron over 1 metal length and the average roughness of the metallic pattern is 0.02 to 0.005 micron.

5,173,393

ETCH-RESISTANT DEEP ULTRAVIOLET RESIST PROCESS HAVING AN AROMATIC TREATING STEP AFTER DEVELOPMENT

Recai Sezi, Roettenbach; Michael Sebald, Hessdorf-Hausberg; Rainer Leuschner, Grossenseebach; Siegfried Birkle, Hoechstadt, and Hellmut Ahne, Roettenbach, all of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Munich, Fed. Rep. of Germany

Filed Apr. 24, 1990, Ser. No. 513,570
Claims priority, application Fed. Rep. of Germany, Apr. 24, 1989, 3913431
Int. Cl.[5] G03F *7/023, 7/36*
U.S. Cl. 430—323 9 Claims

1. A method for dimensionally accurate, photolithographic structure production, comprising the following steps:

a) applying onto a substrate a layer of an easily structurable photoresist, having a base polymer that is adequately transparent for the exposure radiation and a photoactive constituent, o-quinone diazide, the photoresist comprising groups that are reactive after development;

b) exposing in the deep ultraviolet range and developing in an aqueous alkaline solution the resist layer for generating a resist structure;

c) treating the resist structure with a reactant that has aromatic structures and comprises reactive groups for creating a chemical compound with the reactable groups of the generated resist structures; and

d) etching the substrate in a halogen-containing plasma using the treated resist structure as an etching mask.

5,173,394

METHOD FOR PROCESSING SILVER HALIDE COLOR PHOTOGRAPHIC MATERIALS

Hiroshi Hayashi, Kanagawa, Japan, assignor to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Jul. 9, 1991, Ser. No. 729,750
Claims priority, application Japan, Jul. 10, 1990, 2-180528
Int. Cl.[5] G03C *7/40*
U.S. Cl. 430—372 17 Claims

1. A method for continuously processing an imagewise exposed silver halide color photographic material comprising a support having thereon at least one silver halide emulsion layer, comprising the steps of developing with a color developer, bleaching with a processing bath having a bleaching ability comprising a bleaching agent in a concentration of at least 0.15 mol/liter, water washing and/or stabilizing with at least two sequential processing tanks, and drying the thus processed photographic material, wherein the equilibrium iron concentration of the processing solution in the tank immediately preceding the final tank of the water washing and/or stabilizing step is from 100 to 500 ppm and the equilibrium iron concentration is at least seven times that of the processing solution in the final tank of the water washing and/or stabilizing step, and the time from the start of the bleaching step to the completion of the water washing and/or stabilizing step is not more than 65 seconds.

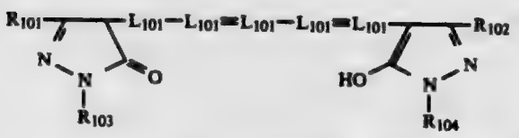
5,173,395

METHOD FOR FORMING COLOR IMAGE

Masahiro Asami, Kanagawa, Japan, assignor to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Oct. 5, 1989, Ser. No. 417,618
Claims priority, application Japan, Oct. 7, 1988, 63-253377
The portion of the term of this patent subsequent to Mar. 19, 2008, has been disclaimed.
Int. Cl.[5] G03C 7/26, 7/30
U.S. Cl. 430—376 12 Claims

1. A method for forming a color image which comprises developing an imagewise exposed silver halide color photographic material with a color developer containing at least one aromatic primary amine developing agent, wherein said silver halide color photographic material comprises a reflective support whose transmission density in the red region is from 0.2 to 0.9, having thereon at least one light-sensitive emulsion layer containing at least one coupler of forming a dye on coupling with an oxidation product of said developing agent and silver chlorobromide grains comprising 98 to 99.9 mol % of silver chloride and containing substantially no silver iodide, said support having further provided thereon a dye represented by formula (A):



(A)

wherein R_{101} and R_{102} each represents $—OR_{105}$, $—COOR_{105}$,

$—COR_{105}$, —CN or $—R_{107}$, wherein R_{105} and R_{106} each represents a hydrogen atom, a substituted or unsubstituted alkyl group or a substituted or unsubstituted aryl group, and R_{107} represents an alkyl group or an alkyl group substituted with a halogen atom, a carboxyl group, a sulfo group or a hydroxy group; R_{103} and R_{104} each represents an alkyl, aralkyl or aryl group substituted with at least one of a sulfo group or a carboxyl group; and L_{101} represents a substituted or unsubstituted methine group, and said color developer contains from 3.5×10^{-2} to 1.5×10^{-1} mol/l of chloride ion and from 5.0×10^{-5} to 5.0×10^{-4} mol/l of bromide ion.

5,173,396

SILVER HALIDE PHOTOGRAPHIC LIGHT-SENSITIVE MATERIAL

Satoru Nagasaki; Haruhiko Sakuma; Hiroyuki Hashimoto, and Kazuya Tsukada, all of Hino, Japan, assignors to Konica Corporation, Tokyo, Japan

Continuation of Ser. No. 596,991, Oct. 11, 1990, abandoned.
This application Dec. 23, 1991, Ser. No. 814,314
Claims priority, application Japan, Oct. 14, 1989, 1-267188; Nov. 15, 1989, 1-296446; Dec. 12, 1989, 1-321876
Int. Cl.[5] G03C 1/85
U.S. Cl. 430—529 14 Claims

1. A light-sensitive silver halide photographic element comprising a support, at least one silver halide emulsion layer, and an antistatic layer provided between said support and a lowermost silver halide emulsion layer, said antistatic layer consisting essentially of an effective amount of a water soluble electrically conductive binder polymer having an electrically conductive group selected from the class consisting of sulfonic acid, sulfuric ester, and quaternary ammonium, an effective amount of latex hydrophobic polymer particles, said hydrophobic polymer particles comprising at least one component selected from the group consisting of a styrene derivative, alkyl acrylate, and alkyl methacylate in an amount of at least 30 mol %, and a hardener;

at least one layer other than said antistatic layer being a hydrophilic colloidal layer containing 0.1 to 2.0 g of a polyhydric alcohol having 2 to 8 carbon atoms and 2 to 6 hydroxy groups, said hydrophilic colloidal layer being a silver halide emulsion layer or a layer adjacent to a silver halide emulsion layer.

5,173,397

PHOTOGRAPHIC SUPPORT WITH TITANIUM DIOXIDE PIGMENTED POLYOLEFIN LAYER

Toura Noda, Matsudo; Masaaki Kubbota, Misato, and Akira Uno, Kashiwa, all of Japan, assignors to Mitsubishi Paper Mills Limited, Tokyo, Japan

Division of Ser. No. 499,659, Mar. 27, 1990, Pat. No. 5,075,206.
This application Sep. 17, 1991, Ser. No. 760,981
Claims priority, application Japan, Mar. 28, 1989, 1-077549; May 30, 1989, 1-137125; Sep. 4, 1989, 1-230085
Int. Cl.[5] G03C 1/76
U.S. Cl. 430—531 13 Claims

1. A photographic support consisting essentially of a substrate and a resin layer provided at least on the side of the substrate where images are to be formed, said resin layer comprising (A) a polyolefin resin or a polyolefin resin mixture, (B) a titanium dioxide pigment, (C) a fluorescent agent and (D) at least one member selected from the group consisting of a color pigment and a color dye, said titanium dioxide pigment having a number-average diameter of 0.110–0.150 μm and having been subjected to at least one treatment selected from the group consisting of (1) a surface treatment with aluminum-containing hydrated metal oxides to coat the titanium dioxide pigment with (a) an aluminum-containing metal composition in an amount of more than 0.2% by weight, but less than 1.8% by weight in terms of anhydrous metal oxide based on the weight of the titanium dioxide pigment and (b) a silicon composition in an amount of 0 inclusive–0.4 inclusive % by weight in terms of anhydrous silicon dioxide based on the weight of the titanium dioxide pigment and (2) an inside treatment with an aluminum compound to contain, in the titanium dioxide pigment, an aluminum composition in an amount of more than 0.2% by weight, but less than 1.8% by weight in terms of anhydrous aluminum oxide based on the weight of the titanium dioxide pigment, and said fluorescent agent being a bis(benzoxazolyl) naphthalene type fluorescent agent having a substituent or a bis(benzoxazolyl)stilbene type fluorescent agent having a substituent.

METHOD AND COMPOSITIONS FOR SCREENING AND DIAGNOSING HUMAN CYTOMEGALOVIRUS ("HCMV")

Deborah H. Spector, and Stephen A. Spector, both of La Jolla, Calif., assignors to The Regents of the University of California, Oakland, Calif.

Continuation of Ser. No. 4,291, Jan. 5, 1987, Pat. No. 4,762,780, which is a continuation of Ser. No. 601,094, Apr. 17, 1984, abandoned, which is a continuation of Ser. No. 438,662, Nov. 2, 1982, abandoned. This application Aug. 2, 1988, Ser. No. 227,188

The portion of the term of this patent subsequent to Aug. 9, 2005, has been disclaimed.

Int. Cl.[5] C12Q *1/68;* C12N *15/11*

U.S. Cl. 435—6 6 Claims

1. A method for determining the presence of human cytomegalovirus ("hCMV") in a human host by assaying for hCMV in a clinical sample, said method comprising:

combining under hybridizing conditions of predetermined stringency, said sample in a mixture of at least two single-stranded DNA fragments which may be obtained by EcoRI cleavage of the hCMV genome, each of at least about 20 bases, wherein said fragments are non-cross-hybridizing with human DNA and are selected from the group consisting of fragments B, D, G, J, K, M, Q, S, T, U, X, Y and fragments duplexing with said EcoRI restriction fragments and non-cross-hybridizing with human DNA; and

determining the formation of duplexes between said DNA fragments and nucleic acid in said sample, as diagnostic of the presence of hCMV in said sample.

5,173,403

THERMOSTABLE ACID PROTEASE FROM *SULFOLOBUS ACIDOCALDARIUS* AND GENE

Jordan J. N. Tang, and Xin-Li Lin, both of Oklahoma City, Okla., assignors to Oklahoma Medical Research Foundation, Oklahoma City, Okla.

Continuation-in-part of Ser. No. 326,622, Mar. 21, 1989, abandoned, which is a continuation-in-part of Ser. No. 315,618, Feb. 24, 1989, abandoned. This application Jan. 19, 1990, Ser. No. 467,745

Int. Cl.[5] C12N *15/52, 9/50, 9/52*

U.S. Cl. 435—6 4 Claims

1. An isolated DNA molecule whose nucleotide sequence encodes a thermostable, acidic protease having enzymatic activity at a temperature between approximately 0° C. and 100° C. and a pH between 0 and 11, and a molecular weight weight of approximately 46,000 Daltons by size exclusion gel chromatography, said sequence hybridizing under stringent conditions to the complement of the nucleotide sequence encoding the thermostable acid protease of *Sulfolobus acidocaldarius* shown in FIG. 6.

5,173,404

IMMUNOASSAY FOR FOLLICULAR REGULATORY PROTEIN

Gere S. diZerega, Pasadena, Calif., assignor to University of Southern California, Los Angeles, Calif.

Division of Ser. No. 28,816, Mar. 26, 1987, Pat. No. 4,912,201, which is a continuation-in-part of Ser. No. 861,118, May 7, 1986, abandoned, which is a division of Ser. No. 661,002, Oct. 11, 1984, abandoned, which is a continuation-in-part of Ser. No. 475,416, Mar. 15, 1983, abandoned, and Ser. No. 912,445, Sep. 25, 1986, Pat. No. 4,764,502. This application Oct. 16, 1989, Ser. No. 422,358

Claims priority, application Canada, Sep. 25, 1985, 491514

Int. Cl.[5] G01N *33/53, 33/543*

U.S. Cl. 435—7.1 10 Claims

1. A method for quantifying follicular regulatory protein (FRP) in a body fluid of a mammal, comprising:

a) contacting said fluid with an antibody which specifically binds FRP, said FRP being characterized in that it:

i) inhibits intragonadal activity of aromatase, as measured by the conversion of androgens to estrogens;

ii) does not affect normal intragonadal FSH level while inhibiting said aromatase activity; and

iii) has a molecular weight of from about 10,000 daltons to about 18,000 daltons and an isoelectric point of about pH 4.0 to 6.5 as determined by electrophoretic mobility or hydrogen ion chromatography; and

b) determining said specific binding of said antibody to said FRP to quantitate said FRP in said body fluid.

5,173,405

USE OF ARSENITE TO REVERSIBLY BLOCK STEROID BINDING TO GLUCOCORTICOID RECEPTORS IN THE PRESENCE OF OTHER STEROID RECEPTORS

S. Stoney Simons, Jr., Bethesda, Md., assignor to The United States of America as represented by the Department of Health and Human Services, Washington, D.C.

Continuation-in-part of Ser. No. 468,929, Jan. 23, 1990, abandoned. This application Sep. 19, 1990, Ser. No. 584,758

Int. Cl.[5] G01N *33/574*

U.S. Cl. 435—7.23 25 Claims

2. A specific binding method for selectively blocking glucocorticoid receptors and assaying for other steroid receptors which comprises:

(a) contacting an amount of arsenite effective for selectively blocking ligand binding to glucocorticoid receptors while not affecting ligand binding to other steroid receptors, with a sample containing said glucocorticoid receptors and other steroid receptors for a time sufficient to selectively block said glucocorticoid receptors; and

(b) assaying for the presence of said other steroid receptors present in said sample.

5,173,406

LIPOSOME IMMUNOASSAY METHOD AND KIT THEREFOR

Kenji Hosoda, Kawagoe; Hideaki Suzuki, Koganei, and Tatsuji Yasuda, Yokohama, all of Japan, assignors to Teijin Limited, Osaka, Japan

PCT No. PCT/JP88/00435, § 371 Date Jan. 5, 1989, § 102(e) Date Jan. 5, 1989, PCT Pub. No. WO88/08982, PCT Pub. Date Nov. 17, 1988

PCT Filed Apr. 28, 1988, Ser. No. 339,824

Claims priority, application Japan, May 6, 1987, 62-108844

Int. Cl.[5] G01N *33/542, 33/544*

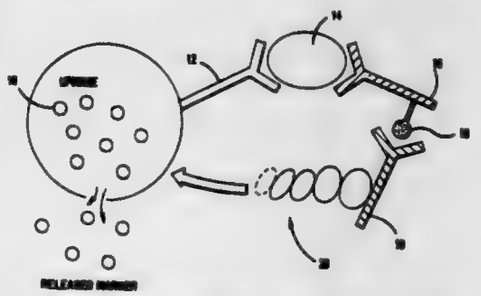
U.S. Cl. 435—7.72 16 Claims

1. A liposome immunoassay method comprising the steps of:

(a) reacting a sample containing an analyte antigen with a first antibody which specifically binds said analyte antigen, wherein said first antibody is bound to a liposome and wherein said liposome encapsulates a marker, so as to form a first complex;

(b) reacting said first complex with a second antibody which specifically binds said analyte antigen and does not activate complement, so as to form a second complex;

(c) reacting said second complex with a third antibody which specifically binds said second antibody but does not bind said analyte antigen, wherein said third antibody activates complement, so as to form a third complex;



(d) reacting said third complex with complement; and

(e) measuring the amount of marker released from the liposome in said third complex as a result of step (d) so as to measure the amount of analyte antigen in said sample.

5,173,407

METHOD FOR MEASURING GLYCOSYLTRANSFERASE

Morito Uemura, and Shin-ya Yoshida, both of Hino, Japan, assignors to Konica Corporation, Tokyo, Japan

Continuation of Ser. No. 131,669, Dec. 11, 1987, abandoned. This application Jan. 22, 1991, Ser. No. 643,695

Claims priority, application Japan, Dec. 16, 1986, 61-299333

Int. Cl.[5] C12Q *1/48;* G01N *33/53*

U.S. Cl. 435—15 10 Claims

1. A method for directly measuring a concentration of a galactosyltransferase by measuring an activity of said galactosyltransferase in a serum, comprising:

adding a non-labeled uridine diphosphate-sugar having a first sugar, a non-labeled substance, a labeled acceptor having a second sugar and a non-labeled acceptor to which said first sugar is to be transferred by said galactosyltransferase in said serum,

wherein said non-labeled acceptor is selected from the group consisting of monosaccharides, oligosaccharides, glycoproteins and glycolipids,

said non-labeled substance is a lectin or an antibody and is specifically bound only to the non-labeled acceptor to which the sugar has been transferred, and

said labeled acceptor comprises a radioisotope, an enzyme or a fluorescent substance,

said non-labeled substance is immobilized to a solid phase;

incubating said serum to effect enzymatic reaction,

washing said solid phase; and measuring said non-labeled acceptor to which the sugar has been transferred on said solid phase.

5,173,408

MAMMALIAN PANCREATIC CHOLESTEROL ESTERASE

Louis G. Lange, III, 38 Kingsbury Pl., St. Louis, Mo. 63112, and Curtis A. Spilburg, 2230 Willow Ridge La., Chesterfield, Mo. 63017

Filed Nov. 13, 1989, Ser. No. 434,899

Int. Cl.[5] C12N *15/55, 15/70, 15/85*

U.S. Cl. 435—69.1 3 Claims

1. A process for producing homogeneous mammalian pancreatic cholesterol esterase, the process comprising the following steps:

(a) growing, in appropriate media an *E. coli* cell culture transformed with an expression vector encoding mammalian pancreatic cholesterol esterase, where the trans-

formed *E. coli* cell culture is capable of expressing mammalian pancreatic cholesterol esterase;
(b) collecting the *E. coli* cells;
(c) lysing the *E. coli* cell to form a cell lysate;
(d) loading the cell lysate onto a sulfated matrix, wherein the concentrations of salt and the pH of the cell lysate is sufficient to allow the cholesterol esterase to bind the sulfated matrix and benzamidine is included in the solution to inhibit proteolysis;
(e) removing non-binding protein impurities by washing the matrix with a solution comprising a concentration of salt and pH sufficient to allow continued binding of the cholesterol esterase to the matrix; and
(f) eluting the cholesterol esterase from the matrix with a solution comprising a concentration of salt and pH sufficient to inhibit binding of the cholesterol esterase to the matrix.

5,173,409

RECOVERY OF BT ENDOTOXIN PROTEIN FROM LYSED CELL MIXTURES

Leigh H. English, Holland, Pa., assignor to Ecogen Inc., Langhorne, Pa.

Filed Dec. 8, 1989, Ser. No. 447,966
Int. Cl.[5] C12P *21/04;* C12R *1/07*
U.S. Cl. 435—71.1 25 Claims

1. A process for recovering a *Bacillus thuringiensis* crystalline endotoxin protein from an initial aqueous suspension comprising lysed cells, the crystalline endotoxin protein and contaminants, which consists essentially of the following steps:
(a) solubilizing the endotoxin protein by treating the initial aqueous suspension under substantially nonneutral pH conditions, resulting in (i) a soluble fraction consisting essentially of an aqueous solution containing the solubilized endotoxin protein and (ii) and insoluble fraction containing solid matter;
(b) separating the soluble fraction from the insoluble fraction;
(c) precipitating the solubilized endotoxin protein by adjusting the pH of the soluble fraction to a value that is substantially equivalent to the isoelectric point of the endotoxin protein; and
(d) recovering the precipitated endotoxin protein, essentially free of the contaminants present in the initial aqueous suspension.

5,173,410

TRANSFER VECTOR

Paul G. Ahlquist, Madison, Wis., assignor to Lubrizol Genetics Inc., Wickliffe, Ohio

Division of Ser. No. 12,739, Feb. 9, 1987, Pat. No. 4,885,248, which is a continuation-in-part of Ser. No. 580,445, Feb. 14, 1984, abandoned. This application Oct. 3, 1989, Ser. No. 406,370
Int. Cl.[5] C12P *19/34;* C12N *15/00, 7/00;* C07H *15/12*
U.S. Cl. 435—91 11 Claims

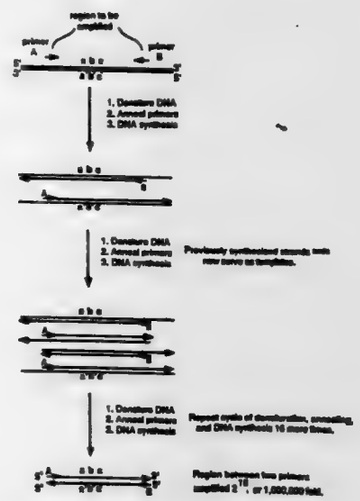
1. An in vitro process for preparing high tolerance RNA transcripts, said process comprising:
(a) preparing a cDNA sequence corresponding to the RNA transcript desired;
(b) providing a promoter sequence attached to said cDNA sequence, said promoter sequence directing transcription of a first transcribed nucleotide wherein said first transcribed nucleotide is the first nucleotide of said cDNA sequence or is immediately 5′ to said first nucleotide of said cDNA sequence;
(c) replicating said cDNA sequence and attached promoter sequence;
(d) placing replicated sequences of step (c) in an in vitro environment comprising an RNA polymerase regulated by said promoter sequences so as to permit transcription of RNA transcripts corresponding to said cDNA;
(e) isolating RNA transcripts from the materials of step (d).

5,173,411

METHOD FOR DETERMINING THE NUCLEOTIDE BASE SEQUENCE OF A DNA MOLECULE

Stanley Tabor, Cambridge, and Charles C. Richardson, Chestnut Hill, both of Mass., assignors to President and Fellows of Harvard College, Cambridge, Mass.

Continuation of Ser. No. 198,996, May 26, 1988, abandoned, which is a continuation of Ser. No. 3,227, Jan. 14, 1989, Pat. No. 4,795,699. This application Apr. 12, 1991, Ser. No. 684,663
Int. Cl.[5] C12P *19/34*
U.S. Cl. 435—91 23 Claims



1. A method for determining the nucleotide base sequence of a DNA molecule, comprising the steps of:
annealing said DNA molecule with a labelled primer molecule able to hybridize to said DNA molecule,
incubating separate portions of the annealed mixture in at least four vessels, each vessel containing four different deoxynucleoside triphosphates, a DNA polymerase except reverse transcriptase, and a chain terminating agent which terminates DNA synthesis at a specific nucleotide base, wherein each agent terminates synthesis at a different nucleotide base, and wherein the concentration of all four deoxynucleoside triphosphates at the start of said incubating is sufficient to allow DNA synthesis to continue until terminated by said agent, and
separating the DNA products of each incubating reaction according to their size, whereby at least a part of the nucleotide base sequence of said DNA molecule can be determined.

5,173,412

MICROBIOLOGICAL PROCESS FOR THE PRODUCTION OF HYDROXYLATED PYRAZINE DERIVATIVES

Andreas Kiener, Visp; Klaus Heinzmann, Visperterminen, and Michael Bokel, Visp, all of Switzerland, assignors to Lonza, Ltd., Gampel/Valais (Direction: Basle), Switzerland

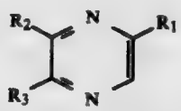
Filed Nov. 6, 1991, Ser. No. 788,375

Claims priority, application Switzerland, Nov. 8, 1990, 3550/90

Int. Cl.[5] C12P *17/12*; C12R *1/01*

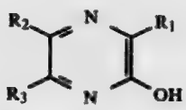
U.S. Cl. 435—122 7 Claims

1. Process for the production of a hydroxylated pyrazine derivative, characterized in that pyrazine derivative of the formula I as substrate:



I

wherein R_1 is a hydrogen atom or a halogen atom and R_2 and R_3 are the same or different and are a hydrogen atom or a C_1–C_4 alkyl group, but R_1, R_2 and R_3 are not all simultaneously hydrogen, is converted with the microorganism *Agrobacterium sp.* DSM 6136, a descendant thereof or a mutant thereof, in a culture medium to a hydroxylated pyrazine derivative of the formula II:



II

wherein R_1, R_2 and R_3 have the above-mentioned meaning, and the hydroxylated pyrazine derivative of the formula II is isolated.

5,173,413

ENHANCED BIOCONVERSION OF TOXIC SUBSTANCES

Robert W. Coughlin, 49 Storrs Heights Rd., Storrs, Conn. 06468; Wafaa M. Mahmoud, and A. Halim El-Sayed, both of 133 Knollwood Dr., Wallingford, Conn. 06492

Filed Feb. 28, 1991, Ser. No. 663,328

Int. Cl.[5] C12P *7/26*; C12N *9/88*; C12R *1/865*

U.S. Cl. 435—148 18 Claims

1. A method of converting benzaldehyde to phenylacetyl carbinol, by means of yeast, comprising the steps:

a. maintaining said yeast in a medium comprising water and a complexing agent selected from the group consisting of beta cyclodextrin and derivatives thereof, said medium of a composition effective for supporting growth of said yeast and conversion by said yeast of benzaldehyde to phenylacetyl carbinol,

b. feeding benzaldehyde to said yeast in said medium,

c. recovering phenylacetyl carbinol produced by said conversion.

5,173,414

PRODUCTION OF RECOMBINANT ADENO-ASSOCIATED VIRUS VECTORS

Jane S. Lebkowski, Portola Valley; Maureen A. McNally, and Thomas B. Okarma, both of Palo Alto, all of Calif., assignors to Applied Immune Sciences, Inc., Menlo Park, Calif.

Filed Oct. 30, 1990, Ser. No. 605,775

Int. Cl.[5] C12N *15/64, 15/85, 15/86, 15/65*

U.S. Cl. 435—172.3 9 Claims

1. A recombinant plasmid vector, comprising in the order given in the 5'-3' direction:

an Epstein Barr nuclear antigen (EBNA) gene, an Epstein Barr virus (EBV) latent origin of replication (oriP), and a recombinant adeno-associated virus (AAV) transducing vector comprising exogenous genetic material and lacking a functional AAV rep gene.

9. A method for producing AAV vectors, which comprises:

cloning a preformed AAV transducing vector containing exogenous genetic material into an EBV plasmid, wherein said EBV plasmid comprises an EBNA gene, an oriP DNA fragment, and a detectible genetic marker;

transfecting a host cell line with the resulting EBV/AAV chimeric plasmid to produce a transfected cell line;

growing said transfected cell line in a cell growth medium;

contacting said transfected cell line with adenovirus and wild-type adeno-associated virus helper functions; and

isolating said AAV vector from said cell growth medium.

5,173,415

PROCESS FOR REMOVAL OF VIRUSES FROM SOLUTIONS OF PHYSIOLOGICALLY ACTIVE SUBSTANCES

Hajime Hiratani, Sennan; Jun Tateishi, and Tetsuyuki Kitamoto, both of Fukuoka, all of Japan, assignors to Japan Chemical Research Co., Ltd., Kobe, Japan

Continuation of Ser. No. 344,521, Apr. 21, 1989, abandoned, which is a continuation of Ser. No. 937,605, Dec. 3, 1986, abandoned. This application Jan. 14, 1991, Ser. No. 640,569

Claims priority, application Japan, Jan. 20, 1986, 61-9011

Int. Cl.[5] C12N *9/00, 9/08, 9/72*; C07K *3/26*

U.S. Cl. 435—183 3 Claims

1. A process for recovering from solution at least about 80% of the activity of a physiologically active proteinaceous substance of human origin selected from the group consisting of urokinase, kallikrein, trypsin inhibitor, human epidermal growth factor, human placenta gonadotropin, hypophysis gonadotropin, interferon-α, interferon, superoxide dismutase, plasminogen, antitumor factor of platelet origin and human growth hormone, which process comprises filtering said solution containing the active proteinaceous substance through a membrane filter of 0.025 to 0.05μ in pore size to remove a virus which may be present in said proteinaceous substance, the membrane filter being previously treated with a 0.2 to 0.5% solution of a water-soluble high molecular substance selected from the group consisting of human serum albumin, polyvinylpyrrolidone, polyoxyethylene sorbitan mono-laurate, polysorbate 80 and modified or unmodified gelatin.

5,173,416

L-CARNITINE DEHYDROGENASE FROM ALCALGENES

Mamoru Takahashi; Kazuo Matsuura, and Shinobu Nagaswa, all of Shizuoka, Japan, assignors to Toyo Jozo Kabushiki Kaisha, Shizuoka, Japan

Filed Oct. 12, 1990, Ser. No. 596,994

Claims priority, application Japan, Oct. 13, 1989, 1-267919

Int. Cl.[5] C12N *9/96, 9/04, 1/00*

U.S. Cl. 435—188 6 Claims

4. An enzymatic reagent solution comprising L-carnitine dehydrogenase enzyme dissolved in Tris-HCl buffer at a pH of about 9.0, said enzyme retaining at least 70% of its initial activity after one week in said solution at a temperature of less than about 5° C. a molecular weight of 51,000±6,000 daltons, a pH optimum of 9.0, a optimum temperature of 50° C. and an isoelectric point of pH 5.3±0.6.

5,173,417

THERMOSTABLE LIPOPROTEIN LIPASE, PROCESS FOR PRODUCING THE SAME, AND TRIGLYCERIDE DETERMINING REAGENT USING THE SAME

Akira Takeda; Tomoko Kamei; Masao Kageyama, and Kenzo Motosugi, all of Kyoto, Japan, assignors to Unitika Ltd., Hyogo, Japan

Filed Aug. 9, 1989, Ser. No. 391,017
Claims priority, application Japan, Aug. 9, 1988, 63-199639
Int. Cl.[5] C12N *9/20, 9/00;* C12Q *1/44*
U.S. Cl. 435—198 3 Claims

1. A thermostable lipoprotein lipase capable of hydrolyzing triglycerides in lipoproteins to glycerol and fatty acids, said hydrolyzing activity being about 100% retained after treatment in a buffer having a pH of from about 4 to 7 at about 60° C. for about 15 minutes,

wherein said thermostable lipoprotein lipase has a glycerol forming activity and a fatty acid forming activity, such that said glycerol forming activity is at least about 15% of said fatty acid forming activity; has a pH optimum of from about 8 to 9; has a stable pH of from about 4 to 7; and a temperature optimum of about 50° C. to 60° C.

5,173,418

PRODUCTION IN *ESCHERICHIA COLI* OF EXTRACELLULAR SERRATIA SPP. HYDROLASES

Soren Molin, Holte; Michael Givskov, and Erik Riise, both of Copenhagen, all of Denmark, assignors to Benzon Pharma, A/S, Hvidovre, Denmark

Division of Ser. No. 372,679, Jun. 28, 1989, abandoned, which is a division of Ser. No. 20,943, Jan. 8, 1987, abandoned. This application Feb. 7, 1990, Ser. No. 476,960
Claims priority, application Denmark, May 10, 1985, 2100/85; Dec. 23, 1985, 6060/85
Int. Cl.[5] C12N *9/20, 9/22, 15/55*
U.S. Cl. 435—198 10 Claims

1. A method of producing an extracellular hydrolytic Serratia spp. enzyme selected from the group consisting of exocellular nuclease, exocellular phospholipase and exocellular lipase, comprising cultivating, *E. coli* in a culture medium, said *E. coli* harboring a hybrid plasmid which comprises DNA encoding an extracellular hydrolytic Serratia spp. enzyme selected from the group consisting of exocellular nuclease, exocellular phospholipase and exocellular lipase, operably linked to a promotor functional in said *E. coli*, under conditions conductive to the expression of said enzyme and its secretion into the culture medium, and harvesting the enzyme from the culture medium.

5,173,419

PURIFIED CHITINASES AND USE THEREOF

Gary E. Harman; Roxanne M. Broadway, both of Geneva, N.Y.; Arne Tronsmo, Aas, Norway, and Matteo Lorito, Geneva, N.Y., assignors to Cornell Research Foundation, Inc., Ithaca, N.Y.

Filed Jun. 17, 1991, Ser. No. 716,134
Int. Cl.[5] C12N *9/42*
U.S. Cl. 435—209 3 Claims

1. An essentially pure chitin-containing fungus and insect-inhibiting protein having endochitinase activity, which is isolated from *Trichoderma harzianum* strain P1 having accession No. ATCC 74058 and which has a molecular weight of 36 kDa as determined by sodium dodecyl sulfate polyacrylamide gel electrophoresis after the protein was prepared under reducing conditions on comparison to migration of protein of known molecular weight and an isoelectric point of 5.3±0.2 as determined based on its elution profile from a chromatofocusing column.

2. A method of inhibiting the germination and subsequent growth of chitin-containing fungus of a genus selected from the group consisting of Fusarium and Trichoderma which comprises contacting such fungus with an antifungal effective amount of the protein of claim 1.

5,173,420

MONOCLONAL ANTIBODY RECOGNIZING UN-NATURAL GANGLIOSIDE GD3

Reiji Kannagi; Yoshiko Kirihata, both of Kyoto; Tomoya Ogawa, Musashino; Masaaki Numata, Kawagoe, and Mamoru Sugimoto, Tokyo, all of Japan, assignors to MECT Corporation, Tokyo, Japan

Filed Feb. 15, 1989, Ser. No. 310,654
Claims priority, application Japan, Feb. 19, 1988, 63-37068
Int. Cl.[5] C12N *5/20;* C07K *15/28*
U.S. Cl. 435—240.27 6 Claims

2. A monoclonal antibody produced by the hybridoma having ATCC accession No. HB 9551 exhibiting specificity to a sialic acid glycolipic containing the epitope designated NeuAcα2→9NeuAc terminal.

5,173,421

CELL CULTURE CARRIERS

Hideaki Kiniwa, and Hirohisa Kubota, both of Yokohama, Japan, assignors to Mitsubishi Kasei Corporation, Tokyo, Japan

Filed Dec. 12, 1989, Ser. No. 448,969
Claims priority, application Japan, Dec. 14, 1988, 63-315518; May 2, 1989, 1-113084
Int. Cl.[5] C12N *5/00, 11/02*
U.S. Cl. 435—240.243 20 Claims

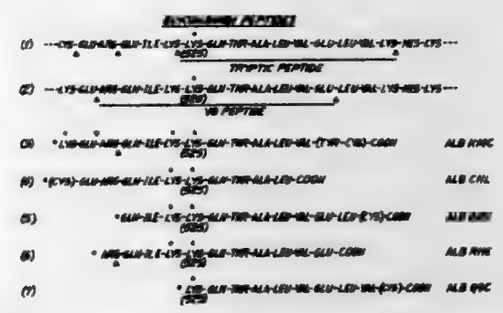
1. A cell culture carrier consisting of a porous support which is at least partially coated with a water-insoluble polymer containing (meth)acrylic acid ester and/or (meth)acrylamide and a cross-linking agent in such an amount that the content of units derived from the cross-linking agent is 1 to 50% by weight of the water-insoluble polymer, and having a positively chargeable chemical moiety of charge capacity 0.2 to 4.0 meq per gram of the water-soluble polymer on the polymer surface.

5,173,422

MONOCLONAL ANTIBODIES SPECIFIC FOR HUMAN GLYCOALBUMIN

William J. Knowles, Madison, and Vincent T. Marchesi, Guilford, both of Conn., assignors to Miles Inc., Elkhart, Ind.

Continuation of Ser. No. 158,200, Feb. 19, 1988, abandoned, which is a continuation-in-part of Ser. No. 54,131, Jun. 1, 1987, abandoned, which is a continuation-in-part of Ser. No. 899,456, Aug. 22, 1986, abandoned. This application May 3, 1990, Ser. No. 518,681
Int. Cl.[5] C12N *5/12;* C07K *15/28;* C12P *21/08*
U.S. Cl. 435—240.27 18 Claims



1. A monoclonal antibody, or a fragment thereof comprising an antibody combining site, which binds specifically to human albumin that is nonenzymatically glycosylated at the lysine residue at position 525, but which does not bind substantially to any other proteins present in human blood.

5,173,423

PROCESS FOR BREEDING A GLABROUS VARIETY OF RICE CROP AND A GLABROUS PLANT

Akira Nishikawa, Sanda; Toshiya Yamamoto, Toyonaka; Seiichi Tuji; Hirochika Sakano, both of Takarazuka, and Hideo Hirohara, Sakai, all of Japan, assignors to Sumitomo Chemical Company Limited, Osaka, Japan

Filed Feb. 12, 1990, Ser. No. 479,670
Int. Cl.[5] C12N *5/04;* A01H *4/00, 1/02*
U.S. Cl. 435—240.5 4 Claims

1. A process for producing a genetically fixed glabrous, japonica-type rice variety derived from a japonica-type rice variety selected from the group consisting of "Nipponbare", "Koganebare", and a F1 hybrid from the cross of a variety "Akihikari" with a variety "Hoshinohikari" which comprises culturing anther from a plant of a japonica-type rice variety on a callus-inducing medium containing 2.5–7.0 mg/l of a callus-inductively effective amount of plant hormones which are a mixture of auxin, selected from the group consisting of 2,4-D, NAA, and a mixture of 2,4-D and NAA, and cytokinin, selected from the group consisting of kinetin and BA, in which the concentration of auxin is 1.5–2.0 mg/l higher than the concentration of cytokinin to produce calli, culturing said calli on a regeneration medium containing 2.6–5.1 mg/l of a regeneratively effective amount of plant hormones which are a mixture of said cytokinin and said auxin in which the concentration of cytokinin is 2.4–4.9 mg/l higher than the concentration of auxin, growing the regenerants, and selecting glabrous plants, whereby the agronomic characteristics other than glabrousness of the rice variety are essentially unchanged.

5,173,424

ENHANCING MODULATION ABILITY OF *RHIZOBIUM JAPONICUM* BY INCUBATION WITH SOYBEAN LECTIN

Gary Stacey; Larry J. Halverson, both of Knoxville, Tenn., and Robert M. Zablotowicz, Syracuse, N.Y., assignors to LiphaTech, Inc., Milwaukee, Wis.

Continuation of Ser. No. 163,151, Feb. 26, 1988, abandoned, which is a continuation of Ser. No. 636,897, Aug. 2, 1984, abandoned. This application Oct. 26, 1988, Ser. No. 266,267
Int. Cl.[5] C12N *1/20, 11/00;* C05F *11/08;* C12R *1/41*
U.S. Cl. 435—252.2 2 Claims

1. A method for preparing a composition for enhancing soybean nodulation which comprises:

contacting a strain of the species *Rhizobium japonicum* with a nodulation-enhancing effective amount of a soybean seed lectin;

incubating said strain in an aqueous liquid for at least about one hour under conditions effective to enhance the nodulation characteristics of said strain;

then recovering and purifying cells of said strain;

then suspending said cells in a lectin-free aqueous medium; and

then reincubating said cells for a period sufficient to further enhance nodulation characteristics of said cells of said strain.

5,173,425

ENHANCEMENT OF NAPHTHALENE DIOXYGENASE ACTIVITY DURING MICROBIAL INDIGO PRODUCTION

Cuneyt M. Serdar, Newbury Park; Douglas C. Murdock, and Burt D. Ensley, Jr., both of Thousand Oaks, all of Calif., assignors to Amgen Inc., Thousand Oaks, Calif.

Filed Aug. 4, 1989, Ser. No. 289,738
Int. Cl.[5] C12N *1/20, 9/02, 15/00;* C07K *13/00*
U.S. Cl. 435—252.3 17 Claims

7. A process for enhancing naphthalene dioxygenase activity to produce indigo from indole in an organism comprising the step of:

transforming a microorganism with a DNA sequence encoding a naphthalene dioxygenase ferredoxin analog having Cys at position 47, Ile at position 52 and Arg at position 67 in said naphthalene dioxygenase ferredoxin analog amino acid sequence, wherein said microorganism has DNA sequences that express a naphthalene dioxygenase enzyme which comprises reductase, ferredoxin and iron-sulfur polypeptides.

5,173,426

DNAS ENCODING GENETICALLY ENGINEERED LOW OXYGEN AFFINITY MUTANTS OF HUMAN HEMOGLOBIN

James J. Fischer, Guilford, and Susan J. Baserga, New Haven, both of Conn., assignors to Yale University, New Haven, Conn.

Filed Oct. 6, 1989, Ser. No. 417,949
Int. Cl.[5] C12N *15/70, 15/74, 15/12*
U.S. Cl. 435—252.3 17 Claims

1. A substantially pure polynucleotide coding for an alpha and/or beta globin, said globin when part of a hemoglobin molecule confering lower oxygen affinity than normal hemoglobin to result in a mutant hemoglobin, said mutant hemoglobin having an oxygen affinity measured for stripped hemoglobin characterized by a P_{50} of 50 torr to 3 atmospheres and/or by a Hill coefficient between 2.5 and 1.0.

5,173,427

VECTORS AND HOSTS WITH INCREASED EXPRESSION OF HBCAG

Richard L. Mallonee, Catonsville, Md., assignor to Becton Dickinson and Company, Franklink Lakes, N.J.

Filed Aug. 1, 1991, Ser. No. 739,642
The portion of the term of this patent subsequent to Dec. 29, 2009, has been disclaimed.
Int. Cl.[5] C12N *1/21, 15/70*
U.S. Cl. 435—252.33 24 Claims

13. A host transformed with a vector comprising a DNA molecule having the sequence consisting essentially of Sequence ID No: 3, Sequence ID No: 5, Sequence ID No: 7, Sequence ID No: 9, or Sequence ID No: 11.

5,173,428

MICROORGANISMS SUITABLE FOR PRODUCING COMPOUNDS CONTAINING A TERMINAL HYDROXYL OR EPOXY GROUP

Bernard Witholt, Hr Eelde, and Roland G. Lageveen, Groningen, both of Netherlands, assignors to Rijksuniversiteit te Groningen, Groningen, Netherlands

Division of Ser. No. 143,826, Jan. 14, 1988, Pat. No. 5,032,512. This application Apr. 1, 1991, Ser. No. 678,587
Claims priority, application Netherlands, Jan. 15, 1987, 8700085
Int. Cl.[5] C12N *1/21*
U.S. Cl. 435—252.34 5 Claims

1. A microorganism of the genus Pseudomonas resistant to the presence of bulk non-aqueous phases and having an alkane hydroxylase enzyme system enabling it to perform a terminal oxidation of an aliphatic substrate or of an aliphatic side chain of a substrate, said microorganism being genetically engineered so that it is still capable of performing the terminal oxidation of the substrate to form a compound having a terminal hydroxyl or epoxy group, but is no longer able to convert the oxidation product further to any significant extent.

5,173,429

CLOSTRIDIUM LJUNGDAHLII, AN ANAEROBIC ETHANOL AND ACETATE PRODUCING MICROORGANISM

James L. Gaddy, and Edgar C. Clausen, both of Fayetteville, Ark., assignors to The Board of Trustees of the University of Arkansas, Little Rock, Ark.

Filed Nov. 9, 1990, Ser. No. 612,221
Int. Cl.[5] C12N *1/20*; C12P *7/06*, *1/100*
U.S. Cl. 435—252.7 7 Claims

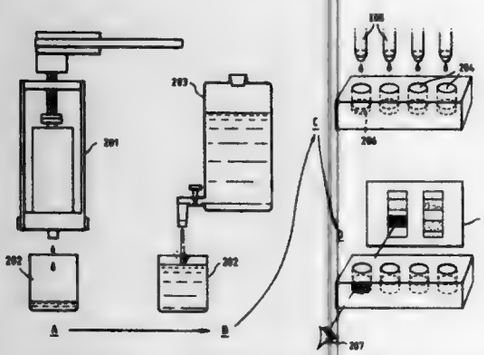
1. A biologically pure culture of the microorganism *Clostridium ljungdahlii*, having all of the identifying characteristics of ATCC No. 49587.

5,173,430

METHOD FOR DETERMINING THE NUTRITIONAL VALUE OF VEGETABLE MATERIALS

David J. Edwards, Ridge Cottage, Pettenhall, Bedfordshire MK44 AAX; Philip J. Evans, 5 Dove Road, Bedford; Christopher P. Freeman, Meadowbank, Pavenham Road, Felmersham, Bedford MK43 7EX; Geoffrey P. Gray, 54 Oxhey Road, Oxhey, Watford, Herts WD1 4QQ; Robert E. Matthews, 7D Tavistock Road, Westbourne Park, London W11 1AT; Clifford A. Smith, 19 Harvey Road, Rushden, Northamptonshire NN10 9JY, and Richard S. Thom, 47 Princess Road, London SW19 8RA, all of England

Continuation of Ser. No. 259,514, Oct. 18, 1988, abandoned.
This application Jan. 22, 1991, Ser. No. 643,106
Int. Cl.[5] C01N *33/02*
U.S. Cl. 436—20 4 Claims



1. A method for determining the nutritional value of silage expressed as a function of it's fermentability in the rumen, which comprises subjecting a known quantity of silage to a reproducible pressure regime to express liquor therefrom, determining the dry matter content of the silage, analyzing the expressed liquor for parameters from which the nutritional value can be determined by regression from the quantity of expressed liquor, said parameters including one or more of the following:

pH
lactic acid concentration
ammonia concentration
free sugars concentration
alpha-amino nitrogen concentration,

and calculating the nutritional value of the silage on the basis of said parameters.

5,173,431

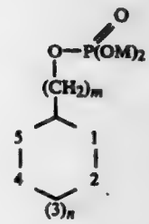
COPPER OXIDATION PROTEIN ASSAY

Michael J. Pugia, Granger, Ind., and Michael Salvati, St. Paul, Minn., assignors to Miles Inc., Elkhart, Ind.

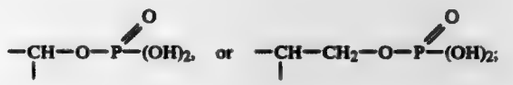
Filed Oct. 12, 1991, Ser. No. 790,429
Int. Cl.[5] G01N *33/48*
U.S. Cl. 436—86 12 Claims

1. A method for the detection of a protein in a fluid system which method comprises contacting said fluid with a reagent composition comprising copper in a form capable of forming a copper/protein complex, a peroxide and a redox indicator which produces a detectable response when oxidized by the peroxide in the presence of the copper/protein complex together with an ionizable phosphate containing compound which compound is:

A.

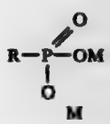


wherein 2, 3, 4 and 5 are selected from the group consisting of



1 is any of the above or —O— and m and n are independently 0 or 1; or

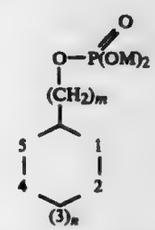
B.



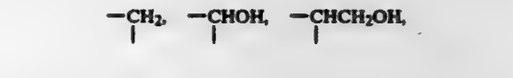
wherein R is OH or substituted or unsubstituted phenyl and M is H or a metallic cation.

11. A reagent system which comprises copper in a form capable of forming a copper/protein complex when contacted with protein in solution, a peroxide, a redox indicator which produces a detectable response when oxidized by the peroxide in the presence of the peroxidatively active copper/protein complex and an ionizable phosphate containing compound which compound is:

A.

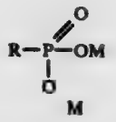


wherein 2, 3, 4 and 5 are selected from the group consisting of



l is any of the above or —O— and m and n are independently 0 or 1; or

B.



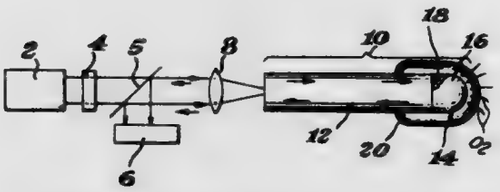
wherein R is OH or substituted or unsubstituted phenyl and M is H or a metallic cation.

5,173,432

APPARATUS AND METHOD FOR MEASURING THE CONCENTRATION OR PARTIAL PRESSURE OF OXYGEN

Steven M. Lefkowitz, Walnut Creek, Calif.; Steven P. Webb, and Michael S. Paquette, both of Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich.

Continuation-in-part of Ser. No. 133,594, Dec. 14, 1987, Pat. No. 4,994,396. This application Oct. 13, 1988, Ser. No. 257,362
The portion of the term of this patent subsequent to Feb. 19, 2008, has been disclaimed.
Int. Cl.[5] G01N *33/26*
U.S. Cl. 436—138 48 Claims



1. A sensor useful for determining the concentration or partial pressure of oxygen in a fluid media, the sensor comprising:

(a) means for transmitting and collecting light to and from a light modifying medium; and

(b) a light modifying medium containing a luminescent dye accessible to oxygen, wherein said luminescent dye contains a hexanuclear core of molybdenum, tungsten or mixtures thereof having 14 coordination sites, wherein each site is occupied by a ligand.

22. A method for determining the concentration or partial pressure of oxygen in a media, comprising:

contacting the media with a light modifying medium comprising a luminescent dye which is accessible to oxygen, wherein said luminescent dye contains a hexanuclear core of molybdenum, tungsten or mixtures thereof each said core having 14 coordination sites, wherein each coordination site is occupied by a ligand;

(B) transmitting and collecting light to and from said light modifying medium;

(C) measuring the intensity of luminescence collected from the light modifying medium and using the measured intensity to determine the concentration or partial pressure of oxygen present in the media.

5,173,433

METHOD FOR CHEMICAL ANALYSIS

Steve S. Bachand, Laguna Niguel, Calif., assignor to Toxi-Lab Incorporated, Irvine, Calif.

Division of Ser. No. 595,976, Oct. 11, 1990, Pat. No. 5,091,153. This application Nov. 19, 1991, Ser. No. 794,480
Int. Cl.[5] G01N *31/22*
U.S. Cl. 436—169 2 Claims

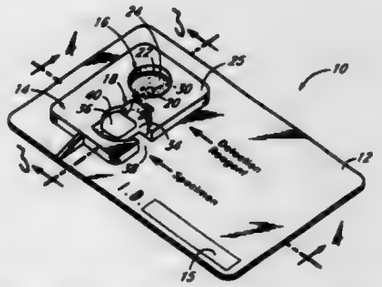
1. A method of detecting the presence of a given chemical in biological fluids, comprising the steps of;

depositing a test specimen in a first well on a base;

contacting the contents of said first well with an absorbent strip of material;

utilizing wicking action of the strip of material to transport said test specimen to a concentration chamber beneath a reagent retaining material where both the chamber and material are on the base;

testing a portion of said strip within said concentration chamber with an agent which volatilizes a given chemical in said specimen;



volatilizing said given chemical from said specimen when said specimen contacts said treated portion;

concentrating said volatilized chemical;

bringing said volatilized chemical into contact with a reagent; and

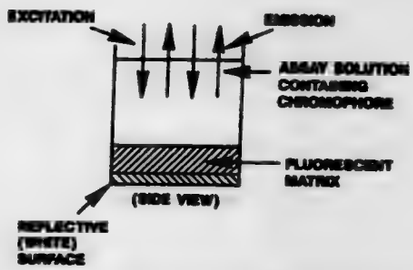
observing said reagent to determine whether a color change has occurred, wherein the occurrence of the color change indicated the existence of said given chemical in the test specimen.

5,173,434

MEASUREMENT OF COLOR REACTIONS BY MONITORING A CHANGE OF FLUORESCENCE

Roger J. Morris, Sacramento; Shoshana Bascomb, Davis, and Carolyn S. Olson, Sacramento, all of Calif., assignors to Baxter Diagnostics Inc., Deerfield, Ill.

Filed Nov. 5, 1990, Ser. No. 609,278
Int. Cl.[5] G01N *21/76*
U.S. Cl. 436—172 4 Claims



1. A process to detect the presence of a substance in solution comprising:

providing a light source emitting a beam forming a transmission light path,

positioning a solution containing said substance and a chromogenic agent in said light path,

sandwiching said solution between said light source and an isolated fluorophore embedded in a chemically inert light transmissive matrix so as to intersect said light path, said fluorophore having an excitation spectrum overlapping the absorptive spectrum of a chromophore formed by reaction of said chromogenic agent with said substance being detected, and

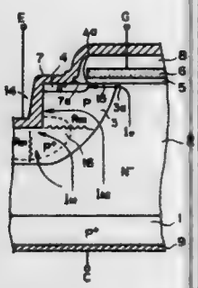
detecting a change in fluorophore emission resulting from light being attenuated or enhanced by the chromophore.

5,173,435

INSULATED GATE BIPOLAR TRANSISTOR

Masana Harada, Itami, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 195,652, May 17, 1988, Pat. No. 5,079,602.
This application Oct. 15, 1991, Ser. No. 775,442
Claims priority, application Japan, Nov. 11, 1987, 62-285807
Int. Cl.[5] H01L *21/265*
U.S. Cl. 437—31 2 Claims



1. A method of manufacturing an insulated gate bipolar transistor comprising the steps of:

preparing a first conductivity type semiconductor substrate having a first and a second major surface,

forming a semiconductor layer of a second conductivity type which is opposite to said first conductivity type, on said first major surface of said semiconductor substrate;

forming a first region of the first conductivity type in a surface of said semiconductor layer;

forming a second region of the second conductivity type in a surface of said first region;

forming an insulation film on the surface of said first region and extending between the surfaces of said semiconductor layer and second region;

forming a control electrode on said insulation film;

forming a trench in said first region through said second region;

filling said trench with a conductive material including the step of doping said conductive material with an impurity;

diffusing said impurity in said first region around said trench by employing said conductive material as a diffusion source to form a high concentration impurity diffusion region of the first conductivity type;

forming a first electrode on said second region and said conductive material to electrically connect said second region and said conductive material; and

forming a second electrode on said second major surface of said semiconductor substrate.

5,173,436

METHOD OF MANUFACTURING AN EEPROM WITH TRENCH-ISOLATED BITLINES

Mansur Gill, Rosharon, Tex.; Sebastiano D'Arrigo, Cannes, France, and David J. McElroy, Allen, Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Division of Ser. No. 439,766, Nov. 21, 1989, Pat. No. 5,051,795.
This application Jun. 27, 1991, Ser. No. 722,732
Int. Cl.[5] H01L *21/76, 21/302*
U.S. Cl. 437—43 20 Claims

1. A method for making a nonvolatile memory array including column lines in a face of a semiconductor body and including row lines on said face, comprising:

patterning a first layer of photoresist to expose first line areas on said face of said semiconductor body;

selectively implanting an impurity of conductivity-type opposite that of said semiconductor body into said face to create first source column lines in said first line areas on said face;

growing first thermal oxide regions over said first source column lines;

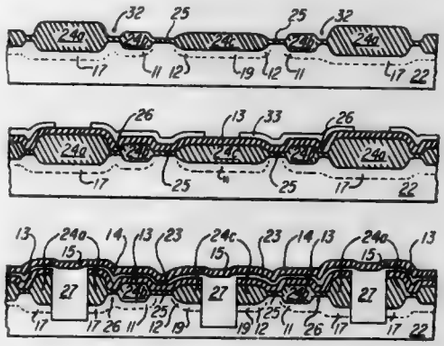
patterning a second layer of photoresist on said face to expose second line areas adjacent said first lien areas and to expose third line areas spaced from and parallel to said second line areas;

selectively implanting an impurity of said opposite conductivity-type into said face to create second source column lines in said second line areas and to create drain column lines in said third line areas on said face;

growing second and third thermal oxide regions over said second source column lines and said drain column lines;

growing a gate oxide coating on said face over areas between said second source column lines and said drain column lines to a first thickness less than the thickness of said second and third thermal oxide regions;

opening window areas between said first and second thermal oxide regions and regrowing gate oxides in said windows



to a second thickness thinner than said first thickness to thereby provide tunnel windows;

applying a first conductive layer on said face and patterning said first conductive layer to leave floating gate layers over channel areas between said second source column lines and said drain column lines, said conductive layer overlapping said first, second and third thermal oxide regions;

forming trenches extending through said first conductive layer, said first thermal oxide regions and said first source column lines to separate a column of cells from a first adjacent column of cells and forming trenches extending through said first conductive layer, said third thermal oxide regions and said drain column lines to separate a column of cells from a second adjacent column of cells;

applying a second conductive layer on said face overlying and insulated from said first conductive layer; and

patterning and etching said second conductive layer and said first conductive layer to form floating gates and to form row lines perpendicular to said column lines, said row lines including control gates overlying said floating gates.

5,173,437

DOUBLE POLYSILICON CAPACITOR FORMATION COMPATABLE WITH SUBMICRON PROCESSING

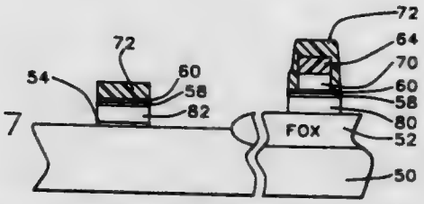
Keh-Fei C. Chi, Singapore, Singapore, assignor to Chartered Semiconductor Manufacturing Pte Ltd, Singapore, Singapore

Filed Aug. 1, 1991, Ser. No. 739,222
Int. Cl.[5] H01L *21/70*
U.S. Cl. 437—60 16 Claims

1. A method for fabricating an integrated circuit having double polycrystalline silicon capacitors and metal oxide silicon field effect devices which are compatible to one micrometer or less processing comprising:

forming a pattern of recessed oxide isolation on the surface

of a monocrystalline silicon substrate which pattern separates surface regions of silicon from other such regions;
forming a gate dielectric layer on the surface of said surface regions of the silicon;
forming a first polycrystalline silicon layer over the said gate dielectric layer and said pattern of isolation wherein the first silicon layer having a suitable doping concentration for imparting high conductivity;
forming an undoped interpoly dielectric layer over the surface of said first polycrystalline silicon layer;
forming a second polycrystalline silicon layer over the said interpoly dielectric layer wherein the second silicon layer having a suitable doping concentration for imparting high conductivity and the dielectric layer being left undoped;
patterning the second polycrystalline silicon layer using a first resist masking and suitable etching to leave only the top plate of said capacitor in said second polycrystalline silicon layer;



removing the said interpoly dielectric layer except where it is located beneath said top plate by using said top plate of said capacitor in said second polycrystalline silicon layer as the etching mask;
patterning the first polycrystalline silicon layer using a second resist masking and etching to leave only the bottom plate of said capacitor and the gate electrode of said transistor in said first polycrystalline silicon layer;
removing said second resist masking layers;
wherein said first resist masking layer remains on the surface of the top plate after the deposition of the second resist masking layer and during the patterning of the first polycrystalline silicon layer, and said resist masking layer forms a larger said bottom plate in the first polycrystalline layer than the top plate of the said double polycrystalline silicon layer capacitor; and completing the elements of the said integrated circuit and making electrical connections thereto to thereby form said integrated circuit.

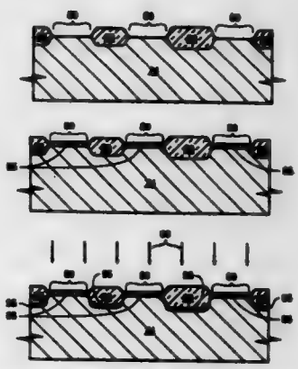
5,173,438

METHOD OF PERFORMING A FIELD IMPLANT SUBSEQUENT TO FIELD OXIDE FABRICATION BY UTILIZING SELECTIVE TUNGSTEN DEPOSITION TO PRODUCE ENCROACHMENT-FREE ISOLATION

Gurtej S. Sandhu, Boise, Id., assignor to Micron Technology, Inc., Boise, Id.

Filed Feb. 13, 1991, Ser. No. 656,365
Int. Cl.[5] H01L *21/76*
U.S. Cl. 437—63 24 Claims

1. A method for forming an integrated circuit device on a semiconductor substrate comprising the steps of:
a. forming at least one electrical isolation structure in said substrate, said electrical isolation structure formed in an isolation region while being substantially prevented from being substantially simultaneously formed in an active region;
b. exposing said substrate in said active region while retaining said electrical isolation structure;
c. depositing a layer of dense material to overlie said substrate in said active region while substantially preventing a depositing of said layer of dense material to overlie said electrical isolation structure thereby providing a self-alignment of said dense material to said active region, said dense material having a capability to inhibit an ion penetration greater than the capability of said electrical isolation structure to inhibit said ion penetration; and
d. subjecting said electrical isolation structure, said layer of dense material, and said substrate to an ion bombardment having at least sufficient energy for ion penetration of said



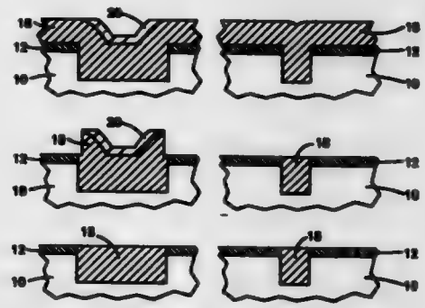
electrical isolation structure, said layer of dense material shielding said active region of said substrate from said ion bombardment, and said ion bombardment forming a doping layer contiguous to said isolation structure in said substrate.

5,173,439

FORMING WIDE DIELECTRIC-FILLED ISOLATION TRENCHES IN SEMI-CONDUCTORS

Somanath Dash; Michael L. Kerbaugh, both of Burlington; Charles W. Koburger, III, Essex; Brian J. Machesney, Burlington, all of Vt., and Nitin B. Parekh, Austin, Tex., assignors to International Business Machines Corporation, Armonk, N.Y.

Continuation of Ser. No. 427,153, Oct. 25, 1989, abandoned. This application Apr. 2, 1991, Ser. No. 679,568
Int. Cl.[5] H01L *21/76*
U.S. Cl. 437—67 14 Claims



12. A process for forming a filled wide trench in the surface of a substrate comprising the steps of:
forming a wide trench in the surface of the substrate;
conformally forming a layer of filling material on the surface of the substrate including in said trench the top surface of which filling material extends above the plane of the surface of the substrate;
conformally forming a layer of etch-resistant material on said layer of filling material which etch resistant material will mask said filling material from reactive ion etching;
selectively removing only those portions of said etch resistant material that extend above the surface of the filling material by physical polishing and not removing any etch resistant material disposed below the surface of said filling material, such that the only remaining portion of the etch resistant material resides within the width of said trench;

forming a plug above said trench comprising the remaining etch resistant material overlying filling material by anisotropically etching said layer of filling material which is not masked by said etch resistant material down to the top of said trench; and

removing said plug to obtain a filled trench having an upper surface in substantial planarity with the upper surface of said substrate.

5,173,440

METHOD OF FABRICATING A SEMICONDUCTOR DEVICE BY REDUCING THE IMPURITIES

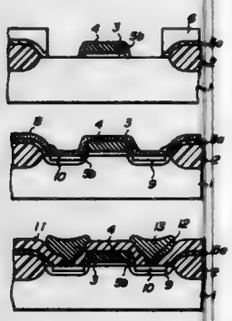
Yoshitaka Tsunashima, Inagi; Kenji Todori, and Kikuo Yamabe, both of Yokohama, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed May 1, 1990, Ser. No. 517,331

Claims priority, application Japan, May 2, 1989, 1-113024; Aug. 7, 1989, 1-202883; Dec. 12, 1989, 1-320654

Int. Cl.[5] H01L *21/225*

U.S. Cl. 437—164 17 Claims



1. A method of fabricating a semiconductor device, comprising the steps of:

forming a silicon oxide layer on a surface of a semiconductor layer, the silicon oxide layer containing impurities;

reducing the impurities in the silicon oxide layer at a first temperature; and

diffusing the impurities in the silicon oxide layer into the surface of the semiconductor layer at a second temperature,

wherein the first temperature is lower than the second temperature.

5,173,441

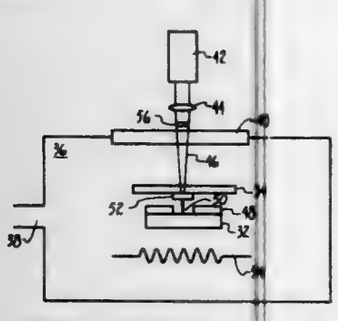
LASER ABLATION DEPOSITION PROCESS FOR SEMICONDUCTOR MANUFACTURE

Chang Yu, and Trung T. Doan, both of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Filed Feb. 8, 1991, Ser. No. 653,658

Int. Cl.[5] H01L *21/428;* B05D *3/06, 5/12;* B23K *26/00*

U.S. Cl. 437—173 24 Claims



1. A laser ablation deposition process for semiconductor manufacture, comprising:

depositing a plurality of metal layers on a source substrate sequentially with an additional step of breaking vacuum between each successive metal layer deposition;

mounting the source substrate in a vacuum chamber separated by a gap from and in close proximity to a target substrate which is optically transparent;

heating the source substrate with a heating element to a desired temperature range; and

scanning the metal layers on the source substrate by a laser beam passed through the target substrate for transmitting a threshold laser fluence to the metal layers to ablate the metal layers and transport fragments from the metal layers and deposit the fragments in a pattern upon the target substrate.

5,173,442

METHODS OF FORMING CHANNELS AND VIAS IN INSULATING LAYERS

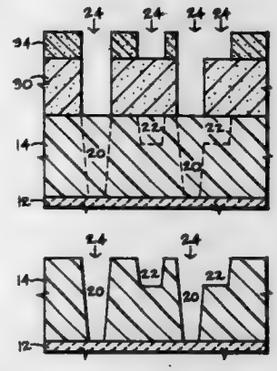
David H. Carey, Austin, Tex., assignor to Microelectronics and Computer Technology Corporation, Austin, Tex.

Continuation of Ser. No. 840,428, Feb. 24, 1992, which is a continuation-in-part of Ser. No. 557,427, Jul. 23, 1990, Pat. No. 5,091,339. This application Mar. 24, 1992, Ser. No. 857,011

The portion of the term of this patent subsequent to Feb. 25, 2009, has been disclaimed.

Int. Cl.[5] H01L *21/283, 21/306*

U.S. Cl. 437—173 8 Claims



1. A method for forming a channel and a via in an insulating layer, said channel being a horizontally disposed in the top surface of and partially through the thickness of the insulating layer and said via being adjacent to the channel and vertically disposed and completely through the thickness of the insulating layer, said method comprising the steps of:

covering the insulating layer with a hard mask having an opening to expose the channel and the via wherein the hard mask is non-erodible by an etch;

covering the hard mask with a soft mask having an opening to expose the via but covering the channel wherein the soft mask is erodible by the etch;

applying the etch to at least partially remove the insulating layer where the via is exposed until the soft mask is eroded;

applying the etch after the soft mask is eroded to remove the insulating layer where the channel is exposed and to remove any of the insulating layer remaining where the via is exposed so that the channel and the via are formed; and

removing the hard mask from the insulating layer.

5,173,443

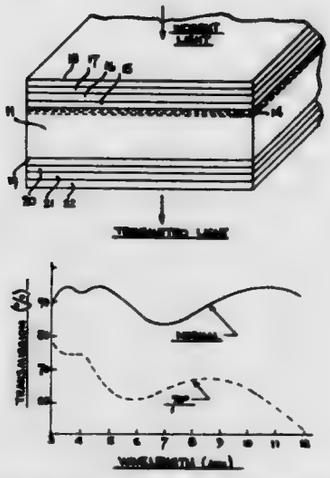
METHOD OF MANUFACTURE OF OPTICALLY TRANSPARENT ELECTRICALLY CONDUCTIVE SEMICONDUCTOR WINDOWS

V. Warren Biricik, Rancho Palos Verdes; James M. Rowe, Torrance; Paul Krantz, Redondo Beach; John W. Tully, Rolling Hills Estates; Wesley J. Thompson, Torrance, and Rudolph W. Modster, Los Angeles, all of Calif., assignors to Northrop Corporation, Los Angeles, Calif.

Continuation-in-part of Ser. No. 258,239, Oct. 14, 1988, Pat. No. 4,939,043, which is a continuation-in-part of Ser. No. 14,326, Feb. 13, 1987, Pat. No. 4,778,731. This application Jun. 27, 1990, Ser. No. 544,772

Int. Cl.[5] H01L *21/44*

U.S. Cl. 437—181 7 Claims



1. A method for making a conductive infrared transparent window comprising the steps of:

providing an infrared transparent substrate of germanium,

forming an inherent layer of infrared transparent germanium from 1–50 microns thick at one surface of said substrate,

diffusing an n type impurity dopant selected from the group consisting of phosphorus, arsenic, and antimony into said layer for rendering the layer electrically conductive with a sheet resistance of less than 100 ohms per square, while

maintaining a sufficient mobility to retain the infrared transparency thereof at a value greater than about 55% of optical transmittance over the infrared range, while further

maintaining the remaining substrate undoped so that said doped layer becomes, upon doping, a distinctly different material from the material of said undoped substrate,

said layer being formed as a crystalline layer with a low density of micro-structural defects to thereby essentially maintain the infrared transparency thereof.

5,173,444

METHOD FOR FORMING A SEMICONDUCTOR DEVICE ISOLATION REGION

Akio Kawamura, Nara, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Sep. 16, 1991, Ser. No. 760,131

Claims priority, application Japan, Sep. 18, 1990, 2-249724

Int. Cl.[5] H01L *21/76*

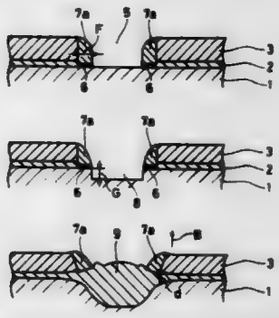
U.S. Cl. 437—69 4 Claims

1. A method for forming a semiconductor device isolation region, comprising steps of:

forming a first silicon oxide film on a silicon substrate, depositing a first silicon nitride film over the first silicon oxide film, and removing the first silicon oxide film and first silicon nitride film in a device isolation region to form an opening in said films by using a resist pattern, which is formed photolithographically as a mask so as to expose the surface of the silicon substrate,

removing the resist pattern, and oxidizing the exposed surface of the silicon substrate so as to form a second silicon oxide film having a smaller thickness than the first silicon oxide film and depositing a second silicon nitride film,

removing the second silicon nitride film by anisotropic etching until the second silicon oxide film is exposed in the device isolation region so as to make the second silicon nitride film remain as a side wall portion of the first silicon



nitride film in only the side wall portion of said opening in the first silicon nitride film,

etching the second silicon oxide film in the opening of the first silicon nitride film on a self-aligning basis by using as etching masks the first silicon nitride film and the side wall portion of the second silicon nitride film remaining on the opening side wall portion of the first silicon nitride film, and

selectively carrying out oxidation so as to form a silicon oxide film in the device isolation region.

METHOD OF MAKING P-TYPE COMPOUND SEMICONDUCTOR EMPLOYING TRIMETHYLGALLIUM, TRIMETHYLARSENIC AND ARSINE

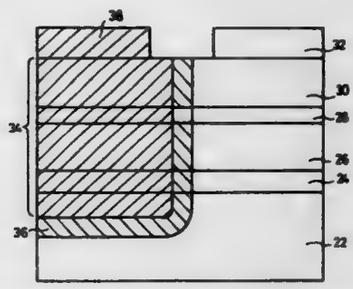
Koji Ando, and Tetsuya Yagi, both of Itami, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Mar. 20, 1991, Ser. No. 672,448

Claims priority, application Japan, Oct. 8, 1990, 2-270735

Int. Cl.[5] H01L *21/20, 21/36*

U.S. Cl. 437—81 18 Claims



1. A method of growing a P-type epitaxial GaAs film on a substrate, the film including carbon in a concentration ranging from about 10^{18} cm^{-3} to about 10^{19} cm^{-3} comprising simultaneously decomposing an organic gallium compound including a methyl radical, arsine, and an alkyl compound of arsenic at about 800° C.

5,173,446

SEMICONDUCTOR SUBSTRATE MANUFACTURING BY RECRYSTALLIZATION USING A COOLING MEDIUM

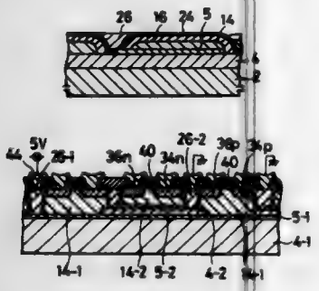
Toshifumi Asakawa, Yamato; Daisuke Kosaka, Takarazuka, and Haruo Nakayama, Kawanishi, all of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan

Continuation of Ser. No. 371,543, Jun. 26, 1989, abandoned. This application Jun. 13, 1991, Ser. No. 715,717

Claims priority, application Japan, Jun. 28, 1988, 63-162117; Jun. 29, 1988, 63-162925; Jul. 9, 1988, 63-171326; Aug. 9, 1988, 63-199146; Mar. 23, 1989, 1-72356

Int. Cl.[5] H01L *21/20*; C30B *1/02*

U.S. Cl. 437—111 11 Claims



1. A method of manufacturing a semiconductor substrate, comprising the steps of:

depositing an amorphous semiconductor film or a polycrystalline semiconductor film on a foundation covered at least partly with a high-melting-point metal film or a high-melting-point metal alloy film;

disposing a transparent cooling medium on said semiconductor film;

melting said semiconductor film by irradiating said semiconductor film with energy through said transparent cooling medium to improve the uniformity of the distribution of heat in said semiconductor film irradiated with energy; and

growing a single-crystal region in said semiconductor film irradiated with said energy.

5,173,447

METHOD FOR PRODUCING STRAINED QUANTUM WELL SEMICONDUCTOR LASER ELEMENTS

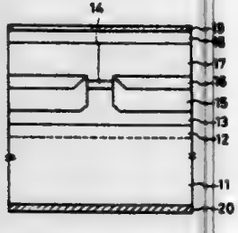
Teturo Ijichi, Yokohama, and Hiroshi Okamoto, Tokyo, both of Japan, assignors to The Furukawa Electric Co., Ltd., Tokyo, Japan

Division of Ser. No. 606,812, Oct. 31, 1990. This application Oct. 17, 1991, Ser. No. 777,910

Claims priority, application Japan, Oct. 31, 1989, 1-284535; Nov. 27, 1989, 1-307339; Jan. 29, 1990, 2-18449

Int. Cl.[5] H01L *21/20*

U.S. Cl. 437—129 1 Claim



1. A method for the production of a semiconductor laser element having a GaAs substrate formed thereon with an active layer of a strained quantum well construction provided with an $In_xGa_{1-x}As$ strained quantum well layer and a GaAs barrier layer, InGaP clad layers arranged up and down said active layer and a GaAs etching step layer inserted into said clad layer through an epitaxial growth means, the method comprising the steps of: etching a GaAs layer to an InGaP layer with an etching liquid containing hydrogen peroxide and any one of sulfuric acid, tartaric acid or ammonia, and etching an InGaP layer to a GaAs layer with an etching liquid containing hydrochloric acid but not containing hydrogen peroxide.

5,173,448

PROCESS FOR FABRICATING A SEMICONDUCTOR DEVICE

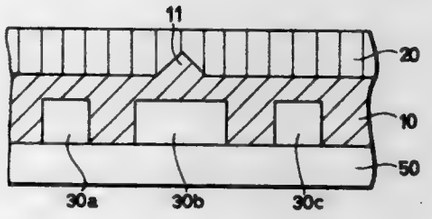
Masahiko Yanagi, Nara, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Nov. 14, 1991, Ser. No. 791,527

Claims priority, application Japan, Nov. 21, 1990, 2-318684

Int. Cl.[5] H01L *21/44, 21/465*

U.S. Cl. 437—186 2 Claims



1. A process for fabricating a semiconductor device comprising the steps of:

depositing a CVD film by a bias ECRCVD process on a wiring layer having an intended contact region in which a wiring line is made wider than in other regions;

coating planarly the CVD film with a resist film;

etching the resist film back so as to expose a protuberance of the CVD film formed above the intended contact region; and

etching the protuberance and the CVD film thereunder to open a contact hole down to the intended contact region of the wiring layer.

5,173,449

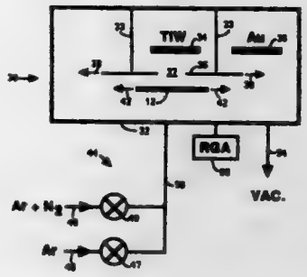
METALLIZATION PROCESS

Kevin A. Lorenzen; Dan L. Burt, and David A. Shumate, all of Phoenix, Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Continuation of Ser. No. 361,900, Jun. 5, 1989, abandoned. This application Jan. 7, 1991, Ser. No. 634,969

Int. Cl.[5] H01L *21/00, 21/02, 21/28, 21/48*

U.S. Cl. 437—192 23 Claims



1. A process for forming a conductive contact to an electronic device, comprising:

providing a substrate having thereon an area to be contacted;

forming a TiWN layer on the first conductor coupled to the area to be contacted;

forming a TiWN layer on the first conductor by sputtering a

TiW target in a nitrogen containing sputtering atmosphere in a sputtering system;

removing the nitrogen from the sputtering atmosphere by purging the sputtering system with a substantially inert gas; and

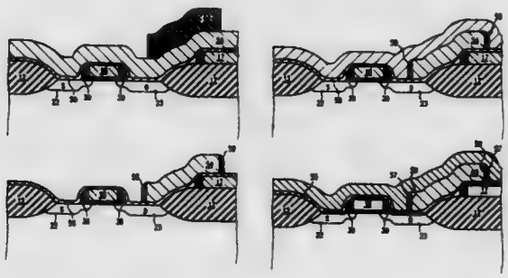
without exposing the TiWN layer to an oxygen or moisture containing atmosphere, thereafter forming a TiW layer on the TiWN layer by sputtering a TiW target in a substantially nitrogen free atmosphere after the step of removing the nitrogen such that an abrupt TiW/TiWN interface is formed thereby preventing the formation of a TiWN gradient interface between the TiW and TiWN layers.

5,173,450

TITANIUM SILICIDE LOCAL INTERCONNECT PROCESS

Che-Chia Wei, Plano, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Filed Dec. 20, 1991, Ser. No. 816,022
Int. Cl.[5] H01L *21/283*
U.S. Cl. 437—200 **17 Claims**



12. A process of forming a local interconnect conductor at a face of a semiconductor workpiece from a portion of a device formed at said face to a conductor spaced from said portion, comprising the steps of:

forming at least one thick insulator region on the face;

forming a semiconductor device in an active device area of the workpiece adjacent the thick insulator region, the semiconductor device including a diffused semiconductor region with a diffused region area on the face of the workpiece;

forming an elemental silicon conductor on the thick insulator region to be laterally spaced from the diffused semiconductor region area;

depositing a first layer of metal on the face of the workpiece, the metal selected to form a conductive silicide and a nitride;

depositing a layer of amorphous silicon on the first layer of metal;

etching the layer of amorphous silicon to define an amorphous silicon local interconnect structure which laterally extends from the diffused region area to the conductor disposed on the thick insulator region;

depositing a second layer of metal on the amorphous silicon structure and on exposed portions of the first layer of said metal;

reacting, under a nitrogen atmosphere, the metal and the amorphous silicon interconnect structure to create a metal silicide interconnect conductor which electrically connects the diffused region to the conductor disposed on the thick insulator region, to create metal silicide regions at exposed silicon surfaces of the conductor disposed on the thick insulator region and semiconductor device, and to create a layer of metal nitride over exposed insulator regions, over the metal silicide regions and over the metal silicide interconnect conductor; and

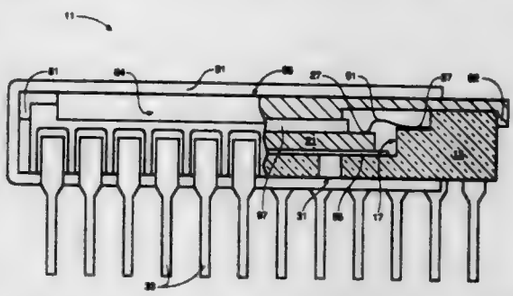
removing unwanted portions of unreacted metal and metal nitride.

5,173,451

SOFT BOND FOR SEMICONDUCTOR DIES

Larry D. Kinsman, and Derek J. Gochnour, both of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Continuation-in-part of Ser. No. 788,165, Nov. 5, 1991, which is a continuation-in-part of Ser. No. 709,858, Jun. 4, 1991. This application May 26, 1992, Ser. No. 889,008
Int. Cl.[5] H01L *21/60*
U.S. Cl. 437—209 **26 Claims**



1. Method for connecting a semiconductor circuit die external equipment for testing purposes and testing the die, whereby the die may be subsequently disconnected, characterized by:

a) placing the die in a die carrier having a die receiving portion thereon, said die carrier having a plurality of connectors thereon for connection to test circuitry, and said die carrier having a plurality of bondpads in close proximity of the die receiving portion;

b) attaching leadwires to the die at bondpads on the die and attaching the leadwires to the bondpads on the die carrier, said attachment of leadwires to the bondpads on the die being with sufficient bonding force to provide an electrical connection and to retain the leadwires on the bondpads on the die during a test sequence, and said bonding force being less than an attachment force of the bondpads on the die to the die and less than the tensile strength of the leadwires separate from the bondpads;

c) providing signals to at least one of the bondpads on the die carrier in response to signals to at least one of the connectors, and providing signals to at least one of the connectors in response to signals at least one of the bondpads;

d) removing the leadwires from the bondpads on the die by mechanically applying force to the wires, the force applied to the wires resulting in the attachment of the leadwires to the bondpads on the die, wherein, for a given force applied to the leadwires, the bond attachment of the leadwires to the bondpads on the die is removed while the leadwires may remain unsevered and the bondpads remain intact; and

e) removing the die from the die carrier.

5,173,452

PROCESS FOR THE VAPOR DEPOSITION OF POLYSILANES PHOTORESISTS

David M. Dobuzinsky, 26 Cascade St., Essex Junction, Vt. 05452; Mark C. Hakey, P.O. Box 212, Milton, Vt. 05468; Steven J. Holmes, 117 Morse Pl., Burlington, Vt. 05401, and David V. Horak, 47 Briar La., Essex Junction, Vt. 05452

Continuation of Ser. No. 311,326, Feb. 15, 1989, abandoned. This application Jan. 2, 1991, Ser. No. 635,819
Int. Cl.[5] H01L *21/00, 21/02;* G03F *7/10*
U.S. Cl. 437—229 **18 Claims**

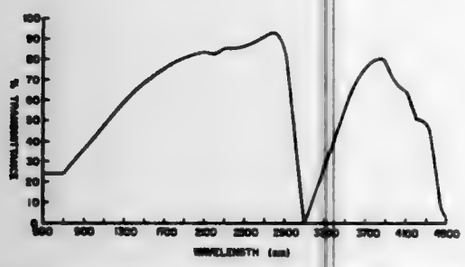
1. A process for forming a film on a substrate, comprising exposing said substrate to the vapor of a polymerizable silane monomer in the substantial absence of oxygen and under such conditions as to deposit on said substrate a film which is photosensitive and comprises a polysilane composition having a chemical backbone characterized by sillicon-silicon bonding.

5,173,453

VARIABLY TRANSLUCENT GLASS-CERAMIC ARTICLE AND METHOD FOR MAKING

George H. Beall, Big Flats, and Linda R. Pinckney, Corning, both of N.Y., assignors to Corning Incorporated, Corning, N.Y.

Filed Oct. 9, 1991, Ser. No. 773,455
Int. Cl.[5] C03C *10/14, 10/12, 3/085, 3/078*
U.S. Cl. 501—4 10 Claims



5. An white translucent glass-ceramic article demonstrating a transmittance to red and infrared wavelengths, through a polished plate of about 5 mm thickness, as illustrated in the FIGURE, wherein β-spodumene solid solution constitutes the principal crystal phase, consisting essentially, expressed in terms of weight percent on the oxide basis, of about 64–70% SiO_2, 18–22% Al_2O_3, 3.3–4% Li_2O, 2–5% ZnO, 0–2% MgO, 1.5–3.5% ZrO_2, 0.5–2.5% TiO_2, 3.5–4.5% ZrO_2+TiO_2, 0.5–1.5% As_2O_5 and 0–0.5% SnO_2.

5,173,454

NANOCRYSTALLINE MATERIALS

Hermann L. Rittler, Corning, N.Y., assignor to Corning Incorporated, Corning, N.Y.

Filed Jan. 9, 1992, Ser. No. 818,347
Int. Cl.[5] C03C *10/00*
U.S. Cl. 501—5 3 Claims

1. A crystallized glass nanocrystalline particle which is a zinc pyrophosphate, has a minor dimension in the range of 0.1 to 100 Angstrom units and has a platey form in which the aspect ratio is grater than one.

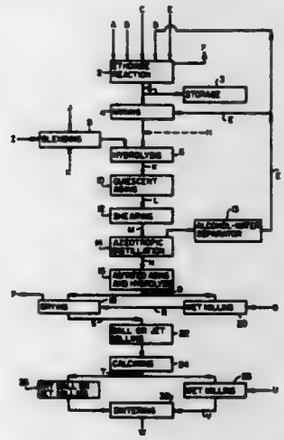
5,173,455

LOW SINTERING CORDIERITE POWDER COMPOSITION

John F. Terbot, Mobile, Ala., and Richard F. Hill, Chagrin Falls, Ohio, assignors to Union Carbide Coatings Service Technology Corporation, Danbury, Conn.

Division of Ser. No. 321,214, Mar. 3, 1989, which is a division of Ser. No. 911,221, Sep. 24, 1986, Pat. No. 4,835,298. This application May 6, 1991, Ser. No. 696,087
Int. Cl.[5] C03C *3/00, 10/08*
U.S. Cl. 501—12 3 Claims

1. A ceramic powder consisting essentially of agglomerates of fine sub-micron size hydrated metal oxide particles of magnesium-aluminum-silicon which form hexagonal cordierite at



substantially full density at a sintering temperature of between 825° C. and 875° C.

5,173,456

PHOSPHATE GLASS USEFUL IN HIGH ENERGY LASERS

Yuiko T. Hayden, Clarks Summit, and Donna Guesto-Barnak, Dupont, both of Pa., assignors to Schott Glass Technologies, Inc., Duryea, Pa.

Filed Dec. 20, 1990, Ser. No. 630,610
Int. Cl.[5] C03C *3/16, 3/19, 3/17, 3/062*
U.S. Cl. 501—45 34 Claims

1. A low- or no-silica, low- or no-alkali phosphate glass useful as a laser amplifier in a multiple pass, high energy laser system having a high thermal conductivity, $K_{90°C.}>0.85$ W/mK, a low coefficient of thermal expansion, $\alpha_{20°-300°C.}<80\times10^{-7}/°$ C., low emission cross section, $\alpha<2.5\times10^{-20}cm^2$, and a high fluorescence lifetime, $\tau>325$ μsecs at 3 wt. % Nd (or equivalent) doping, consisting essentially of (on an oxide composition basis):

	Mole %
P_2O_5	52–72
Al_2O_3	0–<20
B_2O_3	>0–25
ZnO	0–31
Li_2O	0–5
K_2O	0–5
Na_2O	0–5
Cs_2O	0–5
Rb_2O	0–5
MgO	>0–<30
CaO	0–20
BaO	0–20
SrO	0–<20

-continued

	Mole %
Sb_2O_3	0-<1
As_2O_3	0-<1
Nb_2O_5	0-<1
Ln_2O_3	up to 6.5
PbO	0-<5
SiO_2	0-3

wherein

Ln_2O_3 is the sum of lanthanide oxides;

R being Li, Na, K, Cs, and Rb; and said glass substantially corresponds to a point within the upper lined portion of FIG. 1C.

5,173,457

PASTE COMPOSITIONS

Gary P. Shorthouse, Reading, United Kingdom, assignor to Johnson Matthey Public Limited Company, United Kingdom

Filed Nov. 16, 1990, Ser. No. 614,128

Claims priority, application United Kingdom, Nov. 22, 1989, 8926383; Feb. 23, 1990, 9004157

Int. Cl.[5] C03C *3/089, 3/091*

U.S. Cl. 501—65 9 Claims

1. A thick film paste composition comprising a thick film medium component and a dielectric component of substantially spherical particles of dielectric material having a particle size below 5 μm, and which particles are sinterable at a temperature in the range of 600° C. to 1100° C., said particles of dielectric material being prepared by a sol-gel process, with the proviso that the composition contains neither sodium nor lithium high atomic number elements.

5,173,458

SILICON NITRIDE SINTERED BODY AND PROCESS FOR PRODUCING THE SAME

Takao Nishioka; Kenji Matsunuma; Koichi Sogabe; Tomoyuki Awatsu; Masaya Miyake; Takehisa Yamamoto, and Akira Yamakawa, all of Itami, Japan, assignors to Sumitomo Electric Industries, Ltd., Japan

Filed Dec. 18, 1991, Ser. No. 810,723

Claims priority, application Japan, Dec. 28, 1990, 2-415582; Feb. 25, 1991, 3-50198

Int. Cl.[5] C04B *35/58*

U.S. Cl. 501—97 6 Claims

1. A silicon nitride sintered body produced by sintering a green compact of a mixed powder comprising 1) a silicon nitride source powder having a percentage α crystallization of 93% or more and a mean grain diameter of 0.7 μm or less and 2) a combined sintering aid composed of a first sintering aid which is yttrium oxide, and a second sintering aid consisting of aluminum oxide or nitride and at least one member selected from the group consisting of metal oxides and nitrides of Mg, Ca and Li, the total of said first sintering aid and said second sintering aid being not less than 5% by weight but not more than 15% by weight based on the total of said powder and said combined sintering aid, said sintering taking place in a nitrogen gas atmosphere at 1500° to 1700° C., wherein the precipitation ratio of an α-Si_3N_4, including α'-sialon, crystal phase to a β-Si_3N_4, including β'-sialon, crystal phase is from 1:3 to 1:8 in terms of the peak intensity ratio in X-ray diffraction, the weight ratio of said first sintering aid to said second sintering aid being 1.5:1 to 5:1 and the weight ratio of said aluminum oxide or nitride to said metal oxides and nitrides is 2:1 to 5:1.

5,173,459

Si_3N_4-Al_2O_3 COMPOSITE SINTERED BODIES AND METHOD OF PRODUCING THE SAME

Koichi Niihara, 1-2-2, Hashirimizu-Shukusha, University, 25, Hashirimizu 2-Chome, Yokosuka, Kanagawa Pref.; Atsushi Nakahira, Yokosuka, and Toshio Hirai, 4-91, Takamori 3-Chome, Izumi, Miyagi Pref., all of Japan, assignors to Koichi Niihara; Toshio Hirai and NGK Insulators, Ltd., all of, Japan

Continuation of Ser. No. 266,872, Nov. 3, 1988, abandoned. This application Jul. 23, 1990, Ser. No. 611,338

Claims priority, application Japan, Nov. 9, 1987, 62-281061

Int. Cl.[5] C04B *35/58*

U.S. Cl. 501—97 5 Claims

1. An Si_3N_4-Al_2O_3 composite sintered body, consisting of α-Al_2O_3 and at least one crystal phase selected from the group consisting of Si_3N_4 and sialon, said sintered body being obtained by sintering a mixed powder comprising 10-45 mol % Si_3N_4 and the balance being Al_2O_3 powder, in which a content of metallic element other than Si and Al is not more than 0.5% by weight, at 1,500°-1,900° C.;

wherein said sintered body exhibits an increase of weight through oxidation of not greater than 0.1 mg/cm^2 after heating at 1,300° C. for 100 hours.

5,173,460

PIEZOELECTRIC CERAMIC MATERIAL WITH LARGE POWER OUTPUT ABILITY

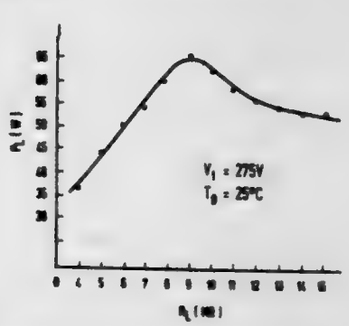
An-Xiang Kuang; Tao-Shen Zhou; Chang-Xin He; Li-Ying Chai, and Ju-Fang Xie, all of Wuhan, China, assignors to Hubei University, Wuhan, China

Filed Oct. 24, 1991, Ser. No. 782,030

Claims priority, application China, Oct. 29, 1990, 90 1 08248.1

Int. Cl.[5] C04B *35/46*

U.S. Cl. 501—134 2 Claims



1. A piezoelectric ceramic material with a large power output ability, said material being a quarternary system PMMN, consisting of lead niobate with $Mg(Pb(Mg_{\frac{1}{3}}Nb_{\frac{2}{3}})O_3)$, lead niobate with $Mn(Pb(Mn_{\frac{1}{3}}Nb_{\frac{2}{3}})O_3)$, lead zirconate ($PbZrO_3$), and lead titanate ($PbTiO_3$), and its formulation being as follows:

$$Pb(Mg_{\frac{1}{3}}Nb_{\frac{2}{3}})_A(Mn_{\frac{1}{3}}Nb_{\frac{2}{3}})_BTi_CZr_DO_3$$

wherein:

A=0.025-0.125;

B=0.025-0.125;

C=0.375-0.475;

D=0.375-0.475.

5,173,461

TOLUENE DISPROPORTIONATION CATALYST

Robert P. Absil, West Deptford; Scott Han, Lawrenceville; David S. Shihabi, Pennington; David O. Marler, Deptford; Clarence D. Chang, Princeton, and Donna M. Mitko, Monmouth Junction, all of N.J., assignors to Mobil Oil Corporation, Fairfax, Va.

Filed Mar. 21, 1990, Ser. No. 497,046
Int. Cl.[5] B01J *29/28*
U.S. Cl. 502—62 24 Claims

6. A toluene disproportionation catalyst consisting essentially of

(a) a crystal having the structure of ZSM-5 which in the as-synthesized form has a silica to alumina framework mole ration of less than 55 and a diffusion rate constant (D/r^2) of less than 150 $sec^{-1} \times 10^{-6}$; and

(b) a material thereon which is inert and stable under the conditions below and wherein the material is free of acid activity effective to isomerize p-xylene, wherein the catalyst is effective to produce amounts of p-xylene which exceeds the thermodynamic equilibrium value of p-xylene during toluene disproportionation under conditions including a temperature within the range of 600° to 1,100° F. at a pressure of about atmospheric to about 1,000 psig and hydrogen to hydrocarbon mole ratio of from (0) to about 10 and

wherein the material comprises a reagent selected from the group consisting of carbon, coke, zirconia, titania, silica and at least one oxide of an element selected from the group consisting of antimony, phosphorus, boron and magnesium,

(c) and a matrix material wherein the matrix material is 10 to 70 weight percent of the catalyst.

5,173,462

INDUSTRIAL ADSORBENTS BASED ON LOW-SILICA X ZEOLITES, FOR NON-CRYOGENIC SEPARATION OF AIR GASES, AND THEIR MANUFACTURE PROCESS

Dominique Plee, Meulan, France, assignor to Ceca S.A., Courbevoie, France

Filed Nov. 14, 1991, Ser. No. 791,680
Claims priority, application France, Nov. 16, 1990, 90 14295
Int. Cl.[5] B01J *20/12, 20/18*
U.S. Cl. 502—67 11 Claims

1. An industrial shaped adsorbent for the non-cryogenic separation of gases from air, comprising from 70 to 95% by weight zeolites and, correspondingly, from 30 to 5% by weight of a clay binder,

(a) said zeolites consisting essentially of mixtures of anhydrous X and A zeolites having an X crystallinity greater than or equal to 95% and an A crystallinity less than or equal to 5%, a tolune standard absorption of 23±1% and an X-ray spectrum characteristic of a practially pure faujasite, and with the Si/Al ratio of the crystalline component being 1±0.03, and

(b) said zeolites having a 2Ca/Al ratio between about 80 and 99%, and

(c) with the adsorbent having a nitrogen adsorption between 16 and 23.5 L/kg and a ratio of the nitrogen to the oxygen adsorption capacities under 1 bar between 3.5 and 4.5.

5,173,463

KAOLIN CONTAINING FLUID CRACKING CATALYST

Jose C. D. Macedo, Rio de Janeiro, Brazil, assignor to Petroleo Brasileiro, S.A.-Petrobras, Rio de Janeiro, Brazil

Continuation of Ser. No. 404,030, Sep. 6, 1989, Pat. No. 5,082,815. This application Dec. 9, 1991, Ser. No. 805,734
Claims priority, application Brazil, Sep. 6, 1988, PI.8804582; Sep. 16, 1988, PI.8804777; Sep. 27, 1988, PI.8804981
Int. Cl.[5] B01J *21/16, 29/06*
U.S. Cl. 502—68 10 Claims

1. A catalyst composition for fluid cracking comprising

a. 5 to 50% by weight of a crystalline aluminosilicate;

b. 5 to 80% by weight of an acid treated clay selected from the group consisting of kaolin and metakaolin obtained by admixing said clay with an acid selected from the group consisting of phosphoric and acetic acid, with the resulting slurry being heated to 25°–110° for 1 to 100 hours under atmospheric or superatmospheric pressure so as to effect precipitation of alumina salts, filtering and washing the clay, and optionally, drying the clay;

c. a matrix which may include 0 to 65% by weight of a clay and

0 to 50% of compounds selected from the group consisting of silica, alumina, magnesia, zirconia, titania, and boria,

8. The catalyst composition of claim 1, comprising 15 to 30% of a crystalline aluminiosilicate selected from the group consisting of X and Y type and the ultrastabilized X and Y type zeolites, 10 to 50% of acid treated clay comprising component (b), 10 to 45% of kaolin, 0 to 20% of an active matrix, the balance being made up of a synthetic matrix selected from the group consisting of silica, silica-alumina, and alumina.

5,173,464

OLEFIN POLYMERIZATION

Ted M. Pettijohn, 4500 Stonehenge Dr., and Henry L. Hsieh, 1406 Meadow La., both of Bartlesville, Okla. 74006

Division of Ser. No. 664,239, Mar. 4, 1991, Pat. No. 5,110,884, which is a division of Ser. No. 536,383, Jun. 11, 1990, Pat. No. 5,028,673. This application Nov. 18, 1991, Ser. No. 793,921
Int. Cl.[5] C08F *4/643, 4/646*
U.S. Cl. 502—104 10 Claims

1. A method for preparing an olefin polymerization catalyst comprising contacting reactants consisting essentially of a rare earth metal halide, an organolithium compound, and a transition metal compound selected from dicyclopentadienyl zirconium dichloride and titanium compounds of the formula TiX_4 wherein each X is individually selected from the group consisting of halogen, alkyl, alkoxy, and aryl radicals.

5,173,465

METHOD FOR PREPARING A SOLID CATALYST COMPONENT FOR ETHYLENE (CO)POLYMERIZATION

Luciano Luciani, Ferrara; Maddalena Pondrelli, Budrio, and Renzo Invernizzi, Milan, all of Italy, assignors to Montedipe S.r.l., Milan, Italy, a

Filed Jun. 14, 1991, Ser. No. 715,788
Claims priority, application Italy, Jun. 22, 1990, 20740 A/90
Int. Cl.[5] C08F *4/02*
U.S. Cl. 502—107 21 Claims

1. A process for preparing a solid catalyst component for ethylene polymerization and for the copolymerization of ethylene with an alpha-olefin, consisting of a silica support in particle form (50–90% by weight) and a catalytically active part (50–10% by weight) containing titanium, magnesium, chlorine and alkoxy groups, characterised by:

a) preparing a solution of magnesium chloride in ethanol;

b) impregnating silica particles with the solution from a) by suspending the silica particles in the solution;

c) eliminating the ethanol not absorbed by the suspension in b) by evaporation at a temperature not exceeding 60° C. and recovering a solid in the form of particles containing ethanol and magnesium chloride in a molar ratio of the order of 5/1–6/1;

d) heating the solid from c) to a temperature not exceeding 150° C. and partially eliminating the absorbed ethanol by evaporation to a molar ratio of ethanol to magnesium chloride in the solid of between 1.5/1 and 4/1;

e) interacting the solid from d) with at least one titanium compound chosen from titanium chlorides, alkoxides and chloroalkoxides to an atomic ratio of magnesium to titanium in the solid of between 0.5/1 and 8/1; and

f) recovering the solid catalyst component.

COMPOSITIONS OF THE FORMULA $MO_{12}P_aV_bX^1_cX^2_dX^3_eSb_fRE_gS_iO_n$

Karl-Heinz Boehning; Gerd Duembgen, both of Ludwigshafen; Ulrich Hammon, Karlsruhe; Richard Krabetz, Kirchheim; Franz Merger, Frankenthal; Matthias Schwarzmann, Limburgerhof; Fritz Thiessen, and Herbert Vogel, both of Ludwigshafen, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Jul. 12, 1991, Ser. No. 729,169

Claims priority, application Fed. Rep. of Germany, Jul. 12, 1990, 4022212

Int. Cl.[5] B01J *27/18, 27/19, 27/198*

U.S. Cl. 502—209 5 Claims

1. A composition of the formula I

$$Mo_{12}P_aV_bX^1_cX^2_dX^3_eSb_fRe_gS_iO_n \quad (I),$$

where

X^1 is potassium, rubidium and/or cesium,

X^2 is copper and/or silver,

X^3 is cerium, boron, zirconium, manganese and/or bismuth,

a is from 0.5 to 3.0,

b is from 0.01 to 3.0,

c is from 0.2 to 3.0,

d is from 0.01 to 2.0,

e is from 0 to 2.0,

f is from 0.01 to 2.0,

g is from 0 to 1.0,

h is from 0.001 to 0.5 and

n is a number determined by the valency and content of the elements different from oxygen in I.

COMPOSITIONS AND PROCESSES FOR REMOVING, SEPARATING AND CONCENTRATING DESIRED IONS FROM SOLUTIONS USING SULFUR AND ARALKYL NITROGEN CONTAINING LIGANDS BONDED TO INORGANIC SUPPORTS

Ronald L. Bruening, Orem; Bryon J. Tarbet, Highland; Reed M. Izatt, and Jerald S. Bradshaw, all of Provo, Utah, assignors to Brigham Young University, Provo, Utah

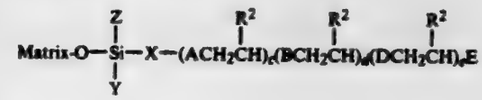
Filed Aug. 9, 1991, Ser. No. 743,340

The portion of the term of this patent subsequent to Aug. 13, 2008, has been disclaimed.

Int. Cl.[5] B01J *20/22*

U.S. Cl. 502—401 14 Claims

1. A thiol and/or thioether aralkyl nitrogen-containing ligand-solid support compound of the formula:



wherein

(i) A and B are members independently selected from the group consisting of NR, $N(R)CH_2$, S and SCH_2;

(ii) D is a member selected from the group S and SCH_2;

(iii) E is a member selected from the group consisting of SH and H;

(iv) R is an aralkyl group wherein the aryl portion is a member selected from the group consisting of phenyl, naphthyl and pyridyl and substituted derivatives thereof and the alkyl portion of the group contains 1 to 3 carbon atoms;

(v) R^2 is a member independently selected from the group consisting of H, SH, OH, lower alkyl, and aryl, where aryl is a member selected from the group consisting of phenyl, naphthyl and pyridyl and substituted derivatives thereof;

(vi) c is a integer from 1 to about 10;

(vii) d and e are each integers from 0 to about 10;

with the following provisos that when A is S or SCH_2, d is an integer of 1 to 10 and at least one B is NR or $N(R)CH_2$ and when A is NR or $N(R)CH_2$, e is 0 with the subprovisos that when d is 0, E is SH and when E is

H, d is an integer of 1 to 10 and at least one B is S or SCH_2;

(viii) X is a spacer grouping selected from the group consisting of:

$(CH_2)_a(OCH_2CHR^1CH_2)_b$ or aralkyl

wherein:

(a) R^1 is a member selected from the group consisting of H, SH, OH, lower alkyl, and aryl, where aryl is a member selected from the group consisting of phenyl, naphthyl and pyridyl and substituted derivatives thereof;

(b) a is an integer from 3 to about 10;

(c) b is an integer of 0 or 1;

(d) aralkyl is a group wherein the aryl portion is a member selected from the group consisting of phenyl, naphthyl and pyridyl and substituted derivatives thereof and the alkyl portion contains from 1 to 6 carbon atoms;

(ix) Y and Z are members independently selected from the group consisting of Cl, Br, I, alkyl, alkoxy, substituted alkyl or substituted alkoxy and O-matrix; and

(x) matrix is selected from the group consisting of sand, silica gel, glass, alumina, zirconia, titania and nickel oxide or other hydrophilic inorganic supports and mixtures thereof.

HEAT SENSITIVE RECORDING MATERIAL

Hisayoshi Mito, Amagasaki; Masato Kawamura, Nishinomiya, and Mikio Nakamura, Kobe, all of Japan, assignors to Kanzaki Paper Manufacturing Co., Ltd., Japan

Filed Jul. 12, 1991, Ser. No. 729,231

Claims priority, application Japan, Jul. 13, 1990, 2-186616

Int. Cl.[5] B41M *5/30*

U.S. Cl. 503—214 12 Claims

1. A heat sensitive recording material comprising a substrate and a heat sensitive recording layer formed thereon and having incorporated therein a colorless or light-colored basic dye and a color acceptor reactive with the dye when contacted therewith by heating, the heat sensitive recording material being characterized in that the heat sensitive recording layer has incorporated therein a polyvinyl alcohol having an average polymerization degree of at least 1000 and a saponification degree of up to 90 mole % , and at least one modified starch selected from the group consisting of oxidized starch, enzyme converted starch, esterified starch, cationic starch, grafted starch, etherified starch and α-starch.

5,173,473

HEAT TRANSFER SHEET

Noritaka N. E. Egashira, Tokyo, Japan, assignor to Dai Nippon Insatsu Kabushiki Kaisha, Japan

Division of Ser. No. 500,124, Mar. 28, 1990, Pat. No. 5,124,309. This application Apr. 6, 1992, Ser. No. 863,865

Claims priority, application Japan, Mar. 28, 1989, 64-73745; Jul. 31, 1989, 64-196774; Oct. 26, 1989, 64-277106

Int. Cl.[5] B41M *5/035, 5/38*

U.S. Cl. 503—227 5 Claims

1. A heat transfer sheet having a dye layer comprising a dye and binder provided on a substrate film,

said dye layer containing a compound represented by the following formula (I):

$$R=[(CH_2)_l-X-(CH_2)_m-CH_3]_k \quad (I)$$

wherein

R is a phenylene group or a naphthylene group or an alkylene group which may also have substituent;

X is a linking group selected from the group consisting of —NHCOO— group, —NHCONH— group, —COO— group, —CONH group, —NHCO group, $—NHSO_2—$ group, —OOC— groups, —OOCNH group, $—O.O_2S—$ group, $—SO_2NH—$ group and $—SO_2.O$ group, —O— group, —NH— group, —S— group; and

l and m are integers of 1 to 30.

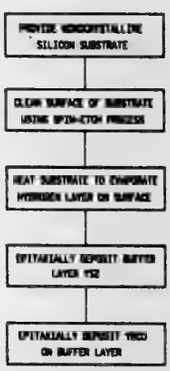
SILICON SUBSTRATE HAVING AN EPITAXIAL SUPERCONDUCTING LAYER THEREON AND METHOD OF MAKING SAME

George A. N. Connell, Cupertino; David B. Fenner, Menlo Park; James B. Boyce, Los Altos, and David K. Fork, Palo Alto, all of Calif., assignors to Xerox Corporation, Stamford, Conn.; President and Board of Trustees of Santa Clara College, Santa Clara, Calif. and Board of Trustees of the Leland Stanford Junior University, Stanford, Calif.

Division of Ser. No. 510,699, Apr. 18, 1990, abandoned. This application Mar. 11, 1991, Ser. No. 667,669

Int. Cl.[5] C30B *25/18*

U.S. Cl. 505—1 32 Claims



1. A method of forming a high temperature superconducting layer on a silicon substrate comprising the steps of

a) providing a monocrystalline silicon substrate having a major surface,

b) cleaning said major surface using a spin-etch process to produce an atomically clean surface terminated with an atomic layer of an element which does not react with silicon so as to disrupt the surface crystallinity,

c) heating said substrate in a deposition chamber to evaporate said element,

d) depositing a buffer layer of YSZ on said major surface while said substrate remains in said deposition chamber, said YSZ forming epitaxially on said major surface of monocrystalline silicon, and

e) depositing a high temperature superconducting material on said buffer layer while said substrate remains in said deposition chamber, said high temperature superconductor material forming epitaxially on said buffer layer of YSZ.

5,173,475

BI-PB-SR-BA-CA-CU-O SYSTEM SUPERCONDUCTOR

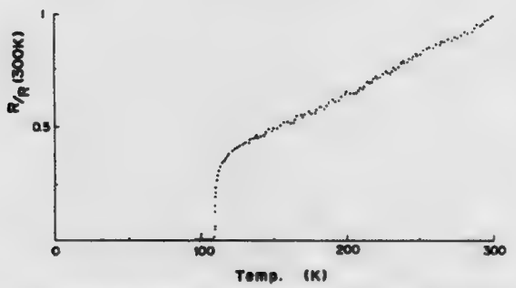
Toshio Takada; Mikio Takano, both of Kyoto; Yoshinari Miura, Hyogo; Jun Takada, Okayama; Kiichi Oda, Kurashiki, and Naoichi Yamamoto, Saita, all of Japan, assignors to Kabushiki Kaisha Kobe Seiko Sho, Kobe; NEC Corporation, Tokyo; Osaka Cement Co., Ltd., Osaka; Seisan Kaihatsu Kagaku Kenkyusho, Kyoto; Toda Kogyo Corp., Hiroshima and Tosoh Corporation, Shin nanyo, all of, Japan

Filed Jun. 29, 1989, Ser. No. 373,101

Claims priority, application Japan, Jul. 1, 1988, 63-165529; Jun. 2, 1989, 1-141419

Int. Cl.[5] C01F *11/02;* C01G *3/02, 21/02;* H01L *39/12*

U.S. Cl. 505—1 2 Claims



1. A Bi-Pb-Sr-Ba-Ca-Cu-O system superconductor having a composition consisting essentially of:

$$Bi_lPb_mSr_pBa_qCa_yCu_zO_x$$

wherein l, m, p, q, y and z satisfy the following inequalities:

$0.50 < l < 1.50$

$0.01 \leqq m \leqq 0.60$

$0.70 \leqq p \leqq 1.60$

$0.005 \leqq q \leqq 0.80$

$0.70 \leqq y \leqq 1.60$

$1.40 \leqq z \leqq 3.00$,

said superconductor being produced wherein the oxygen content of said superconductor is that produced by heating Bi, Pb, Sr, Ba, Ca, Cu compounds in an oxygen containing atmosphere.

5,173,476

110 K BI-SR-CA-CU-O SUPERCONDUCTOR OXIDE AND METHOD FOR MAKING SAME

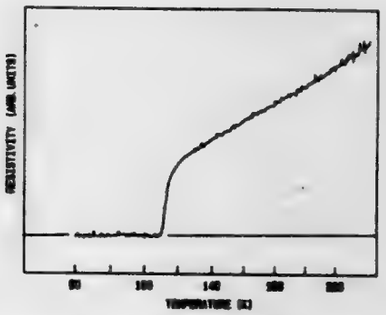
Boyd W. Veal, Downers Grove; John W. Downey, Joliet; Daniel J. Lam, Orland Park, and Arvydas P. Paulikas, Downers Grove, all of Ill., assignors to The United States of America as represented by the United States Department of Energy, Washington, D.C.

Filed Oct. 3, 1988, Ser. No. 252,698

Int. Cl.[5] C01B *13/18;* C01F *11/04;* C01G *3/02, 29/00*

U.S. Cl. 505—1 4 Claims

1. A method of making a superconductor having a resistive zero at 110K, comprising forming a mixture of Bi_2O_3, $SrCO_3$, $CaCO_3$ and CuO into a particulate compact wherein the atom ratios are 2 for Bi, about 1.6 for Sr, about 2 for Ca, 3 for Cu, heating said particulate compact at a rate not less than about 300° C./hr. in the presence of oxygen to a first elevated temperature near the melting point of the oxides to form a sintered compact, maintaining said sintered compact at said first elevated temperature not less than 20° C. less than the melting point of the compact for not less than about 5 hours, cooling said sintered compact and regrinding same to form a particulate material, heating said reground particulate material in the presence of oxygen to a second elevated temperature near the melting point of the oxide, and maintaining said reground particulate material at the second elevated temperature for not less than about 3 days to provide at least 70 volume percent of a material which exhibits a resistive zero at 110K.



5,173,477

POLYPHENYLMETHANE HEAT-SENSITIVE RECORDING MEDIA

Raymond Commandeur, Vizille, and Jean-Pierre Sarrou, Chatou, both of France, assignors to Société Atochem, Puteaux, France

Filed Dec. 19, 1991, Ser. No. 810,181

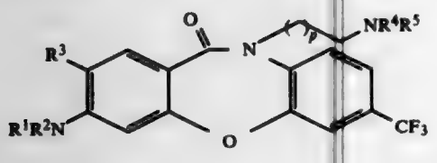
DIBENZ[B,F][1,4]OXAZEPIN-11(10H)-ONES FOR MULTIDRUG RESISTANCE REVERSING AGENTS

Ivo Moskovic, Durham, and Lotte Wang, North Haven, both of Conn., assignors to Bristol-Myers Squibb Company, New York, N.Y.

Filed Aug. 26, 1991, Ser. No. 749,741
Int. Cl.[5] A61K *31/55*; C07S *267/20*
U.S. Cl. 514—211 17 Claims

1. A compound of formula I or a pharmaceutically acceptable salt thereof

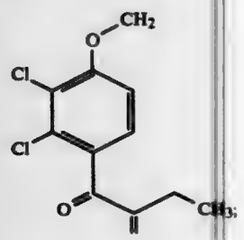


I

wherein

p is 1 to 3;

R^1 and R^2 each are independently hydrogen or an acyl group R^6CO—, in which R^6 is C_{1-6} alkyl, C_{3-7} cycloalkyl, C_{2-7} alkenyl, aryl where aryl is phenyl or phenyl independently substituted with one to three halogen, C_{1-6}alkyl, C_{1-6}alkoxy or C_{1-6}alkoxy or C_{1-6} alkylthio or radical of the formula



R^3 is hydrogen or chloro;

R^4 and R^5 each are independently C_{1-4} alkyl.

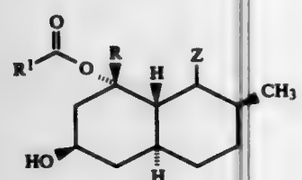
5,173,487

MEVINIC ACID DERIVATIVES

Jeffrey O. Saunders, Somerville, Mass., and Eric M. Gordon, Pennington, N.J., assignors to E. R. Squibb & Sons, Inc., Princeton, N.J.

Filed Nov. 13, 1989, Ser. No. 435,843
Int. Cl.[5] A61K *31/365*; C07C *69/74*; C07D *309/30*
U.S. Cl. 514—227.5 12 Claims

1. A compound of the formula



wherein:

Z is  or  ;

R is selected, from:

(1) alkyl;

(2) substituted alkyl in which one or more substituents are selected from

(a) hydroxyl,

(b) alkoxy,

(c) alkoxycarbonyl,

(d) acyloxy,

(e) cycloalkyl,

(f) aryl,

(g) substituted aryl having substituents X and Y, and

(h) oxo;

(3) alkoxy;

(4) alkenyl;

(5) cycloalkyl;

(6) aryl; and

(7) substituted aryl having substituents X and Y;

R^1 is selected from:

(1) alkyl;

(2) substituted alkyl in which one or more substituents are selected from

(a) halogen,

(b) hydroxyl,

(c) alkoxy,

(d) alkoxycarbonyl,

(e) acyloxy,

(f) cycloalkyl,

(g) aryl,

(h) substituted aryl having substituents X and Y,

(i) alkyl—$S(O)_n$,

(j) cycloalkyl—$S(O)_n$,

(k) aryl—$S(O)_n$,

(l) substituted aryl—$S(O)_n$ having substituents X and Y, and

(m) oxo;

(3) alkoxy;

(4) alkenyl;

(5) cycloalkyl;

(6) substituted cycloalkyl having a substituent selected from

(a) alkyl,

(b) substituent alkyl having a substituent selected from

(i) halogen,

(ii) hydroxy,

(iii) alkoxy,

(iv) alkoxycarbonyl,

(v) acyloxy,

(vi) aryl,

(vii) substituted aryl having substituents X and Y,

(viii) alkyl—$S(O)_n$,

(ix) cycloalkyl—$S(O)_n$,

(x) aryl—$S(O)_n$,

(xi) substituted aryl—$S(O)_n$ having substituents X and Y, and

(xii) oxo,

(c) alkyl—$S(O)_n$,

(d) cycloalkyl—$S(O)_n$,

(e) aryl—$S(O)_n$,

(f) substituted aryl—$S(O)_n$ in which the substituents are X and Y,

(g) halogen,

(h) hydroxy,

(i) alkoxy,

(j) alkoxycarbonyl,

(k) acyloxy,

(l) aryl, and

(m) substituted aryl having substituents X and Y

(7) aryl;

(8) substituted aryl having substituents X and Y;

(9) amino;

(10) alkylamino;

(11) dialkylamino;

(12) arylamino;

(13) substituted arylamino having substituents X and Y;

(14) alkyl(substituted aryl)amino having substituents X and Y;
(15) diarylalkylamino;
(16) substituted arylalkylamino having substituents X and Y;
(17) a member selected from
(a) piperidinyl,
(b) pyrrolidinyl,
(c) piperazinyl,
(d) morpholinyl,
(e) thiomorpholino,
(f) histaminyl,
(g) 3-aminomethyl pyridinyl; and
(18) hydroxy-substituted alkylamine;
R^2 is selected from:
(1) hydrogen;
(2) ammonium;
(3) alkali metal;
(4) alkyl;
(5) alkyl substituted with phenyl;
(6) dialkylamine;
(7) alkylarylamine; and
(8) diarylalkylamine;
X and Y are independently hydrogen, halogen, trifluoromethyl, alkyl, nitro, alkoxy, or cyano;
m is an integer from 0 to 3; and
n is 0, 1, or 2.

5,173,488

STABLE INJECTABLE PHARMACEUTICAL FORMULATION FOR FOLIC ACID AND LEUCOVORIN SALTS AND METHOD

Bruce E. Haeger, Highland Mills, N.Y., assignor to American Cyanamid Company, Stamford, Conn.

Continuation of Ser. No. 396,573, Aug. 21, 1989, abandoned. This application May 1, 1991, Ser. No. 696,335
Int. Cl.[5] A61K *31/505, 47/10, 47/20, 47/18*
U.S. Cl. 514—249 **20 Claims**

1. A stable, injectable aqueous composition comprising:
(i) an effective amount of from about 0.5 mg/ml to about 50 mg/ml of a water soluble pharmaceutically-acceptable salt of folic acid or leucovorin;
(ii) optionally, an effective preservative amount of from about 0.0% w/v to about 2.5% w/v of benzyl alcohol; and
(iii) an effective amount of a buffer/antioxidant combination consisting essentially of
(a) tromethamine and
(b) monothioglycerol, said
combination (iii) being present in an amount at least sufficient to maintain the pH of said composition in a predetermined range of from about 6 to about 10 and to protect the composition against degradation induced by oxygen or light wherein said tromethamine and said monothioglycerol are each present in an amount from about 0.5% w/v to about 6.0% w.v.

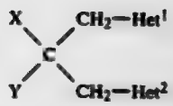
5,173,489

α,α-DISUBSTITUTED AROMATICS AND HETEROAROMATICS AS COGNITION ENHANCERS

Richard A. Earl; Melvyn J. Myers, both of Wilmington, Del., and Victor J. Nickolson, Hermelijnedreef 25, Netherlands, assignors to The DuPont Merck Pharmaceutical Co., Wilmington, Del.

Continuation-in-part of Ser. No. 105,156, Oct. 6, 1987, abandoned, which is a continuation-in-part of Ser. No. 944,953, Jan. 5, 1987, Pat. No. 4,760,083, which is a continuation-in-part of Ser. No. 850,015, Apr. 10, 1986, abandoned. This application Aug. 23, 1988, Ser. No. 234,382
Int. Cl.[5] A61K *31/415, 31/44*; C07D *401/08, 403/08*
U.S. Cl. 514—252 **83 Claims**

1. A pharmaceutical composition consisting essentially of a pharmaceutically suitable carrier and an effective amount of a compound of the formula



or a pharmaceutically acceptable salt thereof wherein
X and Y are taken together to form a saturated or unsaturated carbocyclic first ring and the shown carbon in said ring is α to at least one additional carbocyclic aromatic ring fused to the first ring, the total number of carbocyclic fused rings being 3–5, the sole heterocyclic substituents on said fused rings being Het^1 and Het^2.
one of Het^1 or Het^2 is 2, 3, or 4-pyridyl or 2, 4, or 5-pyrimidinyl and the other is selected from
(a) 2, 3, or 4-pyridyl,
(b) 2, 4, or 5-pyrimidinyl,
(c) 2-pyrazinyl,
(d) 3, or 4-pyridazinyl,
(e) 3, or 4-pyrazolyl,
(f) 2, or 3-tetrahydrofuranyl, and
(g) 3-thienyl.

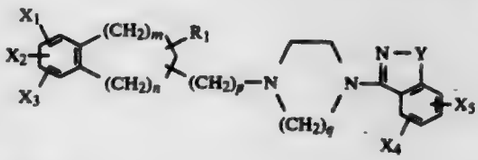
BENZISOXAZOLE AND BENZISOTHIAZOLE COMPOUNDS

Jean-Louis Peglion, Le Vesinet, and Joel Vian, Chaville, both of France, assignors to Adir et Compagnie, Courbevoie, France

Filed Jan. 7, 1992, Ser. No. 817,666
Claims priority, application France, Jan. 8, 1991, 91 00135
Int. Cl.[5] A61K *31/495*; C07D *413/04, 417/04*
U.S. Cl. 514—254 **13 Claims**

1. A compound selected from the group consisting of: benzisoxazole and benzisothiazole compounds of formula I:

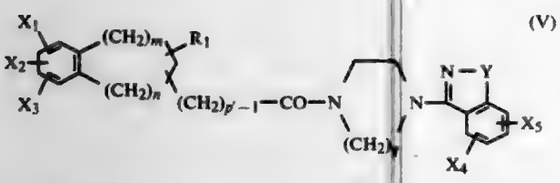


(I)

in which:
X_1, X_2, X_3, X_4 and X_5:
which are the same or different, each represent: hydrogen, halogen, alkyl, alkoxy, or alkylthio in each of which the alkyl moiety is straight-chained or branched and contains 1 to 5 carbon atoms, inclusive, hydroxy, carboxylic acid, acyloxy, trifluoromethyl, nitro, amino, or acetamido, or
two of them in adjacent positions together form methylenedioxy, ethylenedioxy, or vinylenedioxy;
R_1 represents hydrogen or straight-chained or branched alkyl containing 1 to 5 carbon atoms, inclusive;
m and n each represent 0, 1, 2, or 3, provided that $m+n \geq 1$;
p represents 0 or an integer of 1 to 6 inclusive;
q represents 2 or 3; and
Y represents oxygen or $S(O)_z$ in which z is 0, 1, or 2;
in racemic and optically active forms, and the physiologically-tolerable acid addition salts thereof.

11. A pharmaceutical composition useful to treat psychosis and anxiety containing as active ingredient an effective amount of a compound of claim 1 together, with one or more pharmaceutically-acceptable excipients.

13. As a intermediate, an amide compound of formula V:



(V)

in which:

X_1, X_2, X_3, X_4, X_5, R_1, m, n, p', q and Y have the meanings defined in claim 1 and p' is 1–6 inclusive.

5,173,491

PHARMACEUTICAL COMPOSITIONS AND A METHOD FOR THE TREATMENT OF MEMORY DISORDERS, INTELLECTUAL DISORDERS OF AGEING AND ALZHEIMER'S DISEASE

Annie Kamoun; Elisabeth Mocaer, both of Neuilly sur Seine; Gilbert Regnier, Chatenay Malabry; Claude Guillonneau, Clamart, and Jacques Duhault, Croissy sur Seine, all of France, assignors to Adir et Compagnie, Courbevoie, France

Filed Sep. 20, 1990, Ser. No. 585,615

Claims priority, application France, Aug. 10, 1990, 90 10235

Int. Cl.[5] A01N *43/90*

U.S. Cl. 514—265 **2 Claims**

1. A method for treating a human being afflicted with a memory disorder, an intellectual disorder of ageing or Alzheimer's disease, which consists in administering to the said human being an effective amount of 1,3,7-trimethyl-8-[3-(4-diethylaminocarbonylpiperazino)propyl] xanthine or one of its physiologically-tolerable acid addition salts, said effective amount being from about 2 to 50 mg per dose.

5,173,492

S-TRIAZOLO(3,4-I)PURINE DERIVATIVES

Fumio Suzuki, Mishima; Junichi Shimada, Shizuoka; Kenji Ohmori, Mishima; Haruhiko Manabe; Kazuhiro Kubo, both of Shizuoka, all of Japan; Akira Karasawa, Huntingdon Valley, Pa.; Tetsuji Ohno, Shizuoka; Shizuo Shiozaki, Fuji; Akio Ishii, Shizuoka, and Katsuichi Shuto, Mishima, all of Japan, assignors to Kyowa Hakko Kogyo Co., Ltd., Tokyo, Japan

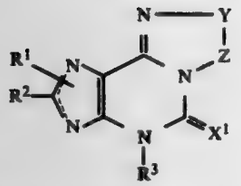
Continuation of Ser. No. 581,562, Sep. 12, 1990, abandoned. This application Aug. 23, 1991, Ser. No. 752,180

Claims priority, application Japan, Sep. 18, 1989, 1-239117; Oct. 6, 1989, 1-261761

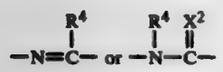
Int. Cl.[5] A61K *31/505*; C07D *239/70*

U.S. Cl. 514—267 **10 Claims**

1. An s-triazolo[3,4-i]purine compound represented by the formula



wherein Y-Z represents



where R^4 represents hydrogen, alkyl, substituted or unsubstituted aromatic heterocyclic group or substituted or unsubstituted aryl; and X^2 represents oxygen, sulfur or NH;

each of R^1 and R^2 independently represents hydrogen, alkyl, cycloalkyl, aralkyl or substituted or unsubsituted aryl;

R^3 represents alkyl, cycloalkyl, aralkyl or substituted or unsubstituted aryl;

X^1 represents oxygen or sulfur;

and represents a single bond or a double bond or a pharmaceutically acceptable salt thereof.

5,173,493

PYRIDOINDOLE DERIVATIVES AND PROCESSES FOR PREPARATION THEREOF

Masayuki Kato, Kyoto; Kiyotaka Ito, Ikeda, and Hisashi Takasugi, Osaka, all of Japan, assignors to Fujisawa Pharmaceutical Company, Ltd., Osaka, Japan

Continuation-in-part of Ser. No. 409,744, Sep. 20, 1989. This application Mar. 19, 1990, Ser. No. 495,119

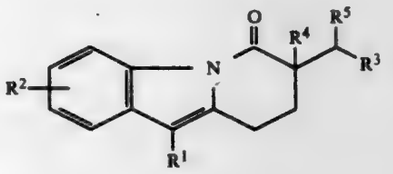
Claims priority, application United Kingdom, Sep. 27, 1988, 8822646; Feb. 10, 1989, 8903044

The portion of the term of this patent subsequent to Aug. 25, 2009, has been disclaimed.

Int. Cl.[5] A61K *31/44*; C07D *459/00*

U.S. Cl. 514—294 **9 Claims**

1. A compound of formula:



wherein

R^1 is hydrogen, lower alkyl, lower alkenyl or N,N-di(lower-)alkylaminomethyl,

R^2 is hydrogen, lower alkyl or halogen,

R^3 is imidazolyl or pyridyl, each of which may have substituent(s) selected from lower alkyl and imino-protective group which is selected from mono-, di- or triphenyl(lower)alkyl, N,N-di(lower)alkylsulfamoyl, lower alkanesulfonyl and tosyl, and

R^4 is hydrogen, lower alkyl, lower alkenyl or hydroxy(lower)alkyl and R^5 is hydrogen, hydroxy or lower alkanoyloxy, or

R^4 and R^5 are linked together to form an additional bond, or a pharmaceutically acceptable salt thereof.

5,173,494

SPECIFIC INHIBITION OF ANGIOTENSIN-II BINDING TO ANGIOTENSIN-II RECEPTOR SUBTYPE-2

Andrew T. Chiu, Landenberg, Pa., and John J. Duncia, Newark, Del., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del.

Continuation-in-part of Ser. No. 497,064, Mar. 20, 1990, abandoned. This application Nov. 21, 1991, Ser. No. 796,097

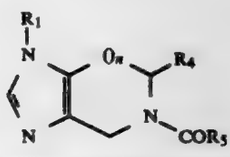
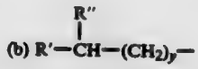
1. A method of treating impaired cognitive performance which comprises administering to a mammal in need of such treatment an effective amount of a compound having the formula (XX):



(XX)

or a pharmaceutically acceptable base or addition salt thereof; wherein R_1 is

(a) alkyl of from four to twenty carbons, inclusive,

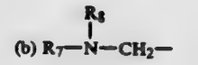


wherein y is zero, one, two, three, four or five, R′ is cycloalkyl, naphthyl, heteroaryl, phenyl unsubstituted or substituted with of from one through five, preferably one through three, substituents comprising lower alkyl, halo, trifluoromethyl, hydroxy, lower alkoxy, lower acyloxy, amino, N-lower monoalkylamino, N,N-lower dialkylamino, lower thioalkyl, lower alkylsulfonyl,

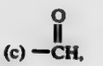
wherein R_{10} is lower alkyl, phenyl unsubstituted or substituted by lower alkyl, or —NHR_{11} wherein R_{11} is hydrogen or lower alkyl, and R″ is hydrogen, lower alkyl, cycloalkyl, napthyl, pehnyl unsubstituted or substituted with of from one through five substituents, preferably from one through three substituent, comprising alkyl, halo, trifluoromethyl, amino, N-lower monoalkylamino, N,N-lower dialkylamino, lower thioalkyl, lower alkylsulfonyl, or nitro;

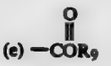
R_4 is

(a) —CH_2OR_7 wherein R_7 is hydrogen, lower acyl, a lower alkyl,



wherein R_7 is a independently as defined above and R_8 is hydrogen, lower alkyl, or benzyl,

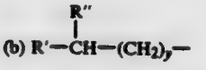




wherein R_9 is hydrogen, lower alkyl or benzyl; and

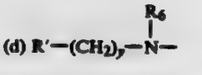
R_5 is

(a) alkyl of from one to fifteen carbons, inclusive,



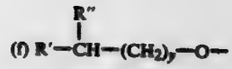
wherein R′, R″ and y are independently as defined above,

(c) —(CH=CR_6)—R_1wherein R_6 is hydrogen or lower alkyl and R_1 is as defined above,



wherein y, R′ and R_6 are independently as defined above,

(e) R′—$(CH_2)_y$—O— wherein y and R′ are independently as defined above,



wherein R′, R″, and y are independently as defined above, and

n is one or two carbons, with the proviso the R_9 cannot be hydrogen wherein R_5 is R′—$(CH_2)_y$—O— or

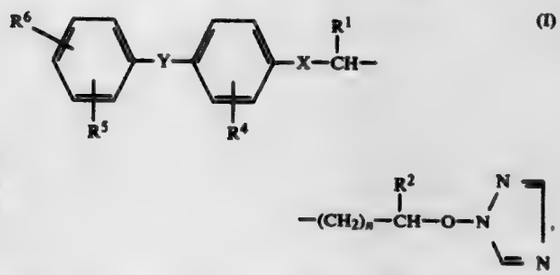
U.S. Cl. 514—384 5 Claims

1. A substituted N-hydroxytriazole of formula I



(I)

where X and Y are O, S, SO, SO_2 or CH_2; R^1 and R^2 are hydrogen or C_1–C_3-alkyl; and R^4, R^5 and R^6 are hydrogen, halogen, C_1–C_4-alkyl, C_1–C_4-alkoxy, C_1–C_4-haloalkyl or C_1–C_4-haloalkoxy, and n is 0, 1 or 2.

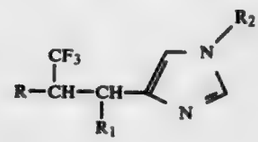
5,173,502

SUBSTITUTED TRIFLUOROPROPAN-1-YL-IMIDAZOLE ALPHA 2-RECEPTOR ANAGONISTS

Charles Malen, Fresnes, and Guillaume de Nanteuil, Suresnes, both of France, assignors to Adir et Compagnie, Courbevoie, France

Filed Nov. 1, 1991, Ser. No. 786,280
Claims priority, application France, Nov. 14, 1990, 90 14086
Int. Cl.[5] A61K *31/415, 31/44*; C07D *233/64, 401/06*
U.S. Cl. 514—396 9 Claims

1. A compound selected from those of formula (I):



(I)

in which
R represents straight-chain or branched lower (C_1–C_6) alkyl; (C_3–C_8) cycloalkyl; phenyl unsubstituted or substituted by one or more halogen atoms by one or more straight-chain or branched (C_1–C_6) alkyl which alkyl groups are themselves unsubstituted or substituted by one or more halogen atoms or by one or more straight-chain or branched (C_1–C_6) alkoxyl; pyridyl; or naphthyl; and
R_1 and R_2, which are the same or different, each represents hydrogen, straight-chain or branched (C_1–C_6) alkyl, or straight-chain or branched (C_1–C_6) acyl,
an enantiomer, diastereoisomer, and epimer, thereof and an addition salt thereof with a pharmaceutically-acceptable acid.

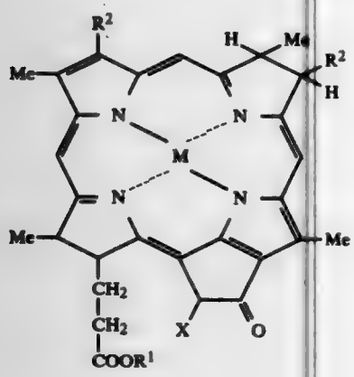
BACTERIOCHLOROPHYLL-A DERIVATIVES USEFUL IN PHOTODYNAMIC THERAPY

Thomas J. Dougherty, Grand Island, N.Y., assignor to Health Research, Inc., Buffalo, N.Y.

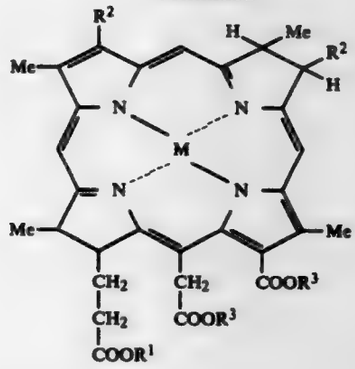
Division of Ser. No. 341,591, Apr. 21, 1989, abandoned. This application Jan. 3, 1991, Ser. No. 638,172
Int. Cl.[5] A61K *31/555*
U.S. Cl. 514—410 6 Claims

1. A pharmaceutical composition suitable for effecting the destruction or impairment of undesired target biological substrates in a photodynamic protocol, which composition comprises the compound of formula 1 or 2:



(1)

-continued



(2)

wherein

M is a non-paramagnetic metal selected from Mg^{+2}, Sn^{+2}, and Zn^{+2}, or represents 2 H^+ each H^+ bonded to one of the N atoms connected by the solid lines;

R^1 is a saturated or unsaturated hydrocarbyl residue of 8–25 C;

each R^2 is independently selected from the group consisting of vinyl, ethyl, acetyl and 1hydroxyethyl, and

X is $COOR^3$, wherein R^3 is alkyl (1–4 C);

said compound of formula (1) or (2) being in an amount effective to photosensitize said biological substrates to the resultant of irradiation absorbed by the compound of formula (1) or (2);

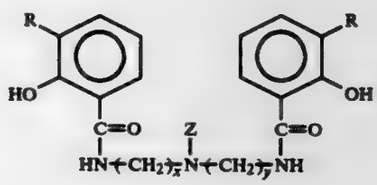
in admixture with a suitable pharmaceutical excipient wherein said pharmaceutical excipient includes a solubilizing amount of detergent or comprises a liposome carrier.

5,173,505
ANTI-NEOPLASTIC, ANTI-VIRAL AND RIBONUCLEOTIDE REDUCTASE ACTIVITY AFFECTING PHARMACEUTICAL COMPOSITIONS AND METHODS OF TREATMENT

Raymond J. Bergeron, Gainesville, Fla., assignor to University of Florida, Gainesville, Fla.

Division of Ser. No. 313,734, Feb. 22, 1989, Pat. No. 5,128,353, which is a continuation-in-part of Ser. No. 746,672, Jun. 20, 1985, abandoned. This application Jan. 25, 1991, Ser. No. 645,644
Int. Cl.[5] A01N *43/36, 43/38, 43/76*; A61K *31/40*
U.S. Cl. 514—408 2 Claims

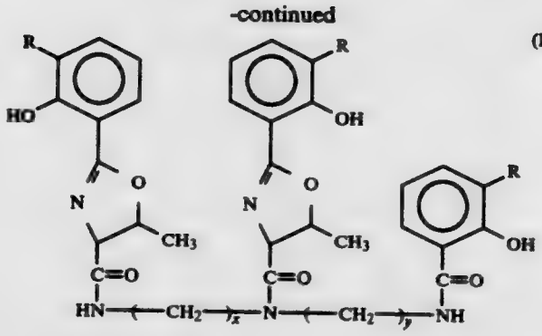
1. A pharmaceutical composition in unit dosage form adapted for administration to a human or non-human animal in need thereof comprising a) an antineoplastic effective amount of a compound of the formula:



(I)

or

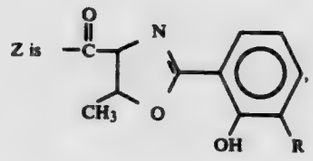
-continued



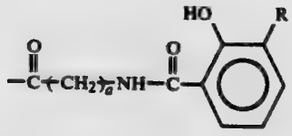
(II)

Wherein:

Z is



or



R is H or OH,

x is 3 or 4,

y is 3 or 4, and

a is 1, 2 or 3,

a pharmaceutically acceptable salt or complex and b) a pharmaceutically acceptable carrier therefor.

5,173,506

N-(MERCAPTOALKYL)UREAS AND CARBAMATES

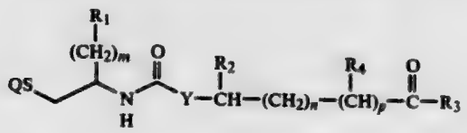
Bernard R. Neustadt, West Orange, and Alan Bronnenkant, Verona, both of N.J., assignors to Schering Corporation, Kenilworth, N.J.

Filed Aug. 16, 1990, Ser. No. 568,569

Int. Cl.[5] **C07C** *327/00;* **A61K** *31/21, 31/445;* **C07D** *207/04*

U.S. Cl. 514—513 **11 Claims**

1. A compound having the structural formula



wherein

Q is hydrogen or R_9CO—;

Y is —O—, —S— or —NR_8—;

R_1 is lower alkyl, cyclolower alkyl or aryl;

R_2 and R_8 are independently hydrogen; lower alkyl; aryl; cyclolower alkyl; or lower alkyl substituted with hydroxy, lower alkoxy, mercapto, lower alkylthio or aryl;

R_3 is —OR_5 or —NR_5R_6;

R_4 is —$(CH_2)_qR_7$; or R_2 and R_4 and the carbons to which they are attached complete a 5-, 6- or 7-membered carbocyclic ring;

R_5 and R_6 are independently selected from the group consisting of hydrogen, lower alkyl, hydroxy lower alkyl, lower alkoxy lower alkyl and aryl lower alkyl, or R_5 and R_6 together with the nitrogen to which they are attached form a 5-, 6- or 7-membered ring;

R_7 is hydrogen, hydroxy, lower alkoxy, lower alkanoyloxy, mercapto, lower alkylthio or aryl;

R_9 is hydrogen, lower alkyl or aryl;

m is 1 or 2;

n is 0, 1 or 2;

p is 0 or 1; and

q is 0, 1 or 2;

or a pharmaceutically acceptable salt thereof.

5,173,507

PROSTAGLANDIN COMBINATIONS IN GLAUCOMA THERAPY

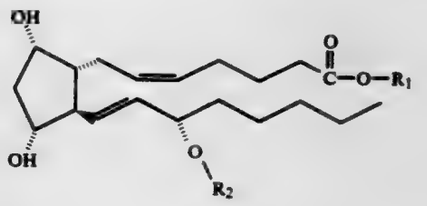
Louis M. DeSantis, Ft. Worth, and Verney L. Sallee, Southlake, both of Tex., assignors to Alcon Laboratories, Inc., Fort Worth, Tex.

Continuation of Ser. No. 686,101, Apr. 16, 1991, abandoned, which is a continuation-in-part of Ser. No. 422,925, Oct. 17, 1989, abandoned, which is a continuation of Ser. No. 220,204, Jul. 18, 1988, abandoned. This application Feb. 4, 1992, Ser. No. 832,662

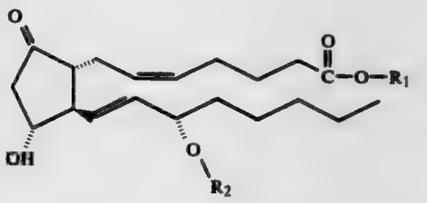
Int. Cl.[5] **A61K** *31/215, 31/19, 31/557*

U.S. Cl. 514—530 **3 Claims**

1. A method of treating glaucoma and ocular hypertension which comprises topically administering to an affected eye a pharmaceutical composition comprising a combination of a compound of formula (I) and a compound of formula (II):



(I)



(II)

wherein:

R_1=hydrogen, or a pharmaceutically acceptable salt or ester moiety; and

R_2=hydrogen, or a pharmaceutically acceptable ester moiety;

wherein the concentration of a compound of formula (I) is in the range of 0.001 to 0.002 wt % and the concentration of a compound of formula (II) is in the range of 0.0001 to 0.0002 wt %; and wherein the molar ratio of (I):(II) is in the range of 4:1 to 20:1.

PHARMACEUTICAL COMPOSITIONS ACTIVE ON THE CARDIOVASCULAR SYSTEM, CONTAINING 3-METHYLTHIOPROPIONYL L-CARNITINE

Claudio Cavazza, Rome, Italy, assignor to Sigma-Tau Industrie Farmaceutiche Riunite S.p.A., Rome, Italy

Filed Mar. 14, 1991, Ser. No. 669,573

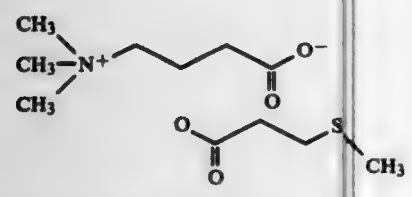
Claims priority, application Italy, Mar. 15, 1990, 47759 A/90

Int. Cl.[5] **A61K** *31/225*

U.S. Cl. 514—547 **5 Claims**

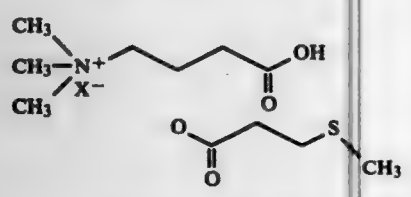
1. A process for the treatment of myocardial anoxia, cardiac ischaemia, arrhythmias and congestive heart failure comprising administering to a patient in need of such treatment a

pharmacologically effective amount of a pharmaceutical composition comprising a compound selected from the group consisting of the inner salt of 3-methylthiopropionyl L-carnitine (I)



(I)

and salts of 3-methylthiopropionyl L-carnitine produced by salification with a pharmacologically acceptable acid (I')



(I')

wherein X^- is the anion of said pharmacologically acceptable acid.

5,173,509

SURAMIN AND ACTIVE ANALOGUES THEREOF IN THE TREATMENT OF HYPERCALCEMIA

McClellan M. Walther, Gaithersburg, Md.; Renato V. LaRocca, Sterling, Va.; Charles E. Myers, Bethesda, Md.; Cy A. Stein, North Potomac, Md., and W. Marston Linehan, Rockville, Md., assignors to The United States of America as represented by the Department of Health and Human Services, Washington, D.C.

Filed Mar. 29, 1990, Ser. No. 500,913
Int. Cl.[5] A61K *31/17*
U.S. Cl. 514—597 3 Claims

1. A method for the treatment of hypercalcemia in a patient in need of such treatment, the method comprising:

administering by injection t the patient an effective amount of suramin, or a pharmaceutically acceptable salt thereof, for lowering the patient's plasma calcium level.

5,173,510

SIMPLIFIED THIOESTER AND ISOSTERE ANALOGS OF OLEOYL COENZYME A AS HYPOCHOLESTEROLEMIC AGENTS

Jonathan D. Bloom, Hartsdale, and Minu D. Dutia, West Nyack, both of N.Y., assignors to American Cyanamid Company, Stamford, Conn.

Division of Ser. No. 501,451, Mar. 29, 1990, Pat. No. 5,053,426. This application Jul. 3, 1991, Ser. No. 725,856
Int. Cl.[5] A61K *31/16*; C07C *233/20*

METHANOL SYNTHESIS

Alwyn Pinto, 18 Cambridge Road, Linthorpe, Middlesbrough, Cleveland, England

Continuation-in-part of Ser. No. 494,491, May 13, 1983, abandoned, which is a continuation of Ser. No. 296,243, Aug. 24, 1981, abandoned. This application Mar. 13, 1991, Ser. No. 668,925

Claims priority, application United Kingdom, Sep. 4, 1980, 8028568; Jan. 22, 1981, 8101930

Int. Cl.[5] C07C *27/06*

U.S. Cl. 518—704 20 Claims

1. A process for the manufacture of methanol by the reaction of carbon monoxide and hydrogen comprising:

a) purifying a starting gas containing carbon monoxide but deficient in hydrogen by a process including a carbon dioxide removal step,

b) adding a hydrogen-rich gas to the starting gas before said carbon dioxide removal step,

c) after said carbon dioxide removal step, feeding said mixture of the starting gas and said hydrogen-rich gas as make-up gas to a synthesis loop and therein mixing said make-up gas with recycle gas to form synthesis gas,

d) subjecting said synthesis gas to a catalytic methanol synthesis step with incomplete conversion, thus producing reacted gas containing methanol and unreacted gas,

e) separating methanol from said unreacted gas, and recycling at least part of said unreacted gas as said recycle gas,

f) taking part of the unreacted gas, before or after addition of the make-up gas thereto, from said synthesis loop, and

g) subjecting said unreacted gas taken from the loop to a catalytic shift reaction with steam, to convert carbon monoxide to carbon dioxide and hydrogen thus producing said hydrogen-rich gas.

HEAT DISTORTION RESISTANT, EXPANDABLE STYRENE POLYMERS HAVING A HIGH CAPACITY OF EXPANSION

Klaus Hahn, Kirchheim; Uwe Gahr, Grosnstadt; Hans Hintz, Ludwigshafen, and Dietmar Wittenberg, Mannheim, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Continuation of Ser. No. 585,901, Sep. 21, 1990, abandoned. This application Nov. 7, 1991, Ser. No. 789,454

Claims priority, application Fed. Rep. of Germany, Sep. 23, 1989, 3931862

Int. Cl.[5] C08J *9/16*

U.S. Cl. 521—59 5 Claims

1. An expandable styrene polymer containing

a) from 80 to 99% by weight of polymerized styrene,

b) from 1 to 20% by weight of a styrene-soluble polymer having a softening point above 140° C., the polymer being selected from the group consisting of poly-1,4-phenylene sulfide and a styrene-maleic acid (anhydride) copolymer containing from 10 to 40% by weight of maleic acid (anhydride),

c) from 3 to 10% by weight, based on the sum of a) and b), of a C_3- to C_6-hydrocarbon as blowing agent, and, if desired,

d) conventional additives in effective amounts, the mixtured components a) and b) having a melt flow index MFI 200/5 of from 15 to 30.

5,173,515

FIRE RETARDANT FOAMS COMPRISING EXPANDABLE GRAPHITE, AMINE SALTS AND PHOSPHOROUS POLYOLS

Wulf von Bonin, Odenthal, and Dietmar Schlipol, Cologne, both of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed May 10, 1990, Ser. No. 521,789

Claims priority, application Fed. Rep. of Germany, May 30, 1989, 3917518

Int. Cl.[5] C08G *18/28*

U.S. Cl. 521—103 12 Claims

1. A fire retardant element comprising a foam containing expandable graphite, one or more phosphorus-containing polyols, and one or more amine salts wherein the compounds are present in the following amounts; 2 to 30% by weight of phosphorus-containing polyols, and 2 to 30% by weight of amine salts, the total amounts of said polyols and amine salts comprising not more than 50% by weight of the total weight of the fire retardant element.

5,173,516

CYCLOALIPHATIC DIAMINES AS ADDITIVES IN HIGH WATER, HIGH RESILIENCY POLYURETHANE FOAMS

Menas S. Vratsanos, Breinigsville, Pa., assignor to Air Products and Chemicals, Inc., Allentown, Pa.

Filed Mar. 26, 1990, Ser. No. 499,116

Int. Cl.[5] C08G *18/14*

U.S. Cl. 521—115 19 Claims

1. In a high resiliency foam composition comprising polyisocyanate, polyol, cycloaliphatic diamine, silicon surfactant, water and catalyst, the improvement which comprises 0.25 to 10 parts cycloaliphatic diamine and a catalyst composition consisting essentially of 0.05 to 0.3 parts gelling catalyst and 0.075 to 0.5 parts acid-blocked blowing catalyst, per 100 parts polyol, the blowing catalyst being present at a higher level than the gelling catalyst.

5,173,517

RIGID POLYURETHANE FOAM AND HEAT INSULATOR OBTAINED THEREFROM

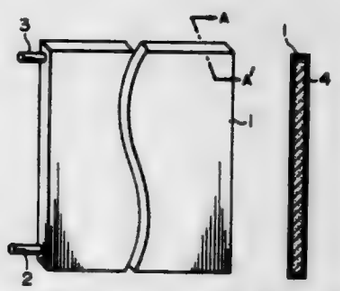
Kazuyoshi Kuroishi; Reishi Naka, and Isao Kobayashi, all of Tochigi, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Dec. 19, 1990, Ser. No. 630,186

Claims priority, application Japan, Sep. 4, 1989, 1-229087

Int. Cl.[5] C08G *18/00*

U.S. Cl. 521—166 26 Claims



1. A rigid polyurethane foam produced by reacting a polyol component with an isocyanate component using only water as a blowing agent, said polyol component being a mixed polyol composition consisting of

(a) 30 to 55% by weight of a polyether polyol obtained by adding ethylene oxide and propylene oxide to an aromatic amine selected from the group consisting of tolylenediamine, phenylenediamine, xylylenediamine and naphthalenediamine,

(b) 10 to 20% by weight of a polyether polyol obtained by adding propylene oxide to an alcoholic amine selected

from the group consisting of triethanolamine, diethanolamine and monoethanolamine,

(c) 5 to 15% by weight of a polyether polyol obtained by adding propylene oxide to sucrose,

(d) 10 to 35% by weight of a polyether polyol obtained by adding propylene oxide to a tetrafunctional polyol selected from the group consisting of methyl glucoside and pentaerythritol,

(e) 0 to 15% by weight of a polyester polyol obtained by condensing diethylene glycol and dipropylene glycol with a polycarboxylic acid or an anhydride thereof selected from the group consisting of phthalic anhydride, phthalic acid, adipic acid, succinic acid, succinic anhydride, maleic acid and maleic anhydride, and

(f) 0 to 25% by weight of a polyether polyol obtained by adding ethylene oxide and propylene oxide to an aliphatic amine selected from the group consisting of ethylenediamine, diaminopropane, diaminobutane, tetramethylenediamine, pentamethylenediamine and hexamethylenediamine.

5,173,518

PREPARATION OF CELLULAR POLYURETHANE ELASTOMERS USING POLYETHER CARBONATE DIOLS AS A STARTING COMPONENT

Kaspar Bott, Mannheim; Horst King, Lemfoerde; Claudia Spang, Frankenthal; Roland Minges, Gruenstadt, and Wolfgang Strachle, Heidelberg, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Jan. 6, 1992, Ser. No. 817,189

Claims priority, application Fed. Rep. of Germany, Jan. 25, 1991, 4102174

Int. Cl.[5] C08G *18/14*

U.S. Cl. 521—172 10 Claims

1. A process for the preparation of a cellular polyurethane elastomer by reacting

a) an organic and/or modified organic polyisocyanate with

b) at least one relatively high-molecular-weight polyhydroxyl compound and, if desired,

c) a low-molecular-weight chain extender and/or crosslinking agent,

in the presence of

d) a blowing agent,

e) a catalyst and

f) optionally additives and/or assistants,

wherein the relatively high-molecular-weight polyhydroxyl compound (b) is a polyether polycarbonate diol prepared by polycondensing

b1) a polyoxytetramethylene glycol having a mean molecular weight Mn (number average) of from 150 to 500 or

b2) a mixture comprising

b2i) at least 10 mol-% of the polyoxytetramethylene glycol (b1) and

b2ii) less than 90 mol-% of at least one polyoxyalkylene diol, other than (b1), comprising an alkylene oxide having 2 to 4 carbon atoms in the alkylene radical, at least one linear or branched alkanediol having 2 to 14 carbon atoms or at least one cyclic alkanediol having 3 to 15 carbon atoms or a mixture of at least two of said diols (b2ii)

with

b3) phosgene, diphenyl carbonate or a dialkyl carbonate containing C_1- to C_4-alkyl groups.

5,173,519

CONDUCTIVE METAL-FILLED COMPOSITES VIA DEVELOPING AGENTS

Paul Y. Y. Moy, Des Plaines; William J. E. Parr; Dieter Frank, both of Naperville, all of Ill., and Ronald Hutton, Faversham, England, assignors to Akzo nv, Arnhem, Netherlands

PCT No. PCT/US89/02498, § 371 Date Jan. 7, 1991, § 102(e) Date Jan. 7, 1991, PCT Pub. No. WO89/12306, PCT Pub. Date Dec. 14, 1989

PCT Filed Jun. 7, 1989, Ser. No. 613,840

The portion of the term of this patent subsequent to Oct. 9, 2007, has been disclaimed.

Int. Cl.[5] G21F *1/10*; G21K *1/10*

U.S. Cl. 523—137 12 Claims

1. A method of forming a conductive metal-filled composite, comprising

a. an intermingling step of intermingling at least 2 vol. % of oxide-covered copper or nickel metal particles in an engineering plastic;

b. a contacting step of contacting the metal particles with an effective amount of a developing agent selected from the group of amine or ammonium compounds having at least one alkyl, alkenyl or acyl group of from 8 to 20 carbon atoms and having at least one further group carrying a coordinative functional substituent, the amine or ammonium nitrogen atom and the functional substituent being separated by from two to six other atoms;

c. a heating step of subjecting the metal particles and the developing agent in the substantial absence of oxygen to improve the conductivity of the metal-filled substrate.

5,173,520

COLORANT MATERIAL WITH A POLYMERIZED COATING

Walter J. Carmody, Port Jervis, N.Y., assignor to Dow Corning Corporation, Midland, Mich.

Filed Oct. 7, 1991, Ser. No. 772,177

Int. Cl.[5] C08K *5/54*

U.S. Cl. 523—205 7 Claims

1. A dispersion comprising a mixture of a volatile silicone fluid selected from the group consisting of octamethylcyclotetrasiloxane and decamethylcyclopentasiloxane, and a coated colorant material, the coated colorant material being a colorant material having polymerized on its surface at least one polyunsaturated methacrylate monomer in the form of a coating of from about 0.25–2.0 percent by weight based on the weight of the colorant material.

5,173,521

ABSORBENT FIBROUS STRUCTURE AND PRODUCING METHOD THEREOF

Yoshiaki Ishino, Shizuoka, Japan, assignor to Mishima Paper Co., Ltd., Fuji, Japan

Filed Jun. 14, 1991, Ser. No. 715,199

Claims priority, application Japan, Jun. 19, 1990, 2-160295

Int. Cl.[5] C08J *3/07*, *5/18*

U.S. Cl. 524—45 10 Claims

1. An absorbent fibrous structure comprising salts of fibrous carboxymethyl cellulose, wherein:

polyelectrolyte complexes are formed in at least a part of said salts of fibrous carboxymethyl cellulose by cationic water-soluble polymers, each of which comprises repeating units having at least one of primary, secondary, tertiary and quaternary nitrogen atoms and each of which does not substantially have functional groups for forming cross-linking other than said nitrogen atoms,

and said absorbent fibrous structure is formed as a shaped structure having water absorbency and wet-web strength.

AQUEOUS POLYMER EMULSIONS AND THEIR PREPARATION

Gerhard Auchter, Mannheim; Gerhard Nesbert, Battenbert, and Rolf Osterloh, Gruenstadt, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Continuation of Ser. No. 205,812, Jun. 13, 1988, abandoned, which is a continuation-in-part of Ser. No. 938,799, Dec. 8, 1986, abandoned. This application Feb. 20, 1990, Ser. No. 481,680
Claims priority, application Fed. Rep. of Germany, Dec. 7, 1985, 3543361
Int. Cl.[5] C08F 2/04
U.S. Cl. 524—461 1 Claim

1. A process for the preparation of an aqueous polymer emulsion, wherein the polymer components of said emulsion consist of

A) from 15 to 50% by weight of a polymer (A) of

I from 25 to 98.5% by weight of esters of acrylic acid or methacrylic acid with straight chain or branched monoalkanols of 1 to 20 carbon atoms or a mixture of these esters,

II from 0 to 60% by weight of a vinylaromatic,

III from 1.5 to 15% by weight of a copolymerizable olefinically unsaturated carboxylic acid or one of its anhydrides which contains not more than 10 carbon atoms and

IV not more than 30% by weight of mono(meth)acrylates of alkanediols and

B) from 50 to 85% by weight of a solution polymer (B) of I, II and IV, comprising the solution polymerization of component (A) or (B) in an organic solvent, followed by solution polymerization of the other component in the resulting polymerization solution, adding water and ammonia to the thus obtained solution and removing the organic solvent, by distillation, to a concentration of less than 5% by weight, based on the amount of dispersion.

5,173,524

CONDUCTIVE POLYSULFONE RESINE COMPOSITION AND HIGH-HEAT-RESISTANT, CONDUCTIVE SEMI-CONDUCTOR ARTICLE MOLDED FROM SAME

Toru Ueki, Yokohama; Masaji Yoshimura, Yokohama, Susumu Kishi, Funabashi, and Takashi Satoh, Yokohama, all of Japan, assignor to Mitsui Toatsu Chemicals, Incorporated, Tokyo, Japan

Filed Apr. 5, 1991, Ser. No. 680,735
Claims priority, application Japan, Apr. 13, 1990, 2-96498
Int. Cl.[5] C08K 3/04
U.S. Cl. 524—496 14 Claims

1. A conductive polysulfone resin composition comprising a mixture of (A) 100 parts by weight of a composition consisting essentially of from 5 to 95% by weight of an aromatic polysulfone resin and from 95 to 5% by weight of a polyphenylene sulfide resin and (B) from 3 to 40 parts by weight of conductive carbon selected from the group consisting of furnace black, channel black, lamp black, acetylene black, thermal black and mixtures thereof.

5,173,525

FLOORING COMPRISING POLYACRYLIC MATRIX CONTAINING FINELY DIVIDED FERRITE PARTICLES

Sergio De Servi, Carugo, and Angelo L. Spelta, Cassinpusterlengo, both of Italy, assignors to Enichem Elastomeri S.p.A., Palermo, Italy

Filed Feb. 26, 1990, Ser. No. 485,036
Claims priority, application Italy, Mar. 2, 1989, 19624 A/89
Int. Cl.[5] C08K 3/22
U.S. Cl. 524—431 2 Claims

1. A composite flooring material consisting essentially of a Europrene acryl elastomer; barium ferrite and a vulcanization accelerator agent comprising 50% of octadecyltrimethylammonium bromide.

5,173,526

AQUEOUS POLYURETHANE-VINYL POLYMER DISPERSIONS FOR COATING APPLICATIONS

Bheema R. Vijayendran, Emmaus; Richard Derby, Allentown, and Bruce A. Gruber, Emmaus, all of Pa., assignors to Air Products and Chemicals, Inc., Allentown, Pa.

Filed Apr. 26, 1991, Ser. No. 691,766
Int. Cl.[5] C08J 3/02; C08F 2/00
U.S. Cl. 524—457 24 Claims

1. In a method for making an aqueous polyurethane-vinyl polymer dispersion, the improvement which comprises

(a) forming a carboxy-containing, water-dispersible, isocyanate terminated polyurethane prepolymer,

(b) adding a vinyl monomer composition, which includes a polyethylenically unsaturated monomer, to the prepolymer to form a prepolymer/monomer mixture,

(c) adding a tertiary amine to the prepolymer/monomer mixture in an amount sufficient to render the prepolymer water dispersible,

(d) dispersing the prepolymer/monomer mixture in water,

(e) adding an oil soluble free radical initiator and a chain-extender to the aqueous dispersion, and

(f) polymerizing the vinyl monomer and completing chain extension of the prepolymer by heating the aqueous dispersion.

5,173,527

FAST CURE AND PRE-CURE RESISTANT CROSS-LINKED PHENOL-FORMALDEHYDE ADHESIVES AND METHODS OF MAKING SAME

Louis R. Calve, Aylmer, Canada, assignor to Forintek Canada Corp., Ottawa, Canada

Filed May 15, 1991, Ser. No. 700,281
Int. Cl.[5] C08K 5/13; C08L 97/00
U.S. Cl. 524—74 5 Claims

1. A method of producing a fast curing cross-linked thermo-

setting adhesive having a pH of from 3 to 11 and which is useful for binding lignocellulosic materials together, comprising the step of reacting at an elevated temperature binary phenol-formaldehyde consisting of high average weight phenol-formaldehyde and low average molecular weight phenol-formaldehyde, wherein the weight ratio on a dry weight basis of said high average weight phenol-formaldehyde to said low average weight phenol-formaldehyde is from 80:20 to 50:50, with a wood pulping waste lignin recovered from at least one of the sulphite, Kraft, organosolv and steam hydrolysed wood pulping processes, and wherein an ammonium salt selected from the group consisting of ammonium sulphate, ammonium p-toluenesulfonic acid and ammonium chloride is added to at least one of said lignin and said binary phenol-formaldehyde prior to reacting said lignin and said binary phenol-formaldehyde.

5,173,528

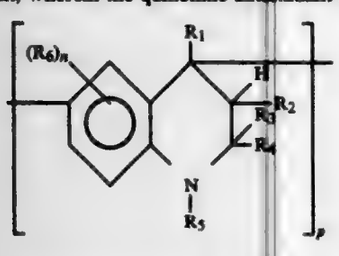
ELASTOMERIC THERMOPLASTIC COPOLYESTERS ENDOWED WITH HIGH RHEOLOGICAL AND MECHANICAL PROPERTIES AND AN IMPROVED AGEING RESISTANCE

Antonio Chiolle; Gian P. Maltoni, both of Ferrara; Romolo Stella, Rovigo, and Alfio Vecchi, Ferrara, all of Italy, assignors to Ausimont S.R.L., Milan, Italy

Filed Jul. 5, 1990, Ser. No. 548,561
Claims priority, application Italy, Jul. 5, 1989, 21094 A/89
Int. Cl.[5] C08K 5/34, 5/29
U.S. Cl. 524—87 **15 Claims**

1. Elastomeric thermoplastic copolyesters endowed with high rheological and mechanical properties and an improved aging resistance, containing an effective amount of a stabilizing system constituted by a synergistic mixture of a quinolinic antioxidant, wherein the quinolinic antioxidant has formula:

(I)



wherein:

R_1, R_3, R_4 and R_5 may be, equal or different from each other, a hydrogen atom or an alkyl radical containing from 1 to 4 carbon atoms;

R_2 may be hydrogen, an alkyl radical containing from 1 to 4 carbon atoms or a phenyl radical;

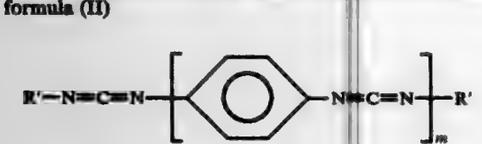
R_6 may be hydrogen, an alkyl radical containing from 1 to 4 carbon atoms, an aromatic radical containing from 6 to 18 carbon atoms, a cycloaliphatic radical containing from 3 to 6 carbon atoms, a halogen or a hydroxylic group;

n may be zero or an integer from 1 and 4, and

p is an integer between 2 and 20

and of a polycarbodiimide, wherein the polycarbodiimide has formula (II)

(II)



wherein:

R' is phenyl, C_1–C_6 alkyl-phenyl, C_1–C_6 alkoxyphenyl, phenyl substituted by halogens, or cyclohexyl; and

m is an integer from 10 to 150.

5,173,529

ADHESIVE ORGANOPOLYSILOXANE COMPOSITION

Hironao Fujiki, Takasaki, and Toshiaki Takahashi, Annaka, both of Japan, assignors to Shin-Etsu Chemical Co., Ltd., Tokyo, Japan

Filed May 17, 1991, Ser. No. 702,061
Claims priority, application Japan, May 30, 1990, 2-138607
Int. Cl.[5] C08K 5/54
U.S. Cl. 524—188 **9 Claims**

1. An adhesive organopolysiloxane composition which comprises, as a mixture:

(a) 100 parts by weight of a diorganopolysiloxane having, in a molecule, at least two alkenyl groups bonded to the silicon atoms;

(b) an organohydrogenpolysiloxane having, in a molecule, at least three hydrogen atoms directly bonded to the silicon atoms in such an amount that from 0.5 to 10 moles of the silicon-bonded hydrogen atoms are provided per mole of the alkenyl groups in the component (a);

(c) from 0.01 to 10 parts by weight of -aminopropionyl-containing compound represented by the general formula

$$X—NR—CH_2—CHR—CO—Y—X,$$

in which each R is, independently from the other, a hydrogen atom or a monovalent hydrocarbon group having 1 to 10 carbon atoms, Y is an oxygen atom or agroup of the formula NR and each X is, independently from the other, a monovalent hydrocarbon group having 1 to 10 carbon atoms or an organosilyl-substituted monovalent hydrocarbon group of the formula Z_3SiQ, Z being, each independently from the others, a monovalent hydrocarbon group or an alkoxy group having 1 to 8 carbon atoms and Q being a divalent hydrocarbon group, containing one or a plurality of methylene groups —CH_2— one of which may be replaced with an imino group —NH— with the proviso that at least either one of the two X groups is an organosily-substituted monovalent hydrocarbon group of the formula Z_3SiQ of which at least one of the three Z groups is an alkoxy group or an alkoxy-substituted alkoxy group; and

(d) a compound of a platinum-group metal in a catalytic amount.

5,173,530

STABLE DISPERSIONS OF POLYOLS CONTAINING POLYVINYLCHLORIDE

Piero Andreola, Venezia; Sauro Gaiba, Mestre-Venezia; Eugenio Bianchin, Treviso, and Carlo Mulas, Mogliano Veneto, all of Italy, assignors to Montedipe S.p.A., Italy

Continuation of Ser. No. 489,866, Mar. 5, 1990, abandoned, which is a continuation of Ser. No. 193,599, May 13, 1988, abandoned. This application May 30, 1991, Ser. No. 707,316
Claims priority, application Italy, May 15, 1987, 41005 A/87
Int. Cl.[5] C08K 5/17, 5/10, 5/06
U.S. Cl. 524—377 **17 Claims**

1. Homogenous, stable dispersions of polyol selected from the group consisting of polyol-polyethers containing ester groups, polyol-polyethers containing amino groups, polyol-polyethers containing end amino groups, and polyol-polyesters comprising from 1 to 50% by weight of polyvinylchloride and having a viscosity less than 10,000 mPa×sec wherein

a) the polyvinylchloride is previously polymerized;

b) the polyvinylchloride comprises particles having size within the range of from 1 to 10 micrometers; and

c) the polyvinylchloride particles are soaked by the same polyol;

whereby soaking of the polyvinylchloride particles as well as size reduction thereof being realized by dispersing polyvinylchloride into the polyol through mechanical stirring and then milling the thus obtained dispersion in a milling machine.

5,173,531

ANTISTATIC TEXTILE COMPOSITIONS AND SOL/GEL/POLYMER COMPOSITIONS

Charles L. Kissel, Anaheim, Calif., assignor to Union Oil Company of California, Los Angeles, Calif.

Division of Ser. No. 345,029, Apr. 28, 1989, Pat. No. 5,004,563, which is a continuation-in-part of Ser. No. 305,451, Feb. 1, 1989, Pat. No. 5,004,562. This application Feb. 26, 1991, Ser. No. 661,510

The portion of the term of this patent subsequent to Apr. 2, 2008, has been disclaimed.

Int. Cl.[5] C08K 3/26, 3/28, 3/38

U.S. Cl. 524—403 19 Claims

1. A dried compounded polymer/salt product composition comprising colloidal salt particulates and a polymer derived from a latex suffused in a textile material and prepared by the method comprising the step of contacting a textile material with a product admixture composition comprising (1) a sol or gel composition containing (a) a salt in the form of anions, cations and colloidal salt particulates and (b) a nonaqueous solvent admixed with (2) a latex of a polymer.

5,173,532

ANTI-FRICTION AND WEAR-RESISTANT POLYACETAL MOLDING COMPOSITIONS, AND MOLDED SLIDING MEMBERS FORMED THEREOF

Toshihiko Endo; Osamu Kanoto; Katsunori Takayama, and Nobuyuki Matsunaga, all of Shizuoka, Japan, assignors to Polyplastics Co., Ltd., Osaka, Japan

Continuation of Ser. No. 587,951, Sep. 25, 1990, abandoned. This application Mar. 10, 1992, Ser. No. 847,885

Int. Cl.[5] C08K 3/26

U.S. Cl. 524—425 6 Claims

1. A polyacetal resin molding composition exhibiting anti-friction and abrasion-resistance properties consisting essentially of:

(A) 100 parts by weight of a polyacetal base resin;

(B) between 0.5 to 40 parts by weight of a branched or cross-linked graft copolymer which is at least one copolymer which is the graft-reaction product of polyethylene and polymethyl methacrylate polymers, polyethylene and acrylonitrile/styrene polymers, and ethylene/glycidyl methacrylate and polymethyl methacrylate;

(C) between 0.1 to 20 parts by weight of a lubricant; and

(D) between 0.5 to 30 parts by weight of an inorganic rigid powder selected from the group consisting of calcium carbonate, talc, silica, clay, and mica, wherein said powder has a mean particle diameter of 50 μm or less, and wherein at least 95% of the particles have a particle diameter of 100 μm or less.

5,173,533

DISPERSION OF REACTIVE POLYMER PARTICLES

Motoshi Yabuta; Yasushi Hiramatsu, and Chikara Kawamura, all of Hiratsuka, Japan, assignors to Kansai Paint Co., Ltd., Hyogo, Japan

Filed Jul. 26, 1988, Ser. No. 235,573

Claims priority, application Japan, Jul. 28, 1987, 62-186737

Int. Cl.[5] C08J 3/09, 3/11; C08F 6/24

U.S. Cl. 524—523 14 Claims

1. A dispersion of reactive polymer particles obtained by polymerization of a monomer in an organic liquid which dissolves the monomer but does not dissolve a polymer formed from the monomer, in the presence of a dispersion stabilizer composed of a high molecular weight polymer; wherein

(i) said dispersion stabilizer is a high molecular weight polymer which is obtained by polymerization of an ethylenically unsaturated monomer and soluble in the above organic liquid and which contains a chemically reactive group (A);

(ii) said polymer particles are particles of a high molecular weight polymer which are obtained by polymerization of an ethylenically unsaturated monomer and contain a complementary chemically reactive group (B) capable of mutually reacting with the chemically reactive group (A);

(iii) the chemically reactive group (A) and the chemically reactive group (B) are present stably in the dispersion;

(iv) the difference of solubility parameter (SP value) between the polymer particles and the dispersion stabilizer is at least 0.2;

(v) the organic liquid has a solubility parameter (SP value) of not more than 9.3;

(vi) the dispersion stabilizer has a solubility parameter (SP value) of not more than 9.3;

(vii) the polymer particles have a solubility parameter (SP value) of not less than 9;

(viii) the difference of solubility parameter (SP value) between the polymer particles and the dispersion stabilizer is at least 0.2;

(ix) the dispersion stabilizer has on the average 5 to 50 chemically reactive groups (A) in one molecule thereof;

(x) the polymer particles have the chemically reactive group (B) in an amount 0.3 to 3 times more than the amount of the chemically reactive group (A) in the dispersion stabilizer and

(xi) reactive group (A) is only present in the dispersion stabilizer and reactive group (B) is only present in the polymer particles.

5,173,534

EMULSION AND LATEX PAINT CONTAINING MULTIPURPOSE BINDER

John Biale, Anaheim, Calif., assignor to Rohm and Haas Company, Philadelphia, Pa.

Continuation of Ser. No. 303,805, Jan. 30, 1989. This application Jun. 19, 1991, Ser. No. 722,360

Int. Cl.[5] C08L 33/00

U.S. Cl. 524—555 15 Claims

1. A latex paint comprising:

(a) a coalescing aid;

(b) a thickening aid;

(c) a dispersing aid;

(d) a defoamer;

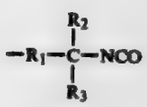
(e) a biocide;

(f) a pigment; and

(g) an emulsion comprising:

(i) water; and

(ii) a substantially water insoluble, polymeric binder, the binder comprising at least one pendant group having the formula



wherein

R_1 is a divalent organic radical;

R_2 and R_3 are each independently selected from the group consisting of monovalent alkyl radicals containing up to about seven carbon atoms;

the pendant group comprises about 0.1 to about two weight percent of the binder;

the latex paint has a solid content; and

the polymeric binder comprises 5 to about 25 weight percent of the solid content of the latex paint.

5,173,535
PLASTICS CONTAINING SUSTAINED RELEASE OF FUNCTIONAL MATERIALS
Eric S. Abrutyn, Middletown, N.Y., assignor to Dow Corning Corporation, Midland, Mich.
Filed Feb. 11, 1988, Ser. No. 154,910
Int. Cl.[5] C08G 63/48
U.S. Cl. 525—54.3 4 Claims

1. A plastic composition having a functional material suited for performing a specific function when said functional material is released from said plastic composition, which plastic composition comprises: a thermoplastic polymeric substrate selected from the group consisting of polyurethane, polyolefin, polyvinyl chloride, acrylic and cellulose, and a crosslinked polymer having said functional material trapped within its polymer lattice, the crosslinked polymer selected from the group consisting of a polymer of styrene and divinylbenzene and a polymer of di and triacrylate esters, said crosslinked polymer being present as discrete particles within said thermoplastic polymeric substrate.

5,173,536
IMPACT POLYMER BLEND
Harold K. Ficker, Wayne, N.J., assignor to Union Carbide Chemicals & Plastics Technology Corporation, Danbury, Conn.
Filed Dec. 11, 1990, Ser. No. 625,543
Int. Cl.[5] C08L 23/10, 53/00
U.S. Cl. 525—88 11 Claims

1. A non-crosslinked, melt blend consisting essentially of;

(a) an isotactic polypropylene matrix containing an ethylene/propylene copolymer dispersed phase, said combination having dual melting peaks, a first peak in the range of about 150° C. to about 165° C. attributable to the matrix, and a second peak in the range of about 123° C. to about 132° C. having at least about 2.2 calories per gram melting endotherm, attributable to the copolymer, component (a) being formed sequentially in situ and being present in the blend in an amount of about 60 to about 90 percent by weight based on the weight of the blend; and

(b) an ethylene/1-butene copolymer containing about 85 to about 90 percent by weight ethylene, having a density in the range of about 0.890 to about 0.908 gram per cubic centimeter; and having an Mw/Mn ratio of up to about 8, component (b) being present in the blend in an amount of about 10 to about 40 percent by weight based on the weight of the blend.

5,173,537
SELECTIVE HYDROGENATION OF CONJUGATED DIOLEFIN POLYMERS
Linda Rae Chamberlain, Richmond, and Carma J. Gibler, Houston, both of Tex., assignors to Shell Oil Company, Houston, Tex.
Filed Dec. 20, 1991, Ser. No. 811,219
Int. Cl.[5] C08F 8/04
U.S. Cl. 525—105 16 Claims

1. In a process for the hydrogenation of conjugated diolefin polymers which comprises:

(a) polymerizing or copolymerizing at least one conjugated diolefin with an organo-alkali metal polymerization initiator in a suitable solvent thereby creating a living polymer an alkali metal hydride,

(b) terminating the polymerization by the addition of H_2 prior to hydrogenation, and

(c) selectively hydrogenating the unsaturated double bonds in the conjugated diolefin units of said terminated polymer by contacting the polymer, in the absence of hydrocarbon lithium and alkoxy lithium compounds, with hydrogen in the presence of at least one bis(cyclopentadienyl)titanium compound of the formula:

wherein R_1 and $_2$ are the same or different and are selected from the group consisting of halogen groups, C_1–C_8 alkyl and alkoxy groups, C_6–C_8 aryloxy groups, aralkyl, cycloalkyl groups, silyl groups and carbonyl groups; the improvement which comprises treating the terminated polymer with a small but effective amount of a reagent which will react to reduce the amount of alkali metal hydride in an amount which will decrease the alkali metal hydride to titanium ratio in the terminated polymer to no less than 6:1 to boost catalyst activity and increase hydrogen conversion.

5,173,538
MOISTURE-CURING, POLYURETHANE HOT-MELT COMPOSITIONS
Heinz G. Glich, Bad Homburg, and Walter Rath, Oberursel, both of Fed. Rep. of Germany, assignors to Bostik, Inc., Middleton, Mass.
Filed Oct. 17, 1989, Ser. No. 422,932
Claims priority, application United Kingdom, Nov. 15, 1988, 8826702
The portion of the term of this patent subsequent to Mar. 12, 2008, has been disclaimed.

THERMOPLASTIC ELASTOMERS

Kaspar Bott, Mannheim; Wolfgang Streeble, Heidelberg, and Ulrich Abel, Waldsee, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Feb. 15, 1991, Ser. No. 655,818

Claims priority, application Fed. Rep. of Germany, Feb. 16, 1990, 4004881

Int. Cl.[5] C08L 69/00, 75/08; C08G 18/44, 18/48

U.S. Cl. 525—439 6 Claims

1. A thermoplastic elastomer selected from the group consisting of the thermoplastic polyurethanes, of the polyetheresters and of the polyetheramides which are derived from polyetherpolycarbonatediols as diol components, wherein the polyetherpolycarbonatediols are reaction products of phosgene, dialkyl carbonates having C_1–C_4-alkyl groups or cyclic carbonates having C_2–C_4-alkylene bridges or mixtures thereof with mixtures of

a_1) from 10 to 100 mol % of polyoxytetramethylenediol having a number average molecular weight $\overline{M}_n$ of from 150 to 242 and

a_2) from 0 to 90 mol % of polyoxyalkylenediols which differ from a_1) and have C_2–C_8-alkylene groups, aliphatic alkanediols of 2 to 14 carbon atoms, alicyclic alkanediols of 3 to 14 carbon atoms or alkylene oxides of 2 or 3 carbon atoms, or mixtures thereof.

EPOXY RESIN COMPOSITIONS

Hisashi Shimizu, Annaka; Kazutoshi Tomiyoshi, Takasaki; Hatsuji Shiraishi, and Toshio Shiobara, both of Annaka, all of Japan, assignors to Shin-Etsu Chemical Co., Ltd., Tokyo, Japan

Filed May 16, 1990, Ser. No. 523,814

Claims priority, application Japan, May 17, 1989, 1-121348

Int. Cl.[5] C08L 63/02, 63/04

U.S. Cl. 525—476 10 Claims

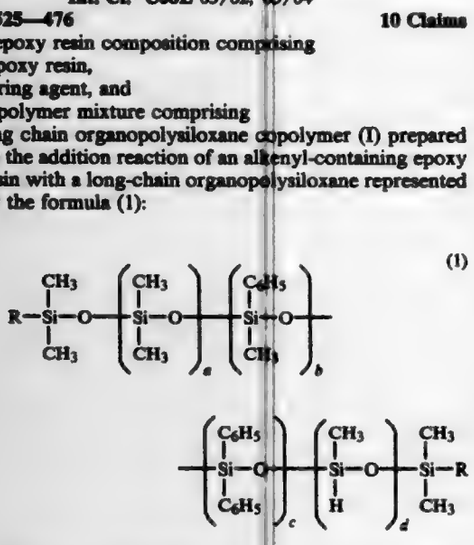
1. An epoxy resin composition comprising

a. an epoxy resin,

b. a curing agent, and

c. a copolymer mixture comprising

a long chain organopolysiloxane copolymer (I) prepared by the addition reaction of an alkenyl-containing epoxy resin with a long-chain organopolysiloxane represented by the formula (1):



(1)

wherein R is a hydrogen atom or a methyl group, a, b, c, and d are integers satisfying the relationships: $a \geqq 1$, $b \geqq 0$, $c \geqq 0$, $d \geqq 0$, and $b+c \geqq 1$, the amount of the phenyl group is 4 to 15 mole % based on the total amount of the methyl and phenyl groups, and the number of hydrogen atoms directly bonded to silicon atoms per molecule is at least 2 and containing 70 to 300 silicon atoms per molecule, and

a short-chain organopolysiloxane copolymer [II] prepared by the addition reaction of an alkenyl-containing epoxy resin with a short-chain organopolysiloxane represented by the formula (1) and containing 20 to 30 silicon atoms per molecule at a weight ratio of the copolymer [II] to the copolymer [I] of 0.3 to 0.6, wherein said epoxy resin recited by a is different from said copolymer mixture recited by c.

RESIN COMPOSITION FOR COMPOSITE MATERIAL

Shigetsugu Hayashi; Hisashi Tada, and Takashi Murata, all of Nagoya, Japan, assignors to Mitsubishi Rayon Co., Ltd., Tokyo, Japan

PCT No. PCT/JP88/01204, § 371 Date Jul. 18, 1989, § 102(e) Date Jul. 18, 1989, PCT Pub. No. WO89/05315, PCT Pub. Date Jun. 15, 1989

PCT Filed Nov. 29, 1988, Ser. No. 381,392

Claims priority, application Japan, Nov. 30, 1987, 62-302084; Dec. 15, 1987, 62-316750

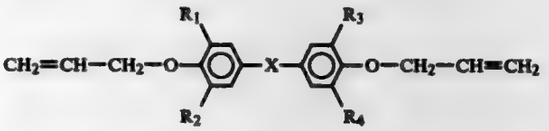
Int. Cl.[5] C08F 222/40, 216/12; C08G 8/10; C08L 61/10

U.S. Cl. 525—502 5 Claims

1. A resin composition for composites, which comprises the following two components (A) and (B) as essential components:

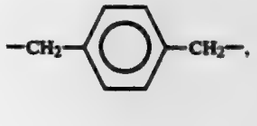
(A) a mixture of N,N'-diphenylmethanebismaleimide, N,N'-tolylenebismaleimide, and N,N'-trimethylhexamethylenebismaleimide; and

(B) an allylphenyl ether compound of the formula:

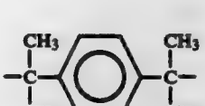


wherein X denotes a direct bond or the divalent radical —CH_2—,

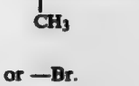
—O—, —S—, —SO_2—,



or



and R_1 through R_4 are the same or different in a molecule and each is —CH_3, —C_2H_5, —$CH(CH_3)_2$, —nC_3H_7, —nC_4H_9, —$C(CH_3)_3$,



—$CH_2CH(CH_3)_2$, or —Br.

NONLINEAR OPTICAL MATERIALS

John J. Kester, Colorado Springs, Colo., and Mark D. Newsham, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich.

Continuation-in-part of Ser. No. 441,783, Nov. 27, 1989, abandoned. This application Nov. 26, 1991, Ser. No. 800,345

Int. Cl.[5] C08G 59/20, 59/50; C02F 1/35

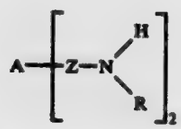
U.S. Cl. 525—504 17 Claims

1. A process for preparing a nonlinear optical composition

comprising applying an external field to the reaction product of:

(I) at least one compound containing an average of more than one epoxide group per molecule; and

(II) at least one curing agent for compound (A) whereby at least a portion of said curing agent (B) is represented by the formula:



or by the formula:

wherein A is a divalent electron-withdrawing group; Z is a conjugated electronic structure, R is independently a hydrogen, or an aliphatic, cycloaliphatic or aromatic hydrocarbon having from 1 to about 12 carbon atoms; n is 2 or 3; and X is a divalent or trivalent organic hydrocarbon, hetero-interrupted hydrocarbon, substituted hydrocarbon radical, or

with the proviso that there are no intervening methylene groups between A and Z, or between A and X; whereby the field applied to the reaction product is sufficient to induce a net orientation in moieties of the curing agent in the product.

5,173,547

COPOLYMERS CONTAINING PERFLUOROALKYLS

Jutta Röttger, Cologne; Wilfried Kortmann, deceased, late of Nachrodt-Wiblingwerde by Margot Kortmann, Bettina Kortmann, Axel Kortmann, heirs; Karl-Erwin Piejko, Bergisch-Gladbach, and Gerd F. Renner, Cologne, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

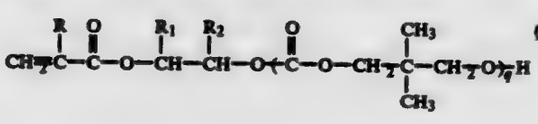
Filed Oct. 2, 1990, Ser. No. 592,033

Claims priority, application Fed. Rep. of Germany, Oct. 17, 1989, 3934543

Int. Cl.[5] C08F *14/18, 214/18, 283/00;* C08L *61/28*

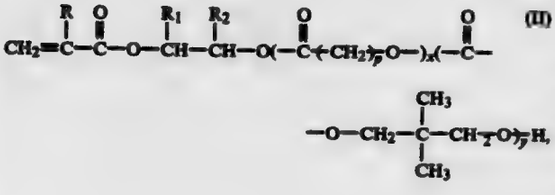
U.S. Cl. 525—518 8 Claims

1. Copolymers or graft copolymers of perfluoroalkylacrylates or methacrylates and esters of the formula



(I)

or



(II)

wherein—independently of one another

R, R_1 and R_2 denote hydrogen or methyl,

p denotes 2 to 6,

q denotes 2 to 200

and x and y denote 3 to 30.

5,173,548

EPOXY-MODIFIED HYDROCARBON RESINS

Naoki Yokoyama, Fukuoka, Japan, assignor to Nippon Steel Chemical Co., Ltd., Tokyo, Japan

PCT No. PCT/JP87/00974, § 371 Date Aug. 7, 1989, § 102(e) Date Aug. 7, 1989, PCT Pub. No. WO89/05321, PCT Pub. Date Jun. 15, 1989

PCT Filed Dec. 12, 1987, Ser. No. 399,546

Int. Cl.[5] C08G *59/04;* C08L *63/00*

U.S. Cl. 525—534 5 Claims

1. An epoxy-modified hydrocarbon resin prepared by epoxidizing at least 30 mole % of phenolic hydroxyl groups of a phenol-modified hydrocarbon resin obtained by the copolymerization of a coaltar fraction containing 40 to 70% by weight of aromatic olefins which mainly consist of indene, styrene and coumarone and at least one phenol selected from the group consisting of phenol and alkyl phenols.

5,173,549

PROCESS FOR SYNTHESIZING EPOXIDIZED POLYSULFIDES

David L. Booth, and James K. Stowell, both of Crystal Lake, Ill., assignors to Morton International, Inc., Chicago, Ill.

Continuation of Ser. No. 208,336, Jun. 17, 1988, abandoned. This application Jul. 5, 1990, Ser. No. 548,449

Int. Cl.[5] C08F *283/00, 283/06*

U.S. Cl. 525—537 20 Claims

1. A process for forming an epoxide capped polysulfide resin, comprising the steps of:

A. reacting at a controlled temperature a polysulfide resin having mercaptan terminal groups and at least one polysulfide linkage with an excess of an epihalohydrin, controlling the reaction temperature by the sequential addition of an alkali to form a product mixture comprising an epoxide capped polysulfide resin, water, and a halide salt; and

B. removing said water from said product mixture during said reacting step A;

wherein said process is carried out in the absence of a solvent capable of forming an inseparable azeotrope with materials selected from the group consisting of an epihalohydrin and a mixture of an epihalohydrin and water.

5,173,550

SYNTHESIS OF RANDOM STYRENE-ISOPRENE RUBBERS

Wen-Liang Hsu, Copley, and Adel F. Halasa, Bath, both of Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio

Filed Apr. 5, 1991, Ser. No. 680,868

Int. Cl.[5] C08F *4/48, 236/10*

U.S. Cl. 526—180 16 Claims

1. A process for preparing a random rubbery binary copolymer of styrene and isoprene having a medium vinyl microstructure which consists of (1) copolymerizing isoprene and styrene by solution polymerization in an organic solvent in the present of at least one organomonolithium compound and (b) dipiperidinomethane and (2) recovering the random rubbery binary copolymer of styrene and isoprene from the organic solvent.

5,173,551

FREE-RADICAL RETROGRADE PRECIPITATION-POLYMERIZATION PROCESS

Gerard T. Caneba, Houghton, Mich., assignor to Board of Control of Michigan Technological University, Houghton, Mich.

Filed Mar. 9, 1990, Ser. No. 491,288
Int. Cl.[5] C08F 2/14, 12/08
U.S. Cl. 526—208 17 Claims

1. A free radical precipitation polymerization method for producing a polymer, said method comprising the steps of:

(1) forming an admixture of reactants including predetermined amounts of:

(a) a monomer;

(b) a solvent; and

(c) a free-radical-forming agent;

(2) initiating a free-radical precipitation polymerization reaction to form a plurality of polymer radicals;

(3) precipitating a polymer from said polymer radicals;

(4) maintaining said admixture of reactants at a temperature above the lower critical solution temperature of said admixture; and

controlling the pressure and temperature of said admixture of reactants to control the rate of propagation of the polymer.

5,173,552

PROCESS FOR THE PRODUCTION OF THERMOFORMED ARTICLES BY POLYMERIZING COMPOSITIONS COMPRISING DIETHYLENE GLYCOL BIS (ALLYLCARBONATE)

Florenzo Renzi, Gorgonzola; Franco Rivetti, Schio, and Ugo Romano, Vimercate, all of Italy, assignors to Enichem Sintesi S.p.A., Palermo, Italy

Continuation of Ser. No. 202,865, Jun. 6, 1988, abandoned, which is a continuation of Ser. No. 835,843, Mar. 3, 1986, abandoned. This application Sep. 10, 1990, Ser. No. 581,208
Claims priority, application Italy, Mar. 29, 1985, 20156 A/85
Int. Cl.[5] C08F 4/32, 26/00; B29D 11/00
U.S. Cl. 526—230.5 22 Claims

1. A process for the preparation of a non-planar thermoformed optical article from a flat plate formed from a polymerizable liquid composition, said non-planar thermoformed optical article having improved resistance to curvature loss at elevated temperatures as compared to the same composition having a lower monomeric content and to returning to the shape of the flat plate, said process comprising:

(1) polymerizing a liquid composition in a mold capable of forming a flat plate, said liquid composition comprising;

(A) from 30 to 80% by weight of diethylene glycol bis (allylcarbonate) prepared by reaction between diallylcarbonate and diethylene glycol in a molar ratio to each other at least 6/1, wherein said diethylene glycol bis (allylcarbonate) is 85 to 90% by weight monomeric,

(B) from 10 to 40% by weight of the trishydroxyethylisocyanurate tris (allylcarbonate) resulting from the reaction between diallylcarbonate and tris-hydroxyethylisocyanurate in a molar ratio of from about 6/1 to about 12/1,

(C) from 10 to 40% by weight of vinyl acetate, wherein the monomers of (A), (B) and (C) are substantially the only monomers present in the liquid composition and from 1 to 5% by weight based on the total weight of components (A), (B), and (C) of at least one free radical polymerization initiator, at a temperature of from 30° to 120° C. to thereby form a flat plate of said polymerized composition;

(2) heating said flat plate to a temperature of at least the glass transition temperature of the polymerized composition; and

(3) heating said flat plate into said non-planar thermoformed optical article.

5,173,553

FLUOROELASTOMERS ENDOWED WITH IMPROVED PROCESSABILITY AND PROCESS FOR PREPARING THEM

Margherita Albano; Giulio Briatti, both of Milan; Vincenzo Arcella, and Enzo Giannetti, both of Novara, all of Italy, assignors to Ausimont S.r.l., Milan, Italy

Filed Jul. 9, 1990, Ser. No. 550,308
Claims priority, application Italy, Jul. 10, 1989, 41004 A/89
Int. Cl.[5] C08F 4/00
U.S. Cl. 526—238 4 Claims

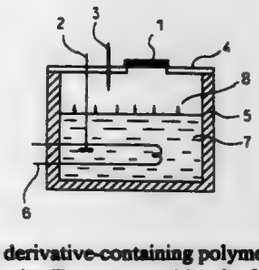
1. Elastomeric fluorinated copolymers comprising monomeric units derived from vinylidene fluoride and/or tetrafluoroethylene, optionally combined with monomeric units derived from hexafluoropropene and/or perfluoroalkylvinylethers, said copolymers comprising macromolecules containing at most one iodine or bromine atom per macromolecule at one end of the macromolecule chain, the other end of said chain being free from organic groups (fragments) derived from iodinated or brominated organic chain transfers, said copolymers further containing bromine atoms derived from bromine-containing monomeric units in the polymeric chain, in amounts of from 0.05 to 2% by weight with respect to the total weight of the monomeric units.

5,173,554

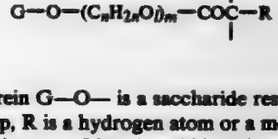
GLYCOSIDE DERIVATIVES, POLYMERS CONTAINING GLYCOSIDE DERIVATIVES, PROCESS FOR THEIR PREPARATION, AND USE OF SAID POLYMERS

Sadaya Kitazawa, Himeji; Masakazu Okumura, Kakogawa; Masaki Kojima, Himeji; Keisuke Kinomura, Kakogawa, and Toshiyuki Sakakibara, Kobe, all of Japan, assignors to Nippon Fine Chemical Co., Ltd., Osaka, Japan

Division of Ser. No. 499,459, Jun. 26, 1990. This application May 21, 1992, Ser. No. 886,358
Claims priority, application Japan, Oct. 27, 1988, 63-272168; Dec. 29, 1988, 63-332116
Int. Cl.[5] C08F 24/00; C07H 15/04
U.S. Cl. 526—238.2 8 Claims



1. A glycoside derivative-containing polymer having at least one of repeated units (I) represented by the formula



wherein G—O— is a saccharide residue having no protective group, R is a hydrogen atom or a methyl group, m is 1 or 2, n is an integer of 1 to 4, and l is an integer of 1 or more provided that $l \leqq n$.

HARDENABLE, FLUORINATED COPOLYMER PROCESS FOR ITS MANUFACTURE AND ITS APPLICATION IN VARNISHES AND PAINTS

Patrick Keppler, Ecully, and Jean-Luc Perilhon, Bernay, both of France, assignors to Atochem, Puteaux, France

Division of Ser. No. 693,132, Apr. 29, 1991, which is a division of Ser. No. 511,566, Apr. 20, 1990, Pat. No. 5,037,922. This application Jan. 8, 1992, Ser. No. 818,108

Claims priority, application France, Apr. 28, 1989, 89 05731

Int. Cl.[5] C08F *12/20*

U.S. Cl. 526—249 6 Claims

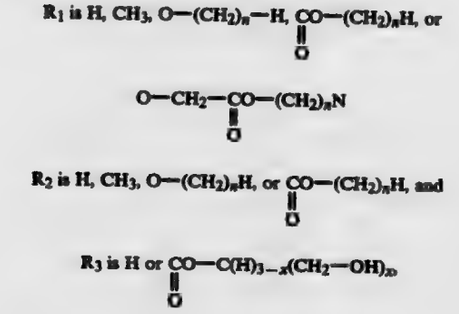
1. A process for manufacturing hardenable copolymer based on fluorinated monomer and acrylamide derivative, comprising polymerizing in solution:

(a) vinylidene fluoride,

(b) tetrafluoroethylene and/or chlorotrifluoroethylene and/or hexafluoropropylene, and

(c) an acrylamide derivative of the formula:

wherein R is H or CH_3,



with:

n representing a number from 0 to 8, and

x representing a number from 0 to 3.

5,173,556

FLUORINATED COPOLYMER AND BARRIER FILMS

Frank Mares, Whippany; Bryce C. Oxenrider, Florham Park, both of N.J.; David J. Long, Amherst, N.Y., and John P. Sibilia, Livingston, N.J., assignors to Allied-Signal Inc., Morristown, N.J.

Division of Ser. No. 616,487, Nov. 21, 1990, which is a continuation-in-part of Ser. No. 124,708, Nov. 20, 1987, abandoned. This application May 6, 1991, Ser. No. 696,414

The portion of the term of this patent subsequent to Jul. 16, 2008, has been disclaimed.

Int. Cl.[5] C08F *14/18*

U.S. Cl. 526—255 68 Claims

1. A copolymer consisting essentially of 40 to 60 percent of fluorinated units having the formula (R_1R_2C—CR_3F) wherein R_1, R_4 and R_3 are the same or different and are selected from H and F, and R_3 is Cl, when R_1 and R_2 are F; and correspondingly from 60 to 40 mole percent of vinyl units having the formula (H_2C—CHR_x) the above percentages based on the total moles of said vinyl units and fluorinated units in said copolymer, wherein R_x is a radical selected from —OH, —O_2-CR_y or combination thereof, and wherein R_y is a radical selected from —CH_3, —C_2H_5 or a combination thereof, wherein the fluorinated units and vinyl units are in a substantially alternating distribution as determined by 1H Fourier Transform Nuclear Magnetic Resonance Spectroscopy.

CROSSLINKABLE RUBBER COMPOSITION

Dane K. Parker, Massillon; Arthur H. Weinstein, Hudson, and Howard A. Colvin, Tallmadge, all of Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio

Division of Ser. No. 498,528, Mar. 26, 1990, Pat. No. 5,043,455, which is a continuation-in-part of Ser. No. 315,987, Feb. 27, 1989, Pat. No. 4,983,694. This application Jun. 17, 1991, Ser. No. 716,455

Int. Cl.[5] C08F *8/06*

U.S. Cl. 526—301 10 Claims

1. A rubber having pendant blocked isocyanate groups bound thereto: wherein said rubber is comprised of repeat units which are derived from at least one conjugated diene monomer and tetrahydro-N-[1-methyl-1-[3-(1-methylethenyl)-phenyl]ethyl]-2-oxo-1-H-pyrrolo-1-carboxamide monomer.

5,173,558

BASE CATALYZED PREPARATION OF POLYORGANOSILOXANES WITH CONTROLLED LOW LEVELS OF HYDROXY SUBSTITUTION

Sidney A. Hansen, Beaverton, and Charles E. Neal, Jr., Midland, both of Mich., assignors to Dow Corning Corporation, Midland, Mich.

Continuation-in-part of Ser. No. 702,485, May 20, 1991, abandoned. This application Jun. 22, 1992, Ser. No. 900,880

Int. Cl.[5] C08G *77/06*

U.S. Cl. 528—14 17 Claims

1. A process for preparing polyorganosiloxanes containing a controlled low-level of hydroxy substitution, the process comprising:

(A) contacting a mixture comprising low molecular weight polyorganosiloxanes of formula

and a source of triorganosilyl endblocker of formula

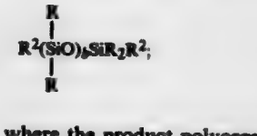
$R^1{}_3Si$—,

with a Lewis base catalyst; where each X is independently selected from a group consisting of cations of the Lewis base catalyst and hydroxyl radicals; each R is independently selected from a group consisting of monovalent hydrocarbon radicals of one to six carbon atoms and 1,1,1-trifluoropropyl radical; each R^1 is independently selected from a group consisting of hydrocarbon radicals of one to six carbon atoms and 1,1,1-trifluoropropyl radical; and a is an average value of one to about 2,000;

(B) controlling partial pressure of water in the process at a constant value within a range of about zero to 1,000 mmHg.

(C) controlling temperature of the contacted mixtures and Lewis base catalyst at a value within a range of 40° C. to 300° C.; and

(D) recovering product polyorganosiloxanes of formula



where the product polyorganosiloxanes have a potential value for hydroxy substitution within a range of about zero to 1,000 ppm; where R is as previously described and R_2 is selected from a group consisting of R_1 and hydroxyl; and b is an average value within a range of a to about 2,000.

REACTIVE SYSTEMS AND A PROCESS FOR THE PREPARATION OF POLYURETHANE PLASTICS

Hanns-Peter Müller, Bergisch-Gladbach; Otto Ganster, Odenthal-Hahnenberg, and Bruno Luckas, Leverkusen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Oct. 20, 1989, Ser. No. 429,264

Claims priority, application Fed. Rep. of Germany, Oct. 27, 1988, 3836598

Int. Cl.[5] C08G *18/00*

U.S. Cl. 528—44 11 Claims

1. A reactive system comprising

(a) a storable mixture of

(i) a polyisocyanate component comprising at least one organic polyisocyanate, and

(ii) an epoxide component comprising at least one organic epoxide, wherein said epoxide component is stabilized by heating in the presence of an alkylating agent,

(b) an isocyanate-reactive component comprising at least one organic compound containing at least two isocyanate-reactive groups in a quantity such that 0.1 to 0.9 isocyanate-reactive groups are present for every isocyanate group in component (a), wherein at least 10% by weight of component (b) comprises compounds having a molecular weight greater than about 2000, and

(c) optionally, a tertiary amine in a quantity such that the storable mixture contains at least 0.005 mole of tertiary amine nitrogen atoms (including any tertiary amine nitrogen atoms present in component (b)) for each 100 g of the total amount of the storable mixture.

5,173,560

COLD-CURING SOLVENT FREE, DUROPLASTIC POLYURETHANE-POLYUREA COMPOUNDS

Rainer Gras, Bochum, and Elmar Wolf, Recklinghausen, both of Fed. Rep. of Germany, assignors to Huels Aktiengesellschaft, Marl, Fed. Rep. of Germany

Filed Jul. 18, 1991, Ser. No. 732,235

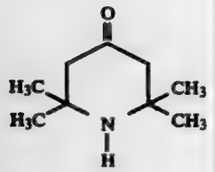
Claims priority, application Fed. Rep. of Germany, Sep. 6, 1990, 4028288

Int. Cl.[5] C08G *18/80*

U.S. Cl. 528—45 15 Claims

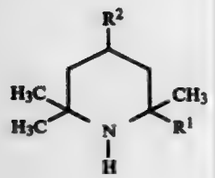
1. A cold-curing, solvent-free, duroplastic two- or one-component polyurethane-polyurea compound, comprising:

(a) a (cyclo) aliphatic polyisocyanate, having NCO groups blocked with piperidine derivatives of the following formula:



(I)

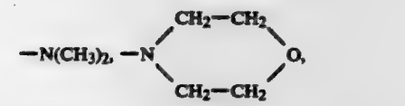
or

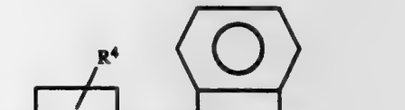


wherein:

R^1=H, CH_3

R^2 = H, OH, $(-O)_n-R^3$, $(-O-\overset{O}{\overset{\|}{C}})_n-R^3$, $-N(\overset{H}{|})-\overset{O}{\overset{\|}{C}}-R^3$,





n=1 or 2

R^3=a C_{1-18} alkyl group, if n=1 and

R^3=a C_{2-18} alkylene group, if n=2

R^4=H, or a C_{1-20} alkyl group, and wherein $(-O)_2-R^3$ is a group in which the two oxygen atoms are singly bonded to the carbon atom to which R^2 is bonded and R^3 forms an alkylene bridge between said two oxygen atoms, and $(-O-C=O)_2-R^3$ is a group in which the two oxygen atoms are singly bonded to the carbon atom to which R^2 is bonded and R^3 forms an alkylene bridge between the two carbonyl carbon atoms, and

(b) a primary or secondary di- or polyamine wherein in the case of one-component system, the primary amino groups are present in a blocked form as ketimines and

(c) a polyester polyol or a polyether polyol.

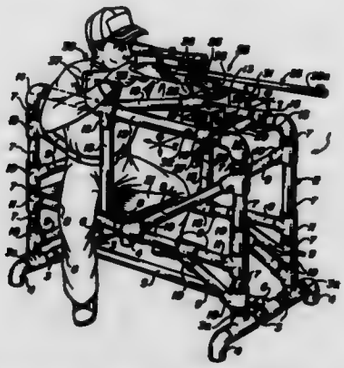
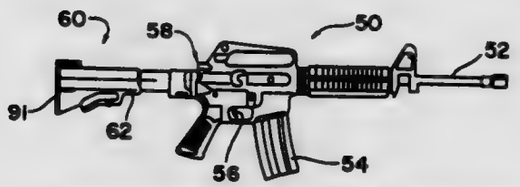
BENCH REST FOR RIFLE SIGHTING
Johnny H. Gray, Rte. 1 Box 51, Kentchie, La. 71046
Filed Mar. 23, 1992, Ser. No. 854,740
Int. Cl.[5] F41C *29/00*
U.S. Cl. 42—94 10 Claims



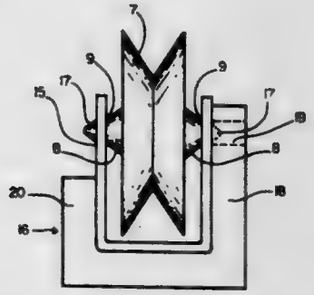
1. A bench rest for sighting in a rifle on a target, comprising frame means for accommodating a rifleman, rear cradle means carried by said frame means in fixed relationship for stabilizing the stock of the rifle and a horizontal threaded rod carried by said frame means in substantially horizontally relationship; a first rod crank carried by said horizontal threaded rod for rotating said horizontal threaded rod; a support block threaded on said horizontal threaded rod; a vertical threaded rod threadably carried by said support block; a second rod crank carried by said vertical threaded rod for rotating said vertical threaded rod; and an adjustable cradle carried by said vertical threaded rod for receiving the forestock of the rifle whereby said support block and said adjustable cradle are horizontally adjusted responsive to manipulation of said first rod crank, and said support block and said adjustable cradle are vertically adjustable responsive to manipulation of said second rad crank wherein the rifle may be adjusted and immobilized to accurately impact a bullet on the target.

5,173,564
QUICK DETACHABLE STOCK SYSTEM AND METHOD
Claude R. Hammond, Jr., 604 Audubon Cir., Belvedere, S.C. 29841
Filed Jan. 7, 1992, Ser. No. 817,634
Int. Cl.[5] F41C *23/14*
U.S. Cl. 42—75.03 24 Claims



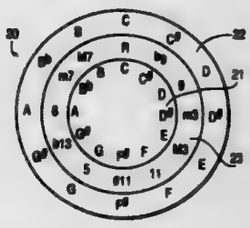
23. A method for readily attaching a stock to and detaching the stock from a receiver comprising the steps of:
providing an extension on one of the stock and the receiver;
inserting the extension into a latch member on the other one of the stock and the receiver;
providing a retractable plunger on one of the stock and the receiver;
retracting the plunger into the one of the stock and the receiver;
rotating the stock relative to the receiver after the plunger is retracted;
aligning the plunger to an opening defined in the other of the stock and the receiver;
releasing the plunger to extend between the stock and the receiver;
preventing rotation of the stock relative to the receiver when the extension is inserted into the latch member and when the plunger extends into the opening; and
preventing separation of the stock and receiver by the extension inserted in the latch member such that the stock is mounted to the receiver.

5,173,565
ROLLER BRIDGE SADDLE
Dennis R. Gunn, Tashiro-So East rm.1 1st fl., Kami Ochiai 2-9-2, Shinjuku-ku, Tokyo, Japan
Filed Apr. 12, 1989, Ser. No. 336,846
Int. Cl.[5] G10D *3/04*
U.S. Cl. 84—298 12 Claims



1. A roller string guide for a string of a musical instrument comprising:
a roller for guiding a section of said string;
a bearing means, said bearing means being defined on said roller for defining a rotational axis of said roller, said rotational axis intersecting a plane containing a longitudinal axis of said string at substantially right angles thereto;
an elastic biasing means, said elastic biasing means elastically urging said roller in a first direction said first direction being substantially coaxial to said rotating axis; and
rigid seating means, said rigid seating means rigidly defining a limit of movement of said roller in said first direction.

5,173,566
APPARATUS FOR RAPID REFERENCE TO MUSICAL SCALES
Tadashi Hiraoka, 1-2-7-605, Tamagawadai, Setagaya-ku, Tokyo, Japan 158
Filed Dec. 19, 1990, Ser. No. 631,057
Claims priority, application Japan, Dec. 27, 1989, 1-150430[U]
Int. Cl.[5] G09B *15/02*
U.S. Cl. 84—474 8 Claims



1. An apparatus for use in modulating and transposing music, comprising:
a first member having a predetermined number of spaced apart indicia thereon corresponding respectively to a predetermined number of musical sounds;
a second member having a predetermined number of spaced

apart indicia thereon corresponding respectively to a predetermined number of muscial sounds;

a third member having a predetermined number of spaced apart indicia thereon corresponding respectively to a predetermined number of musical indexes; and

a means for mounting said first, second and third members for movement relative to one another such that said predetermined number of spaced apart indicia on said first member, said predetermined number of spaced apart indicia on said second member and said predetermined number of spaced apart indicia on said third member can be aligned with each other in various positions corresponding to various relationships between said predetermined number of spaced apart indicia on said first member, said predetermined number of spaced apart indicia on said second member and said predetermined number of spaced apart indicia on said third member;

wherein said predetermined number of spaced apart indicia on said first member correspond to the musical notes C, C#, D, D#, E, F, F#, G, G#, A, B#, and B;

wherein said predetermined number of spaced apart indicia on said second member correspond to the musical notes C, C#, D, D#, E, F, F#, G, G#, A, B#, and B;

wherein said predetermined number of spaced apart indicia on said third member correspond to the musical indexes of root, minor second, major second, minor third, major third, perfect fourth, augmented fourth, perfect fifth, augmented fifth, major sicth, minor seventh, and major seventh, respectively; and

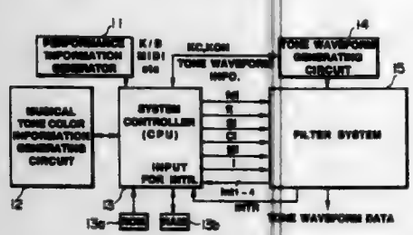
wherein said first member is circular in shape, said second member is circular in shape, said third member is circular in shape, and said mounting means comprises means for mounting said first, second and third members for coaxial rotation relative to one another, said third member being smaller in diameter than said first member and mounted on top of said first member, and said second member being smaller in diameter than said third member and mounted on top of said third member.

5,173,567

MUSICAL TONE GENERATING APPARATUS WITH PARAMETER CONTROLLER FOR CHANGING CHARACTERISTICS OF MUSICAL TONE SIGNAL

Yoshio Fujita, Hamamatsu, Japan, assignor to Yamaha Corporation, Hamamatsu, Japan

Filed Oct. 2, 1990, Ser. No. 591,811
Claims priority, application Japan, Oct. 4, 1989, 1-259740
Int. Cl.[5] G10H *1/12, 7/10, 7/12*
U.S. Cl. 84—607 16 Claims



1. A musical tone generating apparatus comprising:

musical tone source means for generating a musical tone signal; and

parameter control means responsive to the musical tone signal for controlling a tone parameter which characterizes tone color of said musical tone signal by changing a value of said tone parameter, said parameter control means comprising:

target value generating means for generating a target value of said tone parameter;

interpolating means for interpolating between a present value of said tone parameter and said target value, so that said present value is renewed consecutively; and

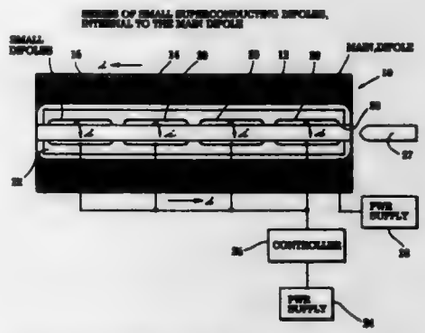
plural filtering units connected with combinations of parallel or series connections to one another, at least one of said plural filtering units changing a frequency characteristic of said musical tone signal based on said present value.

5,173,568

INTEGRATED SUPERCONDUCTING RECONNECTING MAGNETIC GUN

Jerome F. Parmer, San Diego, Calif., assignor to General Dynamics Corporation, Space Systems Division, San Diego, Calif.

Filed Aug. 6, 1990, Ser. No. 563,654
Int. Cl.[5] F41B *6/00*
U.S. Cl. 89—8 2 Claims



1. An improved magnetic gun comprising:

a barrel having an outer metal surface and an inner bore for launching a metal clad projectile;

an elongated dipole magnet positioned within said barrel between said outer metal surface and said bore;

a plurality of superconducting short dipole magnets positioned within said bore between said elongated dipole magnet and said bore; and

control means for selectively normalizing of said superconducting short dipole magnets whereby when said projectile is launched into said bore said superconducting short dipole magnets are sequentially driven normal repelling said projectile and accelerating it along said bore where it exits the end of said bore at a high speed.

5,173,569

DIGITAL DELAY DETONATOR

Robert G. Pallanck, Windsor, and Kenneth A. Rode, Collinsville, both of Conn., assignors to The Ensign-Bickford Company, Simsbury, Conn.

Filed Jul. 9, 1991, Ser. No. 730,275
Int. Cl.[5] F42C *11/02*
U.S. Cl. 102—210 16 Claims

1. An electrical delay detonator for blasting initiation systems energized substantially solely by a force input from a non-electric signal communication system comprising:

a hollow electrically conductive housing enclosing the electrical delay detonator, said housing being closed at one end and open at the other end for end-wise connection to a source of non-electric input force connected to the open end;

a booster charge positioned in said housing for activation by said non-electric input force;

a transducer for directly converting the output force from the booster charge to an electrical output signal, said transducer being positioned adjacent to and in force communicating relationship with said booster charge;

said transducer being substantially insensitive to environmental shock forces and sensitive substantially only to the output force of such booster charge;

an electrical circuit connected to the output of said transducer for introducing a time delay in the electrical output from said transducer relative to the output signal from said electrical circuit; and

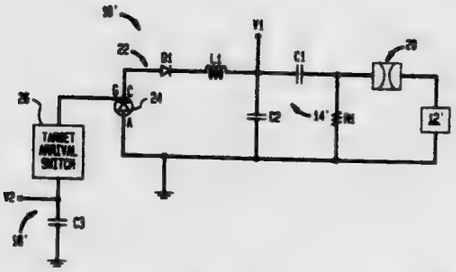
an electrically operable igniter element including means connecting said igniter element to the electrical output of said electrical circuit whereby said igniter is electrically energized after expiry of a time interval between force input to the transducer and electrical output from the electrical circuit.

5,173,570

DETONATOR IGNITION CIRCUITRY

Christopher G. Braun, Neptune, N.J., assignor to The United States of America as represented by the Secretary of the Army, Washington, D.C.

Filed Jul. 8, 1992, Ser. No. 910,858
Int. Cl.[5] F42B *3/10, 4/14*
U.S. Cl. 102—347 6 Claims



1. In detonator ignition circuitry of the type wherein capacitance stored electric energy is applied to an exploding-bridgewire detonator in response to a trigger signal, the improvement comprising:

the energy passes to the detonator through a breakdown means for conducting electricity therethrough when voltage thereacross reaches a threshold; and

means for boosting the energy voltage to the threshold of said breakdown means when the trigger signal is applied.

5,173,571

PROJECTILE GUIDE FOR TELESCOPED AMMUNITION

Donald N. Montgomery, 1615 Dorothy La., Newport Beach, Calif. 92660

Continuation-in-part of Ser. No. 138,257, Dec. 28, 1987, abandoned. This application Dec. 27, 1988, Ser. No. 289,880
Int. Cl.[5] 102 *464, 443;* F42B *5/045*
U.S. Cl. 102—434 22 Claims

1. A telescoped ammunition round comprising:

a propellant charge having an axial cavity for supplying firing power for said ammunition round;

a generally tubular casing means surrounding said propellant charge;

a full caliber projectile housed within said axial cavity for being fired from a forward end of said ammunition round;

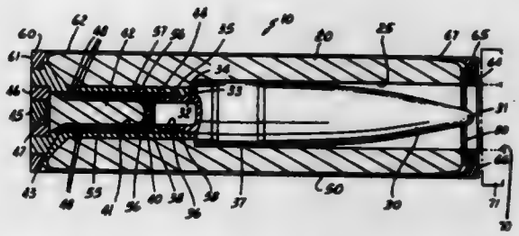
a control tube means housed within said axial cavity for selectively covering an aft surface portion of said propellant charge axial cavity, said control tube means having a generally cylindrical axial bore substantially coaxial with said axial cavity, said projectile extending from within said axial bore to forward of said control tube means;

coupling means for releasably securing said projectile to said control tube means;

a control tube piston having a generally cylindrical outer shape forming a sliding fit within said axial bore aft of said projectile;

a booster charge within said axial bore, said control tube piston being forwardly movable in response to the firing of said booster charge and said projectile being forwardly movable by forward movement of said control tube piston;

a primer means in communication with said booster charge for actuating a firing sequence for said ammunition round; and



one-piece projectile guide means for guiding said projectile during forward movement of the projectile upon firing said booster charge, comprising a generally circular disk mounted in a forward position within said ammunition round and anchored to the tubular casing means substantially normal to the longitudinal axis of the projectile and concentric with said projectile, said disk comprising segmenting means for segmenting said disk into a plurality of generally triangular petals resiliently forwardly deflectable from the center of said disk to apply radially centering pressure upon said projectile during forward movement thereof during firing of said booster charge; whereby

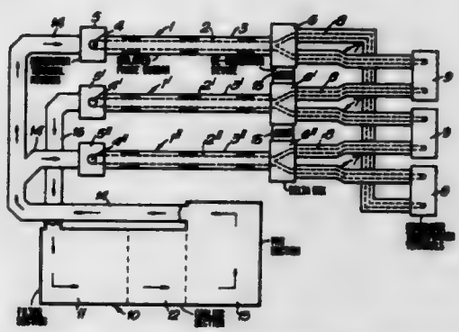
the disk remains anchored to the tubular casing means as the projectile is ejected from said ammunition round.

5,173,572

ISOLATED PHASE BUSBAR INSTALLATION

Antony D. Martin, Wirral, United Kingdom, assignor to BICC Public Ltd. Company, England

Filed Mar. 8, 1991, Ser. No. 666,628
Claims priority, application United Kingdom, Mar. 8, 1990, 9005243
Int. Cl.[5] H02G *5/10*
U.S. Cl. 174—16.2 8 Claims



1. A closed circulatory cooling system of an isolated phase busbar installation comprising three isolated phase busbars, one for each phase, each consisting of a tubular conductor supported co-axially within a tubular enclosure of electrically conductive metal or metal alloy at each of a plurality of posi-

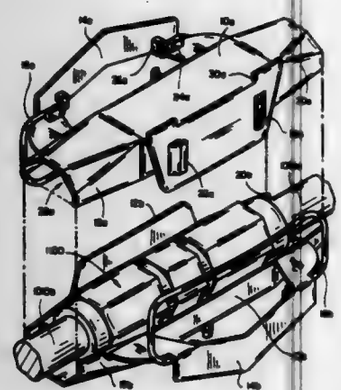
tions mutually spaced along the length of the conductor by at least one electric insulator assembly, wherein a deionization device is interconnected between the tubular enclosures of two isolated phase busbars of the installation between which air is caused to flow, said deionization device comprising an open-ended tubular housing of metal or metal alloy which is connected to earth and, extending transversely across the bore of said housing and dividing the bore throughout its length into a plurality of passages, a plurality of mutually spaced sheets of metal or metal alloy each having a plurality of transversely extending convolutions at spaced positions along the length of the housing so that each passage follows an undulating path, the number of metal sheets and the number and amplitude of the convolutions of each sheet and the dimensions of each passage being selected in accordance with the volume and velocity of air flowing from the tubular enclosure of one of said two busbars, through the tubular housing and to the tubular enclosure of the other said two busbars being such that substantially no contaminants are carried by flow of air from one tubular enclosure to the other tubular enclosure.

5,173,573

HERMAPHRODITIC GEL CLOSURE

James E. Jervis, Atherton, Calif., assignor to Raychem Corporation, Menlo Park, Calif.

Filed Mar. 15, 1991, Ser. No. 669,837
Int. Cl.[5] H01B *17/00*
U.S. Cl. 174—138 F 10 Claims



1. An enclosure for an elongate substrate which comprises:
first and second substantially like members capable of fitting together to form an enclosure around a portion of an elongate substrate therebetween;
each member includes a wing member to restrain the movement of the enclosure with respect to the other member along a horizontal axis which substantially bisects the longitudinal axis of the elongate substrate; and
each member includes a hinge including a spring capable of latching to a catch member on the opposite side of the wing member.

5,173,574

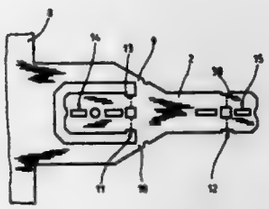
SOLDERING CONNECTOR AND METHOD FOR MANUFACTURING AN ELECTRIC CIRCUIT WITH THIS SOLDERING CONNECTOR

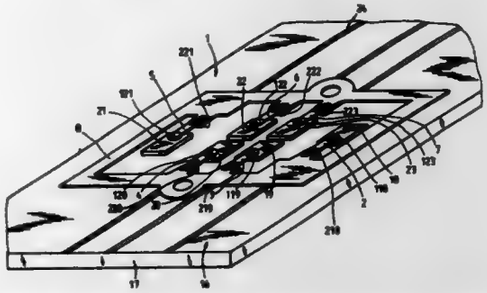
Heinz Kraus, Traunreut, Fed. Rep. of Germany, assignor to Johannes Heidenhain GmbH, Traunreut, Fed. Rep. of Germany

Filed Jun. 25, 1991, Ser. No. 720,912
Claims priority, application European Pat. Off., Jun. 30, 1990, 90112537.7
Int. Cl.[5] H05K *1/00, 3/34*
U.S. Cl. 174—261 20 Claims

1. A soldering connector which comprises:
at least one soldering jumper wherein each of said soldering jumpers further comprises a plurality of regions spaced apart from one another and along said soldering jumper wherein said regions are utilized for a soldering operation; and
a common holder wherein each of said soldering jumpers is connected to said common holder through a breakpoint region which is pre-determined and further wherein said common holder and said soldering jumpers constitute a single unit of electrically conducting material and forms a cantilever and further wherein said common holder is detachable from said soldering jumpers at the said breakpoint regions subsequent to the completion of a common soldering operation.

17. In a method for manufacturing an electric circuit with a substrate on which are placed a printed circuit and electrical components, wherein soldering jumpers are mounted between contact surfaces of the electrical components and/or contact surfaces of the printed circuit, the improvement comprising the steps of





a) placing the printed circuit and the electrical components on the substrate, so that several contact surfaces are formed which are spaced apart from each other and are to be connected electrically to each other;
b) placing a soldering connector on the substrate, such that each soldering jumper bridges at least two contact surfaces, wherein the soldering connector is composed of several soldering jumpers which include a common support and wherein the soldering jumpers and the support are constructed of an electrically conductive material and the soldering jumpers are constructed in one piece with the support and in a cantilevering manner;
c) soldering the soldering jumpers to the contact surfaces; and
d) removing the common support by severing predetermined breaking points provided between the support and the soldering jumpers.

5,173,575

ACOUSTIC APPARATUS

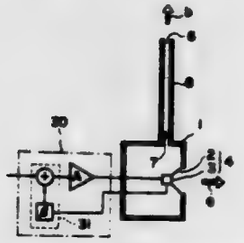
Kazunari Furukawa, Hamamatsu, Japan, assignor to Yamaha Corporation, Hamamatsu, Japan

Filed Mar. 21, 1989, Ser. No. 326,880
Claims priority, application Japan, Mar. 25, 1988, 63-38440; Jul. 22, 1988, 63-96437
Int. Cl.[5] H04R *1/28*
U.S. Cl. 181—160 4 Claims

1. An acoustic apparatus comprising:
an enclosure having an internal cavity defining a Helmholtz resonator, and a resonance duct that together with the

enclosure radiates an acoustic wave by resonance, wherein the resonance duct externally projects from the enclosure;

a vibrator supported by the enclosure and having a diaphragm including a direct radiation portion for directly



radiating an acoustic wave and a resonator driver portion for driving the Helmholtz resonator; and

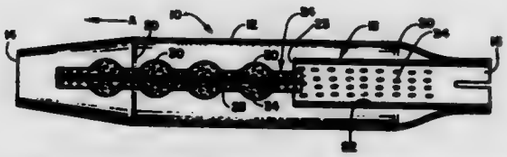
means for driving the vibrator to substantially cancel an air reaction from the resonator, the means for driving including a servo circuit for varying drive of the vibrator in accordance with feedback from the vibrator.

5,173,576

MUFFLER FOR AN INTERNAL COMBUSTION ENGINE

James J. Fealing, Ventura, Calif., assignor to Fealing Engineer, Inc., Ventura, Calif.

Filed Dec. 24, 1990, Ser. No. 633,557
Int. Cl.[5] F01N *1/00*
U.S. Cl. 181—247 18 Claims



1. An improved sound attenuation device having an input and an output end comprising:

a hollow body portion;

a first perforated tube open at each end extending from said input end to a position intermediate the input and output ends; and

means positioned within said hollow body portion and spaced from said input end thereof for supporting said first perforated tube within said hollow body housing.

5,173,577

STAMP FORMED MUFFLER WITH LOW BACK PRESSURE

Michael W. Clegg; Jon W. Harwood, and Robert A. Kohntopp, all of Toledo, Ohio, assignors to AP Parts Manufacturing Co., Ohio

Filed Sep. 4, 1990, Ser. No. 577,495
Int. Cl.[5] F01N *7/18*
U.S. Cl. 181—282 29 Claims

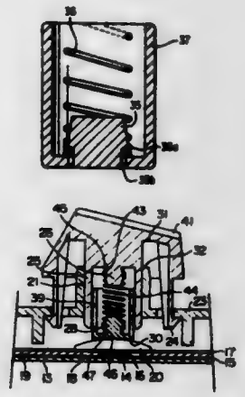
1. An exhaust muffler comprising first and second plates secured in generally face-to-face relationship with one another and formed to define tubes therebetween, said tubes comprising an inlet to the muffler and an outlet from the muffler, said tubes further comprising at least one array of unidirectional flow tubes in communication with the inlet such that each of said flow tubes in said array receives a portion of the exhaust entering the inlet, each of said unidirectional flow tubes defining a cross-sectional area less than the cross-sectional area of the inlet of the muffler, said muffler further comprising at least one in-line expansion chamber defined between the plates and disposed intermediate the array of unidirectional flow tubes and the outlet of the muffler, such that each said unidirectional flow tube communicates directly to said in-line expansion chamber for permitting an expansion of exhaust gas from each of the unidirectional flow tubes into the in-line expansion chamber, the plates being formed such that each said unidirectional flow tube comprises outwardly flared arcuate surfaces that blend smoothly into portions of the plates defining the in-line expansion chamber.

5,173,578

PUSH BUTTON SWITCH ASSEMBLY

Naotaka Tsuna, Tsuruga, Japan, assignor to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Continuation of Ser. No. 437,908, Nov. 13, 1989, abandoned. This application Dec. 14, 1990, Ser. No. 628,949
Claims priority, application Japan, Nov. 18, 1988, 63-292758
Int. Cl.[5] H01H *13/30*
U.S. Cl. 200—345 3 Claims



1. A push button switch assembly comprising:

a pair of upper and lower contacts;

a cylindrical slider body having an inner bottom surface for pressing said contacts;

a button having an inner bottom surface facing said inner bottom surface of said slider body, for pressing said slider body, said button having a guide means for guiding said slider body,

projections provided, respectively, on said inner bottom surface of said button and said inner bottom surface of said slider body, each of said projections having a side surface formed therein with a recess; and

a coil spring disposed between said inner bottom surface of said button and said inner bottom surface of said slider body and having both end parts thereof fitted, respectively, on said projections and locked respectively by said recesses;

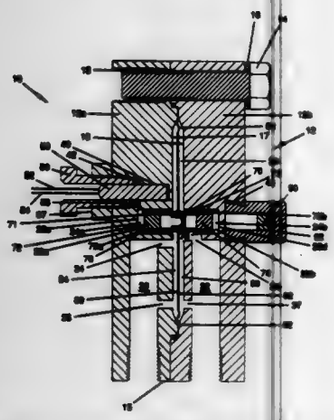
a casing holding said button so as to enable said button to move vertically, and housing at least said contacts therein; wherein each of said projections is planar, having said side surface thereof formed with recesses, wherein said inner bottom surface of said slider body has further formed therein access through-holes at positions below said recesses.

5,173,579

DIFFERENTIAL PRESSURE SWITCH INCLUDING A VERTICAL DIAPHRAGM, A REED SWITCH ACTIVATED BY A FIRST MAGNET AND ADDITIONAL MAGNETS FOR POSITIONING THE DIAPHRAGM AND THE FIRST MAGNET

Spencer M. Nimberger, Houston, Tex., assignor to Precision General, Inc., Houston, Tex.

Filed Jan. 9, 1992, Ser. No. 818,552
Int. Cl.[5] H01H 35/34
U.S. Cl. 200—83 L 16 Claims



1. A differential pressure switch mounted to a source of a medium, comprising:

a housing defining a cavity;

a diaphragm vertically disposed across the cavity and secured to said housing to divide the cavity into a high pressure chamber and a low pressure chamber;

said housing further defining a means for admitting fluid pressures into the chambers for moving said diaphragm in response to differential pressure between the chambers;

a first magnet attached to said diaphragm in the high pressure chamber;

a second magnet attached to said diaphragm in the low pressure chamber;

a third magnet disposed in said housing having a field oriented to oppose a field of said second magnet for positioning said diaphragm and said first magnet within the cavity; and

a reed switch disposed in said housing within a field of said first magnet for maintaining said reed switch in non-detecting state, said reed switch being transformable to a detecting state by movement of said first magnet when said diaphragm is moved in response to an actuating differential pressure between the chambers.

5,173,580

SUSCEPTOR WITH CONDUCTIVE BORDER FOR HEATING FOODS IN A MICROWAVE OVEN

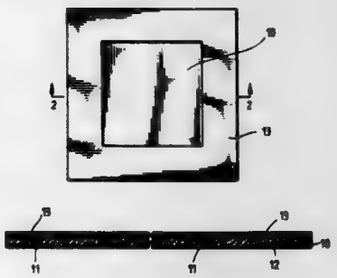
Lisa Levin, Plymouth, and Peter S. Peshek, Brooklyn Center, both of Minn., assignors to The Pillsbury Company, Minneapolis, Minn.

Filed Nov. 15, 1990, Ser. No. 614,392
Int. Cl.[5] H05B 6/80; A23L 1/28
U.S. Cl. 219—10.55 E 6 Claims

1. An apparatus for heating food in a microwave oven, comprising:

a first sheet of material defining susceptor means for heating in response to microwave radiation;

a second sheet of material defining a conductive reflective border region surrounding a transmissive center area, the second sheet of material being closely adjacent to the susceptor means; and,



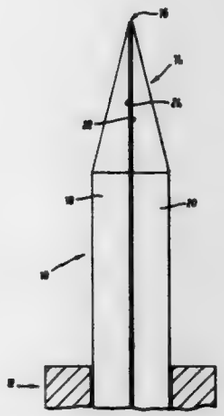
the first sheet of material and the second sheet of material being located on a same side of a food item to be heated.

5,173,581

ELECTRODE FOR TUNGSTEN INERT GAS WELDING

Edward S. Aspindle, Thornton, United Kingdom, assignor to British Nuclear Fuels plc, Cheshire, England

Filed Nov. 26, 1991, Ser. No. 798,533
Claims priority, application United Kingdom, Dec. 15, 1990, 9027235
Int. Cl.[5] B23K 9/167
U.S. Cl. 219—75 9 Claims



1. A non-consumable electrode for tungsten inert gas welding, comprising an elongate body adapted to be carried in a holder and for connection to a source of electrical power, the electrode body having a tapered tip, and at least one longitudinally extending cavity in the tapered tip so that, in use, spark initiation can take place from locations on the electrode from which metal ion deposition has been inhibited, wherein the improvement comprises the electrode body comprises at least two separatable parts extending longitudinally of the body, the parts having faces of flat form so that when assembled and secured together in face-to-face relationship the parts define said at least one cavity between the faces.

5,173,582
CHARGED PARTICLE BEAM LITHOGRAPHY SYSTEM AND METHOD

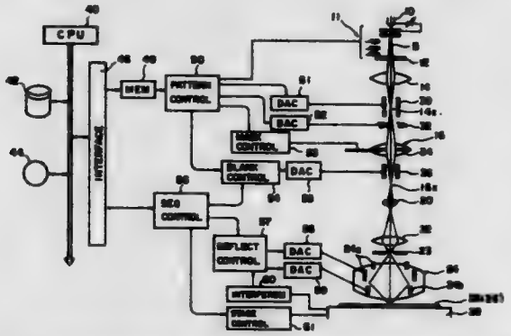
Kiichi Sakamoto, Tokyo; Hiroshi Yasuda, Yokohama, and Akio Yamada, Kawasaki, all of Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Continuation-in-part of Ser. No. 429,500, Oct. 31, 1989. This application Sep. 20, 1990, Ser. No. 585,777

The portion of the term of this patent subsequent to Sep. 24, 2008, has been disclaimed.

Int. Cl.[5] B23K *15/00*

U.S. Cl. 219—121.25 6 Claims



1. A charged particle beam lithography system for drawing a pattern on an object using a charged particle beam, comprising:

beam source means for producing and directing a charged particle beam such that the beam travels along a predetermined optical axis toward the object;

beam shaping means provided along the path of the traveling charged particles beam for providing a predetermined cross section to said charged particle beam;

first focusing means provided between the beam shaping means and the object for focusing the charged particle beam supplied from the beam shaping means on a first crossover point located on the optical axis;

second focusing means provided between the first crossover point and the object for focusing the charged particle beam previously focused on the first crossover point on a second crossover point located on the optical axis;

beam deflection means for deflecting the charged particle beam focused by the second focusing means such that the beam is displaced on the object;

stage means for supporting the object;

mask means provided in a vicinity of said first focusing means so as to extend substantially perpendicularly to the optical axis for interrupting the charged particle beam, said mask means defining a plurality of apertures for providing a predetermined shape to the charged particle beam when the charged particle beam is passed therethrough;

addressing means for selectively deflecting the charged particle beam such that the charged particle beam is passed through a selected one of the apertures in the mask means, said addressing means comprising an electrostatic deflector for deflecting the charged particle beam such that the charged particle beam is passed through a predetermined aperture in the mask means for variable shaping of the charged particle beam, and at least one electromagnetic deflector for deflecting the charged particle beam through an angle larger than that caused by the electrostatic deflector such that the charged particle beam is selectively passed through said selected one of the apertures;

memory means for storing data about size and shape of each of the plurality of apertures formed on the mask means; and

pattern control means for controlling the beam deflection means such that the charged particle beam passed through the selected aperture on the mask means has a variable cross section corresponding to the pattern to be drawn on the object, said pattern control means comprising selection means for selecting one of the plurality of apertures on the mask means in correspondence to the pattern to be drawn on the object and comparison means for comparing the size and shape of the aperture selected by the selection means with size and shape of the pattern to be drawn on the object, said selection means further producing a correction signal indicative of a difference in the size and shape between the selected aperture and the pattern to be drawn on the object in response to a result of the comparison,

wherein said pattern control means controls the beam deflection means in response to the correction signal such that only a part of the beam is passed through the selected aperture.

5,173,583
SPECULAR SYSTEM FOR RECOVERING LASER BEAM ENERGY

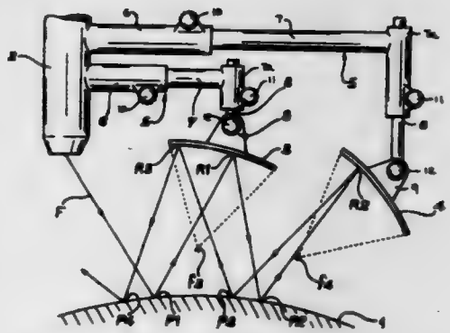
Francois Xavier de Contencin, Fresnes; Gérard Marot, Verrieres Le Buisson, and Serge Trottier, Suresnes, all of France, assignors to Societe Nationale d'etude et de Construction de Moteurs D'Aviation S.N.E.C.M.A., Paris, France

Filed May 28, 1991, Ser. No. 706,308

Claims priority, application France, May 28, 1990, 90 06567

Int. Cl.[5] B23K *26/06*

U.S. Cl. 219—121.74 14 Claims



1. A specular system for recovering the energy of a laser beam emitted from the laser head and reflecting from an impingement point (P1) of a surface of a workpiece comprising: a plurality of reflectors defining a plurality of reflecting surfaces of which the normals of each reflecting surface are displaced from the impingement point (P1), so as to direct the reflected laser beam back onto the workpiece; and attachment means to attach the plurality of reflectors to a laser head, wherein the attachment means is adjustable so as to adjust the positions of the plurality of reflectors.

5,173,584
METHOD AND APPARATUS FOR MONITORING THE WORKING OF A WORKPIECE WITH PULSED LASER RADIATION

Hans-Jürgen Kahlert, and Ulrich Sowada, both of Göttingen, Fed. Rep. of Germany, assignors to Lambda Physik Forschungsgesellschaft, Fed. Rep. of Germany

Filed Apr. 19, 1991, Ser. No. 688,735

Claims priority, application Fed. Rep. of Germany, Apr. 25, 1990, 4013195

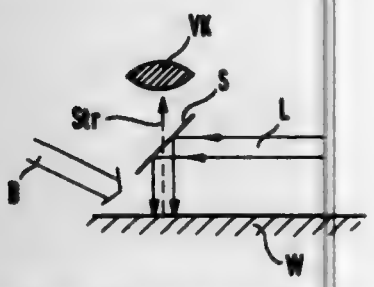
Int. Cl.[5] B23K *26/02*

U.S. Cl. 219—121.83 2 Claims

1. A method of monitoring the working of a workpiece (W) comprising the steps of

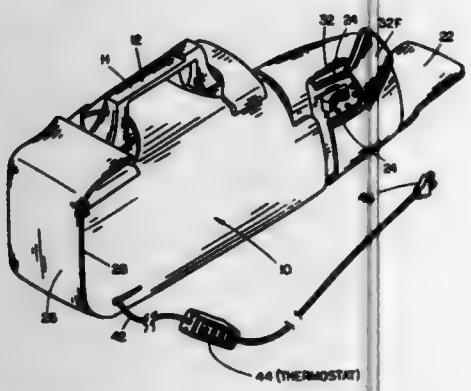
a) directing a pulsed ultraviolet laser beam (L) onto said workpiece (W),

b) providing markings on said workpiece,
c) moving said workpiece relative to said pulsed ultraviolet laser beam such that successive pulses of said pulsed ultraviolet laser beam impinge onto a plurality of different points of said workpiece,



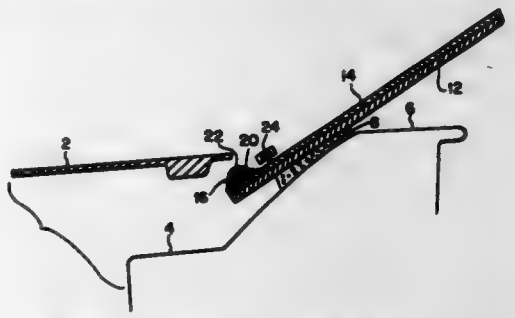
d) directing pulses of visible light onto said plurality of different points of the workpiece, wherein said pulses of visible light are synchronized with said successive pulses of the pulsed ultraviolet laser beam, and
e) monitoring said plurality of different points of the workpiece together with said markings by means of a camera (VK) which is sensitive to visible light.

5,173,585
CAMERA HEATING JACKET
Brian L. Dokken, P.O. Box 244, Velva, N. Dak. 58790
Filed May 6, 1991, Ser. No. 696,367
Int. Cl.[5] A45C *11/38*; B65D *85/38*; H05B *3/34*
U.S. Cl. 219—201 1 Claim



1. In combination:
a camera having forward and rearward ends, opposing sides, a bottom and a top;
a lens mounted on the forward end of said camera;
a flat flexible sheet of insulative material having a forward end, rearward end and opposing sides;
said sheet wrapped around said camera to form an insulative jacket enclosing said camera;
said sheet having a forward flap for selectively covering said lens;
means for selectively connecting said forward flap to portions of said jacket to selectively cover said lens;
said jacket having access openings formed therein providing access to controls on said camera;
flaps of insulative material selectively operably connected to said jacket to selectively cover said access openings;
means on said jacket for selectively maintaining said jacket on said camera;
an electrical heating element mounted in said jacket;
means for activating said heating element to heat the camera within the jacket;
said camera having a handle extending from the top of said camera;
said handle having a grip portion positioned above and in spaced relation to the top of said camera; and
said jacket having flaps along its opposing sides wrapped over the camera top forwardly and rearwardly of said handle and beneath said grip portion of the handle such that the camera top is substantially completely covered and such that the handle projects outwardly above the jacket to permit the camera to be carried by the handle.

5,173,586
ELECTRIC HEATING ATTACHMENT FOR DEICING THE WIPER REST ZONR OF A VEHICLE WINDSHIELD
Peter N. Gold, 465 N. Wood Ave., Rockville Centre, N.Y. 11570
Filed Oct. 5, 1990, Ser. No. 593,736
Int. Cl.[5] H05B *3/26*; E06B *7/00*; A47L *1/16*; B60S *1/02*
U.S. Cl. 219—203 9 Claims



1. A deicer device for heating and deicing the window glass of a vehicle comprising
a vehicle window glass having an exterior surface;
an electric resistance heating wire disposed on said exterior surface of said glass and positioned along a zone at which ice or snow would collect if said ice or snow were precipitated onto said glass and which is outside the normal range of vision through the glass;
an electrically non-conductive adhesive tape placed over said wire holding said wire along said zone and attaching said wire to the exterior surface of the glass;
an electrically non-conductive sealant placed over said adhesive tape on said exterior surface of said glass completely covering said tape and said wire and providing a water-tight encapsulation of said tape and said wire along said zone; and
terminal means provided on the ends of said wire for supplying power thereto.

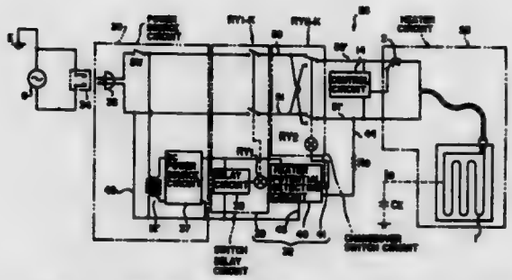
ELECTRIC HEATING APPLIANCE
Shigeru Nakano, Toyoshina, and Kosaku Mitani, Osaka, both of Japan, assignors to Nihon Dennetsu Co., Ltd., Tokyo and Osaka Nishikawa Co., Ltd., Osaka, both of, Japan
Continuation of Ser. No. 630,478, Dec. 20, 1990, abandoned.
This application Feb. 19, 1992, Ser. No. 837,702
Claims priority, application Japan, Dec. 21, 1989, 1-329590
Int. Cl.[5] H05B *1/02, 3/34*
U.S. Cl. 219—212 2 Claims

1. An electric heating appliance including a negative potential generating circuit for feeding negative potential to an electric heater, said electric heating appliance comprising:
a power source circuit to be connected to an alternate current power source;
a heater circuit including the electric heater provided at a downstream position of a power controlling rectifying element in a flow direction of current; and
a connection selecting circuit, provided between the power source circuit and the heater circuit for selective connection of terminals, said connecting selecting circuit including
a potential detecting circuit for detecting current flow

from one terminal of the power source circuit to ground through the electric heater and for detecting whether or not a potential of the electric heater is on a ground side,

a change-over switch circuit controlled by a control signal produced by said potential detecting circuit and connecting an anode terminal of the power controlling rectifying element to a grounding terminal of said alternate current power source, and



a delay switch circuit including a delay circuit and an insulating switch operated by the delay circuit, wherein when the power source circuit is connected to the alternate current power source and after the potential of the electric heater is detected by the potential detecting circuit, said delay switch circuit connecting the power source circuit to the change-over switch circuit.

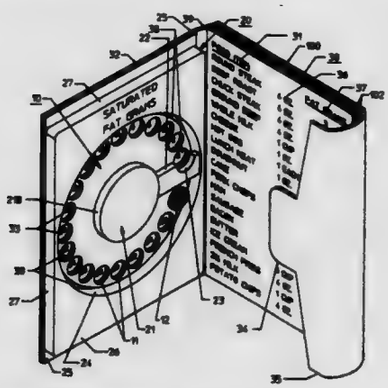
FOOD CONSUMPTION MONITOR

Shane Harrah, 1100 Sharon Park Dr. (#27), Menlo Park, Calif. 94025

Filed Sep. 25, 1990, Ser. No. 588,585
Int. Cl.[5] G06C 27/00
U.S. Cl. 235—114 27 Claims



1. A register comprising:

manually operable rotary dial having a manipulable dial surface;

base for said dial, including means for rotatably mounting said dial to said base, whereby said dial is mounted to rotate abut an axis of rotation;

finger stop which is attached to said base in a stationary position in close proximity to said dial surface such that said finger stop limits the maximum rotary travel of a finger rotating said dial;

set of numerals representing a mathematical sequence of numbers, wherein the individual numerals in said set of numerals are disposed on said base approximately equidistant from said axis of rotation and approximately equiangularly spaced around said axis of rotation in consecutive order; and

a scale pointer permanently coupled with said dial in close proximity to said set of numerals, wherein said scale pointer rotates along with said dial and highlights the numeral in said set of numerals which is closest to said scale pointer, whereby said scale pointer and said set of numerals in combination function as a simple numeric display;

wherein said dial is disposed such that said dial surface is accessible for manual rotation of said dial, and wherein said set of numerals and said scale pointer and said dial are disposed in positions such that said set of numerals and said scale pointer and said dial surface are all viewable.

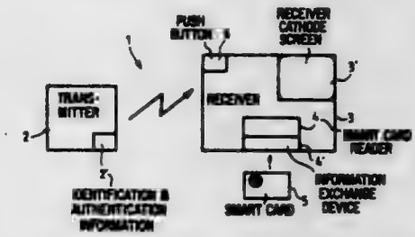
PROCESS FOR INSTANTANEOUS CONFIRMATION OF ACTIONS IN RELATION TO TELEVISION PROGRAMS AND DEVICE FOR USE OF THE PROCESS

Eric Diehl, Neudorf; Jöel Hamon, Lipsheim, and Michel Leduc, Boersch, all of France, assignors to Laboratoire Europeen de Recherches Electroniques Avancees, Societe En Nom Collectif, Courbevoie, France

Filed Oct. 31, 1990, Ser. No. 606,835
Claims priority, application France, Nov. 3, 1989, 89 14415
Int. Cl.[5] H04N 7/00, 7/087
U.S. Cl. 235—375 16 Claims



14. A device for the instantaneous confirmation of viewer's reactions in relation to television programs, comprising:

a television network transmitter; and

a plurality of receivers each equipped with a smart card reader, wherein the transmitter produces authentication data in relation to program content.

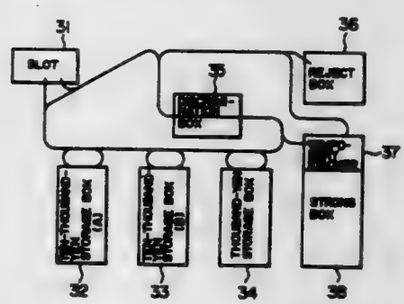
METHOD AND APPARATUS FOR CONTROLLING BILL CONVEYANCE IN AUTOMATIC TELLER MACHINE

Takemasa Nakano, and Takahiro Fujii, both of Seto, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Oct. 3, 1990, Ser. No. 592,285
Claims priority, application Japan, Oct. 13, 1989, 1-264909
Int. Cl.[5] G06F 15/30; B07C 5/00; B65H 1/00
U.S. Cl. 235—379 8 Claims



2. A bill conveyance control apparatus for an automatic teller machine comprising:

a plurality of bill storage boxes for storing bills of a predetermined same denomination;

switching means for successively specifying each of the plurality of bill storage boxes as a bill storage box to be used for deposit/withdrawal, thereby causing said plurality of bill storage boxes to be sued substantially uniformly; and

means for depositing/withdrawing bills from the bill storage box specified by said switching means;

wherein said switching means comprises:

means for comparing respective remainders of bills in the plurality of bill storage boxes with each other; and

means for specifying one of the plurality of bill storage boxes found to have the smallest remainder of bills as a result of the comparison by said comparing means as a bill storage box to be used for deposit.

ELECTRIC GEARSHIFT FOR CHILDREN'S CARS

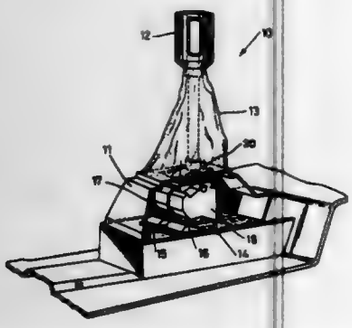
Gianluca Perego, Arcore, Italy, assignor to Peg Perego Pines S.p.A., Milan, Italy

Filed May 6, 1991, Ser. No. 696,350

Claims priority, application Italy, Jun. 29, 1990, 21423/90[U]

Int. Cl.[5] H01H *9/00*; H02P *1/08*

U.S. Cl. 200—61.88 19 Claims



1. An electric gearshift device for an electric car for children, of the type which can be operated manually to provide different electrical connections between an electric motor and sets of batteries, corresponding to different running condition, the gearshift device comprising: a first two-speed electric selector switch, a second electric reversing switch and a lever movable from a first to a second position to control movement of the firsts switch between a first switch first switching position corresponding to the lever first position and a first switch second switching position corresponding to the lever second position, the lever in the lever second position acting on the first switch with an elastically yieldable thrust surfaces to enable the lever to pass the lever second position in which it controls the first switch and reach a lever third position in which it actuates the second switch.

METHOD AND APPARATUS FOR MULTI-LAYER WELDING

Shinji Okumura; Keiichi Taksoka, and Tatsumi Nakazato, all of Kitakyushu, Japan, assignors to Kabushiki Kaisha Yaskawa Denki Seisakusho, Fukuoka, Japan

PCT No. PCT/JP90/00212, § 371 Date Oct. 17, 1990, § 102(e) Date Oct. 17, 1990, PCT Pub. No. WO90/09859, PCT Pub. Date Sep. 7, 1990

PCT Filed Feb. 21, 1990, Ser. No. 596,704

Claims priority, application Japan, Feb. 23, 1989, 10-43900; Feb. 23, 1989, 1-43901; Mar. 10, 1989, 1-58888

Int. Cl.[5] B23K *9/12*

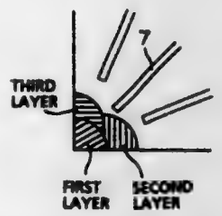
U.S. Cl. 219—125.1 2 Claims

1. A multi-layer welding method for multi-layer welding according to a path of welding defined by interpolating a plurality of instructed points by a suitable line, the method comprising the steps of:

passing a welding torch in a welding operation;

storing N coordinates actually passed by said welding torch in the welding operation of a first layer at the instructed points,

calculating and storing approximate straight lines and approximate curves using the method of least squares at the



instructed points on the basis of said stored N coordinates at the instructed points;

calculating points on each of the approximate straight line or approximate curves on the basis of the distance of the instructed points to define each actual welding path by said points and

welding a second layer in accordance with a path defined by said calculated points.

ELECTRIC CIGAR LIGHTER HAVING A THERMAL SAFETY FUSE

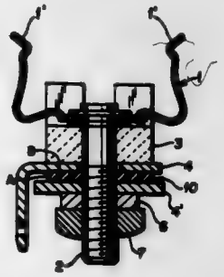
Tatomu Ogino, Omiya, and Akio Nakamura, Kitamoto, both of Japan, assignors to Shin-Etsu Polymer Co., Ltd., Tokyo, Japan

Filed Dec. 13, 1990, Ser. No. 627,004

Claims priority, application Japan, Dec. 28, 1989, 1-338567

Int. Cl.[5] H05B *1/02*; H01H *85/055*, *37/76*; B60N *3/00*

U.S. Cl. 219—264 5 Claims



1. In an electric cigar lighter consisting of a heater element having a heating filament and a spring contact, in which the electric circuit through the heating filament is closed when the heater element is pushed and inserted into the spring contact, and comprising, in the spring contact, two spaced apart electrically conductive connecting plates as part of the electric circuit fastened together with an electrically insulating spacer interposed therebetween and electrically connected through a thermal fuse means, the improvement where said spacer comprises a heat resistant resilient form-retaining plate formed from an electrically insulating rubbery material having opposite surfaces in contact with said connecting plates which is penetrated by at least one electrically conductive portion made form a metallic material having a low melting point extending between the surfaces in contact with the respective connecting plates establishing electrical conduction between the connecting plates so as to serve as said thermal fuse means by melting down of said at least one electrically conductive portion at a high temperature to break said electrical conduction between plates with the spacer retaining its plate form after said at least

one conductive portion has melted to continue to serve as an electrically insulating spacer between said connecting plates.

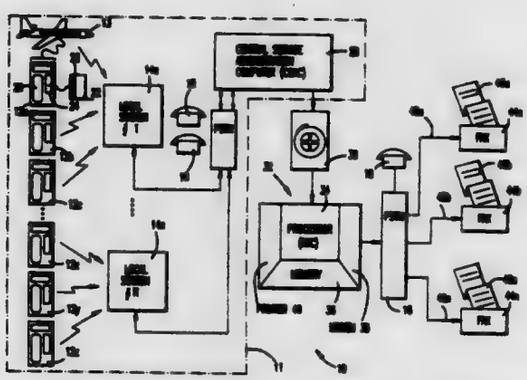
SYSTEM FOR PRINTING PERSONALIZED CHARGE-CARD SERVICE RECEIPTS AT REMOTE LOCATIONS
Dana W. McClure, El Toro, Calif., assignor to GTE Cellular Communications Corporation, Irvine, Calif.
Continuation of Ser. No. 290,063, Dec. 27, 1988, abandoned. This application Sep. 27, 1991, Ser. No. 767,542
Int. Cl.[5] G06F 15/21
U.S. Cl. 235—380 9 Claims



1. A method for initiating the generation of a customer receipt at a selected location in response to customer use of a charge card activated system comprising the steps of

storing in a computer a personal profile data base file for each customer including charge card data fields and target address data fields which include selected locations for generating customer receipts,

storing in said computer a billing file for each customer including charge card data fields and transaction data fields in response to use of the charge card activated system, for each charge card data field in each of the billing file and the personal profile data base file there existing a corresponding transaction data field in the transaction data fields and a corresponding target address data field in the target address data fields that is used when a respective charge card data field in a billing file and a respective charge card data field in a personal profile data base file are matched,

comparing in the computer the billing file for a using customer with the personal profile data base files to identify matching charge card data fields for the using customer in the personal profile data base files and the billing files,
